MEDICAL TEXTILES AND BIOMATERIALS FOR HEALTHCARE

Related titles:

Medical textiles; Proceedings of the International Conference, 24 and 25 August 1999, Bolton Institute. UK

(ISBN-13: 978-1-85573-494-4; ISBN-10: 1-85573-494-X)

Medical textiles are one of the major growth areas within technical textiles. This book comprises 29 original edited papers and gives a fascinating insight into the current state of research and development in this rapidly changing field. Papers are presented under the following headings: modern materials and processes; compression and bandaging; healthcare and hygiene; woundcare; implantable devices; test methods.

Hyaluronan; Proceedings of an international meeting, September 2000, North East Wales Institute, UK

(ISBN-13: 978-1-85573-570-5; ISBN-10: 1-85573-570-9)

Hyaluronan and its derivatives have developed very quickly in the last few years from a scientific novelty into an important new material for a diverse range of medical and biomaterial applications. The landmark conference on which this two volume reference work is based focused on recent developments and applications in the use of hyaluronan in tissue repair and reconstruction, drug delivery systems, anti-cancer treatments and joint recovery and engineering. The entire range of hyaluronan progress is dealt with in depth by more than 135 individual papers presented in two volumes covering: analytical chemistry; chemical modification; physical characterisation; cell biology and medical applications.

New millennium fibers

(ISBN-13: 978-1-85573-601-6; ISBN-10: 1-85573-601-2)

This book describes and identifies the scope of high-tech fibers. The present status and prospects of fiber/textile technology are discussed and high performance fibers are reviewed from origin to future applications, including carbon fiber. The themes of the book are summarised with a discussion on health care and the environment. *New millennium fibers* explores the exciting roles that fibers will play in the future and will be an essential book for all those in the textile and fashion industry involved in fiber development or use.

Preface	хi
Part I Biomaterials utilised in medical textiles	
Biomaterials utilised in medical textiles: An overview JF Kennedy and CJ Knill, Chembiotech Laboratories, UK	3
New generations of resorbable biomaterials with textile structures A Ene, C Mihai, The Research-Development National Institute for Textile and Leather, Romania	23
Reformed collagen fibres D Zeugolis, G Paul, G E Attenburrow, University College of Northampton, UK	29
Novel chitosan-alginate fibres for advanced wound dressings M Miraftab, G Smart, University of Bolton, UK, J F Kennedy, C J Knill, J Mistry, Chembiotech Laboratories, UK, M R Groocock, SSL International plc, UK	37
Modification of alginic acid fibres with hydrolysed chitosans J F Kennedy, C J Knill, J Mistry, Chembiotech Laboratories, UK, M Miraftab, G Smart, University of Bolton, UK, M R Groocock, SSL International plc, UK	50
The effect of degradation on the mechanical properties of biodegradable polylactide yarns and textiles C Golding, E Ekevall, S R Wallace and R R Mather, Heriot-Watt University, UK	58
Chitosan: Crawling from crab shells to wound dressings G Smart, M Miraftab, University of Bolton, J F Kennedy Chembiotech Laboratories, UK, M R Groocock, SSL International Ltd, UK	67
Part II Healthcare and hygiene products	
Healthcare and hygiene products: An overview S C Anand, The University of Bolton, UK	75
Application of nonwovens in healthcare and hygiene sector C J Ajmeri and J R Ajmeri, Sarvajanick College of Engineering and Technology, India	80
Role of advanced textile materials in healthcare R D Anandjiwala, Centre for Fibres, Textiles and Clothing, South Africa	90

