Preface to the Second Edition	(vii)
Preface to the First Edition	(ix)

PART I: GENERAL ASPECTS

1. PHARMACEUTICAL CHEMICALS : PURITY AND MANAGEMENT	3
1.1. Introduction	3
1.2. Purity	4
1.2.1. Broad-Based Highest Attainable Standard	4
1.2.2. Biological Response Vs. Chemical Purity	5
1.2.3. Official Standards vis-a-vis Manufacturing Standards	5
1.3. Management	6
1.3.1. Description of the Drug or Finished Product	6
1.3.2. Sampling Procedures and Errors	6
1.3.3. Bioavailability	9
1.3.4. Identification Tests	10
1.3.5. Physical Constants	11
1.3.6. Limit Tests vis-a-vis Quantitative Determinations	17
1.3.7. Various Types of Tests for Quantitative Determinations	17
1.3.8. Limit Tests for Metallic Impurities	25
1.3.9. Limit Test's for Acid Radical Impurities	30
1.3.10. Limit Tests for Non-Metallic Impurities	37
2. THEORY AND TECHNIQUE OF QUANTITATIVE ANALYSIS	41
2.1. Introduction	41
2.2. Volumetric Analysis	42
2.2.1. Theory	42
2.2.2. Definitions	42
2.2.3. Volumetric Apparatus	44
2.2.4. General Considerations	51
2.2.5. Technique of Volumetric Analysis	52
2.3. Gravimetric Analysis	53
2.4. Biomedical Analytical Chemistry	53
2.4.1. Colorimetric Assays	53
2.4.2. Enzymatic Assays	58
2.4.3. Radioimmuno Assays (RIAS)	63

3. ERRORS IN PHARMACEUTICAL ANALYSIS AND STATISTICAL VALIDATION	71
3A. Errors in Pharmaceutical Analysis	71
3A.1. Introduction	71
3A.2. Classification of Errors	72
3A.2.1. Determinate (Systematic) Errors	72
3A.2.2. Indeterminate (Random) Errors	73
3A.2.3. Accuracy	74
3A.2.4. Precision	74
3A.2.5. Minimising Systematic Errors	75
3B. Statistical Validation	77
3B.1. Introduction	77
3B.2. Statistical Validation	77
3B.2.1. Statistical Treatment of Finite Samples	77
3B.2.2. Distribution of Random Numbers	79
3B.2.3. Significant Figures	80
3B.2.4. Comparison of Results	81
3B.2.5. Method of Least Squares	83
3B.2.6. Recommendations for Criteria of Rejecting an Observation	85
3B.2.7. Sampling Statistics	87
 PART II : CHEMICAL METHODS 	
A. Titrimetric Methods: Acidimetry and Alkalimetry	
4. AQUEOUS TITRATIONS	95
4.1. Introduction	95
4.1.1. Lowry and Bronsted's Theory of Acids and Bases	95
4.1.2. Lewis's Theory	97
4.1.3. Usanovich Theory	97
4.1.4. Lux-Flood Concept	98
4.2. Theory of Acidimetry	98
4.2.1. Direction Titration Method	98
4.2.2. Residual Titration Method	98
4.3. Assay of Drugs	98
4.3.1. Direction Titration Method	99
4.3.2. Residual Titration Method	100
4.4. Theory of Alkalimetry	101
4.4.1. Direction Tiration Method (DTM)	102
4.4.2. Residual Titration Methods (RTM)	103
5. NON-AQUEOUS TITRATIONS	106
5.1. Introduction	106
5.2. Theory	107
5.2.1. Solvents	107

