C. Solution S previously neutralised using a 100 g/L solution of *potassium hydroxide R* gives reaction (a) of *sodium* (2.3.1).

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.

Appearance of solution

Solution S is *clear* (2.2.1) and *colourless* (2.2.2, Method II).

pH (2.2.3)

4.2 to 4.5.

To 5 mL of solution S add 5 mL of *carbon dioxide-free water R*.

Reducing substances

To 5 mL of solution S add 0.25 mL of a 3.2 g/L solution of *potassium permanganate R* and 5 mL of *dilute sulfuric acid R* and heat in a water-bath for 5 min. The colour of the permanganate is not completely discharged.

Chlorides (2.4.4)

Maximum 200 ppm.

Dilute 2.5 mL of solution S to 15 mL with *water R*.

Sulfates (2.4.13)

Maximum 300 ppm.

To 5 mL of solution S add 0.5 mL of *hydrochloric acid R* and dilute to 15 mL with *distilled water R*.

Iron (2.4.9)

Maximum 10 ppm, determined on solution S.

Loss on drying (2.2.32)

21.5 per cent to 24.0 per cent, determined on 0.500 g by drying in an oven at 130 °C.

ASSAY

Dissolve 2.500 g in 40 mL of *water R*. Titrate with carbonate-free 1 M *sodium hydroxide*, determining the end-point potentiometrically (2.2.20).

1 mL of 1 M *sodium hydroxide* is equivalent to 0.120 g of NaH₂PO₄.

Ph Eur

Sodium Dihydrogen Phosphate Monohydrate

NaH₂PO₄·H₂O 138.0 10049-21-5

Action and use

Excipient.

Preparation

Phosphates Enema

DEFINITION

Sodium Dihydrogen Phosphate Monohydrate contains not less than 98.0% and not more than 100.5% of NaH₂PO₄, calculated with reference to the dried substance.

CHARACTERISTICS

Colourless crystals or a white powder.

Very soluble in *water*; very slightly soluble in *ethanol* (96%).

Dissolve 10.0 g in sufficient *carbon dioxide-free water* prepared from *distilled water* to produce 100 mL (solution S).

IDENTIFICATION

- A. Solution S is *slightly acid*, Appendix V K.
- B. Solution S yields the reactions characteristic of *phosphates*, Appendix VI.
- C. Solution S neutralised with a 10% w/v solution of *potassium hydroxide* yields reaction A characteristic of *sodium salts*, Appendix VI.
- D. Complies with the test for Loss on drying.

TESTS

Acidity

pH of a mixture of 5 mL of solution S and 5 mL of *carbon dioxide-free water*, 4.2 to 4.5, Appendix V L.

Clarity and colour of solution

Solution S is *clear*, Appendix IV A, and *colourless*, Appendix IV B, Method II.

Arsenic

0.5 g complies with the *limit test for arsenic*, Appendix VII (2 ppm).

Iron

10 mL of solution S complies with the *limit test for iron*, Appendix VII (10 ppm).

Chloride

Dilute 2.5 mL of solution S to 15 mL with *water*.

The resulting solution complies with the *limit test for chlorides*, Appendix VII (200 ppm).

Sulfate

To 5 mL of solution S add 0.5 mL of *hydrochloric acid* and dilute to 15 mL with *distilled water*. The resulting solution complies with the *limit test for sulfates*, Appendix VII (300 ppm).

Reducing substances

To 5 mL of solution S add 0.25 mL of 0.02M *potassium permanganate* and 5 mL of 1M *sulfuric acid* and heat in a water bath for 5 minutes. The solution retains a slight red colour.

Loss on drying

When dried to constant weight at 130°, loses 11.5 to 14.5% of its weight. Use 0.5 g.

ASSAY

Dissolve 2.2 g in 50 mL of *water* and titrate with carbonate-free 1M *sodium hydroxide VS* determining the end point potentiometrically. Each mL of 1M *sodium hydroxide VS* is equivalent to 0.120 g of NaH₂PO₄.

Sodium Feredetate

C₁₀H₁₂N₂O₈FeNa·3H₂O 421.1 15708-41-5 (*anhydrous*)

Action and use

Source of iron.

Preparation

Sodium Feredetate Oral Solution

DEFINITION

Sodium Feredetate is iron(III) sodium ethylenediaminetetraacetate trihydrate. It contains not less than 98.0% and not more than 102.0% of C₁₀H₁₂N₂O₈FeNa, calculated with reference to the anhydrous substance.

CHARACTERISTICS

A yellow or yellowish brown, crystalline powder.

IDENTIFICATION

- A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of sodium feredetate (RS 378).
- B. Ignite 0.5 g and allow to cool. Dissolve the residue in 2 mL of *hydrochloric acid*, add sufficient *water* to produce 20 mL and filter. The filtrate yields reaction C characteristic of *iron salts*, Appendix VI. Dilute 1 volume of the filtrate to 10 volumes with *water*, the solution yields reaction B characteristic of *iron salts*, Appendix VI.
- C. Dissolve 2 g in 30 mL of *water*, slowly add 6.5 mL of a 20% w/v solution of *potassium hydroxide*, shake and filter the resulting suspension. Evaporate 8 mL of the filtrate to dryness, ignite and dissolve the residue in 4 mL of *water*. The solution yields reaction B characteristic of *sodium salts*, Appendix VI.

TESTS**Acidity**

pH of a 1% w/v solution, 3.5 to 5.5, Appendix V L.

Free iron

Not more than 500 ppm, when determined by the following method. Dissolve 0.2 g in sufficient *water* to produce 20 mL and filter. Label three tubes A, B and C. Place 5 mL of the filtrate into each of tubes A and B and 4 mL of *water* and 1 mL of an iron standard solution prepared in the following manner in tube C. For the iron standard solution dilute 25 volumes of a 0.1726% w/v solution of *ammonium iron(III) sulfate* in 0.05M *sulfuric acid* to 200 volumes with *water* (25 ppm of Fe(III)). Add 1 mL of a 1.0% w/v solution of *disodium catechol-3,5-disulfonate* into each of tubes A and C and 1 mL of *water* to tube B. Measure the *absorbance* of solution A at 670 nm, Appendix II B, using solution B in the reference cell and of solution C using *water* in the reference cell. The absorbance of solution A is not greater than that of solution C.

Free sodium edetate

To 4 mL of a 1.0% w/v solution add 2 mL of an iron standard solution prepared in the following manner and 1 mL of a 1.0% w/v solution of *disodium catechol-3,5-disulfonate* and mix. For the iron standard solution dilute 50 volumes of a 0.1726% w/v solution of *ammonium iron(III) sulfate* in 0.05M *sulfuric acid* to 200 volumes with *water* (50 ppm of Fe(III)). Prepare a standard in the same manner using 4 mL of a 0.010% w/v solution of *disodium edetate* in place of the solution of the substance being examined. Measure the *absorbance* of the solutions at 670 nm, Appendix II B, using *water* in the reference cell. The absorbance of the solution of the substance being examined is not less than that of the standard solution (1%).

Nitritotriacetic acid

Carry out the method for *liquid chromatography*, Appendix III D, protected from light, using the following solutions.

Solvent A To 10 volumes of a 50% w/v solution of *iron(III) sulfate pentahydrate* in 0.5M *sulfuric acid* add 390 volumes of *water*, adjust to a pH of 2.0 with 1M *sodium hydroxide* and dilute to 500 volumes with *water*.

- (1) 0.4% w/v of the substance being examined in solvent A. Mix with the aid of ultrasound.
- (2) 0.0004% w/v of *nitritotriacetic acid* in solvent A.
- (3) 0.0004% w/v of *nitritotriacetic acid* in solution (1).

CHROMATOGRAPHIC CONDITIONS

- (a) Use a stainless steel column (10 cm × 4.6 mm) packed with spherical *graphitised carbon for chromatography R1* (5 µm) with a specific surface area of 120 m²/g and a pore size of 25 nm (*Hypercarb* is suitable).
- (b) Use isocratic elution and the mobile phase described below.
- (c) Use a flow rate of 1.0 mL per minute.
- (d) Use an ambient column temperature.
- (e) Use a detection wavelength of 273 nm.
- (f) Inject 20 µL of each solution.

MOBILE PHASE

To 50 volumes of a 0.01% w/v solution of *iron(III) sulfate pentahydrate* in 0.5M *sulfuric acid*, add 750 volumes of *water*. Adjust to a pH of 1.5 with 0.5M *sulfuric acid* or 1M *sodium hydroxide* and add 20 volumes of *ethylene glycol*. Dilute to 1000 volumes with *water*.

When the chromatograms are recorded under the prescribed conditions the retention of sodium ferredetate relative to nitritotriacetic acid (retention time, about 5 minutes) is about 2.0.

SYSTEM SUITABILITY

The test is not valid unless, in the chromatogram obtained with solution (3), the *resolution* between the peaks due to nitritotriacetic acid and sodium ferredetate is at least 4.0.

LIMITS

In the chromatogram obtained with solution (1): the area of any peak corresponding to nitritotriacetic acid is not greater than the area of the principal peak in the chromatogram obtained with solution 2 (0.1%).

Chlorides

Dissolve 1 g in 100 mL of *water* and filter. 15 mL of the filtrate complies with the *limit test for chlorides*, Appendix VII (350 ppm).

Sulfates

Dissolve 2 g in 40 mL of *water*, add 5 mL of a 20% w/v solution of *sodium hydroxide* and sufficient *water* to produce 50 mL, shake and filter. Evaporate 6.2 mL of this solution to dryness and ignite until no trace of carbon remains. Cool and dissolve the residue in 10 mL of *distilled water*. Neutralise the solution with 2M *hydrochloric acid* using *litmus paper* as external indicator and add 2 mL in excess. Boil the solution, cool, dilute to 15 mL with *distilled water* and filter. The filtrate complies with the *limit test for sulfates*, Appendix VII (600 ppm).

Water

12.0% to 13.5% w/w, Appendix IX C, Method I. Use 0.1 g.

ASSAY

Dissolve 1 g in 40 mL of *water* in an iodine flask, add 20 mL of *hydrochloric acid* and 3 g of *potassium iodide*, close the flask and allow to stand for 5 minutes. Titrate the liberated iodine with 0.1M *sodium thiosulfate VS* using *starch mucilage* as indicator. Repeat the procedure without the substance being examined. The difference between the titrations represents the amount of sodium thiosulfate required. Each mL of 0.1M *sodium thiosulfate VS* is equivalent to 36.71 mg of C₁₀H₁₂N₂O₈FeNa.

Sodium Fluoride

(Ph. Eur. monograph 0514)

NaF 41.99

7681-49-4

Action and use

Used in prevention of dental caries.

Preparations

Sodium Fluoride Mouthwash
Sodium Fluoride Oral Drops
Sodium Fluoride Oral Solution
Sodium Fluoride Tablets

Ph Eur

DEFINITION**Content**

98.5 per cent to 100.5 per cent (dried substance).

CHARACTERS**Appearance**

White or almost white powder or colourless crystals.

Solubility

Soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. To 2 mL of solution S (see Tests) add 0.5 mL of *calcium chloride solution R*. A gelatinous white precipitate is formed that dissolves on adding 5 mL of *ferric chloride solution R1*.

B. To about 4 mg add a mixture of 0.1 mL of *alizarin S solution R* and 0.1 mL of *zirconyl nitrate solution R* and mix. The colour changes from red to yellow.

C. Solution S gives reaction (a) of sodium (2.3.1).

TESTS**Solution S**

Dissolve 2.5 g in *carbon dioxide-free water R* without heating and dilute to 100 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

Acidity or alkalinity

Dissolve 2.5 g of *potassium nitrate R* in 40 mL of solution S and dilute to 50 mL with *carbon dioxide-free water R*. Cool to 0 °C and add 0.2 mL of *phenolphthalein solution R*. If the solution is colourless, not more than 1.0 mL of 0.1 M *sodium hydroxide* is required to produce a red colour that persists for at least 15 s. If the solution is red, not more than 0.25 mL of 0.1 M *hydrochloric acid* is required to change the colour of the indicator.

Chlorides (2.4.4)

Maximum 200 ppm.

Dilute 10 mL of solution S to 15 mL with *water R*.

Fluorosilicates

Heat to boiling the neutralised solution obtained in the test for acidity or alkalinity and titrate whilst hot. Not more than 0.75 mL of 0.1 M *sodium hydroxide* is required to change the colour of the indicator to red.

Sulfates (2.4.13)

Maximum 200 ppm.

Dissolve 0.25 g in 10 mL of a 223 g/L solution of *aluminium nitrate R*. Add 5 mL of *distilled water R* and 0.6 mL of *hydrochloric acid R1*. Prepare the standard by mixing 0.6 mL of *hydrochloric acid R1*, 5 mL of *sulfate standard solution (10 ppm SO₄) R* and 10 mL of a 223 g/L solution of *aluminium nitrate R*.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 130 °C for 3 h.

ASSAY

Dissolve 0.100 g in *water R* and dilute to 60 mL with the same solvent. Titrate with 0.1 M *lanthanum nitrate*, determining the end-point potentiometrically (2.2.20) using a fluoride-selective indicator electrode and a silver-silver chloride reference electrode.

1 mL of 0.1 M *lanthanum nitrate* is equivalent to 12.60 mg of NaF.

Sodium Fusidate

(Ph. Eur. monograph 0848)

C₃₁H₄₇NaO₆

538.7

751-94-0

Action and use

Antibacterial.

Preparation

Sodium Fusidate Ointment

Ph Eur

DEFINITION

Sodium *ent*-(17*Z*)-16 α -(acetyloxy)-3 β ,11 β -dihydroxy-4 β ,8,14-trimethyl-18-nor-5 β ,10 α -cholesta-17(20),24-dien-21-oate.

Antimicrobial substance produced by fermentation of certain strains of *Fusidium coccineum* or by any other means.

Content

97.5 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS**Appearance**

White or almost white, crystalline powder, slightly hygroscopic.

Solubility

Freely soluble in water and in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison sodium fusidate CRS.

B. Ignite 1 g. The residue gives reaction (a) of sodium (2.3.1).

TESTS**Appearance of solution**

The solution is not more intensely coloured than reference solution B₆ (2.2.2, *Method II*).

Dissolve 1.5 g in 10 mL of *water R*.

pH (2.2.3)

7.5 to 9.0.

Dissolve 0.125 g in 10 mL of *carbon dioxide-free water R*.

Related substances

Liquid chromatography (2.2.29). *Prepare the solutions immediately before use.*

Solvent mixture methanol R, 5 g/L solution of phosphoric acid R, acetonitrile R (10:40:50 V/V/V).

Test solution Dissolve 25 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

Reference solution (a) Dissolve 2 mg of *fusidic acid for peak identification CRS* (containing impurities A, B, C, D, F, G, H and N) in the solvent mixture and dilute to 1.0 mL with the solvent mixture.

Ph Eur

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

Reference solution (c) Dilute 1.0 mL of reference solution (b) to 10.0 mL with the solvent mixture.

Reference solution (d) Dissolve the contents of a vial of *fusidic acid impurity mixture CRS* (containing impurities I, K, L and M) in 1.0 mL of the solvent mixture.

Column:

- size: $l = 0.15$ m, $\varnothing = 4.6$ mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (3.5 μ m);
- temperature: 30 °C.

Mobile phase:

- mobile phase A: methanol R, acetonitrile R, 5 g/L solution of phosphoric acid R (20:40:40 V/V/V);
- mobile phase B: 5 g/L solution of phosphoric acid R, methanol R, acetonitrile R (10:20:70 V/V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 3	100	0
3 - 28	100 → 0	0 → 100
28 - 33	0	100

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 235 nm.

Injection 20 μ L.

Identification of impurities Use the chromatogram supplied with *fusidic acid for peak identification CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, D, F, G, H and N; use the chromatogram supplied with *fusidic acid impurity mixture CRS* and the chromatogram obtained with reference solution (d) to identify the peaks due to impurities I, K, L and M.

Relative retention With reference to fusidic acid (retention time = about 18 min): impurity A = about 0.4; impurity B = about 0.5; impurity C = about 0.6; impurity D = about 0.63; impurity N = about 0.65; impurity F = about 0.7; impurity G = about 0.82; impurity H = about 0.85; impurity I = about 0.96; impurity K = about 1.18; impurity L = about 1.23; impurity M = about 1.4.

System suitability Reference solution (a):

- resolution: minimum 1.5 between the peaks due to impurities G and H.

Limits:

- correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity C = 0.7; impurity D = 0.7; impurity F = 0.3; impurity I = 0.6; impurity K = 0.6;
- impurity M: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- impurity G: not more than 0.7 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.7 per cent);
- impurity L: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- impurity B: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.4 per cent);

- impurity A: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.3 per cent);
- impurities C, D, F, I, K, N: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);
- total: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Water (2.5.12)

Maximum 2.0 per cent, determined on 0.500 g.

ASSAY

Dissolve 0.400 g in 30 mL of *water R* and add 40 mL of *ethanol (96 per cent) R*. Titrate with 0.1 M hydrochloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M hydrochloric acid is equivalent to 53.87 mg of $C_{31}H_{47}NaO_6$.

STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

IMPURITIES

Specified impurities A, B, C, D, F, G, I, K, L, M, N.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) E, H, J, O.

Ph Eur

Hydrated Sodium Glycerophosphate

(Ph. Eur. monograph 1995)

$C_3H_7Na_2O_6P \cdot xH_2O$ 216.0
(anhydrous substance)

Ph Eur

DEFINITION

Mixture of variable proportions of hydrated disodium (2*RS*)-2,3-dihydroxypropyl phosphate and hydrated disodium 2-hydroxy-1-(hydroxymethyl)ethyl phosphate. The mixture may contain various amounts of other glycerophosphate esters.

Content

98.0 per cent to 105.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or crystals.

Solubility

Freely soluble in water, practically insoluble in acetone and in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) gives reaction (a) of sodium (2.3.1).

B. To 0.1 g add 5 mL of *dilute nitric acid R*. Heat to boiling and boil for 1 min. Cool. The solution gives reaction (b) of phosphates (2.3.1).

C. In a test-tube fitted with a glass tube, mix 0.1 g with 5 g of *potassium hydrogen sulfate R*. Heat strongly and direct the white vapour into 5 mL of *decolorised fuchsin solution R*. A violet-red colour develops which becomes violet upon heating for 30 min on a water-bath.

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II (2.2.1) and not more intensely coloured than reference solution Y₆ (2.2.2, *Method II*).

Alkalininity

To 10 mL of solution S add 0.2 mL of *phenolphthalein solution R*. Not more than 1.0 mL of 0.1 *M hydrochloric acid* is required to change the colour of the indicator (*n*₂).

Glycerol and ethanol (96 per cent)-soluble substances
Maximum 1.0 per cent.

Shake 1.000 g with 25 mL of *ethanol (96 per cent) R* for 10 min. Filter. Evaporate the filtrate on a water-bath and dry the residue at 70 °C for 1 h. The residue weighs not more than 10 mg.

Chlorides (2.4.4)

Maximum 200 ppm.

Dilute 2.5 mL of solution S to 15 mL with *water R*.

Phosphates (2.4.11)

Maximum 0.1 per cent.

Dilute 1 mL of solution S to 10 mL with *water R*. Dilute 1 mL of this solution to 100 mL with *water R*.

Sulfates (2.4.13)

Maximum 500 ppm.

Dilute 3 mL of solution S to 15 mL with *water R*.

Calcium

Maximum 100 ppm, if intended for use in the manufacture of parenteral preparations.

Inductively coupled plasma-atomic emission spectrometry (2.2.57).

Test solution Dissolve 0.50 g in a 1 per cent *V/V* solution of *nitric acid R* and dilute to 50.0 mL with the same solution.

Reference solutions Prepare the reference solutions using *calcium standard solution (100 ppm Ca) R*, diluting with a 1 per cent *V/V* solution of *nitric acid R*.

Wavelength 396.8 nm.

Iron (2.4.9)

Maximum 20 ppm.

Dilute 5 mL of solution S to 10 mL with *water R*.

Water (2.5.12)

25.0 per cent to 35.0 per cent, determined on 0.100 g.

ASSAY

Dissolve 0.250 g in 30 mL of *water R*. Titrate with 0.05 *M* *sulfuric acid*, determining the end-point potentiometrically (2.2.20), (n_1).

Calculate the percentage content of sodium glycerophosphate (anhydrous substance) using the following expression:

$$\frac{216.0 \left(n_1 - \frac{n_2}{4} \right)}{m(100 - a)}$$

- a = percentage content of water;
- n_1 = volume of 0.05 *M* *sulfuric acid* used in the assay, in millilitres;
- n_2 = volume of 0.1 *M* *hydrochloric acid* used in the test for alkalinity, in millilitres;
- m = mass of the substance to be examined, in grams.

Ph Eur

Sodium Hyaluronate

(Ph. Eur. monograph 1472)

9067-32-7

Action and use

High viscosity mucopolysaccharide.

Ph Eur

DEFINITION

Sodium salt of hyaluronic acid, a glycosaminoglycan consisting of D-glucuronic acid and N-acetyl-D-glucosamine disaccharide units. It is extracted from cocks' combs or

obtained by fermentation from *Streptococci*, Lancefield Groups A and C.

Content

95.0 per cent to 105.0 per cent (dried substance).

Intrinsic viscosity: 90 per cent to 120 per cent of the value stated on the label.

PRODUCTION

Where applicable, the animals from which sodium hyaluronate is derived must fulfil the requirements for the health of animals suitable for human consumption.

When produced by fermentation of gram-positive bacteria, the process must be shown to reduce or eliminate pyrogenic or inflammatory components of the cell wall.

CHARACTERS

Appearance

White or almost white, very hygroscopic powder or fibrous aggregate.

Solubility

Springly soluble or soluble in water, practically insoluble in acetone and in anhydrous ethanol.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison Ph. Eur. reference spectrum of sodium hyaluronate.

B. It gives reaction (a) of sodium (2.3.1).

TESTS

Solution S

Weigh a quantity of the substance to be examined equivalent to 0.10 g of the dried substance and add 30.0 mL of a 9 g/L solution of *sodium chloride R*. Mix gently on a shaker until dissolved (about 12 h).

Appearance of solution

Solution S is clear (2.2.1) and its absorbance (2.2.25) at 600 nm is not greater than 0.01.

pH (2.2.3)

5.0 to 8.5.

Dissolve the substance to be examined in *carbon dioxide-free water R* to obtain a solution containing a quantity equivalent to 5 mg of the dried substance per millilitre.

Intrinsic viscosity

Sodium hyaluronate is very hygroscopic and must be protected from moisture during weighing.

Buffer solution (0.15 *M* *sodium chloride* in 0.01 *M* *phosphate buffer solution pH 7.0*). Dissolve 0.78 g of *sodium dihydrogen phosphate R* and 4.50 g of *sodium chloride R* in *water R* and dilute to 500.0 mL with the same solvent (solution A).

Dissolve 1.79 g of *disodium hydrogen phosphate dodecahydrate R* and 4.50 g of *sodium chloride R* in *water R* and dilute to 500.0 mL with the same solvent (solution B). Mix solutions A and B until a pH of 7.0 is reached. Filter through a sintered-glass filter (4) (2.1.2).

Test solution (a) Weigh 0.200 g (m_{0p}) (NOTE: this value is only indicative and should be adjusted after an initial measurement of the viscosity of test solution (a)) of the substance to be examined and dilute with 50.0 g (m_{0s}) of buffer solution at 4 °C. Mix the solution by shaking at 4 °C during 24 h. Weigh 5.00 g (m_{1p}) of the solution and dilute with 100.0 g (m_{1s}) of buffer solution at 25 °C. Mix this solution by shaking for 20 min. Filter the solution through a sintered-glass filter (100) (2.1.2), and discard the first 10 mL.

Test solution (b) Weigh 30.0 g (m_{2p}) of test solution (a) and dilute with 10.0 g (m_{2s}) of buffer solution at 25 °C. Mix this

solution by shaking for 20 min. Filter the solution through a sintered-glass filter (100) (2.1.2) and discard the first 10 mL.

Test solution (c) Weigh 20.0 g (m_{3p}) of test solution (a) and dilute with 20.0 g (m_{3s}) of buffer solution at 25 °C. Mix this solution by shaking for 20 min. Filter the solution through a sintered-glass filter (100) (2.1.2) and discard the first 10 mL.

Test solution (d) Weigh 10.0 g (m_{4p}) of test solution (a) and dilute with 30.0 g (m_{4s}) of buffer solution at 25 °C. Mix this solution by shaking for 20 min. Filter the solution through a sintered-glass filter (100) (2.1.2) and discard the first 10 mL.

Determine the flow-times (2.2.9) for the buffer solution (t_0) and for the 4 test solutions (t_1 , t_2 , t_3 and t_4), at

25.00 ± 0.03 °C. Use an appropriate suspended level viscometer (specifications: viscometer constant about

0.005 mm²/s², kinematic viscosity of 1-5 mm²/s, internal diameter of tube R 0.53 mm, volume of bulb C 5.6 mL, internal diameter of tube N 2.8-3.2 mm) with a funnel-shaped lower capillary end. Use the same viscometer for all measurements; measure all outflow times in triplicate.

The test is not valid unless the results do not differ by more than 0.35 per cent from the mean and if the flow time t_1 is not less than 1.6 and not more than 1.8 times t_0 . If this is not the case, adjust the value of m_{0p} and repeat the procedure.

Calculation of the relative viscosities

Since the densities of the sodium hyaluronate solutions and of the solvent are almost equal, the relative viscosities η_{ri} (being η_{r1} , η_{r2} , η_{r3} and η_{r4}) can be calculated from the ratio of the flow times for the respective solutions t_i (being t_1 , t_2 , t_3 and t_4) to the flow time of the solvent t_0 , but taking into account the kinetic energy correction factor for the capillary ($B = 30\ 800\ s^3$), using the following expression:

$$\frac{t_i - \frac{B}{t_i}}{t_0 - \frac{B}{t_0}}$$

Calculation of the concentrations

Calculate the concentration c_1 (expressed in kg/m³) of sodium hyaluronate in test solution (a) using the following expression:

$$\frac{m_{0p} \times x \times (100 - h) \times m_{1p} \times \rho_{25}}{100 \times 100 \times (m_{0p} + m_{0s}) \times (m_{1p} + m_{1s})}$$

- x = percentage content of sodium hyaluronate as determined under Assay;
 h = percentage loss on drying;
 ρ_{25} = 1005 kg/m³ (density of the test solution at 25 °C).

Calculate the concentration c_2 (expressed in kg/m³) of sodium hyaluronate in test solution (b) using the following expression:

$$c_1 \times \frac{m_{2p}}{m_{2s} + m_{2p}}$$

Calculate the concentration c_3 (expressed in kg/m³) of sodium hyaluronate in test solution (c) using the following expression:

$$c_1 \times \frac{m_{3p}}{m_{3s} + m_{3p}}$$

Calculate the concentration c_4 (expressed in kg/m³) of sodium hyaluronate in test solution (d) using the following

expression:

$$c_1 \times \frac{m_{4p}}{m_{4s} + m_{4p}}$$

Calculation of the intrinsic viscosity

Calculate the intrinsic viscosity $[\eta]$ by linear least-squares regression analysis using the Martin equation:

$$\log_{10} \left(\frac{\eta_r - 1}{c} \right) = \log_{10} [\eta] + k[\eta]c$$

The decimal antilogarithm of the intercept is the intrinsic viscosity expressed in m³/kg.

Sulfated glycosaminoglycans

Maximum 1 per cent, if the product is extracted from cocks' combs.

Appropriate safety precautions are to be taken when handling perchloric acid at elevated temperature.

Test solution Introduce a quantity of the substance to be examined equivalent to 50.0 mg of the dried substance into a test-tube 150 mm long and 16 mm in internal diameter and dissolve in 1.0 mL of perchloric acid R.

Reference solution Dissolve 0.149 g of anhydrous sodium sulfate R in water R and dilute to 100.0 mL with the same solvent. Dilute 10.0 mL of this solution to 100.0 mL with water R. Evaporate 1.0 mL in a test-tube 150 mm long and 16 mm in internal diameter in a heating block at 90-95 °C, and dissolve the residue in 1.0 mL of perchloric acid R.

Plug each test-tube with a piece of glass wool. Place the test-tubes in a heating block or a silicone oil bath maintained at 180 °C and heat until clear, colourless solutions are obtained (about 12 h). Remove the test-tubes and cool to room temperature. Add to each test-tube 3.0 mL of a 33.3 g/L solution of barium chloride R, cap and shake vigorously. Allow the test-tubes to stand for 30 min. Shake each test-tube once again, and determine the absorbance (2.2.25) at 660 nm, using water R as a blank.

The absorbance obtained with the test solution is not greater than the absorbance obtained with the reference solution.

Nucleic acids

The absorbance (2.2.25) of solution S at 260 nm is maximum 0.5.

Protein

Maximum 0.3 per cent; maximum 0.1 per cent, if intended for use in the manufacture of parenteral preparations.

Test solution (a) Dissolve the substance to be examined in water R to obtain a solution containing a quantity equivalent to about 10 mg of the dried substance per millilitre.

Test solution (b) Mix equal volumes of test solution (a) and water R.

Reference solutions Prepare a 0.5 mg/mL stock solution of bovine albumin R in water R. Prepare 5 dilutions of the stock solution containing between 5 µg/mL and 50 µg/mL of bovine albumin R.

Add 2.5 mL of freshly prepared cupri-tartaric solution R3 to test-tubes containing 2.5 mL of water R (blank), 2.5 mL of the test solutions (a) or (b) or 2.5 mL of the reference solutions. Mix after each addition. After about 10 min, add to each test-tube 0.50 mL of a mixture of equal volumes of phosphomolybdonungstic reagent R and water R prepared immediately before use. Mix after each addition. After 30 min, measure the absorbance (2.2.25) of each solution at 750 nm against the blank. From the calibration curve

obtained with the 5 reference solutions determine the content of protein in the test solutions.

Chlorides (2.4.4)

Maximum 0.5 per cent.

Dissolve 67 mg in 100 mL of *water R*.

Iron

Maximum 80 ppm.

Atomic absorption spectrometry (2.2.23, *Method II*).

Test solution Dissolve a quantity of the substance to be examined equivalent to 0.25 g of the dried substance in 1 mL of *nitric acid R* by heating on a water-bath. Cool and dilute to 10.0 mL with *water R*.

Reference solutions Prepare 2 reference solutions in the same manner as the test solution, adding 1.0 mL and 2.0 mL respectively of *iron standard solution (10 ppm Fe) R* to the dissolved substance to be examined.

Source Iron hollow-cathode lamp using a transmission band of 0.2 nm.

Wavelength 248.3 nm.

Atomisation device Air-acetylene flame.

Loss on drying (2.2.32)

Maximum 20.0 per cent, determined on 0.500 g by drying at 100-110 °C over *diphosphorus pentoxide R* for 6 h.

Microbial contamination

TAMC: acceptance criterion 10² CFU/g (2.6.12). Use 1 g of the substance to be examined.

Bacterial endotoxins (2.6.14)

Less than 0.5 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins; less than 0.05 IU/mg, if intended for use in the manufacture of intra-ocular preparations or intra-articular preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Determine the glucuronic acid content by reaction with carbazole as described below.

Reagent A Dissolve 0.95 g of *disodium tetraborate R* in 100.0 mL of *sulfuric acid R*.

Reagent B Dissolve 0.125 g of *carbazole R* in 100.0 mL of *anhydrous ethanol R*.

Test solution Prepare this solution in triplicate. Dissolve 0.170 g of the substance to be examined in *water R* and dilute to 100.0 g with the same solvent. Dilute 10.0 g of this solution to 200.0 g with *water R*.

Reference stock solution Dissolve 0.100 g of *D-glucuronic acid R*, previously dried to constant mass in vacuum over *diphosphorus pentoxide R* (2.2.32), in *water R* and dilute to 100.0 g with the same solvent.

Reference solutions Prepare 5 dilutions of the reference stock solution containing between 6.5 µg/g and 65 µg/g of *D-glucuronic acid R*.

Place 25 test-tubes, numbered 1 to 25, in iced water.

Add 1.0 mL of the 5 reference solutions in triplicate to the test-tubes 1 to 15 (reference tubes), 1.0 mL of the 3 test solutions in triplicate to the test-tubes 16 to 24 (sample tubes), and 1.0 mL of *water R* to test-tube 25 (blank).

Add to each test-tube 5.0 mL of freshly prepared reagent A, previously cooled in iced water. Tightly close the test-tubes with plastic caps, shake the contents, and place on a water bath for exactly 15 min. Cool in iced water, and add to each test tube 0.20 mL of reagent B. Recap the tubes, shake, and

put them again on a water-bath for exactly 15 min. Cool to room temperature and measure the absorbance (2.2.25) of the solutions at 530 nm, against the blank.

From the calibration curve obtained with the mean absorbances read for each reference solution, determine the mean concentrations of *D-glucuronic acid* in the test solutions.

Calculate the percentage content of sodium hyaluronate using the following expression:

$$\frac{c_g}{c_t} \times Z \times \frac{100}{100-h} \times \frac{401.3}{194.1}$$

- c_g* = mean of concentrations of *D-glucuronic acid* in the test solutions, in milligrams per gram;
- c_t* = mean of concentrations of the substance to be examined in the test solutions, in milligrams per gram;
- Z* = determined percentage content of C₆H₁₀O₇ in *D-glucuronic acid R*;
- h* = percentage loss on drying;
- 401.3 = relative molecular mass of the disaccharide fragment;
- 194.1 = relative molecular mass of glucuronic acid.

STORAGE

In an airtight container, protected from light and humidity. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

LABELLING

The label states:

- the intrinsic viscosity;
- the origin of the substance;
- the intended use of the substance;
- where applicable, that the substance is suitable for parenteral administration other than intra-articular administration;
- where applicable, that the substance is suitable for parenteral administration, including intra-articular administration;
- where applicable that the material is suitable for intra-ocular use.

Ph Eur

Sodium Hydroxide

Caustic Soda

(*Ph. Eur. monograph 0677*)

NaOH 40.00

1310-73-2

Ph Eur

DEFINITION

Content

97.0 per cent to 100.5 per cent.

CHARACTERS

Appearance

White or almost white, crystalline masses, supplied as pellets, sticks or slabs, deliquescent, readily absorbing carbon dioxide.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

A. pH (2.2.3): minimum 11.0.

Dissolve 0.1 g in 10 mL of *water R*. Dilute 1 mL of the solution to 100 mL with *water R*.

B. 2 mL of solution S (see Tests) gives reaction (a) of sodium (2.3.1).

TESTS

Solution S

Carry out the procedure described below with caution. Dissolve 5.0 g in 12 mL of water R. Add 17 mL of hydrochloric acid R1, adjust to pH 7 with a 103 g/L solution of hydrochloric acid R and dilute to 50 mL with water R.

Appearance of solution

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 1.0 g in 10 mL of water R.

Carbonates

Maximum 2.0 per cent, calculated as Na_2CO_3 as determined in the assay.

Chlorides (2.4.4)

Maximum 200 ppm.

Dissolve 0.25 g in 5 mL of water R, acidify the solution with about 4 mL of nitric acid R and dilute to 15 mL with water R. The solution, without addition of dilute nitric acid R, complies with the test.

Sulfates (2.4.13)

Maximum 200 ppm.

Dissolve 0.75 g in 6 mL of distilled water R, adjust to pH 7 with hydrochloric acid R and dilute to 15 mL with distilled water R.

Iron (2.4.9)

Maximum 10 ppm, determined on solution S.

ASSAY

Dissolve 2.000 g in about 80 mL of carbon dioxide-free water R. Add 0.3 mL of phenolphthalein solution R and titrate with 1 M hydrochloric acid. Add 0.3 mL of methyl orange solution R and continue the titration with 1 M hydrochloric acid.

1 mL of 1 M hydrochloric acid used in the 2nd part of the titration is equivalent to 0.1060 g of Na_2CO_3 .

1 mL of 1 M hydrochloric acid used in the combined titrations is equivalent to 40.00 mg of total alkali, calculated as NaOH.

STORAGE

In an airtight, non-metallic container.

Ph Eur

Sodium Iodide

(Ph. Eur. monograph 0196)

NaI 149.9

7681-82-5

Preparation

Sodium Iodide Injection

Ph Eur

DEFINITION

Content

99.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals, hygroscopic.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) gives the reactions of iodides (2.3.1).

B. Solution S gives the reactions of sodium (2.3.1).

TESTS

Solution S

Dissolve 10.0 g in carbon dioxide-free water R prepared from distilled water R and dilute to 100 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

Alkalinity

To 12.5 mL of solution S add 0.1 mL of bromothymol blue solution R1. Not more than 0.7 mL of 0.01 M hydrochloric acid is required to change the colour of the indicator.

Iodates

To 10 mL of solution S add 0.25 mL of iodide-free starch solution R and 0.2 mL of dilute sulfuric acid R and allow to stand protected from light for 2 min. No blue colour develops.

Sulfates (2.4.13)

Maximum 150 ppm.

Dilute 10 mL of solution S to 15 mL with distilled water R.

Thiosulfates

To 10 mL of solution S add 0.1 mL of starch solution R and 0.1 mL of 0.005 M iodine. A blue colour is produced.

Iron (2.4.9)

Maximum 20 ppm.

Dilute 5 mL of solution S to 10 mL with water R.

Loss on drying (2.2.32)

Maximum 3.0 per cent, determined on 1.00 g by drying in an oven at 105 °C for 3 h.

ASSAY

Dissolve 1.300 g in water R and dilute to 100.0 mL with the same solvent. To 20.0 mL of the solution add 40 mL of hydrochloric acid R and titrate with 0.05 M potassium iodate until the colour changes from red to yellow. Add 5 mL of chloroform R and continue the titration, shaking vigorously, until the chloroform layer is decolorised.

1 mL of 0.05 M potassium iodate is equivalent to 14.99 mg of NaI.

STORAGE

Protected from light.

Ph Eur

Sodium Lactate Solution

(Ph. Eur. monograph 1151)

Action and use

Systemic alkalising agent.

Ph Eur

DEFINITION

Solution of a mixture of the enantiomers of sodium (2RS)-2-hydroxypropanoate in approximately equal proportions.

Content

Minimum declared content 50 per cent *m/m* of sodium (2RS)-2-hydroxypropanoate ($\text{C}_3\text{H}_5\text{NaO}_3$; M_r 112.1); 96.0 per cent to 104.0 per cent of the content of sodium lactate stated on the label.

CHARACTERS**Appearance**

Clear, colourless, slightly syrupy liquid.

Solubility

Miscible with water and with ethanol (96 per cent).

IDENTIFICATION

A. To 0.1 mL add 10 mL of *water R*. 5 mL of the solution gives the reaction of lactates (2.3.1).

B. It gives reaction (a) of sodium (2.3.1).

TESTS**Solution S**

Dilute a quantity of the substance to be examined corresponding to 40.0 g of sodium lactate to 200 mL with *distilled water R*.

Appearance of solution

The substance to be examined is clear (2.2.1) and not more intensely coloured than reference solution BY₇ (2.2.2, *Method II*).

pH (2.2.3)

6.5 to 9.0 for the substance to be examined.

Reducing sugars and sucrose

To 5 mL of the substance to be examined add 0.2 mL of *copper sulfate solution R* and 2 mL of *dilute sodium hydroxide solution R*. The solution is clear and blue and remains so on boiling. Add to the hot solution 4 mL of *hydrochloric acid R*. Boil for 1 min. Add 6 mL of *strong sodium hydroxide solution R* and heat to boiling again. The solution is clear and blue.

Methanol

Gas chromatography (2.4.24).

Limit:

— *methanol*: maximum 50 ppm, calculated with reference to sodium lactate, if intended for use in the manufacture of parenteral preparations, dialysis, haemodialysis or haemofiltration solutions.

Chlorides (2.4.4)

Maximum 50 ppm calculated with reference to sodium lactate.

Dilute 5 mL of solution S to 15 mL with *water R*.

Oxalates and phosphates

To 1 mL of the substance to be examined add 15 mL of *ethanol (96 per cent) R* and 2 mL of *calcium chloride solution R*. Heat at 75 °C for 5 min. Any opalescence in the solution is not more intense than that of a standard prepared at the same time and in the same manner using a mixture of 1 mL of the substance to be examined, 15 mL of *ethanol (96 per cent) R* and 2 mL of *water R*.

Sulfates (2.4.13)

Maximum 100 ppm calculated with reference to sodium lactate.

To 7.5 mL of solution S, add 1.9 mL of *hydrochloric acid R1* and dilute to 15 mL with *distilled water R*. The solution complies with the test for sulfates without addition of 0.5 mL of *acetic acid R*. Acidify the standard solution with 0.05 mL of *hydrochloric acid R1* instead of 0.5 mL of *acetic acid R*.

Aluminium

Maximum 0.1 ppm, if intended for use in the manufacture of parenteral preparations, dialysis, haemodialysis or haemofiltration solutions.

Atomic absorption spectrometry (2.2.23, *Method I*). For the preparation of the solutions, use equipment that is

aluminium-free or that will not release aluminium under the conditions of use (glass, polyethylene, etc).

Modifier solution Dissolve 100.0 g of *ammonium nitrate R* in a mixture of 4 mL of *nitric acid R* and 50 mL of *water R* and dilute to 200 mL with *water R*.

Blank solution Dilute 2.0 mL of the modifier solution to 25.0 mL with *water R*.

Test solution To 5.0 g add 2.0 mL of the modifier solution and dilute to 25.0 mL with *water R*.

Reference solutions Prepare the reference solutions immediately before use (0.010 ppm to 0.050 ppm of aluminium) using *aluminium standard solution (200 ppm Al) R*.

Source Aluminium hollow-cathode lamp.

Wavelength 309.3 nm.

Atomisation device Graphite furnace.

Carrier gas argon R.

Conditions The device is equipped with a non-specific absorption correction system. Heat the oven to 120 °C for as many seconds as there are microlitres of solution introduced into the apparatus, then heat at 1000 °C for 30 s and finally at 2700 °C for 6 s.

Iron (2.4.9)

Maximum 10 ppm calculated with reference to sodium lactate.

Dilute 5 mL of solution S to 10 mL with *water R*.

ASSAY

Dissolve a quantity of the substance to be examined corresponding to 75.0 mg of sodium lactate in a mixture of 10 mL of *glacial acetic acid R* and 20 mL of *acetic anhydride R*. Allow to stand for 15 min. Add 1 mL of *naphtholbenzein solution R* and titrate with 0.1 M *perchloric acid*.

1 mL of 0.1 M *perchloric acid* is equivalent to 11.21 mg of C₃H₅NaO₃.

LABELLING

The label states:

- where applicable, that the substance is suitable for use in the manufacture of dialysis, haemodialysis and haemofiltration solutions;
- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations;
- the declared content of sodium lactate.

Ph Eur

Sodium (S)-Lactate Solution

(Ph. Eur. monograph 2033)

Ph Eur

DEFINITION**Content**

Minimum 50.0 per cent *m/m* of sodium (2S)-2-hydroxypropanoate (C₃H₅NaO₃; *M_r* 112.1); 96.0 per cent to 104.0 per cent of the content of sodium lactate stated on the label, not less than 95.0 per cent of which is the (S)-enantiomer.

CHARACTERS**Appearance**

Clear, colourless, slightly syrupy liquid.

Solubility

Miscible with water and with ethanol (96 per cent).

IDENTIFICATION

A. To 0.1 mL add 10 mL of *water R*. 5 mL of the solution gives the reaction of lactates (2.3.1).

B. It gives reaction (a) of sodium (2.3.1).

C. It complies with the limits of the assay.

TESTS**Solution S**

Dilute a quantity of the substance to be examined corresponding to 40.0 g of sodium lactate to 200 mL with *distilled water R*.

Appearance of solution

The substance to be examined is clear (2.2.1) and not more intensely coloured than reference solution BY₇ (2.2.2, *Method II*).

pH (2.2.3)

6.5 to 9.0 for the substance to be examined.

Reducing sugars and sucrose

To 5 mL of the substance to be examined add 2 mL of *dilute sodium hydroxide solution R* and 0.2 mL of *copper sulfate solution R*. The solution is clear and blue and remains so on boiling. Add to the hot solution 4 mL of *hydrochloric acid R*. Boil for 1 min. Add 6 mL of *strong sodium hydroxide solution R* and heat to boiling again. The solution is clear and blue.

Methanol

Gas chromatography (2.4.24).

Limit:

— *methanol*: maximum 50 ppm, calculated with reference to sodium lactate, if intended for use in the manufacture of parenteral preparations, dialysis, haemodialysis or haemofiltration solutions.

Chlorides (2.4.4)

Maximum 50 ppm calculated with reference to sodium lactate.

Dilute 5 mL of solution S to 15 mL with *water R*.

Oxalates and phosphates

To 1 mL of the substance to be examined add 15 mL of *ethanol (96 per cent) R* and 2 mL of *calcium chloride solution R*. Heat at 75 °C for 5 min. Any opalescence in the solution is not more intense than that of a standard prepared at the same time and in the same manner using a mixture of 1 mL of the substance to be examined, 15 mL of *ethanol (96 per cent) R* and 2 mL of *water R*.

Sulfates (2.4.13)

Maximum 100 ppm calculated with reference to sodium lactate.

To 7.5 mL of solution S, add 1.9 mL of *hydrochloric acid R1* and dilute to 15 mL with *distilled water R*. The solution complies with the limit test for sulfates without addition of 0.5 mL of *acetic acid R*. Acidify the standard solution with 0.05 mL of *hydrochloric acid R1* instead of 0.5 mL of *acetic acid R*.

Aluminium

Maximum 0.1 ppm, if intended for use in the manufacture of parenteral preparations, dialysis, haemodialysis or haemofiltration solutions.

Atomic absorption spectrometry (2.2.23, *Method I*). For the preparation of the solutions, use equipment that is aluminium-free or that will not release aluminium under the conditions of use (glass, polyethylene, etc).

Modifier solution Dissolve 100.0 g of *ammonium nitrate R* in a mixture of 50 mL of *water R* and 4 mL of *nitric acid R* and dilute to 200 mL with *water R*.

Blank solution Dilute 2.0 mL of the modifier solution to 25.0 mL with *water R*.

Test solution To 5.0 g add 2.0 mL of the modifier solution and dilute to 25.0 mL with *water R*.

Reference solutions Prepare the reference solutions immediately before use (0.010 ppm to 0.050 ppm of aluminium) using *aluminium standard solution (200 ppm Al) R*.

Source Aluminium hollow-cathode lamp.

Wavelength 309.3 nm.

Atomisation device Graphite furnace.

Carrier gas argon *R*.

Conditions The device is equipped with a non-specific absorption correction system. Heat the oven to 120 °C for as many seconds as there are microlitres of solution introduced into the apparatus, then heat at 1000 °C for 30 s and finally at 2700 °C for 6 s.

Iron (2.4.9)

Maximum 10 ppm calculated with reference to sodium lactate.

Dilute 5 mL of solution S to 10 mL with *water R*.

ASSAY

Dissolve a quantity of the substance to be examined corresponding to 75.0 mg of sodium lactate in a mixture of 10 mL of *glacial acetic acid R* and 20 mL of *acetic anhydride R*. Allow to stand for 15 min. Add 1 mL of *naphtholbenzein solution R* and titrate with 0.1 M *perchloric acid*.

1 mL of 0.1 M *perchloric acid* is equivalent to 11.21 mg of C₃H₅NaO₃.

(S)-enantiomer

Transfer a quantity of the substance to be examined corresponding to 2.50 g of sodium lactate into a 50 mL volumetric flask, dilute with about 30 mL of *water R* and add 5.0 g of *ammonium molybdate R*. Dissolve and dilute with *water R* to 50.0 mL. Measure the angle of optical rotation (2.2.7). Calculate the percentage content of (S)-enantiomer using the expression:

$$50 + \left(24.04 \times \alpha \times \frac{5.0}{m} \times \frac{50}{c} \right)$$

α = angle of optical rotation (absolute value);
 m = mass of the substance to be examined, in grams;
 c = percentage content m/m of C₃H₅NaO₃ in the substance to be examined.

The complex of sodium (S)-lactate formed under these test conditions is laevorotatory.

LABELLING

The label states:

- where applicable, that the substance is suitable for use in the manufacture of dialysis, haemodialysis and haemofiltration solutions;
- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations;
- the declared content of sodium lactate.

Ph Eur

Sodium Lauroylsarcosinate for External Use

(Ph. Eur. monograph 2542)

C₁₅H₂₈NNaO₃

293.4

137-16-6

Action and use
Surfactant.

Ph Eur

DEFINITION

Mixture of sodium *N*-acyl-*N*-methylglycinates, mainly consisting of sodium *N*-lauroyl-*N*-methylglycinate (sodium [dodecanoyl(methyl)amino]acetate).

A suitable chelating agent (e.g. edetic acid (EDTA)) may be added.

PRODUCTION

Sodium lauroylsarcosinate is typically obtained using the reaction of lauroyl chloride with sodium sarcosinate (sodium *N*-methylglycinate) under aqueous alkaline conditions.

The production method is validated to ensure a limit of maximum 0.1 per cent of free sodium sarcosinate.

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water giving a clear or slightly turbid solution, sparingly soluble in ethanol 96 per cent.

mp

About 145 °C.

IDENTIFICATION

A. Dissolve 0.1 g in 10 mL of *water R* and shake. Copious foam is formed.

B. Examine the chromatograms obtained in the test for composition of fatty acids.

Results The principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

C. Place 0.5 g in a silica crucible and ignite in a muffle furnace at 600 ± 25 °C for 1 h. Allow to cool to room temperature and dissolve the residue in 10 mL of *water R*. 0.5 mL of the solution obtained gives reaction (b) of sodium (2.3.1). Rub the inside of the tube to initiate the precipitation.

TESTS

pH (2.2.3)

7.5 to 8.5.

Dissolve 3.0 g in *carbon dioxide-free water R* and dilute to 100 mL with the same solvent.

Composition of fatty acids

Gas chromatography (2.2.28): use the normalisation procedure.

Test solution (a) To 2.5 g in a 150 mL round-bottomed flask add 30.0 mL of *boron trifluoride-methanol solution R*, fit a reflux condenser and boil for 20 min. Add 120 mL of hot

water R so that the upper layer is brought into the neck of the flask in order to recover the methyl esters. Dissolve 0.50 g of the methyl esters in 10.0 mL of *heptane R*.

Test solution (b) Dilute 1.0 mL of test solution (a) to 10.0 mL with *heptane R*.

Reference solution (a) Prepare 0.50 g of the mixture of calibrating substances with the composition described in Table 2542.-1, dissolve in *heptane R* and dilute to 50.0 mL with the same solvent.

Reference solution (b) Dilute 1.0 mL of test solution (a) to 100.0 mL with *heptane R*. Dilute 1.0 mL of this solution to 10.0 mL with *heptane R*.

Reference solution (c) To 0.5 g of *sodium lauroylsarcosinate CRS* in a 25 mL round-bottomed flask, add 6.0 mL of *boron trifluoride-methanol solution R*, fit a reflux condenser and boil for 20 min. Add 20.0 mL of hot *water R* so that the upper layer is brought into the neck of the flask in order to recover the methyl esters. Dissolve 0.25 g of the methyl esters in 50.0 mL of *heptane R*.

Table 2542.-1. – Mixture of calibrating substances

Mixture of the following substances	Composition (per cent <i>m/m</i>)
<i>Methyl caproate R</i>	10
<i>Methyl caprylate R</i>	10
<i>Methyl decanoate R</i>	20
<i>Methyl laurate R</i>	20
<i>Methyl myristate R</i>	40

Column:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.25 mm;
- *stationary phase*: *macrogol 20 000 R* (film thickness 0.25 µm).

Carrier gas *helium for chromatography R*.

Split ratio 1:5.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 3	100
	3 - 13	100 → 200
	13 - 19	200 → 230
	19 - 29	230
	29 - 31	230 → 250
	31 - 40	250
Injection port		250
Detector		250

Detection Flame ionisation.

Injection 1 µL.

Identification of peaks Use the chromatogram obtained with reference solution (a) to identify the peaks due to methyl caprylate, methyl decanoate, methyl laurate and methyl myristate.

System suitability:

- *resolution*: minimum 4.0 between the peaks due to methyl caprylate and methyl decanoate in the chromatogram obtained with reference solution (a);
- *signal-to-noise ratio*: minimum 20 for the peak due to methyl laurate in the chromatogram obtained with reference solution (b).

Disregard any peak eluting after the peak due to methyl myristate, as well as any peak with an area less than

0.05 per cent of the total area of the peaks used for quantification.

Composition of the fatty-acid fraction of the substance Test solution (a):

- *capric acid*: maximum 0.5 per cent;
- *lauric acid*: minimum 98.0 per cent;
- *myristic acid*: maximum 1.5 per cent.

Sodium laurate

Proceed as described in the test for composition of fatty acids with the following modifications.

Internal standard *undecanoic acid R*.

Test solution To 2.5 g in a 150 mL round-bottomed flask add 0.100 g of the internal standard. Add 30.0 mL of *boron trifluoride-methanol solution R*, fit a reflux condenser and boil for 20 min. Add 120 mL of hot *water R* so that the upper layer is brought into the neck of the flask in order to recover the methyl esters. Dissolve 0.50 g of the methyl esters in 10.0 mL of *heptane R*.

Calculate the percentage content of sodium laurate using the following expression:

$$\frac{A_1 \times m_2 \times 1.110 \times 100}{A_2 \times m_1}$$

- A_1 = area of the peak due to methyl laurate in the chromatogram obtained with the test solution;
- A_2 = area of the peak due to methyl undecanoate in the chromatogram obtained with the test solution;
- m_1 = mass of the substance to be examined in the test solution, in grams;
- m_2 = mass of the internal standard in the test solution, in grams;
- 1.110 = ratio of the molecular mass of sodium laurate to that of lauric acid (222/200).

Limit:

- *sodium laurate*: maximum 5.0 per cent.

Sodium chloride

Maximum 0.5 per cent.

Dissolve 0.500 g in 50 mL of a mixture of equal volumes of *ethanol (96 per cent) R* and *water R*. Add 10 mL of *nitric acid R* and titrate with 0.005 M *silver nitrate*, determining the end-point potentiometrically (2.2.20).

Calculate the percentage content of sodium chloride using the following expression:

$$\frac{M \times V \times 58.44}{m \times 10}$$

- M = molarity of the silver nitrate solution, in moles per litre;
- V = volume of 0.005 M *silver nitrate* used, in mL;
- m = mass of the substance to be examined, in grams.

Sodium sulfate

Maximum 1.5 per cent.

Test solution In a 150 mL borosilicate-glass beaker, dissolve 0.3 g in 20 mL of *deionised distilled water R*. Add 0.3 mL of *naphtharson solution R1*, 1.0 mL of *perchloric acid R* and 70.0 mL of *2-propanol R*.

Degas the solution obtained under vacuum for 30 s or using an ultrasonic bath for 2 min, then titrate with 0.005 M barium perchlorate.

Determine the end-point using a suitable autotitrator equipped with a photometric sensor at 523 nm and at 25 °C. Adjust the stirrer speed to avoid the formation of bubbles.

1 mL of 0.005 M barium perchlorate is equivalent to 0.7102 mg of Na₂SO₄.

Sodium Lauryl Sulfate¹

Sodium Dodecyl Sulfate

Sodium Lauryl Sulphate

(*Sodium Laurilsulfate*, Ph. Eur. monograph 0098)

Sodium dodecyl sulfate: 151-21-3

Action and use

Anionic emulsifying agent.

Ph Eur

DEFINITION

Mixture of sodium alkyl sulfates consisting mainly of sodium dodecyl sulfate (C₁₂H₂₅NaO₄S; M_r 288.4).

Content

- *sodium alkyl sulfates*: minimum 85.0 per cent, expressed as C₁₂H₂₅NaO₄S.

CHARACTERS

Appearance

White or pale yellow, powder or crystals.

Solubility

Freely soluble in water giving an opalescent solution, partly soluble in ethanol (96 per cent).♦

IDENTIFICATION

First identification: A, B, C.

◊*Second identification*: B, C, D.◊

A. Infrared absorption spectrophotometry (2.2.24).

Comparison *sodium laurilsulfate CRS*.

B. Place 2.5 g in a silica or platinum crucible and add 2 mL of a 500 g/L solution of *sulfuric acid R*. Heat on a water-bath, then cautiously raise the temperature progressively over an open flame. Ignite, preferably in a muffle furnace, at 600 ± 25 °C. Continue heating until all black particles have disappeared. Cool, add a few drops of a 100 g/L solution of *sulfuric acid R*, and heat and ignite as above. Add a few drops of *ammonium carbonate solution R*, evaporate to dryness, and ignite as above. Cool, dissolve the residue in 50 mL of *water R* and mix. To 2 mL of this solution add 4 mL of *potassium pyroantimonate solution R1*. If necessary, rub the inside of the test-tube with a glass rod. A white, crystalline precipitate is formed.

C. Prepare a 100 g/L solution. After acidification with *hydrochloric acid R* and boiling for 20 min, no precipitate is formed. Add a 120 g/L solution of *barium chloride R*; a white precipitate is produced.

◊D. Dissolve 0.1 g in 10 mL of *water R* and shake. A copious foam is formed.◊

TESTS

Alkalinity

Dissolve 1.0 g in 100 mL of *carbon dioxide-free water R* and add 0.1 mL of *phenol red solution R*. Not more than 0.5 mL of 0.1 M *hydrochloric acid* is required to change the colour of the indicator.

Non-esterified alcohols

Maximum 4.0 per cent.

Dissolve 10.0 g in 100 mL of *water R*, add 100 mL of *ethanol (96 per cent) R* and shake the solution with 3 quantities, each of 50 mL, of *light petroleum R*, adding *sodium chloride R*, if necessary, to promote separation of the 2 layers. Wash the

¹ This monograph has undergone pharmacopoeial harmonisation. See chapter 5.8 Pharmacopoeial harmonisation.

combined organic layers with 3 quantities, each of 50 mL, of water R, dry over anhydrous sodium sulfate R, filter and evaporate on a water-bath until the solvent has evaporated. Heat the residue at 105 °C for 30 min and cool. The residue weighs a maximum of 0.4 g.

Sodium chloride and sodium sulfate

Maximum 8.0 per cent for the total percentage content.

Sodium chloride Dissolve 5.00 g in 50 mL of water R, add dilute nitric acid R dropwise, if necessary, until the solution is neutral, and add 5.0 mL of a 5.84 g/L solution of sodium chloride R. Titrate with 0.1 M silver nitrate, while stirring vigorously to disperse the silver chloride, using 0.1 mL of a 2 g/L solution of sodium fluoresceinate R as indicator, to the first appearance of turbidity with solution colour change from yellow-green to orange through yellow. Perform a blank determination.

1 mL of 0.1 M silver nitrate is equivalent to 5.844 mg of NaCl.

Sodium sulfate Dissolve 1.00 g in 10 mL of water R, add 100 mL of ethanol (96 per cent) R and heat at a temperature just below the boiling point for 2 h. Filter while hot through a glass or porcelain filter with a porosity of 4-10 µm and wash with 100 mL of boiling ethanol (96 per cent) R. Dissolve the precipitate by washing with 150 mL of water R, collecting the washings in a beaker. Add 10 mL of dilute hydrochloric acid R, heat to boiling, add 25 mL of a 120 g/L solution of barium chloride R and allow to stand overnight. Collect the precipitate by filtration (maximum pore size 16 µm) and wash with water R until the last washing shows no opalescence with 0.1 M silver nitrate. Dry the precipitate, ignite to constant mass at 500-600 °C by raising the temperature gradually, and weigh as barium sulfate.

1 mg of barium sulfate is equivalent to 0.609 mg of Na₂SO₄.

ASSAY

Dissolve 1.15 g in water R, warming if necessary, and dilute to 1000.0 mL with the same solvent. To 20.0 mL of the solution add 15 mL of methylene chloride R and 10 mL of dimidium bromide-sulfan blue mixed solution R and mix. Titrate with 0.004 M benzethonium chloride, shaking vigorously and allowing the layers to separate before each addition, until the pink colour of the methylene chloride layer is completely discharged and a greyish-blue colour is obtained.

1 mL of 0.004 M benzethonium chloride is equivalent to 1.154 mg of sodium alkyl sulfates, expressed as C₁₂H₂₅NaO₄S.

Ph Eur

Sodium Metabisulfite

Sodium Metabisulphite
Sodium Pyrosulphite
(Ph. Eur. monograph 0849)

Na₂S₂O₅ 190.1 7681-57-4

Action and use
Antioxidant.

Ph Eur

DEFINITION

Sodium metabisulfite also called sodium disulfite.

Content

95.0 per cent to 100.5 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. pH (see Tests).

B. To 0.4 mL of iodinated potassium iodide solution R add 8 mL of distilled water R and 1 mL of solution S diluted 1 to 10 in distilled water R. The solution is colourless and gives reaction (a) of sulfates (2.3.1).

C. Solution S gives reaction (a) of sodium (2.3.1).

TESTS

Solution S

Dissolve 5.0 g in carbon dioxide-free water R prepared from distilled water R and dilute to 100 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

pH (2.2.3)

3.5 to 5.0 for solution S.

Thiosulfates

To 5 mL of solution S add 5 mL of dilute hydrochloric acid R. The solution remains clear (2.2.1) for at least 15 min.

Iron (2.4.9)

Maximum 20 ppm, determined on solution S.

ASSAY

Dissolve 0.200 g in 50.0 mL of 0.05 M iodine and add 5 mL of dilute hydrochloric acid R. Titrate the excess of iodine with 0.1 M sodium thiosulfate using 1 mL of starch solution R, added towards the end of the titration, as indicator.

1 mL of 0.05 M iodine is equivalent to 4.753 mg of Na₂S₂O₅.

STORAGE

Protected from light.

Sodium Methyl Hydroxybenzoate

Sodium Methylparaben

(Sodium Methyl Parahydroxybenzoate, Ph. Eur. monograph 1262)

C₈H₇NaO₃ 174.1 5026-62-0

Action and use
Antimicrobial preservative.

Ph Eur

DEFINITION

Sodium 4-(methoxycarbonyl)phenolate.

Content

95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS**Appearance**

White or almost white, hygroscopic, crystalline powder.

Solubility

Freely soluble in water, sparingly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Dissolve 0.5 g in 50 mL of *water R*. Immediately add 5 mL of *hydrochloric acid RI*. Filter and wash the precipitate with *water R*. Dry *in vacuo* at 80 °C for 2 h. The precipitate melts (2.2.14) at 125 °C to 128 °C.

B. Infrared absorption spectrophotometry (2.2.24).

Preparation Precipitate obtained in identification test A.

Comparison *methyl parahydroxybenzoate CRS*.

C. Thin-layer chromatography (2.2.27).

Test solution (a) Dissolve 0.10 g of the substance to be examined in 10 mL of *water R*. Immediately add 2 mL of *hydrochloric acid R* and shake with 50 mL of *1,1-dimethylethyl methyl ether R*. Evaporate the upper layer to dryness and take up the residue with 10 mL of *acetone R*.

Test solution (b) Dilute 1 mL of test solution (a) to 10 mL with *acetone R*.

Reference solution (a) Dissolve 10 mg of *methyl parahydroxybenzoate CRS* in *acetone R* and dilute to 10 mL with the same solvent.

Reference solution (b) Dissolve 10 mg of *ethyl parahydroxybenzoate CRS* in 1 mL of test solution (a) and dilute to 10 mL with *acetone R*.

Plate TLC octadecylsilyl silica gel F₂₅₄ plate R.

Mobile phase *glacial acetic acid R, water R, methanol R* (1:30:70 V/V/V).

Application 5 µL of test solution (b) and reference solutions (a) and (b).

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

- the chromatogram shows 2 clearly separated principal spots.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 1 mL of solution S (see Tests) add 1 mL of *water R*. The solution gives reaction (a) of sodium (2.3.1).

TESTS**Solution S**

Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 mL with the same solvent.

Appearance of solution

Solution S examined immediately after preparation is clear (2.2.1) and not more intensely coloured than reference solution BY₆ (2.2.2, Method II).

pH (2.2.3)

Dilute 1 mL of solution S to 100 mL with *carbon dioxide-free water R*. The pH of the solution is 9.5 to 10.5.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 50.0 mg of the substance to be examined in 2.5 mL of *methanol R* and dilute to 50.0 mL with the mobile phase. Dilute 10.0 mL of the solution to 100.0 mL with the mobile phase.

Reference solution (a) Dissolve 5 mg of *4-hydroxybenzoic acid R* (impurity A) and 5 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 10.0 mL with the mobile phase.

Reference solution (b) Dissolve 50.0 mg of *methyl parahydroxybenzoate CRS* in 2.5 mL of *methanol R* and dilute to 50.0 mL with the mobile phase. Dilute 10.0 mL of the solution to 100.0 mL with the mobile phase.

Reference solution (c) Dilute 1.0 mL of the test solution to 20.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Column:

— size: $l = 0.15$ m, $\varnothing = 4.6$ mm;

— stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 µm).

Mobile phase 6.8 g/L solution of *potassium dihydrogen phosphate R, methanol R* (35:65 V/V).

Flow rate 1.3 mL/min.

Detection Spectrophotometer at 272 nm.

Injection 10 µL of the test solution and reference solutions (a) and (c).

Run time 5 times the retention time of *methyl parahydroxybenzoate*.

Relative retention With reference to *methyl parahydroxybenzoate* (retention time = about 2.3 min): impurity A = about 0.6.

System suitability Reference solution (a):

- resolution: minimum 2.0 between the peaks due to impurity A and *methyl parahydroxybenzoate*.

Limis:

- correction factor: for the calculation of content, multiply the peak area of impurity A by 1.4;
- impurity A: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (c) (3.0 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
- sum of impurities other than A: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);
- disregard limit: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

Chlorides (2.4.4)

Maximum 350 ppm.

To 10 mL of solution S, add 30 mL of *water R* and 1 mL of *nitric acid R* and dilute to 50 mL with *water R*. Shake and filter. Dilute 10 mL of the filtrate to 15 mL with *water R*. Prepare the standard using 14 mL of *chloride standard solution (5 ppm Cl) R* to which 1 mL of *water R* has been added.

Sulfates (2.4.13)

Maximum 300 ppm.

