Introduction

‘Fashion is merely a form of ugliness so unbearable that we are compelled to alter it every six months.’

Oscar Wilde

Oscar Wilde was passionate about his appearance and his clothes, so it is perhaps with his tongue planted firmly in his cheek that he made the above remark. We are drawn to fashion, not only as a means to express ourselves individually by the way we dress, but also as a method of creative expression through design.

Fashion is a constant search for the new. It is hungry and ruthless. But to be able to create clothes is also very exciting and very rewarding.

In this book we will introduce you to the fundamental principles of fashion design. Designers do not just sit at a desk and design pretty frocks. They need to research and develop a theme, source fabrics and develop a cohesive range with them. A good designer understands the differing properties of fabric and what is achievable with them, and an understanding of the techniques of garment construction is essential to fashion design. When developing a collection, a designer needs to think about whom they are designing for, what type of garments they are developing and for what season.

The finished collection of garments is only the start; it then has to be promoted and marketed. A fashion designer is only one of many jobs in the fashion industry. Not everyone with a love of fashion has the ability to be a talented designer. It might be that you find you are more suited to another career within the fashion industry. There are creative people with a love of fashion who are fashion buyers, selling agents, journalists, photographers, stylists, illustrators, and all of these people are essential to the success of the fashion designer.

The Fundamentals of Fashion Design is packed with varied examples of work by talented designers and others in the fashion industry, used to illustrate the no-nonsense text and to inspire you.

We hope that you enjoy it...