5.3.	Methodology	108
5.3.1.	Preparation of 0.1 N Perchloric Acid	108
5.3.2.	Standardization of 0.1 N Perchloric Acid	109
5.3.3.	Choice of Indicators	110
5.3.4.	Effect of Temperature on Assays	110
5.4.	Assay by Non-Aqueous Titrations	110
5.4.1.	Acidimetry in Non-Aqueous Titrations	111
5.4.2.	Alkalimetry in Non-Aqueous Titrations	117
B. Redox Methods		
6.	PERMANGANATE, DICHROMATE AND CERIC SULPHATE TITRATION METHODS	125
6.1.	Introduction	125
6.2.	Theory	125
6.3.	Assay Methods	126
6.3.1.	Permanganate Methods	126
6.3.2.	Dichromate Methods	130
6.3.3.	Ceric Sulphate Titration Methods	133
7.	IODIMETRIC AND IODOMETRIC TITRATIONS	137
7.1.	Introduction	137
7.2.	Theory	137
7.3.	Assay Methods	138
7.3.1.	Iodimetric Assays	138
7.3.2.	Iodometric Assays	144
C. Precipitation Methods		
8.	ARGENTOMETRIC METHODS	151
8.1.	Introduction	151
8.2.	Theory	152
8.3.	Assay Methods	152
8.3.1.	Direct Titration with Silver Nitrate	153
8.3.2.	Ammonium Thiocyanate-Silver Nitrate Titrations (Volhard's Method)	155
D. Complexometric Methods		
9.	COMPLEXOMETRIC ANALYSIS	161
9.1.	Introduction	161
9.2.	Theory	161
9.2.1.	Effect of pH on Complexation	163
9.2.2.	Stability of Complexes	163
9.2.3.	Colouration of Complexes	164

9.2.4.	Titrability of Polyvalent Metal Ions Employing Disodium Edetate	164
9.2.5.	Usage of pM Indicators in Complexometric Titrations	164
9.3.	Assay Methods	165
9.3.1.	Direction Titration Methods	166
9.3.2.	Masking and Demasking Agents	168
9.3.3.	Residual Titration Methods	169

E. Gravimetric Methods

10. GRAVIMETRIC ANALYSIS	173
10.1. Introduction	173
10.2. Theory	173
10.2.1. Law of Mass Action and Reversible Reactions	174
10.2.2. Principle of Solubility Product	175
10.2.3. Common Ion Effect	176
10.3. Assay Methods	177
10.3.1. Substances Assayed Gravimetrically	177
10.3.2. Substances Assayed After Conversion	181

F. Thermoanalytical Methods

11. THERMOANALYTICAL ANALYSIS	193
11.1. Introduction	193
11.2. Thermogravimetric Analysis (TGA)	194
11.2.1. Theory	194
11.2.2. Instrumentation	194
11.2.3. Methodology	195
11.3. Differential Thermal Analysis (DTA)	198
11.3.1. Theory	198
11.3.2. Instrumentation	198
11.3.3. Methodology	199
11.3.4. Applications	200
11.4. Thermometric Titrations (TT)	200
11.4.1. Theory	200
11.4.2. Instrumentation	200
11.4.3. Methodology	202
11.4.4. Applications	202

G. Miscellaneous Methods

12. DIAZOTIZATION (SODIUM NITRITE TITRATION)	207
12.1. Introduction	207
12.2. Theory	207
12.3. Assay Methods	208
12.3.1. Preparation of 0.1 M Sodium Nitrite Solution	208
12.3.2. Standardization of 0.1 M Sodium Nitrite Solution with Sulphanilamide ...	208