To 25 mL of solution S, add 5 mL of *distilled water R* and 10 mL of *hydrochloric acid R* and dilute to 50 mL with *distilled water R*. Shake and filter. Dilute 10 mL of the filtrate to 15 mL with *distilled water R*.

Water (2.5.12)

Maximum 5.0 per cent, determined on 0.500 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (b).

Calculate the percentage content of $C_8H_7NaO_3$ using the declared content of *methyl parahydroxybenzoate CRS* and multiplying by a correction factor of 1.145.

STORAGE

In an airtight container.

IMPURITIES

Specified impurities A.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for otherunspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B, C, D.

A. 4-hydroxybenzoic acid,

B. ethyl 4-hydroxybenzoate (ethyl parahydroxybenzoate),

C. propyl 4-hydroxybenzoate (propyl parahydroxybenzoate),

D. butyl 4-hydroxybenzoate (butyl parahydroxybenzoate).

Ph Eur

Solubility

Freely soluble in water.

IDENTIFICATION

A. Loss on drying (see Tests).

B. Dissolve 0.2 g in 5 mL of a mixture of equal volumes of *nitric acid R* and *water R* and add 0.1 g of *ammonium chloride R*. Add 0.3 mL of *disodium hydrogen phosphate solution R* and heat slowly at 50-60 °C. A yellow precipitate is formed.

C. Dissolve 0.15 g in 2 mL of *water R*. The solution gives reaction (a) of sodium (2.3.1).

TESTS

Solution S

Dissolve 5.0 g in *water R* and dilute to 50 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

Chlorides

Maximum 50 ppm.

To 10 mL of a mixture of equal volumes of *nitric acid R* and *water R* add 10 mL of solution S with shaking. Add 1 mL of 0.1 M *silver nitrate*. Any opalescence in the solution is not more intense after 5 min than that of a standard solution prepared at the same time in the same manner with 10 mL of *chloride standard solution (5 ppm Cl) R*.

Phosphates

Maximum 200 ppm.

Dissolve 2.0 g by heating in 13 mL of *water R*. In the still-hot solution, dissolve 8.0 g of *ammonium nitrate R1*. Add this solution to 27 mL of a mixture of equal volumes of *nitric acid R* and *water R*. Any yellow colour or opalescence in the solution is not more intense within 3 h than that in a standard solution prepared at the same time in the same manner as follows: dissolve 1.0 g in 12 mL of *water R* and add 1 mL of *phosphate standard solution (200 ppm PO₄) R*.

Ammonium (2.4.1, Method B)

Maximum 10 ppm, determined on 0.10 g.

Prepare the standard using 1 mL of *ammonium standard solution (1 ppm NH₄) R*.

Loss on drying (2.2.32)

14.0 per cent to 16.0 per cent, determined on 1.000 g by drying in an oven at 140 °C for 3 h.

ASSAY

Dissolve 0.100 g in 30 mL of *water R*, add 0.5 g of *hexamethylenetetramine R* and 0.1 mL of a 250 g/L solution of *nitric acid R*. Heat to 60 °C. Titrate with 0.05 M *lead nitrate* using 4-(2-pyridylazo)resorcinol monosodium salt R as indicator. 1 mL of 0.05 M *lead nitrate* is equivalent to 10.30 mg of $MoNa_2O_4$.

CHARACTERS

Appearance

Colourless crystals or mass or yellowish rods, hygroscopic.

Solubility

Freely soluble in water, soluble in ethanol (96 per cent).

IDENTIFICATION

A. Dilute 1 mL of solution S1 (see Tests) to 25 mL with water R. To 0.1 mL of the solution add 1 mL of sulfanilic acid solution R1. Allow to stand for 2-3 min. Add 1 mL of β-naphthol solution R and 1 mL of dilute sodium hydroxide solution R. An intense red colour develops.

B. To 1 mL of the solution prepared for identification test A add 3 mL of a 20 g/L solution of phenazone R and 0.4 mL of dilute sulfuric acid R. An intense green colour develops.

C. To 0.15 mL of solution S1, add 0.35 mL of water R. The solution gives reaction (b) of sodium (2.3.1).

TESTS

Solution S1

Dissolve 2.5 g in carbon dioxide-free water R and dilute to 50 mL with the same solvent.

Solution S2

Dissolve 3 g in distilled water R. Cautiously add 10 mL of nitric acid R and evaporate to dryness. Dissolve the residue in 10 mL of distilled water R, neutralise with dilute sodium hydroxide solution R and dilute to 30 mL with distilled water R.

Appearance of solution

Solution S1 is clear (2.2.1) and not more intensely coloured than reference solution B₆ (2.2.2, Method II).

Acidity or alkalinity

To 10 mL of solution S1, add 0.05 mL of phenol red solution R. Add 0.1 mL of 0.01 M sodium hydroxide. The solution is red. Add 0.3 mL of 0.01 M hydrochloric acid. The solution is yellow.

Chlorides (2.4.4)

Maximum 50 ppm.

Dilute 10 mL of solution S2 to 15 mL with water R.

Sulfates (2.4.13)

Maximum 200 ppm.

Dilute 7.5 mL of solution S2 to 15 mL with distilled water R.

Loss on drying (2.2.32)

Maximum 1.0 per cent, determined on 1.000 g by drying in vacuo.

ASSAY

Dissolve 0.400 g in 100.0 mL of water R. Introduce 20.0 mL of the solution, while stirring continuously and keeping the tip of the pipette below the surface of the liquid, into a conical flask containing 30.0 mL of 0.1 M cerium sulfate. Immediately stopper the flask and allow to stand for 2 min.

Add 10 mL of a 200 g/L solution of potassium iodide R and 2 mL of starch solution R.

While stirring continuously, titrate with 0.1 M sodium thiosulfate until the blue colour disappears. Carry out a blank titration.

1 mL of 0.1 M cerium sulfate is equivalent to 3.45 mg of NaNO₂.

STORAGE

In an airtight container.

Ph Eur

Sodium Nitroprusside

(Ph. Eur. monograph 0565)

Na₂[Fe(CN)₅(NO)]·2H₂O 298.0

13755-38-9

Action and use

Vasodilator.

Preparation

Sodium Nitroprusside Infusion

Ph Eur

DEFINITION

Sodium pentacyanonitrosylferrate (III) dihydrate.

Content

99.0 per cent to 100.5 per cent (anhydrous substance).

CHARACTERS

Appearance

Reddish-brown powder or crystals.

Solubility

Freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

Test solution Dissolve 0.700 g in water R and dilute to 100.0 mL with the same solvent. Examine the solution immediately after preparation.

Spectral range 350-600 nm.

Absorption maximum At 395 nm.

Shoulder At about 510 nm.

Absorption minimum At 370 nm.

Specific absorbance at the absorption maximum 0.65 to 0.80.

B. Dissolve about 20 mg in 2 mL of water R and add 0.1 mL of sodium sulfide solution R. A deep violet-red colour is produced.

C. Dissolve 50 mg in 1 mL of water R and acidify the solution by the addition of hydrochloric acid R. Place a drop of the solution in an oxidising flame. A persistent yellow colour is produced.

TESTS

Insoluble matter

Maximum 100 ppm.

Dissolve 10 g without heating in 50 mL of water R. Allow to stand for 30 min and filter through a sintered-glass filter (16) (2.1.2). Wash the filter with cold water R until the filtrate is colourless. Dry the residue on the filter at 105 °C. The residue weighs a maximum of 1 mg.

Chlorides (2.4.4)

Maximum 200 ppm.

In a metallic crucible (nickel) mix 1.0 g with 8 mL of a 200 g/L solution of *sodium hydroxide R*. Heat slowly and evaporate carefully to dryness over a small flame, then heat to a dull red colour for 30 min. Allow to cool and transfer the solid residue with 3 quantities, each of 8 mL, of *dilute sulfuric acid R*. Filter the sulfuric acid extracts on a filter paper and collect the filtrates. Render the filtrate acid to *blue litmus paper R* by adding, if necessary, a few drops of *dilute sulfuric acid R*. Wash the crucible and the filter paper with 3 quantities, each of 10 mL, of *water R*, add the washings to the main sulfuric acid solution and dilute to 60 mL with *water R*. Mix.

Ferricyanides

Maximum 200 ppm.

Dissolve 1.25 g in *acetate buffer solution pH 4.6 R* and dilute to 50.0 mL with the same buffer solution. Use three 50 mL volumetric flasks (A, B, C). To flask B add 1.0 mL of *ferricyanide standard solution (50 ppm Fe(CN)₆ R*. To flasks A and B add 1 mL of a 5 g/L solution of *ferrous ammonium sulfate R*. To the 3 flasks add 10.0 mL of the solution of the substance to be examined. Dilute the contents of each flask to 50.0 mL with *water R*. Allow to stand for 30 min. The absorbance (2.2.25) of the solution in flask A measured at 720 nm using the solution in flask C as the compensation liquid is not greater than the absorbance of the solution in flask B measured at 720 nm using the solution in flask A as the compensation liquid.

Ferrocyanides

Maximum 200 ppm.

Dissolve 4.0 g in *water R* and dilute to 100.0 mL with the same solvent. Use three 50 mL volumetric flasks (A, B, C). To flask B add 2.0 mL of *ferrocyanide standard solution (100 ppm Fe(CN)₆ R*. To flasks A and B add 1 mL of *ferric chloride solution R2*. To the 3 flasks add 25.0 mL of the solution of the substance to be examined. Dilute the contents of each flask to 50.0 mL with *water R*. Allow to stand for 30 min. The absorbance (2.2.25) of the solution in flask A measured at 695 nm using the solution in flask C as the compensation liquid is not greater than the absorbance of the solution in flask B measured at 695 nm using the solution in flask A as the compensation liquid.

Sulfates

Maximum 100 ppm.

Test solution Dissolve 3.6 g in 120 mL of *distilled water R*, add with mixing 4 mL of *sulfate standard solution (10 ppm SO₄ R* and 20 mL of a 250 g/L solution of *cupric chloride R* and dilute to 150.0 mL with *distilled water R*. Allow to stand for 16 h and filter or centrifuge until a clear light-blue solution is obtained.

Reference solution To 40 mL of *sulfate standard solution (10 ppm SO₄ R* add 80 mL of *distilled water R* and 12-13 mL of a 250 g/L solution of *cupric chloride R*. Dilute to 150.0 mL with *distilled water R*. The volume of cupric chloride solution added is such that the colour of the final solution matches that of the test solution.

Allow the solutions to stand. Filter both solutions, discarding the first 25 mL of filtrate. To 100 mL of each filtrate, add 0.5 mL of *acetic acid R*. Mix and add 2 mL of a 250 g/L solution of *barium chloride R* and mix again. The test solution is not more opalescent than the reference solution.

Water (2.5.12)

9.0 per cent to 15.0 per cent, determined on 0.250 g.

ASSAY

Dissolve 0.250 g in 100 mL of *water R* and add 0.1 mL of *dilute sulfuric acid R*. Titrate with 0.1 M *silver nitrate*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *silver nitrate* is equivalent to 13.10 mg of Na₂[Fe(CN)₅(NO)].

STORAGE

Protected from light.

Ph Eur

Sodium Perborate

(Hydrated Sodium Perborate, Ph. Eur. monograph 1997)

NaBO₃·4H₂O or NaBO₂·H₂O₂·3H₂O 153.9

Action and use

Antiseptic.

Ph Eur

DEFINITION**Content**

96.0 per cent to 103.0 per cent.

CHARACTERS**Appearance**

Colourless, prismatic crystals or white or almost white powder, stable in the crystalline form.

Solubility

Springly soluble in water, with slow decomposition. It dissolves in dilute mineral acids.

IDENTIFICATION

A. Dissolve 20 mg in a mixture of 1 mL of *dilute sulfuric acid R* and 1 mL of *water R*. Add 1 mL of *potassium iodide solution R*. A reddish-brown colour appears.

B. The mixture obtained by treating about 100 mg with 0.1 mL of *sulfuric acid R* and 5 mL of *methanol R* burns with a greenish flame when ignited.

C. It gives reaction (a) of sodium (2.3.1).

TESTS**Chlorides (2.4.4)**

Maximum 330 ppm.

Dissolve 0.15 g in 15 mL of *water R*.

Sulfates (2.4.13)

Maximum 1.2 per cent.

Dissolve 0.13 g in 150 mL of *distilled water R*.

Iron (2.4.9)

Maximum 20 ppm.

Dissolve 2.5 g in 10 mL of *dilute hydrochloric acid R* with heating, evaporate to dryness, with stirring, and dissolve the residue in 25 mL of hot *water R*. Dilute 5 mL of the obtained solution to 10 mL with *water R*.

ASSAY

Dissolve 0.300 g in 50.0 mL of *water R*. Dilute 10.0 mL of the solution to 50 mL with *water R* and add 10 mL of *dilute sulfuric acid R*. Titrate with 0.02 M *potassium permanganate*.

1 mL of 0.02 M potassium permanganate is equivalent to 7.693 mg of NaH_2BO_7 .

STORAGE

In an airtight container.

Sodium Phenylbutyrate

(Ph. Eur. monograph 2183)

$\text{C}_{10}\text{H}_{11}\text{NaO}_2$

186.2

1716-12-7

Action and use

Glutamine conjugate; treatment of hyperammonaemia.

Ph Eur

DEFINITION

Sodium 4-phenylbutanoate.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS**Appearance**

White or yellowish-white powder.

Solubility

Freely soluble in water and in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison sodium phenylbutyrate CRS.

B. Dissolve 0.15 g in 2 mL of water R. The solution gives reaction (a) of sodium (2.3.1).

TESTS**pH (2.2.3)**

6.5 to 7.5.

Dissolve 0.20 g in carbon dioxide-free water R and dilute to 10 mL with the same solvent.

Impurity C

Gas chromatography (2.2.28).

Silylation solution To 2 mL of *N,O*-bis(trimethylsilyl)trifluoroacetamide R add 0.04 mL of chlorotrimethylsilane R and mix.

Test solution Dissolve 50.0 mg of the substance to be examined in 3 mL of water R and add 0.5 mL of hydrochloric acid R. Extract with 2 quantities, each of 5 mL, of methylene chloride R. Evaporate the combined methylene chloride extracts to dryness in a vial with a screw cap and add 0.5 mL of the silylation solution. Seal the vial and heat at $70 \pm 5^\circ\text{C}$ for 20 min.

Reference solution (a) Dissolve 5.0 mg of sodium phenylbutyrate impurity C CRS in methylene chloride R and dilute to 10.0 mL with the same solvent.

Reference solution (b) Dilute 1.0 mL of reference solution (a) to 10.0 mL with methylene chloride R. Place 1.0 mL of this solution in a vial with a screw cap, evaporate to dryness and add 0.5 mL of the silylation solution. Seal the vial and heat at $70 \pm 5^\circ\text{C}$ for 20 min.

Reference solution (c) Dissolve 10 mg of the substance to be examined in 25 mL of water R. To 3 mL of this solution add 0.1 mL of hydrochloric acid R. Extract with 2 quantities, each of 5 mL, of methylene chloride R. Combine the methylene chloride extracts in a vial with a screw cap and add 2 mL of reference solution (a). Evaporate to dryness and add 0.5 mL of the silylation solution. Seal the vial and heat at $70 \pm 5^\circ\text{C}$ for 20 min.

Column:

— material: fused silica;

— size: $l = 25\text{ m}$, $\varnothing = 0.25\text{ mm}$;

— stationary phase: phenyl(5)methyl(95)polysiloxane R (film thickness $1.0\ \mu\text{m}$).

Carrier gas helium for chromatography R.

Flow rate 0.9 mL/min.

Split ratio 1:100.

Temperature:

	Time (min)	Temperature ($^\circ\text{C}$)
Column	0 - 5	50
	5 - 27	50 → 270
	27 - 32	270
Injection port		270
Detector		270

Detection Flame ionisation.

Injection 1 μL .

Relative retention With reference to phenylbutyrate (retention time = about 20 min): impurity C = about 0.98.

System suitability Reference solution (c):

— resolution: minimum 3.0 between the peaks due to impurity C and phenylbutyrate.

Limit:

— impurity C: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 0.20 g of the substance to be examined in 10 mL of methanol R and dilute to 50.0 mL with water R.

Reference solution (a) Dissolve 4.0 mg of α -tetralone R (impurity B) in 10 mL of methanol R and dilute to 200.0 mL with the same solvent.

Reference solution (b) Dissolve 0.20 g of the substance to be examined in 10 mL of methanol R, add 1 mL of reference solution (a) and dilute to 50 mL with water R.

Reference solution (c) Dilute 1.0 mL of reference solution (a) to 50.0 mL with water R.

Reference solution (d) Dissolve 5.0 mg of 3-benzoylpropionic acid R (impurity A) in 2.5 mL of methanol R and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of this solution to 50.0 mL with water R.

Column:

— size: $l = 0.25\text{ m}$, $\varnothing = 4.6\text{ mm}$;

— stationary phase: base-deactivated end-capped octadecylsilyl silica gel for chromatography R ($5\ \mu\text{m}$).

Mobile phase glacial acetic acid R, methanol R, water R (1:49:50 V/V/V).

Flow rate 1.3 mL/min.

Detection Spectrophotometer at 245 nm.

Injection 20 µL of the test solution and reference solutions (b), (c) and (d).

Run time Twice the retention time of phenylbutyrate.

Relative retention With reference to phenylbutyrate (retention time = about 17 min): impurity A = about 0.3; impurity B = about 0.7.

System suitability Reference solution (b):

— **resolution:** minimum 6 between the peaks due to impurity B and phenylbutyrate.

Limits:

- **impurity A:** not more than twice the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.1 per cent);
- **impurity B:** not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.01 per cent);
- **unspecified impurities:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (0.05 per cent);
- **total:** not more than twice the area of the principal peak in the chromatogram obtained with reference solution (d) (0.1 per cent);
- **disregard limit of impurities other than B:** 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (d) (0.03 per cent).

Water (2.5.12)

Maximum 0.5 per cent, determined on 2.00 g.

ASSAY

Disperse 0.150 g in 50 mL of *anhydrous acetic acid R*.

The opalescence of the solution disappears during the titration. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 18.62 mg of $C_{10}H_{11}NaO_2$.

IMPURITIES

Specified impurities A, B, C.

A. 4-oxo-4-phenylbutanoic acid (3-benzoylpropionic acid),

B. 3,4-dihydronaphthalen-1(2H)-one (α -tetralone),

C. 4-cyclohexylbutanoic acid.

Sodium Picosulfate

(Ph. Eur. monograph 1031)

$C_{18}H_{13}NNa_2O_8S_2 \cdot H_2O$ 499.4

Action and use
Stimulant laxative.

Preparations
Compound Sodium Picosulfate Powder for Oral Solution
Sodium Picosulfate Oral Solution

Ph Eur

DEFINITION

4,4'-[(Pyridin-2-yl)methylene]diphenyl bis(sodium sulfate) monohydrate.

Content
98.5 per cent to 100.5 per cent (anhydrous substance).

CHARACTERS

Appearance
White or almost white, crystalline powder.

Solubility
Freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification: A, D.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison sodium picosulfate CRS.

B. Thin-layer chromatography (2.2.27).

Test solution Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 5 mL with the same solvent.

Reference solution Dissolve 20 mg of *sodium picosulfate CRS* in *methanol R* and dilute to 5 mL with the same solvent.

Plate TLC silica gel GF₂₅₄ plate R.

Mobile phase *anhydrous formic acid R*, *water R*, *methanol R*, *ethyl acetate R* (2.5:12.5:25:60 V/V/V/V).

Application 5 µL.

Development Over 1/2 of the plate.

Drying In a current of warm air for 15 min.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. To 5 mL of solution S (see Tests) add 1 mL of *dilute hydrochloric acid R* and heat to boiling. Add 1 mL of *barium chloride solution R1*. A white precipitate is formed.

D. Solution S gives reaction (a) of sodium (2.3.1).

TESTS

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 mL with the same solvent.

Ph Eur

Appearance of solution

Solution S is clear (2.2.1) and not more intensely coloured than reference solution GY₇ (2.2.2, Method II).

Acidity or alkalinity

To 10 mL of solution S add 0.05 mL of *phenolphthalein solution R*. The solution is colourless. Not more than 0.25 mL of 0.01 M sodium hydroxide is required to change the colour of the indicator to pink.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 10.0 mL of this solution to 100.0 mL with the mobile phase.

Reference solution (b) Dissolve the contents of a vial of *picosulfate for system suitability CRS* (containing impurities A and B) in 1.0 mL of the mobile phase.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.0$ mm;
- stationary phase: spherical end-capped octadecylsilyl silica gel for chromatography R1 (5 μ m);
- temperature: 40 °C.

Mobile phase Dissolve 2.3 g of *disodium hydrogen phosphate dihydrate R* in 800 mL of *water for chromatography R*, add 0.2 g of *cetyltrimethylammonium bromide R*, adjust to pH 7.5 with *phosphoric acid R* and dilute to 1000 mL with *water for chromatography R*; mix 550 mL of this solution and 450 mL of *acetonitrile R* (if necessary vary the buffer/acetonitrile proportion in 10 mL increments in order to fulfil the resolution requirement).

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 263 nm.

Injection 40 μ L.

Run time Twice the retention time of *picosulfate*.

Identification of impurities Use the chromatogram supplied with *picosulfate for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and B.

Relative retention With reference to *picosulfate* (retention time = about 7.4 min): impurity B = about 0.5; impurity A = about 0.7.

System suitability Reference solution (b):

- resolution: minimum 4.0 between the peaks due to impurities B and A.

Limits:

- correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.7; impurity B = 0.5;
- impurities A, B: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- total: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Chlorides (2.4.4)

Maximum 200 ppm.

Dilute 5 mL of solution S to 15 mL with *water R*.

Sulfates (2.4.13)

Maximum 400 ppm.

Dilute 7.5 mL of solution S to 15 mL with *distilled water R*.

Water (2.5.12)

3.0 per cent to 5.0 per cent, determined on 0.500 g.

ASSAY

Dissolve 0.400 g in 80 mL of *methanol R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 48.14 mg of C₁₈H₁₃NNa₂O₈S₂.

IMPURITIES

Specified impurities A, B.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*) C.

A. 4-[(RS)-(4-hydroxyphenyl)(pyridin-2-yl)methyl]phenyl sodium sulfate,

B. 4,4'-[(pyridin-2-yl)methylene]diphenol,

C. 2-[(RS)-(pyridin-2-yl)[4-(sulfonatoxy)phenyl]methyl]phenyl disodium sulfate.

Ph Eur

Sodium Polystyrene Sulfonate

Sodium Polystyrene Sulphonate

(Ph. Eur. monograph 1909)

Action and use

Used in the treatment of hyperkalaemia.

Ph Eur

DEFINITION

Polystyrene sulfonate resin prepared in the sodium form.

Exchange capacity 2.8 mmol to 3.4 mmol of potassium per gram (dried substance).

Content

9.4 per cent to 11.0 per cent of Na (dried substance).

CHARACTERS

Appearance

Almost white or light brown powder.

Solubility

Practically insoluble in water, in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Preparation Discs using finely ground substance.

Comparison Ph. Eur. reference spectrum of sodium polystyrene sulfonate.

B. Suspend 0.1 g in water R, add 2 mL of a 150 g/L solution of potassium carbonate R, and heat to boiling. Allow to cool and filter. To the filtrate add 4 mL of potassium pyroantimonate solution R and heat to boiling. Allow to cool in iced water and if necessary rub the inside of the test-tube with a glass rod. A dense white precipitate is formed.

TESTS

Styrene

Liquid chromatography (2.2.29).

Test solution Shake 10.0 g of the substance to be examined with 10 mL of acetone R for 30 min, centrifuge and use the supernatant.

Reference solution Dissolve 10 mg of styrene R in acetone R and dilute to 100 mL with the same solvent. Dilute 1 mL of this solution to 100 mL with acetone R.

Column:

— size: $l = 0.25$ m, $\varnothing = 4$ mm;

— stationary phase: octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase acetonitrile R, water R (1:1 V/V).

Flow rate 2 mL/min.

Detection Spectrophotometer at 254 nm.

Injection 20 μ L.

Limit:

— styrene: not more than the area of the principal peak in the chromatogram obtained with the reference solution (1 ppm).

Calcium

Maximum 0.10 per cent.

Atomic emission spectrometry (2.2.22, Method D).

Test solution To 1.10 g add 5 mL of hydrochloric acid R, heat to boiling, cool and add 10 mL of water R. Filter, wash the filter and residue with water R and dilute the filtrate and washing to 25.0 mL with water R.

Reference solutions Prepare the reference solutions using calcium standard solution (400 ppm Ca) R, diluted as necessary with water R.

Wavelength 422.7 nm.

Potassium

Maximum 0.10 per cent.

Atomic emission spectrometry (2.2.22, Method D).

Test solution To 1.10 g add 5 mL of hydrochloric acid R, heat to boiling, cool and add 10 mL of water R. Filter, wash the filter and residue with water R and dilute the filtrate and washings to 25.0 mL with water R.

Reference solutions Prepare the reference solutions using potassium standard solution (100 ppm K) R, diluted as necessary with water R.

Wavelength 766.5 nm.

Loss on drying (2.2.32)

Maximum 7.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Microbial contamination (2.6.13)

Bile-tolerant gram-negative bacteria: acceptance criterion less than 10^2 CFU/g.

ASSAY

Sodium

Atomic emission spectrometry (2.2.22, Method D).

Test solution In a platinum crucible moisten 0.90 g with a few drops of sulfuric acid R, ignite very gently and allow to cool. Moisten with a few drops of sulfuric acid R again, ignite at 800 ± 50 °C until a carbon-free ash is obtained and allow to cool.

Add 20 mL of water R to the crucible, warm gently on a water-bath until dissolution, cool, transfer quantitatively to a 100 mL graduated flask and dilute to 100.0 mL with water R. Dilute 5 mL of this solution to 1000.0 mL with water R.

Reference solutions Prepare the reference solutions using sodium standard solution (200 ppm Na) R, diluted as necessary with water R.

Wavelength 589 nm.

Exchange capacity

Atomic emission spectrometry (2.2.22, Method D).

Solution A 9.533 g/L solution of potassium chloride R.

Test solution To 1.6 g of the substance to be examined in a dry 250 mL ground-glass-stoppered flask add 100 mL of solution A, stopper and shake for 15 min. Filter, discard the first 20 mL of the filtrate and dilute 4 mL of the filtrate to 1000 mL with water R.

Reference solutions Prepare the reference solutions by diluting 0, 1, 2, 3 and 4 mL of solution A respectively and 4, 3, 2, 1 and 0 mL of a 7.63 g/L solution of sodium chloride R to 1000 mL with water R.

Wavelength 766.5 nm.

Prepare a calibration curve using the reference solutions and calculate the potassium exchange capacity of the substance to be examined in millimoles per gram taking the concentration of potassium in solution A as 128 mmol of K per litre.

STORAGE

In an airtight container.

IMPURITIES

Specified impurities A.

A. styrene.

Ph Eur

Sodium Propionate

(Ph. Eur. monograph 2041)

C₃H₅NaO₂

96.1

Action and use
Antifungal.

Ph Eur

DEFINITION

Sodium propanoate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

Colourless crystals or, white or almost white powder, slightly hygroscopic.

Solubility

Freely soluble in water, sparingly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

First identification: A, D.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison Ph. Eur. reference spectrum of sodium propionate.

B. Dissolve 0.1 g in a mixture of 2 mL of copper sulfate solution R and 2 mL of methylene chloride R. Shake vigorously and allow to stand. Both the upper and the lower layer show a blue colour.

C. To 5 mL of solution S (see Tests) add 2 mL of 0.1 M silver nitrate. A white precipitate is formed.

D. Solution S gives reaction (a) of sodium (2.3.1).

TESTS

Solution S

Dissolve 10 g in carbon dioxide-free water R prepared from distilled water R and dilute to 100 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

pH (2.2.3)

7.8 to 9.2.

Dilute 1 mL of solution S to 5 mL with water R.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 0.250 g of the substance to be examined in water R and dilute to 100 mL with the same solvent.

Reference solution (a) Dissolve 10 mg of the substance to be examined and 10 mg of sodium acetate R in water R and dilute to 100 mL with the same solvent.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with water R.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm,

— stationary phase: octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase Dilute 1 mL of phosphoric acid R to 1000 mL with water for chromatography R.

Flow rate 1 mL/min.

Detection Spectrophotometer at 210 nm.

Injection 20 μ L.

System suitability Reference solution (a):

— resolution: minimum 5.0 between the peaks due to sodium acetate and sodium propionate.

Limits:

— any impurity: not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

— total: not more than half the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),

— disregard limit: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Readily oxidisable substances

In a ground-glass-stoppered conical flask introduce 10 g of the substance to be examined. Add 100 mL of water R and stir to dissolve. Add 25 mL of sodium hypobromite solution R and 10 mL of a 200 g/L solution of sodium acetate R, stopper the flask and allow to stand for 15 min. Add 10 mL of potassium iodide solution R and 20 mL of hydrochloric acid R while cooling. Titrate with 0.1 M sodium thiosulfate, adding 2 mL of starch solution R towards the end of the titration. Carry out a blank titration. The difference between the volumes used in the 2 titrations is not greater than 2.2 mL.

Iron (2.4.9)

Maximum 10 ppm, determined on solution S.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by heating in an oven at 105 °C for 3 h.

ASSAY

Dissolve 80.0 mg in 30 mL of anhydrous acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 9.61 mg of C₃H₅NaO₂.

STORAGE

In an airtight container.

Ph Eur

Sodium Propyl Hydroxybenzoate

Sodium Propylparaben

(Sodium Propyl Parahydroxybenzoate, Ph. Eur. monograph 1263)

C₁₀H₁₁NaO₃

202.2

35285-69-9

Action and use

Antimicrobial preservative.

Ph Eur

DEFINITION

Sodium 4-(propoxycarbonyl)phenolate.

Content

94.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, hygroscopic, crystalline powder.

Solubility

Freely soluble in water, sparingly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Dissolve 0.5 g in 50 mL of water R. Immediately add 5 mL of hydrochloric acid R1. Filter and wash the precipitate with water R. Dry in vacuo at 80 °C for 2 h. The precipitate melts (2.2.14) at 96 °C to 99 °C.

B. Infrared absorption spectrophotometry (2.2.24).

Preparation Precipitate obtained in identification test A.

Comparison propyl parahydroxybenzoate CRS.

C. Thin-layer chromatography (2.2.27).

Test solution (a) Dissolve 0.10 g of the substance to be examined in 10 mL of water R. Immediately add 2 mL of hydrochloric acid R and shake with 50 mL of 1,1-dimethylethyl methyl ether R. Evaporate the upper layer to dryness and take up the residue with 10 mL of acetone R.

Test solution (b) Dilute 1 mL of test solution (a) to 10 mL with acetone R.

Reference solution (a) Dissolve 10 mg of propyl parahydroxybenzoate CRS in acetone R and dilute to 10 mL with the same solvent.

Reference solution (b) Dissolve 10 mg of ethyl parahydroxybenzoate CRS in 1 mL of test solution (a) and dilute to 10 mL with acetone R.

Plate TLC octadecylsilyl silica gel F₂₅₄ plate R.

Mobile phase glacial acetic acid R, water R, methanol R (1:30:70 V/V/V).

Application 5 µL of test solution (b) and reference solutions (a) and (c).

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

- the chromatogram shows 2 clearly separated principal spots.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 1 mL of solution S (see Tests) add 1 mL of water R. The solution gives reaction (a) of sodium (2.3.1).

TESTS

Solution S

Dissolve 5.0 g in carbon dioxide-free water R prepared from distilled water R, and dilute to 50 mL with the same solvent.

Appearance of solution

Solution S, examined immediately after preparation, is clear (2.2.1) and not more intensely coloured than reference solution BY₆ (2.2.2, Method II).

pH (2.2.3)

9.5 to 10.5.

Dilute 1 mL of solution S to 100 mL with carbon dioxide-free water R.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 50.0 mg of the substance to be examined in 2.5 mL of methanol R and dilute to 50.0 mL with the mobile phase. Dilute 10.0 mL of the solution to 100.0 mL with the mobile phase.

Reference solution (a) Dissolve 5 mg of ethyl parahydroxybenzoate CRS (impurity C), 5 mg of 4-hydroxybenzoic acid R (impurity A) and 5 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 10.0 mL with the mobile phase.

Reference solution (b) Dissolve 50.0 mg of propyl parahydroxybenzoate CRS in 2.5 mL of methanol R and dilute to 50.0 mL with the mobile phase. Dilute 10.0 mL of the solution to 100.0 mL with the mobile phase.

Reference solution (c) Dilute 1.0 mL of the test solution to 20.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Column:

— size: *l* = 0.15 m, Ø = 4.6 mm;

— stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 µm).

Mobile phase 6.8 g/L solution of potassium dihydrogen phosphate R, methanol R (35:65 V/V).

Flow rate 1.3 mL/min.

Detection Spectrophotometer at 272 nm.

Injection 10 µL of the test solution and reference solutions (a) and (c).

Run time 2.5 times the retention time of propyl parahydroxybenzoate.

Relative retention With reference to propyl parahydroxybenzoate (retention time = about 4.5 min): impurity A = about 0.3; impurity C = about 0.7.

System suitability Reference solution (a):

- resolution: minimum 5.0 between the peaks due to impurity C and propyl parahydroxybenzoate.

Limits:

- correction factor: for the calculation of content, multiply the peak area of impurity A by 1.4;
- impurity A: not more than 8 times the area of the principal peak in the chromatogram obtained with reference solution (c) (4.0 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
- sum of impurities other than A: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);
- disregard limit: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

Chlorides (2.4.4)

Maximum 350 ppm.

To 10 mL of solution S, add 1 mL of nitric acid R and 30 mL of water R and dilute to 50 mL with water R. Shake and filter. Dilute 10 mL of the filtrate to 15 mL with water R. Prepare the standard using 14 mL of chloride standard solution (5 ppm Cl) R to which 1 mL of water R has been added.

Sulfates (2.4.13)

Maximum 300 ppm.

To 25 mL of solution S, add 5 mL of *distilled water R* and 10 mL of *hydrochloric acid R* and dilute to 50 mL with *distilled water R*. Shake and filter. Dilute 10 mL of the filtrate to 15 mL with *distilled water R*.

Water (2.5.12)

Maximum 5.0 per cent, determined on 0.500 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (b).

Calculate the percentage content of $C_{10}H_{11}NaO_3$ from the declared content of *propyl parahydroxybenzoate CRS*, multiplied by a correction factor of 1.122.

STORAGE

In an airtight container.

IMPURITIES

Specified impurities A.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B, C, D.

A. 4-hydroxybenzoic acid,

B. methyl 4-hydroxybenzoate (methyl parahydroxybenzoate),

C. ethyl 4-hydroxybenzoate (ethyl parahydroxybenzoate),

D. butyl 4-hydroxybenzoate (butyl parahydroxybenzoate).

Ph Eur

Sodium Salicylate

(Ph. Eur. monograph 0413)

$C_7H_5NaO_3$

160.1

54-21-7

Action and use

Anti-inflammatory; analgesic.

Ph Eur

DEFINITION

Sodium 2-hydroxybenzenecarboxylate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or small, colourless crystals or shiny flakes.

Solubility

Freely soluble in water, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification: A, C.

Second identification: B, C.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison sodium salicylate CRS.

B. Solution S (see Tests) gives the reactions of salicylates (2.3.1).

C. It gives reaction (b) of sodium (2.3.1).

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and not more intensely coloured than reference solution BY₆ (2.2.2, *Method II*).

Acidity

To 20 mL of solution S add 0.1 mL of *phenol red solution R*. The solution is yellow. Not more than 2.0 mL of 0.01 M *sodium hydroxide* is required to change the colour of the indicator to violet-red.

Chlorides (2.4.4)

Maximum 200 ppm.

To 5 mL of solution S add 5 mL of *water R* and 10 mL of *dilute nitric acid R* and filter. Dilute 10 mL of the filtrate to 15 mL with *water R*.

Sulfates (2.4.13)

Maximum 600 ppm.

Dilute 2.5 mL of solution S to 15 mL with *distilled water R*.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.00 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.130 g in 30 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 16.01 mg of $C_7H_5NaO_3$.

STORAGE

In an airtight container, protected from light.

Ph Eur

Sodium Selenite

(Ph. Eur. monograph 2740)

Na_2SeO_3 172.9 10102-18-8

Action and use

Used in treatment of selenium deficiency.

Ph Eur

DEFINITION

Content

98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline deliquescent powder.

Solubility

Freely soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Dissolve 50 mg in 5 mL of a mixture of equal volumes of dilute hydrochloric acid R and water R and heat to boiling. Add 50 mg of ascorbic acid R; a red precipitate is formed which may become black.

B. Dissolve 50 mg in a mixture of 1 mL of dilute hydrochloric acid R and 5 mL of water R. Add 1 mL of barium chloride solution R1; the solution remains clear.

C. It gives reaction (a) of sodium (2.3.1).

D. It complies with the limits of the assay.

TESTS

Solution S

Dissolve 5.0 g in carbon dioxide-free water R and dilute to 50.0 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

pH (2.2.3)

9.8 to 10.8 for solution S.

Chlorides (2.4.4)

Maximum 50 ppm.

Dissolve 1.0 g in 5 mL of water R, add 9 mL of nitric acid R and dilute to 15 mL with water R.

Sulfates and selenates (2.4.13)

Maximum 300 ppm (determined as sulfates).

Dissolve 0.5 g in 10 mL of distilled water R, add 0.5 mL of hydrochloric acid R1 and dilute to 15 mL with distilled water R.

Iron

Maximum 50 ppm.

To 2 mL of solution S add 2 mL of a 200 g/L solution of sulfosalicylic acid R and 5 mL of concentrated ammonia R, and dilute to 10 mL with water R. The solution is not more intensely coloured than a reference solution prepared at the same time and in the same manner using 1 mL of iron standard solution (10 ppm Fe) R.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 130 °C for 2 h.

ASSAY

Dissolve 80.0 mg in 50 mL of water R. Add 1.0 mL of anhydrous formic acid R, 25.0 mL of 0.1 M sodium thiosulfate and 0.5 g of potassium iodide R. Titrate immediately with 0.05 M iodine using starch solution R as indicator. Carry out a blank titration.

1 mL of 0.1 M sodium thiosulfate is equivalent to 4.323 mg of Na_2SeO_3 .

STORAGE

In an airtight container.

Ph Eur

Sodium Selenite Pentahydrate

(Ph. Eur. monograph 1677)

$Na_2SeO_3 \cdot 5H_2O$ 263.0 26970-82-1

Action and use

Used in treatment of selenium deficiency.

Ph Eur

DEFINITION

Content

98.5 per cent to 101.5 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder, hygroscopic.

Solubility

Freely soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Dissolve 50 mg in 5 mL of a mixture of equal volumes of dilute hydrochloric acid R and water R and heat to boiling. Add 50 mg of ascorbic acid R; a red precipitate is formed which may become black.

B. Dissolve 50 mg in a mixture of 1 mL of dilute hydrochloric acid R and 5 mL of water R. Add 1 mL of barium chloride solution R1; the solution remains clear.

C. It gives reaction (a) of sodium (2.3.1).

D. It complies with the limits of the assay.

TESTS

Solution S

Dissolve 5.0 g in carbon dioxide-free water R and dilute to 50.0 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

pH (2.2.3)

9.8 to 10.8 for solution S.

Chlorides (2.4.4)

Maximum 50 ppm.

Dissolve 1.0 g in 5 mL of water R, add 9 mL of nitric acid R and dilute to 15 mL with water R.

Sulfates and selenates (2.4.13)

Maximum 300 ppm (determined as sulfates).

Dissolve 0.5 g in 10 mL of distilled water R, add 0.5 mL of hydrochloric acid R1 and dilute to 15 mL with distilled water R.

Iron

Maximum 50 ppm.

To 2 mL of solution S add 2 mL of a 200 g/L solution of *sulfosalicylic acid R*, 5 mL of *concentrated ammonia R* and dilute to 10 mL with *water R*. The solution is not more intensely coloured than a reference solution prepared at the same time and in the same manner using 1 mL of *iron standard solution (10 ppm Fe) R*.

ASSAY

Dissolve 0.120 g in 50 mL of *water R*. Add 1.0 mL of *anhydrous formic acid R*, 25.0 mL of 0.1 M *sodium thiosulfate* and 0.5 g of *potassium iodide R*. Titrate immediately with 0.05 M *iodine* using *starch solution R* as indicator. Carry out a blank titration.

1 mL of 0.1 M *sodium thiosulfate* is equivalent to 6.575 mg of $\text{Na}_2\text{SeO}_3 \cdot 5\text{H}_2\text{O}$.

STORAGE

In an airtight container.

Ph Eur

Sodium Starch Glycolate (Type A)¹

(Ph. Eur. monograph 0983)

Action and use

Excipient.

Ph Eur

DEFINITION

Sodium salt of a cross-linked partly *O*-carboxymethylated starch.

Content

2.8 per cent to 4.2 per cent of Na (A_r 22.99) (substance washed with ethanol (80 per cent *V/V*) and dried).

CHARACTERS**Appearance**

White or almost white, fine, free-flowing powder, very hygroscopic.

Solubility

Practically insoluble in methylene chloride. It gives a translucent suspension in water. ♦

IDENTIFICATION

♦ A. pH (see Tests).

B. Prepare with shaking and without heating a mixture of 4.0 g of the substance to be examined and 20 mL of *carbon dioxide-free water R*. The mixture has the appearance of a gel. Add 100 mL of *carbon dioxide-free water R* and shake.

A suspension forms that settles after standing. ♦

C. To an acidified solution, add *iodinated potassium iodide solution R1*. The solution becomes blue or violet.

D. Solution S2 (see Tests) gives reaction (a) of sodium (2.3.1).

TESTS**Solution S1**

Centrifuge the suspension obtained in identification test B at 2500 *g* for 10 min. Collect carefully the supernatant.

Solution S2

Place 2.5 g in a silica or platinum crucible and add 2 mL of a 500 g/L solution of *sulfuric acid R*. Heat on a water-bath, then cautiously over a naked flame, raising the temperature progressively, then incinerate in a muffle furnace at 600 ± 25 °C. Continue heating until all black particles have disappeared. Allow to cool, add a few drops of *dilute sulfuric acid R*, heat and incinerate as above. Allow to cool, add a few drops of *ammonium carbonate solution R*, evaporate to dryness and incinerate cautiously. Allow to cool and dissolve the residue in 50 mL of *water R*.

Appearance of solution S1

Solution S1 is clear (2.2.1) and colourless (2.2.2, *Method II*). ♦

pH (2.2.3)

5.5 to 7.5.

Disperse 1.0 g in 30 mL of *carbon dioxide-free water R*.

Sodium glycolate

Maximum 2.0 per cent. Carry out the test protected from light.

Test solution Place 0.20 g in a beaker. Add 5 mL of *acetic acid R* and 5 mL of *water R*. Stir until dissolution is complete (about 10 min). Add 50 mL of *acetone R* and 1 g of *sodium chloride R*. Filter through a fast filter paper impregnated with *acetone R*, rinse the beaker and filter with *acetone R*. Combine the filtrate and washings and dilute to 100.0 mL with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant.

Reference solution Dissolve 0.310 g of *glycolic acid R*, previously dried in a desiccator (2.2.32) at room temperature overnight, in *water R* and dilute to 500.0 mL with the same solvent. To 5.0 mL of this solution add 5 mL of *acetic acid R* and allow to stand for about 30 min. Add 50 mL of *acetone R* and 1 g of *sodium chloride R*. Filter through a fast filter paper impregnated with *acetone R*, rinse the beaker and filter with *acetone R*. Combine the filtrate and washings and dilute to 100.0 mL with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant.

Heat 2.0 mL of the test solution on a water-bath for 20 min. Cool to room temperature and add 20.0 mL of *2,7-dihydroxynaphthalene solution R*. Shake and heat in a water-bath for 20 min. Cool under running water, transfer to a volumetric flask and dilute to 25.0 mL with *sulfuric acid R*, maintaining the flask under running water. Within 10 min, measure the absorbance at 540 nm (2.2.25) using *water R* as the compensation liquid. The absorbance of the solution prepared with the test solution is not greater than that of a solution prepared at the same time and in the same manner with 2.0 mL of the reference solution.

Sodium chloride

Maximum 7.0 per cent.

Place 0.500 g in a beaker and suspend in 100 mL of *water R*. Add 1 mL of *nitric acid R*. Titrate with 0.1 M *silver nitrate*, determining the end-point potentiometrically (2.2.20), using a silver-based indicator electrode and a double-junction reference electrode containing a 100 g/L solution of *potassium nitrate R* in the outer jacket and a standard filling solution in the inner jacket.

1 mL of 0.1 M *silver nitrate* is equivalent to 5.844 mg of NaCl.

Iron (2.4.9)

Maximum 20 ppm, determined on 10 mL of solution S2.

¹ This monograph has undergone pharmacopoeial harmonisation. See chapter 5.8 Pharmacopoeial harmonisation.

Loss on drying (2.2.32)

Maximum 10.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 1.5 h.

Microbial contamination

It complies with the test for *Escherichia coli* and *Salmonella* (2.6.13).

ASSAY

Shake about 1 g with 20 mL of ethanol (80 per cent V/V) R, stir for 10 min and filter. Repeat the operation until chloride has been completely extracted and verify the absence of chloride using silver nitrate solution R2. Dry the residue at 105 °C to constant mass. To 0.700 g of the dried residue, add 80 mL of glacial acetic acid R and heat under a reflux condenser for 2 h. Cool the solution to room temperature. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20). Carry out a blank titration.

1 mL of 0.1 M perchloric acid is equivalent to 2.299 mg of Na.

♦ **STORAGE**

In an airtight container, protected from light. ♦

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for sodium starch glycolate (type A) used as disintegrant in tablets.

Settling volume

Introduce 70 mL of water R in a flask, add 1.0 g of the substance to be examined (dried substance) and stir with a glass rod so that no lumps remain. Transfer the suspension to a 100 mL graduated cylinder, rinse the walls of the flask with water R and dilute to 100 mL with the same solvent. Stir again until the substance is evenly distributed. Allow to stand for 2 h. The volume of the sediment is typically less than 45 mL.

Degree of substitution

Place 1.000 g (dried substance) in a 500 mL conical flask, add 300 mL of a 100 g/L solution of sodium chloride R and 25.0 mL of 0.1 M sodium hydroxide, stopper the flask and allow to stand for 5 min, shaking occasionally. Add 0.05 mL of m-cresol purple solution R and about 15 mL of 0.1 M hydrochloric acid from a burette. Insert the stopper and shake. If the solution is violet, add 0.1 M hydrochloric acid in 1 mL portions until the solution becomes yellow, shaking after each addition. Titrate with 0.1 M sodium hydroxide until the colour turns to violet. Calculate the number of milliequivalents (M) of base required to neutralise the equivalent of 1 g of dried substance.

Calculate the degree of acid carboxymethyl substitution (A) using the following expression:

$$A = \frac{1150M}{(7102 - 412M - 80C)}$$

C = sulfated ash as a percentage, determined as follows.

Introduce 1.3 g of the substance to be examined in a flask and add 20 mL of ethanol (80 per cent V/V) R. Shake for 10 min and filter on a sintered-glass filter (2.1.2). Repeat this operation 4 times. Add to the residue 10 mL of ethanol (96 per cent) R and filter. Collect the residue and place it in an oven at 105 °C for 4 h. Place the dried residue in a mortar and crush. Determine the sulfated ash content (C) (2.4.14) on 1.000 g of the powder obtained.

Calculate the degree of sodium carboxymethyl substitution (S) using the following expression:

$$S = \frac{(162 + 58A)C}{(7102 - 80C)}$$

The degree of substitution is the sum of A and S.

Particle-size distribution (2.9.31 or 2.9.38)

Ph Eur

Sodium Starch Glycolate (Type B)¹

(Ph. Eur. monograph 0984)

Action and use
Excipient.

Ph Eur

DEFINITION

Sodium salt of a cross-linked partly O-carboxymethylated starch.

Content

2.0 per cent to 3.4 per cent of Na (A, 22.99) (substance washed with ethanol (80 per cent V/V) and dried).

♦ **CHARACTERS**

Appearance

White or almost white, fine, free-flowing powder, very hygroscopic.

Solubility

Practically insoluble in methylene chloride. It gives a translucent suspension in water. ♦

IDENTIFICATION

♦ A. pH (see Tests).

B. Prepare with shaking and without heating a mixture of 4.0 g of the substance to be examined and 20 mL of carbon dioxide-free water R. The mixture has the appearance of a gel. Add 100 mL of carbon dioxide-free water R and shake. A suspension forms that settles after standing. ♦

C. To an acidified solution, add iodinated potassium iodide solution R1. The solution becomes blue or violet.

D. Solution S2 (see Tests) gives reaction (a) of sodium (2.3.1).

TESTS

Solution S1

Centrifuge the suspension obtained in identification test B at 2500 g for 10 min. Collect carefully the supernatant.

¹ This monograph has undergone pharmacopoeial harmonisation. See chapter 5.8 Pharmacopoeial harmonisation.

Solution S2

Place 2.5 g in a silica or platinum crucible and add 2 mL of a 500 g/L solution of *sulfuric acid R*. Heat on a water-bath, then cautiously over a naked flame, raising the temperature progressively, and then incinerate in a muffle furnace at 600 ± 25 °C. Continue heating until all black particles have disappeared. Allow to cool, add a few drops of *dilute sulfuric acid R* and heat and incinerate as above. Allow to cool, add a few drops of *ammonium carbonate solution R*, evaporate to dryness and incinerate cautiously. Allow to cool and dissolve the residue in 50 mL of *water R*.

◊ **Appearance of solution S1**

Solution S1 is clear (2.2.1) and colourless (2.2.2, *Method II*).
◊

pH (2.2.3)

3.0 to 5.0.

Disperse 1.0 g in 30 mL of *carbon dioxide-free water R*.

Sodium glycolate

Maximum 2.0 per cent. Carry out the test protected from light.

Test solution Place 0.20 g in a beaker. Add 5 mL of *acetic acid R* and 5 mL of *water R*. Stir until dissolution is complete (about 10 min). Add 50 mL of *acetone R* and 1 g of *sodium chloride R*. Filter through a fast filter paper impregnated with *acetone R*, rinse the beaker and filter with *acetone R*. Combine the filtrate and washings and dilute to 100.0 mL with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant.

Reference solution Dissolve 0.310 g of *glycolic acid R*, previously dried in a desiccator (2.2.32) at room temperature overnight, in *water R* and dilute to 500.0 mL with the same solvent. To 5.0 mL of this solution add 5 mL of *acetic acid R* and allow to stand for about 30 min. Add 50 mL of *acetone R* and 1 g of *sodium chloride R*. Filter through a fast filter paper impregnated with *acetone R*, rinse the beaker and filter with *acetone R*. Combine the filtrate and washings and dilute to 100.0 mL with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant.

Heat 2.0 mL of the test solution on a water-bath for 20 min. Cool to room temperature and add 20.0 mL of *2,7-dihydroxynaphthalene solution R*. Shake and heat in a water-bath for 20 min. Cool under running water, transfer quantitatively to a volumetric flask and dilute to 25.0 mL with *sulfuric acid R*, maintaining the flasks under running water. Within 10 min, measure the absorbance at 540 nm (2.2.25) using *water R* as the compensation liquid.

The absorbance of the solution prepared with the test solution is not greater than that of a solution prepared at the same time and in the same manner with 2.0 mL of the reference solution.

Sodium chloride

Maximum 7.0 per cent.

Place 0.500 g in a beaker and suspend in 100 mL of *water R*. Add 1 mL of *nitric acid R*. Titrate with 0.1 M *silver nitrate*, determining the end-point potentiometrically (2.2.20), using a silver-based indicator electrode and a double-junction reference electrode containing a 100 g/L solution of *potassium nitrate R* in the outerjacket and a standard filling solution in the inner jacket.

1 mL of 0.1 M *silver nitrate* is equivalent to 5.844 mg of NaCl.

Iron (2.4.9)

Maximum 20 ppm, determined on 10 mL of solution S2.

Loss on drying (2.2.32)

Maximum 10.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 1.5 h.

Microbial contamination

It complies with the test for *Escherichia coli* and *Salmonella* (2.6.13).

ASSAY

Shake about 1 g with 20 mL of *ethanol (80 per cent V/V) R*, stir for 10 min and filter. Repeat the operation until chloride has been completely extracted and verify the absence of chloride using *silver nitrate solution R2*. Dry the residue at 105 °C to constant mass. To 0.700 g of the dried residue, add 80 mL of *glacial acetic acid R* and heat under a reflux condenser for 2 h. Cool the solution to room temperature. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20). Carry out a blank titration.

1 mL of 0.1 M *perchloric acid* is equivalent to 2.299 mg of Na.

♦ **STORAGE**

In an airtight container, protected from light. ♦

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the *Functionality-related characteristics* section may also be present in the *mandatory part of the monograph* since they also represent *mandatory quality criteria*. In such cases, a cross-reference to the tests described in the *mandatory part* is included in the *Functionality-related characteristics* section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for sodium starch glycolate (type B) used as disintegrant in tablets.

Settling volume

Introduce 70 mL of *water R* in a flask, add 1.0 g of the substance to be examined (dried substance) and stir with a glass rod so that no lumps remain. Transfer the suspension to a 100 mL graduated cylinder, rinse the walls of the flask with *water R* and dilute to 100 mL with the same solvent. Stir again until the substance is evenly distributed. Allow to stand for 2 h. The volume of the sediment is typically less than 45 mL.

Degree of substitution

Place 1.000 g (dried substance) in a 500 mL conical flask, add 300 mL of a 100 g/L solution of *sodium chloride R* and 25.0 mL of 0.1 M *sodium hydroxide*, stopper the flask and allow to stand for 5 min, shaking occasionally. Add 0.05 mL of *m-cresol purple solution R* and about 15 mL of 0.1 M *hydrochloric acid* from a burette. Insert the stopper and shake. If the solution is violet, add 0.1 M *hydrochloric acid* in 1 mL portions until the solution becomes yellow, shaking after each addition. Titrate with 0.1 M *sodium hydroxide* until the colour turns to violet. Calculate the number of milliequivalents (*M*) of base required to neutralise the equivalent of 1 g of dried substance.

Calculate the degree of acid carboxymethyl substitution (*A*) using the following expression:

$$A = \frac{1150M}{(7102 - 412M - 80C)}$$

C = sulfated ash as a percentage, determined as follows.

Introduce 1.3 g of the substance to be examined in a flask and add 20 mL of *ethanol (80 per cent V/V) R*. Shake for 10 min and filter on a sintered-glass filter (2.1.2). Repeat this operation 4 times. Add to the residue 10 mL of *ethanol (96 per cent) R* and filter. Collect the residue and place it in an oven at 105 °C for 4 h. Place the dried residue in a mortar and crush. Determine the sulfated ash content (C) (2.4.14) on 1.000 g of the powder obtained.

Calculate the degree of sodium carboxymethyl substitution (S) using the following expression:

$$S = \frac{(162 + 58A)C}{(7102 - 80C)}$$

The degree of substitution is the sum of A and S.

Particle-size distribution (2.9.31 or 2.9.38)

Ph Eur

Sodium Starch Glycolate (Type C)¹

(Ph. Eur. monograph 1566)

Action and use
Excipient.

Ph Eur

DEFINITION

Sodium salt of a partly O-carboxymethylated starch, cross-linked by physical dehydration.

Content

2.8 per cent to 5.0 per cent of Na (*A*_r 22.99) (substance washed with ethanol (80 per cent V/V) and dried).

CHARACTERS

Appearance

White or almost white, fine, free-flowing powder, very hygroscopic.

Microscopic examination: it is seen to consist of granules, irregularly shaped, ovoid or pear-shaped, 30-100 µm in size, or rounded, 10-35 µm in size; compound granules consisting of 2-4 components occur occasionally; the granules have an eccentric hilum and clearly visible concentric striations; between crossed nicol prisms, the granules show a distinct black cross intersecting at the hilum; small crystals are visible at the surface of the granules. The granules show considerable swelling in contact with water.

Solubility

Soluble in water, practically insoluble in methylene chloride. It gives a translucent gel-like product in water.

IDENTIFICATION

A. pH (see Tests).

B. Prepare with shaking and without heating a mixture of 4.0 g of the substance to be examined and 20 mL of *carbon dioxide-free water R*. The mixture has the appearance of a gel. Add 100 mL of *carbon dioxide-free water R* and shake: the gel

remains stable (difference from types A and B). Keep the gel for the tests for appearance of gel and pH.

C. To 5 mL of the gel obtained in identification test B add 0.05 mL of *iodine solution R1*. A dark blue colour is produced.

D. Solution S (see Tests) gives reaction (a) of sodium (2.3.1).

TESTS

Solution S

Place 2.5 g in a silica or platinum crucible and add 2 mL of a 500 g/L solution of *sulfuric acid R*. Heat on a water-bath, then cautiously over a naked flame, raising the temperature progressively, and then incinerate in a muffle furnace at 600 ± 25 °C. Continue heating until all black particles have disappeared. Allow to cool, add a few drops of *sulfuric acid R*, heat and incinerate as above. Allow to cool, add a few drops of *ammonium carbonate solution R*, evaporate to dryness and incinerate cautiously. Allow to cool and dissolve the residue in 50 mL of *water R*.

Appearance of gel

The gel obtained in identification test B is colourless (2.2.2, Method II).

pH (2.2.3)

5.5 to 7.5 for the gel obtained in identification test B.

Sodium glycolate

Maximum 2.0 per cent. Carry out the test protected from light.

Test solution Place 0.20 g in a beaker. Add 5 mL of *acetic acid R* and 5 mL of *water R*. Stir until dissolution is complete (about 10 min). Add 50 mL of *acetone R* and 1 g of *sodium chloride R*. Filter through a fast filter paper impregnated with *acetone R*, rinse the beaker and filter with *acetone R*. Combine the filtrate and washings and dilute to 100.0 mL with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant.

Reference solution Dissolve 0.310 g of *glycolic acid R*, previously dried in a desiccator (2.2.32), in *water R* and dilute to 500.0 mL with the same solvent. To 5.0 mL of this solution, add 5 mL of *acetic acid R* and allow to stand for about 30 min. Add 50 mL of *acetone R* and 1 g of *sodium chloride R* and dilute to 100.0 mL with *acetone R*.

Heat 2.0 mL of the test solution on a water-bath for 20 min. Cool to room temperature and add 20.0 mL of *2,7-dihydroxynaphthalene solution R*. Shake and heat on a water-bath for 20 min. Cool under running water, transfer to a volumetric flask and dilute to 25.0 mL with *sulfuric acid R*, maintaining the flask under running water. Within 10 min, measure the absorbance (2.2.25) at 540 nm using *water R* as the compensation liquid. The absorbance of the solution prepared with the test solution is not greater than that of a solution prepared at the same time and in the same manner with 2.0 mL of the reference solution.

Sodium chloride

Maximum 1 per cent.

Shake 1.00 g with 20 mL of *ethanol (80 per cent V/V) R* for 10 min and filter. Repeat the operation 4 times. Dry the residue to constant mass at 100 °C and set aside for the assay. Combine the filtrates. Evaporate to dryness, take up the residue with *water R* and dilute to 25.0 mL with the same solvent. To 10.0 mL of the solution add 30 mL of *water R* and 5 mL of *dilute nitric acid R*. Titrate with 0.1 M *silver nitrate*, determining the end-point potentiometrically (2.2.20), using a silver-based indicator electrode and a double-junction reference electrode containing a 100 g/L

¹ In contrast to sodium starch glycolate type A and type B, this monograph has NOT undergone pharmacopoeial harmonisation.

solution of *potassium nitrate R* in the outer jacket and a standard filling solution in the inner jacket.

1 mL of 0.1 M *silver nitrate* is equivalent to 5.844 mg of NaCl.

Iron (2.4.9)

Maximum 20 ppm, determined on solution S.

Loss on drying (2.2.32)

Maximum 7.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Microbial contamination

It complies with the test for *Escherichia coli* and *Salmonella* (2.6.13).

ASSAY

To 0.500 g of the dried and crushed residue obtained in the test for sodium chloride add 80 mL of *anhydrous acetic acid R* and heat under a reflux condenser for 2 h. Cool the solution to room temperature. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20). Carry out a blank test.

1 mL of 0.1 M *perchloric acid* is equivalent to 2.299 mg of Na.

STORAGE

In an airtight container, protected from light.

Ph Eur

Sodium Stearate

(Ph. Eur. monograph 2058)

Action and use

Excipient.

Ph Eur

DEFINITION

Mixture of sodium salts of different fatty acids consisting mainly of stearic (octadecanoic) acid [C₁₇H₃₅COONa; M_r 306.5] and palmitic (hexadecanoic) acid [C₁₅H₃₁COONa; M_r 278.4].

Content

- *sodium*: 7.4 per cent to 8.5 per cent (A_r 22.99) (dried substance);
- *stearic acid in the fatty acid fraction*: minimum 40 per cent;
- *sum of stearic acid and palmitic acid in the fatty acid fraction*: minimum 90 per cent.

CHARACTERS

Appearance

White or yellowish, fine powder, greasy to the touch.

Solubility

Slightly soluble in water and in ethanol (96 per cent).

IDENTIFICATION

First identification: C, D.

Second identification: A, B, D.

A. Freezing point (2.2.18): minimum 53 °C for the residue obtained in the preparation of solution S (see Tests).

B. Acid value (2.5.1): 195 to 210, determined on 0.200 g of the residue obtained in the preparation of solution S dissolved in 25 mL of the prescribed mixture of solvents.

C. Examine the chromatograms obtained in the assay of stearic acid and palmitic acid.

Results The 2 principal peaks in the chromatogram obtained with the test solution are similar in retention time and size to the 2 principal peaks in the chromatogram obtained with the reference solution.

D. Solution S gives reaction (b) of sodium (2.3.1).

TESTS

Solution S

To 10.0 g add 100 mL of *peroxide-free ether R* and 80 mL of *acetic acid R*. Boil under a reflux condenser until dissolution is complete. Allow to cool. In a separating funnel, separate the aqueous layer and shake the ether layer with 2 quantities, each of 8 mL, of *acetic acid R*. Combine the aqueous layers, wash with 30 mL of *peroxide-free ether R* and dilute to 100 mL with *distilled water R* (solution S). Evaporate the ether layers to dryness on a water-bath and dry the residue at 100–105 °C.

Acidity or alkalinity

Suspend 2.0 g in 50 mL of previously neutralised *ethanol* (96 per cent) *R*. Heat under reflux to dissolve and add 3 drops of *phenolphthalein solution R*; the solution is colourless. Not less than 0.60 mL and not more than 0.85 mL of 0.1 M *sodium hydroxide* is required to change the colour of the indicator.

Chlorides (2.4.4)

Maximum 0.2 per cent.

Dilute 0.25 mL of solution S to 15 mL with *water R*.

Sulfates (2.4.13)

Maximum 0.3 per cent.

Dilute 0.5 mL of solution S to 15 mL with *distilled water R*.

Nickel

Maximum 5 ppm.

Atomic absorption spectrometry (2.2.23, *Method II*).

Test solution Place 50.0 mg of the substance to be examined in a polytetrafluoroethylene digestion flask and add 0.5 mL of a mixture of 1 volume of *heavy metal-free hydrochloric acid R* and 5 volumes of *heavy metal-free nitric acid R*. Allow to digest at 170 °C for 5 h. Allow to cool. Dissolve the residue in *water R* and dilute to 5.0 mL with the same solvent.

Reference solutions Prepare the reference solutions using *nickel standard solution* (10 ppm Ni) *R*, diluting as necessary with *water R*.

Source Nickel hollow-cathode lamp.

Wavelength 232.0 nm.

Atomisation device Furnace.

Loss on drying (2.2.32)

Maximum 5.0 per cent.

In a weighing glass introduce 1.0 g of previously washed *sand R*, dry at 105 °C and weigh. Add 0.500 g of the substance to be examined and 10 mL of *ethanol* (96 per cent) *R*. Evaporate at 80 °C and dry the residue at 105 °C for 4 h.

Microbial contamination

TAMC: acceptance criterion 10³ CFU/g (2.6.12).

TYMC: acceptance criterion 10² CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

Absence of *Salmonella* (2.6.13).

ASSAY

Sodium

Dissolve 0.250 g with gentle heating in a mixture of 5 mL of *acetic anhydride R* and 20 mL of *anhydrous acetic acid R*. Cool

and add 20 mL of dioxan R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20). 1 mL of 0.1 M perchloric acid is equivalent to 2.299 mg of Na.

Stearic acid and palmitic acid

Gas chromatography (2.2.28): use the normalisation procedure.

Test solution In a conical flask fitted with a reflux condenser, dissolve 0.10 g of the substance to be examined in 5 mL of boron trifluoride-methanol solution R. Boil under a reflux condenser for 10 min. Add 4 mL of heptane R through the condenser and boil again under a reflux condenser for 10 min. Allow to cool. Add 20 mL of saturated sodium chloride solution R. Shake and allow the layers to separate. Remove about 2 mL of the organic layer and dry over 0.2 g of anhydrous sodium sulfate R. Dilute 1.0 mL of the solution to 100.0 mL with heptane R.

Reference solution Prepare the reference solution in the same manner as the test solution using 50.0 mg of palmitic acid CRS and 50.0 mg of stearic acid CRS instead of the substance to be examined.

Column:

- material: fused silica;
- size: l = 30 m, Ø = 0.32 mm;
- stationary phase: macrogol 20 000 R (film thickness 0.5 µm).

Carrier gas helium for chromatography R.

Flow rate 2.4 mL/min.

In an airtight container, protected from light.

Sodium Stearyl Fumarate

(Ph. Eur. monograph 1567)

C₂₂H₃₉NaO₄ 390.5 4070-80-8

Ph Eur

DEFINITION

Sodium octadecyl (E)-butenedioate.

Content

99.0 per cent to 101.5 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, fine powder with agglomerates of flat, circular particles.

Solubility

Practically insoluble in water, slightly soluble in methanol, practically insoluble in acetone and in anhydrous ethanol.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison sodium stearyl fumarate CRS.

TESTS

Related substances

Gas chromatography (2.2.28): use the normalisation procedure.

Silylation solution n. To 2 mL of N,O-bis(trimethylsilyl) trifluoroacetamide R add 0.02 mL of chlorotrimethylsilane R and mix.