Improving the quality of life and comfort in wool and blended fabrics for the elderly	
R A L Miguel, J M Lucas, University of Beira Interior, Portugal, A M Manich, CSIC, Research and Development Center, Spain	99
Using ultrasonic energy for bleaching cotton in hygiene textiles S I Mistik, S M Yukseloglu, Marmara University, Turkey	107
A study of the prevalence of respiratory morbidity in the workers of textile industry of Baroda City V. M. Shobha, P. V. Kotecha and G. D. Joshi, Baroda Medical College, India	113
Market research and overview of Turkish hygienic products M Akalin, Marmara University, Turkey, A O Agirgan, Trakya University, Turkey	122
Part III Infection control and barrier materials	
Infection control and barrier materials: An overview S Rajendran, The University of Bolton, UK	131
The use of dye-like interactions for developing novel infection-resistant materials M J Bide, University of Rhode Island, USA, H-M Choi, Soongsil University, Korea, M D Phaneuf, W C Quist and F W LoGerfo, Beth Israel Deaconess Medical Center, USA	136
Nylon 6,6 knitted fabrics with antibacterial properties D Saihi, A El-Achari, Laboratoire GEMTEX, France, A Ghenaim, ENSAIS, France, C Caze, Laboratoire GEMTEX, France	144
The impact of ageing on the properties of single-use OR garments M J Abreu, M E Cabeço-Silva, Universidade do Minho, Portugal, L Schacher, D C Adolphe, Ecole Nationale Supérieure des Industries Textiles de Mulhouse, France	153
The use of Amicor Pure technology in medical textiles Roland Cox, Acordis Acrylic Fibres, UK	162
Qualitative evaluation of the barrier effect of textilcs in use D Aibibu, B Lehmann and P Offermann, Institute of Textile and Clothing Technology, Germany	168
Reducing microbial contamination in hospital blankets: a contribution to combat nosocomial infections (hospital infections) P Vandendaele, A Langerock, Devan Chemicals, Belgium, W Curtis White, J Krueger, ÆGIS Environments, USA	177
Durable and rechargeable biocidal textiles G Sun, University of California, USA	187

Barrier textiles by wet finishing and plasma treatment M N Islam, M Harun, U Lappan and B Voit, Institute of Polymer Research, Germany	195			
Novel approach to breathable nonwoven hygienic products M Akalin, S M Yukseloglu, B C Gultekin and A O Agirgan, Marmara University, Turkey	201			
Part IV Bandaging and pressure garments				
Bandaging and pressure garments: An overview S Rajendran, The University of Bolton, UK	211			
A comparison of elastic and non-elastic compression bandages for venous leg ulcer treatment E A Nelson, University of York, UK	217			
The study of pressure delivery for hypertrophic scar treatment L Macintyre, M Baird, P Weedall, Heriot-Watt University, UK	224			
Evaluation of pressure profile of bandages using mannequin leg S Rajendran, S C Anand, The University of Bolton, UK	233			
Effect of fibre type and structure in designing orthopaedic wadding for the treatment of venous leg ulcers S C Anand and S Rajendran, The University of Bolton, UK	243			
Assessment of fabrics worn on the upper limbs A Davies and J Williams, De Montfort University, UK	256			
Bandaging techniques using short-stretch compression bandages H Charles, Clinical Nurse Specialist, UK				
Part V Woundcare materials				
Woundcare materials: An overview M Miraftab, The University of Bolton, UK	273			
The use of textiles in burns – from injury to recovery J Edwards, Wythenshawe Hospital, UK	279			
Woundcare dressings from chitin K Van de Velde, Ghent University, Belgium, L Szosland, I Krucińska, Technical University of Łódź, Poland	286			
Metronidazole loaded microspheres and membranes of dibutyrylchitin: preparation and drug release investigation A Blasinska, L Szosland, A Krucińska, Technical University of Łódź, Poland	296			

Epistaxis device and nasal surgical dressings J O Hudson, Endocavitas Research Ltd, UK	303
Conducting clinical trials in woundcare DV Praburaj, SC Anand, CDean and RNettleton, The University of Bolton, UK	310
New approach to produce absorbent pads for new end uses D Kocak, M Akalin, I Usta, N Merdan, Marmara University, Turkey	320
Part VI Implantable devices	
Implantable devices: An overview S C Anand, The University of Bolton, UK	329
Repair of articular cartilage defects using 3-dimensional tissuc engineering textile architectures R J Minns, Newcastle General Hospital, S J Russell, University of Leeds, S Young, University Hospital of North Durham, R Bibb, UWIC, Cardiff, P Moliter, Scunthorpe and Goole NHS Trust	335
Manufacture and <i>in vitro</i> bioactivity of sol-gel-derived silica fibre and P(L/D,L)LA composite T Peltola, V Ääritalo, University of Turku, Finland, A M Haltia, M Vehviläinen, Tampere University of Technology, Finland, S Areva, Åbo Akademi University, Finland, P Nousiainen, Tampere University of Technology, Finland, M Jokinen, A Yli-Urpo, University of Turku, Finland	342
A spider silk supportive matrix used for cartilage regeneration K Gellynck, P Verdonk, F Almqvist, E Van Nimmen, D De Bakker, L Van Langenhove, J Mertens, G Verbruggen, P Kiekens, University of Ghent, Belgium	350
Nonwoven scaffolds of improved design for the tissue engineering of the anterior cruciate ligament S L Edwards, S J Russell, E Ingham, J B Matthews, W Mitchell, University of Leeds, UK	355
New prophylaxis method of children's teeth caries R Alimova, Tashkent Institute of Textile and Light Industry, Uzbekistan	366
Part VII Medical devices	
Medical devices: An overview M Miraftab, The University of Bolton, UK	373
Knot performance of monofilament and braided polyamide sutures under different test conditions E Karaca, AS Hockenberger, University of Uluday, Turkey	378