12.3.3. Calcium Aminosalicylate	209
12.3.4. Isocarboxazid	209
12.3.5. Phthalylsulphathiazole	210
12.3.6. Cognate Assays	210
13. ESTIMATION OF PHENOLS AND RELATED COMPOUNDS	213
13.1. Introduction	213
13.2. Theory	214
13.3. Assay Methods	214
13.3.1. Titrations with 0.1 N Bromine	214
13.3.2. Titrations with Potassium Bromate	217
13.3.3. Titrations with Potassium Iodate	219
14. KARL FISCHER METHOD FOR DETERMINATION OF WATER	223
14.1. Introduction	223
14.2. Theory	223
14.3. Instrumentation	224
14.3.1. Automated Electrochemical Karl Fischer Analysis	225
14.4. Applications of Karl Fischer Method for Determination of Water in Pharmaceutical Analysis	226
14.4.1. Prednisolone Sodium Phosphate	226
14.4.2. Cognate Assays	226
15. TETRAZOLIUM ASSAY OF STEROIDS	228
15.1. Introduction	228
15.2. Theory	228
15.3. Assay of Pharmaceutical Substances	229
15.3.1. Hydrocortisone Acetate	229
15.3.2. Cognate Assays	230
PART III : ELECTROCHEMICAL METHODS	
16. POTENTIOMETRIC METHODS	233
16.1. Introduction	233
16.2. Theory	233
16.2.1. General Considerations	235
16.2.2. End-Point Determination	237
16.3. Instrumentation	239
16.3.1. Electrodes	240
16.3.2. Automatic Titrator (Preset End-Point Titrator)	249
16.4. Applications of Potentiometric Titrations in Pharmaceutical Analysis	250
16.4.1. Cognate Assays	251
17. AMPEROMETRIC METHODS	253
17.1. Introduction	253

17.2.	Theory	254
17.2.1	Titration Curves	254
17.2.2.	Corrections for the Volume Change	256
17.2.3.	Advantages of Amperometric Titrations	257
17.3.	Instrumentation	257
17.3.1.	Amperometric Titrations with the Dropping Mercury Electrode	257
17.3.2.	Amperometric Titrations with a Rotating Platinum Microelectrode	258
17.3.3.	Amperometric Titrations with Twin-Polarized Microelectrodes (Biamperometric Titrations or Dead-Stop-End-Point Method).....	260
17.4.	Applications of Amperometric Titrations in Pharmaceutical Substances	261
17.4.1.	Procainamide Hydrochloride	261
17.4.2.	Cognate Assay	261
17.4.3.	Assay of Nickel with Dimethylglyoxime	261
17.4.4.	Assay of Lead with Potassium Dichromate Solution	261

PART IV : OPTICAL METHODS

18.	REFRACTOMETRY	265
18.1.	Introduction	265
18.2.	Theory	266
18.3.	Instrumentation	268
18.4.	Determination of Refractive Index of Pharmaceutical Substances	270
18.5.	Applications of Refractivity	271
19.	POLARIMETRY	274
19.1.	Introduction	274
19.2.	Theory	275
19.3.	Instrumentation	277
19.4.	Determination of Optical Activity of Pharmaceutical Substances	278
19.4.1.	Determination of Optical Rotation of Pharmaceutical Substances	278
19.4.2.	Determination of Specific Optical Rotation of Pharmaceutical Substances	279
20.	NEPHELOMETRY AND TURBIDIMETRY	283
20.1.	Introduction	283
20.2.	Theory	284
20.3.	Instruments for Nephelometry and Turbidimetry	284
20.3.1.	Instruments for Nephelometry	284
20.3.2.	Instruments for Turbidimetry	287
20.4.	Assay of Pharmaceutical Substances	287
20.4.1.	Turbidimetric Assay	287
20.4.2.	Nephelometric Assay	289
21.	ULTRAVIOLET AND ABSORPTION METHODS	293
21.1.	Introduction	293

21.2.	Theory	293
21.2.1.	Electromagnetic Spectrum	293
21.2.2.	Schematic Representation of Electromagnetic Spectrum	294
21.2.3.	Molar Absorptivity	295
21.2.4.	Laws of Photometry	296
21.2.5.	Spectral Presentation	296
21.2.6.	Structural Features	297
21.2.7.	Absorption of Radiant Energy by Molecules	298
21.2.8.	Factors Influencing Absorption of Radiant Energy	301
21.3.	Instrumentation	303
21.3.1.	Single Beam Spectrophotometer	303
21.3.2.	Double Beam Spectrophotometer	304
21.4.	Assay Methods	306
21.4.1.	Methodology	306
21.4.2.	Spectrophotometers	306
21.4.3.	Preparation of Sample	307
21.4.4.	Measurement of Extinction (E)	307
21.4.5.	Examples	307
21.4.6.	UV-Absorption Characteristics of Some Official Pharmaceutical Substances	311