Test solution Introduce 15.0 mg of the substance to be examined in a vial with a screw cap and add 1 mL of the silylation solution. Seal the vial and heat at about 70 °C for 1 h. After the reaction a precipitate remains in the vial; filter the solution through a nylon filter (pore size 0.45 µm).

Reference solution Introduce 1.0 mg of sodium stearyl maleate CRS and 1.0 mg of sodium stearyl fumarate CRS into a vial with a screw cap and add 1 mL of the silylation solution. Seal the vial and heat at about 70 °C for 1 h.

Column:

- material: fused silica;
- size: l = 15 m, Ø = 0.53 mm;
- stationary phase: methylpolysiloxane R (film thickness 0.15 µm).

Carrier gas helium for chromatography R.

Flow rate 2 mL/min.

Split ratio 1:25.

	1 - 21	180 → 320
	21 - 26	320
Injection port		250
Detector		320

Detection Flame ionisation.

Injection 2 µL.

Relative retention With reference to stearyl trimethylsilyl fumarate (retention time = about 9 min): stearyl

Ph Eur

alcohol = 0.30; stearyl trimethylsilyl ether = 0.35; palmityl trimethylsilyl fumarate = 0.80; heptadecyl trimethylsilyl fumarate = 0.85; stearyl trimethylsilyl maleate = 0.90; nonadecyl trimethylsilyl fumarate = 1.05; eicos-11-enyl trimethylsilyl fumarate = 1.15; distearyl fumarate = 2.25.

System suitability:

— *resolution*: minimum 1.5 between the peaks in the chromatogram obtained with the reference solution.

Limits:

— *any impurity*: maximum 0.5 per cent;
— *total*: maximum 5.0 per cent.

Water (2.5.12)

Maximum 5.0 per cent, determined on 0.250 g.

ASSAY

Dissolve 0.250 g, accurately weighed, in 10 mL of *methylene chloride R* and add 30 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 39.05 mg of $C_{22}H_{39}NaO_4$.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for sodium stearyl fumarate used as a lubricant in tablets and capsules.

Particle-size distribution (2.9.31)

Specific surface area (2.9.26, Method I)

Ph Eur

Sodium Stibogluconate

16037-91-5

Action and use

Pentavalent antimony compound; antiprotozoal.

Preparation

Sodium Stibogluconate Injection

DEFINITION

Sodium Stibogluconate is mainly the disodium salt of μ -oxybis[gluconato(3-)- O^2 , O^3 , O^4 -hydroxoantimony]. It contains not less than 30.0% and not more than 34.0% of antimony

(v), calculated with reference to the dried and methanol-free substance.

PRODUCTION

The method of manufacture is such as to ensure consistently controlled reaction stoichiometry in order to yield sodium stibogluconate that is satisfactory with regard to intrinsic toxicity.

CHARACTERISTICS

A colourless, mostly amorphous powder.

Very soluble in *water*, practically insoluble in *ethanol (96%)* and in *ether*.

IDENTIFICATION

A. A solution is dextrorotatory.

B. Pass *hydrogen sulfide* into a 5% w/v solution for several minutes. An orange precipitate is produced.

C. When heated it chars, without melting, leaving a residue which yields the reactions characteristic of *antimony compounds* and the reactions characteristic of *sodium salts*, Appendix VI.

TESTS

Stability and acidity of solution

Heat a solution containing the equivalent of 10% w/v of antimony(v) in an autoclave at 115.5° and at a pressure of 70 kPa for 30 minutes. The resulting solution is colourless or almost colourless and has a pH of 5.0 to 5.6, Appendix V L.

Antimony(III)

Dissolve 2 g in 30 mL of *water*, add 15 mL of *hydrochloric acid* and titrate with 0.00833M *potassium bromate VS* using *methyl orange solution* as indicator. Not more than 1.3 mL of 0.00833M *potassium bromate VS* is required.

Chloride

Dissolve 2.5 g in 50 mL of *water* and add 2 mL of 2M *nitric acid* and 75 mL of *acetate buffer pH 5.0*. Titrate with 0.1M *silver nitrate VS* determining the end point potentiometrically. Not more than 3.0 mL of 0.1M *silver nitrate VS* is required.

Methanol

Not more than 2.0% w/w when determined by the following method. Carry out the method for *gas chromatography*, Appendix III B, using the following solutions. For solution (1) add 1 mL of a 1.0% v/v solution of *methanol* to 5 mL of a 0.2% v/v solution of *absolute ethanol* (internal standard). For solution (2) add 5 mL of *water* to 0.5 g of the substance being examined and mix with the aid of ultrasound until solution is complete. For solution (3) add 5 mL of a 0.2% v/v solution of the internal standard to 0.5 g of the substance being examined and mix with the aid of ultrasound until solution is complete.

The chromatographic procedure may be carried out using a glass column (1.5 m × 4 mm) packed with porous polymer beads (80 to 100 mesh) (Porapak Q and Chromosorb 101 are suitable) and maintained at 130°.

Calculate the percentage w/w of methanol taking 0.792 g as its weight per mL at 20°.

Loss on drying

When dried to constant weight at 130° at a pressure not exceeding 0.7 kPa, loses not more than 15.0% of its weight. Use 1 g.

ASSAY

Dissolve 0.16 g in 30 mL of *hydrochloric acid*, add 70 mL of *orthophosphoric acid* and stir carefully until completely mixed. Titrate with 0.05M *ammonium iron(II) sulfate VS* prepared using *sulfuric acid (1%)* and determining the end point

potentiometrically using a platinum electrode and a silver-silver chloride reference electrode. Each mL of 0.05M ammonium iron(II) sulfate VS is equivalent to 3.044 mg of antimony(v).

Anhydrous Sodium Sulfate

Anhydrous Sodium Sulphate

(Ph. Eur. monograph 0099)

Na₂SO₄

142.0

7757-82-6

Action and use

Laxative.

Ph Eur

DEFINITION

Anhydrous disodium sulfate.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder, hygroscopic.

Solubility

Freely soluble in water.

IDENTIFICATION

A. It gives reaction (a) of sulfates (2.3.1).

B. It gives reaction (a) of sodium (2.3.1).

C. Loss on drying (see Tests).

TESTS

Solution S

Dissolve 2.2 g in carbon dioxide-free water R prepared from distilled water R and dilute to 100 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

Acidity or alkalinity

To 10 mL of solution S add 0.1 mL of bromothymol blue solution RI. Not more than 0.5 mL of 0.01 M hydrochloric acid or 0.01 M sodium hydroxide is required to change the colour of the indicator.

Chlorides (2.4.4)

Maximum 450 ppm.

Dilute 5 mL of solution S to 15 mL with water R.

Calcium (2.4.3)

Maximum 450 ppm, if intended for use in the manufacture of parenteral preparations.

Dilute 10 mL of solution S to 15 mL with distilled water R.

Iron (2.4.9)

Maximum 90 ppm, if intended for use in the manufacture of parenteral preparations.

Dilute 5 mL of solution S to 10 mL with water R.

Magnesium

Maximum 200 ppm, if intended for use in the manufacture of parenteral preparations.

To 10 mL of solution S add 1 mL of glycerol (85 per cent) R, 0.15 mL of titan yellow solution R, 0.25 mL of ammonium oxalate solution R and 5 mL of dilute sodium hydroxide solution R and shake. Any pink colour in the test solution is not more intense than that in a standard prepared at the same time in the same manner using a mixture of 5 mL of

magnesium standard solution (10 ppm Mg) R and 5 mL of water R.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 130 °C.

ASSAY

Pack 20 g of strongly acidic ion-exchange resin R into a glass column, at least 20 cm long and 20 mm in internal diameter, and cover it with water R. After 5 min, wash the resin with water R until the pH of the eluate is about 6 to 7 using a pH indicator strip R. Keep the resin covered with water R.

Dissolve 0.500 g of the substance to be examined in 10 mL of water R in a beaker. Load the solution onto the column and pass through the resin at a flow rate of about 4 mL/min until the resin is just covered with the solution. Using about 200 mL of water R, rinse the beaker and pass the rinsings through the column at the same flow rate. Check that the pH of the last eluate is about 6 to 7 using a pH indicator strip R. Titrate the eluate with 1 M sodium hydroxide, determining the end-point potentiometrically (2.2.20).

1 mL of 1 M sodium hydroxide is equivalent to 71.00 mg of Na₂SO₄.

STORAGE

Store in an airtight container.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

Glauber's Salt

(Sodium Sulfate Decahydrate, Ph. Eur. monograph 0100)

Na₂SO₄·10H₂O

322.2

7727-73-3

Action and use

Laxative.

Ph Eur

DEFINITION

Disodium sulfate decahydrate.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless, transparent crystals.

Solubility

Freely soluble in water, practically insoluble in ethanol (96 per cent). It partly dissolves in its own water of crystallisation at about 33 °C.

IDENTIFICATION

A. It gives reaction (a) of sulfates (2.3.1).

B. It gives reaction (a) of sodium (2.3.1).

C. Loss on drying (see Tests).

TESTS**Solution S**

Dissolve 5.0 g in carbon dioxide-free water R prepared from distilled water R and dilute to 100 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

Acidity or alkalinity

To 10 mL of solution S add 0.1 mL of bromothymol blue solution R1. Not more than 0.5 mL of 0.01 M hydrochloric acid or 0.01 M sodium hydroxide is required to change the colour of the indicator.

Chlorides (2.4.4)

Maximum 200 ppm.

Dilute 5 mL of solution S to 15 mL with water R.

Calcium (2.4.3)

Maximum 200 ppm, if intended for use in the manufacture of parenteral preparations.

Dilute 10 mL of solution S to 15 mL with distilled water R.

Iron (2.4.9)

Maximum 40 ppm, if intended for use in the manufacture of parenteral preparations.

Dilute 5 mL of solution S to 10 mL with water R.

Magnesium

Maximum 100 ppm, if intended for use in the manufacture of parenteral preparations.

To 10 mL of solution S add 1 mL of glycerol (85 per cent) R, 0.15 mL of titan yellow solution R, 0.25 mL of ammonium oxalate solution R and 5 mL of dilute sodium hydroxide solution R and shake. Any pink colour in the test solution is not more intense than that in a standard prepared at the same time in the same manner using a mixture of 5 mL of magnesium standard solution (10 ppm Mg) R and 5 mL of water R.

Loss on drying (2.2.32)

52.0 per cent to 57.0 per cent, determined on 1.000 g by drying at 30 °C for 1 h, then at 130 °C.

ASSAY

Pack 20 g of strongly acidic ion-exchange resin R into a glass column, at least 20 cm long and 20 mm in internal diameter, and cover it with water R. After 5 min, wash the resin with water R until the pH of the eluate is about 6 to 7 using a pH indicator strip R. Keep the resin covered with water R.

Dissolve 1.100 g of the substance to be examined in 10 mL of water R in a beaker. Load the solution onto the column and pass through the resin at a flow rate of about 4 mL/min until the resin is just covered with the solution. Using about 200 mL of water R, rinse the beaker and pass the rinsings through the column at the same flow rate. Check that the pH of the last eluate is about 6 to 7 using a pH indicator strip R.

Titrate the eluate with 1 M sodium hydroxide, determining the end-point potentiometrically (2.2.20).

1 mL of 1 M sodium hydroxide is equivalent to 71.00 mg of Na₂SO₃.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

DEFINITION**Content**

95.0 per cent to 100.5 per cent of Na₂SO₃.

CHARACTERS**Appearance**

White or almost white powder.

Solubility

Freely soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) is slightly alkaline (2.2.4).

B. To 5 mL of solution S add 0.5 mL of 0.05 M iodine. The solution is colourless and gives reaction (a) of sulfates (2.3.1).

C. Solution S gives reaction (a) of sodium (2.3.1).

D. It complies with the limits of the assay.

TESTS**Solution S**

Dissolve 5 g in water R and dilute to 100 mL with the same solvent.

Solution S1

To 10.0 g add 25 mL of water R. Shake until mostly dissolved, carefully and progressively add 15 mL of hydrochloric acid R. Heat to boiling. Cool and dilute to 100.0 mL with water R.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method I).

Thiosulfates

Maximum 0.1 per cent.

To 2.00 g add 100 mL of water R. Shake, add 10 mL of formaldehyde solution R and 10 mL of acetic acid R. Allow to stand for 5 min. Add 0.5 mL of starch solution R and titrate with 0.05 M iodine. Carry out a blank titration.

The difference between the volumes used in the titrations is not more than 0.15 mL.

Iron (2.4.9)

Maximum 10 ppm, determined on solution S1.

Selenium

Maximum 10 ppm.

To 3.0 g add 10 mL of formaldehyde solution R, carefully and progressively add 2 mL of hydrochloric acid R. Heat on a water-bath for 20 min. Any pink colour in the solution is not more intense than that of a standard prepared at the same time and in the same manner using 1.0 g of the substance to be examined to which 0.2 mL of selenium standard solution (100 ppm Se) R has been added.

Zinc

Maximum 25 ppm.

Atomic absorption spectrometry (2.2.23, Method I).

Ph Eur

Test solution Dilute 2.0 mL of solution S1 to 10.0 mL with water R.

Reference solutions Prepare the reference solutions using zinc standard solution (100 ppm Zn) R, diluting with water R.

Source Zinc hollow-cathode lamp.

Wavelength 213.9 nm.

Atomisation device Air-acetylene flame.

ASSAY

Introduce 0.250 g into a 500 mL conical flask containing 50.0 mL of 0.05 M iodine. Shake until completely dissolved. Add 1 mL of starch solution R and titrate the excess of iodine with 0.1 M sodium thiosulfate. Carry out a blank titration.

1 mL of 0.05 M iodine is equivalent to 6.30 mg of Na₂SO₃.

Sodium Tetradecyl Sulfate Concentrate

Sodium Tetradecyl Sulphate Concentrate

mixture of 4 stereoisomers

C₁₄H₂₉NaO₄S

316.4

139-88-8

Action and use

Sclerosant.

Preparation

Sodium Tetradecyl Sulfate Injection

DEFINITION

Sodium Tetradecyl Sulfate Concentrate is an aqueous gel containing sodium *all-rac*-4-ethyl-1-isobutyloctyl sulfate. It contains not less than 46.0% w/w and not more than 52.0% w/w of C₁₄H₂₉NaO₄S.

CHARACTERISTICS

A clear, colourless gel.

IDENTIFICATION

A. Carry out the method for gas chromatography, Appendix III B, using the following solutions. For solution (1) boil 0.2 g under a reflux condenser with 20 mL of 2M hydrochloric acid for 15 minutes, allow to cool, add 20 mL

of ethanol (96%) and extract the mixture with two 10 mL quantities of *n*-pentane. Wash the combined pentane extracts with 20 mL of water and dry over anhydrous sodium sulfate. Solution (2) contains 0.35% w/v of decan-1-ol and 0.7% w/v of dodecan-1-ol in *n*-pentane.

The chromatographic procedure may be carried out using a glass column (1.5 m × 4 mm) packed with acid-washed, silanised diatomaceous support (80 to 100 mesh) coated with 3% w/w of polyethylene glycol (Carbowax 20M is suitable) and maintained at 120°.

The retention time of the principal peak in the chromatogram obtained with solution (1) is less than the retention time of the peak due to dodecan-1-ol and more than that of the peak due to decan-1-ol in the chromatogram obtained with solution (2).

B. Mix 0.1 mL of a 2% w/v solution with 0.1 mL of a 0.1% w/v solution of methylene blue and 2 mL of 1M sulfuric acid, add 2 mL of chloroform and shake. The chloroform layer is intensely blue.

C. Mix 20 mg with 10 mL of ethanol (96%) and heat to boiling on a water bath, shaking frequently. Filter immediately and evaporate the ethanol. Dissolve the residue in 8 mL of water, add 3 mL of 2M hydrochloric acid, evaporate the solution to half its volume and cool. Filter to remove the congealed fatty alcohols and add 1 mL of 0.25M barium chloride to the filtrate. A white, crystalline precipitate is produced.

D. Yields reaction B characteristic of sodium salts, Appendix VI.

TESTS

Alkalinity

Dissolve 1 g in 100 mL of water and add 0.1 mL of methyl red solution; the solution is yellow. Not more than 0.5 mL of 0.1M hydrochloric acid VS is required to change the colour of the solution.

Non-ionic impurities

Not more than 3.0% w/w, with respect to the nominal content of Sodium Tetradecyl Sulfate, when determined by the method for gas chromatography, Appendix III B, using the following solutions. Dissolve 75 mg of dodecan-1-ol (internal standard) in sufficient *n*-hexane to produce 100 mL (solution A). For solution (1) extract 1 g of the concentrate being examined with 10 mL of solution A followed by two 10 mL quantities of *n*-hexane. Pass 10 mL of the combined extracts at a rate of about 1.5 mL per minute through a column, 1 cm in diameter, packed with 5 g of basic aluminium oxide (Brockmann grade II is suitable) and pre-washed with 25 mL of *n*-hexane. Elute with 20 mL of a mixture of equal volumes of *n*-hexane and ether, evaporate to dryness using a rotary evaporator and dissolve the residue in 2 mL of *n*-hexane. Prepare solution (2) in the same manner but using 10 mL of *n*-hexane in place of 10 mL of solution A.

The chromatographic procedure may be carried out using a glass column (1.5 m × 4 mm) packed with acid-washed, silanised diatomaceous support (80 to 100 mesh) coated with 3% w/w of polyethylene glycol (Carbowax 20M is suitable) and maintained at 120°.

Allow the chromatography to proceed for the retention time of the peak due to the internal standard.

In the chromatogram obtained with solution (1) the sum of the areas of any secondary peaks is not greater than twice the area of the peak due to the internal standard.

Chloride

Dissolve 33 mg in sufficient water to produce 100 mL. 15 mL of the resulting solution complies with the limit test for chlorides, Appendix VII (1%).

Sulfated ash

10.3 to 13.3%, Appendix IX A.

ASSAY

Dissolve 2.4 g in sufficient water to produce 1000 mL. To 20 mL add 15 mL of chloroform and 10 mL of dimidium bromide-sulfan blue mixed solution and titrate with 0.004M benzethonium chloride VS, shaking vigorously and allowing the layers to separate after each addition, until the pink colour of the chloroform layer is completely discharged and a greyish blue colour is produced. Each mL of 0.004M benzethonium chloride VS is equivalent to 1.266 mg of C₁₄H₂₉NaO₄S.

STORAGE

Sodium Tetradecyl Sulfate Concentrate should be protected from light.

Sodium Thiosulfate

Sodium Thiosulphate

(Ph. Eur. monograph 0414)

Na₂S₂O₃·5H₂O

248.2

10102-17-7

Action and use

Used in treatment of cyanide poisoning.

Preparation

Sodium Thiosulfate Injection

Ph Eur

DEFINITION

Content

99.0 per cent to 101.0 per cent of Na₂S₂O₃·5H₂O.

CHARACTERS

Appearance

Transparent, colourless crystals, efflorescent in dry air.

Solubility

Very soluble in water, practically insoluble in ethanol 96 per cent. It dissolves in its water of crystallisation at about 49 °C.

IDENTIFICATION

A. It decolourises iodinated potassium iodide solution R.

B. To 0.5 mL of solution S (see Tests) add 0.5 mL of water R and 2 mL of silver nitrate solution R2. A white precipitate is formed which rapidly becomes yellowish and then black.

C. To 2.5 mL of solution S add 2.5 mL of water R and 1 mL of hydrochloric acid R. A precipitate of sulfur is formed and gas is evolved which gives a blue colour to starch iodate paper R.

D. 1 mL of solution S gives reaction (a) of sodium (2.3.1).

TESTS

Solution S

Dissolve 10.0 g in carbon dioxide-free water R prepared from distilled water R and dilute to 100 mL with the same solvent.

Appearance of solution

The freshly prepared solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 10.0 g in 50 mL of distilled water R, add 1 mL of 0.1 M sodium hydroxide and dilute to 100 mL with the same solvent.

pH (2.2.3)

6.0 to 8.4 for the freshly prepared solution S.

Sulfates and sulfites (2.4.13)

Maximum 0.2 per cent.

Dilute 2.5 mL of freshly prepared solution S to 10 mL with distilled water R. To 3 mL of this solution first add 2 mL of iodinated potassium iodide solution R and continue the addition dropwise until a very faint persistent yellow colour appears. Dilute to 15 mL with distilled water R.

Sulfides

To 10 mL of solution S add 0.05 mL of a freshly prepared 50 g/L solution of sodium nitroprusside R. The solution does not become violet.

ASSAY

Dissolve 0.500 g in 20 mL of water R and titrate with 0.05 M iodine, using 1 mL of starch solution R, added towards the end of the titration, as indicator.

1 mL of 0.05 M iodine is equivalent to 24.82 mg of Na₂S₂O₃·5H₂O.

STORAGE

In an airtight container.

If the spectra obtained in the solid state show differences, record new spectra using discs prepared by placing 50 µL of a 100 g/L solution in methanol R on a disc of potassium bromide R and evaporating the solvent in vacuo. Examine immediately.

B. 2 mL of solution S (see Tests) gives reaction (a) of sodium (2.3.1).

TESTS

Solution S

Dissolve 1.25 g in 20 mL of distilled water R in a separating funnel, add 5 mL of dilute nitric acid R and shake. Allow the mixture to stand for 12 h. Use the aqueous lower layer.

Appearance of solution

The solution is not more opalescent than reference suspension II (2.2.1) and not more intensely coloured than reference solution Y₆ (2.2.2, Method II).

Dissolve 2.0 g in water R and dilute to 10 mL with the same solvent.

Acidity or alkalinity

Dissolve 1.0 g in 10 mL of water R. Add 0.1 mL of phenolphthalein solution R. Not more than 0.75 mL of 0.1 M hydrochloric acid or 0.1 M sodium hydroxide is required to change the colour of the indicator.

Related substances

Gas chromatography (2.2.28).

Test solution Dissolve 0.500 g of the substance to be examined in 10 mL of water R. Add 5 mL of dilute sulfuric acid R and shake with 3 quantities, each of 20 mL, of heptane R. Dilute the combined upper layers to 100.0 mL with heptane R.

Reference solution (a) Dissolve 5 mg of valproic acid for system suitability CRS (containing impurity K) in 1.0 mL of heptane R.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with heptane R.

White or light yellow powder.

Solubility

Very soluble or freely soluble in water, soluble in ethanol (96 per cent), practically insoluble in heptane.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison solifenacin succinate CRS.

B. Isomeric purity (see Tests).

TESTS**Isomeric purity**

Liquid chromatography (2.2.29).

Test solution Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase.

Reference solution (a) Dissolve the contents of a vial of solifenacin for system suitability CRS (containing impurities F, G and H) in 1.0 mL of the mobile phase.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: amylose derivative of silica gel for chiral separation R (5 μ m);
- temperature: 35 °C.

Mobile phase diethylamine R, anhydrous ethanol R, heptane R (0.1:200:800 V/V/V).

Flow rate 0.8 mL/min.

Detection Spectrophotometer at 220 nm.

Injection 10 μ L.

Run time 1.5 times the retention time of solifenacin.

Identification of impurities Use the chromatogram supplied with solifenacin for system suitability CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities F, G and H.

Relative retention With reference to solifenacin (retention time = about 17 min): impurity F = about 0.7; impurity H = about 0.76; impurity G = about 0.84.

System suitability Reference solution (a):

- resolution: minimum 1.5 between the peaks due to impurities F and H;
- peak-to-valley ratio: minimum 10, where H_p = height above the baseline of the peak due to impurity G and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity H.

Calculation of percentage contents:

- for each impurity, use the concentration of solifenacin succinate in reference solution (b).

Limits:

- impurities F, G, H: for each impurity, maximum 0.15 per cent.

Impurity E

Thin-layer chromatography (2.2.27).

Test solution Dissolve 0.500 g of the substance to be examined in methanol R and dilute to 5.0 mL with the same solvent.

Reference solution Dissolve 5.0 mg of 3-quinuclidinol R (impurity E) in methanol R and dilute to 50.0 mL with the same solvent.

Plate TLC silica gel plate R (2-10 μ m).

Mobile phase concentrated ammonia R, anhydrous ethanol R, toluene R (6:31:63 V/V/V).

Application 10 μ L.

Development Over 2/3 of the plate.

Drying At 100-105 °C for 1 h.

Detection Expose to iodine vapour for at least 2 h.

Relative retention With reference to solifenacin (R_f = about 0.6); impurity E = about 0.2.

Limit:

- impurity E: any spot due to impurity E is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.1 per cent).

Related substances

Liquid chromatography (2.2.29).

Solvent mixture Dissolve 0.6 g of ammonium phosphate R in 1 L of water R, add 1.0 mL of diethylamine R and adjust to pH 11 with concentrated ammonia R.

Test solution Dissolve 0.100 g of the substance to be examined in mobile phase A and dilute to 100.0 mL with mobile phase A.

Reference solution (a) Dissolve 5 mg of 1-phenyl-1,2,3,4-tetrahydroisoquinoline R (impurity A) in the test solution and dilute to 25.0 mL with the test solution.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

Column:

- size: $l = 0.10$ m, $\varnothing = 2.1$ mm;
- stationary phase: end-capped ethylene-bridged polar-embedded octadecylsilyl silica gel for chromatography (hybrid material) R (1.7 μ m);
- temperature: 40 °C.

Mobile phase:

- mobile phase A: acetonitrile R1, solvent mixture (45:55 V/V);
- mobile phase B: acetonitrile R1;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 0.5	90	10
0.5 - 10.5	90 → 68	10 → 32
10.5 - 12.5	68	32

Flow rate 0.4 mL/min.

Detection Spectrophotometer at 215 nm.

Injection 2.5 μ L.

Identification of impurities Use the chromatogram obtained with reference solution (a) to identify the peak due to impurity A.

Relative retention With reference to solifenacin (retention time = about 2 min): succinate = about 0.2; impurity A = about 0.7.

System suitability Reference solution (a):

- resolution: minimum 4.0 between the peaks due to impurity A and solifenacin.

Calculation of percentage contents:

- for each impurity, use the concentration of solifenacin succinate in reference solution (b).

Content

95.0 per cent to 104.0 per cent (anhydrous and acetic acid-free substance).

CHARACTERS**Appearance**

White or almost white, hygroscopic, amorphous powder.

Solubility

Freely soluble in water and in acetic acid, practically insoluble in methylene chloride.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

B. Amino acid analysis (2.2.56). Method 1 for hydrolysis and method 1 for analysis are suitable.

Express the content of each amino acid in moles. Calculate the relative proportions of the amino acids taking 1/8 of the sum of the number of moles of aspartic acid, alanine, lysine, glycine and phenylalanine as equal to 1. The values fall within the following limits: aspartic acid: 0.90 to 1.10; glycine: 0.90 to 1.10; alanine: 0.90 to 1.10; phenylalanine: 2.7 to 3.3; serine: 0.7 to 1.05; threonine: 1.4 to 2.1; half-cystine: 1.4 to 2.1; lysine: 1.8 to 2.2. Not more than traces of other amino acids are present.

TESTS**Specific optical rotation (2.2.7)**

-47 to -37 (anhydrous and acetic acid-free substance).

Dissolve 2.0 mg in 1.0 mL of a 1 per cent *V/V* solution of glacial acetic acid R.

Related substances

Liquid chromatography (2.2.29): use the normalisation procedure. Prepare the solutions immediately before use.

Test solution Dissolve the substance to be examined in water R to obtain a concentration of 1.0 mg/mL.

Reference solution (a) Dissolve the contents of a vial of somatostatin CRS in water R to obtain a concentration of 1.0 mg/mL.

Reference solution (b) Dissolve the contents of a vial of somatostatin CRS in a 1 mg/mL solution of dithioerythritol R to obtain a concentration of 1.0 mg/mL. Allow to stand at room temperature for about 1 h. Mix 1 volume of this solution and 1 volume of reference solution (a).

Reference solution (c) Dissolve the contents of a vial of somatostatin impurity B CRS in 1.0 mL of water R.

Reference solution (d) Dissolve the contents of a vial of somatostatin impurity F CRS in 1.0 mL of water R.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase:

- mobile phase A: trifluoroacetic acid R, acetonitrile for chromatography R, water for chromatography R (0.1:20:80 *V/V/V*);
- mobile phase B: trifluoroacetic acid R, acetonitrile for chromatography R, water for chromatography R (0.1:45:55 *V/V/V*);

Time (min)	Mobile phase A (per cent <i>V/V</i>)	Mobile phase B (per cent <i>V/V</i>)
0 - 25	100 → 0	0 → 100
25 - 30	0	100
30 - 32	0 → 100	100 → 0

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 220 nm.

Injection 15 μ L of the test solution and reference solutions (b), (c) and (d).

Identification of peaks Use the chromatogram obtained with reference solution (b) to identify the peak due to reduced somatostatin; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity B; use the chromatogram obtained with reference solution (d) to identify the peak due to impurity F.

Relative retention With reference to somatostatin (retention time = about 12 min): impurities B and F = about 1.03; reduced somatostatin = about 1.09; impurities C and D = about 1.17; impurity E = about 1.22.

System suitability Reference solution (b):

- the ratio of the area of the peak due to reduced somatostatin to the area of the peak due to somatostatin is between 1:9 and 9:1;
- resolution: minimum 3.5 between the peaks due to somatostatin and reduced somatostatin;
- number of theoretical plates: minimum 15 000, calculated for the peak due to somatostatin;
- symmetry factor: maximum 2.7 for the peak due to somatostatin.

Limits:

- impurity B or F: maximum 1.0 per cent;
- unspecified impurities: for each impurity, maximum 0.5 per cent;
- total: maximum 2.0 per cent;
- reporting threshold: 0.1 per cent.

Acetic acid (2.5.34)

3.0 per cent to 15.0 per cent.

Test solution Dissolve 7.0 mg of the substance to be examined in a mixture of 5 volumes of mobile phase B and 95 volumes of mobile phase A, then dilute to 10.0 mL with the same mixture of mobile phases.

Water (2.5.32)

Maximum 8.0 per cent, determined on 10.0 mg.

Bacterial endotoxins (2.6.14)

Less than 10 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection 10 μ L of the test solution and reference solution (a).

Calculate the percentage content of somatostatin ($C_{76}H_{104}N_{18}O_{19}S_2$) taking into account the assigned content of $C_{76}H_{104}N_{18}O_{19}S_2$ in somatostatin CRS.

STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C. If the substance is sterile, the container is also sterile and tamper-evident.

IMPURITIES

Specified impurities B, F.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) C, D, E.

B. des-10-threonine-somatostatin (des-Thr¹⁰-somatostatin),

C. acetylsomatostatin ([Ac-Ala¹]somatostatin),

D. N^{6,4}-acetylsomatostatin ([Lys(Ac)⁴]somatostatin),

E. N^{6,9}-acetylsomatostatin ([Lys(Ac)⁹]somatostatin),

F. [5-(3-cyanoalanine)]somatostatin ([Ala(CN)⁵]somatostatin).

C₉₉₀H₁₅₂₈N₂₆₂O₃₀₀S₇ 22 125

Action and use
 Growth hormone.

Preparation
 Somatropin Injection

Ph Eur

DEFINITION

Protein having the structure (191 amino-acid residues) of the major component of growth hormone produced by the human pituitary.

Content

91.0 per cent to 105.0 per cent (anhydrous substance).

By convention, for the purpose of labelling somatropin preparations, 1 mg of anhydrous somatropin (C₉₉₀H₁₅₂₈N₂₆₂O₃₀₀S₇) is equivalent to 3.0 IU of biological activity.

PRODUCTION

Somatropin is produced by a method based on recombinant DNA (rDNA) technology. During the course of product development, it must be demonstrated that the manufacturing process produces a product having a biological activity of not less than 2.5 IU/mg, using a validated bioassay based on growth promotion and approved by the competent authority.

Somatropin complies with the following additional requirements.

Host-cell-derived proteins

The limit is approved by the competent authority.

Host-cell- and vector-derived DNA

The limit is approved by the competent authority.

CHARACTERS

Appearance

White or almost white powder.

IDENTIFICATION

A. Capillary electrophoresis (2.2.47) as described in the test for charged variants with the following modifications.

Injection Test solution (b); under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s.

Results In the electropherogram obtained, only 1 principal peak, corresponding to somatropin, is detected: no doubling of this peak is observed.

B. Examine the chromatograms obtained in the test for related proteins.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

C. Peptide mapping (2.2.55).

SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS

Test solution Prepare a solution of the substance to be examined in 0.05 M tris-hydrochloride buffer solution pH 7.5 R to obtain a solution containing 2.0 mg/mL of somatropin and transfer about 1.0 mL to a tube made from a suitable material such as polypropylene. Prepare a 1 mg/mL solution of trypsin for peptide mapping R in 0.05 M tris-hydrochloride buffer solution pH 7.5 R and add 30 µL to the solution of the substance to be examined. Cap the tube and place in a water-bath at 37 °C for 4 h. Remove from the water-bath and stop the reaction immediately, for example by freezing. If analysed immediately using an automatic injector, maintain at 2-8 °C.

Reference solution Prepare at the same time and in the same manner as for the test solution, but using somatropin CRS instead of the substance to be examined.

CHROMATOGRAPHIC SEPARATION Liquid chromatography (2.2.29).

Column:

- size: l = 0.25 m, Ø = 4.6 mm;
- stationary phase: octylsilyl silica gel for chromatography R (5-10 µm) with a pore size of 30 nm;
- temperature: 30 °C.

Mobile phase:

- *mobile phase A*: dilute 1 mL of trifluoroacetic acid R to 1000 mL with water for chromatography R;
- *mobile phase B*: to 100 mL of water for chromatography R, add 1 mL of trifluoroacetic acid R and dilute to 1000 mL with acetonitrile R1;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 20	100 → 80	0 → 20
20 - 40	80 → 75	20 → 25
40 - 65	75 → 50	25 → 50
65 - 70	50 → 20	50 → 80

Flow rate 1 mL/min.

Detection Spectrophotometer at 214 nm.

Injection 100 µL.

System suitability The chromatogram obtained with the reference solution is qualitatively similar to the chromatogram of somatropin digest supplied with somatropin CRS.

Results The profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

D. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

TESTS**Related proteins**

Liquid chromatography (2.2.29): use the normalisation procedure. Maintain the solutions at 2-8 °C and use within 24 h. If an automatic injector is used, maintain it at 2-8 °C.

Test solution Prepare a solution of the substance to be examined in 0.05 M tris-hydrochloride buffer solution pH 7.5 R, containing 2.0 mg/mL of somatropin.

Reference solution Prepare a solution of somatropin CRS in 0.05 M tris-hydrochloride buffer solution pH 7.5 R, containing 2.0 mg/mL of somatropin.

Resolution solution Dissolve the contents of a vial of somatropin/desamidosomatropin resolution mixture CRS in 0.05 M tris-hydrochloride buffer solution pH 7.5 R to obtain a concentration of 2 mg/mL of somatropin.

Column:

- *size*: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- *stationary phase*: end-capped butylsilyl silica gel for chromatography R (5 µm) with a pore size of 30 nm; a silica saturation column is placed between the pump and the injector valve;
- *temperature*: 45 °C.

Mobile phase propanol R, 0.05 M tris-hydrochloride buffer solution pH 7.5 R (29:71 V/V).

Flow rate 0.5 mL/min.

Detection Spectrophotometer at 220 nm.

Preconditioning of the column Rinse with 200-500 mL of a 0.1 per cent V/V solution of trifluoroacetic acid R in a 50 per cent V/V solution of acetonitrile R; repeat as necessary, to improve column performance.

Injection 20 µL.

Relative retention With reference to somatropin (retention time = about 33 min; if necessary adjust the concentration of propanol R in the mobile phase):
desamidosomatropin = about 0.85.

System suitability Resolution solution:

- *resolution*: minimum 1.0 between the peaks due to desamidosomatropin and somatropin;
- *symmetry factor*: 0.9 to 1.8 for the peak due to somatropin.

Limit:

- *total*: maximum 6.0 per cent.

Dimer and related substances of higher molecular mass

Size-exclusion chromatography (2.2.30): use the normalisation procedure.

Test solution Prepare a solution of the substance to be examined in 0.025 M phosphate buffer solution pH 7.0 R, containing 1.0 mg/mL of somatropin.

Reference solution Dissolve the contents of a vial of somatropin CRS in 0.025 M phosphate buffer solution pH 7.0 R and dilute with the same solution to obtain a concentration of 1.0 mg/mL.

Resolution solution Place 1 vial of somatropin CRS in an oven at 50 °C for a period sufficient to generate 1-2 per cent of dimer (typically 12-24 h). Dissolve its contents in 0.025 M phosphate buffer solution pH 7.0 R and dilute with the same solution to obtain a concentration of 1.0 mg/mL.

Column:

- *size*: $l = 0.30$ m, $\varnothing = 7.8$ mm;
- *stationary phase*: hydrophilic silica gel for chromatography R of a grade suitable for fractionation of globular proteins in the relative molecular mass range of 5000 to 150 000.

Mobile phase 2-propanol R, 0.063 M phosphate buffer solution pH 7.0 R (3:97 V/V); filter and degas.

Flow rate 0.6 mL/min.

Detection Spectrophotometer at 214 nm.

Injection 20 µL.

Relative retention With reference to somatropin monomer (retention time = 12 min to 17 min): related substances of higher molecular mass = about 0.65; somatropin dimer = about 0.9.

System suitability Resolution solution:

- *peak-to-valley ratio*: minimum 2.5, where H_p = height above the baseline of the peak due to the dimer and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to the monomer.

Limit:

- *sum of the peaks with retention times less than that of the principal peak*: maximum 4.0 per cent.

Charged variants

Capillary electrophoresis (2.2.47).

Test solution (a) Prepare a solution of the substance to be examined containing 1 mg/mL of somatropin.

Test solution (b) Mix equal volumes of test solution (a) and the reference solution.

Reference solution Dissolve the contents of a vial of somatropin CRS in water R and dilute with the same solvent to obtain a concentration of 1 mg/mL.

Capillary:

- *material*: uncoated fused silica;
- *size*: effective length = at least 70 cm, $\varnothing = 50$ µm.

Temperature 30 °C.

GZE buffer 13.2 g/L solution of ammonium phosphate R adjusted to pH 6.0 with phosphoric acid R and filtered.

Detection Spectrophotometer at 200 nm.

Set the autosampler to store the samples at 4 °C during analysis.

Preconditioning of the capillary Rinse with 1 M sodium hydroxide for 20 min, with water R for 10 min and with the CZE buffer for 20 min.

Between-run rinsing Rinse with 0.1 M sodium hydroxide for 2 min and with the CZE buffer for 6 min.

Note: rinsing times may be adapted according to the length of the capillary and the equipment used.

Injection Test solution (a) and the reference solution; under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s.

The injection time and pressure may be adapted in order to meet the system suitability criteria.

Migration Apply a field strength of 217 V/cm (20 kV for capillaries of 92 cm total length) for 80 min, using the CZE buffer as the electrolyte in both buffer reservoirs.

Relative migration With reference to somatropin: deamidated forms = 1.02 to 1.11.

System suitability Reference solution:

- the electropherogram obtained is similar to the electropherogram of somatropin supplied with somatropin CRS; 2 peaks (I₁, I₂) eluting prior to the principal peak and at least 2 peaks (I₃, I₄) eluting after the principal peak are clearly visible.

Note: peak I₂ corresponds to the cleaved form and peak I₄ corresponds to the deamidated forms, eluting as a doublet.

Limits:

- deamidated forms: maximum 5.0 per cent;
- any other impurity: for each impurity, maximum 2.0 per cent;
- total: maximum 10.0 per cent.

Water (2.5.32)

Maximum 10.0 per cent.

Bacterial endotoxins (2.6.14)

Less than 5 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for removal of bacterial endotoxins.

ASSAY

Size-exclusion chromatography (2.2.30) as described in the test for dimer and related substances of higher molecular mass.

Calculate the content of somatropin (C₉₉₀H₁₅₂₈N₂₆₂O₃₀₀S₇) from the declared content of C₉₉₀H₁₅₂₈N₂₆₂O₃₀₀S₇ in somatropin CRS.

STORAGE

In an airtight container, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

C₉₉₀H₁₅₂₈N₂₆₂O₃₀₀S₇ 22 125

Action and use

Growth hormone.

Preparation

Somatropin Injection

Ph Eur

DEFINITION

Solution containing a protein having the structure (191 amino-acid residues) of the major component of growth hormone produced by the human pituitary. It may contain buffer salts and other auxiliary substances.

Content

91.0 per cent to 105.0 per cent of the amount of somatropin stated on the label.

By convention, for the purpose of labelling somatropin preparations, 1 mg of anhydrous somatropin (C₉₉₀H₁₅₂₈N₂₆₂O₃₀₀S₇) is equivalent to 3.0 IU of biological activity.

PRODUCTION

Somatropin concentrated solution is produced by a method based on recombinant DNA (rDNA) technology. During the course of product development, it must be demonstrated that the manufacturing process produces a product having a biological activity of at least 2.5 IU/mg, using a validated bioassay based on growth promotion and approved by the competent authority.

Somatropin concentrated solution complies with the following additional requirements.

Host-cell-derived proteins

The limit is approved by the competent authority.

Host-cell- and vector-derived DNA

The limit is approved by the competent authority.

CHARACTERS

Appearance

Clear or slightly turbid, colourless solution.

IDENTIFICATION

A. Capillary electrophoresis (2.2.47) as described in the test for charged variants with the following modifications.

Injection Test solution (b); under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s.

Results In the electropherogram obtained, only 1 principal peak, corresponding to somatropin, is detected: no doubling of this peak is observed.

B. Examine the chromatograms obtained in the test for related proteins.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to

the principal peak in the chromatogram obtained with the reference solution.

C. Peptide mapping (2.2.55).

SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS

Test solution Dilute the solution to be examined with 0.05 M tris-hydrochloride buffer solution pH 7.5 R so that it contains 2.0 mg/mL of somatropin and transfer about 1.0 mL to a tube made from a suitable material such as polypropylene. Prepare a 1 mg/mL solution of trypsin for peptide mapping R in 0.05 M tris-hydrochloride buffer solution pH 7.5 R and add 30 µL to the solution of the substance to be examined. Cap the tube and place in a water-bath at 37 °C for 4 h. Remove from the water-bath and stop the reaction immediately, for example by freezing. If analysed immediately using an automatic injector, maintain at 2-8 °C.

Note: If a 2 mg/mL somatropin concentration is not obtainable, a similar digest relationship (micrograms of trypsin per milligram of somatropin) may be used.

Reference solution Prepare at the same time and in the same manner as for the test solution, but using somatropin CRS instead of the substance to be examined.

CHROMATOGRAPHIC SEPARATION Liquid chromatography (2.2.29).

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: octylsilyl silica gel for chromatography R (5-10 µm) with a pore size of 30 nm;
- temperature: 30 °C.

Mobile phase:

- mobile phase A: dilute 1 mL of trifluoroacetic acid R to 1000 mL with water for chromatography R;
- mobile phase B: to 100 mL of water for chromatography R, add 1 mL of trifluoroacetic acid R and dilute to 1000 mL with acetonitrile R1;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 20	100 → 80	0 → 20
20 - 40	80 → 75	20 → 25
40 - 65	75 → 50	25 → 50
65 - 70	50 → 20	50 → 80

Flow rate 1 mL/min.

Detection Spectrophotometer at 214 nm.

Injection 100 µL.

System suitability The chromatogram obtained with the reference solution is qualitatively similar to the chromatogram of somatropin digest supplied with somatropin CRS.

Results The profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

D. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

TESTS

Related proteins

Liquid chromatography (2.2.29): use the normalisation procedure. Maintain the solutions at 2-8 °C and use within 24 h. If an automatic injector is used, maintain it at 2-8 °C.

Test solution Dilute the solution to be examined in 0.05 M tris-hydrochloride buffer solution pH 7.5 R, so as to contain

2.0 mg/mL of somatropin. A weaker solution may be prepared, in which case the injection volume is adjusted accordingly.

Reference solution Prepare a solution of somatropin CRS in 0.05 M tris-hydrochloride buffer solution pH 7.5 R, containing 2.0 mg/mL of somatropin.

Resolution solution Dissolve the contents of a vial of somatropin/desamidosomatropin resolution mixture CRS in 0.05 M tris-hydrochloride buffer solution pH 7.5 R to obtain a concentration of 2 mg/mL of somatropin.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: end-capped butylsilyl silica gel for chromatography R (5 µm) with a pore size of 30 nm; a silica saturation column is placed between the pump and the injector valve;
- temperature: 45 °C.

Mobile phase propanol R, 0.05 M tris-hydrochloride buffer solution pH 7.5 R (29:71 V/V).

Flow rate 0.5 mL/min.

Detection Spectrophotometer at 220 nm.

Preconditioning of the column Rinse with 200-500 mL of a 0.1 per cent V/V solution of trifluoroacetic acid R in a 50 per cent V/V solution of acetonitrile R; repeat as necessary, to improve column performance.

Injection 20 µL.

Relative retention With reference to somatropin (retention time = about 33 min; if necessary adjust the concentration of propanol R in the mobile phase):
desamidosomatropin = about 0.85.

System suitability Resolution solution:

- resolution: minimum 1.0 between the peaks due to desamidosomatropin and somatropin;
- symmetry factor: 0.9 to 1.8 for the peak due to somatropin.

Limit:

- total: maximum 6.0 per cent.

Dimer and related substances of higher molecular mass

Size-exclusion chromatography (2.2.30): use the normalisation procedure.

Test solution Dilute the solution to be examined in 0.025 M phosphate buffer solution pH 7.0 R, so as to contain 1.0 mg/mL of somatropin.

Reference solution Dissolve the contents of a vial of somatropin CRS in 0.025 M phosphate buffer solution pH 7.0 R and dilute with the same solution to obtain a concentration of 1.0 mg/mL.

Resolution solution Place 1 vial of somatropin CRS in an oven at 50 °C for a period sufficient to generate 1-2 per cent of dimer (typically 12-24 h). Dissolve its contents in 0.025 M phosphate buffer solution pH 7.0 R and dilute with the same solution to obtain a concentration of 1.0 mg/mL.

Column:

- size: $l = 0.30$ m, $\varnothing = 7.8$ mm;
- stationary phase: hydrophilic silica gel for chromatography R of a grade suitable for fractionation of globular proteins in the relative molecular mass range of 5000 to 150 000.

Mobile phase 2-propanol R, 0.063 M phosphate buffer solution pH 7.0 R (3:97 V/V); filter and degas.

Flow rate 0.6 mL/min.

Detection Spectrophotometer at 214 nm.

Injection 20 µL.

Relative retention With reference to somatropin monomer (retention time = 12 min to 17 min); related substances of higher molecular mass = about 0.65; somatropin dimer = about 0.9.

System suitability Resolution solution:

— **peak-to-valley ratio:** minimum 2.5, where H_p = height above the baseline of the peak due to the dimer and H_o = height above the baseline of the lowest point of the curve separating this peak from the peak due to the monomer.

Limit:

— **sum of the peaks with retention times less than that of the principal peak:** maximum 4.0 per cent.

Charged variants

Capillary electrophoresis (2.2.47).

Test solution (a) Dilute the solution to be examined so as to obtain a concentration of 1 mg/mL of somatropin.

Test solution (b) Mix equal volumes of test solution (a) and the reference solution.

Reference solution Dissolve the contents of a vial of somatropin CRS in water R and dilute with the same solvent to obtain a concentration of 1 mg/mL.

Capillary:

— **material:** uncoated fused silica;

— **size:** effective length = at least 70 cm, \varnothing = 50 μ m.

Temperature 30 °C.

CZE buffer 13.2 g/L solution of ammonium phosphate R adjusted to pH 6.0 with phosphoric acid R and filtered.

Detection Spectrophotometer at 200 nm.

Set the autosampler to store the samples at 4 °C during analysis.

Preconditioning of the capillary Rinse with 1 M sodium hydroxide for 20 min, with water R for 10 min and with the CZE buffer for 20 min.

Between-run rinsing Rinse with 0.1 M sodium hydroxide for 2 min and with the CZE buffer for 6 min.

Note: rinsing times may be adapted according to the length of the capillary and the equipment used.

Injection Test solution (a) and the reference solution; under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s. The injection time and pressure may be adapted in order to meet the system suitability criteria.

Migration Apply a field strength of 217 V/cm (20 kV for capillaries of 92 cm total length) for 80 min, using the CZE buffer as the electrolyte in both buffer reservoirs.

Relative migration With reference to somatropin: deamidated forms = 1.02 to 1.11.

System suitability Reference solution:

— the electropherogram obtained is similar to the electropherogram of somatropin supplied with somatropin CRS; 2 peaks (I_1 , I_2) eluting prior to the principal peak and at least 2 peaks (I_3 , I_4) eluting after the principal peak are clearly visible.

Note: peak I_2 corresponds to the cleaved form and peak I_4 corresponds to the deamidated forms, eluting as a doublet.

Limits:

— **deamidated forms:** maximum 5.0 per cent;

— **any other impurity:** for each impurity, maximum 2.0 per cent;

— **total:** maximum 10.0 per cent.

Bacterial endotoxins (2.6.14)

Less than 5 IU in the volume that contains 1 mg of somatropin, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for removal of bacterial endotoxins.

ASSAY

Size-exclusion chromatography (2.2.30) as described in the test for dimer and related substances of higher molecular mass.

Calculate the content of somatropin ($C_{990}H_{1528}N_{262}O_{300}S_7$) from the declared content of $C_{990}H_{1528}N_{262}O_{300}S_7$ in somatropin CRS.

STORAGE

In an airtight container at a temperature of -20 °C. Avoid repeated freezing and thawing. If the solution is sterile, store in a sterile, airtight, tamper-evident container.

LABELLING

The label states:

— the content of somatropin in milligrams per millilitre;
— the name and concentration of any auxiliary substance.

Ph Eur

Sorafenib Tosilate

(Ph. Eur. monograph 2931)

$C_{28}H_{24}ClF_3N_4O_6S$

637

475207-59-1

Action and use

Inhibitor of multiple tyrosine kinases; antineoplastic.

Preparation

Sorafenib Tablets

Ph Eur

DEFINITION

4-[[[4-Chloro-3-(trifluoromethyl)phenyl]carbonylamino]amino]phenoxy]-N-methylpyridine-2-carboxamide 4-methylbenzene-1-sulfonate.

Content

97.5 per cent to 102.0 per cent (anhydrous substance).

PRODUCTION

It is considered that alkyl toluenesulfonate esters are genotoxic and are potential impurities in sorafenib tosilate. The manufacturing process should be developed taking into consideration the principles of quality risk management, together with considerations of the quality of starting materials, process capability and validation. The general method 2.5.40. Methyl, ethyl and isopropyl toluenesulfonate in active substances is available to assist manufacturers.

CHARACTERS

Appearance

White or slightly yellowish or brownish powder.

Solubility

Practically insoluble in water, slightly soluble in anhydrous ethanol, practically insoluble in heptane.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison sorafenib tosilate CRS.

TESTS**Related substances**

Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

Solvent mixture phosphoric acid R, acetonitrile R, dimethyl sulfoxide R (0.1:15:85 V/V/V).

Test solution Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

Reference solution (a) Dissolve 50.0 mg of sorafenib tosilate CRS in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Reference solution (c) Dissolve 2 mg of sorafenib impurity H CRS in 100 mL of the solvent mixture using sonication. Dilute 1 mL of the solution to 20 mL with the test solution.

Reference solution (d) Dissolve 5 mg of sorafenib for peak identification CRS (containing impurities A and D) in the solvent mixture and dilute to 5 mL with the solvent mixture.

Column:

- size: $l = 0.15$ m, $\varnothing = 2.1$ mm;
- stationary phase: end-capped extra-dense bonded octylsilyl silica gel for chromatography R (3.5 μ m);
- temperature: 75 °C.

Mobile phase:

- mobile phase A: dissolve 1.0 g of potassium dihydrogen phosphate R and 1.0 mL of phosphoric acid R in water for chromatography R and dilute to 1000 mL with the same solvent;
- mobile phase B: anhydrous ethanol R, acetonitrile for chromatography R (40:60 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 2	95	5
2 - 24	95 → 56.5	5 → 43.5
24 - 32	56.5 → 10	43.5 → 90
32 - 37	10	90

Flow rate 0.6 mL/min.

Detection Spectrophotometer at 235 nm.

Injection 3 μ L of the test solution and reference solutions (b), (c) and (d).

Identification of impurities Use the chromatogram obtained with reference solution (c) to identify the peak due to impurity H; use the chromatogram supplied with sorafenib for peak identification CRS and the chromatogram obtained with reference solution (d) to identify the peaks due to impurities A and D.

Relative retention With reference to sorafenib (retention time = about 27 min): toluenesulfonic acid = about 0.07; impurity A = about 0.1; impurity D = about 0.7; impurity H = about 0.98.

System suitability Reference solution (c):

- resolution: minimum 2.5 between the peaks due to impurity H and sorafenib.

Calculation of percentage contents:

- correction factor: multiply the peak area of impurity D by 0.7;
- for each impurity, use the concentration of sorafenib tosilate in reference solution (b).

Limits:

- impurities A, D: for each impurity, maximum 0.15 per cent;
- unspecified impurities: for each impurity, maximum 0.10 per cent;
- total: maximum 0.5 per cent;
- reporting threshold: 0.05 per cent; disregard the peak due to toluenesulfonic acid.

Water (2.5.32)

Maximum 1.0 per cent, determined on 0.200 g by direct sample introduction.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (a).

Calculate the percentage content of $C_{28}H_{24}ClF_3N_4O_6S$ taking into account the assigned content of sorafenib tosilate CRS.

IMPURITIES

Specified impurities A, D.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B, C, E, F, G, H.

A. 4-(4-aminophenoxy)-N-methylpyridine-2-carboxamide,

B. 4-(4-formamidophenoxy)-N-methylpyridine-2-carboxamide,

C. 4-chloro-3-(trifluoromethyl)aniline,

D. propan-2-yl [4-[[2-(methylcarbamoyl)pyridin-4-yl]oxy]phenyl]carbamate,

E. 4,4'-[carbonylbis(azanediy-4,1-phenyleneoxy)]bis(N-methylpyridine-2-carboxamide),

F. N-methyl-4-[4-[[3-(trifluoromethyl)phenyl]carbamoyl]amino]phenoxy]pyridine-2-carboxamide,

G. ethyl [4-chloro-3-(trifluoromethyl)phenyl]carbamate,

H. 4-[4-[[[2-chloro-3-(trifluoromethyl)phenyl]carbamoyl]amino]phenoxy]-N-methylpyridine-2-carboxamide.

Ph Eur

Sorbic Acid

(Ph. Eur. monograph 0592)

C₆H₈O₂

112.1

110-44-1

Action and use

Antimicrobial preservative.

Ph Eur

DEFINITION

(*E,E*)-Hexa-2,4-dienoic acid.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Slightly soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

First identification: A, C.

Second identification: A, B, D.

A. Melting point (2.2.14): 132 °C to 136 °C.

B. Ultraviolet and visible absorption spectrophotometry (2.2.25).

Test solution Dissolve 50.0 mg in water R and dilute to 250.0 mL with the same solvent. Dilute 2.0 mL of this solution to 200.0 mL with 0.1 M hydrochloric acid.

Spectral range 230-350 nm.

Absorption maximum At 264 nm.

Specific absorbance at the absorption maximum 2150 to 2550.

C. Infrared absorption spectrophotometry (2.2.24).

Comparison sorbic acid CRS.

D. Dissolve 0.2 g in 2 mL of ethanol (96 per cent) R and add 0.2 mL of bromine water R. The solution is decolorised.

TESTS

Solution S

Dissolve 1.25 g in ethanol (96 per cent) R and dilute to 25 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

Aldehydes

Maximum 0.15 per cent, calculated as C₂H₄O.

Dissolve 1.0 g in a mixture of 30 mL of water R and 50 mL of 2-propanol R, adjust to pH 4 with 0.1 M hydrochloric acid or 0.1 M sodium hydroxide and dilute to 100 mL with water R. To 10 mL of this solution add 1 mL of decolorised fuchsin solution R and allow to stand for 30 min. Any colour in the solution is not more intense than that in a standard prepared at the same time by adding 1 mL of decolorised fuchsin solution R to a mixture of 1.5 mL of acetaldehyde standard solution (100 ppm C₂H₄O) R, 4 mL of 2-propanol R and 4.5 mL of water R.

Water (2.5.12)

Maximum 1.0 per cent, determined on 2.000 g.

Sulfated ash (2.4.14)

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.1000 g in 20 mL of ethanol (96 per cent) R. Using 0.2 mL of phenolphthalein solution R as indicator, titrate with 0.1 M sodium hydroxide until a pink colour is obtained.

1 mL of 0.1 M sodium hydroxide is equivalent to 11.21 mg of C₆H₈O₂.

STORAGE

Protected from light.

Ph Eur

Sorbitan Laurate

(Ph. Eur. monograph 1040)

Action and use

Non-ionic surfactant.

When sorbitan monolaurate is demanded, Sorbitan Laurate shall be supplied.

Ph Eur

DEFINITION

Mixture usually obtained by partial esterification of sorbitol and its mono- and di-anhydrides with lauric (dodecanoic) acid.

CHARACTERS

Appearance

Brownish-yellow, viscous liquid.

Solubility

Practically insoluble but dispersible in water, miscible with ethanol (96 per cent).

Relative density

About 0.98.

IDENTIFICATION

A. Hydroxyl value (see Tests).

B. Iodine value (see Tests).

C. Composition of fatty acids (see Tests).

TESTS

Acid value (2.5.1)

Maximum 7.0, determined on 5.0 g.

Hydroxyl value (2.5.3, Method A)

330 to 358.

Iodine value (2.5.4)

Maximum 10.

Peroxide value (2.5.5)

Maximum 5.0.

Saponification value (2.5.6)

158 to 170.

Carry out the saponification for 1 h.

Composition of fatty acids

Gas chromatography (2.4.22, Method C).

Prepare reference solution (a) as indicated in tables 2.4.22.-1 and 2.4.22.-2.

Composition of the fatty acid fraction of the substance:

- caproic acid: maximum 1.0 per cent;
- caprylic acid: maximum 10.0 per cent;
- capric acid: maximum 10.0 per cent;
- lauric acid: 40.0 per cent to 60.0 per cent;
- myristic acid: 14.0 per cent to 25.0 per cent;
- palmitic acid: 7.0 per cent to 15.0 per cent;
- stearic acid: maximum 7.0 per cent;
- oleic acid: maximum 11.0 per cent;
- linoleic acid: maximum 3.0 per cent.

Water (2.5.12)

Maximum 1.5 per cent, determined on 1.00 g.

Total ash (2.4.16)

Maximum 0.5 per cent.

STORAGE

Protected from light.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for sorbitan laurate used as emulsifier and co-solubiliser in creams.

Composition of fatty acids

(see Tests).

Hydroxyl value

(see Tests).

Ph Eur

Sorbitan Oleate

(Ph. Eur. monograph 1041)

Action and use

Non-ionic surfactant.

When sorbitan mono-oleate is demanded, Sorbitan Oleate shall be supplied.

Ph Eur

DEFINITION

Mixture usually obtained by esterification of 1 mole of sorbitol and its mono- and di-anhydrides per mole of oleic ((9Z)-octadec-9-enoic) acid. A suitable antioxidant may be added.

CHARACTERS

Appearance

Brownish-yellow, viscous liquid.

Solubility

Practically insoluble but dispersible in water, soluble in fatty oils producing a hazy solution, miscible with ethanol (96 per cent).

Relative density

About 0.99.

IDENTIFICATION

A. Hydroxyl value (see Tests).

B. Iodine value (see Tests).

C. Composition of fatty acids (see Tests).

Margaric acid Maximum 0.2 per cent for oleic acid of vegetable origin and maximum 4.0 per cent for oleic acid of animal origin.

TESTS

Acid value (2.5.1)

Maximum 8.0, determined on 5.0 g.

Hydroxyl value (2.5.3, Method A)

190 to 210.

Iodine value (2.5.4)
62 to 76.

Peroxide value (2.5.5)
Maximum 10.0.

Saponification value (2.5.6)
145 to 160.

Carry out the saponification for 1 h.

Composition of fatty acids
Gas chromatography (2.4.22, Method C).

Composition of the fatty acid fraction of the substance:

- *myristic acid*: maximum 5.0 per cent;
- *palmitic acid*: maximum 16.0 per cent;
- *palmitoleic acid*: maximum 8.0 per cent;
- *stearic acid*: maximum 6.0 per cent;
- *oleic acid*: 65.0 per cent to 88.0 per cent;
- *linoleic acid*: maximum 18.0 per cent;
- *linolenic acid*: maximum 4.0 per cent;
- *fatty acids with chain length greater than C₁₈*: maximum 4.0 per cent.

Water (2.5.12)
Maximum 1.5 per cent, determined on 1.00 g.

Total ash (2.4.16)
Maximum 0.5 per cent, determined on 1.5 g.

STORAGE
Protected from light.

LABELLING
The label states the origin of the oleic acid used (animal or vegetable).

FUNCTIONALITY-RELATED CHARACTERISTICS
This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for sorbitan oleate used as emulsifier and co-solubiliser in creams.

Composition of fatty acids
(see Tests).

Hydroxyl value
(see Tests).

Sorbitan Palmitate

(Ph. Eur. monograph 1042)

Action and use
Non-ionic surfactant.

When sorbitan monopalmitate is demanded, Sorbitan Palmitate shall be supplied.

Ph Eur

DEFINITION

Mixture usually obtained by partial esterification of sorbitol and its mono- and di-anhydrides with palmitic (hexadecanoic) acid.

CHARACTERS

Appearance
Yellow or yellowish powder, waxy flakes or hard masses.

Solubility
Practically insoluble in water, soluble in fatty oils, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

- A. Melting point (2.2.15): 44 °C to 51 °C.
Introduce the melted substance into the glass capillary tubes and allow to stand at a temperature below 10 °C for 24 h.
- B. Hydroxyl value (see Tests).
- C. Composition of fatty acids (see Tests).

TESTS

Acid value (2.5.1)
Maximum 8.0, determined on 5.0 g.

Hydroxyl value (2.5.3, Method A)
270 to 305.

Peroxide value (2.5.5)
Maximum 5.0.

Saponification value (2.5.6)
140 to 155.

Carry out the saponification for 1 h.

Composition of fatty acids
Gas chromatography (2.4.22, Method C).

Composition of the fatty acid fraction of the substance:

- *palmitic acid*: minimum 92.0 per cent;
- *stearic acid*: maximum 6.0 per cent.

Water (2.5.12)
Maximum 1.5 per cent, determined on 1.00 g.

Total ash (2.4.16)
Maximum 0.5 per cent.

STORAGE
Protected from light.

Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can

Ph Eur

also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for sorbitan palmitate used as emulsifier and co-solubiliser in creams.

Composition of fatty acids
(see Tests).

Hydroxyl value
(see Tests).

Ph Eur

Sorbitan Sesquioleate

(Ph. Eur. monograph 1916)

Action and use
Non-ionic surfactant.

Ph Eur

DEFINITION

Mixture usually obtained by esterification of 2 moles of sorbitol and its mono- and di-anhydrides per 3 moles of oleic ((9Z)-octadec-9-enoic) acid. A suitable antioxidant may be added.

CHARACTERS

Appearance

Pale yellow or slightly brownish-yellow paste, which becomes a viscous, oily, brownish-yellow liquid at about 25 °C.

Solubility

Dispersible in water, soluble in fatty oils, slightly soluble in ethanol (96 per cent).

Relative density

About 0.99.

IDENTIFICATION

- A. Hydroxyl value (see Tests).
B. Iodine value (see Tests).
C. Composition of fatty acids (see Tests).

Margaric acid Maximum 0.2 per cent for oleic acid of vegetable origin and maximum 4.0 per cent for oleic acid of animal origin.

TESTS

Acid value (2.5.1)

Maximum 16.0, determined on 5.0 g.

Hydroxyl value (2.5.3, Method A)

180 to 215.

Iodine value (2.5.4)

70 to 95.

Peroxide value (2.5.5)

Maximum 10.0.

Saponification value (2.5.6)

145 to 166.

Carry out the saponification for 1 h.

Composition of fatty acids

Gas chromatography (2.4.22, Method C).

Composition of the fatty acid fraction of the substance:

- *myristic acid*: maximum 5.0 per cent;
- *palmitic acid*: maximum 16.0 per cent;
- *palmitoleic acid*: maximum 8.0 per cent;
- *stearic acid*: maximum 6.0 per cent;
- *oleic acid*: 65.0 per cent to 88.0 per cent;

- *linoleic acid*: maximum 18.0 per cent;
- *linolenic acid*: maximum 4.0 per cent;
- *fatty acids with chain length greater than C₁₈*: maximum 4.0 per cent.

Water (2.5.12)

Maximum 1.5 per cent, determined on 1.00 g.

Total ash (2.4.16)

Maximum 0.5 per cent, determined on 1.5 g.

STORAGE

Protected from light.

LABELLING

The label states the origin of the oleic acid used (animal or vegetable).

The following characteristics may be relevant for sorbitan sesquioleate used as emulsifier and co-solubiliser in creams.

Composition of fatty acids

(see Tests).

Hydroxyl value

(see Tests).

Ph Eur

Sorbitan Stearate

(Ph. Eur. monograph 1043)

Action and use

Non-ionic surfactant.

When sorbitan monostearate is demanded, Sorbitan Stearate shall be supplied.

Ph Eur

DEFINITION

Mixture usually obtained by partial esterification of sorbitol and its mono- and di-anhydrides with *Stearic acid 50 (1474)* or *Stearic acid 70 (1474)*.

CHARACTERS

Appearance

Pale yellow, waxy solid.

Solubility

Practically insoluble but dispersible in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Melting point (2.2.15): 50 °C to 60 °C.

Introduce the melted substance into the capillary tubes and allow to stand at a temperature below 10 °C for 24 h.

B. Hydroxyl value (see Tests).

C. Composition of fatty acids (see Tests).

TESTS

Acid value (2.5.1)

Maximum 10.0, determined on 5.0 g.

Hydroxyl value (2.5.3, Method A)

235 to 260.

Peroxide value (2.5.5)

Maximum 5.0.

Saponification value (2.5.6)

147 to 157.

Carry out the saponification for 1 h.

Composition of fatty acids

Gas chromatography (2.4.22, Method C).

