Geosynthetics in civil engineering

Related titles:

Corrosion of reinforcement in concrete (EFC 38)

(ISBN-13: 978-1-84569-210-0; ISBN-10: 1-84569-210-1)

The results of research into and application of various prevention, protection and remedial methods are discussed, together with aspects of the understanding of the mechanisms of the processes that are involved. Experience in the field with the application of electrochemical methods for protection and restoration and procedures for monitoring the protection are described.

Advanced civil infrastructure materials: Advancements in science and mechanics

(ISBN-13: 978-1-85573-943-7; ISBN-10: 1-85573-943-7)

In recent decades, developments in response to the call for more durable infrastructures has led to many exciting advancements in materials science and mechanics. This book provides an up-to-date review of several emerging infrastructure materials – especially in advanced composites – that may have a significant impact on repair and/or new construction. Each chapter concludes with selective examples of real-world applications using advanced materials. This book will be an invaluable reference source for undergraduate and graduate students of civil engineering, materials, architecture and building engineering, and will serve as a guide for researchers and professional engineers in the construction industry.

Flammability testing of materials used in construction, transport and mining

(ISBN-13: 978-1-85573-935-2; ISBN-10: 1-85573-935-6)

This authoritative work provides a comprehensive source of reference for regulators, researchers and all those concerned with the flammability testing of materials over three industrial sectors: construction, transport and mining. The book concentrates on practical applications via the careful selection of case studies, with an overall emphasis on specific types of tests that are widely accepted and internationally practised in a variety of applications. This book will be particularly welcome in simplifying the difficult and often confusing area of national regulations and fire test procedures.