22. INFRARED SPECTROPHOTOMETRY 314

22.1.	Introduction	314
22.1.1.	Group Frequency Region	315
22.1.2.	Fingerprint Region	315
22.2.	Theory	315
22.2.1.	Molecular Vibrations	315
22.2.2.	Factors Influencing Vibrational Frequencies	318
22.3.	Instrumentation	323
22.3.1.	Single Monochromator Infrared Spectrophotometers	324
22.3.2.	Double-Monochromator Infrared Spectrophotometer	326
22.4.	Applications of IR-Spectroscopy in Pharmaceutical Assays	330
22.4.1.	Applications of IR-Spectroscopy in the Analysis of Pharmaceutical Substances	330
22.4.2.	Applications of IR-Spectroscopy in the Analysis of Pharmaceutical Dosage Forms	331
22.5.	Applications of IR-Spectroscopy in Analytical Chemistry	333
22.5.1.	Determination of cis-trans Isomer Ratio in Clomiphene Citrate	333
22.5.2.	To Distinguish and Characterize the pri-, sec- and tert-amine Salts from One Another	333
22.5.3.	IR-Spectroscopy in the Study of Complex Formations	334
22.5.4.	IR-Spectroscopy in Quantitative Reaction Sequence Study	334
22.5.5.	IR-Spectroscopy in the Identification of Functional Groups	334
22.5.6.	IR-Spectroscopy : Identification by Fingerprinting	335
22.5.7.	Interpretation of an IR-Spectrum	335

23. NUCLEAR MAGNETIC RESONANCE SPECTROSCOPY	339
23.1. Introduction	339
23.1.1. The NMR Phenomenon	340
23.1.2. Informations Provided by ¹ H-NMR (Proton-NMR)	341
23.2. Theory	342
23.2.1. Orientations of Magnetic Nucleus Under Bo	343
23.2.2. Precessional Frequency (ν)	343
23.2.3. Saturation of the Signal	344
23.2.4. Absorption Positions in NMR-spectrum	344
23.2.5. Chemical Shift	344
23.2.6. Spin-Spin Interactions	345
23.2.7. ³ H-NMR (Tritium NMR-Spectroscopy)	347
23.2.8. ¹³ C-NMR-Spectroscopy	348
23.2.9. 2D-NMR (Two Dimensional Correlation Spectroscopy or Two Dimensional Cosy Spectrum)	349
23.3. Interpretation of a NMR-Spectrum	350
23.3.1. Chemical Shift (δ) (Relative to Reference Compound, Usually Me ₄ Si)	351
23.3.2. Relative Peak Area	351
23.3.3. Multiplicity of the Signal	351
23.3.4. Coupling Constant (J)	351
23.4. Instrumentation	352
23.5. Applications of NMR-Spectroscopy in Pharmaceutical Analysis	353
23.5.1. Identification Testing	353
23.5.2. Assay of Drugs	353
24. EMISSION SPECTROSCOPY	357
24.1. Introduction	357
24.2. Theory	357
24.3. Instrumentation	361
24.3.1. Excitation Sources	361
24.3.2. Electrodes	363
24.3.3. Sample Handling	364
24.3.4. Monochromators	364
24.3.5. Detectors	365
24.3.6. Spectrographs	366
24.4. Applications of Emission Spectroscopy	368
25. FLAME SPECTROSCOPY	370
25.1. Introduction	370
25.2. Theory	371
25.3. Instrumentation	372
25.3.1. Simple Flame Photometer	372
25.3.2. Internal Standard Flame Photometer	373
25.4. Applications of Flame Emission Spectroscopy in Pharmaceutical Analysis	375
25.4.1. Assay of Sodium, Potassium and Calcium in Blood Serum and Water	375