Composition of the fatty acid fraction of the substance:

	Type of fatty acid used	Composition of fatty acids
Sorbitan stearate (type I)	Stearic acid 50	Stearic acid: 40.0 per cent to 60.0 per cent, Sum of the contents of palmitic and stearic acids: minimum 90.0 per cent.
Sorbitan stearate (type II)	Stearic acid 70	Stearic acid: 60.0 per cent to 80.0 per cent, Sum of the contents of palmitic and stearic acids: minimum 90.0 per cent.

Water (2.5.12)

Maximum 1.5 per cent, determined on 1.00 g.

Total ash (2.4.16)

Maximum 0.5 per cent.

STORAGE

Protected from light.

LABELLING

The label states the type of sorbitan stearate.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Ph Eur

Sorbitol

(Ph. Eur. monograph 0435)

C₆H₁₄O₆

182.2

50-70-4

Action and use

Used for parenteral nutrition.

Ph Eur

DEFINITION

D-Glucitol (D-sorbitol).

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS**Appearance**

White or almost white, crystalline powder.

Solubility

Very soluble in water, practically insoluble in ethanol (96 per cent).

It shows polymorphism (5.9).

IDENTIFICATION

First identification: A.

Second identification: B, C, D.

A. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

B. Dissolve 0.5 g with heating in a mixture of 0.5 mL of pyridine R and 5 mL of acetic anhydride R. After 10 min, pour

the solution into 25 mL of water R and allow to stand in iced water for 2 h. The precipitate, recrystallised from a small volume of ethanol (96 per cent) R and dried *in vacuo*, melts (2.2.14) at 98 °C to 104 °C.

C. Thin-layer chromatography (2.2.27).

Test solution Dissolve 25 mg of the substance to be examined in water R and dilute to 10 mL with the same solvent.

Reference solution (a) Dissolve 25 mg of sorbitol CRS in water R and dilute to 10 mL with the same solvent.

Reference solution (b) Dissolve 25 mg of mannitol CRS and 25 mg of sorbitol CRS in water R and dilute to 10 mL with the same solvent.

Plate TLC silica gel plate R.

Mobile phase water R, ethyl acetate R, propanol R (10:20:70 V/V/V).

Application 2 µL.

Development Over 2/3 of the plate.

Drying In air.

Detection Spray with 4-aminobenzoic acid solution R; dry in a current of cold air until the acetone is removed; heat at 100 °C for 15 min; allow to cool and spray with a 2 g/L solution of sodium periodate R; dry in a current of cold air; heat at 100 °C for 15 min.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Specific optical rotation (2.2.7): + 4.0 to + 7.0 (anhydrous substance).

Dissolve 5.00 g of the substance to be examined and 6.4 g of disodium tetraborate R in 40 mL of water R. Allow to stand for 1 h, shaking occasionally, and dilute to 50.0 mL with water R. Filter if necessary.

TESTS**Appearance of solution**

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 5 g in water R and dilute to 50 mL with the same solvent.

Conductivity (2.2.38)

Maximum 20 µS·cm⁻¹.

Dissolve 20.0 g in carbon dioxide-free water R prepared from distilled water R and dilute to 100.0 mL with the same solvent. Measure the conductivity of the solution while gently stirring with a magnetic stirrer.

Reducing sugars

Maximum 0.2 per cent, expressed as glucose equivalent.

Dissolve 5.0 g in 6 mL of water R with the aid of gentle heat. Cool and add 20 mL of cupri-citric solution R and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 mL of a 2.4 per cent V/V solution of glacial acetic acid R and 20.0 mL of 0.025 M iodine. With continuous shaking, add 25 mL of a mixture of 6 volumes of hydrochloric acid R and 94 volumes of water R and, when the precipitate has dissolved, titrate the excess of iodine with 0.05 M sodium thiosulfate using 1 mL of starch solution R, added towards the end of the titration, as indicator. Not less than 12.8 mL of 0.05 M sodium thiosulfate is required.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 5.0 g of the substance to be examined in 20 mL of water R and dilute to 100.0 mL with the same solvent.

Reference solution (a) Dissolve 0.50 g of sorbitol CRS in 2 mL of water R and dilute to 10.0 mL with the same solvent.

Reference solution (b) Dilute 2.0 mL of the test solution to 100.0 mL with water R.

Reference solution (c) Dilute 5.0 mL of reference solution (b) to 100.0 mL with water R.

Reference solution (d) Dissolve 0.5 g of sorbitol R and 0.5 g of mannitol R (impurity A) in 5 mL of water R and dilute to 10 mL with the same solvent.

Column:

- size: $l = 0.3$ m, $\varnothing = 7.8$ mm;
- stationary phase: strong cation-exchange resin (calcium form) R (9 μ m);
- temperature: 85 ± 1 °C.

Mobile phase Degassed water for chromatography R.

Flow rate 0.5 mL/min.

Detection: Differential refractometer maintained at a constant temperature (e.g. 35 °C).

Injection 20 μ L of the test solution and reference solutions (b), (c) and (d).

Run time Twice the retention time of sorbitol.

Relative retention With reference to sorbitol (retention time = about 27 min): impurity C = about 0.6; impurity A = about 0.8; impurity B = about 1.1.

System suitability Reference solution (d):

- resolution: minimum 2.0 between the peaks due to impurity A and sorbitol.

Limits:

- any impurity: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);
- total: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3.0 per cent);
- disregard limit: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

Water (2.5.12)

Maximum 1.5 per cent, determined on 1.00 g. Use a mixture of 1 volume of formamide R1 and 2 volumes of anhydrous methanol R as solvent.

Microbial contamination

If intended for use in the manufacture of parenteral preparations:

- TAMC: acceptance criterion 10^2 CFU/g (2.6.12).

If not intended for use in the manufacture of parenteral preparations:

- TAMC: acceptance criterion 10^3 CFU/g (2.6.12);
- TYMC: acceptance criterion 10^2 CFU/g (2.6.12);
- absence of *Escherichia coli* (2.6.13);
- absence of *Salmonella* (2.6.13).

Bacterial endotoxins (2.6.14)

If intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins:

- less than 4 IU/g for parenteral preparations having a concentration of less than 100 g/L of sorbitol;

- less than 2.5 IU/g for parenteral preparations having a concentration of 100 g/L or more of sorbitol.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (a).

Calculate the percentage content of $C_6H_{14}O_6$ taking into account the assigned content of sorbitol CRS.

LABELLING

The label states:

- where applicable, the maximum concentration of bacterial endotoxins;
- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

IMPURITIES

A. D-mannitol,

B. D-iditol,

C. 4-O- α -D-glucopyranosyl-D-glucitol (D-maltitol).

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for sorbitol used as filler and binder in tablets.

Particle-size distribution (2.9.31 or 2.9.38)

Powder flow (2.9.36)

Ph Eur

Partially Dehydrated Liquid Sorbitol

(Sorbitol, Liquid, Partially Dehydrated, Ph. Eur. monograph 2048)

Action and use

Excipient.

Ph Eur

DEFINITION

Partially dehydrated liquid sorbitol is obtained by acid-catalysed partial internal dehydration of liquid sorbitol. It contains not less than 68.0 per cent *m/m* and not more than 85.0 per cent *m/m* of anhydrous substances, composed of a mixture of mainly D-sorbitol and 1,4-sorbitan, with mannitol, hydrogenated oligo- and disaccharides, and sorbitans.

Content

(nominal value):

- 1,4-sorbitan (C₆H₁₂O₅): minimum 15.0 per cent (anhydrous substance);
- D-sorbitol (C₆H₁₄O₆): minimum 25.0 per cent (anhydrous substance).

The contents of 1,4-sorbitan and D-sorbitol are within 95.0 per cent to 105.0 per cent of the nominal values.

CHARACTERS

Appearance

Clear, colourless, syrupy liquid.

Solubility

Miscible with water, practically insoluble in mineral oils and vegetable oils.

IDENTIFICATION

Examine the chromatograms obtained in the assay.

Results The 2 principal peaks in the chromatogram obtained with the test solution are similar in retention time and size to the peaks in the chromatogram obtained with reference solution (a).

TESTS

Solution S

Dilute the substance to be examined with carbon dioxide-free water R prepared from distilled water R to obtain a solution containing 50.0 per cent *m/m* of anhydrous substance.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

Conductivity (2.2.38)

Maximum 20 μS·cm⁻¹.

Measure the conductivity of solution S, while gently stirring with a magnetic stirrer.

Reducing sugars

Maximum 0.3 per cent, calculated as glucose (anhydrous substance).

To an amount of the substance to be examined equivalent to 3.3 g of anhydrous substance, add 3 mL of water R, 20.0 mL of cupri-citric solution R and a few glass beads. Heat so that boiling begins after 4 min. Maintain boiling for 3 min. Cool rapidly and add 100 mL of a 2.4 per cent V/V solution of glacial acetic acid R and 20.0 mL of 0.025 M iodine. With continuous shaking, add 25 mL of a mixture of 6 mL of hydrochloric acid R and 94 mL of water R. When the precipitate has dissolved, titrate the excess of iodine with 0.05 M sodium thiosulfate using 2 mL of starch solution R,

added towards the end of the titration, as indicator. Not less than 12.8 mL of 0.05 M sodium thiosulfate is required.

Water (2.5.12)

15.0 per cent to 32.0 per cent, determined on 0.100 g.

Microbial contamination

TAMC: acceptance criterion 10³ CFU/g (2.6.12).

TYMC: acceptance criterion 10² CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

Absence of *Salmonella* (2.6.13).

ASSAY

Liquid chromatography (2.2.29).

Test solution Dissolve 0.400 g of the substance to be examined in water R and dilute to 20.0 mL with the same solvent.

Reference solution (a) Dissolve 50.0 mg of sorbitol CRS and 20.0 mg of 1,4-sorbitan CRS in water R and dilute to 5.0 mL with the same solvent.

Reference solution (b) Dissolve 0.100 g of mannitol R and 0.100 g of sorbitol R in water R and dilute to 10 mL with the same solvent.

Column:

- size: $l = 0.3$ m, $\varnothing = 7.8$ mm;
- stationary phase: strong cation-exchange resin (calcium form) R (9 μm);
- temperature: 80 ± 5 °C.

Mobile phase Degassed water for chromatography R.

Flow rate 0.5 mL/min.

Detection Differential refractometer maintained at a constant temperature (e.g. 30–35 °C).

Injection 40 μL.

Relative retention With reference to D-sorbitol (retention time = about 25 min): 1,4-sorbitan = about 0.5; mannitol = about 0.8.

System suitability Reference solution (b):

- resolution: minimum 2.0 between the peaks due to mannitol and D-sorbitol.

Calculate the percentage contents of 1,4-sorbitan (C₆H₁₂O₅) and D-sorbitol (C₆H₁₄O₆) taking into account the assigned contents of 1,4-sorbitan CRS and sorbitol CRS.

LABELLING

The label states the content of D-sorbitol and the content of 1,4-sorbitan (= nominal values).

Ph Eur

Liquid Sorbitol (Crystallising)

Sorbitol Solution (70 per cent) (Crystallising)

(Ph. Eur. monograph 0436)

Action and use

Excipient.

Ph Eur

DEFINITION

Aqueous solution of a hydrogenated, partly hydrolysed starch.

Content

- anhydrous substance: 68.0 per cent *m/m* to 72.0 per cent *m/m*,

— D-glucitol (D-sorbitol, $C_6H_{14}O_6$): 92.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

Clear, colourless, syrupy liquid, miscible with water.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

B. To 7.0 g add 40 mL of *water R* and 6.4 g of *disodium tetraborate R*, allow to stand for 1 h, shaking occasionally, and dilute to 50.0 mL with *water R*. Filter if necessary. The angle of rotation (2.2.7) is 0° to $+1.5^\circ$.

C. It is a clear, syrupy liquid at a temperature of 25°C .

TESTS

Appearance of solution

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dilute 7.0 g to 50 mL with *water R*.

Conductivity (2.2.38)

Maximum $10\ \mu\text{S}\cdot\text{cm}^{-1}$ measured on the undiluted liquid sorbitol (crystallising) while gently stirring with a magnetic stirrer.

Reducing sugars

Maximum 0.2 per cent calculated as glucose equivalent.

To 5.0 g add 6 mL of *water R*, 20 mL of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 mL of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 mL of 0.025 *M* *iodine*. With continuous shaking, add 25 mL of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R* and, when the precipitate has dissolved, titrate the excess of iodine with 0.05 *M* *sodium thiosulfate* using 1 mL of *starch solution R*, added towards the end of the titration, as indicator. Not less than 12.8 mL of 0.05 *M* *sodium thiosulfate* is required.

Water (2.5.12)

28.0 per cent to 32.0 per cent *m/m*, determined on 0.100 g.

ASSAY

Liquid chromatography (2.2.29).

Test solution Mix 1.00 g of the substance to be examined with 20 mL of *water R* and dilute to 50.0 mL with the same solvent.

Reference solution (a) Dissolve 65.0 mg of *sorbitol CRS* in 2 mL of *water R* and dilute to 5.0 mL with the same solvent.

Reference solution (b) Dissolve 65 mg of *mannitol R* and 65 mg of *sorbitol R* in 2 mL of *water R* and dilute to 5 mL with the same solvent.

Column:

- size: $l = 0.3\ \text{m}$, $\varnothing = 7.8\ \text{mm}$,
- stationary phase: strong cation-exchange resin (calcium form) *R* ($9\ \mu\text{m}$),
- temperature: $85 \pm 1^\circ\text{C}$.

Mobile phase Degassed *water for chromatography R*.

Flow rate 0.5 mL/min.

Detection Differential refractometer maintained at a constant temperature (e.g. 35°C).

Injection 20 μL .

Run time Twice the retention time of sorbitol.

Relative retention With reference to sorbitol (retention time = about 27 min): mannitol = about 0.8.

System suitability Reference solution (b):

— resolution: minimum 2.0 between the peaks due to mannitol and to sorbitol.

Calculate the percentage content of $C_6H_{14}O_6$ taking into account the assigned content of *sorbitol CRS*.

Ph Eur

Liquid Sorbitol (Non-crystallising)

Sorbitol Solution (70 per cent) (Non-crystallising)

(Ph. Eur. monograph 0437)

Action and use

Excipient.

Ph Eur

DEFINITION

Aqueous solution of a hydrogenated, partly hydrolysed starch.

Content

— anhydrous substance: 68.0 per cent *m/m* to 72.0 per cent *m/m*,

— D-glucitol (D-sorbitol, $C_6H_{14}O_6$): 72.0 per cent to 92.0 per cent (anhydrous substance).

CHARACTERS

Appearance

Clear, colourless, syrupy liquid, miscible with water.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

B. To 7.0 g add 40 mL of *water R* and 6.4 g of *disodium tetraborate R*. Allow to stand for 1 h, shaking occasionally, and dilute to 50.0 mL with *water R*. Filter if necessary. The angle of rotation (2.2.7) is $+1.5^\circ$ to $+3.5^\circ$.

C. It is a clear, syrupy liquid at 25°C .

TESTS

Appearance of solution

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dilute 7.0 g to 50 mL with *water R*.

Conductivity (2.2.38)

Maximum $10\ \mu\text{S}\cdot\text{cm}^{-1}$ measured on the undiluted liquid sorbitol (non crystallising) while gently stirring with a magnetic stirrer.

Reducing sugars

Maximum 0.2 per cent calculated as glucose equivalent.

To 5.0 g add 6 mL of *water R*, 20 mL of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 mL of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 mL of 0.025 *M* *iodine*. With continuous shaking, add 25 mL of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R* and, when the precipitate has dissolved, titrate the excess of iodine with 0.05 *M* *sodium thiosulfate* using 1 mL of *starch solution R*, added towards the

end of the titration, as indicator. Not less than 12.8 mL of 0.05 M sodium thiosulfate is required.

Reducing sugars after hydrolysis

Maximum 9.3 per cent calculated as glucose equivalent.

To 6.0 g add 35 mL of water R, 40 mL of 1 M hydrochloric acid and a few glass beads. Boil under a reflux condenser for 4 h. Cool and neutralise with dilute sodium hydroxide solution R using 0.2 mL of bromothymol blue solution R1 as indicator. Cool and dilute to 100.0 mL with water R.

To 3.0 mL of the solution add 5 mL of water R, 20 mL of cupri-citric solution R and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 mL of a 2.4 per cent V/V solution of glacial acetic acid R and 20.0 mL of 0.025 M iodine. With continuous shaking, add 25 mL of a mixture of 6 volumes of hydrochloric acid R and 94 volumes of water R. When the precipitate has dissolved, titrate the excess of iodine with 0.05 M sodium thiosulfate using 1 mL of starch solution R, added towards the end of the titration, as indicator. Not less than 8.0 mL of 0.05 M sodium thiosulfate is required.

Water (2.5.12)

28.0 per cent to 32.0 per cent m/m, determined on 0.100 g.

ASSAY

Liquid chromatography (2.2.29).

Test solution Mix 1.00 g of the substance to be examined with 20 mL of water R and dilute to 50.0 mL with the same solvent.

Reference solution (a) Dissolve 55.0 mg of sorbitol CRS in 2 mL of water R and dilute to 5.0 mL with the same solvent.

Reference solution (b) Dissolve 55 mg of mannitol R and 55 mg of sorbitol R in 2 mL of water R and dilute to 5 mL with the same solvent.

Column:

- size: $l = 0.3$ m, $\varnothing = 7.8$ mm,
- stationary phase: strong cation-exchange resin (calcium form) R (9 μ m),
- temperature: 85 ± 1 °C.

Mobile phase Degassed water for chromatography R.

Flow rate 0.5 mL/min.

Detection Differential refractometer maintained at a constant temperature (e.g. 35 °C).

Injection 20 μ L.

Run time Twice the retention time of sorbitol.

Relative retention With reference to sorbitol (retention time = about 27 min): mannitol = about 0.8.

System suitability Reference solution (b):

- resolution: minimum 2.0 between the peaks due to mannitol and to sorbitol.

Calculate the percentage content of $C_{12}H_{21}NO_3S$ taking into account the assigned content of sorbitol CRS.

Ph Eur

Sotalol Hydrochloride

(Ph. Eur. monograph 2004)

$C_{12}H_{21}ClN_2O_3S$ 308.8 959-24-0

Action and use

Beta-adrenoceptor antagonist; class II and class III antiarrhythmic.

Ph Eur

DEFINITION

N-[4-[(1R)-1-Hydroxy-2-[(propan-2-yl)amino]ethyl]phenyl]methanesulfonamide hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water, soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison sotalol hydrochloride CRS.

B. It gives reaction (a) of chlorides (2.3.1).

TESTS

Solution S

Dissolve 5.0 g in carbon dioxide-free water R and dilute to 50.0 mL with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension III (2.2.1) and not more intensely coloured than reference solution Y₆ (2.2.2, Method II).

pH (2.2.3)

4.0 to 5.0.

Dilute 5.0 mL of solution S to 10.0 mL with carbon dioxide-free water R.

Optical rotation (2.2.7)

-0.10° to + 0.10°.

Dilute 25.0 mL of solution S to 50.0 mL with water R.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 3.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b) Dissolve 8.0 mg of sotalol impurity B CRS in the mobile phase and dilute to 10.0 mL with the mobile phase.

Reference solution (c) Dilute 1.0 mL of reference solution (b) to 100.0 mL with the mobile phase.

Reference solution (d) Dilute 1.5 mL of reference solution (b) to 100 mL with the mobile phase. To 1 mL of this solution add 1 mL of reference solution (a).

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: base-deactivated end-capped octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase Dissolve 2 g of sodium octanesulfonate R in 790 mL of water for chromatography R, adjust to pH 3.0 with phosphoric acid R and add 210 mL of acetonitrile for chromatography R.

Flow rate 1 mL/min.

Detection Spectrophotometer at 228 nm.

Injection 10 μ L of the test solution and reference solutions (a), (c) and (d).

Run time 2.5 times the retention time of sotalol.

System suitability Reference solution (d):

- resolution: minimum 4.0 between the peaks due to sotalol and impurity B.

Limits:

- impurity B: not more than 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent);
- any other impurity: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent), and not more than 1 such peak has an area greater than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- total of other impurities: not more than 1.65 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- disregard limit: 0.17 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

In order to avoid overheating during the titration, mix thoroughly throughout and stop the titration immediately after the end-point has been reached.

Dissolve 0.250 g in 10 mL of anhydrous formic acid R, using sonication if necessary. Add 40 mL of acetic anhydride R and titrate immediately with 0.1 M perchloric acid. Determine the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 30.88 mg of $C_{12}H_{21}ClN_2O_3S$.

STORAGE

Protected from light.

IMPURITIES

A. *N*-[4-[2-[(propan-2-yl)amino]ethyl]phenyl]methanesulfonamide,

Ph Eur

Hydrogenated Soya Oil

Hydrogenated Soyabean Oil

(Hydrogenated Soya-bean Oil, Ph. Eur. monograph 1265)

Action and use

Excipient.

Ph Eur

DEFINITION

Product obtained by refining, bleaching, hydrogenation and deodorisation of oil obtained from seeds of *Glycine max* (L.) Merr. (*G. hispida* (Moench) Maxim.). The product consists mainly of triglycerides of palmitic and stearic acids.

CHARACTERS

Appearance

White or almost white mass or powder which melts to a clear, pale yellow liquid when heated.

Solubility

Practically insoluble in water, freely soluble in methylene chloride, in light petroleum (bp: 65–70 °C) after heating and in toluene, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Melting point (see Tests).

B. Composition of fatty acids (see Tests).

TESTS

Melting point (2.2.15)

66 °C to 72 °C.

Acid value (2.5.1)

Maximum 0.5.

Dissolve 10.0 g in 50 mL of a hot mixture of equal volumes of ethanol (96 per cent) R and toluene R, previously neutralised with 0.1 M potassium hydroxide using 0.5 mL of phenolphthalein solution R1 as indicator. Titrate the solution immediately while still hot.

Peroxide value (2.5.5, Method A)

Maximum 5.0.

Unsaponifiable matter (2.5.7)

Maximum 1.0 per cent, determined on 5.0 g.

Alkaline impurities (2.4.19)

Dissolve 2.0 g with gentle heating in a mixture of 1.5 mL of ethanol (96 per cent) R and 3 mL of toluene R. Add 0.05 mL of a 0.4 g/L solution of bromophenol blue R in ethanol (96 per cent) R. Not more than 0.4 mL of 0.01 M hydrochloric acid is required to change the colour to yellow.

Composition of fatty acids

Gas chromatography (2.4.22, Method A) with the following modifications. Use the mixture of calibrating substances in Table 2.4.22.-3.

Column:

- material: fused silica;
- size: $l = 25$ m, $\varnothing = 0.25$ mm;
- stationary phase: cyanopropylpolysiloxane R (film thickness 0.2 μ m).

Carrier gas helium for chromatography R.

Flow rate 0.65 mL/min.

Split ratio 1:100.

Temperature:

- column: 180 °C for 20 min;
- injection port and detector: 250 °C.

Detection Flame ionisation.

Composition of the fatty-acid fraction of the substance:

- saturated fatty acids of chain length less than C_{14} : maximum 0.1 per cent;
- myristic acid: maximum 0.5 per cent;
- palmitic acid: 9.0 per cent to 16.0 per cent;
- stearic acid: 79.0 per cent to 89.0 per cent;
- oleic acid and isomers: maximum 4.0 per cent;
- linoleic acid and isomers: maximum 1.0 per cent;
- linolenic acid and isomers: maximum 0.2 per cent;
- arachidic acid: maximum 1.0 per cent;
- behenic acid: maximum 1.0 per cent.

STORAGE

Protected from light.

Refined Soya Oil

Refined Soyabean Oil

(Refined Soya-bean Oil, Ph. Eur. monograph 1473)

Action and use

Excipient.

When Soya Oil, Soyabean Oil or Soya-bean Oil is demanded, Refined Soya Oil shall be supplied.

When intended for use in the manufacture of a parenteral dosage form, Refined Soya Oil complying with the requirement for Water below should be used.

Ph Eur

DEFINITION

Fatty oil obtained from seeds of *Glycine max* (L.) Merr. (*Glycine hispida* (Moench) Maxim.) by extraction and subsequent refining. It may contain a suitable antioxidant.

PRODUCTION

The oil is prepared using materials and methods designed to ensure that the content of brassicasterol (2.4.23) in the sterol fraction of the oil is not greater than 0.3 per cent.

CHARACTERS**Appearance**

Clear, pale yellow liquid.

Solubility

Practically insoluble in ethanol (96 per cent), miscible with light petroleum (bp: 50-70 °C).

Relative density

About 0.922.

Refractive index

About 1.475.

IDENTIFICATION

First identification: B.

Second identification: A.

A. Identification of fatty oils by thin-layer chromatography (2.3.2).

Results The chromatogram obtained is similar to the corresponding chromatogram shown in Figure 2.3.2.-1.

B. Composition of fatty acids (see Tests).

TESTS**Acid value (2.5.1)**

Maximum 0.5.

Peroxide value (2.5.5, Method A)

Maximum 10.0, or maximum 5.0 if intended for use in the manufacture of parenteral preparations.

Unsaponifiable matter (2.5.7)

Maximum 1.5 per cent, determined on 5.0 g.

Alkaline impurities (2.4.19)

It complies with the test.

Composition of fatty acids (2.4.22, Method A)

Use the mixture of calibrating substances in Table 2.4.22.-3.

Composition of the fatty-acid fraction of the oil:

- saturated fatty acids of chain length less than C_{14} : maximum 0.1 per cent;
- myristic acid: maximum 0.2 per cent;
- palmitic acid: 9.0 per cent to 13.0 per cent;
- palmitoleic acid: maximum 0.3 per cent;
- stearic acid: 2.5 per cent to 5.0 per cent;
- oleic acid and isomer: 17.0 per cent to 30.0 per cent;
- linoleic acid: 48.0 per cent to 58.0 per cent;
- linolenic acid: 5.0 per cent to 11.0 per cent;
- arachidic acid: maximum 1.0 per cent;
- eicosenoic acid: maximum 1.0 per cent;
- behenic acid: maximum 1.0 per cent.

Water (2.5.32)

Maximum 0.1 per cent, determined on 1.00 g.

STORAGE

In a well-filled container, protected from light, at a temperature not exceeding 25 °C. If intended for use in the manufacture of parenteral preparations, store under an inert gas.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral preparations and the name of the inert gas.

Ph Eur

Spectinomycin Dihydrochloride Pentahydrate

(Ph. Eur. monograph 1152)

Compound	R	R'	Molec. Formula	M_r
spectinomycin	R + R' = O		$C_{14}H_{26}Cl_2N_2O_7 \cdot 5H_2O$	495.4
(4R)-dihydro-spectinomycin	OH	H	$C_{14}H_{28}Cl_2N_2O_7 \cdot 5H_2O$	497.4

Action and use

Aminocyclitol antibacterial.

Ph Eur

DEFINITION

Mixture of (2R,4aR,5aR,6S,7S,8R,9S,9aR,10aS)4a,7,9-trihydroxy-2-methyl-6,8-bis(methylamino)decahydro-4H-pyrano[2,3-b][1,4]benzodioxin-4-one dihydrochloride pentahydrate (spectinomycin dihydrochloride pentahydrate) and of (2R,4R,4aS,5aR,6S,7S,8R,9S,9aR,10aS)-2-methyl-6,8-bis(methylamino)decahydro-2H-pyrano[2,3-b][1,4]benzodioxine-4,4a,7,9-tetrol dihydrochloride pentahydrate ((4R)-dihydro-spectinomycin dihydrochloride pentahydrate).

It is produced by *Streptomyces spectabilis* or by any other means.

Content

- (4R)-dihydro-spectinomycin dihydrochloride: maximum 9.0 per cent (anhydrous substance);
- sum of the contents of spectinomycin dihydrochloride and (4R)-dihydro-spectinomycin dihydrochloride: 93.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, slightly hygroscopic powder.

Solubility

Freely soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison spectinomycin hydrochloride CRS.

B. Dilute 1.0 mL of solution S (see Tests) to 10 mL with water R. The solution gives reaction (a) of chlorides (2.3.1).

TESTS

Solution S

Dissolve 2.50 g in carbon dioxide-free water R and dilute to 25.0 mL with the same solvent.

Appearance of solution

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dilute 2.0 mL of solution S to 20.0 mL with water R.

pH (2.2.3)

3.8 to 5.6 for solution S.

Specific optical rotation (2.2.7)

+ 15.0 to + 21.0 (anhydrous substance), determined on solution S within 20 min of preparation.

Related substances

Liquid chromatography (2.2.29). In order to avoid formation of anomers, prepare the solutions immediately before use.

Test solution Dissolve 15.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

Reference solution (a) Dissolve 3 mg of spectinomycin for system suitability CRS in the mobile phase and dilute to 20 mL with the mobile phase.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase.

Reference solution (c) Dilute 3.0 mL of reference solution (b) to 10.0 mL with the mobile phase.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: octylsilyl silica gel for chromatography R (5 μ m);

— temperature: ambient and constant.

Mobile phase Dissolve 4.2 g of oxalic acid R and 2.0 mL of heptafluorobutyric acid R in water R and dilute to 1000 mL with water R; adjust to pH 3.2 with sodium hydroxide solution R, add 105 mL of acetonitrile R and mix; filter through a 0.45 μ m filter and degas with helium for chromatography R for 10 min.

Flow rate 1.0 mL/min.

Post-column solution carbonate-free sodium hydroxide solution R diluted with carbon dioxide-free water R to obtain a final concentration of NaOH of 21 g/L. Degas the solution with helium for chromatography R for 10 min before use. Add it pulse-less to the column effluent using a 375 μ L polymeric mixing coil.

Post-column flow rate 0.5 mL/min.

Detection Pulsed amperometric detection or equivalent with a gold indicator electrode having preferably a diameter of 1.4 mm or greater, a suitable reference electrode and a stainless steel counter electrode, held at + 0.12 V detection, + 0.70 V oxidation and -0.60 V reduction potentials respectively, with pulse durations according to the instrument used. Keep the detection cell at ambient and constant temperature. Clean the gold indicator electrode with an eraser and damp precision wipe prior to start-up of the system to enhance the detector sensitivity and increase the signal-to-noise ratio.

Injection 20 μ L.

Run time 1.5 times the retention time of spectinomycin.

Identification of impurities Use the chromatogram supplied with spectinomycin for system suitability CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, D and E.

Relative retention With reference to spectinomycin (retention time = 11 min to 20 min): impurity A = about 0.5; impurity F = about 0.53; impurity G = about 0.6; impurity D = about 0.7; impurity E = about 0.9; (4R)-dihydro-spectinomycin = about 1.3; impurity C = about 1.4.

System suitability Reference solution (a):

— resolution: minimum 1.5 between the peaks due to impurity E and spectinomycin.

Limits:

— correction factor: for the calculation of content, multiply the peak area of impurity A by 0.4;

- *impurities A, C, F, G*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *impurities D, E*: for each impurity, not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (4.0 per cent);
- *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *total*: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (6.0 per cent);
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.3 per cent); disregard the peak due to (4*R*)-dihydrospectinomycin.

Water (2.5.12)

16.0 per cent to 20.0 per cent, determined on 0.100 g.

Sulfated ash (2.4.14)

Maximum 1.0 per cent, determined on 1.0 g.

Bacterial endotoxins (2.6.14)

Less than 0.09 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins. Prepare the solutions using a 0.42 per cent *m/m* solution of *sodium hydrogen carbonate R*.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modifications.

Test solution Dissolve 40.0 mg of the substance to be examined in *water R* and dilute to 50.0 mL with the same solvent. Allow to stand for not less than 15 h and not more than 72 h (formation of anomers). Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

Reference solution Dissolve 40.0 mg of *spectinomycin hydrochloride CRS* (containing (4*R*)-dihydrospectinomycin) in *water R* and dilute to 50.0 mL with the same solvent. Allow to stand for the same period of time as the test solution (formation of anomers). Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

System suitability:

- *repeatability*: maximum relative standard deviation of 3.0 per cent for the principal peak after 6 injections of the reference solution.

Calculate the sum of the percentage contents of spectinomycin dihydrochloride and (4*R*)-dihydrospectinomycin dihydrochloride from the declared contents of $C_{14}H_{26}Cl_2N_2O_7$ and $C_{14}H_{28}Cl_2N_2O_7$ in *spectinomycin hydrochloride CRS*.

STORAGE

In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

IMPURITIES

Specified impurities A, C, D, E, F, G.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B.

A. 1,3-dideoxy-1,3-bis(methylamino)-*myo*-inositol (actinamine),

B. (2*S*,3*RS*,5*R*)-3-hydroxy-5-methyl-2-[[[(1*r*,2*R*,3*S*,4*r*,5*R*,6*S*)-2,4,6-trihydroxy-3,5-bis(methylamino)cyclohexyl]oxy]tetrahydrofuran-3-carboxylic acid (actinospectinoic acid),

C. (2*R*,4*S*,4*aS*,5*aR*,6*S*,7*S*,8*R*,9*S*,9*aR*,10*aS*)-2-methyl-6,8-bis(methylamino)decahydro-2*H*-pyrano[2,3-*b*][1,4]benzodioxine-4,4*a*,7,9-tetrol ((4*S*)-dihydrospectinomycin),

D. (2*R*,3*R*,4*S*,4*aS*,5*aR*,6*S*,7*S*,8*R*,9*S*,9*aR*,10*aS*)-2-methyl-6,8-bis(methylamino)decahydro-2*H*-pyrano[2,3-*b*][1,4]benzodioxine-3,4,4*a*,7,9-pentol (dihydroxyspectinomycin),

E. (2*R*,4*aR*,5*aR*,6*S*,7*R*,8*R*,9*S*,9*aR*,10*aS*)-6-amino-4*a*,7,9-trihydroxy-2-methyl-8-(methylamino)decahydro-4*H*-pyrano[2,3-*b*][1,4]benzodioxin-4-one (*N*-desmethylspectinomycin),

F. (2*S*,4*S*,6*R*)-4-hydroxy-6-methyl-2-[[[(1*r*,2*R*,3*S*,4*r*,5*R*,6*S*)-2,4,6-trihydroxy-3,5-bis(methylamino)cyclohexyl]oxy]dihydro-2*H*-pyran-3(4*H*)-one (triol spectinomycin),

G. (2*R*,3*S*,4*aR*,5*aR*,6*S*,7*S*,8*R*,9*S*,9*aR*,10*aS*)-3,4*a*,7,9-tetrahydroxy-2-methyl-6,8-bis(methylamino)decahydro-4*H*-pyrano[2,3-*b*][1,4]benzodioxin-4-one (tetrahydroxy-spectinomycin).

Ph Eur

Spirapril Hydrochloride Monohydrate

(Ph. Eur. monograph 1766)

C₂₂H₃₁ClN₂O₅S₂·H₂O 521.1

Action and use

Angiotensin-converting enzyme inhibitor.

Ph Eur

DEFINITION

(8*S*)-7-[(2*S*)-2-[[[(1*S*)-1-(Ethoxycarbonyl)-3-phenylpropyl]amino]propanoyl]-1,4-dithia-7-azaspiro[4.4]nonane-8-carboxylic acid hydrochloride monohydrate.

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, fine crystalline powder.

Solubility

Very slightly soluble in water, soluble in methanol, slightly soluble in acetonitrile, practically insoluble in methylene chloride.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

Comparison spirapril hydrochloride monohydrate CRS.

C. It gives reaction (a) of chlorides (2.3.1).

TESTS

Specific optical rotation (2.2.7)

-13.0 to -11.0 (anhydrous substance).

Dissolve 0.200 g in dimethylformamide R and dilute to 20.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Solvent mixture acetonitrile R1, water R (20:80 V/V).

Test solution Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 20.0 mL with the solvent mixture.

Reference solution (a) Dissolve 6 mg of spirapril for system suitability CRS (containing impurities B and D) in the solvent mixture and dilute to 20 mL with the solvent mixture.

Reference solution (b) Dilute 5.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 5.0 mL of this solution to 50.0 mL with the solvent mixture.

Reference solution (c) Dilute 1.0 mL of reference solution (b) to 10.0 mL with the solvent mixture.

Column:

— size: $l = 0.125$ m, $\varnothing = 4.6$ mm;— stationary phase: octadecylsilyl silica gel for chromatography R (5 μ m);

— temperature: 70 °C.

Mobile phase:

— mobile phase A: dissolve 4.5 g of tetramethylammonium hydroxide R in 900 mL of water R, add 100 mL of acetonitrile R1 and adjust to pH 2.2 with phosphoric acid R;

— mobile phase B: dissolve 4.5 g of tetramethylammonium hydroxide R in 400 mL of water R, add 600 mL of acetonitrile R1 and adjust to pH 2.2 with phosphoric acid R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 4	90	10
4 - 14	90 → 10	10 → 90
14 - 20	10	90

Flow rate 2.0 mL/min.

Detection Spectrophotometer at 210 nm.

Injection 20 μ L.

Relative retention With reference to spirapril (retention time = about 10 min): impurity C = about 0.6; impurity B = about 0.7; impurity A = about 1.26; impurity D = about 1.38.

System suitability Reference solution (a):

— resolution: minimum 3.5 between the peaks due to impurity B and spirapril, and minimum 5.5 between the peaks due to spirapril and impurity D.

Limits:

— impurity D: not more than 0.8 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);

— impurity B: not more than 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— impurities A, C: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— unspecified impurities: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— total: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— disregard limit: area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Water (2.5.12)

3.0 per cent to 4.0 per cent, determined on 0.200 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29).

Solvent mixture Mix equal volumes of acetonitrile R1 and water R.

Test solution Dissolve 20.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

Reference solution (a) Dissolve 20.0 mg of spirapril hydrochloride monohydrate CRS in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

Reference solution (b) Dissolve 6.0 mg of spirapril for system suitability CRS (spirapril spiked with impurity B and impurity D) in a mixture of 2 volumes of acetonitrile R and 8 volumes of water R and dilute to 20 mL with the same mixture of solvents.

Solution A Dissolve 4.5 g of tetramethylammonium hydroxide R in 900 mL of water R, adjust to pH 1.75 with phosphoric acid R and add 100 mL of acetonitrile R1.

Solution B Dissolve 4.5 g of tetramethylammonium hydroxide R in 400 mL of water R, adjust to pH 1.75 with phosphoric acid R and add 600 mL of acetonitrile R1.

Column:

— size: $l = 0.125$ m, $\varnothing = 4.6$ mm;

— stationary phase: octadecylsilyl silica gel for chromatography R (5 μ m);

— temperature: 70 °C.

Mobile phase Solution A, solution B (45:55 V/V).

Flow rate 2.0 mL/min.

Detection Spectrophotometer at 210 nm.

Injection 20 μ L.

Retention time Spirapril = 1.6 min to 2.9 min; impurity D = about 13 min. Adjust the proportion of solution B in the mobile phase if necessary.

System suitability Reference solution (b):

— resolution: minimum 15 between the peaks due to spirapril and impurity D.

Calculate the percentage content of $C_{22}H_{31}ClN_2O_5S_2$ using the chromatogram obtained with reference solution (a) and taking into account the assigned content of spirapril hydrochloride monohydrate CRS.

STORAGE

In an airtight container, protected from light.

IMPURITIES

Specified impurities A, B, C, D.

A. ethyl (2S)-2-[(3'S,8'aS)-3'-methyl-1',4'-dioxohexahydrospiro[1,3-dithiolane-2,7'(6'H)-pyrrolo[1,2-a]pyrazin]-2'-yl]-4-phenylbutanoate,

B. (8S)-7-[(2S)-2-[[[(1S)-1-carboxy-3-phenylpropyl]amino]propanoyl]-1,4-dithia-7-azaspiro[4.4]nonane-8-carboxylic acid (spiraprilat),

C. (2S)-2-[[[(1S)-1-(ethoxycarbonyl)-3-phenylpropyl]amino]propanoic acid,

D. 1-methylethyl (8S)-7-[(2S)-2-[[[(1S)-1-(ethoxycarbonyl)-3-phenylpropyl]amino]propanoyl]-1,4-dithia-7-azaspiro[4.4]nonane-8-carboxylate.

Ph Eur

Spironolactone

(Ph. Eur. monograph 0688)

$C_{24}H_{32}O_4S$

416.6

52-01-7

Action and use

Aldosterone receptor antagonist; potassium-sparing diuretic.

Preparations

Spironolactone Oral Suspension

Spironolactone Tablets

Ph Eur

DEFINITION

S-[(2'R)-3,5'-Dioxo-3',4'-dihydro-5'H-spiro[androst-4-ene-17,2'-furan]-7 α -yl] ethanethioate.

Content

97.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or yellowish-white powder.

Solubility

Practically insoluble in water, soluble in ethanol (96 per cent).

It shows polymorphism (5.9).

IDENTIFICATION

First identification: A.

Second identification: B, C.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison spironolactone CRS.

If the spectra obtained in the solid state shows differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of methanol R, evaporate to dryness and record new spectra using the residues.

B. Thin-layer chromatography (2.2.27).

Test solution Dissolve 20 mg of the substance to be examined in methylene chloride R and dilute to 10 mL with the same solvent.

Reference solution Dissolve 20 mg of spironolactone CRS in methylene chloride R and dilute to 10 mL with the same solvent.

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase water R, cyclohexane R, ethyl acetate R (1:24:75 V/V/V).

Application 5 µL.

Development Over 3/4 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. To about 10 mg add 2 mL of a 50 per cent V/V solution of sulfuric acid R and shake. An orange solution with an intense yellowish-green fluorescence is produced. Heat the solution gently; the colour becomes deep red and hydrogen sulfide, which blackens lead acetate paper R, is evolved. Add the solution to 10 mL of water R; a greenish-yellow solution is produced, showing opalescence or a precipitate.

TESTS**Specific optical rotation (2.2.7)**

-46 to -41 (dried substance).

Dissolve 0.100 g in ethanol (96 per cent) R and dilute to 10.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

Solvent mixture acetonitrile R, water R (50:50 V/V).

Test solution (a) Dissolve 50.0 mg of the substance to be examined in 2.5 mL of tetrahydrofuran R and dilute to 25.0 mL with the solvent mixture.

Test solution (b) Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture.

Reference solution (a) Dilute 1.0 mL of test solution (b) to 10.0 mL with the solvent mixture.

Reference solution (b) Dissolve with the aid of ultrasound the contents of a vial of spironolactone for system suitability CRS (containing impurities A, C, D, E and I) in 1.0 mL of the solvent mixture.

Reference solution (c) Dissolve 50.0 mg of spironolactone CRS in 2.5 mL of tetrahydrofuran R and dilute to 25.0 mL with

the solvent mixture. Dilute 1.0 mL of this solution to 100.0 mL with the solvent mixture.

Reference solution (d) Dissolve 5.0 mg of canrenone CRS (impurity F) in 2.5 mL of tetrahydrofuran R and dilute to 25.0 mL with the solvent mixture. Dilute 3.0 mL of this solution to 100.0 mL with the solvent mixture.

Column:

— size: $l = 0.15$ m, $\varnothing = 4.6$ mm;

— stationary phase: end-capped octadecylsilyl silica gel for chromatography R (3 µm);

— temperature: 40 °C.

Mobile phase acetonitrile R, tetrahydrofuran R, methanol R1, water for chromatography R (15:20:425:540 V/V/V/V).

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µL of test solution (a) and reference solutions (a), (b) and (d).

Run time 2.5 times the retention time of spironolactone.

Identification of impurities Use the chromatogram supplied with spironolactone for system suitability CRS and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, C, D, E and I; use the chromatogram obtained with reference solution (d) to identify the peak due to impurity F.

Relative retention With reference to spironolactone (retention time = about 26 min): impurity A = about 0.95; impurity F = about 1.2; impurity C = about 1.5; impurity D = about 1.6; impurity E = about 1.7; impurity I = about 1.9.

System suitability Reference solution (b):

— *peak-to-valley ratio*: minimum 1.5, where H_p = height above the baseline of the peak due to impurity A and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to spironolactone.

Limits:

— *correction factor*: for the calculation of content, multiply the peak area of impurity F by 2.3;

— *impurity I*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *impurities E, F*: for each impurity, not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *impurities A, C*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *impurity D*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 7 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.7 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Free thiol compounds

To 2.0 g add 20 mL of water R, shake for 1 min and filter. To 10 mL of the filtrate add 0.05 mL of 0.01 M iodine and 0.1 mL of starch solution R and mix. A blue colour develops.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution (b) and reference solution (c).

Calculate the percentage content of $C_{24}H_{32}O_4S$ from the assigned content of *spironolactone CRS*.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, C, D, E, F, I.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*) B, G, H.

A. *S*-[(2'*R*)-3,5'-dioxo-5'*H*-spiro[androst-4-ene-17,2'-furan]-7α-yl] ethanethioate (Δ 20-spiroolactone),

B. *S*-[(2'*R*)-4-bromo-3,5'-dioxo-3',4'-dihydro-5'*H*-spiro[androst-4-ene-17,2'-furan]-7α-yl] ethanethioate (4-bromospironolactone),

C. (2'*R*)-3',4'-dihydro-5'*H*-spiro[androst-4-ene-17,2'-furan]-3,5'-dione (aldone),

D. *S*-[(2'*R*)-3,5'-dioxo-3',4'-dihydro-5'*H*-spiro[androst-4-ene-17,2'-furan]-7α-yl] ethane(dithioperoxate) (disulfanyl-spiroolactone),

E. *S*-[(2'*R*)-3,5'-dioxo-3',4'-dihydro-5'*H*-spiro[androst-4-ene-17,2'-furan]-7β-yl] ethanethioate (7β-spiroolactone),

F. (2'*R*)-3',4'-dihydro-5'*H*-spiro[androst-4,6-diene-17,2'-furan]-3,5'-dione (canrenone),

G. *S*-[(2'*R*)-6β-hydroxy-3,5'-dioxo-3',4'-dihydro-5'*H*-spiro[androst-4-ene-17,2'-furan]-7α-yl] ethanethioate (6β-hydroxy-spiroolactone),

H. (2'*S*)-spiro[androst-4,6-diene-17,2'-oxiran]-3-one,

I. *S*-[17α-(ethoxymethyl)-17β-hydroxy-3-oxoandrost-4-en-7α-yl] ethanethioate.

Products with Risk of Transmitting Agents of Animal Spongiform Encephalopathies

(Ph. Eur. monograph 1483)

Ph Eur

DEFINITION

Products with risk of transmitting agents of animal spongiform encephalopathies are those derived from tissues or secretions of animals susceptible to transmissible spongiform encephalopathies other than by experimental challenge. This monograph applies to all substances or preparations obtained from such animals and to all substances or preparations where products obtained from such animals are included as active substances or excipients or have been used during production, for example as raw or source materials, starting materials or reagents.

PRODUCTION

Production complies with chapter 5.2.8. *Minimising the risk of transmitting animal spongiform encephalopathy agents via human and veterinary medicinal products.*

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison squalane CRS.

B. Refractive index (see Tests).

TESTS

Appearance

The substance to be examined is clear (2.2.1) and colourless (2.2.2, Method II).

Refractive index (2.2.6)

1.450 to 1.454.

Acid value (2.5.1)

Maximum 0.2.

Iodine value (2.5.4, Method A)

Maximum 4.0.

Saponification value (2.5.6)

Maximum 3.0.

Total ash (2.4.16)

Maximum 0.5 per cent, determined on 1.000 g.

ASSAY

Gas chromatography (2.2.28).

Internal standard solution To 1.0 mL of dimethylacetamide R add 100.0 mL of heptane R.

Test solution Dissolve 0.100 g of the substance to be examined in the internal standard solution and dilute to 25.0 mL with the same solution.

Reference solution (a) Dissolve 0.100 g of squalane CRS in the internal standard solution and dilute to 25.0 mL with the same solution.

Reference solution (b) To 0.1 mL of methyl erucate R add 0.100 g of the substance to be examined, dissolve in the internal standard solution and dilute to 25 mL with the same solution.

Column:

— material: fused silica;

— size: $l = 30$ m, $\varnothing = 0.32$ mm;

— stationary phase: methylpolysiloxane R (film thickness 1 μ m).

Carrier gas helium for chromatography R.

Flow rate 1.7 mL/min.

Split ratio 1:12.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 39	60 → 290
	39 - 50	290
Injection port		275
Detector		300

Detection Flame ionisation.

Injection 1 μ L.

Relative retention With reference to squalane (retention time = about 41 min): internal standard = about 0.2; methyl erucate = about 0.9; cyclosqualane = 1.05.

System suitability Reference solution (b):

— resolution: minimum 5 between the peaks due to methyl erucate and squalane.

Calculate the percentage content of C₃₀H₆₂ using the chromatogram obtained with reference solution (a) and taking into account the assigned content of squalane CRS.

Squalane

(Ph. Eur. monograph 1630)

C₃₀H₆₂

422.8

111-01-3

Action and use

Excipient; emollient.

Ph Eur

DEFINITION

(6E,10E,15E,19E)-2,6,10,15,19,23-Hexamethyltetracosane (perhydrosqualene). It may be of vegetable (unsaponifiable matter of olive oil), animal (shark liver oil) or synthetic origin.

Content

96.0 per cent to 103.0 per cent.

PRODUCTION

The origin of the squalane (vegetable, animal or synthetic) is stated by the manufacturer.

CHARACTERS

Appearance

Clear, colourless, oily liquid.

Solubility

Practically insoluble in water, miscible with most fats and oils, freely soluble in acetone and in cyclohexane, practically insoluble in ethanol (96 per cent).

Relative density

About 0.815.

LABELLING

The label states the origin of squalene (vegetable, animal or synthetic).

Ph Eur

Squalene

(Ph. Eur. monograph 2805)

 $C_{30}H_{50}$

Ph Eur

DEFINITION

(6*E*,10*E*,14*E*,18*E*)-2,6,10,15,19,23-Hexamethyltetracosane-2,6,10,14,18,22-hexaene. It may be of vegetable or animal origin.

Content

97.0 per cent to 103.0 per cent (anhydrous substance).

This monograph applies to squalene used as an adjuvant in vaccines.

CHARACTERS**Appearance**

Clear, colourless or light yellow, oily liquid.

Solubility

Practically insoluble in water, freely soluble in acetone and in cyclohexane, soluble in ethanol (96 per cent).

Relative density

About 0.86.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison squalene CRS.

TESTS**Appearance**

The substance to be examined is clear (2.2.1) and not more intensely coloured than reference solution Y_6 (2.2.2, Method II).

Refractive index (2.2.6)

1.491 to 1.499.

Acid value (2.5.1)

Maximum 1.0.

Iodine value (2.5.4, Method B)

350 to 450, determined on 0.06 g.

Peroxide value (2.5.5, Method A)

Maximum 5.0.

Saponification value (2.5.6)

Maximum 5.0.

Water (2.5.32)

Maximum 0.2 per cent, determined on 2.00 g.

ASSAY

Gas chromatography (2.2.28). Prepare the solutions immediately before use.

Test solution Dissolve 0.100 g of the substance to be examined in heptane R and dilute to 100.0 mL with the same solvent.

Reference solution (a) Dissolve 0.100 g of squalene CRS in heptane R and dilute to 100.0 mL with the same solvent.

Reference solution (b) Dissolve 0.100 g of the substance to be examined and 0.100 g of methyl lignocerate R in heptane R and dilute to 100.0 mL with the same solvent.

Column:

— material: fused silica;

— size: $l = 30$ m, $\varnothing = 0.32$ mm;

— stationary phase: methylpolysiloxane R (film thickness 1 μ m).

Carrier gas helium for chromatography R.

Flow rate 1.7 mL/min.

Split ratio 1:12.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 12	290
Injection port		275
Detector		300

Detection Flame ionisation.

Injection 1 μ L.

Relative retention With reference to squalene (retention time = about 8.1 min): methyl lignocerate = about 0.9.

System suitability Reference solution (b):

— resolution: minimum 5.0 between the peaks due to methyl lignocerate and squalene.

Calculate the percentage content of $C_{30}H_{50}$ taking into account the assigned content of squalene CRS.

STORAGE

In an airtight container, protected from light.

LABELLING

The label states the origin of squalene (vegetable or animal).

Ph Eur

Stannous Chloride Dihydrate

(Ph. Eur. monograph 1266)

 $SnCl_2 \cdot 2H_2O$

225.6

10025-69-1

Ph Eur

DEFINITION**Content**

98.0 per cent to 102.0 per cent.

CHARACTERS**Appearance**

White or almost white, crystalline powder or colourless crystals, efflorescent in air.

Solubility

Freely soluble in water (the solution becomes cloudy after standing or on dilution), freely soluble in ethanol (96 per cent). It dissolves in dilute hydrochloric acid.

IDENTIFICATION

A. To 1 mL of solution S1 (see Tests) add 5 mL of water R and 0.05 mL of mercuric chloride solution R. A blackish-grey precipitate is formed.

B. Dissolve 1.0 g in 3.0 mL of water R. Add 0.5 mL of dilute sodium hydroxide solution R to the cloudy solution; a yellowish flocculent precipitate is formed. Add 6.5 mL of water R.

To 1.0 mL of the previously shaken suspension add 1.0 mL of *strong sodium hydroxide solution R*; the precipitate dissolves and the resulting solution is clear and colourless.

C. Dissolve 10 mg in 2 mL of *dilute nitric acid R*. The solution gives reaction (a) of chlorides (2.3.1).

TESTS

Solution S1

To 0.40 g add 1 mL of *dilute hydrochloric acid R* and dilute to 20 mL with *distilled water R*.

Solution S2

Dissolve 1.0 g in *dilute hydrochloric acid R* and dilute to 30 mL with the same acid. Heat to boiling. Add 30 mL of *thioacetamide solution R* and boil for 15 min (solution A). Take 5 mL, filter and heat the filtrate to boiling. Add 5 mL of *thioacetamide solution R* and boil for 15 min. If a precipitate is formed, add the remainder of solution A (solution A') to the mixture. Add 10 mL of *thioacetamide solution R* and boil. Repeat the series of operations from "Take 5 mL" until a precipitate is no longer formed on addition of *thioacetamide solution R* to the filtrate obtained from the 5 mL of solution A (solution A', solution A'', etc. respectively). If no precipitate is formed or if no more precipitate is formed combine the solution obtained with the remainder of solution A (solution A', solution A'', etc. respectively), filter and wash the precipitate with 10 mL of *water R*. Heat the filtrate until the resulting vapour no longer turns a moistened piece of *lead acetate paper R* blackish-grey. Allow to cool and dilute to 50 mL with *water R*.

Appearance of solution

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 10.0 g in *dilute hydrochloric acid R* and dilute to 20 mL with the same acid.

Substances not precipitated by thioacetamide
Maximum 0.2 per cent.

Evaporate 25 mL of solution S2 to dryness and ignite at 600 ± 50 °C. The residue weighs a maximum of 1 mg.

Sulfates (2.4.13)

Maximum 500 ppm, determined on solution S1.

Iron (2.4.9)

Maximum 100 ppm.

Dilute 5 mL of solution S2 to 10 mL with *water R*.

ASSAY

Dissolve 0.100 g in 50 mL of *water R*, freed from oxygen by purging with carbon dioxide or nitrogen for 15 min. Add 1.5 mL of *hydrochloric acid R1*, 5 g of *sodium potassium tartrate R*, 10 g of *sodium hydrogen carbonate R* and 1 mL of *starch solution R*. Titrate immediately with 0.05 M *iodine*. Carry out a blank titration.

1 mL of 0.05 M *iodine* is equivalent to 11.28 mg of $\text{SnCl}_2 \cdot 2\text{H}_2\text{O}$.

STORAGE

In an airtight container.

Stanozolol

(Ph. Eur. monograph 1568)

$\text{C}_{21}\text{H}_{32}\text{N}_2\text{O}$

328.5

10418-03-8

Action and use

Anabolic steroid; androgen.

Ph Eur

DEFINITION

17-Methyl-2'-H-5α-androst-2-eno[3,2-c]pyrazol-17β-ol.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, hygroscopic, crystalline powder.

Solubility

Practically insoluble in water, soluble in dimethylformamide, slightly soluble in ethanol (96 per cent), very slightly soluble in methylene chloride.

It shows polymorphism (5.9).

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison stanozolol CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *methylene chloride R*, evaporate to dryness at room temperature under an air-stream and record new spectra using the residues.

B. Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (c).

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

TESTS

Specific optical rotation (2.2.7)

+ 37 to + 41 (dried substance).

Dissolve 60.0 mg in *methanol R* and dilute to 20.0 mL with the same solvent.

Impurities A and B

Thin-layer chromatography (2.2.27).

Solvent mixture *methanol R1*, *methylene chloride R* (10:90 V/V).

Test solution Dissolve 20 mg of the substance to be examined in 1.0 mL of the solvent mixture.

Reference solution Dissolve 2 mg of *stanozolol CRS*, 2.0 mg of *stanozolol impurity A CRS* and 2.0 mg of *stanozolol impurity B CRS* in 1.0 mL of the solvent mixture. Dilute 0.1 mL of the solution to 2.0 mL with the solvent mixture.

Plate TLC silica gel plate R.

Mobile phase *glacial acetic acid R*, *ethyl acetate R*, *cyclohexane R* (2:48:50 V/V/V).

Ph Eur

Application 10 µL.

Development Over 3/4 of the plate.

Drying In air.

Detection Spray with *vanillin reagent R* and heat at 120 °C.

System suitability Reference solution:

- the chromatogram shows 3 clearly separated spots, due to stanozolol, impurity A and impurity B, in order of increasing R_F value.

Limits:

- **impurity A:** any spot due to impurity A is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.5 per cent);
- **impurity B:** any spot due to impurity B is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.5 per cent).

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 15.0 mg of the substance to be examined in *methanol R* and dilute to 5.0 mL with the same solvent.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

Reference solution (b) Dissolve 1 mg of *stanozolol CRS* and 1 mg of *stanozolol impurity B CRS* in *methanol R* and dilute to 20 mL with the same solvent.

Reference solution (c) Dissolve 15.0 mg of *stanozolol CRS* in *methanol R* and dilute to 5.0 mL with the same solvent.

Column:

- **size:** $l = 0.15$ m, $\varnothing = 4.6$ mm;
- **stationary phase:** *end-capped octadecylsilyl silica gel for chromatography R1* (5 µm).

Mobile phase 1 g/L solution of *sodium dihydrogen phosphate R* adjusted to pH 3.0 with *phosphoric acid R*, *methanol R1* (30:70 V/V).

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 228 nm.

Injection 25 µL of the test solution and reference solutions (a) and (b).

Run time 3 times the retention time of stanozolol.

Identification of impurities Use the chromatogram obtained with reference solution (b) to identify the peak due to impurity B.

Relative retention With reference to stanozolol (retention time = about 12 min): impurity B = about 1.3.

System suitability Reference solution (b):

- **resolution:** minimum 4.0 between the peaks due to stanozolol and impurity B.

Limits:

- **unspecified impurities:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- **total:** not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- **disregard limit:** 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 1.0 per cent, determined on 1.000 g by drying at 105 °C at a pressure not exceeding 0.7 kPa.

ASSAY

Dissolve 0.250 g in 50 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 32.85 mg of $C_{21}H_{32}N_2O$.

STORAGE

In an airtight container, protected from light.

IMPURITIES

Specified impurities A, B.

A. 17β-hydroxy-17-methyl-5α-androstan-3-one (mestanolone),

B. 17β-hydroxy-2-(hydroxymethylene)-17-methyl-5α-androstan-3-one (oxymetholone).

Ph Eur

Hydroxyethyl Starches

(Ph. Eur. monograph 1785)

$R = -[CH_2CH_2O]_{n'}H$ ($n' = 0, 1, 2, \dots$)

$R1 = -[CH_2CH_2O]_{n''}H$ ($n'' = 0$ or 1) or glucose

$[C_6H_{10}O_5(C_2H_4O)_x]_n$ with $x =$ molar substitution 9005-27-0

Ph Eur

DEFINITION.

Hydroxyethyl starches are partially substituted poly(2-hydroxyethyl)ethers of waxy maize starch or potato starch, which primarily consist of amylopectine. The type of hydroxyethyl starch is defined by 2 numbers: the mean molecular weight (M_w) and the number of hydroxyethyl groups per anhydroglucose unit expressed as the molar substitution (MS). Hydroxyethyl starch is also characterised by the number of hydroxyethyl groups located at the C2 group over the number of hydroxyethyl groups located at C6, expressed as the C2/C6 ratio. The parameters M_w , MS and C2/C6 ratio are determined by the reaction conditions of the production.

PRODUCTION

Hydroxyethyl starches are produced from waxy maize starch or potato starch by acidic hydrolysis and reaction with ethylene oxide and purified by ultrafiltration.

CHARACTERS**Appearance**

White or almost white powder.

Solubility

Freely soluble in water and in dimethyl sulfoxide, practically insoluble in anhydrous ethanol.

Hydroxyethyl starches are hygroscopic until they reach a water content of about 12 per cent to 15 per cent.

IDENTIFICATION

First identification: A, C.

Second identification: B, C.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison medium *Mw* hydroxyethyl starch CRS.

Results The spectrum obtained shows the same absorption bands as the spectrum obtained with medium *Mw* hydroxyethyl starch CRS. Due to the difference in the substitution of the substance, the intensity of some absorption bands can vary.

B. To 5 mL of solution S (see Tests), add 0.1 mL of 0.05 M iodine. A reddish-brown or blue-violet colour appears.

C. Molecular weight (see Tests).

TESTS**Solution S**

Dissolve 5.0 g of the substance to be examined (dried substance) in carbon dioxide-free water R and dilute to 100.0 mL with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II (2.2.1).

pH (2.2.3)

4.5 to 7.0.

To 25 mL of solution S, add 0.2 mL of a saturated solution of potassium chloride R.

Absorbance (2.2.25)

Maximum 0.025, determined at 400 nm on solution S filtered through a 0.2 µm filter.

Molecular weight (*Mw*) and molecular weight distribution

Size-exclusion chromatography (2.2.30).

Buffer solution Dissolve 54.34 g of sodium acetate R in water R, add 100.0 mL of glacial acetic acid R and dilute to 1000.0 mL with water R.

Test stock solution Dissolve 2.0 g of the substance to be examined (dried substance) in water R and dilute to 50 mL with the same solvent. Add 10.0 mL of the buffer solution and dilute to 100.0 mL with water R.

Reference solution (a) To prepare reference solution (a):

- if the nominal *Mw* of the substance to be examined is below 300 000, use medium *Mw* hydroxyethyl starch CRS;
- if the nominal *Mw* of the substance to be examined is above 300 000, use high *Mw* hydroxyethyl starch CRS.

Dissolve 0.4 g of medium *Mw* hydroxyethyl starch CRS or high *Mw* hydroxyethyl starch CRS in 10 mL of water R.

Add 2.0 mL of the buffer solution and dilute to 20.0 mL with water R.

Reference solution (b) Dilute 10.0 mL of reference solution (a) to 20.0 mL with the mobile phase.

Reference solution (c) Dilute 10.0 mL of reference solution (b) to 20.0 mL with the mobile phase.

Reference solution (d) Dilute 10.0 mL of reference solution (c) to 20.0 mL with the mobile phase.

Column:

- stationary phase: hydroxylated polymethacrylate gel R;
- 4 columns to be connected in series:

Length in m	Internal diameter in mm	Particle size in µm	Pore size in nm
0.30	7.5	17	> 100
0.30	7.5	17	100
0.30	7.5	10	20
0.30	7.5	10	12.5

Mobile phase Dilute 100.0 mL of the buffer solution to 1000 mL with water for chromatography R.

Flow rate 0.5-1.0 mL/min.

Detection Multiple-angle light scattering (MALS) detector and refractometer maintained at a constant temperature, connected in series.

Injection volume 50 µL.

Determine the suitable working solution as follows: inject reference solutions (a) and (b), the mean *Mw* determined with reference solution (b) does not deviate by more than 3 per cent from the mean *Mw* determined with reference solution (a). If the deviation meets the requirement, use reference solution (a) to check the system suitability criterion.

If the deviation is higher, inject reference solution (c) and determine the mean *Mw*. The mean *Mw* determined with reference solution (c) does not deviate by more than 3 per cent from the mean *Mw* determined with reference solution (b). If the deviation meets the requirement, use reference solution (b) to check the system suitability criterion.

If the deviation is higher, inject reference solution (d) and determine the mean *Mw*. The mean *Mw* determined with reference solution (d) does not deviate by more than 3 per cent from the mean *Mw* determined with reference solution (c). If the deviation meets the requirement, use reference solution (c) to check the system suitability criterion.

System suitability:

- mean *Mw*: within 5 per cent of the value assigned to the medium *Mw* hydroxyethyl starch CRS or high *Mw* hydroxyethyl starch CRS.

If necessary, dilute the test stock solution in order to have the same concentration as that of the reference solution used to check the system suitability.

Results Use a suitable integrator to determine the mean *Mw* and the *Mw* of the lowest and highest 10 per cent mass fraction.

Low <i>Mw</i> 2000 - 100 000	Medium <i>Mw</i> 100 000 - 300 000	High <i>Mw</i> 300 000 - 900 000
Determined <i>Mw</i> = nominal <i>Mw</i> ± 15 per cent		
<i>Mw</i> at 10 per cent lowest fraction > 10 per cent of nominal <i>Mw</i>	<i>Mw</i> at 10 per cent lowest fraction > 15 000	<i>Mw</i> at 10 per cent lowest fraction > 15 000
<i>Mw</i> at 10 per cent highest fraction < 300 per cent of nominal <i>Mw</i>	<i>Mw</i> at 10 per cent highest fraction < 300 per cent of nominal <i>Mw</i>	<i>Mw</i> at 10 per cent highest fraction < 500 per cent of nominal <i>Mw</i>

C2/C6 ratio

Gas chromatography (2.2.28).

Solution A Mix equal volumes of dilute sulfuric acid R and water R.

Test solution Introduce 0.18 g of the substance to be examined into a 5 mL vial. Add 3.0 mL of solution A, cap, seal the vial and shake until dissolution. Heat the vials for 4 h in a heating block already preheated to 100 °C, shaking them from time to time. Cool to room temperature. Open the vial and carefully add 0.9 g of barium carbonate R. Shake carefully and then centrifuge at about 9000 g for about 15 min. Test the clear supernatant for neutral pH with pH paper. If the solution is still acid, add more barium carbonate R in portions of 0.2 g until the solution is neutral. Filter the clear supernatant (pore size 0.45 µm). Introduce 0.5 mL of the filtrate into a autosampler vial and evaporate to dryness at 40 °C (several hours are usually needed). Take up the residue with 0.50 mL of pyridine R, 0.25 mL of N,O-bis(trimethylsilyl)acetamide R and 25 µL of chlorotrimethylsilane R. Seal the vial and heat to 40 °C for 1 h shaking from time to time. Cool to room temperature. Place the vial into the autosampler and perform 3 injections from each vial. Prepare in duplicate.