Enhancing physio-chemical behaviour of P(LLA/CL) suture by solvent treatment P Patel, A Jalal, M S University of Baroda, India, Y Ohkoshi, Shinshu University, Japan	386
Barbed, bi-directional surgical sutures J C Leung, G L Ruff, Quill Medical Inc, USA, M W King, P P Dattilo Jnr, North Carolina State University, USA	395
Natural silk based surgical threads production technology exploitation R Alimova, R Burnashev, M Khikmatullaeva, A Gulamov, Tashkent State Medical Institute and Tashkent Institute of Textiles and Light Industry, Uzbekistan	404
New generation of vascular prostheses accomplished through weaving technologies	
C Mihai, A Ene, The Research-Development National Institute for Textile and Leather, Romania	409
The Medical Devices Faraday Partnership F C Smith, TWI Ltd, UK	417
The potential for localised delivery of antibiotics from braided surgical sutures M W King, A D Jones, University of Manitoba, Canada	425
Surgical sutures: the largest textile implant material JR Ajmeri, C J Ajmeri, Sarvajanik College of Eng and Tech, India	432
Nerve implants N Yıldız, Pamukkale University, Turkey	441
Part VIII Intelligent textiles for medical applications	
Intelligent textiles for medical applications: An overview L Van Langenhove, R Puers, D Matthys, University of Ghent, Belgium	451
Delivering cell therapy for chronic wounds D Haddow, R Short, S MacNeil, M Jarmolowicz, M Moustafa, C Hernon, CellTran Ltd, UK	476
Textile finishing for the production of new generation medical textiles N D Oltargevskaya, G E Krichevsky, Educational Textile Institute, Russia	482
The effect of ammonia and sulphur dioxide gas plasma treatments on polymer surfaces	
E Ekevall, J I B Wilson, R R Mather, Heriot-Watt University, UK	491
Index	499

PREFACE

Medical textiles are a major growth area within the technical textiles sector and the range of applications for such products continue to grow and increase in diversity with every new development. This new book is the culmination of worldwide research into medical textiles and biomaterials for healthcare and is based on the most innovative and exciting papers presented at MEDTEX03. The presented research has been thoroughly edited by a group of leading experts in the field and combined with expert overviews to produce an invaluably comprehensive book covering all aspects of major research into medical textiles and biomaterials for healthcare.

The book consists of eight parts each covering the main areas of basic biomaterials, healthcare and hygiene products, infection control and barrier materials, bandaging and pressure garments, woundcare materials, implantable devices, medical devices and smart technologies. I am deeply grateful to my co-editors, Professor John F Kennedy from the University of Birmingham Research Park, Dr Mohsen Miraftab and Dr Subbiyan Rajendran, both from the University of Bolton, for their generous input in terms of time, effort and above all expertise during preparation of the manuscript. Their contribution and cooperation is greatly appreciated. All editors have endeavoured to make this book as consistent and coherent as possible.

I sincerely feel that the readers will find the book both interesting and informative, as it contains state of the art innovations and developments in medical textiles and biomaterials for healthcare.

I wish to thank all the authors, poster presenters and the exhibitors for their cooperation and permission for publication of their contributions at MEDTEX, The International Conference and Exhibition on Healthcare and Medical Textiles, hosted by the Centre for Materials Research and Innovation, the University of Bolton and organised in association with Tampere University of Technology, Finland.

A number of people are involved in the production of a successful conference and this subsequent book. I wish to express my sincere thanks to Professor Pertti Nousiainen, Mrs Kiyoko Hay and Mrs Anita Taylor for their valuable help during the conference. I am particularly grateful to Mrs Anita Taylor for her consistent help and hard work during the editing and preparation of this book, and Miss Emma Starr of Woodhead Publishing Limited; UK for her consistent help and understanding.

Professor Subhash Anand Co-ordinating Editor The University of Bolton, Bolton, UK