25.4.2.	Assay of Barium, Potassium and Sodium in Calcium Acetate	375
25.4.3.	Cognate Assays	376
26.	ATOMIC ABSORPTION SPECTROSCOPY	378
26.1.	Introduction	378
26.2.	Theory	379
26.2.1.	Merits of AAS Over FES	379
26.2.2.	Demerits of AAS	380
26.3.	Instrumentation	380
26.3.1.	Single-Beam Atomic Absorption Spectrophotometer	380
26.3.2.	Double-Beam Atomic Absorption Spectrophotometer	382
26.4.	Important Aspects of Atomic Absorption Spectroscopy	383
26.4.1.	Analytical Techniques	383
26.4.2.	Detection Limit and Sensitivity	384
26.4.3.	Interferences	385
26.5.	Application of Atomic Absorption Spectroscopy in Pharmaceutical Analysis	387
26.5.1.	Assay of Total Zinc in Insulin Zinc Suspension	387
26.5.2.	Assay of Palladium in Carbenicillin Sodium	387
26.5.3.	Cognate Assays	388
 PART V : ASSAY METHODS BASED ON SEPARATION TECHNIQUES		
27.	LIQUID-LIQUID EXTRACTION	393
27.1.	Introduction	393
27.2.	Theory	394
27.2.1.	Error Due to the Volume Change	395
27.2.2.	Effectiveness of an Extraction	396
27.3.	Factors Influencing Solvent Extraction	397
27.3.1.	Effect of Temperature and Inert Solutes	397
27.3.2.	Effect of pH on Extraction	398
27.3.3.	Effect of Ion-Pair Formation	399
27.3.4.	Effect of Synergistic Extraction	400
27.4.	Emulsion Problem Encountered in Extractions	401
27.5.	Assay Methods Based on Liquid-Liquid Extraction	403
27.5.1.	Determination of Copper (I) as the Neo-Cuproin Complex	403
27.5.2.	Determination of Iron (III) as the 8-Hydroxy Quinolone Complex [Iron (III) Oxinate]	403
27.5.3.	Determination of Lead (I) by the Dithizone Method	404
27.5.4.	Determination of Molybdenum (VI) by the Thiocyanate Method	405
27.5.5.	Determinations of Nickel (II)	406
28.	THIN LAYER CHROMATOGRAPHY (TLC)	409
28.1.	Introduction	409
28.2.	Theory	410
28.2.1.	Versatility of TLC over Paper and Column Chromatography	410

28.3.	Experimental Techniques of TLC	411
28.3.1.	Preparation of Thin Layers on Plates	411
28.3.2.	Choice of Adsorbents	413
28.3.3.	Choice of Solvent System in TLC	415
28.3.4.	Activation of Adsorbent	417
28.3.5.	Purification of Silica Gel-G Layers	417
28.3.6.	Spotting of the Components	418
28.3.7.	Development of Thin Layers	418
28.3.8.	Special Techniques in TLC	419
28.3.9.	Chemical Reactions on TLC Plates	422
28.3.10.	Combination of TLC with other Techniques	423
28.3.11.	Detection of Components	423
28.3.12.	Evaluation of the Chromatogram	424
28.4.	Applications of TLC in Pharmaceutical Analysis	425
28.4.1.	Presence of Specific Substances as Impurities in Drug Substances	425
28.4.2.	Related Substances Present in Official Drugs	427
28.4.3.	Foreign Alkaloids Present in Alkaloidal Drugs	428
28.4.4.	Foreign Steroids Present in Steroidal Drugs	428
28.4.5.	Ninhydrin Positive Substances Present in Official Amino Acids	429
29.	GAS LIQUID CHROMATOGRAPHY (GLC)	431
29.1.	Introduction	431
29.2.	Theory	432
29.2.1.	Plate Theory	432
29.2.2.	Rate Theory	433
29.2.3.	Random Walk and Nonequilibrium Theory	433
29.3.	Instrumentation	435
29.3.1.	Carrier Gas Pressure Regulator and Flow Meter	436
29.3.2.	Sample Injection System	436
29.3.3.	Separation Column	437
29.3.4.	Thermal Compartment	437
29.3.5.	Detectors	437
29.3.6.	Recording of Signal Current	441
29.3.7.	Integrator	441
29.4.	Working Techniques for Quantitative Analysis	442
29.4.1.	Area Normalization	443
29.4.2.	Internal Standard Method	444
29.4.3.	Comparison Method	445
29.5.	Applications of GLC in Pharmaceutical Analysis	445
29.5.1.	Assay of Drugs	446
29.5.2.	Determination of Specific Organic Compounds as Impurities in Official Pharmaceutical Substances	447
29.5.3.	Determination of Related Substances in Official Drugs	448
29.5.4.	Determination of Water in a Drug	449
29.5.5.	Determination of Chloroform in Colchicine by Head-Space Gas Chromatography	449