Reference solution Prepare as prescribed for the test solution but using medium Mw hydroxyethyl starch CRS instead of the substance to be examined.

Column:

- size: l = 15 m, Ø = 0.32 mm;
- stationary phase: methylpolysiloxane R (film thickness 0.25 µm).

Carrier gas hydrogen for chromatography R at a constant pressure of 69 kPa.

Split ratio 1:20.

	Time (min)	Temperature (°C)
Column	0 - 1	150
	1 - 25	150 → 270
	25 - 28	270
Injection port		250
Detector		300

Detection Flame ionisation.

Injection 1 µL.

Identification of peaks Use the chromatogram supplied with medium Mw hydroxyethyl starch CRS and the chromatogram obtained with the reference solution to identify the peaks due to derivatised product 1, derivatised product 2, derivatised product 3, 2-O-hydroxyethyl-α-D-glucose, 6-O-hydroxyethyl-α-D-glucose, 2-O-hydroxyethyl-β-D-glucose and 6-O-hydroxyethyl-β-D-glucose.

System suitability Reference solution:

- resolution: minimum 1.5 between the peaks due to 2-O-hydroxyethyl-β-D-glucose and 6-O-hydroxyethyl-β-D-glucose;
- symmetry factor: 0.6 to 1.5 for the peak due to derivatised product 1;
- repeatability: maximum relative standard deviation of 5.0 per cent for derivatised product 1 after 3 injections.

Calculate the C2/C6 ratio using the following expression:

$$\frac{A_1 + A_2 + A_3 + A_4 + A_5}{A_6 + A_7}$$

- A₁ = area of the peak due to derivatised product 1;
- A₂ = area of the peak due to derivatised product 2;

- A₃ = area of the peak due to derivatised product 3;
- A₄ = area of the peak due to 2-O-hydroxyethyl-α-D-glucose;
- A₅ = area of the peak due to 2-O-hydroxyethyl-β-D-glucose;
- A₆ = area of the peak due to 6-O-hydroxyethyl-α-D-glucose;
- A₇ = area of the peak due to 6-O-hydroxyethyl-β-D-glucose.

Calculate the mean C2/C6 ratio from the values obtained with the 2 test solutions.

The test is not valid unless the difference of the 2 values is not more than 5 per cent.

Limit Within 20.0 per cent of the nominal value.

Molar substitution (MS)

Gas chromatography (2.2.28).

The content of hydroxyethyl groups is determined after hydrolysis with hydriodic acid as iodoethane.

Internal standard solution Dilute 1.0 mL of toluene R to 200.0 mL with xylene R.

Test solution Introduce 50.0 mg of the substance to be examined and about 0.10-0.15 g of adipic acid R in a 5 mL vial. Add 1.0 mL of the internal standard solution and 2.0 mL of hydriodic acid R. Tightly seal and cap the vial with a septum and an aluminium, centre tear-off seal. Prepare the test solution 5 times.

Reference solutions In each of 7 vials of 5 mL, introduce about 0.10-0.15 g of adipic acid R. To each vial add 1.0 mL of the internal standard solution and 2.0 mL of hydriodic acid R. Tightly seal and cap the vials with a septum and an aluminium, centre tear-off seal. Weigh the vials with an accuracy of 0.01 mg. Introduce respectively 10 mg, 20 mg, 30 mg, 40 mg, 50 mg, 60 mg and 70 mg of iodoethane R with a 100 µL syringe piercing the septa carefully. Weigh the vials again with an accuracy of 0.01 mg and calculate the exact amount of iodoethane R added.

Determine the mass of the vials to the nearest 1 mg. Place the vials for 10 h into a heating block already preheated to 150 °C. After cooling to room temperature, determine the mass of each vial to the nearest 1 mg. Disregard any vial with a loss in mass of more than 5 mg. From 4 vials of the test solution and 5 of the reference solutions, take-up 100 µL of the upper layer. Introduce in an autosampler vial and dilute with 1.0 mL of xylene R. Seal immediately the vials and shortly shake.

Column:

- material: fused silica;
- size: l = 30 m, Ø = 0.53 mm;
- stationary phase: cyanopropyl(3)phenyl(3)methyl(94) polysiloxane R (film thickness 3 µm).

Carrier gas helium for chromatography R.

Flow rate 8 mL/min.

Split ratio 1:20.

	Time (min)	Temperature (°C)
Column	0 - 4	50
	4 - 16	50 → 230
	16 - 20	230
Injection port		200
Detector		280

Detection Flame ionisation.

Injection volume 1 µL; inject each solution twice.

Relative retention With reference to toluene (retention time = about 7.5 min): iodoethane = about 0.5.

System suitability Reference solutions:

- **resolution:** minimum 1.5 between the peaks due to iodoethane and toluene;
- calculate the ratio of the area of the peak due to iodoethane *R* to the area of the peak due to the internal standard for each chromatogram. Calculate the linear regression curve plotting the ratios calculated for the reference solutions against the quantity of iodoethane *R* added (in milligrams). The coefficient of determination R^2 is not less than 0.990.

Results Calculate the quantity (*T*) of iodoethane in milligrams present in the test solution using the following expression:

$$\frac{A - B}{M}$$

- A* = ratio of the area of the peak due to iodoethane to the area of the peak due to the internal standard in the chromatogram obtained with the test solution;
- B* = y-intercept of the curve;
- M* = slope of the curve.

Then calculate the percentage content of ethylene oxide (*C*) using the following expression:

$$\frac{44.05 \times T \times 100}{155.97 \times m}$$

- m* = mass of the substance to be examined, in milligrams;
- 44.05 = molecular mass of ethylene oxide;
- 155.97 = molecular mass of iodoethane.

Then calculate the *MS* using the following expression:

$$\frac{C \times 162.14}{(100 - C) \times 44.05}$$

- 162.14 = molecular mass of anhydroglucose;
- 44.05 = molecular mass of ethylene oxide.

Calculate the mean *MS* from the values obtained with the 4 test solutions.

Limit: 0.05 to 2.4, and within 8.0 per cent of the nominal value.

Ethylene glycol

Liquid chromatography (2.2.29).

Test solution Dissolve 1.0 g of the substance to be examined (dried substance) in water *R* and dilute to 50.0 mL with the same solvent.

Reference solution Dissolve 0.800 g of ethylene glycol *R* in water *R* and dilute to 100.0 mL with the same solvent. Dilute 2.0 mL of the solution to 200.0 mL with water *R*. Dilute 2.0 mL of this solution to 200.0 mL with water *R*.

Precolumn:

- size: $l = 0.01$ m, $\emptyset = 4.0$ mm;
- stationary phase: octadecylsilyl silica gel for chromatography compatible with 100 per cent aqueous mobile phases *R* (5 μ m).

Column:

- size: $l = 0.25$ m, $\emptyset = 4.6$ mm;
- stationary phase: octadecylsilyl silica gel for chromatography compatible with 100 per cent aqueous mobile phases *R* (5 μ m);
- temperature: 30 °C.

Mobile phase water for chromatography *R*.

Flow rate 1.0 mL/min.

Post-column solution Dilute 750 mL of 2 *M* sodium hydroxide *R* to 1000 mL with water for chromatography *R*.

Flow rate of post-column solution 0.2 mL/min.

Detection Pulsed amperometric detector.

Injection 20 μ L.

Run time 2.5 times the retention time of ethylene glycol.

Retention time Ethylene glycol = about 4 min.

System suitability Reference solution:

- **signal-to-noise ratio:** minimum 10 for the principal peak;
- **repeatability:** maximum relative standard deviation of 10.0 per cent determined on 6 injections.

After a maximum of 8 sample injections, wash the column using the following program.

Rinsing solution acetonitrile for chromatography *R*, water for chromatography *R* (20:80 *V/V*).

Time (min)	Mobile phase (per cent <i>V/V</i>)	Rinsing solution (per cent <i>V/V</i>)
0 - 15	75	25
15 - 20	75 → 0	25 → 100
20 - 25	0	100
25 - 30	0 → 100	100 → 0
30 - 100	100	0

Limit:

- **ethylene glycol:** not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (40 ppm).

2-Chloroethanol

Gas chromatography (2.2.28).

Solvent mixture methanol *R*, acetonitrile *R* (25:75 *V/V*).

Internal standard solution Dissolve 0.250 g of 2,6-dimethylaniline *R* in the solvent mixture and dilute to 50.0 mL with the solvent mixture. Dilute 0.5 mL of the solution to 50.0 mL with the solvent mixture.

Test solution Introduce 1.0 g of the substance to be examined into a 20 mL vial. Add 10.0 mL of the solvent mixture. Close tightly. Treat in an ultrasonic bath for 3.5 h. Allow to cool to room temperature. To 1.0 mL of this solution add 0.8 mL of the internal standard solution.

Reference solution Dissolve 0.250 g of 2-chloroethanol *R* in the solvent mixture and dilute to 50.0 mL with the solvent mixture. Dilute 1.0 mL of the solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 100.0 mL with the solvent mixture. To 1.0 mL of this solution add 0.8 mL of the internal standard solution.

Precolumn:

- material: fused silica;
- size: $l = 10$ m, $\emptyset = 0.53$ mm;
- stationary phase: polar-deactivated macrogol *R*.

Column:

- material: fused silica;
- size: $l = 30$ m, $\emptyset = 0.32$ mm;
- stationary phase: macrogol 20 000 *R* (film thickness 0.25 μ m).

Carrier gas hydrogen for chromatography *R*.

Flow rate 2.9 mL/min.

Split program:

Time (min)	Split state	Split ratio
initial	on	1:20
0.01	off	1:20
0.50	on	1:20

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 4	45
	4 - 23.5	45 → 240
	23.5 - 28.5	240
Injection port		250
Detector		270

Detection Flame ionisation.

Injection 1 µL.

System suitability Reference solution:

- **signal-to-noise ratio:** minimum 10 for the peak due to 2-chloroethanol;
- **repeatability:** maximum relative standard deviation of 10.0 per cent after 6 injections.

Limit:

- **2-chloroethanol:** calculate the ratio (*R*) of the area of the peak due to 2-chloroethanol to the area of the peak due to the internal standard from the chromatogram obtained with the reference solution; calculate the ratio of the area of the peak due to 2-chloroethanol to the area of the peak due to the internal standard from the chromatogram obtained with the test solution: this ratio is not greater than *R* (5 ppm).

Ethylene oxide

Head-space gas chromatography (2.2.28).

Test solution Dissolve 1.0 g of the substance to be examined in 1.0 mL of *water R*. Close the vial tightly. Prepare in duplicate.

Reference stock solution Introduce 80 mL of *water R* in a 100 mL volumetric flask. Cool at about 4 °C for at least 30 min. Place the flask on an analytical balance and slowly introduce 1.0 g of *ethylene oxide R*. Determine the precise quantity of ethylene oxide by differential weighing. Dilute to 100.0 mL with *water R*. Store in the refrigerator and use within 4 weeks.

Reference solution (a) Dilute 1.0 mL of the reference stock solution to 100.0 mL with *water R*. Dilute 1.0 mL of this solution to 100.0 mL with *water R*. Use within 24 h.

Reference solution (b) Dissolve 1.0 g of the substance to be examined in 1.0 mL of reference solution (a). Close the vial tightly. Prepare in duplicate.

Column:

- **material:** quartz;
- **size:** *l* = 30 m, Ø = 0.32 mm;
- **stationary phase:** cyanopropyl(3)phenyl(3)methyl(94) polysiloxane *R* (film thickness 1.5 µm).

Carrier gas helium for chromatography *R* at a pressure of 110.3 kPa.

Split ratio 1:35.

Static head-space conditions which may be used:

- **equilibration temperature:** 80 °C;
- **equilibration time:** 40 min;
- **transfer-line temperature:** 150 °C;
- **pressurisation time:** 2.0 min;
- **injection time:** 3 s.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 20	40
	20 - 30	40 → 240
	30 - 40	240
Injection port		140
Detector		250

Detection Flame ionisation.

Injection Inject a suitable volume of the gaseous phase of the test solution and reference solution (b).

System suitability:

- **signal-to-noise ratio:** minimum 10 for the peak due to ethylene oxide in the chromatogram obtained with reference solution (b).

Limit:

- **ethylene oxide:** not more than 0.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (1 ppm).

Sodium chloride

Maximum 0.1 per cent.

Test solution In a 250 mL conical flask, dissolve 10.0 g of the substance to be examined in 100 mL of *water R*. Add 2 mL of *dilute nitric acid R* and 5.0 mL of a 9 g/L solution of *sodium chloride R*.

Reference solution In a 250 mL conical flask, dilute 5.0 mL of a 9 g/L solution of *sodium chloride R* with 100 mL of *water R*. Add 2 mL of *dilute nitric acid R*.

Carry out a potentiometric titration (2.2.20) with 0.1 M *silver nitrate*. Calculate the percentage content of sodium chloride using the following expression:

$$\frac{(n_1 - n_2) \times 5.844 \times 100}{m}$$

- n*₁ = volume of 0.1 M *silver nitrate* used for the test solution, in millilitres;
- n*₂ = volume of 0.1 M *silver nitrate* used for the reference solution, in millilitres;
- m* = mass of the substance to be examined in the test solution, in milligrams.

Loss on drying (2.2.32)

Maximum 15.0 per cent, determined on 1.000 g by drying at 105 °C.

Bacterial endotoxins (2.6.14)

Less than 2.5 IU/g.

Microbial contamination

TAMC: acceptance criterion 10² CFU/g (2.6.12).

LABELLING

The label states the mean molecular weight, molar substitution and C2/C6 ratio (nominal values).

Ph Eur

Hydroxypropyl Starch

(Ph. Eur. monograph 2165)

9049-76-7

Ph Eur

DEFINITION

Hydroxypropyl starch is a partially substituted 2-hydroxypropylether of *Maize starch* (0344), *Potato starch* (0355), cassava starch, *Rice starch* (0349) or *Pea starch* (2403) chemically modified by etherification with the reagent propylene oxide. In addition, this starch may be partially hydrolysed using acids or enzymes to obtain 'thinned starch' with reduced viscosity.

Content

— *hydroxypropyl groups*: 0.5 per cent to 7.0 per cent.

PRODUCTION

The production of hydroxypropyl starch shall be in compliance with the requirements of the European legislation for food additives.

Mixing of starches from different botanical sources prior to chemical modification is not allowed.

CHARACTERS

Appearance

White or slightly yellowish powder.

Solubility

Practically insoluble in cold water and in ethanol (96 per cent).

IDENTIFICATION

A. Examined under a microscope, using not less than 20 × magnification and using a mixture of equal volumes of *glycerol R* and *water R*, it appears as follows according to the botanical source stated on the label.

- *Maize-based hydroxypropyl starch*: it presents either angular polyhedral granules of irregular sizes with diameters of about 2-23 µm or rounded or spheroidal granules of irregular sizes with diameters of about 25-35 µm; the central hilum consists of a distinct cavity or 2-to-5-rayed cleft and there are no concentric striations; between orthogonally orientated polarising plates or prisms, the starch granules show a distinct black cross intersecting at the hilum.
- *Potato-based hydroxypropyl starch*: it presents granules, either irregularly shaped, ovoid or pear-shaped, usually 30-100 µm in size but occasionally exceeding 100 µm, or rounded, 10-35 µm in size; there are occasional compound granules having 2-4 components; the ovoid and pear-shaped granules have an eccentric hilum and the rounded granules a centric or slightly eccentric hilum; all granules show clearly visible concentric striations; between orthogonally orientated polarising plates or prisms, the starch granules show a distinct black cross intersecting at the hilum.
- *Cassava-based hydroxypropyl starch*: it presents spherical granules with one truncated side, typically 5-35 µm in diameter and having a circular or several-rayed central cleft; some granules may also be egg-shaped or cap-shaped; the hilum is centric, sometimes slightly fissured; between orthogonally orientated polarising plates or prisms, the starch granules show a distinct black cross intersecting at the hilum.
- *Rice-based hydroxypropyl starch*: it presents polyhedral, simple granules 1-10 µm, mostly 4-6 µm, in size; these simple granules often gather in ellipsoidal, compound

granules 50-100 µm in diameter; the granules have a poorly visible central hilum and there are no concentric striations; between orthogonally orientated polarising plates or prisms, the starch granules show a distinct black cross intersecting at the hilum.

- *Pea-based hydroxypropyl starch*: it presents a majority of large elliptical granules, 25-45 µm in size, sometimes irregular or reniform; it also presents a minority of small rounded granules, 5-8 µm in size; granules can present cracks or irregularities; sometimes, granules show barely visible concentric striations; exceptionally, granules show a slit along the main axis; between orthogonally orientated polarising plates or prisms, the starch granules show a distinct black cross.

B. Suspend 1 g in 50 mL of *water R*, boil for 1 min and cool. A translucent or clear mucilage is formed.

C. To 1 mL of the mucilage obtained in identification test B add 0.05 mL of *iodine solution R1*. An orange-red or dark blue colour is produced, which disappears on heating.

D. Introduce 0.1 g into a 100 mL volumetric flask and add 12.5 mL of *dilute sulfuric acid R*. Place the flask in a water-bath and heat until the sample is dissolved. Cool and dilute to 100 mL with *water R*. Introduce 1 mL of this solution into a 25 mL graduated test-tube with glass stopper and, with the tube immersed in cold water, add dropwise 8 mL of *sulfuric acid R*. Mix well and place the tube in a water-bath for exactly 3 min. Immediately transfer the tube to an ice-bath until the solution is chilled. Add 0.6 mL of *ninhydrin solution R2*, carefully allowing the reagent to run down the walls of the test-tube. Immediately shake well, and place the tube in a water-bath at 25 °C for 100 min. Dilute to 25 mL with *sulfuric acid R* and mix by inverting the tube several times. Do not shake. A violet colour develops within 5 min.

TESTS

pH (2.2.3)

4.5 to 8.0.

Shake 5.0 g with 25.0 mL of *carbon dioxide-free water R* for 60 s. Allow to stand for 15 min.

Foreign matter

Examined under a microscope using a mixture of equal volumes of *glycerol R* and *water R*, not more than traces of matter other than starch granules are present.

Oxidising substances (2.5.30)

Maximum 20 ppm, calculated as H₂O₂.

Sulfur dioxide (2.5.29)

Maximum 50 ppm.

Iron (2.4.9)

— For hydroxypropyl starch obtained from maize, potato, cassava or rice: maximum 20 ppm.

Shake 1.0 g with 20 mL of *dilute hydrochloric acid R*. Filter. The filtrate complies with the test for iron.

— For hydroxypropyl starch obtained from pea: maximum 50 ppm.

Shake 1.0 g with 50 mL of *dilute hydrochloric acid R*. Filter. The filtrate complies with the test for iron.

Loss on drying

(2.2.32) determined on 1.000 g by drying in an oven at 130 °C for 90 min:

- maximum 15.0 per cent for hydroxypropyl starch obtained from maize, cassava, rice or pea;
- maximum 20.0 per cent for hydroxypropyl starch obtained from potato.

Sulfated ash (2.4.14)

Maximum 0.6 per cent, determined on 1.0 g.

Microbial contamination

TAMC: acceptance criterion 10^3 CFU/g (2.6.12).

TYMC: acceptance criterion 10^2 CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

Absence of *Salmonella* (2.6.13).

ASSAY

Nuclear magnetic resonance spectrometry (2.2.33).

Internal standard solution Disperse 50.0 mg of 3-trimethylsilyl-1-propanesulfonic acid sodium salt CRS in about 5 g of deuterium oxide R1, weighed to the nearest 0.1 mg. Store in a sealed bottle.

Test solution Disperse 20 g of the substance to be examined in 200.0 mL of carbon dioxide-free water R at room temperature. Agitate for 15 min and filter. Repeat the operation twice. If problems of poor dispersibility or slow filtration are encountered, use cooled carbon dioxide-free water R for the washing operation. Dry the washed starch for at least 4 h in an oven *in vacuo* at 30 ± 5 °C. Determine the moisture content (*W*) on 5 g of this washed and dried sample using the test for loss on drying. Weigh 12.0 mg (dried substance) of the washed and dried sample in a 5 mm NMR tube. Add 0.1 mL of deuterium chloride solution R and 0.75 mL of deuterium oxide R1. Cap the tube, mix, and place it in a water-bath until a clear solution is obtained (3 min to 1 h maximum). When a clear solution is obtained, allow to cool to room temperature. Dry the exterior of the tube and weigh to the nearest 0.1 mg. Add 0.05 mL of the internal standard solution and weigh to the nearest 0.1 mg. Determine the mass of the internal standard solution introduced. Mix thoroughly.

Apparatus FT-NMR spectrometer at minimum 300 MHz.

Acquisition of ^1H NMR spectra The following parameters may be used:

- sweep width: 8 ppm (−1.0 to + 7 ppm);
- irradiation frequency offset: none;
- time domain: 64 K at least;
- pulse width: 90°;
- pulse delay: 10 s;
- dummy scans: 0;
- number of scans: 8.

Use the CH_3 signal of the internal standard for shift referencing. The shift of the singlet is set to 0 ppm.

Record the FID signal.

Call the integration sub-routine after phase corrections and baseline correction between −0.5 ppm and + 6 ppm.

Measure the peak areas of the doublet from the methyl groups of the hydroxypropyl function at + 1.2 ppm (A_2), and of the methyl groups at 0 ppm of the internal standard (A_1) without ^{13}C -satellites.

Results Measure the signal coming from the 3 protons of the methyl group in the hydroxypropyl function; calculate the hydroxypropyl groups content as a percentage *m/m* (dried substance) using the following expression:

$$\frac{3A_2}{A_1} \times \frac{P}{100} \times \frac{W_1 \times m_1}{218} \times 59 \times \frac{100}{m} \times \frac{100}{100 - W}$$

- 3 = numerical value representing the 3 methyl groups in the internal standard;
- A_1 = area of the methyl groups in the internal standard;
- A_2 = area of the methyl groups of hydroxypropyl;
- P = percentage content of 3-trimethylsilyl-1-propanesulfonic acid sodium salt CRS;

- W_1 = mass fraction of the internal standard in the internal standard solution, in milligrams per gram;
- m_1 = mass of the internal standard solution in the NMR tube, in grams;
- 218 = molar mass of the internal standard, in grams per mole;
- 59 = molar mass of the hydroxypropyl group, in grams per mole;
- m = mass of the washed and dried sample in the NMR tube, in milligrams;
- W* = moisture content, as a percentage *m/m*.

LABELLING

The label states the botanical source of the starch and the type of modification.

Ph Eur

Pregelatinised Hydroxypropyl Starch

(Ph. Eur. monograph 2645)

Ph Eur

DEFINITION

Pregelatinised hydroxypropyl starch is prepared from *Starch, hydroxypropyl* (2165) by mechanical processing in the presence of water, with or without heat, to rupture all or part of the starch granules, and subsequent drying.

Content

— *hydroxypropyl groups*: 0.5 per cent to 7.0 per cent.

PRODUCTION

The production of pregelatinised hydroxypropyl starch shall be in compliance with the requirements of the European legislation for food additives.

CHARACTERS**Appearance**

White or slightly yellowish powder.

IDENTIFICATION

A. It swells in cold water.

B. Disperse 0.5 g in 2 mL of water R, without heating, and add 0.05 mL of iodine solution R1. A reddish-violet or greyish-blue colour is produced.

C. To 0.1 g add 12.5 mL of dilute sulfuric acid R. Heat in a water-bath until the sample is dissolved. Cool and dilute to 100 mL with water R. Introduce 1 mL of the solution into a 25 mL graduated test-tube with a ground-glass stopper and, with the tube immersed in cold water, add dropwise 8 mL of sulfuric acid R. Mix well and place the tube in a water-bath for exactly 3 min. Immediately transfer the tube to an ice-bath until the solution is chilled. Add 0.6 mL of ninhydrin solution R2, carefully allowing the reagent to run down the walls of the test-tube. Immediately shake well, and place the tube in a water-bath at 25 °C for 100 min. Dilute to 25 mL with sulfuric acid R and mix by inverting the tube several times. Do not shake. A violet colour develops within 5 min.

TESTS**pH (2.2.3)**

4.5 to 8.0.

Progressively add 3.0 g to 100.0 mL of carbon dioxide-free water R, stirring continuously. Determine the pH when a homogeneous solution is obtained.

Impurity A

Gas chromatography (2.2.28).

Internal standard solution Mix 50.0 mg of *propane-1,3-diol R* with *anhydrous pyridine R* and dilute to 100.0 mL with the same solvent.

Test solution To 0.200 g of the substance to be examined add 1.0 mL of the internal standard solution and 9.0 mL of *anhydrous pyridine R*. Heat under a reflux condenser for 20 min. Allow to cool. Transfer 1.0 mL of this solution to a 2 mL vial with a screw cap fitted with a septum. Add 0.1 mL of *chlorotrimethylsilane R* and 0.2 mL of *hexamethyldisilazane R*. Close and mix. Allow to stand for 15 min.

Reference solution Mix 50.0 mg of *propane-1,3-diol R* and 50.0 mg of *propylene glycol CRS* (impurity A) with *anhydrous pyridine R* and dilute to 100.0 mL with the same solvent. Transfer 0.1 mL of the solution to a 2 mL vial with a screw cap fitted with a septum. Add 0.1 mL of *chlorotrimethylsilane R*, 0.2 mL of *hexamethyldisilazane R* and 0.9 mL of *anhydrous pyridine R*. Close and mix. Allow to stand for 15 min.

Column:

- **material:** fused silica;
- **size:** $l = 30\text{ m}$, $\varnothing = 0.32\text{ mm}$;
- **stationary phase:** *methylpolysiloxane R* (film thickness 0.25 μm).

NOTE: the column must be desorbed regularly. Conditions: temperature program of 70 °C to 300 °C at a rate of 7 °C/min. Maintain for 10 min at 300 °C.

Carrier gas helium for chromatography R.

Flow rate 3 mL/min.

Split ratio 1:30.

Temperature:

- **column:** 70 °C;
- **injection port and detector:** 250 °C.

Detection Flame ionisation.

Injection 1 μL .

Relative retention With reference to the trimethylsilyl derivative of propane-1,3-diol (retention time = about 8.5 min): trimethylsilyl derivative of propylene glycol = about 0.7.

System suitability Reference solution:

- **resolution:** minimum 5.0 between the peaks due to the trimethylsilyl derivative of propylene glycol and the trimethylsilyl derivative of propane-1,3-diol.

Calculation of percentage contents Use the internal standard method.

Limit:

- **impurity A:** maximum 0.1 per cent.

Oxidising substances (2.5.30)

Maximum 20 ppm, calculated as H_2O_2 .

Use a mixture of equal volumes of *methanol R* and *water R* as solvent.

Sulfur dioxide (2.5.29)

Maximum 50 ppm.

Iron (2.4.9)

- For pregelatinised hydroxypropyl starch obtained from maize, potato, cassava or rice: maximum 20 ppm.

Dissolve the residue obtained in the test for sulfated ash in 20 mL of *dilute hydrochloric acid R* and filter. The filtrate complies with the test for iron.

- For pregelatinised hydroxypropyl starch obtained from pea: maximum 50 ppm.

Dissolve the residue obtained in the test for sulfated ash in 50 mL of *dilute hydrochloric acid R* and filter. The filtrate complies with the test for iron.

Loss on drying

(2.2.32) determined on 1.000 g by drying in an oven at 130 °C for 90 min:

- maximum 15.0 per cent for pregelatinised hydroxypropyl starch obtained from maize, cassava, rice or pea;
- maximum 20.0 per cent for pregelatinised hydroxypropyl starch obtained from potato.

Sulfated ash (2.4.14)

Maximum 0.6 per cent, determined on 1.0 g.

Microbial contamination

TAMC: acceptance criterion 10^3 CFU/g (2.6.12).

TYMC: acceptance criterion 10^2 CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

Absence of *Salmonella* (2.6.13).

ASSAY

Nuclear magnetic resonance spectrometry (2.2.33).

Internal standard solution Disperse 50.0 mg of 3-trimethylsilyl-1-propanesulfonic acid sodium salt CRS in about 5 g of *deuterium oxide R1*, weighed to the nearest 0.1 mg. Store in a sealed bottle.

Test solution Dry 5.000 g of the substance to be examined at 130 °C for 90 min. Weigh 12.0 mg of the dried substance in a 5 mm NMR tube. Add 0.1 mL of *deuterium chloride solution R* and 0.75 mL of *deuterium oxide R1*. Cap the tube, mix, and place it in a water-bath until a clear solution is obtained (3 min to maximum 1 h). When a clear solution is obtained, allow to cool to room temperature. Dry the exterior of the tube and weigh to the nearest 0.1 mg. Add 0.05 mL of the internal standard solution and weigh to the nearest 0.1 mg. Determine the mass of the internal standard solution introduced. Mix thoroughly.

Apparatus FT-NMR spectrometer operating at minimum 300 MHz.

Acquisition of ^1H NMR spectra The following parameters may be used:

- **sweep width:** 8 ppm (−1.0 to + 7 ppm);
- **irradiation frequency offset:** none;
- **time domain:** at least 64 K;
- **pulse width:** 90°;
- **pulse delay:** 10 s;
- **dummy scans:** 0;
- **number of scans:** 8.

Use the CH_3 signal of the internal standard for shift referencing. The shift of the singlet is set to 0 ppm.

Record the FID signal.

Call the integration sub-routine after phase corrections and baseline correction between −0.5 ppm and + 6 ppm.

Measure the peak areas of the doublet from the methyl groups of the hydroxypropyl function at + 1.2 ppm (A_2), and of the methyl groups at 0 ppm of the internal standard (A_1) without ^{13}C -satellites.

Results Measure the signal coming from the 3 protons of the methyl group in the hydroxypropyl function; calculate the percentage content of hydroxypropyl groups using the following expression:

$$\frac{3A_2}{A_1} \times \frac{P}{100} \times \frac{W_1 \times m_1}{218} \times 59 \times \frac{100}{m}$$

- 3 = numerical value representing the 3 methyl groups in the internal standard;

- A_1 = area of the methyl groups in the internal standard;
 A_2 = area of the methyl groups of hydroxypropyl;
 P = percentage content of 3-trimethylsilyl-1-propanesulfonic acid sodium salt CRS;
 W_1 = mass fraction of the internal standard in the internal standard solution, in milligrams per gram;
 m_1 = mass of the internal standard solution in the NMR tube, in grams;
 218 = molar mass of the internal standard, in grams per mole;
 59 = molar mass of the hydroxypropyl group, in grams per mole;
 m = mass of the substance to be examined in the NMR tube, in milligrams.

LABELLING

The label states the botanical source of the starch and the type of modification.

IMPURITIES

A. (2RS)-propane-1,2-diol (propylene glycol).

Ph Eur

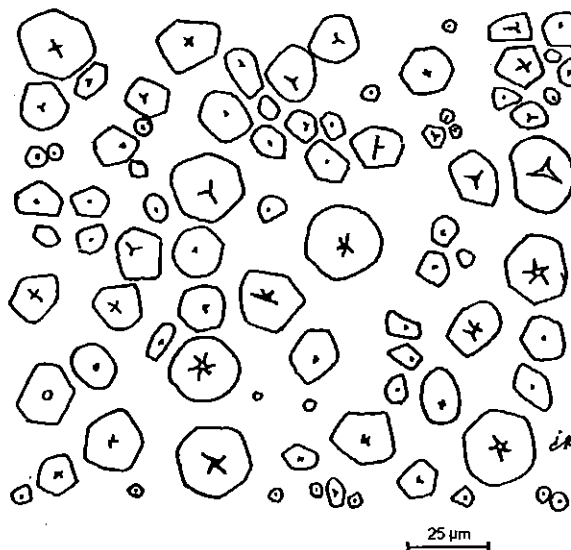

Figure 0344.-1. – Illustration for identification test A of maize starch

Maize Starch¹

(Ph. Eur. monograph 0344)

Action and use

Excipient.

When Starch is specified and the type is not indicated, Maize Starch, Potato Starch, Rice Starch, Wheat Starch or, in tropical countries where these are not available, Tapioca Starch may be supplied or used.

Ph Eur

DEFINITION

Maize starch is obtained from the caryopsis of *Zea mays* L.

CHARACTERS**Appearance**

Matt, white to slightly yellowish, very fine powder that creaks when pressed between the fingers.

Solubility

Practically insoluble in cold water and in ethanol (96 per cent).

The presence of granules with cracks or irregularities on the edge is exceptional.♦

IDENTIFICATION

A. Microscopic examination (2.8.23), using a 50 per cent V/V solution of glycerol R. It appears as either angular polyhedral granules of irregular sizes with diameters ranging from about 2 µm to about 23 µm or as rounded or spheroidal granules of irregular sizes with diameters ranging from about 25 µm to about 35 µm (Figure 0344.-1). The central hilum consists of a distinct cavity or 2- to 5-rayed cleft and there are no concentric striations. Between orthogonally orientated polarising plates or prisms, the starch granules show a distinct black cross intersecting at the hilum.

B. Suspend 1 g in 50 mL of water R, boil for 1 min and cool. A thin, cloudy mucilage is formed.

C. To 1 mL of the mucilage obtained in identification test B add 0.05 mL of iodine solution R1. An orange-red to dark blue colour is produced, which disappears on heating.

TESTS**pH (2.2.3)**

4.0 to 7.0.

To 5.0 g add 25.0 mL of carbon dioxide-free water R. Agitate continuously at a moderate rate for 60 s. Stop the agitation and allow to stand for 15 min.

Foreign matter

Examined under a microscope using a 50 per cent V/V solution of glycerol R, not more than traces of matter other than starch granules are present. No starch grains of any other origin are present.♦

Oxidising substances (2.5.30)

Maximum 20 ppm, calculated as H₂O₂.

Sulfur dioxide (2.5.29)

Maximum 50 ppm.

Iron (2.4.9)

Maximum 10 ppm.

Shake 1.5 g with 15 mL of dilute hydrochloric acid R. Filter. The filtrate complies with the test.

Loss on drying (2.2.32)

Maximum 15.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 90 min.

Sulfated ash (2.4.14)

Maximum 0.6 per cent, determined on 1.0 g.

Microbial contamination

TAMC: acceptance criterion 10³ CFU/g (2.6.12).

TYMC: acceptance criterion 10² CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

♦Absence of *Salmonella* (2.6.13).♦

Ph Eur

¹ This monograph has undergone pharmacopoeial harmonisation. See chapter 5.8 Pharmacopoeial harmonisation.

Pea Starch

(Ph. Eur. monograph 2403)

Ph Eur

DEFINITION

Pea starch is obtained from the seeds of *Pisum sativum* L.

CHARACTERS

Appearance

White or almost white, very fine powder.

Solubility

Practically insoluble in cold water and in ethanol (96 per cent).

IDENTIFICATION

- A. Microscopic examination (2.8.23) using a 50 per cent *V/V* solution of *glycerol R*. It presents a majority of large elliptical granules, 25-45 μm in size, sometimes irregular, or reniform. It also presents a minority of small rounded granules, 5-8 μm in size (Figure 2403.-1). Granules can present cracks or irregularities. Sometimes, granules show barely visible concentric striations. Exceptionally, granules show a slit along the main axis. Between orthogonally oriented polarising plates or prisms, the granules show a distinct black cross.
- B. Suspend 1 g in 50 mL of *water R*, boil for 1 min and cool. A thin, cloudy mucilage is formed.
- C. To 1 mL of the mucilage obtained in identification test B, add 0.05 mL of *iodine solution R1*. A dark blue colour is produced, which disappears on heating.

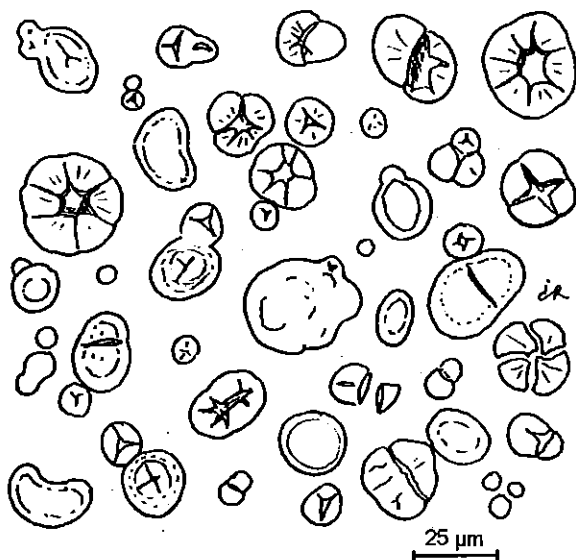

Figure 2403.-1. – Illustration for identification test A of pea starch

TESTS

pH (2.2.3)

5.0 to 8.0.

Shake 5.0 g with 25.0 mL of *carbon dioxide-free water R* for 60 s. Allow to stand for 15 min and shake again.

Foreign matter

Examined under a microscope using a 50 per cent *V/V* solution of *glycerol R*, not more than traces of matter other than starch granules are present. No starch granules of any other origin are present.

Oxidising substances (2.5.30)

Maximum 20 ppm, calculated as H_2O_2 .

Sulfur dioxide (2.5.29)

Maximum 50 ppm.

Iron (2.4.9)

Maximum 50 ppm.

Shake 1.0 g with 50 mL of *dilute hydrochloric acid R*. Filter.

The filtrate complies with the test for iron.

Loss on drying (2.2.32)

Maximum 16.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 90 min.

Sulfated ash (2.4.14)

Maximum 0.6 per cent, determined on 1.0 g.

Microbial contamination

TAMC: acceptance criterion 10^3 CFU/g (2.6.12).

TYMC: acceptance criterion 10^2 CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

Absence of *Salmonella* (2.6.13).

Ph Eur

Potato Starch¹

(Ph. Eur. monograph 0355)

Action and use

Excipient.

When Starch is specified and the type is not indicated, Maize Starch, Potato Starch, Rice Starch, Wheat Starch or, in tropical countries where these are not available, Tapioca Starch may be supplied or used.

Ph Eur

DEFINITION

Potato starch is obtained from the tuber of *Solanum tuberosum* L.

CHARACTERS

Appearance

Very fine, white or almost white powder which creaks when pressed between the fingers.

Solubility

Practically insoluble in cold water and in ethanol (96 per cent).

Potato starch does not contain starch grains of any other origin. It may contain a minute quantity, if any, of tissue fragments of the original plant.♦

IDENTIFICATION

- A. Microscopic examination (2.8.23) using a 50 per cent *V/V* solution of *glycerol R*. It presents granules, either irregularly shaped, ovoid or pear-shaped, usually 30-100 μm in size but occasionally exceeding 100 μm , or rounded, 10-35 μm in size. There are occasional compound granules having 2-4 components (Figure 0355.-1). The ovoid and pear-shaped granules have an eccentric hilum and the rounded granules acentric or slightly eccentric hilum. All granules show clearly visible concentric striations. Between orthogonally orientated polarising plates or prisms, the granules show a distinct black cross intersecting at the hilum.

¹ This monograph has undergone pharmacopoeial harmonisation. See chapter 5.8 Pharmacopoeial harmonisation.

Figure 0355.-1. – Illustration for identification test A of potato starch

- B. Suspend 1 g in 50 mL of water R, boil for 1 min and cool. A thick, opalescent mucilage is formed.
- C. To 1 mL of the mucilage obtained in identification test B, add 0.05 mL of iodine solution R1. An orange-red to dark blue colour is produced which disappears on heating.

TESTS

pH (2.2.3)
5.0 to 8.0.

Shake 5.0 g with 25.0 mL of carbon dioxide-free water R for 60 s. Allow to stand for 15 min.

◊**Foreign matter**

Examined under a microscope using a 50 per cent V/V solution of glycerol R, not more than traces of matter other than starch granules are present. No starch grains of any other origin are present.◊

Oxidising substances (2.5.30)

Maximum 20 ppm, calculated as H₂O₂.

Sulfur dioxide (2.5.29)

Maximum 50 ppm.

Iron (2.4.9)

Maximum 10 ppm.

Shake 1.5 g with 15 mL of dilute hydrochloric acid R. Filter. The filtrate complies with the limit test for iron.

Loss on drying (2.2.32)

Maximum 20.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 90 min.

Sulfated ash (2.4.14)

Maximum 0.6 per cent, determined on 1.0 g.

Microbial contamination

TAMC: acceptance criterion 10³ CFU/g (2.6.12).

TYMC: acceptance criterion 10² CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

◊Absence of *Salmonella* (2.6.13).◊

Ph Eur

Pregelatinised Starch

Pregelatinised Maize Starch

(Ph. Eur. monograph 1267)

When Pregelatinised Starch is prepared *Zea mays*, the title Pregelatinised Maize Starch may be used.

Ph Eur

DEFINITION

Pregelatinised starch is prepared from *Maize starch* (0344), *Potato starch* (0355) or *Rice starch* (0349) by mechanical processing in the presence of water, with or without heat, to rupture all or part of the starch granules, and subsequent drying. It contains no added substances but it may be modified to render it compressible and to improve its flow characteristics.

CHARACTERS

Appearance

White or yellowish-white powder.

It swells in cold water.

IDENTIFICATION

A. Examined under a microscope using a mixture of equal volumes of glycerol R and water R it presents irregular, translucent, white or yellowish-white flakes or pieces with an uneven surface. Under polarised light (between crossed nicol prisms), starch granules with a distinct black cross intersecting at the hilum may be seen.

B. Disperse 0.5 g in 2 mL of water R without heating and add 0.05 mL of iodine solution R1. A reddish-violet or blue colour is produced.

TESTS

pH (2.2.3)
4.5 to 7.0.

Progressively add 3.0 g to 100.0 mL of carbon dioxide-free water R, stirring continuously. Determine the pH when a homogeneous solution is obtained.

Oxidising substances (2.5.30)

It complies with the test for oxidising substances. Use a mixture of equal volumes of methanol R and water R as solvent.

Sulfur dioxide (2.5.29)

Maximum 50 ppm.

Iron (2.4.9)

Maximum 20 ppm.

Dissolve the residue obtained in the test for sulfated ash in 20 mL of *dilute hydrochloric acid R*. Filter. The filtrate complies with the test.

Foreign matter

Examined under a microscope using a mixture of equal volumes of *glycerol R* and *water R*, not more than traces of matter other than starch granules are present.

Loss on drying (2.2.32)

Maximum 15.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 90 min.

Sulfated ash (2.4.14)

Maximum 0.6 per cent, determined on 1.0 g.

Microbial contamination

TAMC: acceptance criterion 10³ CFU/g (2.6.12).

TYMC: acceptance criterion 10² CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

Absence of *Salmonella* (2.6.13).

LABELLING

The label states the type of starch used as starting material.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for pregelatinised starch used as filler, binder or disintegrant in tablets and in hard capsules.

Cold-water-soluble matter

Transfer 100 mL of *water R* at 25 ± 1 °C into a beaker and add 1.000–3.000 g of the substance to be examined while stirring. Continue to stir for 10 min. Transfer 35 mL of the dispersion to a centrifuge tube and centrifuge at 3000 g for 15 min. Transfer 25 mL of the supernatant to a crucible that has previously been dried in an oven at 120 ± 2 °C for 4 h and weighed to the nearest 0.1 mg. Evaporate to dryness on a water-bath, then place the crucible in an oven at 120 ± 2 °C for 4 h. Allow to cool in a desiccator. Weigh the crucible to the nearest 0.1 mg again.

Determine the percentage of cold-water-soluble matter using the following expression:

$$\frac{(B - A) \times \frac{100}{25} \times 100}{S \times \frac{100 - C}{100}}$$

- A* = initial crucible mass, in grams;
B = final crucible mass, in grams;
C = loss on drying, in per cent;
S = sample mass, in grams.

Particle-size distribution (2.9.31 or 2.9.38)

Powder flow (2.9.36)

Rice Starch¹

(Ph. Eur. monograph 0349)

Action and use

Excipient.

When Starch is specified and the type is not indicated, Maize Starch, Potato Starch, Rice Starch, Wheat Starch or, in tropical countries where these are not available, Tapioca Starch may be supplied or used.

Ph Eur

DEFINITION

Rice starch is obtained from the caryopsis of *Oryza sativa* L.

CHARACTERS

Appearance

Very fine, white or almost white powder, which creaks when pressed between the fingers.

Solubility

Practically insoluble in cold water and in ethanol (96 per cent).

Rice starch does not contain starch grains of any other origin. It may contain traces of, if any, fragments of the endosperm tissue of the fruit.♦

IDENTIFICATION

A. Microscopic examination (2.8.23) using a 50 per cent *V/V* solution of *glycerol R*. It presents polyhedral, simple grains 1–10 µm (mostly 4–6 µm) in size (Figure 0349.-1). These simple grains often gather in ellipsoidal, compound grains 50–100 µm in diameter. The grains have a poorly visible central hilum and there are no concentric striations. Between orthogonally orientated polarising plates or prisms, the starch grains show a distinct black cross intersecting at the hilum.

Figure 0349.-1. – Illustration for identification test A of rice starch

B. Suspend 1 g in 50 mL of *water R*, boil for 1 min and cool. A thin, cloudy mucilage is formed.

¹ This monograph has undergone pharmacopoeial harmonisation. See chapter 5.8 Pharmacopoeial harmonisation.

C. To 1 mL of the mucilage obtained in identification test B add 0.05 mL of *iodine solution R1*. An orange-red to dark blue colour is produced, which disappears on heating.

TESTS**pH (2.2.3)**

5.0 to 8.0.

Shake 5.0 g with 25.0 mL of *carbon dioxide-free water R* for 60 s. Allow to stand for 15 min.

♦Foreign matter

Examined under a microscope using a 50 per cent *V/V* solution of *glycerol R*, not more than traces of matter other than starch granules are present. No starch grains of any other origin are present.♦

Oxidising substances (2.5.30)

Maximum 20 ppm, calculated as H₂O₂.

Sulfur dioxide (2.5.29)

Maximum 50 ppm.

Iron (2.4.9)

Maximum 10 ppm.

Shake 1.5 g with 15 mL of *dilute hydrochloric acid R*. Filter. The filtrate complies with the test.

Loss on drying (2.2.32)

Maximum 15.0 per cent, determined on 1.00 g by drying in an oven at 130 °C for 90 min.

Sulfated ash (2.4.14)

Maximum 0.6 per cent, determined on 1.0 g.

Microbial contamination

Ph Eur

Tapioca Starch

Cassava Starch

Action and use

Excipient.

When Starch is specified and the type is not indicated, Maize Starch, Potato Starch, Rice Starch, Wheat Starch or, in tropical and sub-tropical countries where these are not available, Tapioca Starch may be supplied or used.

DEFINITION

Tapioca Starch is obtained from the rhizomes of *Manihot utilissima* Pohl.

CHARACTERISTICS

Very fine powder which creaks when pressed between the fingers.

Practically insoluble in cold *water* and in *ethanol* (96%).

IDENTIFICATION

A. Principally simple granules, subspherical, muller-shaped or rounded polyhedral; smaller granules 5 to 10 µm, larger granules 20 to 35 µm in diameter; hilum, central, punctate, linear or triradiate; striations, faint, concentric; compound granules, few, of two to three unequal components.

B. Heat to boiling a suspension of 1 g in 50 mL of *water* for 1 minute and cool. A thin, cloudy mucilage is formed.

C. Mix 0.05 mL of *iodine solution R1* with 1 mL of the mucilage obtained in test B. A dark blue colour is produced which disappears on heating and reappears on cooling.

TESTS**Acidity**

Add 10 g of the starch to 100 mL of *ethanol* (70%) previously neutralised to 0.5 mL of *phenolphthalein solution*, shake for 1 hour, filter and titrate 50 mL of the filtrate with 0.1M *sodium hydroxide VS*. Not more than 2.0 mL is required to change the colour of the solution.

Foreign matter

Not more than traces of cell membranes and protoplasm are present.

Loss on drying

When dried to constant weight at 100° to 105°, loses not more than 15.0% of its weight. Use 1 g.

Sulfated ash

Not more than 0.6%, Appendix IX A, Method II. Use 1 g.

Microbial contamination

1.0 g is free from *Escherichia coli*, Appendix XVI B1.

STORAGE

Tapioca Starch should be kept in an airtight container.

Wheat Starch¹

(Ph. Eur. monograph 0359)

Action and use

Excipient.

When Starch is specified and the type is not indicated, Maize Starch, Potato Starch, Rice Starch, Wheat Starch or, in tropical countries where these are not available, Tapioca Starch may be supplied or used.

Ph Eur

DEFINITION

Wheat starch is obtained from the caryopsis of *Triticum aestivum* L. (*T. vulgare* Vill.).

◊PRODUCTION

The gluten content is monitored and stated on the label.◊

♦CHARACTERS**Appearance**

Very fine, white or almost white powder that creaks when pressed between the fingers.

Solubility

Practically insoluble in cold *water* and in *ethanol* (96 per cent).

Wheat starch does not contain starch granules of any other origin. It may contain a minute quantity, if any, of tissue fragments of the original plant.♦

IDENTIFICATION

A. Microscopic examination (2.8.23) using a 50 per cent *V/V* solution of *glycerol R*. It shows large and small granules, and, very rarely, intermediate sizes (Figure 0359.-1). The large granules, 10-60 µm in diameter, are discoid or, more rarely, reniform in surface view. The central hilum and striations are invisible or barely visible and the granules sometimes show cracks on the edges. In side view, the granules are elliptical

¹ This monograph has undergone pharmacopoeial harmonisation. See chapter 5.8 Pharmacopoeial harmonisation.

and fusiform and the hilum appears as a slit along the main axis. The small granules, rounded or polyhedral, are 2-10 µm in diameter. Between orthogonally orientated polarising plates or prisms, the granules show a distinct black cross intersecting at the hilum.

Figure 0359.-1. – Illustration for identification test A of wheat starch

B. Suspend 1 g in 50 mL of *water R*, boil for 1 min and cool. A thin, cloudy mucilage is formed.

C. To 1 mL of the mucilage obtained in identification test B add 0.05 mL of *iodine solution R1*. A dark blue colour is produced, which disappears on heating.

TESTS

pH (2.2.3)
4.5 to 7.0.

Shake 5.0 g with 25.0 mL of *carbon dioxide-free water R* for 60 s. Allow to stand for 15 min.

◊Foreign matter

Examined under a microscope using a 50 per cent *V/V* solution of *glycerol R*, not more than traces of matter other than starch granules are present. No starch granules of any other origin are present.◊

Total protein

Maximum 0.3 per cent (corresponding to 0.048 per cent of nitrogen).

Determine the nitrogen content by sulfuric acid digestion as follows, and calculate the quantity of protein by multiplying by 6.25.

Carry out a blank determination by placing 4 g of a powdered mixture of 100 g of *dipotassium sulfate R*, 3 g of *copper sulfate pentahydrate R* and 3 g of *titanium dioxide R*, and 3 glass beads in a combustion flask. Wash any adhering particles from the neck into the flask with 25 mL of *sulfuric acid R*, allowing it to run down the sides of the flask, and swirl to mix the contents. Close the mouth of the flask loosely, for example by means of a glass bulb with a short stem, to avoid excessive loss of sulfuric acid. Heat gradually at first, then increase the temperature until there is vigorous boiling with condensation of sulfuric acid in the neck of the flask; take precautions to prevent the upper part of the flask from becoming overheated. Continue heating until a clear

solution is obtained. Cool, dissolve the solid material by cautiously adding 25 mL of *water R* to the mixture, cool again and place in a steam-distillation apparatus. Add a suitable volume of *strong sodium hydroxide solution R* to change the colour of the solution from bluish-green to brown or black, and distil immediately by passing steam through the mixture. Collect about 40 mL of distillate in 50.0 mL of 0.01 M *hydrochloric acid*, adding enough *water R* if necessary to cover the tip of the condenser. Towards the end of the distillation, lower the receiver so that the tip of the condenser is above the surface of the acid. Take precautions to prevent any water on the outer surface of the condenser from reaching the contents of the receiver. Titrate the distillate with 0.025 M *sodium hydroxide* (n_1 mL), using *methyl red mixed solution R* as indicator.

Repeat the test adding 3.0 g (m g) of the substance to be examined to the combustion flask, and using the same volume of *strong sodium hydroxide solution R*. Titrate the distillate as described for the blank determination with 0.025 M *sodium hydroxide* (n_2 mL). Calculate the percentage content of nitrogen using the following expression:

$$\frac{0.03503(n_1 - n_2)}{m}$$

Oxidising substances (2.5.30)

Maximum 20 ppm, calculated as H_2O_2 .

Sulfur dioxide (2.5.29)

Maximum 50 ppm.

Iron (2.4.9)

Maximum 10 ppm.

Shake 1.5 g with 15 mL of *dilute hydrochloric acid R*. Filter. The filtrate complies with the test.

Loss on drying (2.2.32)

Maximum 15.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 90 min.

Sulfated ash (2.4.14)

Maximum 0.6 per cent, determined on 1.0 g.

Microbial contamination

TAMC: acceptance criterion 10^3 CFU/g (2.6.12).

TYMC: acceptance criterion 10^2 CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

◊Absence of *Salmonella* (2.6.13).◊

◊LABELLING

The label states the gluten content.◊

Ph Eur

Stavudine

(Ph. Eur. monograph 2130)

$C_{10}H_{12}N_2O_4$

224.2

3056-17-5

Action and use

Nucleoside reverse transcriptase inhibitor; antiviral (HIV).

Ph Eur

DEFINITION

1-(2,3-Dideoxy-β-D-glycero-pent-2-enofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione.

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Soluble in water, sparingly soluble in ethanol (96 per cent), slightly soluble in methylene chloride.

It shows polymorphism (5.9).

IDENTIFICATION

A. Specific optical rotation (2.2.7): -45.9 to -39.5 (anhydrous substance).

Dissolve 0.100 g in *water R* and dilute to 10.0 mL with the same solvent.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison stavudine CRS.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *anhydrous ethanol R*, evaporate to dryness and record new spectra using the residues.

TESTS

Related substances

Liquid chromatography (2.2.29). *Prepare the solutions immediately before use or store them at 2-8 °C until use.*

Test solution Dissolve 25.0 mg of the substance to be examined in *water R* and dilute to 50.0 mL with the same solvent.

Reference solution (a) Dilute 0.5 mL of the test solution to 100.0 mL with *water R*.

Reference solution (b) Dilute 20.0 mL of reference solution (a) to 100.0 mL with *water R*.

Reference solution (c) Dissolve 5 mg of *stavudine for system suitability CRS* (containing impurities A, B, C, E and G) in *water R* and dilute to 10.0 mL with the same solvent.

Column:

- *size*: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- *stationary phase*: base-deactivated end-capped octadecylsilyl silica gel for chromatography R (5 μm).

Mobile phase:

- *mobile phase A*: mix 35 volumes of *acetonitrile for chromatography R* and 965 volumes of a 0.77 g/L solution of *ammonium acetate R*;
- *mobile phase B*: mix 250 volumes of *acetonitrile for chromatography R* and 750 volumes of a 0.77 g/L solution of *ammonium acetate R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 10	100	0
10 - 20	100 → 0	0 → 100
20 - 30	0	100

Flow rate 2.0 mL/min.

Detection Spectrophotometer at 254 nm.

Injection 10 μL.

Identification of impurities Use the chromatogram supplied with *stavudine for system suitability CRS* and the

chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B, C, E and G.

Relative retention With reference to stavudine (retention time = about 10 min): impurity A = about 0.3; impurity B = about 0.50; impurity C = about 0.53; impurity E = about 1.1; impurity G = about 1.9.

System suitability Reference solution (c):

- *peak-to-valley ratio*: minimum 1.5, where H_p = height above the baseline of the peak due to impurity C and H_o = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity B; minimum 1.5, where H_p = height above the baseline of the peak due to impurity E and H_o = height above the baseline of the lowest point of the curve separating this peak from the peak due to stavudine.

Calculation of percentage contents:

- *correction factor*: multiply the peak area of impurity A by 0.7;
- for impurity A, use the concentration of stavudine in reference solution (a);
- for impurities other than A, use the concentration of stavudine in reference solution (b).

Limits:

- *impurity A*: maximum 0.5 per cent;
- *impurity G*: maximum 0.2 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 1.0 per cent;
- *reporting threshold*: 0.05 per cent.

Impurity I

Liquid chromatography (2.2.29). *Prepare the solutions immediately before use or store them at 2-8 °C until use.*

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

Reference solution (a) Dissolve 2 mg of *stavudine impurity I CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 20.0 mL with the mobile phase.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Column:

- *size*: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- *stationary phase*: end-capped octylsilyl silica gel for chromatography R (5 μm).

Mobile phase Mix 30 volumes of *acetonitrile for chromatography R* and 70 volumes of a 1.15 g/L solution of *ammonium dihydrogen phosphate R* previously adjusted to pH 6.8 with *triethylamine R*.

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 266 nm.

Injection 20 μL.

Run time 7 times the retention time of stavudine.

Identification of impurities Use the chromatogram obtained with reference solution (a) to identify the peak due to impurity I.

Relative retention With reference to stavudine (retention time = about 3 min): impurity I = about 6.0.

System suitability Reference solution (b):

- *signal-to-noise ratio*: minimum 40 for the principal peak.

Calculation of percentage content:

- **correction factor:** multiply the peak area of impurity I by 1.7;
- for impurity I, use the concentration of stavudine in reference solution (b).

Limit:

- **impurity I:** maximum 0.15 per cent.

Water (2.5.12)

Maximum 0.5 per cent, determined on 0.500 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29). Prepare the solutions immediately before use or store them at 2–8 °C until use.

Test solution Dissolve 10.0 mg of the substance to be examined in water R and dilute to 100.0 mL with the same solvent. Dilute 10.0 mL of the solution to 50.0 mL with water R.

Reference solution (a) Dissolve 10.0 mg of stavudine CRS in water R and dilute to 100.0 mL with the same solvent. Dilute 10.0 mL of the solution to 50.0 mL with water R.

Reference solution (b) Dissolve 5 mg of thymine R (impurity A) and 7.5 mg of thymidine R (impurity C) in water R and dilute to 100.0 mL with the same solvent. Dilute 10.0 mL of the solution to 50.0 mL with water R.

Column:

- **size:** $l = 0.033$ m, $\varnothing = 4.0$ mm;
- **stationary phase:** base-deactivated end-capped octadecylsilyl silica gel for chromatography R (3 μ m).

Mobile phase Mix 5 volumes of acetonitrile for chromatography R and 95 volumes of a 0.77 g/L solution of ammonium acetate R.

Flow rate 0.7 mL/min.

Detection Spectrophotometer at 254 nm.

Injection 25 μ L.

Run time Twice the retention time of stavudine.

Identification of impurities Use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and C.

Relative retention With reference to stavudine (retention time = about 4 min): impurity A = about 0.4; impurity C = about 0.6.

System suitability:

- **resolution:** minimum 3.5 between the peaks due to impurities A and C in the chromatogram obtained with reference solution (b);
- **symmetry factor:** maximum 1.6 for the peak due to stavudine in the chromatogram obtained with reference solution (a).

Calculate the percentage content of $C_{10}H_{12}N_2O_4$ using the chromatograms obtained with the test solution and reference solution (a) and taking into account the assigned content of stavudine CRS.

STORAGE

Protected from light and humidity.

IMPURITIES

Specified impurities A, G, I.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general

monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*) B, C, D, E, F, H.

A. 5-methylpyrimidine-2,4(1H,3H)-dione (thymine),

B. 1-(2-deoxy- β -D-threo-pentofuranosyl)-5-methylpyrimidine-2,4(1H,3H)-dione (3'-epithymidine),

C. 1-(2-deoxy- β -D-erythro-pentofuranosyl)-5-methylpyrimidine-2,4(1H,3H)-dione (thymidine),

D. 1-[(2R)-5-oxo-2,5-dihydrofuran-2-yl]-5-methylpyrimidine-2,4(1H,3H)-dione,

E. 1-(2,3-dideoxy- α -D-glycero-pent-2-enofuranosyl)-5-methylpyrimidine-2,4(1H,3H)-dione (stavudine anomer α),

F. 1-(3,5-anhydro-2-deoxy- β -D-threo-pentofuranosyl)-5-methylpyrimidine-2,4(1H,3H)-dione,

G. 1-[2-deoxy-5-O-[[[(2S,5R)-5-[5-methyl-2,4-dioxo-3,4-dihydropyrimidine-1(2H)-yl]-2,5-dihydrofuran-2-yl]methyl]-β-D-threo-pentofuranosyl]-5-methylpyrimidine-2,4(1H,3H)-dione,

H. 1-[2-deoxy-5-O-(1-methylethyl)-β-D-threo-pentofuranosyl]-5-methylpyrimidine-2,4(1H,3H)-dione,

I. 1-(5-O-benzoyl-2,3-dideoxy-β-D-glycero-pent-2-enofuranosyl)-5-methylpyrimidine-2,4(1H,3H)-dione.

Ph Eur

Stearic Acid¹

(Ph. Eur. monograph 1474)

Action and use
Excipient.

Ph Eur

DEFINITION

Mixture consisting mainly of stearic (octadecanoic) acid (C₁₈H₃₆O₂; M_r 284.5) and palmitic (hexadecanoic) acid (C₁₆H₃₂O₂; M_r 256.4) obtained from fats or oils of vegetable or animal origin.

Content

Stearic acid 50	Stearic acid: 40.0 per cent to 60.0 per cent. Sum of the contents of stearic and palmitic acids: minimum 90.0 per cent.
Stearic acid 70	Stearic acid: 60.0 per cent to 80.0 per cent. Sum of the contents of stearic and palmitic acids: minimum 90.0 per cent.
Stearic acid 95	Stearic acid: minimum 90.0 per cent. Sum of the contents of stearic and palmitic acids: minimum 96.0 per cent.

CHARACTERS

Appearance

White or almost white, waxy, flaky crystals, white or almost white hard masses, or white or yellowish-white powder.

Solubility

Practically insoluble in water, soluble in ethanol (96 per cent) and in light petroleum (bp: 50-70 °C).[♦]

IDENTIFICATION

A. Freezing point (see Tests).

B. Acid value (2.5.1): 194 to 212, determined on 0.5 g.

C. Examine the chromatograms obtained in the assay.

Results The principal peaks in the chromatogram obtained with the test solution are similar in retention time to those in the chromatogram obtained with the reference solution.

TESTS

Appearance

Heat the substance to be examined to about 75 °C.

The resulting liquid is not more intensely coloured than reference solution Y₇ or BY₇ (2.2.2, Method I).[♦]

Acidity

Melt 5.0 g, shake for 2 min with 10 mL of hot carbon dioxide-free water R, cool slowly and filter. To the filtrate add 0.05 mL of methyl orange solution R. No red colour develops.

Iodine value (2.5.4)

See Table 1474.-1.

Freezing point (2.2.18)

See Table 1474.-1.

Table 1474.-1.

Type	Iodine value	Freezing point (°C)
Stearic acid 50	maximum 4.0	53 - 59
Stearic acid 70	maximum 4.0	57 - 64
Stearic acid 95	maximum 1.5	64 - 69

ASSAY

Gas chromatography (2.2.28): use the normalisation procedure.

Test solution In a conical flask fitted with a reflux condenser, dissolve 0.100 g of the substance to be examined in 5 mL of boron trifluoride-methanol solution R. Boil under reflux for 10 min. Add 4.0 mL of heptane R through the condenser and boil again under reflux for 10 min. Allow to cool.

Add 20 mL of a saturated solution of sodium chloride R. Shake and allow the layers to separate. Remove about 2 mL of the organic layer and dry it over 0.2 g of anhydrous sodium sulfate R. Dilute 1.0 mL of this solution to 10.0 mL with heptane R.

Reference solution Prepare the reference solution in the same manner as the test solution using 50 mg of palmitic acid CRS and 50 mg of stearic acid CRS instead of the substance to be examined.

Column:

- material: fused silica;
- size: l = 30 m, Ø = 0.32 mm;
- stationary phase: macrogol 20 000 R (film thickness 0.5 µm).

Carrier gas helium for chromatography R.

Flow rate 2.4 mL/min.

¹ This monograph has undergone pharmacopoeial harmonisation. See chapter 5.8 Pharmacopoeial harmonisation.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 2	70
	2 - 36	70 → 240
	36 - 41	240
Injection port		220
Detector		260

Detection Flame ionisation.

Injection 1 µL.

Relative retention With reference to methyl stearate: methyl palmitate = about 0.9.

System suitability Reference solution:

— **resolution**: minimum 5.0 between the peaks due to methyl palmitate and methyl stearate;

— **repeatability**: maximum relative standard deviation of 3.0 per cent for the areas of the peaks due to methyl palmitate and methyl stearate, determined on 6 injections; maximum 1.0 per cent for the ratio of the areas of the peaks due to methyl palmitate to the areas of the peaks due to methyl stearate, determined on 6 injections.

LABELLING

The label states the type of stearic acid (50, 70, 95).

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for stearic acid used as a lubricant in tablets and capsules.

Particle-size distribution (2.9.31)

Specific surface area
(2.9.26, Method 1)Ø.

Ph Eur

Stearoyl Macroglycerides

(Ph. Eur. monograph 1268)

Action and use
Excipient.

Ph Eur

DEFINITION

Mixtures of monoesters, diesters and triesters of glycerol and monoesters and diesters of macrogols with a mean relative molecular mass between 300 and 4000.

They are obtained by partial alcoholysis of saturated oils containing mainly triglycerides of stearic (octadecanoic) acid,

using macrogol, or by esterification of glycerol and macrogol with saturated fatty acids, or by mixing glycerol esters and condensates of ethylene oxide with the fatty acids of these hydrogenated oils.

The hydroxyl value is within 15 units of the nominal value. The saponification value is within 10 units of the nominal value.

CHARACTERS**Appearance**

Pale yellow waxy solid.

Solubility

Dispersible in warm water and in warm liquid paraffin, freely soluble in methylene chloride, soluble in warm anhydrous ethanol.

IDENTIFICATION

A. Thin-layer chromatography (2.2.27).

Test solution Dissolve 1.0 g of the substance to be examined in methylene chloride R and dilute to 20 mL with the same solvent.

Plate TLC silica gel plate R.

Mobile phase hexane R, ether R (30:70 V/V).

Application 10 µL.

Development Over a path of 15 cm.

Drying In air.

Detection Spray with a 0.1 g/L solution of rhodamine B R in ethanol (96 per cent) R and examine in ultraviolet light at 365 nm.

Results The chromatogram shows a spot due to triglycerides with an R_F value of about 0.9 (R_{II} 1) and spots due to 1,3-diglycerides (R_{II} 0.7), to 1,2-diglycerides (R_{II} 0.6), to monoglycerides (R_{II} 0.1) and to esters of macrogol (R_{II} 0).

B. Hydroxyl value (see Tests).

C. Saponification value (see Tests).

D. Composition of fatty acids (see Tests).

TESTS

Acid value (2.5.1)

Maximum 2.0, determined on 2.0 g.

Hydroxyl value (2.5.3, Method A)

Within 15 units of the nominal value, determined on 1.0 g.

Peroxide value (2.5.5, Method A)

Maximum 6.0, determined on 2.0 g.

Saponification value (2.5.6)

Within 10 units of the nominal value, determined on 2.0 g.

Alkaline impurities

Introduce 5.0 g into a test-tube and carefully add a mixture, neutralised if necessary with 0.01 M hydrochloric acid or with 0.01 M sodium hydroxide, of 0.05 mL of a 0.4 g/L solution of bromophenol blue R in ethanol (96 per cent) R, 0.3 mL of water R and 10 mL of ethanol (96 per cent) R. Shake and allow to stand. Not more than 1.0 mL of 0.01 M hydrochloric acid is required to change the colour of the upper layer to yellow.

Free glycerol

Maximum 3.0 per cent.

Dissolve 1.20 g in 25.0 mL of methylene chloride R. Heat if necessary. After cooling, add 100 mL of water R. Shake and add 25.0 mL of periodic acetic acid solution R. Shake and allow to stand for 30 min. Add 40 mL of a 75 g/L solution of potassium iodide R. Allow to stand for 1 min. Add 1 mL of starch solution R. Titrate the iodine with 0.1 M sodium thiosulfate. Carry out a blank titration.

1 mL of 0.1 M sodium thiosulfate is equivalent to 2.3 mg of glycerol.

Composition of fatty acids

Gas chromatography (2.4.22, Method A).

Composition of the fatty-acid fraction of the substance:

- lauric acid: maximum 5.0 per cent;
- myristic acid: maximum 5.0 per cent;
- stearic acid and palmitic acid: different nominal amounts and minimum 90.0 per cent for the sum of $C_{18}H_{36}O_2$ and $C_{16}H_{32}O_2$.

Ethylene oxide and dioxan (2.4.25)

Maximum 1 ppm of ethylene oxide and maximum 10 ppm of dioxan.

Water (2.5.12)

Maximum 1.0 per cent, determined on 1.00 g. Use a mixture of 30 volumes of anhydrous methanol R and 70 volumes of methylene chloride R as solvent.

Total ash (2.4.16)

Maximum 0.2 per cent.

LABELLING

The label states:

- the nominal hydroxyl value;
- the nominal saponification value;
- the type of the macrogol used (mean relative molecular mass) or the number of moles of ethylene oxide reacted per mole of substance (nominal value).

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for stearyl macrogolglycerides used as self-emulsifying agents, solubilisers, modified-release agents and wetting agents.

Hydroxyl value

(see Tests).

Saponification value

(see Tests).

Composition of fatty acids

(see Tests).

Stearyl Alcohol

(Ph. Eur. monograph 0753)

Action and use

Excipient.

Ph Eur

DEFINITION

Mixture of solid alcohols, mainly octadecan-1-ol ($C_{18}H_{38}O$; M_r 270.5), of animal or vegetable origin.

Content

Minimum 95.0 per cent of $C_{18}H_{38}O$.

CHARACTERS

Appearance

White or almost white, unctuous flakes, granules or mass.

Solubility

Practically insoluble in water, soluble in ethanol (96 per cent). When melted, it is miscible with fatty oils, with liquid paraffin and with melted wool fat.

IDENTIFICATION

Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (b).

TESTS

Appearance of solution

The solution is clear (2.2.1) and not more intensely coloured than reference solution B₆ (2.2.2, Method II).

Dissolve 0.50 g in 20 mL of boiling ethanol (96 per cent) R. Allow to cool.

Melting point (2.2.14)

57 °C to 60 °C.

Acid value (2.5.1)

Maximum 1.0.

Hydroxyl value (2.5.3, Method A)

197 to 217.

Iodine value (2.5.4, Method A)

Maximum 2.0.

Dissolve 2.00 g in methylene chloride R, warming if necessary and dilute to 25 mL with the same solvent.

Saponification value (2.5.6)

Maximum 2.0.

ASSAY

Gas chromatography (2.2.28): use the normalisation procedure.

Test solution Dissolve 0.100 g of the substance to be examined in ethanol (96 per cent) R and dilute to 10.0 mL with the same solvent.

Reference solution (a) Dissolve 50 mg of cetyl alcohol R in ethanol (96 per cent) R and dilute to 10 mL with the same solvent.

Reference solution (b) Dissolve 50 mg of stearyl alcohol CRS in ethanol (96 per cent) R and dilute to 5 mL with the same solvent.

Reference solution (c) Mix 1 mL of reference solution (a) and 1 mL of reference solution (b) and dilute to 10 mL with ethanol (96 per cent) R.

Column:

— size: $l = 30$ m, $\varnothing = 0.32$ mm,

Ph Eur

— stationary phase: methylpolysiloxane R (1 µm).

Calculate the percentage content of C₁₈H₃₈O.

Ph Eur

Streptokinase Concentrated Solution

Streptokinase Bulk Solution

(Ph. Eur. monograph 0356)

Action and use

Plasminogen activator; fibrinolytic.

Preparation

Streptokinase Injection

Ph Eur

DEFINITION

Streptokinase concentrated solution is a preparation of a protein obtained from culture filtrates of certain strains of haemolytic *Streptococcus* group C; it has the property of combining with human plasminogen to form plasminogen activator. It may contain buffer salts and other excipients. The potency is not less than 510 IU per microgram of nitrogen.

CHARACTERS

Appearance

Clear, colourless liquid.

IDENTIFICATION

A. Place 0.5 mL of citrated human plasma in a polystyrene tube maintained in a water-bath at 37 °C. Add 0.1 mL of a dilution of the preparation to be examined containing 10 000 IU of streptokinase activity per millilitre in phosphate buffer solution pH 7.2 R and 0.1 mL of a solution of human thrombin R containing 20 IU/mL in phosphate buffer solution pH 7.2 R. Mix immediately. A clot forms and lyses within 30 min. Repeat the procedure using citrated bovine plasma. The clot does not lyse within 60 min.

B. Perform an immunochemical test using double immunodiffusion techniques (2.7.1). Place in the central cavity about 80 µL of goat or rabbit antistreptokinase serum containing about 10 000 units of antistreptokinase activity per millilitre; place in each of the surrounding cavities about 80 µL of a dilution of the preparation to be examined

containing 125 000 IU of streptokinase activity per millilitre. Allow the plates to stand in a humidified tank for 24 h. Only one precipitation arc appears and it is well defined.

TESTS

pH (2.2.3)

6.8 to 7.5.

Dilute the preparation to be examined in carbon dioxide-free water R to obtain a solution containing at least 1000 000 IU of streptokinase activity per millilitre.

Streptodornase

Maximum 10 IU of streptodornase activity per 100 000 IU of streptokinase activity.

Test solution Dilute the preparation to be examined in imidazole buffer solution pH 6.5 R to obtain a solution containing 150 000 IU of streptokinase activity per millilitre.

Reference solution Dissolve in imidazole buffer solution pH 6.5 R a reference preparation of streptodornase, calibrated in International Units against the International Standard of streptodornase, to obtain a solution containing 20 IU of streptodornase activity per millilitre.

The equivalence in International Units of the International Standard is stated by the World Health Organization.

To each of 8 numbered centrifuge tubes, add 0.5 mL of a 1 g/L solution of sodium deoxyribonucleate R in imidazole buffer solution pH 6.5 R. To tube number 1 and tube number 2 add 0.25 mL of imidazole buffer solution pH 6.5 R, 0.25 mL of the test solution and, immediately, 3.0 mL of perchloric acid (25 g/L HClO₄). Mix, centrifuge at about 3000 g for 5 min and measure the absorbances (2.2.25) of the supernatant liquids at 260 nm, using as the compensation liquid a mixture of 1.0 mL of imidazole buffer solution pH 6.5 R and 3.0 mL of perchloric acid (25 g/L HClO₄) (absorbances A₁ and A₂). To the other 6 tubes (numbers 3 to 8) add 0.25 mL, 0.25 mL, 0.125 mL, 0.125 mL, 0 mL and 0 mL respectively of imidazole buffer solution pH 6.5 R; add to each tube 0.25 mL of the test solution and 0 mL, 0 mL, 0.125 mL, 0.125 mL, 0.25 mL and 0.25 mL respectively of the reference solution. Mix the contents of each tube and heat at 37 °C for 15 min. To each tube add 3.0 mL of perchloric acid (25 g/L HClO₄), mix and centrifuge. Measure the absorbances (2.2.25) of the supernatant liquids at 260 nm using the compensation liquid described above (absorbances A₃ to A₈). The absorbances comply with the following requirement:

$$(A_3 + A_4) - (A_1 + A_2) < \frac{(A_5 + A_6 + A_7 + A_8)}{2} - (A_3 + A_4)$$

Streptolysin

In a polystyrene tube, use a quantity of the preparation to be examined equivalent to 500 000 IU of streptokinase activity and dilute to 0.5 mL with a mixture of 1 volume of phosphate buffer solution pH 7.2 R and 9 volumes of a 9 g/L solution of sodium chloride R. Add 0.4 mL of a 23 g/L solution of sodium thioglycollate R. Heat in a water-bath at 37 °C for 10 min. Add 0.1 mL of a solution of a reference preparation of human antistreptolysin O containing 5 IU/mL. Heat at 37 °C for 5 min. Add 1 mL of rabbit erythrocyte suspension R. Heat at 37 °C for 30 min. Centrifuge at about 1000 g. In the same manner, prepare a polystyrene tube in which the solution of the preparation to be examined has been replaced by 0.5 mL of a mixture of 1 volume of phosphate buffer solution pH 7.2 R and 9 volumes of a 9 g/L solution of sodium chloride R. Measure the absorbances (2.2.25) of the supernatant liquids

at 550 nm. The absorbance of the test solution is not more than 50 per cent greater than that of the reference solution.

Related substances

Liquid chromatography (2.2.29): use the normalisation procedure.

Test solution Dilute the preparation to be examined with water R to obtain a concentration of about 0.5-1 g/L, depending on the chromatographic system used.

Reference solution Dilute 1 volume of streptokinase for system suitability CRS with 49 volumes of water R.

Column:

- size: $l = 0.10$ m, $\varnothing = 4.6$ mm;
- stationary phase: styrene-divinylbenzene copolymer R (10 μ m) with a pore size of 200 nm;
- temperature: 25 °C.

Mobile phase:

- mobile phase A: trifluoroacetic acid R, water for chromatography R (1:1000 V/V); degas;
- mobile phase B: trifluoroacetic acid R, acetonitrile for chromatography R (1:1000 V/V); degas;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 1	68	32
1 - 4	68 → 52	32 → 48
4 - 5	52	48
5 - 7	0	100
7 - 10	68	32

The above conditions may be modified to improve the separation efficiency of the chromatographic system.

Flow rate 5 mL/min.

Detection Spectrophotometer at 280 nm.

Injection 20 μ L.

Retention time: streptokinase = 2.3 min to 2.8 min.

System suitability Reference solution:

- symmetry factor: maximum 1.9 for the peak due to streptokinase;
- peak-to-valley ratio: minimum 2, where H_p = height above the baseline of the 1st peak eluting after the principal peak and H_v = height above the baseline of the lowest point of the curve separating this peak from the 2nd peak eluting after the principal peak;
- the chromatogram obtained with the reference solution is similar to the chromatogram supplied with streptokinase for system suitability CRS.

Limit:

- total: maximum 5 per cent.

Bacterial endotoxins (2.6.14)

Less than 0.02 IU per 100 IU of streptokinase activity, if intended for use without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Nitrogen (2.5.9)

Potency

The potency of streptokinase is determined by comparing its capacity to activate plasminogen to form plasmin with the same capacity of a reference preparation of streptokinase calibrated in International Units; the formation of plasmin is determined using a suitable chromogenic substrate.

The International Unit is the activity of a stated amount of the International Standard for streptokinase. The equivalence

in International Units of the International Standard is stated by the World Health Organization.

Reference and test solutions

Prepare 2 independent series of at least 3 dilutions of each of the preparation to be examined and of the reference preparation of streptokinase in tris(hydroxymethyl)aminomethane sodium chloride buffer solution pH 7.4 R1, in the linear range of the assay (a range of 0.5-4.0 IU/mL has been found suitable). Prepare and maintain all solutions at 37 °C.

Substrate solution

Mix 1.0 mL of tris(hydroxymethyl)aminomethane buffer solution pH 7.4 R with 1.0 mL of chromogenic substrate R3. Add 5 μ L of a 100 g/L solution of polysorbate 20 R. Keep at 37 °C in a water-bath. Immediately before commencing the activation assay, add 45 μ L of a 1 mg/mL solution of human plasminogen R.

Method

Analyse each streptokinase dilution, maintained at 37 °C, in duplicate. Initiate the activation reaction by adding 60 μ L of each dilution to 40 μ L of substrate solution. For blank wells, use 60 μ L of tris(hydroxymethyl)aminomethane sodium chloride buffer solution pH 7.4 R1 instead of the reference and test solutions. Allow the reaction to proceed at 37 °C for 20 min and read the absorbance (2.2.25) at 405 nm. If a suitable thermostatted plate reader is available, this may be used to monitor the reaction. Alternatively, it may be necessary to stop the reaction after 20 min using 50 μ L of a 50 per cent V/V solution of glacial acetic acid R. Best results are obtained when the absorbance for the highest streptokinase concentration is between 0.1 and 0.2 (after blank subtraction). If necessary, adjust the time of incubation in order to reach this range of absorbances.

Calculate the regression of the absorbance on log concentrations of the solutions of the preparation to be examined and of the reference preparation of streptokinase and calculate the potency of the preparation to be examined using a suitable statistical method, for example the parallel-line assay (5.3).

The estimated potency is not less than 90 per cent and not more than 111 per cent of the stated potency. The confidence limits ($P = 0.95$) are not less than 80 per cent and not more than 125 per cent of the estimated potency.

STORAGE

In an airtight container, protected from light and at a temperature of -20 °C. If the preparation is sterile, store in a sterile, airtight, tamper-evident container.

LABELLING

The label states:

- the number of International Units of streptokinase activity per milligram, calculated with reference to the dried preparation;
- that the preparation is suitable for use in the manufacture of parenteral preparations.

Ph Eur

Streptomycin Sulfate

Streptomycin Sulphate
(Ph. Eur. monograph 0053)

$C_{42}H_{84}N_{14}O_{36}S_3$

1457

3810-74-0

Action and use

Aminoglycoside antibacterial; antituberculosis drug.

Preparation

Streptomycin Injection

Ph Eur

DEFINITION

Bis[N^1, N^3 -dicarbamimidoyl-4-O-[5-deoxy-2-O-[2-deoxy-2-(methylamino)- α -L-glucopyranosyl]-3-C-formyl- α -L-lyxofuranosyl]-D-streptomine] trisulfate, a substance produced by the growth of certain strains of *Streptomyces griseus* or obtained by any other means. Stabilisers may be added. The potency is not less than 720 IU/mg, calculated with reference to the dried substance.

PRODUCTION

It is produced by methods of manufacture designed to eliminate or minimise substances lowering blood pressure.

CHARACTERS

A white or almost white powder, hygroscopic, very soluble in water, practically insoluble in anhydrous ethanol.

IDENTIFICATION

A. Examine by thin-layer chromatography (2.2.27), using a plate coated with a 0.75 mm layer of the following mixture: mix 0.3 g of carboxer R with 240 mL of water R and allow to stand, with moderate shaking, for 1 h; adjust to pH 7 by the gradual addition, with continuous shaking, of dilute sodium hydroxide solution R and add 30 g of silica gel H R.

Heat the plate at 110 °C for 1 h, allow to cool and use immediately.

Test solution Dissolve 10 mg of the substance to be examined in water R and dilute to 10 mL with the same solvent.

Reference solution (a) Dissolve 10 mg of streptomycin sulfate for identification CRS in water R and dilute to 10 mL with the same solvent.

Reference solution (b) Dissolve 10 mg of kanamycin monosulfate CRS, 10 mg of neomycin sulfate CRS and 10 mg of streptomycin sulfate for identification CRS in water R and dilute to 10 mL with the same solvent.

Apply separately to the plate 10 μ L of each solution. Develop over a path of 12 cm using a 70 g/L solution of potassium dihydrogen phosphate R. Dry the plate in a current of warm

air, and spray with a mixture of equal volumes of a 2 g/L solution of 1,3-dihydroxynaphthalene R in ethanol (96 per cent) R and a 460 g/L solution of sulfuric acid R. Heat at 150 °C for 5 min to 10 min. The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows three clearly separated spots.

B. Dissolve 5 mg to 10 mg in 4 mL of water R and add 1 mL of 1 M sodium hydroxide. Heat in a water-bath for 4 min. Add a slight excess of dilute hydrochloric acid R and 0.1 mL of ferric chloride solution R1. A violet colour develops.

C. Dissolve 0.1 g in 2 mL of water R, add 1 mL of α -naphthol solution R and 2 mL of a mixture of equal volumes of strong sodium hypochlorite solution R and water R. A red colour develops.

D. Dissolve about 10 mg in 5 mL of water R and add 1 mL of 1 M hydrochloric acid. Heat in a water-bath for 2 min. Add 2 mL of a 5 g/L solution of α -naphthol R in 1 M sodium hydroxide and heat in a water-bath for 1 min. A faint yellow colour develops.

E. It gives the reactions of sulfates (2.3.1).

TESTS

Solution S

Dissolve 2.5 g in carbon dioxide-free water R and dilute to 10 mL with the same solvent.

Appearance of solution

Solution S is not more intensely coloured than intensity 3 of the range of reference solutions of the most appropriate colour (2.2.2, Method 1). Allow to stand protected from light, at a temperature of about 20 °C for 24 h. Solution S is not more opalescent than reference suspension II (2.2.1).

pH

(2.2.3): 4.5 to 7.0 for solution S.

Specific absorbance (2.2.25)

10.0 to 12.4, determined at the absorption maximum at 525 nm (dried substance).

Dissolve 0.100 g in water R and dilute to 100.0 mL with the same solvent. Introduce separately 5.0 mL of the solution, and 5.0 mL of water R (blank) into 2 volumetric flasks. To each flask add 5.0 mL of 0.2 M sodium hydroxide and heat for exactly 10 min in a water-bath.

Cool in ice for exactly 5 min, add 3 mL of a 15 g/L solution of ferric ammonium sulfate R in 0.5 M sulfuric acid, dilute to 25.0 mL with water R and mix. Exactly 20 min after the addition of the ferric ammonium sulfate solution, measure the absorbance of the test solution in a 2 cm cell, using the blank as compensation liquid.

Methanol

Examine by gas chromatography (2.2.28).

Test solution Dissolve 1.00 g of the substance to be examined in water R and dilute to 25.0 mL with the same solvent.

Reference solution Dilute 12.0 mg of methanol R to 100.0 mL with water R.

The chromatographic procedure may be carried out using:

- a column 1.5 m to 2.0 m long and 2 mm to 4 mm in internal diameter, packed with ethylvinylbenzene-divinylbenzene copolymer R (150 μ m to 180 μ m);
- nitrogen for chromatography R as the carrier gas at a constant flow rate of 30 mL to 40 mL per minute;
- a flame-ionisation detector.

Maintain the column at a constant temperature between 120 °C and 140 °C and the injection port and the detector at a temperature at least 50 °C higher than that of the column. Inject the test solution and the reference solution. The area of the peak due to methanol in the chromatogram obtained with the test solution is not greater than the area of the peak in the chromatogram obtained with the reference solution (0.3 per cent).

Streptomycin B

Examine by thin-layer chromatography (2.2.27), using silica gel G R as the coating substance.

Test solution Dissolve 0.2 g of the substance to be examined in a freshly prepared mixture of 3 volumes of sulfuric acid R and 97 volumes of methanol R and dilute to 5 mL with the same mixture of solvents. Heat under a reflux condenser for 1 h, cool, rinse the condenser with methanol R and dilute to 20 mL with the same solvent (10 g/L solution).

Reference solution Dissolve 36 mg of mannose R in a freshly prepared mixture of 3 volumes of sulfuric acid R and 97 volumes of methanol R and dilute to 5 mL with the same mixture of solvents. Heat under a reflux condenser for 1 h, cool, rinse the condenser with methanol R and dilute to 50 mL with the same solvent. Dilute 5 mL of the solution to 50 mL with methanol R (0.3 g/L solution expressed as streptomycin B; 1 mg of mannose R is equivalent to 4.13 mg of streptomycin B).

Apply separately to the plate 10 µL of each solution. Develop over a path of 13 cm to 15 cm using a mixture of 25 volumes of glacial acetic acid R, 25 volumes of methanol R and 50 volumes of toluene R. Allow the plate to dry in air and spray with a freshly prepared mixture of equal volumes of a 2 g/L solution of 1,3-dihydroxynaphthalene R in ethanol (96 per cent) R and a 20 per cent V/V solution of sulfuric acid R and heat at 110 °C for 5 min. Any spot corresponding to streptomycin B in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with the reference solution (3.0 per cent).

Sulfate

18.0 per cent to 21.5 per cent of sulfate (dried substance).

Dissolve 0.250 g in 100 mL of water R and adjust the solution to pH 11 using concentrated ammonia R. Add 10.0 mL of 0.1 M barium chloride and about 0.5 mg of phthalain purple R. Titrate with 0.1 M sodium edetate, adding 50 mL of ethanol (96 per cent) R when the colour of the solution begins to change and continuing the titration until the violet-blue colour disappears.

1 mL of 0.1 M barium chloride is equivalent to 9.606 mg of sulfate (SO₄).

Loss on drying

(2.2.32): maximum 7.0 per cent, determined on 1.000 g by drying at 60 °C at a pressure not exceeding 0.1 kPa for 24 h.

Sulfated ash

(2.4.14): maximum 1.0 per cent, determined on 1.000 g.

Bacterial endotoxins (2.6.14)

Less than 0.25 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for removal of bacterial endotoxins.

ASSAY

Carry out the microbiological assay of antibiotics (2.7.2). Use streptomycin sulfate CRS as the chemical reference substance.

STORAGE

In an airtight container. If the substance is sterile, the container is also sterile and tamper-evident.

Ph Eur

Sucralfate

(Ph. Eur. monograph 1796)

$\text{C}_{12}\text{H}_{30}\text{Al}_8\text{O}_{51}\text{S}_8[\text{Al(OH)}_3]_n[\text{H}_2\text{O}]_{n'}$
in which $n = 8$ to 10 and $n' = 22$ to 31

Action and use

Treatment of gastric and duodenal ulcers.

Ph Eur

DEFINITION

β-D-Fructofuranosyl-α-D-glucopyranoside octakis (dihydroxyaluminium sulfate) with 8-10 molecules of aluminium hydroxide and 22-31 molecules of water.

Content

- β-D-fructofuranosyl-α-D-glucopyranoside octakis (sulfate) (sucrose octasulfate) (C₁₂H₁₄O₃₅S₈⁸⁻; M_r 975): 30.0 per cent to 38.0 per cent;
- aluminium (Al; A_r 26.98): 15.5 per cent to 18.5 per cent.

CHARACTERS

Appearance

White or almost white, amorphous powder.

Solubility

Practically insoluble in water, in ethanol (96 per cent) and in methylene chloride. It dissolves in dilute solutions of mineral acids and alkali hydroxides.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison sucralfate CRS.

B. To 2 g add 10 mL of a 10.3 g/L solution of hydrochloric acid R and boil. Cool and neutralise with a 4 g/L solution of sodium hydroxide R. To 5 mL of the solution add 0.15 mL of freshly prepared copper sulfate solution R and 2 mL of freshly prepared dilute sodium hydroxide solution R. The solution is blue and clear and remains so after boiling. To the hot solution add 4 mL of dilute hydrochloric acid R and boil for 1 min. Add 4 mL of dilute sodium hydroxide solution R; an orange precipitate is formed immediately.

C. Dissolve about 15 mg in a mixture of 0.5 mL of dilute hydrochloric acid R and 2 mL of water R. The solution gives the reaction of aluminium (2.3.1).

TESTS**Impurity A**

Liquid chromatography (2.2.29).

Test solution Dissolve 450.0 mg of the substance to be examined in a mixture of equal volumes of an 88 g/L solution of *sodium hydroxide R* and a 196.2 g/L solution of *sulfuric acid R* and dilute to 10.0 mL with the same mixture of solvents. Without delay, while shaking at a moderate rate, add a volume (*V*), accurately measured in millilitres, of a 4 g/L solution of *sodium hydroxide R* to adjust the solution to approximately pH 2.3. Dilute the solution with (15.0 - *V*) mL of *water R*. Shake for 1 min. If the pH is not between 2.3 and 3.5, repeat the test using a different volume of a 4 g/L solution of *sodium hydroxide R*.

Reference solution (a) Dissolve 40.0 mg of *potassium sucrose octasulfate CRS* in the mobile phase and dilute to 5.0 mL with the mobile phase.

Reference solution (b) Dilute 1.0 mL of reference solution (a) to 10.0 mL with the mobile phase.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.0$ mm;
- stationary phase: aminopropylsilyl silica gel for chromatography *R* (5 μ m).

Mobile phase 70 g/L solution of *ammonium sulfate R*, adjusted to pH 3.5 with *phosphoric acid R*.

Flow rate 1 mL/min.

Detection Differential refractometer.

Injection 50 μ L of the test solution and reference solution (b).

Relative retention With reference to sucrose octasulfate (retention time = about 6 min): impurity A = about 0.6.

System suitability Reference solution (b):

- number of theoretical plates: minimum 400;
- symmetry factor: maximum 4.0.

Limit:

- impurity A: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (5.0 per cent).

Neutralising capacity

Disperse 0.25 g in 100.0 mL of 0.1 M *hydrochloric acid*, previously heated at 37 °C, stir continuously for 1 h in a water-bath at 37 °C and cool. Titrate 20.0 mL of this solution with 0.1 M *sodium hydroxide* to pH 3.5; not more than 14.0 mL of 0.1 M *sodium hydroxide* is required.

Chlorides (2.4.4)

Maximum 0.50 per cent.

Dissolve 0.10 g in 5 mL of *dilute nitric acid R* and dilute to 50 mL with *water R*. Dilute 5 mL of this solution to 15 mL with *water R*.

ASSAY**Aluminium**

Disperse 1.0 g in 10 mL of 6 M *hydrochloric acid R*. Heat with continuous stirring in a water-bath at 70 °C for 5 min. Cool to room temperature, transfer quantitatively to a volumetric flask, dilute to 250.0 mL with *water R*, and mix. Filter the solution, discarding the 1st portion of the filtrate. To 10.0 mL of the solution, add 10.0 mL of 0.1 M *sodium edetate* and 30 mL of a mixture of equal volumes of *ammonium acetate solution R* and *dilute acetic acid R*. Heat in a water-bath at 70 °C for 5 min, then cool. Add 25 mL of *ethanol (96 per cent) R* and 1 mL of a freshly prepared 0.25 g/L solution of *dithizone R* in *ethanol (96 per cent) R*.

Titrate the excess of sodium edetate with 0.1 M *zinc sulfate* until the colour changes to pink.

1 mL of 0.1 M *sodium edetate* is equivalent to 2.698 mg of Al.

Sucrose octasulfate

Liquid chromatography (2.2.29) as described in the test for impurity A with the following modifications.

Mobile phase 132 g/L solution of *ammonium sulfate R*, adjusted to pH 3.5 with *phosphoric acid R*.

Injection Test solution and reference solution (a).

Calculate the percentage content of $C_{12}H_{14}O_{35}S_8$ taking into account the assigned content of *potassium sucrose octasulfate CRS* and by multiplying the potassium sucrose octasulfate content by 0.757.

IMPURITIES

Specified impurities A.

R = SO₃H
and H in a 7 to 1 ratio

A. β -D-fructofuranosyl- α -D-glucopyranoside heptakis (hydrogen sulfate).

Action and use
Sweetening agent.

Ph Eur

DEFINITION

1,6-Dichloro-1,6-dideoxy- β -D-fructofuranosyl 4-chloro-4-deoxy- α -D-galactopyranoside.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS**Appearance**

White or almost white, crystalline powder.

Solubility

Freely soluble in water, soluble in anhydrous ethanol, slightly soluble in ethyl acetate.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

Comparison *sucralose CRS*.

TESTS

Specific optical rotation (2.2.7)

+ 84.0 to + 87.5 (anhydrous substance).

Dissolve 2.50 g in *water R* and dilute to 25.0 mL with the same solvent.

Impurities H and I

Test solution Dissolve 2.5 g of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

Reference solution (a) Dissolve 1.0 g of *mannitol R* in *water R* and dilute to 10.0 mL with the same solvent.

Reference solution (b) Dissolve 1.0 g of *mannitol R* and 4.0 mg of *fructose R* in *water R* and dilute to 10.0 mL with the same solvent.

Plate TLC silica gel plate *R*.

Application 5 µL by applying the solution slowly in 1 µL aliquots and allowing the plate to dry between applications; the 3 spots must be of a similar size.

Detection Spray with a solution prepared as follows: dissolve 1.23 g of *p-anisidine R* and 1.66 g of *phthalic acid R* in 100 mL of *methanol R*; store the solution in darkness and in a refrigerator to prevent it becoming discoloured; discard if the solution becomes discoloured; heat the plate at 100 ± 2 °C for 15 min and examine immediately against a dark background.

System suitability The spot due to mannitol obtained with reference solution (a) is colourless; darkening of the mannitol spot indicates that the plate has been held for too long in the oven and a 2nd plate has to be prepared.

Limit:

— *sum of impurities H and I*: any spot is not more intense than the spot due to fructose obtained with reference solution (b) (0.1 per cent).

Related substances

Thin-layer chromatography (2.2.27).

Test solution Dissolve 1.0 g of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

Reference solution (a) Dilute 0.5 mL of the test solution to 100.0 mL with *methanol R*.

Reference solution (b) Dissolve the contents of a vial of *sucralose impurity B CRS* in 1.0 mL of the test solution.

Plate TLC octadecylsilyl silica gel plate *R*.

Mobile phase acetonitrile *R*, 50 g/L solution of sodium chloride *R* (30:70 V/V).

Application 5 µL.

Development Over 3/4 of the plate.

Drying In air.

Detection Spray with a 15 per cent V/V solution of *sulfuric acid R* in *methanol R* and heat at 125 °C for 10 min.

Retardation factors Impurity A = about 0.3;

impurity B = about 0.35; sucralose = about 0.45;

impurity F = about 0.67; impurity G = about 0.70;

impurity E = about 0.72; impurity D = about 0.8.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots due to impurity B and sucralose.

Limits:

— *impurities A, B, D, E, F, G*: any spot, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.5 per cent).

Water (2.5.12)

Maximum 2.0 per cent, determined on 0.500 g.

Sulfated ash (2.4.14)

Maximum 0.7 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29).

Test solution Dissolve 0.25 g of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase.

Reference solution Dissolve 0.25 g of *sucralose CRS* in the mobile phase and dilute to 25.0 mL with the mobile phase.

Column:

— *size*: $l = 0.10$ m, $\varnothing = 4.6$ mm;

— *stationary phase*: octadecylsilyl silica gel for chromatography *R* (5 µm).

Mobile phase acetonitrile *R*, *water R* (15:85 V/V).

Flow rate 1.5 mL/min.

Detection Refractometer maintained at a constant temperature.

Injection 20 µL.

Retention time Sucralose = about 3 min.

System suitability Reference solution:

— *symmetry factor*: maximum 2.0 for the peak due to sucralose.

Calculate the percentage content of $C_{12}H_{19}Cl_3O_8$ taking into account the assigned content of *sucralose CRS*.

IMPURITIES

Specified impurities A, B, D, E, F, G, H, I.

A. 1,6-dichloro-1,6-dideoxy- β -D-fructofuranosyl 6-O-acetyl-4-chloro-4-deoxy- α -D-galactopyranoside (6-O-acetylsucralose),

DEFINITION

β -D-Fructofuranosyl α -D-glucopyranoside.

It contains no additives.

CHARACTERS

Appearance

White or almost white, crystalline powder, or lustrous, colourless or white or almost white crystals.

Solubility

Very soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in anhydrous ethanol.

IDENTIFICATION

First identification: A.

Second identification: B, C.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison sucrose CRS.

B. Thin-layer chromatography (2.2.27).

Test solution Dissolve 10 mg of the substance to be examined in a mixture of 2 volumes of water R and 3 volumes of methanol R and dilute to 20 mL with the same mixture of solvents.

¹ This monograph has undergone pharmacopoeial harmonisation. See chapter 5.8 Pharmacopoeial harmonisation.

Reference solution (a) Dissolve 10 mg of *sucrose CRS* in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 mL with the same mixture of solvents.

Reference solution (b) Dissolve 10 mg of *fructose R*, 10 mg of *glucose R*, 10 mg of *lactose monohydrate R* and 10 mg of *sucrose R* in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 mL with the same mixture of solvents.

Plate TLC silica gel G plate R.

Mobile phase cold saturated boric acid solution R, 60 per cent V/V solution of *glacial acetic acid R, anhydrous ethanol R, acetone R, ethyl acetate R* (10:15:20:60:60 V/V/V/V/V).

Application 2 µL.

Development In an unsaturated tank, over 3/4 of the plate.

Drying In a current of warm air.

Detection Spray with a solution of 0.5 g of *thymol R* in a mixture of 5 mL of *sulfuric acid R* and 95 mL of *ethanol (96 per cent) R*. Heat the plate at 130 °C for 10 min.

System suitability The chromatogram obtained with reference solution (b) shows 4 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dilute 1 mL of solution S (see Tests) to 100 mL with *water R*. To 5 mL of the solution add 0.15 mL of freshly prepared *copper sulfate solution R* and 2 mL of freshly prepared *dilute sodium hydroxide solution R*. The solution is blue and clear and remains so after boiling. To the hot solution add 4 mL of *dilute hydrochloric acid R* and boil for 1 min. Add 4 mL of *dilute sodium hydroxide solution R*. An orange precipitate is formed immediately.†

TESTS

Solution S

Dissolve 50.0 g in *water R* and dilute to 100 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1).

Conductivity (2.2.38)

Maximum 35 µS·cm⁻¹ at 20 °C.

Dissolve 31.3 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent. Measure the conductivity of the solution (C₁), while gently stirring with a magnetic stirrer, and that of the water used for preparing the solution (C₂). The readings must be stable within 1 per cent over a period of 30 s. Calculate the conductivity of the solution of the substance to be examined using the following expression:

$$C_1 - 0.35 C_2$$

Specific optical rotation (2.2.7)

+ 66.3 to + 67.0.

Dissolve 26.0 g in *water R* and dilute to 100.0 mL with the same solvent.

†**Colour value**

Maximum 45.

Dissolve 50.0 g in 50.0 mL of *water R*. Mix, filter (diameter of pores 0.45 µm) and degas. Measure the absorbance (2.2.25) at 420 nm, using a minimum path length of 4 cm (a path length of 10 cm or more is preferred).

Calculate the colour value using the following expression:

$$\frac{A \times 1000}{b \times c}$$

- A = absorbance measured at 420 nm;
- b = path length in centimetres;
- c = concentration of the solution, in grams per millilitre, calculated from the refractive index (2.2.6) of the solution; use Table 0204.-1 and interpolate the values if necessary.

Table 0204.-1

n_D^{20}	c (g/mL)
1.4138	0.570
1.4159	0.585
1.4179	0.600
1.4200	0.615
1.4221	0.630
1.4243	0.645
1.4264	0.661

System suitability:

— **repeatability:** the absolute difference between 2 results is not greater than 3.†

Dextrins

If intended for use in the manufacture of large-volume parenteral preparations, it complies with the test for dextrins. To 2 mL of solution S add 8 mL of *water R*, 0.05 mL of *dilute hydrochloric acid R* and 0.05 mL of 0.05 M *iodine*. The solution remains yellow.

Reducing sugars

To 5 mL of solution S in a test-tube about 150 mm long and 16 mm in diameter add 5 mL of *water R*, 1.0 mL of 1 M *sodium hydroxide* and 1.0 mL of a 1 g/L solution of *methylene blue R*. Mix and place in a water-bath. After exactly 2 min, take the tube out of the bath and examine the solution immediately. The blue colour does not disappear completely. Ignore any blue colour at the air/solution interface.

Sulfites

Maximum 10 ppm, calculated as SO₂.

Determine the sulfites content by a suitable enzymatic method based on the following reactions. Sulfite is oxidised by sulfite oxidase to sulfate and hydrogen peroxide which in turn is reduced by nicotinamide-adenine dinucleotide-peroxidase in the presence of reduced nicotinamide-adenine dinucleotide (NADH). The amount of NADH oxidised is proportional to the amount of sulfite.

Test solution Dissolve 4.0 g of the substance to be examined in freshly prepared *distilled water R* and dilute to 10.0 mL with the same solvent.

Reference solution. Dissolve 4.0 g of the substance to be examined in freshly prepared *distilled water R*, add 0.5 mL of *sulfite standard solution (80 ppm SO₂) R* and dilute to 10.0 mL with freshly prepared *distilled water R*.

Blank solution Freshly prepared *distilled water R*.

Separately introduce 2.0 mL each of the test solution, the reference solution and the blank in 10 mm cuvettes and add the reagents as described in the instructions in the kit for sulfite determination. Measure the absorbance (2.2.25) at the absorption maximum at about 340 nm before and at the end of the reaction time and subtract the value obtained with the blank.

The absorbance difference of the test solution is not greater than half the absorbance difference of the reference solution.

Loss on drying (2.2.32)

Maximum 0.1 per cent, determined on 2.000 g by drying in an oven at 105 °C for 3 h.

Bacterial endotoxins (2.6.14)

Less than 0.25 IU/mg, if intended for use in the manufacture of large-volume parenteral preparations.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of large-volume parenteral preparations.

Ph Eur

Syrup

Syrup

(Liquid Sucrose, Ph. Eur. monograph 2797)

Ph Eur

DEFINITION

Aqueous solution of sucrose.

Content

— *dry matter*: 66.0 per cent *m/m* to 67.5 per cent *m/m*.

CHARACTERS

Appearance

Clear, colourless or pale yellow, viscous liquid.

Solubility

Miscible with glycerol.

IDENTIFICATION

A. Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution (b) and reference solution (c).

Results The principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

B. Dilute 75 g to 100 mL with *water R*. Dilute 1 mL of the solution to 100 mL with *water R*. To 5 mL of this solution add 0.15 mL of freshly prepared *copper sulfate solution R* and 2 mL of freshly prepared *dilute sodium hydroxide solution R*. The solution is blue and clear and remains so after boiling. To the hot solution add 4 mL of *dilute hydrochloric acid R* and boil for 1 min. Add 4 mL of *dilute sodium hydroxide solution R*. An orange precipitate is formed immediately.

TESTS

Colour value

Maximum 30.

Dilute a quantity of the substance to be examined corresponding to 50.0 g of dry matter (see Tests) to 100.0 g with *water R*. Filter through a membrane filter (nominal pore size 0.45 µm) and allow to stand for about 15 min. Measure the absorbance (2.2.25) at 420 nm, using a minimum path length of 5 cm (a path length of 10 cm or more is preferred). Calculate the colour value using the following expression:

$$\frac{A \times 1000}{b \times c}$$

- A* = absorbance measured at 420 nm;
b = path length, in centimetres;
c = concentration of the solution obtained, in grams per millilitre, calculated from the refractive index (2.2.6) of the solution; use Table 2797.-1 and interpolate the values if necessary.

Table 2797.-1

n_D^{20}	<i>c</i> (g/mL)
1.4138	0.570
1.4159	0.585
1.4179	0.600
1.4200	0.615
1.4221	0.630
1.4243	0.645
1.4264	0.661

System suitability:

— *repeatability*: the absolute difference between 2 results is not greater than 3.

Conductivity (2.2.38)

Maximum 35 µS·cm⁻¹ at 20 °C.

Dilute a quantity of the substance to be examined corresponding to 31.3 ± 0.1 g of dry matter (see Tests) to 100.0 mL with *carbon dioxide-free water R*. Measure the conductivity of the solution (*C*₁), while gently stirring with a magnetic stirrer, and that of the water used for preparing the solution (*C*₂). The readings must be stable within 1 per cent over a period of 30 s. Calculate the conductivity of the solution of the substance to be examined using the following expression:

$$C_1 - 0.35 C_2$$

Related substances

Liquid chromatography (2.2.29).

Test solution (a) Dilute 0.200 g of the substance to be examined to 10.0 mL with *water R*.

Test solution (b) Dilute 1.0 mL of test solution (a) to 20.0 mL with *water R*.

Reference solution (a) Dilute 1.0 mL of test solution (a) to 200.0 mL with *water R*.

Reference solution (b) Dissolve 10.0 mg of *raffinose pentahydrate R* (impurity A) and 14.0 mg of *glucose R* (impurity C) in *water R* and dilute to 50.0 mL with the same solvent. To 1.0 mL of the solution add 26.0 mg of *sucrose CRS* and dilute to 2.0 mL with *water R*.

Reference solution (c) Dissolve 33.0 mg of *sucrose CRS* in *water R* and dilute to 5.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *water R*.

Precolumn:

- *size*: *l* = 0.03 m, Ø = 8.0 mm;
- *stationary phase*: strong cation-exchange resin (calcium form) *R* (9 µm).

Column:

- *size*: *l* = 0.30 m, Ø = 7.8 mm;
- *stationary phase*: strong cation-exchange resin (calcium form) *R* (9 µm);
- *temperature*: 80 ± 1 °C.

Mobile phase *water for chromatography R*.

Flow rate 0.5 mL/min.

Detection Differential refractometer maintained at a constant temperature (about 40 °C).

Injection 10 µL of test solution (a) and reference solutions (a) and (b).

Run time 3 times the retention time of sucrose.

Identification of impurities Use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A (or B) and C.

Impurity A is present in sucrose obtained from sugar beet and impurity B is present in sucrose obtained from sugar cane.

Relative retention With reference to sucrose (retention time = about 10 min): impurities A and B = about 0.9; impurity C = about 1.2.

System suitability Reference solution (b):

— **peak-to-valley ratio:** minimum 2.5, where H_p = height above the baseline of the peak due to impurity A and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to sucrose; minimum 2.5, where H_p = height above the baseline of the peak due to impurity C and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to sucrose.

Calculation of percentage contents:

— for each impurity, use the concentration of sucrose in reference solution (a).

Limits:

- **impurity C:** maximum 0.7 per cent;
- **unspecified impurities:** for each impurity, maximum 0.5 per cent;
- **total:** maximum 2.0 per cent;
- **reporting threshold:** 0.05 per cent.

Sulfites

Maximum 10 ppm, calculated as SO₂.

Determine the sulfites content by a suitable enzymatic method based on the following reactions. Sulfite is oxidised by sulfite oxidase to sulfate and hydrogen peroxide which in turn is reduced by nicotinamide-adenine dinucleotide-peroxidase in the presence of reduced nicotinamide-adenine dinucleotide (NADH). The amount of NADH oxidised is proportional to the amount of sulfite.

Test solution Dilute 4.0 g of the substance to be examined to 10.0 mL with freshly prepared distilled water R.

Reference solution To 4.0 g of the substance to be examined add 0.5 mL of sulfite standard solution (80 ppm SO₂) R and dilute to 10.0 mL with freshly prepared distilled water R.

Blank solution Freshly prepared distilled water R.

Separately introduce 2.0 mL each of the test solution, the reference solution and the blank solution into 10 mm cuvettes and add the reagents as described in the instructions in the kit for sulfite determination. Measure the absorbance (2.2.25) at the absorption maximum at about 340 nm before and at the end of the reaction time and subtract the value obtained with the blank.

The absorbance difference of the test solution is not greater than half the absorbance difference of the reference solution.

Dry matter

Determine the refractive index (2.2.6). Use Table 2797.-2 and interpolate the values if necessary.

Table 2797.-2

Dry matter (per cent m/m)	n_D^{20}
65	1.453478
66	1.455839
67	1.458217
68	1.460613
69	1.463026

IMPURITIES

Specified impurities C.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, B, D.

A. β -D-fructofuranosyl α -D-galactopyranosyl-(1→6)- α -D-glucopyranoside (raffinose),

B. β -D-fructofuranosyl α -D-glucopyranosyl-(1→6)- α -D-glucopyranoside (theanderose),

C. D-glucopyranose (glucose),

D. D-arabino-hex-2-ulopyranose (fructose).

Ph Eur

Sucrose Monopalmitate

(Ph. Eur. monograph 2319)

Ph Eur

DEFINITION

Mixture of sucrose monoesters, mainly sucrose monopalmitate, obtained by transesterification of palmitic (hexadecanoic) acid methyl esters of vegetable origin with Sucrose (0204). The manufacture of the fatty acid methyl esters includes a distillation step.

It contains variable quantities of mono-, di-, tri- and polyesters.

Content

- monoesters: minimum 55.0 per cent;
- diesters: maximum 40.0 per cent;
- sum of triesters and polyesters: maximum 20.0 per cent.

CHARACTERS

Appearance

White or almost white, unctuous powder.

Solubility

Very slightly soluble in water, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Composition of fatty acids (see Tests).

B. It complies with the limits of the assay.

TESTS

Acid value (2.5.1)

Maximum 6.0, determined on 3.00 g.

Use a freshly neutralised mixture of 1 volume of water R and 2 volumes of 2-propanol R as solvent and heat gently.

Composition of fatty acids (2.4.22, Method C)

Use the mixture of calibrating substances in Table 2.4.22.-1.

Composition of the fatty-acid fraction of the substance:

- lauric acid: maximum 3.0 per cent;
- myristic acid: maximum 3.0 per cent;
- palmitic acid: 70.0 per cent to 85.0 per cent;
- stearic acid: 10.0 per cent to 25.0 per cent;
- sum of the contents of palmitic acid and stearic acid: minimum 90.0 per cent.

Free sucrose

Liquid chromatography (2.2.29).

Solvent mixture water for chromatography R, tetrahydrofuran for chromatography R (12.5:87.5 V/V).

Test solution Dissolve 0.200 g of the substance to be examined in the solvent mixture and dilute to 4.0 mL with the solvent mixture.

Reference solution (a) Dissolve 20.0 mg of sucrose CRS in the solvent mixture and dilute to 10.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Reference solution (b) In 4 volumetric flasks, introduce respectively 5.0 mg, 10.0 mg, 20.0 mg and 25.0 mg of sucrose CRS, dissolve in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: spherical aminopropylsilyl silica gel for chromatography R (4 μ m).

Mobile phase:

- mobile phase A: 0.01 g/L solution of ammonium acetate R in acetonitrile for chromatography R;

- mobile phase B: 0.01 g/L solution of ammonium acetate R in a mixture of 10 volumes of water for chromatography R and 90 volumes of tetrahydrofuran for chromatography R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)	Flow rate (mL/min)
0 - 1	100	0	1.0
1 - 9	100 → 0	0 → 100	1.0
9 - 16	0	100	1.0
16 - 16.01	0	100	1.0 → 2.5
16.01 - 32	0	100	2.5

Detection Evaporative light-scattering detector; the following settings have been found to be suitable; if the detector has different setting parameters, adjust the detector settings so as to comply with the system suitability criterion:

- carrier gas: nitrogen R;
- flow rate: 1.0 mL/min;
- evaporator temperature: 45 °C;
- nebuliser temperature: 40 °C.

Injection 20 μ L.

Retention time About 26 min.

System suitability Reference solution (a):

- signal-to-noise ratio: minimum 10.

Limit Maximum 4.0 per cent.

Water (2.5.12)

Maximum 4.0 per cent, determined on 0.20 g.

Total ash (2.4.16)

Maximum 1.5 per cent.

ASSAY

Size-exclusion chromatography (2.2.30): use the normalisation procedure.

Test solution Dissolve 60.0 mg of the substance to be examined in tetrahydrofuran R and dilute to 4.0 mL with the same solvent.

Column:

- size: $l = 0.6$ m, $\varnothing = 7$ mm;
- stationary phase: styrene-divinylbenzene copolymer R (5 μ m) with a pore size of 10 nm.

Mobile phase: tetrahydrofuran R.

Flow rate 1.2 mL/min.

Detection Differential refractometer.

Injection 20 μ L.

Relative retention With reference to monoesters (retention time = about 13 min): diesters = about 0.93; triesters and polyesters = about 0.91.

Calculations:

- disregard limit: disregard the peaks having a signal-to-noise ratio less than 10;
- free fatty acids: calculate the percentage content of free fatty acids (C), using the following expression:

$$\frac{I_A \times 256}{56.11 \times 10}$$

- I_A = acid value (see Tests);
- 256 = rounded molar mass of palmitic acid, in grams per mole;
- 56.11 = molar mass of potassium hydroxide, in grams per mole.

- monoesters: calculate the percentage content of monoesters using the following expression:

$$\left[\frac{X}{X+Y+Z} (100 - A - B) \right] - C$$

- A** = percentage content of free sucrose (see Tests);
B = percentage content of water (see Tests);
C = percentage content of free fatty acids;
X = area of the peak due to monoesters and free fatty acids;
Y = area of the peak due to diesters;
Z = area of the peak due to triesters and polyesters.

— *diesters*: calculate the percentage content of diesters using the following expression:

$$\frac{Y}{X+Y+Z} (100 - A - B)$$

— *sum of triesters and polyesters*: calculate the sum of the percentage contents of triesters and polyesters using the following expression:

$$\frac{Z}{X+Y+Z} (100 - A - B)$$

STORAGE

Protected from humidity.

Ph Eur

Sucrose Stearate

(Ph. Eur. monograph 2318)

Ph Eur

DEFINITION

Mixture of sucrose esters, mainly sucrose stearate, obtained by transesterification of stearic (octadecanoic) acid methyl esters of vegetable origin with *sucrose* (0204).

The manufacture of the fatty acid methyl esters includes a distillation step.

It contains variable quantities of mono-, di-, tri- and polyesters.

Content

Sucrose stearate type I:

- *monoesters*: minimum 50.0 per cent;
- *diesters*: maximum 40.0 per cent;
- *sum of triesters and polyesters*: maximum 25.0 per cent;

Sucrose stearate type II:

- *monoesters*: 20.0 per cent to 45.0 per cent;
- *diesters*: 30.0 per cent to 40.0 per cent;
- *sum of triesters and polyesters*: maximum 30.0 per cent;

Sucrose stearate type III:

- *monoesters*: 15.0 per cent to 25.0 per cent;
- *diesters*: 30.0 per cent to 45.0 per cent;
- *sum of triesters and polyesters*: 35.0 per cent to 50.0 per cent.

CHARACTERS

Appearance

White or almost white, unctuous powder.

Solubility

Very slightly soluble in water, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

- A. Composition of fatty acids (see Tests).
- B. It complies with the limits of the assay.

TESTS

Acid value (2.5.1)

Maximum 6.0, determined on 3.00 g.

Use a freshly neutralised mixture of 1 volume of *water R* and 2 volumes of *2-propanol R* as solvent and heat gently.

Composition of fatty acids (2.4.22, Method C)

Use the mixture of calibrating substances in Table 2.4.22.-1.

Composition of the fatty-acid fraction of the substance:

- *lauric acid*: maximum 3.0 per cent;
- *myristic acid*: maximum 3.0 per cent;
- *palmitic acid*: 25.0 per cent to 40.0 per cent;
- *stearic acid*: 55.0 per cent to 75.0 per cent;
- *sum of the contents of palmitic acid and stearic acid*: minimum 90.0 per cent.

Free sucrose

Liquid chromatography (2.2.29).

Solvent mixture *water for chromatography R*, *tetrahydrofuran for chromatography R* (12.5:87.5 V/V).

Test solution Dissolve 0.200 g of the substance to be examined in the solvent mixture and dilute to 4.0 mL with the solvent mixture.

Reference solution (a) Dissolve 20.0 mg of *sucrose CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Reference solution (b) In 4 volumetric flasks, introduce respectively 5.0 mg, 10.0 mg, 20.0 mg and 25.0 mg of *sucrose CRS*, dissolve in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

Column:

- *size*: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- *stationary phase*: spherical *aminopropylsilyl silica gel for chromatography R* (4 μ m).

Mobile phase:

- *mobile phase A*: 0.01 g/L solution of *ammonium acetate R* in *acetonitrile for chromatography R*;
- *mobile phase B*: 0.01 g/L solution of *ammonium acetate R* in a mixture of 10 volumes of *water for chromatography R* and 90 volumes of *tetrahydrofuran for chromatography R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)	Flow rate (mL/min)
0 - 1	100	0	1.0
1 - 9	100 → 0	0 → 100	1.0
9 - 16	0	100	1.0
16 - 16.01	0	100	1.0 → 2.5
16.01 - 32	0	100	2.5

Detection Evaporative light-scattering detector; the following settings have been found to be suitable; if the detector has different setting parameters, adjust the detector settings so as to comply with the system suitability criterion:

- *carrier gas*: *nitrogen R*;
- *flow rate*: 1.0 mL/min;
- *evaporator temperature*: 45 °C;
- *nebuliser temperature*: 40 °C.

Injection 20 μ L.

Retention time About 26 min.

System suitability Reference solution (a):

- *signal-to-noise ratio*: minimum 10.

Limit:

- *sucrose*: maximum 4.0 per cent.

Water (2.5.12)

Maximum 4.0 per cent, determined on 0.20 g.

Total ash (2.4.16)

Maximum 1.5 per cent.

ASSAY

Size-exclusion chromatography (2.2.30): use the normalisation procedure.

Test solution Dissolve 60.0 mg of the substance to be examined in *tetrahydrofuran R* and dilute to 4.0 mL with the same solvent.

Column:

- size: $l = 0.6$ m, $\varnothing = 7$ mm;
- stationary phase: *styrene-divinylbenzene copolymer R* (5 μ m) with a pore size of 10 nm.

Mobile phase *tetrahydrofuran R*.

Flow rate 1.2 mL/min.

Detection Differential refractometer.

Injection 20 μ L.

Relative retention With reference to monoesters (retention time = about 13 min): diesters = about 0.94; triesters and polyesters = about 0.92.

Calculations:

- **disregard limit:** disregard the peaks having a signal-to-noise ratio less than 10;
- **free fatty acids:** calculate the percentage content of free fatty acids (*C*) using the following expression:

$$\frac{I_A \times 284}{56.11 \times 10}$$

- I_A = acid value (see Tests);
- 284 = rounded molar mass of stearic acid, in grams per mole;
- 56.11 = molar mass of potassium hydroxide, in grams per mole.

- **monoesters:** calculate the percentage content of monoesters using the following expression:

$$\left[\frac{X}{X + Y + Z} (100 - A - B) \right] - C$$

- A = percentage content of free sucrose (see Tests);
- B = percentage content of water (see Tests);
- C = percentage content of free fatty acids;
- X = area of the peak due to monoesters and free fatty acids;
- Y = area of the peak due to diesters;
- Z = area of the peak due to triesters and polyesters.

- **diesters:** calculate the percentage content of diesters using the following expression:

$$\frac{Y}{X + Y + Z} (100 - A - B)$$

- **sum of triesters and polyesters:** calculate the sum of the percentage contents of triesters and polyesters using the following expression:

$$\frac{Z}{X + Y + Z} (100 - A - B)$$

LABELLING

The label states the type of sucrose stearate (type I, II or III).

STORAGE

Protected from humidity.

Sufentanil

(Ph. Eur. monograph 1569)

$C_{22}H_{30}N_2O_2S$

386.6

56030-54-7

Action and use

Opioid receptor agonist; analgesic.

Ph Eur

DEFINITION

N-[4-(Methoxymethyl)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]-*N*-phenylpropanamide.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS**Appearance**

White or almost white powder.

Solubility

Practically insoluble in water, freely soluble in ethanol (96 per cent) and in methanol.

mp

About 98 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison Ph. Eur. reference spectrum of *sufentanil*.

TESTS**Appearance of solution**

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 0.10 g in *methanol R* and dilute to 20 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

Reference solution (a) In order to produce impurity E *in situ*, dissolve 10 mg of the substance to be examined in 10.0 mL of *dilute hydrochloric acid R*. Heat on a water-bath under a reflux condenser for 4 h. Add 10.0 mL of *dilute sodium hydroxide solution R*. Evaporate to dryness on a water-bath. Cool and take up the residue in 10 mL of *methanol R*. Filter.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 5.0 mL of this solution to 20.0 mL with *methanol R*.

Column:

- size: $l = 0.1$ m, $\varnothing = 4.6$ mm;
- stationary phase: *octadecylsilyl silica gel for chromatography R* (3 μ m).

Mobile phase:

- **mobile phase A:** 5 g/L solution of *ammonium carbonate R* in a mixture of 10 volumes of *tetrahydrofuran R* and 90 volumes of *water R*;
- **mobile phase B:** *acetonitrile R*;

Ph Eur

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 15	90 → 40	10 → 60
15 - 20	40	60

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 220 nm.

Injection 10 µL.

Relative retention With reference to sufentanil (retention time = about 13 min): impurity D = about 0.85; impurity E = about 0.9; impurity F = about 0.95; impurity H = about 1.1.

System suitability Reference solution (a):

— resolution: minimum 4.0 between the peaks due to impurity E and sufentanil.

Limits:

- impurities D, F, H: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);
- unspecified impurities: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- total: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- disregard limit: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 2 h.

ASSAY

Dissolve 0.300 g in 50 mL of a mixture of 1 volume of anhydrous acetic acid R and 7 volumes of methyl ethyl ketone R and titrate with 0.1 M perchloric acid, using 0.2 mL of naphtholbenzein solution R as indicator.

1 mL of 0.1 M perchloric acid is equivalent to 38.66 mg of C₂₂H₃₀N₂O₂S.

STORAGE

Protected from light.

IMPURITIES

Specified impurities D, F, H.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison Ph. Eur. reference spectrum of sufentanil citrate.

TESTS

Appearance of solution

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 0.2 g in water R and dilute to 20 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 0.100 g of the substance to be examined in methanol R and dilute to 10.0 mL with the same solvent.

Reference solution (a) In order to produce impurity E *in situ*, dissolve 10 mg of the substance to be examined in 10.0 mL of dilute hydrochloric acid R. Heat on a water-bath under a reflux condenser for 4 h. Add 10.0 mL of dilute sodium hydroxide solution R. Evaporate to dryness on a water-bath. Cool and take up the residue in 10 mL of methanol R. Filter.

Reference solution (b) Dilute 5.0 mL of the test solution to 100.0 mL with methanol R. Dilute 1.0 mL of this solution to 10.0 mL with methanol R.

Column:

- size: $l = 0.1$ m, $\varnothing = 4.6$ mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (3 μ m).

Mobile phase:

- mobile phase A: 5 g/L solution of ammonium carbonate R in a mixture of 10 volumes of tetrahydrofuran R and 90 volumes of water R;
- mobile phase B: acetonitrile R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 15	90 → 40	10 → 60
15 - 20	40	60

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 220 nm.

Injection 10 μ L.

Relative retention With reference to sufentanil (retention time = about 13 min): impurity A = about 0.3; impurity B = about 0.4; impurity I = about 0.45; impurity C = about 0.7; impurity D = about 0.85; impurity E = about 0.9; impurity F = about 0.95; impurity G = about 1.05; impurity H = about 1.1.

System suitability Reference solution (a):

- resolution: minimum 4.0 between the peaks due to impurity E and sufentanil.

Limits:

- impurities A, B, C, D, E, F, G, H, I: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- unspecified impurities: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- total: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);
- disregard limit: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak with a relative retention with reference to sufentanil of 0.05 or less.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C.

ASSAY

Dissolve 0.400 g in 50 mL of a mixture of 1 volume of anhydrous acetic acid R and 7 volumes of methyl ethyl ketone R and titrate with 0.1 M perchloric acid, using 0.2 mL of naphtholbenzein solution R as indicator.

1 mL of 0.1 M perchloric acid is equivalent to 57.87 mg of C₂₈H₃₈N₂O₉S.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E, F, G, H, I.

A. *N*-[4-(methoxymethyl)piperidin-4-yl]-*N*-phenylpropanamide,

B. *cis*-4-(methoxymethyl)-4-(phenylpropanoylamino)-1-[2-(thiophen-2-yl)ethyl]piperidine 1-oxide,

C. [4-(phenylamino)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]methanol,

D. *N*-[4-(methoxymethyl)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]-*N*-phenylacetamide,

E. 4-(methoxymethyl)-*N*-phenyl-1-[2-(thiophen-2-yl)ethyl]piperidin-4-amine,

F. *N*-[4-(methoxymethyl)-1-[2-(thiophen-3-yl)ethyl]piperidin-4-yl]-*N*-phenylpropanamide,

G. [4-(phenylpropanoylamino)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]methyl propanoate,

H. *N*-[4-(methoxymethyl)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]-*N*-phenylbutanamide,

I. *trans*-4-(methoxymethyl)-4-(phenylpropanoylamino)-1-[2-(thiophen-2-yl)ethyl]piperidine 1-oxide.

Ph Eur

Compressible Sugar

Action and use

Excipient.

DEFINITION

Compressible Sugar contains Sucrose and maltodextrin or dried glucose syrup. It contains 95.0 to 98.0% of Sucrose and 2 to 5% of dried glucose syrup or maltodextrin. It may contain a suitable lubricant, invert sugar or suitable colouring matter.

CHARACTERISTICS

Dry free-flowing powder or microcrystalline agglomerates.

Very soluble in *water*.

Dissolve 20 g in 80 mL of *water*, dilute to 100 mL with *water* and filter (solution S).

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of compressible sugar (RS 401).

B. The specific optical rotation of the uninverted solution obtained in the Assay is not less than 62.6 and the acid-inverted solution is laevorotatory.

TESTS

Conductivity

Not more than 35 $\mu\text{S}\cdot\text{cm}^{-1}$, Appendix V O. Dissolve 31.3 g in *carbon dioxide-free water* prepared from *distilled water* and dilute to 100 mL with the same solvent. Measure the conductivity of the solution (C_1), while gently stirring with a magnetic stirrer, and that of the *water* used for preparing the solution (C_2). The readings must be stable within 1% over a period of 30 seconds. Calculate the conductivity of the

solution of the substance being examined from the expression $C_1 - 0.35C_2$.

Calcium

Add 1 mL of *ammonium oxalate* to 5 mL of solution S. The solution remains clear for not less than 1 minute.

Lead

Not more than 0.5 ppm of Pb when determined by *atomic absorption spectrometry*, Appendix II D, Method II, using an apparatus equipped with a graphite furnace and the following solution. Dissolve 50 mg in 0.5 mL of *lead-free nitric acid* in a polyfluorocarbon-lined digestion bomb and heat at 150° for 5 hours. Allow to cool and dilute to 5 mL with *water*. Measure the absorbance at 283.3 nm, maintaining the drying temperature of the furnace at 110°, the ashing temperature at 600° and the atomising temperature at 2100°.

Chloride

2 mL of solution S diluted to 15 mL with *water* complies with the *limit test for chlorides*, Appendix VII (125 ppm).

Sulfate

7.5 mL of solution S diluted to 15 mL with *water* complies with the *limit test for sulfates*, Appendix VII (100 ppm).

Loss on drying

When dried at 105° for 4 hours, loses 0.25 to 1.0% of its weight. Use 1 g.

ASSAY

To 26 g of the substance being examined, previously dried, add 0.3 mL of a saturated aqueous solution of *lead(II) acetate* and 90 mL of *water*, shake, dilute to 100 mL with *water* and mix. Distribute evenly on the surface of a sheet of medium-fast filter paper 8 g of chromatographic siliceous earth and filter the solution with the aid of vacuum, discarding the first 20 mL of the filtrate. Transfer 25 mL of the filtrate into each of two 50 mL flasks. Slowly add 6 mL of 2M *hydrochloric acid* to one flask while rotating it, add 10 mL of *water*, mix, place the flask in a water bath at 60°, continuously shake for 3 minutes and allow the flask to stand in the water bath for a further 7 minutes. Immediately cool to 20° and dilute the solution with *water* to 50 mL and mix. Cool the contents of the second flask to 20°, dilute with *water* to volume and mix. Maintain both flasks at 20° for 30 minutes. Determine the *specific optical rotation*, Appendix V F, of each solution at 20°. Calculate the percentage of $C_{12}H_{22}O_{11}$ using the expression $100(a_0 - a_i)/88.3$ where a_0 and a_i are the specific optical rotations of the uninverted and acid-inverted solutions respectively.

Sugar Spheres

(Ph. Eur. monograph 1570)

Action and use
Excipient.

Ph Eur

DEFINITION

Sugar spheres contain not more than 92 per cent of sucrose, calculated on the dried basis. The remainder consists of maize starch and may also contain starch hydrolysates and colour additives. The diameter of sugar spheres varies usually from 200 µm to 2000 µm and the upper and lower limits of the size of the sugar spheres are stated on the label.

IDENTIFICATION

A. Examine by thin-layer chromatography (2.2.27), using a *TLC silica gel G plate R*.

Solvent mixture water R, methanol R (2:3 V/V).

Test solution Mix 2 mL of solution S (see Tests) with 3 mL of *methanol R* and dilute to 20 mL with the solvent mixture.

Reference solution (a) Dissolve 10 mg of *sucrose GRS* in the solvent mixture and dilute to 20 mL with the solvent mixture.

Reference solution (b) Dissolve 10 mg of *fructose R*, 10 mg of *glucose R*, 10 mg of *lactose monohydrate R* and 10 mg of *sucrose R* in the solvent mixture and dilute to 20 mL with the solvent mixture.