30. HIGH PERFORMANCE LIQUID CHROMATOGRAPHY (HPLC)	452
30.1. Introduction	452
30.2. Theory	453
30.3. Instrumentation	455
30.3.1. Solvent Reservoir and Degassing System	456
30.3.2. Pressure, Flow and Temperature	456
30.3.3. Pumps and Sample Injection System	457
30.3.4. Columns	459
30.3.5. Detectors	461
30.3.6. Strip Chart Recorder	465
30.3.7. Data Handling Device and Microprocessor Control	466
30.4. Derivatization	466
30.4.1. Pre-Column Off-Line Derivatization	466
30.4.2. Post-Column On-Line Derivatization	467
30.4.3. Reagents for Derivatization	467
30.5. Applications of HPLC in Pharmaceutical Analysis	468
30.5.1. Isolation of Natural Pharmaceutically Active Compounds	468
30.5.2. Control of Microbiological Processes	468
30.5.3. Assay of Cephalosporins	469
30.5.4. Assay of Frusemide	470
30.5.5. Assay of Theophylline	471
30.5.6. Assay of Corticosteroids	472
30.5.7. Assay of Dichlorphenamide	473
30.5.8. Assay of Human Insulin	473
30.5.9. Cognate Assays	473
31. SIZE EXCLUSION CHROMATOGRAPHY	476
31.1. Introduction	476
31.2. Theory	477
31.2.1. Distribution Coefficient (K_D)	478
31.2.2. Performance	478
31.2.3. Materials	478
31.3. Apparatus	479
31.3.1. Application of Sample	479
31.3.2. Detection and Recording	479
31.4. Applications of Size Exclusion Chromatography in Pharmaceutical Analysis	480
31.4.1. Determination of Relative Component Composition	480
31.4.2. Determination of Molecular Weight	480
31.4.3. Corticotrophin : For Impurities of Higher Molecular Weights	480
31.4.4. Insulin : For Proteins of Higher Molecular Weight	481
31.4.5. Human Insulin : For Proteins of Higher Molecular Weight	481
31.4.6. Plasma Protein Solution : For Polymers and Aggregates	481

PART VI : MISCELLANEOUS METHODS

32. RADIOIMMUNOASSAY	485
32.1. Introduction	485
32.2. Theory	486
32.2.1. Hapten Determinants and Purity : The Key to Immunological Specificity	487
32.2.2. Importance of Antigenic Determinants	487
32.2.3. Analysis by Competitive Antibody Binding or Isotopically Labelled Compounds	488
32.3. Instrumentation	491
32.3.1. Centrifuge	491
32.3.2. Radioactive Counters	491
32.4. Methodology of the Assay	492
32.5. Applications of Radioimmunoassay (RIA) in Pharmaceutical Analysis	492
32.5.1. Radioimmunoassay of Morphine	493
32.5.2. Radioimmunoassay of Hydromorphone and Hydrocodone in Human Plasma	494
32.5.3. Radioimmunoassay of Clonazepam	495
32.5.4. Radioimmunoassay of Flurazepam in Human Plasma	496
32.5.5. Radioimmunoassay of Chlordiazepoxide in Plasma	497
32.5.6. Radioimmunoassay of Barbiturates	499
32.5.7. Radioimmunoassay of Flunisolide in Human Plasma	500
32.6. Novel Applications of RIA-Techniques	502
32.6.1. Combined RIA-Techniques Isotope Dilution	502
32.6.2. Stereospecificity	503
INDEX	510