Apply to the plate 2 µL of each solution and thoroughly dry the points of application. Develop over a path of 15 cm using a mixture of 10 volumes of *water R*, 15 volumes of *methanol R*, 25 volumes of *anhydrous acetic acid R* and 50 volumes of *ethylene chloride R*, measured accurately as a slight excess of water causes cloudiness of the solution. Dry the plate in a current of warm air. Repeat the development immediately after renewing the mobile phase. Dry the plate in a current of warm air and spray evenly with a 5 g/L solution of *thymol R* in a mixture of 5 volumes of *sulfuric acid R* and 95 volumes of *ethanol (96 per cent) R*. Heat at 130 °C for 10 min. The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows 4 clearly separated spots.

B. To a water slurry of the insoluble portion obtained in the assay, add 0.05 mL of *iodine solution R1*. A dark-blue colour is produced, which disappears on heating.

C. To 5 mL of solution S add 0.15 mL of freshly prepared *copper sulfate solution R* and 2 mL of freshly prepared *dilute sodium hydroxide solution R*. The solution is blue and clear and remains so after boiling. To the hot solution add 4 mL of *dilute hydrochloric acid R* and boil for 1 min. Add 4 mL of *dilute sodium hydroxide solution R*. An orange precipitate is formed immediately.

TESTS

Solution S

To 0.5 g in a 100 mL volumetric flask add 80 mL of *water R* and shake until the sucrose is dissolved. Dilute to 100.0 mL with *water R*. Filter under vacuum to obtain a clear solution.

Fineness (2.9.35)

Not less than 90 per cent *m/m* of the sugar spheres are between the lower and the upper limits of the size of the sugar spheres stated on the label.

Loss on drying (2.2.32)

Maximum 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulfated ash (2.4.14)

Maximum 0.2 per cent, determined on 2 g.

Microbial contamination

TAMC: acceptance criterion 10^3 CFU/g (2.6.12).

TYMC: acceptance criterion 10^2 CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

Absence of *Salmonella* (2.6.13).

ASSAY**Sucrose content**

Weigh 10.000 g of ground sugar spheres in a 100 mL flask and make up to 100.0 mL with *water R*. Stir and decant. Filter under vacuum to obtain a clear solution (the insoluble portion is used for identification test B). Measure the angle of optical rotation (2.2.7) and calculate the sucrose percentage content using the following expression:

$$\frac{10^6 \times \alpha}{66.5 \times l \times m \times (100 - H)}$$

- α = angle of rotation;
 l = length of the polarimeter tube, in decimetres;
 m = exact mass of the sample, in grams;
 H = loss on drying.

LABELLING

The label states the upper and the lower limits of the size of the sugar spheres.

Ph Eur

Sulbactam Sodium

(Ph. Eur. monograph 2209)

$C_8H_{10}NNaO_5S$ 255.2 69388-84-7

Action and use

Beta-lactam antibacterial.

Ph Eur

DEFINITION

Sodium (2*S*,5*R*)-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo [3.2.0]heptane-2-carboxylate 4,4-dioxide.

Semi-synthetic product derived from a fermentation product.

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS**Appearance**

White or almost white, hygroscopic, crystalline powder.

Solubility

Freely soluble in water, sparingly soluble in ethyl acetate, very slightly soluble in ethanol (96 per cent). It is freely soluble in dilute acids.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison *sublactam sodium CRS*.

B. It gives reaction (a) of sodium (2.3.1).

TESTS**Appearance of solution**

The solution is clear (2.2.1).

Dissolve 2.0 g in *water R* and dilute to 20 mL with the same solvent.

Absorbance (2.2.25)

Maximum 0.10 at 430 nm.

Dissolve 1.0 g in *water R* and dilute to 100.0 mL with the same solvent.

pH (2.2.3)

4.5 to 7.2; if the substance is sterile: 5.2 to 7.2.

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

Specific optical rotation (2.2.7)

+ 219 to + 233 (anhydrous substance).

Dissolve 0.500 g in *water R* and dilute to 50.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Solution A 2.72 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 4.0 with *dilute phosphoric acid R*.

Solution B Dilute 2 mL of *acetonitrile R1* to 100.0 mL with *solution A*.

Test solution Suspend 77.0 mg of the substance to be examined in 2 mL of *acetonitrile R1*, sonicate for about 5 min and dilute to 100.0 mL with *solution A*.

Reference solution (a) Suspend 70.0 mg of *sublactam CRS* in 2 mL of *acetonitrile R1*, sonicate for about 5 min and dilute to 100.0 mL with *solution A*.

Reference solution (b) Dilute 1.0 mL of *reference solution (a)* to 100.0 mL with *solution B*. Dilute 1.0 mL of this solution to 10.0 mL with *solution B*.

Reference solution (c) Dissolve 15.0 mg of *6-aminopenicillanic acid R* (impurity B) in *solution A* and dilute to 50.0 mL with *solution A*.

Reference solution (d) Mix 1 mL of *reference solution (a)* and 1 mL of *reference solution (c)* and dilute to 25.0 mL with *solution B*.

Reference solution (e) Dissolve 8 mg of *sublactam for peak identification CRS* (containing impurities A, C, D, E and F) in 1 mL of *acetonitrile R1*, sonicate for about 5 min and dilute to 10 mL with *solution B*.

Column:

— size: $l = 0.10$ m, $\varnothing = 4.0$ mm;

— stationary phase: end-capped octadecylsilyl silica gel for chromatography R (3.0 μ m);

— temperature: 40 °C.

Mobile phase:

— *mobile phase A*: 5.44 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 4.0 with *dilute phosphoric acid R*;

— *mobile phase B*: *mobile phase A*, *acetonitrile R1* (40:60 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 2.0	98	2
2.0 - 9.5	98 → 50	2 → 50
9.5 - 12.0	50	50

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 215 nm.

Injection 20 μ L of the test solution, *solution B* and *reference solutions (b), (d) and (e)*.

Identification of impurities Use the chromatogram supplied with *sublactam for peak identification CRS* and the chromatogram obtained with *reference solution (e)* to identify the peaks due to impurities A, C, D, E and F; use the

chromatogram obtained with reference solution (d) to identify the peak due to impurity B.

Relative retention With reference to sulbactam (retention time = about 3 min): impurity A = about 0.4; impurity B = about 0.7; impurity C = about 2.3; impurity D = about 3.1; impurity E = about 3.3; impurity F = about 3.9.

System suitability Reference solution (d):

— **resolution:** minimum 5.0 between the peaks due to impurity B and sulbactam.

Calculation of percentage contents:

— **correction factors:** multiply the peak areas of the following impurities by the corresponding correction factor:

impurity A = 0.6; impurity B = 0.5; impurity D = 0.5; impurity F = 0.6;

— for each impurity, use the concentration of sulbactam in reference solution (b).

Limits:

— **impurity A:** maximum 0.5 per cent;

— **impurities C, E:** for each impurity, maximum 0.2 per cent;

— **impurities B, D, F:** for each impurity, maximum 0.1 per cent;

— **unspecified impurities:** for each impurity, maximum 0.10 per cent;

— **total:** maximum 1.0 per cent;

— **reporting threshold:** 0.05 per cent.

2-Ethylhexanoic acid (2.4.28)

Maximum 0.5 per cent *m/m*.

Water (2.5.12)

Maximum 1.0 per cent, determined on 1.00 g.

Bacterial endotoxins (2.6.14, Method A)

Less than 0.17 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (a).

Calculate the percentage content of $C_8H_{10}NNaO_5S$ taking into account the assigned content of *sulbactam* CRS and a conversion factor of 1.094.

STORAGE

In an airtight container. If the substance is sterile, store in a sterile, the container is also sterile and tamper-evident.

IMPURITIES

Specified impurities A, B, C, D, E, F.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) G.

A. (2S)-2-amino-3-methyl-3-sulfinobutanoic acid,

B. (2S,5R,6R)-6-amino-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-aminopenicillanic acid),

C. (2S,5R,6R)-6-bromo-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid 4,4-dioxide (6-bromopenicillanic acid sulfone),

D. (2S,5R,6R)-6-bromo-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-bromopenicillanic acid),

E. (2S,5R)-6,6-dibromo-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid 4,4-dioxide (6,6-dibromopenicillanic acid sulfone),

F. (2S,5R)-6,6-dibromo-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6,6-dibromopenicillanic acid),

G. (2S)-2-[[[(2E)-2-carboxyethenyl]amino]-3-methyl-3-sulfinobutanoic acid.

Ph Eur

Sulfacetamide Sodium

Soluble Sulfacetamide

(Ph. Eur. monograph 0107)

$C_8H_9N_2NaO_3S \cdot H_2O$ 254.2

Action and use

Sulfonamide antibacterial.

Ph Eur

DEFINITION

Sodium acetyl[(4-aminophenyl)sulfonyl]azanide monohydrate.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or yellowish-white, crystalline powder.

Solubility

Freely soluble in water, slightly soluble in anhydrous ethanol.

IDENTIFICATION

First identification: B, F.

Second identification: A, C, E, F.

A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

Test solution Dissolve 0.1 g in phosphate buffer solution pH 7.0 R and dilute to 100.0 mL with the same buffer solution. Dilute 1.0 mL of this solution to 100.0 mL with phosphate buffer solution pH 7.0 R.

Spectral range 230-350 nm.

Absorption maximum At 255 nm.

Specific absorbance at the absorption maximum 660 to 720 (anhydrous substance).

B. Infrared absorption spectrophotometry (2.2.24).

Comparison sulfacetamide sodium GRS.

C. Melting point (2.2.14): 181 °C to 185 °C.

Dissolve 1 g in 10 mL of water R, add 6 mL of dilute acetic acid R and filter. Wash the precipitate with a small quantity of water R and dry at 100-105 °C for 4 h.

E. Dissolve about 1 mg of the precipitate obtained in identification C, with heating, in 1 mL of water R.

The solution gives the reaction of primary aromatic amines (2.3.1) with formation of an orange-red precipitate.}

F. Solution S (see Tests) gives the reactions of sodium (2.3.1).

TESTS

Solution S

Dissolve 1.25 g in carbon dioxide-free water R and dilute to 25 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and not more intensely coloured than reference solution GY₄ (2.2.2, Method II).

pH (2.2.3)

8.0 to 9.5 for solution S.

Related substances

Liquid chromatography (2.2.29). Prepare the solutions immediately before use and carry out the test protected from light.

Test solution Dissolve 0.200 g of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

Reference solution (a) Dissolve 5 mg of sulfacetamide sodium GRS and 5 mg of sulfanilamide R (impurity A) in 1.0 mL of the mobile phase.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Column:

— size: $l = 0.125$ m, $\varnothing = 4$ mm;

— stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase glacial acetic acid R, methanol R, water for chromatography R (1:10:89 V/V/V).

Flow rate 0.8 mL/min.

Detection Spectrophotometer at 254 nm.

Injection 10 μ L.

Run time 7 times the retention time of sulfacetamide.

Relative retention With reference to sulfacetamide (retention time = about 5 min); impurity A = about 0.5.

System suitability Reference solution (a):

— resolution: minimum 5.0 between the peaks due to impurity A and sulfacetamide.

Limits:

— correction factor: for the calculation of the content, multiply the peak area of impurity A by 0.5;

— impurity A: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— total: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Sulfates (2.4.13)

Maximum 200 ppm.

Dissolve 2.5 g in distilled water R and dilute to 25 mL with the same solvent. Add 25 mL of dilute acetic acid R, shake for 30 min and filter. 15 mL of the filtrate complies with the limit test for sulfates.

Water (2.5.12)

6.0 per cent to 8.0 per cent, determined on 0.200 g.

ASSAY

Dissolve 0.500 g in a mixture of 50 mL of water R and 20 mL of dilute hydrochloric acid R. Cool the solution in a bath of iced water and carry out the determination of primary aromatic amino-nitrogen (2.5.8), determining the end-point electrometrically.

1 mL of 0.1 M sodium nitrite is equivalent to 23.62 mg of $C_8H_9N_2NaO_3S$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B, C, D.

A. 4-aminobenzenesulfonamide (sulfanilamide),

B. N-(4-sulfamoylphenyl)acetamide,

C. N-[[4-(acetamino)phenyl]sulfonyl]acetamide,

D. 4,4'-sulfonyldianiline (dapson).

Ph Eur

Sulfadiazine

(Ph. Eur. monograph 0294)

$C_{10}H_{10}N_4O_2S$

250.3

68-35-9

Action and use
Sulfonamide antibacterial.

Preparation
Sulfadiazine Injection

Ph Eur

DEFINITION

4-Amino-N-(pyrimidin-2-yl)benzenesulfonamide.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White, yellowish-white or pinkish-white, crystalline powder or crystals.

Solubility

Practically insoluble in water, slightly soluble in acetone, very slightly soluble in ethanol (96 per cent). It dissolves in solutions of alkali hydroxides and in dilute mineral acids.

IDENTIFICATION

First identification: A.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison sulfadiazine CRS.

B. Thin-layer chromatography (2.2.27).

Solvent mixture concentrated ammonia R, methanol R (4:96 V/V)

Test solution Dissolve 20 mg of the substance to be examined in 3 mL of the solvent mixture and dilute to 5.0 mL with the solvent mixture.

Reference solution Dissolve 20 mg of sulfadiazine CRS in 3 mL of the solvent mixture and dilute to 5.0 mL with the solvent mixture.

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase dilute ammonia R1, water R, nitromethane R, dioxan R (3:5:40:50 V/V/V/V).

Application 5 µL.

Development Over 3/4 of the plate.

Drying At 105 °C.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. Place 3 g in a dry tube. Immerse the lower part of the tube, inclined at 45°, in a silicone oil bath and heat to about 270 °C. The substance to be examined decomposes and a white or yellowish-white sublimate is formed, which, after recrystallisation from toluene R and drying at 100 °C, melts (2.2.14) at 123 °C to 127 °C.

D. Dissolve about 5 mg in 10 mL of a 103 g/L solution of hydrochloric acid R. Dilute 1 mL of the solution to 10 mL with water R. The solution, without further acidification, gives the reaction of primary aromatic amines (2.3.1).

TESTS

Appearance of solution

The solution is not more intensely coloured than reference solution Y₅, BY₅ or GY₅ (2.2.2, Method II).

Dissolve 0.8 g in a mixture of 5 mL of dilute sodium hydroxide solution R and 5 mL of water R.

Acidity

To 1.25 g, finely powdered, add 25 mL of carbon dioxide-free water R. Heat at about 70 °C for 5 min. Cool in iced water for about 15 min and filter. To 20 mL of the filtrate add 0.1 mL of bromothymol blue solution R1. Not more than 0.2 mL of 0.1 M sodium hydroxide is required to change the colour of the indicator.

Related substances

Liquid chromatography (2.2.29).

Solvent mixture 40 g/L solution of sodium hydroxide R, acetonitrile R, water R (2:20:60 V/V/V).

Test solution Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with water R.

Reference solution (a) Dissolve 5.0 mg of sulfadiazine impurity A CRS and 5.0 mg of sulfanilic acid RV (impurity B)

in the solvent mixture and dilute to 10.0 mL with *water R*. Dilute 1.0 mL of the solution to 100.0 mL with the mobile phase. Dilute 3.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (c) Dissolve the contents of a vial of *acetylsulfadiazine CRS* (impurity E) in 1 mL of the mobile phase.

Reference solution (d) Dissolve 5 mg of *sulfadiazine for identification of impurity F CRS* in the solvent mixture and dilute to 10.0 mL with *water R*.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase *acetomirile R*, 2.8 g/L solution of *phosphoric acid R* (10:90 V/V).

Flow rate 1.2 mL/min.

Detection Spectrophotometer at 260 nm.

Injection 20 μ L.

Run time 7 times the retention time of *sulfadiazine*.

Identification of impurities Use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A and B; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity E; use the chromatogram obtained with reference solution (d) to identify the peak due to impurity F.

Relative retention With reference to *sulfadiazine* (retention time = about 8.5 min): impurity A = about 0.26; impurity B = about 0.30; impurity E = about 2.1; impurity F = about 6.0.

System suitability Reference solution (a):

— resolution: minimum 2.0 between the peaks due to impurities A and B.

Limits:

- **correction factor:** for the calculation of content, multiply the peak area of impurity E by 0.7;
- **impurities A, B:** for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- **impurity E:** not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- **impurity F:** not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- **unspecified impurities:** for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent);
- **total:** maximum 0.5 per cent;
- **disregard limit:** 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.03 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in a mixture of 20 mL of *dilute hydrochloric acid R* and 50 mL of *water R*. Cool the solution in iced water. Carry out the determination of primary aromatic amino-nitrogen (2.5.8), determining the end-point electrometrically.

1 mL of 0.1 M *sodium nitrite* is equivalent to 25.03 mg of $C_{10}H_{10}N_4O_2S$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, E, F.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) C, D.

122-11-2

Action and use

Sulfonamide antibacterial.

Ph Eur

DEFINITION

4-Amino-N-(2,6-dimethoxypyrimidin-4-yl)benzene-1-sulfonamide.

Content

97.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, slightly soluble in methylene chloride, very slightly soluble in ethanol (96 per cent).

It is freely soluble in dilute sodium hydroxide and sparingly soluble in dilute hydrochloric acid.

mp

197 °C to 202 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison sulfadimethoxine CRS.

TESTS

Acidity

Suspend 0.5 g in 25 mL of carbon dioxide-free water R. Heat the suspension at 70 °C for 5 min, cool quickly to room temperature and filter. Not more than 0.1 mL of 0.1 M sodium hydroxide is required to reach pH 7.0.

Related substances

Liquid chromatography (2.2.29).

Solution A Dissolve 6.0 g of sodium dihydrogen phosphate R in 950 mL of water for chromatography R, adjust to pH 7.0 with dilute sodium hydroxide solution R and dilute to 1000 mL with water for chromatography R.

Test solution Dissolve 20.0 mg of the substance to be examined in 25 mL of methanol R and dilute to 100.0 mL with solution A.

Reference solution (a) Dissolve 20.0 mg of sulfadimethoxine CRS in 25 mL of methanol R and dilute to 100.0 mL with solution A.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

Reference solution (c) Dissolve 4 mg of sulfadimethoxine for peak identification CRS (containing impurities A and F) in 5 mL of methanol R and dilute to 20 mL with solution A.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: end-capped ethylene-bridged octadecylsilyl silica gel for chromatography (hybrid material) R (5 μ m);

— temperature: 25 °C.

Mobile phase:

— mobile phase A: methanol R, solution A (25:75 V/V);

— mobile phase B: methanol R, acetonitrile R, solution A (25:35:40 V/V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 10	100	0
10 - 30	100 → 0	0 → 100
30 - 35	0	100

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 254 nm.

Injection 10 μ L of the test solution and reference solutions (b) and (c).

Identification of impurities Use the chromatogram supplied with sulfadimethoxine for peak identification CRS and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A and F.

Relative retention With reference to sulfadimethoxine (retention time = about 11 min): impurity F = about 0.4; impurity A = about 1.2.

System suitability:

— resolution: minimum 2.5 between the peaks due to sulfadimethoxine and impurity A in the chromatogram obtained with reference solution (c);

— signal-to-noise ratio: minimum 40 for the principal peak in the chromatogram obtained with reference solution (b).

Calculation of percentage contents:

— correction factors: multiply the peak areas of the following impurities by the corresponding correction factor:

impurity A = 1.4; impurity F = 1.7;

— for each impurity, use the concentration of sulfadimethoxine in reference solution (b).

Limits:

— impurities A, F: for each impurity, maximum 0.15 per cent;

— unspecified impurities: for each impurity, maximum 0.10 per cent;

— total: maximum 0.5 per cent;

— reporting threshold: 0.05 per cent.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (a).

Calculate the percentage content of $C_{12}H_{14}N_4O_4S$ taking into account the assigned content of sulfadimethoxine CRS.

STORAGE

Protected from light.

310.3

2447-57-6

Action and use
Sulfonamide antibacterial.

Ph Eur

DEFINITION

Sulfadoxine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(5,6-dimethoxypyrimidin-4-yl)benzenesulfonamide, calculated with reference to the dried substance.

CHARACTERS

White or yellowish-white crystalline powder or crystals, very slightly soluble in water, slightly soluble in alcohol and in methanol. It dissolves in solutions of alkali hydroxides and in dilute mineral acids.

It melts at about 198 °C, with decomposition.

IDENTIFICATION

First identification: A, C.

Second identification: B, C, D.

A. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *sulfadoxine CRS*. Examine the substances prepared as discs.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 0.5 g in 1 mL of a 40 per cent *V/V* solution of *sulfuric acid R*, heating gently. Continue heating until a crystalline precipitate appears (about 2 min). Allow to cool and add 10 mL of *dilute sodium hydroxide solution R*. Cool again. Add 25 mL of *ether R* and shake for 5 min. Separate the ether layer, dry over *anhydrous sodium sulfate R* and filter. Evaporate the solvent by heating in a water-bath. The residue melts (2.2.14) at 80 °C to 82 °C or at 90 °C to 92 °C.

D. Dissolve about 5 mg in 10 mL of 1 *M* *hydrochloric acid*. Dilute 1 mL of the solution to 10 mL with *water R*.

The solution, without further acidification, gives the reaction of primary aromatic amines (2.3.1).

TESTS

Appearance of solution

Dissolve 1.0 g in a mixture of 5 mL of *dilute sodium hydroxide solution R* and 5 mL of *water R*. The solution is not more intensely coloured than reference solution Y₅, BY₅ or GY₅ (2.2.2, *Method II*).

Acidity

To 1.25 g, finely powdered, add 25 mL of *carbon dioxide-free water R*. Heat at 70 °C for 5 min. Cool in a bath of iced water for about 15 min and filter. To 20 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of 0.1 *M* *sodium hydroxide* is required to change the colour of the indicator.

Related substances

Examine by thin-layer chromatography (2.2.27), using *silica gel GF₂₅₄ R* as the coating substance.

Test solution (a) Dissolve 0.10 g of the substance to be examined in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

Test solution (b) Dilute 1 mL of test solution (a) to 5 mL with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

Reference solution (a) Dissolve 20 mg of *sulfadoxine CRS* in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

Reference solution (b) Dilute 2.5 mL of test solution (b) to 100 mL with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

Apply to the plate 5 μ L of each solution. Develop over a path of 15 cm using a mixture of 3 volumes of *dilute ammonia R1*, 5 volumes of *water R*, 40 volumes of *nitromethane R* and 50 volumes of *dioxan R*. Dry the plate at 100 °C to 105 °C and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Loss on drying (2.2.32)

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Carry out the determination of primary aromatic amino-nitrogen (2.5.8), using 0.250 g and determining the end-point electrometrically.

1 mL of 0.1 M *sodium nitrite* is equivalent to 31.03 mg of C₁₂H₁₃N₃O₃S.

Ph Eur

DEFINITION

Sulfafurazole contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-N-(3,4-dimethylisoxazol-5-yl)benzenesulfonamide, calculated with reference to the dried substance.

CHARACTERS

White or yellowish-white, crystalline powder or crystals, practically insoluble in water, sparingly soluble in alcohol, slightly soluble in methylene chloride. It dissolves in solutions of alkali hydroxides and in dilute mineral acids.

It melts at about 197 °C, with decomposition.

IDENTIFICATION

First identification: A, C.

Second identification: B, C, D.

A. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *sulfafurazole CRS*. Examine the substances prepared as discs.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. To 0.5 g add 1 mL of a 40 per cent *V/V* solution of *sulfuric acid R* and heat over a low flame to dissolve. Continue heating until a crystalline precipitate appears (about 2 min). Allow to cool and add 10 mL of *dilute sodium hydroxide solution R*. Cool. Shake the solution for 5 min with 25 mL of *ether R*. Separate the ether layer, dry over *anhydrous sodium sulfate R* and filter. Evaporate the solvent by heating on a water-bath. The residue melts (2.2.14) at 119 °C to 123 °C.

D. Dissolve about 5 mg in 10 mL of 1 M *hydrochloric acid*. Dilute 1 mL of the solution to 10 mL with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines (2.3.1).

TESTS

Appearance of solution

Dissolve 0.4 g in a mixture of 5 mL of *dilute sodium hydroxide solution R* and 5 mL of *water R*, with gently warming if necessary. The solution is not more intensely coloured than reference solution Y₆, BY₆ or GY₆ (2.2.2, *Method II*).

Acidity

To 1.25 g, finely powdered, add 25 mL of *carbon dioxide-free water R*. Heat at 70 °C for 5 min. Cool in iced water for about 15 min and filter. 20 - 40	100 → 30	0 → 70
40 - 45	30	70

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µL.

Identification of impurities Use the chromatogram supplied with sulfamethizole for system suitability CRS and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities B, C and D.

Relative retention With reference to sulfamethizole (retention time = about 17 min): impurity B = about 0.23; impurity C = about 0.24; impurity D = about 1.9.

System suitability Reference solution (b):

— resolution: minimum 1.5 between the peaks due to impurities B and C.

Calculation of percentage contents:

- *correction factor*: multiply the peak area of impurity D by 1.4;
- for each impurity, use the concentration of sulfamethizole in reference solution (a).

Limits:

- *impurity D*: maximum 0.2 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.5 per cent;
- *reporting threshold*: 0.05 per cent.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Carry out the determination of primary aromatic amino-nitrogen (2.5.8), using 0.2500 g and determining the end-point electrometrically.

1 mL of 0.1 M sodium nitrite is equivalent to 27.03 mg of $C_{10}H_{11}N_3O_3S_2$.

STORAGE

Protected from light.

IMPURITIES**Specified impurities D.**

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, B, C.

- A. hydrazinecarbothioamide (thiosemicarbazide),

- B. 4-aminobenzene-1-sulfonamide (sulfanilamide),

- C. 5-methyl-1,3,4-thiadiazol-2-amine,

- D. 4-(4-aminobenzene-1-sulfonamido)-N-(5-methyl-1,3,4-thiadiazol-2-yl)benzene-1-sulfonamide.

Sulfamethoxazole

(Ph. Eur. monograph 0108)

$C_{10}H_{11}N_3O_3S$

253.3

723-46-6

Action and use

Sulfonamide antibacterial.

Preparations

- Co-trimoxazole Infusion
- Co-trimoxazole Oral Suspension
- Paediatric Co-trimoxazole Oral Suspension
- Co-trimoxazole Tablets
- Co-trimoxazole Dispersible Tablets
- Paediatric Co-trimoxazole Tablets

Ph Eur

DEFINITION

4-Amino-N-(5-methylisoxazol-3-yl)benzenesulfonamide.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS**Appearance**

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in acetone, sparingly soluble in ethanol (96 per cent). It dissolves in dilute solutions of sodium hydroxide and in dilute acids.

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D.

A. Melting point (2.2.14): 169 °C to 172 °C.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison sulfamethoxazole CRS.

C. Thin-layer chromatography (2.2.27).

Test solution Dissolve 20 mg of the substance to be examined in 3 mL of a mixture of 2 volumes of concentrated ammonia R and 48 volumes of methanol R and dilute to 5 mL with the same mixture of solvents.

Reference solution Dissolve 20 mg of sulfamethoxazole CRS in 3 mL of a mixture of 2 volumes of concentrated ammonia R and 48 volumes of methanol R and dilute to 5 mL with the same mixture of solvents.

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase dilute ammonia R1, water R, nitromethane R, dioxan R (3:5:41:51 V/V/V/V).

Application 5 µL.

Development Over 3/4 of the plate.

Drying At 100–105 °C.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

Ph Eur

D. Dissolve about 5 mg in 10 mL of 1 M hydrochloric acid. Dilute 1 mL of the solution to 10 mL with water R. The solution, without further acidification, gives the reaction of primary aromatic amines (2.3.1).

TESTS

Appearance of solution

The solution is clear (2.2.1) and not more intensely coloured than reference solution Y₅, BY₅ or GY₅ (2.2.2, Method II).

Dissolve 1.0 g in a mixture of 5 mL of dilute sodium hydroxide solution R and 5 mL of water R.

Acidity

To 1.25 g, finely powdered, add 25 mL of water R. Heat at 70 °C for 5 min. Cool in iced water for about 15 min and filter. To 20 mL of the filtrate add 0.1 mL of bromothymol blue solution R1. Not more than 0.3 mL of 0.1 M sodium hydroxide is required to change the colour of the indicator.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 50.0 mg of the substance to be examined in 45 mL of the mobile phase, sonicate at about 45 °C for 10 min, cool and dilute to 50.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

Reference solution (b) Dissolve 1 mg of the substance to be examined and 1 mg of sulfamethoxazole impurity A CRS in the mobile phase and dilute to 10.0 mL with the mobile phase.

Reference solution (c) Dissolve 1.0 mg of sulfamethoxazole impurity F CRS in the mobile phase and dilute to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.0$ mm,
- stationary phase: octylsilyl silica gel for chromatography R (5 μ m),
- temperature: 30 °C.

Mobile phase Mix 35 volumes of methanol R2 and 65 volumes of a 13.6 g/L solution of potassium dihydrogen phosphate R previously adjusted to pH 5.3 with a 20 g/L solution of potassium hydroxide R.

Flow rate 0.9 mL/min.

Detection Spectrophotometer at 210 nm.

Injection 20 μ L.

Run time 3 times the retention time of sulfamethoxazole.

Relative retention With reference to sulfamethoxazole (retention time = about 10 min): impurity D = about 0.3; impurity E = about 0.35; impurity F = about 0.45; impurity C = about 0.5; impurity A = about 1.2; impurity B = about 2.0.

System suitability Reference solution (b):

- resolution: minimum 3.5 between the peaks due to sulfamethoxazole and impurity A.

Limits:

- impurities A, B, C, D, E: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- impurity F: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent),
- any other impurity: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),

- total: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent),
- disregard limit: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.025 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Carry out the assay of primary aromatic amino-nitrogen (2.5.8), using 0.200 g and determining the end-point electrometrically.

1 mL of 0.1 M sodium nitrite is equivalent to 25.33 mg of C₁₀H₁₁N₃O₃S.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E, F.

A. N-[4-[(5-methylisoxazol-3-yl)sulfonyl]phenyl]acetamide,

DEFINITION

2-Hydroxy-5-[2-[4-(pyridin-2-ylsulfamoyl)phenyl]diazanyl]benzoic acid.

Content

97.0 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance

Bright yellow or brownish-yellow, fine powder.

Solubility

Practically insoluble in water, very slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Preparation Discs.

Comparison sulfasalazine CRS.

TESTS

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 25.0 mg of the substance to be examined in dilute ammonia R3 and dilute to 25.0 mL with the same solvent.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with dilute ammonia R3.

Reference solution (b) Dissolve 1.0 mg of sulfasalazine derivative for resolution CRS in 10.0 mL of reference solution (a). Dilute 1.0 mL of this solution to 10.0 mL with reference solution (a).

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;— stationary phase: octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase:

— **mobile phase A:** in a 1000 mL volumetric flask dissolve 1.13 g of sodium dihydrogen phosphate R and 2.5 g of sodium acetate R in 900 mL of water R; adjust to pH 4.8 with glacial acetic acid R and dilute to 1000 mL with water R;

— **mobile phase B:** mobile phase A, methanol R (10:40 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 15	60 → 45	40 → 55
15 - 25	45	55
25 - 60	45 → 0	55 → 100
60 - 65	0	100

Flow rate 1 mL/min.

Detection Spectrophotometer at 320 nm.

Injection 20 μ L.

Relative retention With reference to sulfasalazine:

impurity H = about 0.16; impurity I = about 0.28; impurity C = about 0.80; impurity F = about 0.85; impurity G = about 1.39; impurity E = about 1.63; impurity B = about 1.85; impurity D = about 1.90; impurity A = about 2.00.

System suitability Reference solution (b):

— **resolution:** minimum 3.0 between the peaks due to sulfasalazine and sulfasalazine derivative for resolution.

Limits:

- **impurities A, B, C, D, E, F, G, I:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1 per cent);
- **total:** not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (4 per cent);
- **disregard limit:** 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard any peak with a retention time less than 6 min (due to impurities H and J).

Impurities H and J

Liquid chromatography (2.2.29).

Test solution Dissolve 25.0 mg of the substance to be examined in dilute ammonia R3 and dilute to 25.0 mL with the same solvent.

Reference solution (a) Dissolve 5.0 mg of salicylic acid R (impurity H) and 5.0 mg of sulfapyridine CRS (impurity J) in dilute ammonia R3 and dilute to 10.0 mL with the same solvent.

Reference solution (b) Dilute 2.0 mL of reference solution (a) to 100.0 mL with dilute ammonia R3.

Column:

— size: $l = 0.25$, $\varnothing = 4.6$ mm;— stationary phase: octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase Mobile phase B (described in the test for related substances), mobile phase A (described in the test for related substances) (30:70 V/V).

Flow rate 1 mL/min.

Detection Spectrophotometer at 300 nm.

Injection 20 μ L of the test solution and reference solution (b).

Run time 10 min.

Retention time Impurity H = about 6 min;
impurity J = about 7 min.

System suitability Reference solution (b):

— **resolution:** minimum 2 between the peaks due to impurities H and J.

Limits:

- **impurities H, J:** for each impurity, not more than 0.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- **disregard limit:** 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Chlorides (2.4.4)

Maximum 140 ppm.

To 1.25 g add 50 mL of *distilled water R*. Heat at about 70 °C for 5 min. Cool and filter. To 20 mL of the filtrate add 1 mL of *nitric acid R*, allow to stand for 5 min and filter to obtain a clear solution.

Sulfates (2.4.13)

Maximum 400 ppm.

To 20 mL of the filtrate prepared for the test for chlorides add 1 mL of *dilute hydrochloric acid R*, allow to stand for 5 min and filter.

Loss on drying (2.2.32)

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulfated ash (2.4.14)

Maximum 0.5 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 0.1 M *sodium hydroxide* and dilute to 100.0 mL with the same solvent. Transfer 5.0 mL of this solution to a 1000 mL volumetric flask containing about 750 mL of *water R*. Add 20.0 mL of a 6 g/L solution of *glacial acetic acid R* and dilute to 1000.0 mL with *water R*. Prepare a standard solution at the same time and in the same manner using 0.150 g of *sulfasalazine CRS*. Measure the absorbance (2.2.25) of the 2 solutions at the absorption maximum at 359 nm.

Calculate the content of $C_{18}H_{14}N_4O_5S$ from the absorbances measured and the concentration of the solutions.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E, F, G, H, I, J.

Ph Eur

Sulfathiazole

(Ph. Eur. monograph 0742)

C₉H₉N₃O₂S₂

255.3

72-14-0

Action and use
Sulfonamide antibacterial.

Ph Eur

DEFINITION

Sulfathiazole contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(thiazol-2-yl)benzenesulfonamide, calculated with reference to the dried substance.

CHARACTERS

A white or slightly yellowish, crystalline powder, practically insoluble in water, slightly soluble in alcohol, practically insoluble in methylene chloride. It dissolves in dilute solutions of alkali hydroxides and in dilute mineral acids.

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D, E.

A. Melting point (2.2.14): 200 °C to 203 °C. Melting may occur at about 175 °C, followed by solidification and a second melting between 200 °C and 203 °C.

B. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with sulfathiazole CRS. Examine the substances prepared as discs. If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in alcohol R, evaporate to dryness *in vacuo* and record the spectra again using the residues.

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 10 mg in a mixture of 10 mL of water R and 2 mL of 0.1 M sodium hydroxide and add 0.5 mL of copper sulfate solution R. A greyish-blue or purple precipitate is formed.

E. Dissolve about 5 mg in 10 mL of 1 M hydrochloric acid. Dilute 1 mL of the solution to 10 mL with water R. The solution, without further addition of acid, gives the reaction of primary aromatic amines (2.3.1).

TESTS

Appearance of solution

Dissolve 1.0 g in 10 mL of 1 M sodium hydroxide. The solution is clear (2.2.1) and not more intensely coloured than reference solution GY₄ (2.2.2, Method II).

Acidity

To 1.0 g add 50 mL of carbon dioxide-free water R. Heat to 70 °C for 5 min. Cool rapidly to 20 °C and filter. To 25 mL of the filtrate add 0.1 mL of bromothymol blue solution R1. Not more than 0.1 mL of 0.1 M sodium hydroxide is required to change the colour of the indicator.

Related substances

Examine by thin-layer chromatography (2.2.27), using silica gel H R as the coating substance.

Test solution (a) Dissolve 0.10 g of the substance to be examined in a mixture of 1 volume of concentrated ammonia R and 9 volumes of alcohol R and dilute to 10 mL with the same mixture of solvents.

Test solution (b) Dilute 1 mL of test solution (a) to 5 mL with a mixture of 1 volume of concentrated ammonia R and 9 volumes of alcohol R.

Reference solution (a) Dissolve 20 mg of sulfathiazole CRS in a mixture of 1 volume of concentrated ammonia R and 9 volumes of alcohol R and dilute to 10 mL with the same mixture of solvents.

Reference solution (b) Dissolve 50 mg of sulfamylamide R in a mixture of 1 volume of concentrated ammonia R and 9 volumes of alcohol R and dilute to 100 mL with the same mixture of solvents. Dilute 1 mL of this solution to 10 mL with the same mixture of solvents.

Apply to the plate 10 µL of each solution. Develop over a path of 15 cm using a mixture of 18 volumes of ammonia R and 90 volumes of butanol R. Dry the plate at 100 °C to 105 °C for 10 min and spray with a 1 g/L solution of dimethylaminobenzaldehyde R in alcohol R containing 1 per cent V/V of hydrochloric acid R. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Loss on drying (2.2.32)

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Carry out the determination of primary aromatic amino-nitrogen (2.5.8), using 0.200 g, determining the end-point electrometrically.

1 mL of 0.1 M sodium nitrite is equivalent to 25.53 mg of $C_9H_9N_3O_2S_2$.

Action and use

Uricosuric.

Ph Eur

DEFINITION

1,2-Diphenyl-4-[2-(phenylsulfinyl)ethyl]pyrazolidine-3,5-dione.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Very slightly soluble in water, sparingly soluble in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification: A, C.

Second identification: A, B, D.

A. Melting point (2.2.16): 131 °C to 135 °C.

B. Ultraviolet and visible absorption spectrophotometry (2.2.25).

Test solution Dissolve 30.0 mg in 0.01 M sodium hydroxide and dilute to 100.0 mL with the same alkaline solution. Dilute 1.0 mL of this solution to 20.0 mL with 0.01 M sodium hydroxide.

Spectral range 230-350 nm.

Absorption maximum At 260 nm.

Specific absorbance at the absorption maximum 530 to 580.

C. Infrared absorption spectrophotometry (2.2.24).

Comparison sulfinpyrazone CRS.

D. Dissolve about 10 mg in 3 mL of acetone R and add a mixture of 0.2 mL of ferric chloride solution R2 and 3 mL of water R. A red to violet colour develops.

TESTS

Appearance of solution in acetone

The solution is clear (2.2.1) and its absorbance (2.2.25) at 420 nm using a path length of 4 cm is not greater than 0.10. Dissolve 1.25 g in acetone R and dilute to 25 mL with the same solvent.

Appearance of solution in 1 M sodium hydroxide

The solution is clear (2.2.1) and its absorbance (2.2.25) at 420 nm using a path length of 4 cm is not greater than 0.15. Dissolve 1.25 g, heating gently if necessary, in 25 mL of 1 M sodium hydroxide.

Related substances

Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

Solvent mixture water R, acetonitrile R (10:40 V/V).

Test solution Dissolve 10.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

Reference solution (b) Dissolve 5.0 mg of sulfinpyrazone impurity A CRS and 5.0 mg of sulfinpyrazone impurity B CRS in the solvent mixture and dilute to 5.0 mL with the solvent mixture.

Reference solution (c) Dilute 1.0 mL of reference solution (b) to 100.0 mL with the solvent mixture.

Reference solution (d) Dissolve the contents of a vial of sulfinpyrazone for system suitability CRS (containing impurity C) in 1.0 mL of the solvent mixture.

Reference solution (e) Dilute 1.0 mL of reference solution (a) to 10.0 mL with the solvent mixture.

Column:

— size: $l = 0.125$ m, $\varnothing = 4.6$ mm;

— stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase tetrahydrofuran for chromatography R, acetonitrile R, 0.3 per cent V/V solution of phosphoric acid R (7:35:58 V/V/V).

Flow rate 2.0 mL/min.

Detection Spectrophotometer at 235 nm.

Injection 20 μ l.

Run time 7 times the retention time of sulfinpyrazone.

Identification of impurities Use the chromatogram supplied with sulfinpyrazone for system suitability CRS and the chromatogram obtained with reference solution (d) to identify the peak due to impurity C; use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and B.

Relative retention With reference to sulfinpyrazone (retention time = about 3.5 min): impurity C = about 0.8; impurity A = about 1.6; impurity B = about 4.8.

System suitability Reference solution (d):

— resolution: minimum 2.0 between the peaks due to impurity C and sulfinpyrazone.

Limits:

— impurities A, B: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (1.0 per cent);

— impurity C: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (e) (0.2 per cent);

— unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (e) (0.10 per cent);

— total: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (2.0 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (e) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 25 mL of *acetone R*. Add 0.5 mL of *bromothymol blue solution R1*. Titrate with 0.1 M *sodium hydroxide* until the colour changes from yellow to blue.

1 mL of 0.1 M *sodium hydroxide* is equivalent to 40.45 mg of C₂₃H₂₀N₂O₃S.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C.

A. 1,2-diphenyl-4-[2-(phenylsulfonyl)ethyl]pyrazolidine-3,5-dione,

B. 1,2-diphenyl-4-[2-(phenylsulfanyl)ethyl]pyrazolidine-3,5-dione,

C. 4-hydroxy-1,2-diphenyl-4-[2-(phenylsulfinyl)ethyl]pyrazolidine-3,5-dione.

Sulfobutylbetadex Sodium

(Ph. Eur. monograph 2804)

R = H or (CH₂)₄-SO₃Na

C₄₂H_{70-n}O₃₅(C₄H₈SO₃Na)_n 2163 when n = 6.5 182410-00-0

Ph Eur

DEFINITION

Sulfobutylbetadex sodium (β-cyclodextrin, sodium 4-sulfonatobutyl ether) is the sodium salt of a partially substituted poly(sulfobutyl) ether of betadex.

Content

- *sulfobutylbetadex sodium*: 95.0 per cent to 105.0 per cent (anhydrous substance);
- *average number of sulfobutyl groups per cyclodextrin ring, expressed as average degree of substitution (DS)*: 5.9 to 6.6.

CHARACTERS

Appearance

White or almost white, hygroscopic powder.

Solubility

Freely soluble in water, practically insoluble in anhydrous ethanol and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison sulfobutylbetadex sodium CRS.

Results The spectrum obtained with the substance to be examined shows the same absorption bands as the spectrum obtained with *sulfobutylbetadex sodium CRS*. Due to differences in the degree of substitution of the substance, the relative intensity of some absorption bands may vary.

B. It gives reaction (a) of sodium (2.3.1).

TESTS

Solution S

Dissolve 7.50 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

pH (2.2.3)

5.0 to 7.5 for solution S.

Use intensive nitrogen purging to avoid carbon dioxide-absorption during measurement.

Reducing sugars

Maximum 0.05 per cent.

Reagent solution Dissolve 1.0 g of *triphenyltetrazolium chloride R* in 100 mL of *aldehyde-free methanol R*.

Test solution Dissolve 0.45 g of the substance to be examined in 2.0 mL of *dimethyl sulfoxide R* in a test tube and add 0.5 mL of a 40 g/L solution of *sodium hydroxide R* and 7.5 mL of the reagent solution. Mix and store at room temperature.

Reference solution Prepare at the same time and in the same manner as for the test solution, using 0.10 mL of a 2.25 g/L solution of *glucose R* instead of the substance to be examined. After 1 h, measure the absorbance (2.2.25) of the solutions at the absorption maximum at 482 nm. The absorbance of the test solution is not greater than that of the reference solution.

Impurities A, C and D

Liquid chromatography (2.2.29).

Test solution Dissolve 0.300 g of the substance to be examined in *water R* and dilute to 5.0 mL with the same solvent.

Reference solution (a) Dissolve 15.0 mg of *betadex CRS* (impurity A) in *water R* and dilute to 5.0 mL with the same solvent. Dilute 1.0 mL of the solution to 50.0 mL with *water R*.

Reference solution (b) Dissolve 15.0 mg of *sulfobutylbetadex impurity C CRS* in *water R* and dilute to 5.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *water R*.

Reference solution (c) Dissolve 15.0 mg of *sulfobutylbetadex impurity D CRS* in *water R* and dilute to 5.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *water R*.

Reference solution (d) Dissolve 0.300 g of *sulfobutylbetadex sodium CRS* in 1.0 mL of reference solution (b) and 0.5 mL of reference solution (c), and dilute to 5.0 mL with *water R*.

Column:

- size: $l = 0.15$ m, $\varnothing = 4.0$ mm;
- stationary phase: 4-dimethylaminobenzylcarbamidesilyl silica gel for chromatography R (3 μ m);
- temperature: 25 °C.

Mobile phase:

- mobile phase A: to 4.0 mL of *triethylamine R* add 900 mL of *water for chromatography R* and adjust to pH 4.5 with *anhydrous formic acid R*; dilute to 1000 mL with *water for chromatography R*;
- mobile phase B: *acetonitrile R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 2	90	10
2 - 8	90 → 60	10 → 40
8 - 14	60 → 40	40 → 60
14 - 20	40	60

Flow rate 1.1 mL/min.

Detection Evaporative light-scattering detector; the following settings have been found to be suitable; if the detector has different setting parameters, adjust the detector settings so as to comply with the system suitability criteria.

- carrier gas: *nitrogen R*;
- flow rate: 1.5 L/min;
- evaporator temperature: 50 °C.

Equilibration At initial isocratic conditions for 10 min.

Injection 10 μ L of the test solution and reference solutions (a) and (d).

Identification of impurities Use the chromatogram obtained with reference solution (a) to identify the peak due to impurity A; use the chromatogram obtained with reference solution (d) to identify the peaks due to impurities C and D.

Relative retention With reference to impurity A (retention time = about 2.9 min): impurity C = about 0.7; impurity D = about 2.0; sulfobutylbetadex elutes as several peaks after impurity D unless heart-cutting is applied.

System suitability:

- resolution: minimum 2.0 between the peaks due to impurities C and A in the chromatogram obtained with reference solution (d);
- repeatability: maximum relative standard deviation of 3.0 per cent for the area of the peak due to impurity A determined on 5 injections of reference solution (a), using the initial isocratic conditions for 4 min.

Limits:

- impurity A: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- impurity C: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.1 per cent);
- impurity D: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.05 per cent);
- disregard the peak due to the sodium counter-ion (corresponding to the dead volume of the column) and any peak eluting after impurity D (due to sulfobutylbetadex).

Impurity B

Gas chromatography (2.2.28). Prepare the solutions immediately before use.

Internal standard solution Dissolve 25.0 mg of *diethyl sulfone R* in 10.0 mL of *dimethylformamide R* and dilute to 1000.0 mL with *water R*. Dilute 1.0 mL of the solution to 100.0 mL with *water R*.

Test solutions (a), (b), (c) and (d) In 4 test tubes with screw caps, prepare 4 solutions as indicated in Table 2804.-1. Mix each test tube on a vortex mixer for 30 s and allow to stand for at least 5 min or until complete separation of the phases. Decant the organic phase into a vial and seal.

Reference solution (a) Dissolve 50.0 mg of *sulfobutylbetadex impurity B CRS* in 5.0 mL of *dimethylformamide R* and dilute with *water R* to obtain a concentration of 2.0 μ g/mL.

Reference solution (b) Dilute 1.0 mL of reference solution (a) to 2.0 mL with *water R*.

Reference solution (c) Dilute 1.0 mL of reference solution (a) to 4.0 mL with *water R*.

Blank solution Prepare as described for test solution (d), but omitting the substance to be examined.

Column:

- material: fused silica;
- size: $l = 30$ m, $\varnothing = 0.32$ mm;
- stationary phase: cyanopropyl(7)phenyl(7)methyl(86) polysiloxane R (film thickness 0.5 μ m).

Carrier gas *helium for chromatography R*.

Flow rate 2.4 mL/min.

Table 2804.-1.

	Substance to be examined (g)	Internal standard solution (mL)	Solvent/solution (mL)	Methylene chloride R (mL)	Final content of sulfobutylbetadex impurity B CRS (µg)
Blank solution	0	4.0	Water R, 1.0	1.0	0
Test solution (a)	1.000	4.0	Reference solution (a), 1.0	1.0	2.0
Test solution (b)	1.000	4.0	Reference solution (b), 1.0	1.0	1.0
Test solution (c)	1.000	4.0	Reference solution (c), 1.0	1.0	0.5
Test solution (d)	1.000	4.0	Water R, 1.0	1.0	0

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 10	100 → 200
	10 - 11.5	200 → 250
	11.5 - 16.5	250
Injection port		250
Detector		270

Detection Flame ionisation.

Injection 1 µL.

Relative retention With reference to the internal standard (retention time = about 6.5 min); impurity B = about 1.4.

System suitability:

— **repeatability:** maximum relative standard deviation of 10.0 per cent for the corrected ratios (as described under Calculation of content) determined on 5 injections of test solution (b).

Calculation of content Calculate the ratio of the area of the peak due to impurity B to the area of the peak due to the internal standard in the chromatograms obtained with test solutions (a), (b), (c) and (d) respectively. Subtract from these values the ratio of the area of the peak due to impurity B to the area of the peak due to the internal standard in the chromatogram obtained with the blank solution (diethyl sulfone may contain trace amounts of impurity B). Plot the added quantity of impurity B (in micrograms) as the abscissa and the corrected ratios as the ordinates. Extrapolate the line joining the points on the graph until it meets the x-axis. The distance between this point and the origin corresponds to the content of impurity B in micrograms per gram (ppm) of the substance to be examined.

Limit:

— **impurity B:** maximum 0.5 ppm.

Chlorides (2.4.4)

Maximum 0.12 per cent (corresponding to 0.20 per cent expressed as sodium chloride).

Dissolve a quantity of the substance to be examined corresponding to 42 mg of anhydrous substance in 15.0 mL of water R.

Water (2.5.12)

Maximum 10.0 per cent, determined on 0.200 g.

Microbial contamination

If intended for use in the manufacture of parenteral preparations:

— **TAMC:** acceptance criterion 10² CFU/g (2.6.12).

If not intended for use in the manufacture of parenteral preparations:

— **TAMC:** acceptance criterion 10³ CFU/g (2.6.12);

— **TYMC:** acceptance criterion 10² CFU/g (2.6.12);

— absence of *Escherichia coli* (2.6.13);

— absence of *Salmonella* (2.6.13).

ASSAY

Sulfobutylbetadex sodium

Size-exclusion chromatography (2.2.30).

Test solution Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

Reference solution Dissolve 0.100 g of sulfobutylbetadex sodium CRS in the mobile phase and dilute to 10.0 mL with the mobile phase.

Column:

— **size:** *l* = 0.30 m, Ø = 7.8 mm;

— **stationary phase:** polymethacrylate gel R.

Mobile phase Dissolve 10.11 g of potassium nitrate R in a mixture of 1 volume of acetonitrile for chromatography R and 4 volumes of water for chromatography R and dilute to 1000 mL with the same mixture of solvents.

Flow rate 1.0 mL/min.

Detection Differential refractometer maintained at 35 ± 2 °C.

Injection 20 µL.

Between-run rinsing Rinse the column with a mixture of 1 volume of acetonitrile for chromatography R and 9 volumes of water for chromatography R.

System suitability Reference solution:

— **repeatability:** maximum relative standard deviation of 2.0 per cent for the area of the peak due to sulfobutylbetadex, determined on 5 injections;

— **symmetry factor:** maximum 1.8.

Calculate the percentage content of sulfobutylbetadex sodium taking into account the assigned content of sulfobutylbetadex sodium CRS.

Average degree of substitution

Nuclear magnetic resonance spectrometry (2.2.33).

The average degree of substitution (*DS*) is calculated from the ratio between the signals of the inner-chain protons of the sulfoethyl ether groups (-O-CH₂-CH₂-CH₂-CH₂-SO₃H) and the signals of the glycosidic protons attached to the C1 carbon of the anhydroglucose units.

Test solution Introduce not less than 10.0 mg of the substance to be examined, previously dried for at least 1 day in a desiccator, into a 5 mm NMR tube. Add about 0.70 mL of deuterium oxide R1. Cap the tube and mix thoroughly.

Apparatus FT-NMR spectrometer operating at minimum 250 MHz and suitable for recording at 25 °C.

Acquisition of ¹H NMR spectra The following parameters may be used:

- sweep width: 10 ppm (0 to + 10.0 ppm);
- irradiation frequency offset: none;
- time domain: 32 K;
- pulse width: 90°;
- pulse delay: 15 s;
- dummy scans: 2;
- number of scans: 16.

Call the integration sub-routine after phase corrections and baseline correction between - 1 ppm and + 9 ppm.

The signal of exchangeable protons (solvent) at + 4.8 ppm is used as reference.

Make a zero filling at least twice in size relative to the acquisition data file and transform the FID to the spectrum without any correction of the Gaussian broadening factor (GB = 0) and with a line broadening factor not greater than 0.3 Hz (LB ≤ 0.3). Adjust integral level and tilting.

Measure the peak areas of the signals between 1.43 ppm and 2.12 ppm (*A*₁, -O-CH₂-CH₂-CH₂-CH₂-SO₃H), and the signals of the glycosidic protons between 4.95 ppm and 5.41 ppm (*A*₂, -O-CH-O-).

Calculate the average degree of substitution (*DS*) using the following expression:

$$\frac{7 \times A_1}{4 \times A_2}$$

- A*₁ = area of the peaks due to the inner methylene protons (indicated in bold) of the sulfoethyl ether functional group;
- A*₂ = area of the peaks due to the glycosidic protons (indicated in bold).

STORAGE

In an airtight container.

LABELLING

The label states:

- the average degree of substitution (*DS*);
- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

IMPURITIES

Specified impurities A, B, C, D.

- A. cycloheptakis-(1→4)-(α -D-glucopyranosyl) (betadex or cyclomaltoheptaose or β -cyclodextrin),

- B. 1,2 λ^6 -oxathiane-2,2-dione,

- C. 4-hydroxybutane-1-sulfonic acid,

- D. 4,4'-oxydi(butane-1-sulfonic acid).

Ph Eur

Sulindac

(Ph. Eur. monograph 0864)

C₂₀H₁₇FO₃S

356.4

38194-50-2

Action and use

Cyclo-oxygenase inhibitor; analgesic; anti-inflammatory.

Preparation

Sulindac Tablets

Ph Eur

DEFINITION

[(1*Z*)-6-Fluoro-3-[[4-[(*RS*)-methanesulfinyl]phenyl]methylidene]-2-methyl-3*H*-inden-1-yl]acetic acid.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

Yellow, crystalline powder.

Solubility

Very slightly soluble in water, soluble in methylene chloride, sparingly soluble in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

It shows polymorphism (5.9).

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison sulindac CRS.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of hot *methanol R*, evaporate to dryness and record new spectra using the residues.

TESTS

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 0.10 g of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b) Dissolve 4 mg of *sulindac* for system suitability *CRS* (containing impurities B, C and D) in the mobile phase and dilute to 2 mL with the mobile phase.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: silica gel for chromatography *R* (10 μ m).

Mobile phase glacial acetic acid *R*, ethanol (96 per cent) *R*, ethyl acetate *R*, methylene chloride *R* (1:4:100:400 *V/V/V/V*).

Flow rate 2 mL/min.

Detection Spectrophotometer at 280 nm.

Injection 20 μ L.

Run time 2.5 times the retention time of *sulindac*.

Identification of impurities Use the chromatogram supplied with *sulindac* for system suitability *CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities B, C and D.

Relative retention With reference to *sulindac* (retention time = about 10 min): impurity C = about 0.20; impurity B = about 0.25; impurity D = about 0.7.

System suitability Reference solution (b):

— resolution: minimum 2.0 between the peaks due to impurities C and B.

Calculation of percentage contents:

— correction factor: multiply the peak area of impurity C by 2;
— for each impurity, use the concentration of *sulindac* in reference solution (a).

Limits:

— impurity C: maximum 0.5 per cent;

— impurity B: maximum 0.4 per cent;

— impurity D: maximum 0.2 per cent;

— unspecified impurities: for each impurity, maximum 0.10 per cent;

— total: maximum 1.0 per cent;

— reporting threshold: 0.05 per cent.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C at a pressure not exceeding 0.7 kPa.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 mL of *methanol R*. Titrate with 0.1 *M* sodium hydroxide, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 *M* sodium hydroxide is equivalent to 35.64 mg of $C_{20}H_{17}FO_3S$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities B, C, D.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*) A.

Keratolytic.

Ph Eur

DEFINITION

Content

99.0 per cent to 101.0 per cent.

CHARACTERS

Appearance

Yellow powder.

Solubility

Practically insoluble in water, soluble in carbon disulfide, slightly soluble in vegetable oils.

mp

About 120 °C.

The size of most of the particles is not greater than 20 µm and that of almost all the particles is not greater than 40 µm.

IDENTIFICATION

A. Heated in the presence of air, it burns with a blue flame, emitting sulfur dioxide which changes the colour of moistened *blue litmus paper R* to red.

B. Heat 0.1 g with 0.5 mL of *bromine water R* until decolourised. Add 5 mL of *water R* and filter. The solution gives reaction (a) of sulfates (2.3.1).

TESTS

Solution S

To 5 g add 50 mL of *carbon dioxide-free water R* prepared from *distilled water R*. Allow to stand for 30 min with frequent shaking and filter.

Appearance of solution

Solution S is colourless (2.2.2, *Method II*).

Odour (2.3.4)

It has no perceptible odour of hydrogen sulfide.

Acidity or alkalinity

To 5 mL of solution S add 0.1 mL of *phenolphthalein solution R1*. The solution is colourless. Add 0.2 mL of 0.01 M *sodium hydroxide*. The solution is red. Add 0.3 mL of 0.01 M *hydrochloric acid*. The solution is colourless. Add 0.15 mL of *methyl red solution R*. The solution is orange-red.

Chlorides (2.4.4)

Maximum 100 ppm.

Dilute 5 mL of solution S to 15 mL with *water R*.

Sulfates (2.4.13)

Maximum 100 ppm, determined on solution S.

Sulfides

To 10 mL of solution S add 2 mL of *buffer solution pH 3.5 R* and 1 mL of a freshly prepared 1.6 g/L solution of *lead nitrate R* in *carbon dioxide-free water R*. Shake. After 1 min any colour in the solution is not more intense than that in a reference solution prepared at the same time using 1 mL of *lead standard solution (10 ppm Pb) R*, 9 mL of *carbon dioxide-free water R*, 2 mL of *buffer solution pH 3.5 R* and 1.2 mL of *thioacetamide reagent R*.

Sulfated ash (2.4.14)

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Carry out the oxygen-flask method (2.5.10), using 60.0 mg in a 1000 mL combustion flask. Absorb the combustion products in a mixture of 5 mL of *dilute hydrogen peroxide solution R* and 10 mL of *water R*. Heat to boiling, boil gently for 2 min and cool. Using 0.2 mL of *phenolphthalein solution R* as indicator, titrate with 0.1 M *sodium hydroxide* until the colour changes from colourless to red. Carry out a blank titration under the same conditions.

1 mL of 0.1 M *sodium hydroxide* is equivalent to 1.603 mg of S.

STORAGE

Protected from light.

Ph Eur

Sulfuric Acid

Sulphuric Acid

(Ph. Eur. monograph 1572)

H₂SO₄

98.1

7664-93-9

Preparation

Dilute Sulfuric Acid

Ph Eur

DEFINITION

Content

95.0 per cent *m/m* to 100.5 per cent *m/m*.

CHARACTERS

Appearance

Colourless, oily liquid, very hygroscopic.

Solubility

Miscible with water and with ethanol (96 per cent) producing intense heat.

Relative density

About 1.84.

IDENTIFICATION

A. Carefully add 1 mL to 100 mL of *water R*. The solution is strongly acid (2.2.4).

B. The solution obtained in identification test A gives reaction (a) of sulfates (2.3.1).

TESTS

Appearance of solution

The solution is clear (2.2.1) and colourless (2.2.2, *Method II*).

Carefully pour, while cooling, 5 mL into 30 mL of *water R* and dilute to 50 mL with the same solvent.

Chlorides (2.4.4)

Maximum 50 ppm.

Mix carefully, while cooling, 3.3 g with 30 mL of *water R*. Neutralise with *ammonia R* and dilute to 50 mL with *water R*.

Nitrates

Add 5 mL to 5 mL of *water R*. Cool to room temperature and add 0.5 mL of *indigo carmine solution R*. The blue colour persists for at least 1 min.

Iron (2.4.9)

Maximum 25 ppm.

Cautiously evaporate 10.0 g and ignite to dull redness. Dissolve the ignition residue in 1 mL of *dilute hydrochloric acid R* with gentle heating and dilute to 25 mL with *water R*. Dilute 1 mL of this solution to 10 mL with *water R*.

ASSAY

Weigh accurately a ground-glass-stoppered flask containing 30 mL of *water R*. Introduce 0.2 mL, cool and weigh again. Titrate with 1 M *sodium hydroxide*, determining the end-point potentiometrically (2.2.20).

1 mL of 1 M *sodium hydroxide* is equivalent to 49.04 mg of H₂SO₄.

STORAGE

In an airtight container.

Ph Eur

Dilute Sulfuric Acid

Dilute Sulphuric Acid

DEFINITION

Dilute Sulfuric Acid is prepared by adding 104 g of Sulfuric Acid to 896 g of Purified Water with constant stirring and cooling. It contains not less than 9.5% and not more than 10.5% w/w of H₂SO₄.

Weight per mL

1.062 g to 1.072 g, Appendix V G.

ASSAY

To 10 g add 40 mL of *water* and titrate with 1M *sodium hydroxide VS* using *methyl orange solution* as indicator. Each mL of 1M *sodium hydroxide VS* is equivalent to 49.04 mg of H₂SO₄.

chloride. It dissolves in dilute solutions of mineral acids and alkali hydroxides.

IDENTIFICATION

First identification: B.

Second identification: A, C, D.

A. Melting point (2.2.14): 177 °C to 181 °C.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison sulphiride CRS.

C. Examine the chromatograms obtained in the test for impurity A.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To about 1 mg in a porcelain dish, add 0.5 mL of *sulfuric acid R* and 0.05 mL of *formaldehyde solution R*. Examined in ultraviolet light at 365 nm, the solution shows blue fluorescence.

TESTS

Appearance of solution

The solution is clear (2.2.1) and not more intensely coloured than reference solution Y₆ (2.2.2, *Method I*).

Dissolve 1.0 g in *dilute acetic acid R* and dilute to 10 mL with the same acid.

Impurity A. Thin-layer chromatography (2.2.27)

Test solution (a) Dissolve 0.20 g of the substance to be examined in *methanol R*, sonicate until dissolution is complete and dilute to 10.0 mL with the same solvent.

Test solution (b) Dilute 1.0 mL of test solution (a) to 10.0 mL with *methanol R*.

Reference solution (a) Dissolve 20 mg of *sulpiride CRS* in *methanol R* and dilute to 10.0 mL with the same solvent.

Reference solution (b) Dissolve 5.0 mg of *sulpiride impurity A CRS* in *methanol R* and dilute to 25.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *methanol R*.

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase concentrated ammonia R, dioxan R, methanol R, methylene chloride R (2:10:14:90 V/V/V/V).

Application 10 µL.

Development Over 1/2 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm for identification test C and then spray with *ninhydrin solution R*; heat at 100-105 °C for 15 min and examine in daylight.

Limit Test solution (a):

— *impurity A*: any spot due to impurity A is not more intense than the corresponding spot in the chromatogram obtained with reference solution (b) (0.1 per cent).

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Sulpiride

(Ph. Eur. monograph 1045)

C₁₅H₂₃N₃O₄S

341.4

15676-16-1

Action and use

Dopamine receptor antagonist; neuroleptic.

Preparation

Sulpiride Tablets

Ph Eur

DEFINITION

N-[[[(2RS)-1-Ethylpyrrolidin-2-yl]methyl]-2-methoxy-5-sulfamoylbenzamide.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, sparingly soluble in methanol, slightly soluble in ethanol (96 per cent) and in methylene

Reference solution (b) Dissolve 5 mg of the substance to be examined and 5 mg of *sulpiride impurity B CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: end-capped octylsilyl silica gel for chromatography R (5 μ m).

Mobile phase Mix 10 volumes of acetonitrile R, 10 volumes of methanol R and 80 volumes of a solution containing 6.8 g/L of potassium dihydrogen phosphate R and 1 g/L of sodium octanesulfonate R, previously adjusted to pH 3.3 with phosphoric acid R.

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 240 nm.

Injection 10 μ L.

Run time Twice the retention time of sulpiride.

Identification of impurities Use the chromatogram obtained with reference solution (b) to identify the peak due to impurity B.

Relative retention With reference to sulpiride (retention time = about 15 min): impurity B = about 0.7.

System suitability Reference solution (b):

- resolution: minimum 2.5 between the peaks due to impurity B and sulpiride.

Calculation of percentage contents:

- for each impurity, use the concentration of sulpiride in reference solution (a).

Limits:

- unspecified impurities: for each impurity, maximum 0.10 per cent;
- total: maximum 0.3 per cent;
- reporting threshold: 0.05 per cent.

Chlorides (2.4.4)

Maximum 100 ppm.

Shake 1.0 g with 20 mL of water R. Filter through a sintered-glass filter (40) (2.1.2). To 10 mL of the filtrate add 5 mL of water R.

Iron (2.4.9)

Maximum 10 ppm.

Ignite 1.0 g in a silica crucible. To the residue add 1 mL of 1 M hydrochloric acid, 3 mL of water R and 0.1 mL of nitric acid R. Heat on a water-bath for about 5 min. Place the solution in a test-tube. Rinse the crucible with 4 mL of water R. Collect the rinsings in the test-tube and dilute to 10 mL with water R.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 80 mL of anhydrous acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 34.14 mg of $C_{15}H_{23}N_3O_4S$.

IMPURITIES

Specified impurities A.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance

criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B, C, D, E, F, G.

A. [(2*RS*)-1-ethylpyrrolidin-2-yl]methanamine,

B. methyl 2-methoxy-5-sulfamoylbenzoate,

C. ethyl 2-methoxy-5-sulfamoylbenzoate,

D. 2-methoxy-5-sulfamoylbenzoic acid,

76497-13-7

Action and use

Beta-lactamase inhibitor.

Ph Eur

DEFINITION

Methylene (2*S*,5*R*,6*R*)-6-[[*(2R)*-aminophenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ⁶-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content

96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS**Appearance**

White or almost white, slightly hygroscopic, crystalline powder.

Solubility

Practically insoluble in water, very slightly soluble in methanol, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison *sultamicillin* CRS.**TESTS****Specific optical rotation (2.2.7)**

+ 190 to + 210 (anhydrous substance).

Dissolve 0.500 g in *dimethylformamide* R and dilute to 50.0 mL with the same solvent.**Related substances**

Liquid chromatography (2.2.29). Prepare the solutions immediately before use or keep at 2-8 °C for not more than 6 h.

Solution A *methanol* R1, *acetonitrile* R1 (20:80 V/V).**Solution B** Dissolve 1.56 g of *sodium dihydrogen phosphate* R in 900 mL of *water* R. Add 7.0 mL of *phosphoric acid* R and dilute to 1000 mL with *water* R.**Blank solution** Solution B, solution A (30:70 V/V).**Test solution** Dissolve 50.0 mg of the substance to be examined in 35 mL of solution A and sonicate for about 1 min. Add 13 mL of solution B, mix and sonicate for about 1 min. Dilute to 50.0 mL with solution B and mix.**Reference solution (a)** Dissolve 70.0 mg of *sultamicillin tosilate* CRS in 35 mL of solution A and sonicate for about 1 min. Add 13 mL of solution B, mix and sonicate for about 1 min. Dilute to 50.0 mL with solution B and mix.**Reference solution (b)** Suspend 15 mg of *sultamicillin tosilate* CRS in 20 mL of a 0.4 g/L solution of *sodium hydroxide* R and sonicate in an ultrasonic bath for about 5 min. Add 20 mL of a 0.36 g/L solution of *hydrochloric acid* R and dilute to 100 mL with *water* R.**Reference solution (c)** Dilute 1.0 mL of reference solution (a) to 100.0 mL with the blank solution.**Reference solution (d)** Dissolve 17.3 mg of *ampicillin trihydrate* CRS (impurity C) and 15.0 mg of *subactam* CRS (impurity A) in *water* R and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of this solution to 100.0 mL with *water* R.**Reference solution (e)** Dissolve 5 mg of *sultamicillin for peak identification* CRS (containing impurity G) in 7.0 mL of solution A and sonicate for about 1 min. Dilute to 10.0 mL with solution B, mix and sonicate for about 1 min.**Column:**— size: *l* = 0.10 m, Ø = 4.6 mm;— stationary phase: *octadecylsilyl silica gel for chromatography* R (3.5 µm);

— temperature: 25 °C.

Mobile phase:— mobile phase A: 4.68 g/L solution of *sodium dihydrogen phosphate* R adjusted to pH 3.0 with *phosphoric acid* R;— mobile phase B: *acetonitrile* R1;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 15	95 → 30	5 → 70
15 - 16	30	70
16 - 16.5	30 → 95	70 → 5
16.5 - 20	95	5

Flow rate 1.0 mL/min.**Detection** Spectrophotometer at 215 nm.**Injection** 5 µL of the blank solution, the test solution and reference solutions (b), (c), (d) and (e).**Identification of impurities** Use the chromatogram supplied with *sultamicillin for peak identification* CRS and the chromatogram obtained with reference solution (e) to identify the peak due to impurity G.**Relative retention** With reference to *sultamicillin* (retention time = about 9.3 min): impurity A = about 0.41; *ampicillin penicilloic acid* = about 0.47; impurity B = about 0.50; impurity C = about 0.55; impurity D = about 0.94; impurity E = about 1.09; impurity F = about 1.26; impurity G = about 1.42.**System suitability** Reference solution (b):— resolution: minimum 2.5 between the peaks due to *ampicillin penicilloic acid* and impurity B and minimum 2.5 between the peaks due to impurities B and C.**Limits:**

- impurity G: not more than the area of the peak due to *sultamicillin* in the chromatogram obtained with reference solution (c) (1.0 per cent);
- impurity A: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.3 per cent);
- impurity B: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.3 per cent);
- impurity C: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.3 per cent);
- impurities D, E, F: for each impurity, not more than 0.3 times the area of the peak due to *sultamicillin* in the chromatogram obtained with reference solution (c) (0.3 per cent);

- *any other impurity*: for each impurity, not more than 0.3 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (0.3 per cent);
- *total*: not more than 3 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (3.0 per cent);
- *disregard limit*: 0.1 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (0.1 per cent).

Ethyl acetate

Head-space gas chromatography (2.2.28).

Test solution Dissolve 0.200 g in 7.0 mL of a mixture of 1 volume of *water R* and 99 volumes of *dimethylformamide R*.

Reference solution Dissolve 0.200 g of *ethyl acetate R* in 240 mL of a mixture of 1 volume of *water R* and 99 volumes of *dimethylformamide R* and dilute to 250.0 mL with the same mixture of solvents. Dilute 5.0 mL of this solution to 7.0 mL with a mixture of 1 volume of *water R* and 99 volumes of *dimethylformamide R*.

Close the vials immediately with a tight rubber membrane stopper coated with polytetrafluoroethylene and secure with an aluminium crimped cap. Shake to obtain a homogeneous solution.

Column:

- *material*: fused silica;
- *size*: $l = 50$ m, $\varnothing = 0.32$ mm;
- *stationary phase*: methylpolysiloxane *R* (film thickness: 1.8 μ m or 3 μ m).

Carrier gas helium for chromatography *R*.

Linear velocity 35 cm/s.

Split ratio 1:5.

Static head-space conditions that may be used:

- *equilibration temperature*: 105 °C;
- *equilibration time*: 45 min;
- *transfer-line temperature*: 110 °C;
- *pressurisation time*: 30 s.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 6	70
	6 - 16	70 → 220
	16 - 18	220
Injection port		140
Detector		250

Detection Flame ionisation.

Injection 1 mL.

Relative retention With reference to dimethylformamide (retention time = about 14 min); ethyl acetate = about 0.7.

Limit:

- *ethyl acetate*: maximum 2.5 per cent.

Water (2.5.12)

Maximum 1.0 per cent, determined on 0.50 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modifications.

Injection Test solution and reference solution (a).

Calculate the percentage content of sultamicillin ($C_{25}H_{30}N_4O_9S_2$) from the declared content of

$C_{25}H_{30}N_4O_9S_2$ in *sultamicillin tosilate CRS* and by multiplying the sultamicillin tosilate content by 0.7752.

STORAGE

In an airtight container.

IMPURITIES

Specified impurities A, B, C, D, E, F, G.

- A. (2*S*,5*R*)-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid 4,4-dioxide (sulbactam),

- B. 4-methylbenzenesulfonic acid (*p*-toluenesulfonic acid),

- C. (2*S*,5*R*,6*R*)-6-[[[(2*R*)-2-amino-2-phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (ampicillin),

- D. [[[(2*R*)-aminophenylacetyl]amino][(4*S*)-4-[[[(2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4 λ^6 -thia-1-azabicyclo[3.2.0]hept-2-yl]carbonyl]oxy]methoxy]carbonyl]-5,5-dimethylthiazolidin-2-yl]acetic acid (penicilloic acids of sultamicillin),

- E. methylene (2*S*,5*R*,6*R*)-3,3-dimethyl-6-[[[(2*R*)-[(1-methyl-4-oxopentylidene)amino]phenylacetyl]amino]-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-7-oxo-4-oxa-1-azabicyclo[3.2.0]heptane-2-carboxylate,

- F. methylene (2*S*,5*R*,6*R*)-6-[[[(2*R*)-[[[(2*S*,5*R*,6*R*)-6-[[[(2*R*)-aminophenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]hept-2-yl]carbonyl]amino]phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ⁶-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (ampicillin sultamicillin amide),

- G. methylene (2*S*,5*R*,6*R*)-6-[[[(2*R*)-[[[(2*R*)-aminophenylacetyl]amino]][(4*S*)-4-[[[(2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ⁶-thia-1-azabicyclo[3.2.0]hept-2-yl]carbonyl]oxy]methoxy]carbonyl]-5,5-dimethylthiazolidin-2-yl]acetyl]amino]phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ⁶-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (sultamicillin dimer).

Ph Eur

Sultamicillin Tosilate Dihydrate

(Ph. Eur. monograph 2212)

C₃₂H₃₈N₄O₁₂S₃·2H₂O 803

Action and use

Beta-lactamase inhibitor.

Ph Eur

DEFINITION

4-Methylbenzenesulfonate of methylene (2*S*,5*R*,6*R*)-6-[[[(2*R*)-aminophenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-

dimethyl-4,4,7-trioxo-4λ⁶-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate dihydrate.

Semi-synthetic product derived from a fermentation product.

Content

95.0 per cent to 102.0 per cent (anhydrous substance).

PRODUCTION

It is considered that alkyl toluenesulfonate esters are genotoxic and are potential impurities in sultamicillin tosilate dihydrate. The manufacturing process should be developed taking into consideration the principles of quality risk management, together with considerations of the quality of starting materials, process capability and validation.

The general method 2.5.40. *Methyl, ethyl and isopropyl toluenesulfonate in active substances* is available to assist manufacturers.

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison sultamicillin tosilate CRS.

TESTS

Specific optical rotation (2.2.7)

+ 178 to + 195 (anhydrous substance).

Dissolve 1.000 g in *dimethylformamide R* and dilute to 50.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29). Prepare the solutions immediately before use or keep at 2–8 °C for not more than 6 h.

Solution A methanol R1, acetonitrile R1 (20:80 V/V).

Solution B Dissolve 1.56 g of sodium dihydrogen phosphate R in 900 mL of water R. Add 7.0 mL of phosphoric acid R and dilute to 1000 mL with water R.

Blank solution Solution B, solution A (30:70 V/V).

Test solution Dissolve 70.0 mg of the substance to be examined in 35 mL of solution A and sonicate for about 1 min. Add 13 mL of solution B, mix and sonicate for about 1 min. Dilute to 50.0 mL with solution B and mix.

Reference solution (a) Dissolve 70.0 mg of sultamicillin tosilate CRS in 35 mL of solution A and sonicate for about 1 min. Add 13 mL of solution B, mix and sonicate for about 1 min. Dilute to 50.0 mL with solution B and mix.

Reference solution (b) Suspend 15 mg of the substance to be examined in 20 mL of a 0.4 g/L solution of sodium hydroxide R and sonicate in an ultrasonic bath for about 5 min. Add 20 mL of a 0.36 g/L solution of hydrochloric acid R and dilute to 100.0 mL with water R.

Reference solution (c) Dissolve 0.200 g of the substance to be examined in 70.0 mL of solution A and sonicate for about 1 min. Add 25.0 mL of solution B, mix and sonicate for about 1 min. Dilute to 100.0 mL with solution B and mix. Dilute 1.0 mL of this solution to 100.0 mL with the blank solution.

Reference solution (d) Dissolve 32.3 mg of ampicillin trihydrate CRS (impurity B) and 7.0 mg of subactam CRS (impurity A) in water R and dilute to 1000 mL with the same solvent.

Column:

- size: $l = 0.10$ m, $\varnothing = 4.6$ mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (3.5 μm);
- temperature: 25 °C.

Mobile phase:

- mobile phase A: 4.68 g/L solution of sodium dihydrogen phosphate R adjusted to pH 3.0 with phosphoric acid R;
- mobile phase B: acetonitrile R1;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 15	95 → 30	5 → 70
15 - 16	30	70
16 - 16.5	30 → 95	70 → 5
16.5 - 20	95	5

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 215 nm.

Injection 5 μL of the blank solution, the test solution and reference solutions (b), (c) and (d).

Relative retention With reference to sultamicillin (retention time = about 9.3 min): impurity A = about 0.41; ampicillin penicilloic acid = about 0.47; tosilate = about 0.50; impurity B = about 0.55; impurity C = about 0.94; impurity D = about 1.09; impurity F = about 1.23; impurity E = about 1.26; impurity G = about 1.42.

System suitability Reference solution (b):

- resolution: minimum 2.5 between the peaks due to ampicillin penicilloic acid and tosilate and minimum 2.5 between the peaks due to tosilate and impurity B.

Limits:

- impurity B: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (2.0 per cent);
- impurity A: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.5 per cent);
- impurities C, D, E, F, G: for each impurity, not more than 0.5 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (0.5 per cent);
- any other impurity: for each impurity, not more than 0.5 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (0.5 per cent);
- total: not more than 4 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (4.0 per cent);
- disregard limit: 0.1 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (0.1 per cent).

Ethyl acetate

Head-space gas chromatography (2.2.28).

Test solution Dissolve 0.200 g in 7.0 mL of a mixture of 1 volume of water R and 99 volumes of dimethylformamide R.

Reference solution Dissolve 0.200 g of ethyl acetate R in 240 mL of a mixture of 1 volume of water R and 99 volumes of dimethylformamide R and dilute to 250.0 mL with the same mixture of solvents. Dilute 5.0 mL of this solution to 7.0 mL with a mixture of 1 volume of water R and 99 volumes of dimethylformamide R.

Immediately close the vials with a tight rubber membrane stopper coated with polytetrafluoroethylene and secure with an aluminium crimped cap. Shake to obtain a homogeneous solution.

Column:

- material: fused silica;
- size: $l = 50$ m, $\varnothing = 0.32$ mm;
- stationary phase: methylpolysiloxane R (film thickness: 1.8 μm or 3 μm).

Carrier gas helium for chromatography R.

- G. methylene (2*S*,5*R*,6*R*)-6-[[[(2*R*)-[[[(2*R*)-aminophenylacetyl]amino][(4*S*)-4-[[[(2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ⁶-thia-1-azabicyclo[3.2.0]hept-2-yl]carbonyl]oxy]methoxy]carbonyl]-5,5-dimethylthiazolidin-2-yl]acetyl]amino]phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ⁶-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (sultamicillin dimer).

Ph Eur

Sumatriptan

C₁₄H₂₁N₃O₂S

295.4

103628-46-2

Action and use

Serotonin 5HT₁ receptor agonist; treatment of migraine.

Preparation

Sumatriptan Nasal Spray

DEFINITION

Sumatriptan is 3-(2-dimethylaminoethyl)indol-5-yl-*N*-methylmethanesulfonamide. It contains not less than 97.5% and not more than 102.0% of C₁₄H₂₁N₃O₂S, calculated with reference to the anhydrous substance.

CHARACTERISTICS

A white to pale yellow powder. Very slightly soluble in *water*.

IDENTIFICATION

The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of sumatriptan (RS 414).

TESTS

The total impurity content in the test for Impurities A and H and the test for Related substances is not greater than 1.5%.

Impurities A and H

Carry out the method for *liquid chromatography*, Appendix III D. Prepare the solutions in a mixture containing 3 volumes of 0.025*M* sodium dihydrogen orthophosphate, the pH of which has been adjusted to 6.5, and 1 volume of *acetonitrile* (solution A).

(1) 0.2% w/v of the substance being examined.

(2) Dilute 1 volume of solution (1) to 100 volumes.

(3) Dilute the contents of a vial of *sumatriptan for system suitability EPCRS* to 1 mL with the mobile phase.

CHROMATOGRAPHIC CONDITIONS

- Use a stainless steel column (25 cm × 4.6 mm) packed with *silica gel for chromatography* (5 μm) (Spherisorb silica S5W is suitable).
- Use isocratic elution and the mobile phase described below.
- Use a flow rate of 2.0 mL per minute.
- Use an ambient column temperature.
- Use a detection wavelength of 282 nm.
- Inject 20 μL of each solution.
- For solution (1) allow the chromatography to proceed for 5 times the retention time of the principal peak.

MOBILE PHASE

10 volumes of 10M *ammonium acetate* and 90 volumes of *methanol*.

SYSTEM SUITABILITY

The test is not valid unless the chromatogram obtained with solution (3) resembles that supplied with *sumatriptan for system suitability EPCRS* and the *resolution* between impurity A and sumatriptan is at least 1.5.

LIMITS

In the chromatogram obtained with solution (1): the area of any peak corresponding to impurity A is not greater than the area of the principal peak in the chromatogram obtained with solution (2) (0.6%; taking into account the correction factor of 0.6 for impurity A); the area of any peak due to impurity H is not greater than 0.3 times the area of the principal peak in the chromatogram obtained with solution (2) (0.3%).

Related substances

Carry out the method for *liquid chromatography*, Appendix III D. Prepare the solutions in a mixture containing 3 volumes of 0.025M *sodium dihydrogen orthophosphate*, the pH of which has been adjusted to 6.5, and 1 volume of *acetonitrile* (solution A).

- 0.2% w/v of the substance being examined.
- Dilute 1 volume of solution (1) to 100 volumes and further dilute 1 volume of the resulting solution to 10 volumes.
- Dilute the contents of a vial of *sumatriptan impurity mixture EPCRS* to 1 mL with the mobile phase.

CHROMATOGRAPHIC CONDITIONS

- Use a stainless steel column (25 cm × 4.6 mm) packed with *octadecylsilyl silica gel for chromatography* (5 μm) (Spherisorb ODS 1 is suitable).
- Use isocratic elution and the mobile phase described below.
- Use a flow rate of 1.5 mL per minute.
- Use an ambient column temperature.
- Use a detection wavelength of 282 nm.
- Inject 20 μL of each solution.

MOBILE PHASE

Mix 25 volumes of *acetonitrile* with 75 volumes of a solution containing 0.97 g of *dibutylamine*, 0.735 g of *orthophosphoric acid* and 2.93 g of *sodium dihydrogen orthophosphate* in 750 mL *water*, adjust to pH 6.5 with 10M *sodium hydroxide* and dilute to 1000 mL with *water*.

SYSTEM SUITABILITY

The test is not valid unless, in the chromatogram obtained with solution (3), the *resolution factor* between the peaks due to impurity C and sumatriptan is at least 1.5.

LIMITS

In the chromatogram obtained with solution (1): the areas of any peaks corresponding to impurities B, C and D are not greater than 5 times the area of the principal peak in the chromatogram obtained with solution (2) (0.5% of each); the area of any peak corresponding to impurity E is not greater than the area of the principal peak in the chromatogram obtained with solution (2) (0.1%); the area of any other *secondary peak* is not greater than the area of the principal peak in the chromatogram obtained with solution (2) (0.1%).

Disregard any peak with an area less than 0.5 times the area of the principal peak in the chromatogram obtained with solution (2) (0.05%).

Water

Not more than 1.0% w/w, Appendix IX C. Use 1.0 g.

ASSAY

Carry out the method for *liquid chromatography*, Appendix III D. Prepare solutions (1) and (2) in a mixture containing 3 volumes of 0.025M *sodium dihydrogen orthophosphate*, the pH of which has been adjusted to 6.5, and 1 volume of *acetonitrile* (solution A).

- 0.01% w/v of the substance being examined.
- 0.014% w/v of *sumatriptan succinate BPCRS*.
- Dilute the contents of a vial of *sumatriptan impurity mixture EPCRS* to 1 mL with the mobile phase.

CHROMATOGRAPHIC CONDITIONS

The chromatographic conditions described under Related substances may be used.

SYSTEM SUITABILITY

The Assay is not valid unless, in the chromatogram obtained with solution (3), the *resolution* between the peaks due to impurity C and sumatriptan is at least 1.5.

DETERMINATION OF CONTENT

Calculate the content of $C_{14}H_{21}N_3O_2S$ using the declared content of $C_{14}H_{21}N_3O_2S \cdot C_4H_6O_4$ in *sumatriptan succinate BPCRS*. Each 1 mg of $C_{14}H_{21}N_3O_2S$ is equivalent to 1.4 mg of $C_{14}H_{21}N_3O_2S \cdot C_4H_6O_4$.

STORAGE

Sumatriptan should be protected from light.

IMPURITIES

- A. [3-[2-(dimethylamino)ethyl]-2-[[3-[2-(dimethylamino)ethyl]-1H-indol-5-yl]methyl]-1H-indol-5-yl]-N-methylmethanesulfonamide,

B. R1 = R2 = H: *N*-methyl[3-[2-(methylamino)ethyl]-1*H*-indol-5-yl]methanesulfonamide,

C. R1 = CH₂-OH, R2 = CH₃: [3-[2-(dimethylamino)ethyl]-1-(hydroxymethyl)-1*H*-indol-5-yl]-*N*-methylmethanesulfonamide,

D. *N,N*-dimethyl-2-[5-[(methylsulfamoyl)methyl]-1*H*-indol-3-yl]ethanamine *N*-oxide,

E. [3-(2-aminoethyl)-1*H*-indol-5-yl]-*N*-methylmethanesulfonamide,

F. R = H: *N*-methyl(2,3,4,9-tetrahydro-1*H*-pyrido[3,4-*b*]indol-6-yl)methanesulfonamide,

G. R = CH₃: *N*-methyl(2-methyl-2,3,4,9-tetrahydro-1*H*-pyrido[3,4-*b*]indol-6-yl)methanesulfonamide,

H. [3-[2-(dimethylamino)ethyl]-1-[[3-[2-(dimethylamino)ethyl]-1*H*-indol-5-yl]methyl]-1*H*-indol-5-yl]-*N*-methylmethanesulfonamide.

Sumatriptan Succinate

(Ph. Eur. monograph 1573)

C₁₈H₂₇N₃O₆S

413.5

103628-48-4

Action and use

Serotonin 5HT₁ receptor agonist; treatment of migraine.

Preparations

Sumatriptan Injection

Sumatriptan Tablets

Ph Eur

DEFINITION

1-[3-[2-(Dimethylamino)ethyl]-1*H*-indol-5-yl]-*N*-methylmethanesulfonamide hydrogen butanedioate.

Content

97.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water, sparingly soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison sumatriptan succinate CRS.

TESTS

Solution S

Dissolve 1.0 g in carbon dioxide-free water R and dilute to 25.0 mL with the same solvent.

pH (2.2.3)

4.5 to 5.3.

Dilute 2.5 mL of solution S to 10 mL with carbon dioxide-free water R.

Absorbance (2.2.25)

Maximum 0.10, determined at 440 nm on solution S.

Impurities A and H

Liquid chromatography (2.2.29).

Test solution Dissolve 30.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b) Dissolve 3 mg of sumatriptan for system suitability CRS (containing impurities A and H) in the mobile phase and dilute to 1.0 mL with the mobile phase.

Column:

— size: *l* = 0.25 m, \varnothing = 4.6 mm;

— stationary phase: silica gel for chromatography R (5 μ m).

Mobile phase Mix 10 volumes of a 771 g/L solution of ammonium acetate R and 90 volumes of methanol R.

Flow rate 2.0 mL/min.

Detection Spectrophotometer at 282 nm.

Injection 20 µL.

Run time 5 times the retention time of sumatriptan.

Identification of impurities Use the chromatogram supplied with sumatriptan for system suitability CRS and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and H.

Relative retention With reference to sumatriptan (retention time = about 2 min): impurity A = about 1.9; impurity H = about 2.6.

System suitability Reference solution (b):

— **resolution:** minimum 3.0 between the peaks due to impurities A and H.

Limits:

- **correction factor:** for the calculation of content, multiply the peak area of impurity A by 0.6;
- **impurity A:** not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.6 per cent);
- **impurity H:** not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent).

Related substances

Liquid chromatography (2.2.29).

Solution A Dissolve 2.925 g of sodium dihydrogen phosphate R in 600 mL of water R, adjust to pH 6.5 with strong sodium hydroxide solution R, dilute to 750 mL with water R, add 250 mL of acetonitrile R and mix.

Test solution (a) Dissolve 30.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

Test solution (b) Dissolve 15.0 mg of the substance to be examined in solution A and dilute to 100.0 mL with solution A.

Reference solution (a) Dilute 1.0 mL of test solution (a) to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b) Dissolve the contents of a vial of sumatriptan impurity mixture CRS (containing impurities B, C, D and E) in the mobile phase and dilute to 1 mL with the mobile phase.

Reference solution (c) Dissolve 15.0 mg of sumatriptan succinate CRS in solution A and dilute to 100.0 mL with solution A.

Column:

- **size:** $l = 0.25$ m, $\varnothing = 4$ mm;
- **stationary phase:** octadecylsilyl silica gel for chromatography R (5 µm).

Mobile phase Mix 25 volumes of acetonitrile R with 75 volumes of a solution prepared as follows: dissolve 0.970 g of dibutylamine R, 0.735 g of phosphoric acid R and 2.93 g of sodium dihydrogen phosphate R in 750 mL of water R, adjust to pH 6.5 with strong sodium hydroxide solution R and dilute to 1000 mL with water R.

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 282 nm.

Injection 10 µL of test solution (a) and reference solutions (a) and (b).

Run time 4 times the retention time of sumatriptan.

Identification of impurities Use the chromatogram supplied with sumatriptan impurity mixture CRS and the chromatogram

obtained with reference solution (b) to identify the peaks due to impurities B, C, D and E.

Relative retention With reference to sumatriptan (retention time = about 7 min): impurity E = about 0.5; impurity B = about 0.6; impurity D = about 0.7; impurity C = about 0.8.

System suitability Reference solution (b):

- **resolution:** minimum 1.5 between the peaks due to impurity C and sumatriptan;
- the chromatogram shows 5 clearly separated peaks.

Limits:

- **impurities B, C, D:** for each impurity, not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- **impurity E:** not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
- **unspecified impurities:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- **total:** not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.6 per cent);
- **disregard limit:** 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Water (2.5.12)

Maximum 1.0 per cent, determined on 0.500 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution (b) and reference solution (c).

Calculate the percentage content of $C_{18}H_{27}N_3O_6S$ taking into account the assigned content of sumatriptan succinate CRS.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E, H.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) F, G.

A. 1-[3-[2-(dimethylamino)ethyl]-2-[[3-[2-(dimethylamino)ethyl]-1H-indol-5-yl]methyl]-1H-indol-5-yl]-N-methylmethanesulfonamide,

B. *N*-methyl-1-[3-[2-(methylamino)ethyl]-1*H*-indol-5-yl]methanesulfonamide,

C. 1-[3-[2-(dimethylamino)ethyl]-1-(hydroxymethyl)-1*H*-indol-5-yl]-*N*-methylmethanesulfonamide,

D. *N,N*-dimethyl-2-[5-[(methylsulfamoyl)methyl]-1*H*-indol-3-yl]ethan-1-amine *N*-oxide,

E. 1-[3-(2-aminoethyl)-1*H*-indol-5-yl]-*N*-methylmethanesulfonamide,

F. *N*-methyl-1-(2,3,4,9-tetrahydro-1*H*-pyrido[3,4-*b*]indol-6-yl)methanesulfonamide,

G. *N*-methyl-1-(2-methyl-2,3,4,9-tetrahydro-1*H*-pyrido[3,4-*b*]indol-6-yl)methanesulfonamide,

H. 1-[3-[2-(dimethylamino)ethyl]-1-[[3-[2-(dimethylamino)ethyl]-1*H*-indol-5-yl]methyl]-1*H*-indol-5-yl]-*N*-methylmethanesulfonamide,

Refined Sunflower Oil

(*Ph. Eur. monograph 1371*)

Ph Eur

DEFINITION

Fatty oil obtained from the seeds of *Helianthus annuus* L. by mechanical expression or by extraction. It is then refined. A suitable antioxidant may be added.

CHARACTERS

Appearance

Clear, light yellow liquid.

Solubility

Practically insoluble in water and in ethanol (96 per cent), miscible with light petroleum (bp: 40-60 °C).

Relative density

About 0.921.

Refractive index

About 1.474.

IDENTIFICATION

Identification of fatty oils by thin-layer chromatography (2.3.2).

Results The chromatogram obtained is similar to the corresponding chromatogram shown in Figure 2.3.2.-1.

TESTS

Acid value (2.5.1)

Maximum 0.5, determined on 10.0 g.

Peroxide value (2.5.5, Method A)

Maximum 10.0.

Unsaponifiable matter (2.5.7)

Maximum 1.5 per cent, determined on 5.0 g.

Alkaline impurities (2.4.19)

It complies with the test.

Composition of fatty acids (2.4.22, Method A)

Use the mixture of calibrating substances in Table 2.4.22.-3.

Composition of the fatty-acid fraction of the oil:

- *palmitic acid*: 4.0 per cent to 9.0 per cent,
- *stearic acid*: 1.0 per cent to 7.0 per cent,
- *oleic acid*: 14.0 per cent to 40.0 per cent,
- *linoleic acid*: 48.0 per cent to 74.0 per cent.

Water (2.5.32)

Maximum 0.1 per cent, determined on 1.00 g.

STORAGE

In an airtight, well-filled container, protected from light.

LABELLING

The label states whether the oil is obtained by mechanical expression or by extraction.

Ph Eur

Ph Eur

Suxamethonium Chloride

(Ph. Eur. monograph 0248)

$C_{14}H_{30}Cl_2N_2O_4 \cdot 2H_2O$ 397.3 6101-15-1

Action and use

Depolarizing neuromuscular blocker.

Preparation

Suxamethonium Chloride Injection

Ph Eur

DEFINITION

Suxamethonium chloride contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of 2,2'-(butanedioylbis(oxy))bis(*N,N,N*-trimethylethanaminium) dichloride, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder, hygroscopic, freely soluble in water, slightly soluble in alcohol.

It melts at about 160 °C, determined without previous drying.

IDENTIFICATION

First identification: A, D.

Second identification: B, C, D.

A. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *suxamethonium chloride CRS*. Examine the substances prepared as discs.

B. To 1 mL of solution S (see Tests) add 9 mL of *water R*, 10 mL of *dilute sulfuric acid R* and 30 mL of *ammonium reineckate solution R*. A pink precipitate is formed. Allow to stand for 30 min, filter, wash with *water R*, with *alcohol R* and then with *ether R* and dry at 80 °C. The melting point (2.2.14) of the precipitate is 180 °C to 185 °C.

C. Dissolve about 25 mg in 1 mL of *water R* and add 0.1 mL of a 10 g/L solution of *cobalt chloride R* and 0.1 mL of *potassium ferrocyanide solution R*. A green colour is produced.

D. About 20 mg gives reaction (a) of chlorides (2.3.1).

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1). Dilute 4 mL of solution S to 10 mL with *water R*. The solution is colourless (2.2.2, Method I).

pH (2.2.3)

Dilute 1 mL of solution S to 10 mL with *carbon dioxide-free water R*. The pH of the solution is 4.0 to 5.0.

Choline chloride

Examine by thin-layer chromatography (2.2.27), using *cellulose for chromatography R1* as the coating substance.

Test solution Dissolve 0.4 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

Reference solution Dissolve 0.4 g of *suxamethonium chloride CRS* and 2 mg of *choline chloride R* in *methanol R* and dilute to 10 mL with the same solvent.

Apply to the plate 5 µL of each solution. Prepare the mobile phase as follows: shake together for 10 min, 10 volumes of *anhydrous formic acid R*, 40 volumes of *water R* and 50 volumes of *butanol R*; allow to stand and use the upper layer. Develop over a path of 15 cm. Dry the plate in a current of air and spray with *potassium iodobismuthate solution R*. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot corresponding to choline chloride in the chromatogram obtained with the reference solution (0.5 per cent). The test is not valid unless the chromatogram obtained with the reference solution shows two clearly separated spots.

Water (2.5.12)

8.0 per cent to 10.0 per cent, determined on 0.30 g by the semi-micro determination of water.

Sulfated ash (2.4.14)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 50 mL of *acetic anhydride R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 18.07 mg of $C_{14}H_{30}Cl_2N_2O_4$.

STORAGE

Store in an airtight container, protected from light.

Ph Eur

Suxibuzone

(Ph. Eur. monograph 1574)

$C_{24}H_{26}N_2O_6$ 438.5 27470-51-5

Action and use

Cyclo-oxygenase inhibitor; analgesic; anti-inflammatory.

Ph Eur

DEFINITION

4-[(4-Butyl-3,5-dioxo-1,2-diphenylpyrazolidin-4-yl)methoxy]-4-oxobutanoic acid.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in acetone, soluble in ethanol (96 per cent), practically insoluble in cyclohexane.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison *suxibuzone CRS*.

TESTS**Appearance of solution**

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 1 g in *anhydrous ethanol R* and dilute to 20 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 0.10 g of the substance to be examined in *acetonitrile R* and dilute to 25.0 mL with the same solvent.

Reference solution (a) Dissolve 2.8 mg of *phenylbutazone CRS* (impurity A), 2.8 mg of *suxibuzone impurity B CRS* and 2.8 mg of *suxibuzone impurity C CRS* in *acetonitrile R* and dilute to 10.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *acetonitrile R*.

Reference solution (b) Dissolve 4 mg of *phenylbutazone CRS* (impurity A) in *acetonitrile R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *acetonitrile R*.

Reference solution (c) Dissolve 10 mg of *phenylbutazone CRS* (impurity A) in *acetonitrile R* and dilute to 25.0 mL with the same solvent. Mix 10.0 mL of this solution with 1.0 mL of the test solution and dilute the mixture to 25.0 mL with *acetonitrile R*.

Column:

— size: $l = 0.125$ m, $\varnothing = 4.0$ mm;

— stationary phase: *octadecylsilyl silica gel for chromatography R* (5 μ m).

Mobile phase Mix 44 volumes of *acetonitrile R* and 56 volumes of a solution prepared as follows: dissolve 6.7 g of *citric acid monohydrate R* and 2.4 g of *tris(hydroxymethyl) aminomethane R* in 950 mL of *water R*, adjust to pH 3.0 with *citric acid monohydrate R* and dilute to 1000 mL with *water R*.

Flow rate 1 mL/min.

Detection Spectrophotometer at 250 nm.

Injection 10 μ L.

Relative retention With reference to *suxibuzone* (retention time = about 7 min): impurity C = 0.7; impurity A = 1.4; impurity B = 3.3.

System suitability Reference solution (c):

— resolution: minimum of 2.0 between the peaks due to *suxibuzone* and impurity A.

Limits:

- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.7 per cent);
- *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.7 per cent);
- *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.7 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *disregard limit*: 0.1 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (a) (0.07 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven *in vacuo* at 60 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in previously neutralised *anhydrous ethanol R* and dilute to 10 mL with the same solvent. Carry out a potentiometric titration (2.2.20) using 0.1 M *sodium hydroxide*.

1 mL of 0.1 M *sodium hydroxide* is equivalent to 43.85 mg of $C_{24}H_{26}N_2O_6$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C.

A. 4-butyl-1,2-diphenylpyrazolidine-3,5-dione (phenylbutazone),

B. (4-butyl-3,5-dioxo-1,2-diphenylpyrazolidin-4-yl)methyl ethyl butanedioate,

C. 4-butyl-4-(hydroxymethyl)-1,2-diphenyl-1,2-dihydro-4H-pyrazole-3,5-dione.

Ph Eur

Tacalcitol Monohydrate

(Ph. Eur. monograph 2272)

$C_{27}H_{44}O_3 \cdot H_2O$

434.7

93129-94-3

Action and use
Vitamin D₃ analogue.

Ph Eur

DEFINITION

(5Z,7E)-(24R)-9,10-Secocholesta-5,7,10(19)-triene-1 α ,3 β ,24-triol.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

A reversible isomerisation to pre-tacalcitol takes place in solution, depending on temperature and time. The activity is due to both compounds.

It is sensitive to air, heat and light.

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in anhydrous ethanol and in ethyl acetate.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison Ph. Eur. reference spectrum of tacalcitol monohydrate.

B. It complies with test B for related substances (see Tests).

C. Water (see Tests).

TESTS

Related substances

A. Liquid chromatography (2.2.29). Prepare the solutions immediately before use avoiding exposure to light and air.

Test solution Dissolve 5.0 mg of the substance to be examined in acetonitrile R and dilute to 25.0 mL with the same solvent.

Reference solution (a) Dissolve 5.0 mg of tacalcitol monohydrate CRS in acetonitrile R and dilute to 25.0 mL with the same solvent.

Reference solution (b) Heat 3 mL of the test solution at 80 °C for 30 min. Cool the solution to room temperature.

Reference solution (c) Dilute 1.0 mL of the test solution to 100.0 mL with acetonitrile R. Dilute 1.0 mL of this solution to 10.0 mL with acetonitrile R.

Reference solution (d) Dissolve the contents of a vial of tacalcitol impurity A CRS in 1 mL of the test solution.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase water for chromatography R, acetonitrile R (40:60 V/V).

Flow rate 2 mL/min.

Detection Spectrophotometer at 265 nm.

Injection 50 μ L of the test solution and reference solutions (b), (c) and (d).

Run time 2.5 times the retention time of tacalcitol.

Identification of impurities Use the chromatogram obtained with reference solution (d) to identify the peak due to impurity A; use the chromatogram obtained with reference solution (b) to identify the peak due to pre-tacalcitol.

Relative retention With reference to tacalcitol (retention time = about 11 min): pre-tacalcitol = about 0.8; impurity A = about 0.9.

System suitability Reference solution (d):

— resolution: minimum 1.5 between the peaks due to impurity A and tacalcitol.

Calculation of percentage contents:

— for each impurity, use the concentration of tacalcitol monohydrate in reference solution (c).

Limits:

— impurity A: maximum 0.3 per cent;

— unspecified impurities: for each impurity, maximum 0.10 per cent;

— total: maximum 0.5 per cent;

— reporting threshold: 0.05 per cent; disregard the peak due to pre-tacalcitol.

B. Liquid chromatography (2.2.29).

Test solution Dissolve 2.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase.

Reference solution (a) Dissolve the contents of a vial of tacalcitol for system suitability CRS (containing impurity B) in 0.5 mL of the mobile phase.

Reference solution (b) Dilute 5.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: amylose derivative of silica gel for chiral separation R (10 μ m).

Mobile phase anhydrous ethanol R, heptane R (14:86 V/V).

Flow rate 1 mL/min.

Detection Spectrophotometer at 265 nm.

Injection 50 μ L.

Run time 2.5 times the retention time of tacalcitol.

Identification of impurities Use the chromatogram supplied with tacalcitol for system suitability CRS and the chromatogram obtained with reference solution (a) to identify the peak due to impurity B.

Relative retention With reference to tacalcitol (retention time = about 12 min): impurity A = about 0.7; impurity B = about 0.85.

System suitability Reference solution (a):

— resolution: minimum 1.5 between the peaks due to impurity B and tacalcitol.

Calculation of percentage contents:

— for each impurity, use the concentration of tacalcitol monohydrate in reference solution (b).

Limits:

- impurity B: maximum 1.0 per cent;
- unspecified impurities: for each impurity, maximum 0.10 per cent;
- disregard any peak with a relative retention with reference to tacalcitol of about 0.7 (impurity A).

Water (2.5.32)

3.8 per cent to 4.8 per cent, determined on 10.0 mg by direct sample introduction.

ASSAY

Liquid chromatography (2.2.29) as described in test A for related substances with the following modification.

Injection Test solution and reference solutions (a) and (b).

Calculate the percentage content of $C_{27}H_{44}O_3$ taking into account the assigned content of *tacalcitol monohydrate CRS* and, if present, the peak due to pre-tacalcitol.

STORAGE

In an airtight container, under an inert gas, protected from light at a temperature not exceeding $-15\text{ }^{\circ}\text{C}$.

IMPURITIES

Test A for related substances: A.

Test B for related substances: B, C.

Specified impurities A, B.

Ph Eur

DEFINITION

(3S,4R,5S,8R,9E,12S,14S,15R,16S,18R,19R,26aS)-5,19-dihydroxy-3-[(1E)-1-[(1R,3R,4R)-4-hydroxy-3-methoxycyclohexyl]prop-1-en-2-yl]-14,16-dimethoxy-4,10,12,18-tetramethyl-8-(prop-2-en-1-yl)-3,4,5,6,8,11,12,13,14,15,16,17,18,19,24,25,26,26a-octadecahydro-7H-15,19-epoxy-pyrido[2,1-c][1,4]oxaazacyclotricosine-1,7,20,21(23H)-tetrone monohydrate.

Substance produced by the growth of certain strains of *Streptomyces tsukubaensis*.

Content

97.0 per cent to 102.0 per cent for the sum of tacrolimus, tacrolimus compound I and tacrolimus compound II (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, soluble in ethanol (96 per cent), practically insoluble in heptane.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison *tacrolimus monohydrate CRS*.

TESTS

Appearance of solution

The solution is clear (2.2.1) and not more intensely coloured than reference solution GY₇ (2.2.2, Method II).

Dissolve 0.20 g in ethanol (96 per cent) R and dilute to 20.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29). Carry out the test protected from light. Allow the test and reference solutions to stand for 3 h at room temperature before use.

Solvent mixture water R, acetonitrile R (30:70 V/V).

Test solution Dissolve 30.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

Reference solution (a) Dissolve 30.0 mg of tacrolimus monohydrate CRS in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

Reference solution (b) Dissolve 3.0 mg of tacrolimus for system suitability CRS (containing impurity A) in the solvent mixture and dilute to 1.0 mL with the solvent mixture.

Reference solution (c) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Column:

- size: $l = 0.15$ m, $\varnothing = 4.6$ mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (3 μ m);
- temperature: 60 °C.

Mobile phase:

- mobile phase A: mix 20 volumes of a mixture of 19 volumes of 1,1-dimethylethyl methyl ether R and 81 volumes of acetonitrile for chromatography R with 80 volumes of a 0.04 per cent V/V solution of phosphoric acid R;
- mobile phase B: mix 20 volumes of a 0.04 per cent V/V solution of phosphoric acid R with 80 volumes of a mixture of 19 volumes of 1,1-dimethylethyl methyl ether R and 81 volumes of acetonitrile for chromatography R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 30	72	28
30 - 53	72 → 15	28 → 85

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 220 nm.

Autosampler Set at 4 °C.

Injection 20 μ L of the test solution and reference solutions (b) and (c).

Identification of impurities Use the chromatogram supplied with tacrolimus for system suitability CRS and the chromatogram obtained with reference solution (b) to identify the peak due to impurity A.

Relative retention With reference to tacrolimus (retention time = about 24 min): tacrolimus compound I = broad peak at about 0.5; impurity B = sharp peak at about 0.5; tacrolimus compound II = about 0.6; impurity A = about 0.9.

System suitability Reference solution (b):

- resolution: minimum 3.0 between the peaks due to impurity A and tacrolimus.

Integration The peak due to impurity B, which co-elutes with tacrolimus compound I, is a rider peak that is to be

integrated using tangential skimming. It is necessary that the integration area of the peak due to tacrolimus compound I preserves the Gaussian peak shape.

Calculation of percentage contents:

- for each impurity, use the concentration of tacrolimus monohydrate in reference solution (c).

Limits:

- impurity A: maximum 0.5 per cent;
- unspecified impurities: for each impurity, maximum 0.15 per cent;
- total: maximum 1.0 per cent;
- reporting threshold: 0.05 per cent; disregard the peaks due to tacrolimus compound I and tacrolimus compound II.

Water (2.5.12)

1.5 per cent to 4.0 per cent, determined on 0.250 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (a).

Calculate the percentage content of the sum of tacrolimus, tacrolimus compound I and tacrolimus compound II taking into account the assigned content of tacrolimus monohydrate CRS.

STORAGE

In an airtight container. If the substance is sterile, the container is also sterile and tamper-evident.

IMPURITIES

Specified impurities A.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B, C, D, E, H, I.

- A. (3*S*,4*R*,5*S*,8*R*,9*E*,12*S*,14*S*,15*R*,16*S*,18*R*,19*R*,26*aS*)-8-ethyl-5,19-dihydroxy-3-[(1*E*)-1-[(1*R*,3*R*,4*R*)-4-hydroxy-3-methoxycyclohexyl]prop-1-en-2-yl]-14,16-dimethoxy-4,10,12,18-tetramethyl-3,4,5,6,8,11,12,13,14,15,16,17,18,19,24,25,26,26*a*-octadecahydro-7*H*-15,19-epoxyppyrido[2,1-*c*][1,4]oxaazacyclotricosine-1,7,20,21(23*H*)-tetrone,

Ph Eur

Tadalafil

(Ph. Eur. monograph 2606)

C₂₂H₁₉N₃O₄

389.4

171596-29-5

Action and use

Selective inhibitor of cyclic GMP-specific phosphodiesterase (Type V) with vasodilator action; treatment of erectile dysfunction.

Ph Eur

DEFINITION

(6*R*,12*aR*)-6-(1,3-Benzodioxol-5-yl)-2-methyl-2,3,6,7,12,12*a*-hexahydropyrazino[1',2':1,6]-pyrido[3,4-*b*]indole-1,4-dione.

Content

97.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, freely soluble in dimethyl sulfoxide, slightly soluble in methylene chloride.

IDENTIFICATION

Carry out either tests A, B or tests A, C.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison *tadalafil CRS*.

B. Liquid chromatography (2.2.29) as described in the test for impurities A, B and C with the following modification.

Injection Test solution and reference solution (a).

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

C. Specific optical rotation (2.2.7): + 78.0 to + 84.0 (dried substance).

Dissolve 0.250 g in *dimethyl sulfoxide R* and dilute to 25.0 mL with the same solvent.

TESTS

Impurities A, B and C

Liquid chromatography (2.2.29).

Solvent mixture *acetonitrile R*, *hexane R*, *2-propanol R* (20:40:40 V/V/V).

Solution A Dissolve 27 g of *tetrabutylammonium hydroxide R* in *methanol R* and dilute to 100.0 mL with the same solvent.

Test solution Dissolve 25.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

Reference solution (a) Dissolve 25.0 mg of *tadalafil CRS* in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Reference solution (c) In order to prepare impurity A *in situ*, dissolve 25 mg of the substance to be examined in 40 mL of the solvent mixture. Add 1 mL of solution A, mix well and allow to stand for 20 min. Add 1 mL of *trifluoroacetic acid R* and dilute to 100 mL with the solvent mixture.

Reference solution (d) To 1 mL of the test solution add 1 mL of reference solution (c) and dilute to 50 mL with the solvent mixture.

Column:

— *size*: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— *stationary phase*: amylose derivative of silica gel for chiral separation R (10 μ m);

— *temperature*: 30 °C.

Mobile phase *hexane R*, *2-propanol R1* (50:50 V/V).

Flow rate 0.75 mL/min.

Detection Spectrophotometer at 222 nm.

Injection 20 μ L of the test solution and reference solutions (b) and (d).

Run time 2.2 times the retention time of *tadalafil*.

Identification of impurities Use the chromatogram obtained with reference solution (d) to identify the peak due to impurity A.

Relative retention With reference to tadalafil (retention time = about 11 min): impurity A = about 0.8.

System suitability Reference solution (d)

— **resolution**: minimum 2.0 between the peaks due to impurity A and tadalafil.

Limits:

- **impurity A**: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- **unspecified impurities**: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent).

Related substances

Liquid chromatography (2.2.29). Do not use sonication during the preparation of the solutions.

Solvent mixture acetonitrile R, 2-propanol R (50:50 V/V).

Solution A Dissolve 27 g of tetrabutylammonium hydroxide R in methanol R and dilute to 100.0 mL with the same solvent.

Test solution (a) Dissolve 40 mg of the substance to be examined in 50 mL of acetonitrile R and dilute to 100.0 mL with mobile phase A.

Test solution (b) Dissolve 50.0 mg of the substance to be examined in 50 mL of acetonitrile R and dilute to 100.0 mL with mobile phase A. To 10.0 mL of this solution add 25.0 mL of acetonitrile R and dilute to 50.0 mL with mobile phase A.

Reference solution (a) To 1.0 mL of test solution (a) add 50 mL of acetonitrile R and dilute to 100.0 mL with mobile phase A. To 1.0 mL of this solution add 5 mL of acetonitrile R and dilute to 10.0 mL with mobile phase A.

Reference solution (b) In order to prepare impurity A *in situ*, dissolve 4 mg of the substance to be examined in 50 mL of the solvent mixture. Add 1 mL of solution A, mix, and allow to stand for 40 min. Add 1 mL of trifluoroacetic acid R and dilute to 100 mL with the solvent mixture.

Reference solution (c) Dilute 1 mL of reference solution (b) to 50 mL with test solution (a).

Reference solution (d) Dissolve 50.0 mg of tadalafil CRS in 50 mL of acetonitrile R and dilute to 100.0 mL with mobile phase A. To 10.0 mL of this solution add 25.0 mL of acetonitrile R and dilute to 50.0 mL with mobile phase A.

Column:

- **size**: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- **stationary phase**: octylsilyl silica gel for chromatography R (5 μ m);
- **temperature**: 40 °C.

Mobile phase:

- **mobile phase A**: mix 1.0 mL of trifluoroacetic acid R with water for chromatography R and dilute to 1000 mL with the same solvent;
- **mobile phase B**: acetonitrile R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 3	85	15
3 - 30	85 → 5	15 → 95
30 - 33	5	95

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 285 nm.

Injection 20 μ L of test solution (a) and reference solutions (a) and (c).

Identification of impurities Use the chromatogram obtained with reference solution (c) to identify the peak due to impurities A + C.

Relative retention With reference to tadalafil (retention time = about 16 min): impurities A and C = about 1.03.

System suitability Reference solution (c):

- **peak-to-valley ratio**: minimum 3.3, where H_p = height above the baseline of the peak due to impurities A + C and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to tadalafil.

Limits:

- **unspecified impurities**: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- **total**: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- **disregard limit**: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard any peak due to impurity A and/or C.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 105 °C for 3 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modifications.

Mobile phase acetonitrile R, mobile phase A (45:55 V/V).

Flow rate 1.5 mL/min.

Injection Test solution (b) and reference solution (d).

Run time Twice the retention time of tadalafil (retention time = about 4.5 min).

Calculate the percentage content of $C_{22}H_{19}N_3O_4$ from the declared content of tadalafil CRS.

IMPURITIES

Specified impurities A.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B, C, D, E, F, G, H, I.

A. (6*R*,12*aS*)-6-(1,3-benzodioxol-5-yl)-2-methyl-2,3,6,7,12,12*a*-hexahydropyrazino[1',2':1,6]pyrido[3,4-*b*]indole-1,4-dione,

Ph Eur

Purified Talc

(Talc, Ph. Eur. monograph 0438)

14807-96-6

Preparation

Talc Dusting Powder

Ph Eur

DEFINITION

Powdered, selected, natural, hydrated magnesium silicate. Pure talc has the formula $Mg_3Si_4O_{10}(OH)_2$ (M_r 379.3). It may contain variable amounts of associated minerals among which chlorites (hydrated aluminium and magnesium silicates), magnesite (magnesium carbonate), calcite (calcium carbonate) and dolomite (calcium and magnesium carbonate) are predominant.

PRODUCTION

Talc derived from deposits that are known to contain associated asbestos is not suitable for pharmaceutical use. The manufacturer is responsible for demonstrating by the test for amphiboles and serpentines that the product is free from asbestos. The presence of amphiboles and of serpentines is revealed by X-ray diffraction or by infrared spectrophotometry (see A and B). If detected, the specific

morphological criteria of asbestos are investigated by a suitable method of optical microscopy to determine whether tremolite asbestos or chrysotile is present, as described below.

A. Infrared absorption spectrophotometry (2.2.24).

Preparation Discs of *potassium bromide R*.

In the range 740 cm^{-1} to 760 cm^{-1} using scale expansion, any absorption band at $758 \pm 1\text{ cm}^{-1}$ may indicate the presence of tremolite or of chlorite. If the absorption band remains after ignition of the substance to be examined at $850 \pm 50\text{ }^\circ\text{C}$ for at least 30 min, it indicates the presence of the tremolite. In the range 600 cm^{-1} to 650 cm^{-1} using scale expansion, any absorption band or shoulder may indicate the presence of serpentines.

B. X-ray diffraction.

Preparation Place the sample on the sample holder; pack and smooth its surface with a polished glass microscope slide.

Radiation Cu K α monochromatic, 40 kV, 24-30 mA.

Incident slit 1° .

Detection slit 0.2° .

Goniometer speed $1/10^\circ$ 2 θ /min.

Scanning range $10\text{-}13^\circ$ 2 θ and $24\text{-}26^\circ$ 2 θ .

Sample Not oriented.

Results The presence of amphiboles is detected by a diffraction peak at $10.5 \pm 0.1^\circ$ 2 θ , the presence of serpentines is detected by diffraction peaks at $24.3 \pm 0.1^\circ$ 2 θ and at $12.1 \pm 0.1^\circ$ 2 θ .

If, by one of the 2 methods, amphiboles and/or serpentine are detected, examine by a suitable method of optical microscopy to determine the asbestos character.

The presence of asbestos is shown if the following 2 criteria are met:

- a range of length to width ratios of 20:1 to 100:1, or higher for fibres longer than 5 μm ;
 - capability of splitting into very thin fibrils;
- and if at least 2 of the following 4 criteria are met:
- parallel fibres occurring in bundles;
 - fibre bundles displaying frayed ends;
 - fibres in the form of thin needles;
 - matted masses of individual fibres and/or fibres showing curvature.

CHARACTERS

Appearance

Light, homogeneous, white or almost white powder, greasy to the touch (non abrasive).

Solubility

Practically insoluble in water, in ethanol (96 per cent) and in dilute solutions of acids and alkali hydroxides.

IDENTIFICATION

First identification: A.

Second identification: B, C.

A. Infrared absorption spectrophotometry (2.2.24).

Preparation Discs of *potassium bromide R*.

Absorption bands At $3677 \pm 2\text{ cm}^{-1}$, $1018 \pm 2\text{ cm}^{-1}$ and $669 \pm 2\text{ cm}^{-1}$.

B. In a platinum crucible, melt a mixture of 0.2 g of *anhydrous sodium carbonate R* and 2.0 g of *potassium carbonate R*. To the melted mass add 0.1 g of the substance to be examined and heat until the mixture is completely melted. Allow to cool and transfer the melted mass into an evaporating dish with 50 mL of hot *water R*. Add *hydrochloric acid R* until effervescence ceases. Add 10 mL of *hydrochloric*

acid R and evaporate to dryness on a water-bath. Allow to cool. Add 20 mL of *water R*, heat to boiling and filter (the residue is used for identification test C). To 5 mL of the filtrate add 1 mL of *ammonia R* and 1 mL of *ammonium chloride solution R* and filter. To the filtrate add 1 mL of *disodium hydrogen phosphate solution R*. A white, crystalline precipitate is formed.

C. The residue obtained in identification test B gives the reaction of silicates (2.3.1).

TESTS

Solution S1

Weigh 10.0 g into a conical flask fitted with a reflux condenser, gradually add 50 mL of 0.5 M *hydrochloric acid* while stirring and heat on a water-bath for 30 min. Allow to cool. Transfer the mixture to a beaker and allow the undissolved material to settle. Filter the supernatant through medium-speed filter paper into a 100 mL volumetric flask, retaining as much as possible of the insoluble material in the beaker. Wash the residue and the beaker with 3 quantities, each of 10 mL, of hot *water R*. Wash the filter with 15 mL of hot *water R*, allow the filtrate to cool and dilute to 100.0 mL with the same solvent.

Solution S2

Perchlorates mixed with heavy metals are known to be explosive. Take proper precautions while performing this procedure Weigh 0.5 g in a 100 mL polytetrafluoroethylene dish, add 5 mL of *hydrochloric acid R*, 5 mL of *lead-free nitric acid R* and 5 mL of *perchloric acid R*. Stir gently then add 35 mL of *hydrofluoric acid R* and evaporate slowly to dryness on a hot plate. To the residue, add 5 mL of *hydrochloric acid R*, cover with a watch-glass, heat to boiling and allow to cool. Rinse the watch-glass and the dish with *water R*. Transfer into a volumetric flask, rinse the dish with *water R* and dilute to 50.0 mL with the same solvent.

Acidity or alkalinity

Boil 2.5 g with 50 mL of *carbon dioxide-free water R* under reflux. Filter *in vacuo*. To 10 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*; not more than 0.4 mL of 0.01 M *hydrochloric acid* is required to change the colour of the indicator to green. To 10 mL of the filtrate add 0.1 mL of *phenolphthalein solution R1*; not more than 0.3 mL of 0.01 M *sodium hydroxide* is required to change the colour of the indicator to pink.

Water-soluble substances

Maximum 0.2 per cent.

To 10.0 g add 50 mL of *carbon dioxide-free water R*, heat to boiling and maintain boiling under a reflux condenser for 30 min. Allow to cool, filter through a medium-speed filter paper and dilute to 50.0 mL with *carbon dioxide-free water R*. Take 25.0 mL of the filtrate, evaporate to dryness and heat at $105\text{ }^\circ\text{C}$ for 1 h. The residue weighs a maximum of 10 mg.

Aluminium

Maximum 2.0 per cent.

Atomic absorption spectrometry (2.2.23, Method I).

Test solution To 5.0 mL of solution S2 add 10 mL of a 25.34 g/L solution of *caesium chloride R*, 10.0 mL of *hydrochloric acid R* and dilute to 100.0 mL with *water R*.

Reference solutions Into 4 identical volumetric flasks, each containing 10.0 mL of *hydrochloric acid R* and 10 mL of a 25.34 g/L solution of *caesium chloride R*, introduce respectively 5.0 mL, 10.0 mL, 15.0 mL and 20.0 mL of *aluminium standard solution (100 ppm Al) R* and dilute to 100.0 mL with *water R*.

Source Aluminium hollow-cathode lamp.

Wavelength 309.3 nm.

Atomisation device Nitrous oxide-acetylene flame.

Calcium

Maximum 0.9 per cent.

Atomic absorption spectrometry (2.2.23, *Method I*).

Test solution To 5.0 mL of solution S2 add 10.0 mL of hydrochloric acid R, 10 mL of lanthanum chloride solution R and dilute to 100.0 mL with water R.

Reference solutions Into 4 identical volumetric flasks, each containing 10.0 mL of hydrochloric acid R and 10 mL of lanthanum chloride solution R, introduce respectively 1.0 mL, 2.0 mL, 3.0 mL and 5.0 mL of calcium standard solution (100 ppm Ca) R1 and dilute to 100.0 mL with water R.

Source Calcium hollow-cathode lamp.

Wavelength 422.7 nm.

Atomisation device Nitrous oxide-acetylene flame.

Iron

Maximum 0.25 per cent.

Atomic absorption spectrometry (2.2.23, *Method I*).

Test solution To 2.5 mL of solution S1, add 50.0 mL of 0.5 M hydrochloric acid and dilute to 100.0 mL with water R.

Reference solutions Into 4 identical volumetric flasks, each containing 50.0 mL of 0.5 M hydrochloric acid, introduce respectively 2.0 mL, 2.5 mL, 3.0 mL and 4.0 mL of iron standard solution (250 ppm Fe) R and dilute to 100.0 mL with water R.

Source Iron hollow-cathode lamp.

Wavelength 248.3 nm.

Atomisation device Air-acetylene flame.

Correction Deuterium lamp.

Lead

Maximum 10 ppm.

Atomic absorption spectrometry (2.2.23, *Method I*).

Test solution Use solution S1.

Reference solutions Into 4 identical volumetric flasks, each containing 50.0 mL of 0.5 M hydrochloric acid, introduce respectively 5.0 mL, 7.5 mL, 10.0 mL and 12.5 mL of lead standard solution (10 ppm Pb) R1 and dilute to 100.0 mL with water R.

Source Lead hollow-cathode lamp.

Wavelength 217.0 nm.

Atomisation device Air-acetylene flame.

Magnesium

17.0 per cent to 19.5 per cent.

Atomic absorption spectrometry (2.2.23, *Method I*).

Test solution Dilute 0.5 mL of solution S2 to 100.0 mL with water R. To 4.0 mL of the solution, add 10.0 mL of hydrochloric acid R, 10 mL of lanthanum chloride solution R and dilute to 100.0 mL with water R.

Reference solutions Into 4 identical volumetric flasks, each containing 10.0 mL of hydrochloric acid R and 10 mL of lanthanum chloride solution R, introduce respectively 2.5 mL, 3.0 mL, 4.0 mL and 5.0 mL of magnesium standard solution (10 ppm Mg) R1 and dilute to 100.0 mL with water R.

Source Magnesium hollow-cathode lamp.

Wavelength 285.2 nm.

Atomisation device Air-acetylene flame.

Loss on ignition

Maximum 7.0 per cent, determined on 1.00 g by ignition to constant weight at 1050-1100 °C.

Microbial contamination

If intended for cutaneous administration:

— TAMC: acceptance criterion 10^2 CFU/g (2.6.12).

If intended for oral administration:

— TAMC: acceptance criterion 10^3 CFU/g (2.6.12);

— TYMC: acceptance criterion 10^2 CFU/g (2.6.12).

LABELLING

The label states, where applicable, that the substance is suitable for oral or cutaneous administration.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for talc used as antisticking agent or glidant in tablets and capsules or as antiadhesive in coated and film-coated tablets.

Particle-size distribution (2.9.31)

Specific surface area (2.9.26)

Ph Eur

Tamoxifen Citrate

(Ph. Eur. monograph 1046)

$C_{32}H_{37}NO_8$

563.6

54965-24-1

Action and use

Selective estrogen receptor modulator.

Preparations

Tamoxifen Oral Solution

Tamoxifen Tablets

Ph Eur

DEFINITION

2-[4-[(Z)-1,2-Diphenylbut-1-en-1-yl]phenoxy]-N,N-dimethylethan-1-amine dihydrogen 2-hydroxypropane-1,2,3-tricarboxylate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS**Appearance**

White or almost white, crystalline powder.

Solubility

Slightly soluble in water, soluble in methanol, slightly soluble in acetone.

It shows polymorphism (5.9).

IDENTIFICATION

First identification: B.

Second identification: A, C.

A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

Test solution Dissolve 20 mg in *methanol R* and dilute to 50.0 mL with the same solvent. Dilute 5.0 mL of the solution to 100.0 mL with *methanol R*.

Spectral range 220-350 nm.

Absorption maxima At 237 nm and 275 nm.

Absorbance ratio $A_{237}/A_{275} = 1.45$ to 1.65.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison *tamoxifen citrate CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *acetone R*, evaporate to dryness and record new spectra using the residues.

C. Thin-layer chromatography (2.2.27).

Test solution Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

Reference solution (a) Dissolve 10 mg of *tamoxifen citrate CRS* in *methanol R* and dilute to 10 mL with the same solvent.

Reference solution (b) Dissolve 10 mg of *clomifene citrate CRS* and 10 mg of *tamoxifen citrate CRS* in *methanol R* and dilute to 10 mL with the same solvent.

Plate TLC silica gel F_{254} plate *R*.

Mobile phase *triethylamine R*, *toluene R* (10:90 *V/V*).

Application 5 μ L.

Development Over 3/4 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS**Related substances**

Liquid chromatography (2.2.29). Prepare the solutions immediately before use and protect from light.

Test solution Dissolve 15 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

Reference solution (a) Dissolve 3 mg of *tamoxifen citrate for performance test CRS* (containing impurities A and F) in the mobile phase and dilute to 2.0 mL with the mobile phase.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Column:

— *size:* $l = 0.25$ m, $\varnothing = 4.6$ mm;

— *stationary phase:* end-capped octadecylsilyl silica gel for chromatography *R* (5 μ m).

Mobile phase Mix 40 volumes of *acetonitrile R* and 60 volumes of *water R* containing 0.9 g/L of *sodium dihydrogen phosphate R* and 4.8 g/L of *N,N-dimethylethylamine R*; adjust to pH 3.0 with *phosphoric acid R*.

Flow rate 1.2 mL/min.

Detection Spectrophotometer at 240 nm.

Injection 10 μ L.

Run time Twice the retention time of tamoxifen.

Identification of impurities Use the chromatogram supplied with *tamoxifen citrate for performance test CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A and F.

Relative retention With reference to tamoxifen (retention time = about 20 min): impurity A = about 0.8; impurity F = about 0.9.

System suitability Reference solution (a):

— *resolution:* minimum 3.0 between the peaks due to impurities A and F; baseline separation between the peaks due to impurity F and tamoxifen.

Limits:

— *impurity A:* not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *impurity F:* not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— *unspecified impurities:* for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— *total:* not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *disregard limit:* 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak due to the citrate.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 65 °C for 4 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in 75 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 56.36 mg of $C_{32}H_{37}NO_8$.

IMPURITIES

Specified impurities A, F.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*) B, C, D, E, G, H.

A. 2-[4-[(*E*)-1,2-diphenylbut-1-en-1-yl]phenoxy]-*N,N*-dimethylethan-1-amine ((*E*)-isomer),

B. 1-[4-[2-(dimethylamino)ethoxy]phenyl]-1,2-diphenylbutan-1-ol,

C. 2-[4-[(*EZ*)-1,2-diphenyleth-1-en-1-yl]phenoxy]-*N,N*-dimethylethan-1-amine,

D. 2-[4-[(*EZ*)-1,2-diphenylprop-1-en-1-yl]phenoxy]-*N,N*-dimethylethan-1-amine,

E. 2-[2-[(*EZ*)-1,2-diphenylbut-1-en-1-yl]phenoxy]-*N,N*-dimethylethan-1-amine,

F. 2-[4-[(*Z*)-1,2-diphenylbut-1-en-1-yl]phenoxy]-*N*-methylethan-1-amine,

G. 1-[4-[2-(dimethylamino)ethoxy]phenyl]-2-phenylbutan-1-one,

H. 2-[4-[(*RS*)-[4-[(*Z*)-1-[4-[2-(dimethylamino)ethoxy]phenyl]-2-phenylbut-1-en-1-yl]phenyl](phenyl)methyl]phenoxy]-*N,N*-dimethylethan-1-amine.

Tamsulosin Hydrochloride

(Ph. Eur. monograph 2131)

$C_{20}H_{29}ClN_2O_5S$

445.0

106463-17-6

Action and use

Alpha-1-adrenoceptor antagonist.

Preparations

Tamsulosin Prolonged-release Capsules

Tamsulosin Prolonged-release Tablets

Ph Eur

DEFINITION

5-[(2*R*)-2-[[2-(2-Ethoxyphenoxy)ethyl]amino]propyl]-2-methoxybenzenesulfonamide hydrochloride.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Slightly soluble in water, freely soluble in formic acid, slightly soluble in anhydrous ethanol.

mp

About 230 °C.

IDENTIFICATION

Carry out either tests A, C, D or tests A, B, D.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison tamsulosin hydrochloride CRS.

B. Specific optical rotation (2.2.7): -20.5 to -17.5 (dried substance).

Dissolve with heating 0.15 g in *water R* and dilute to 20.0 mL with the same solvent.

C. Enantiomeric purity (see Tests).

D. Dissolve with heating 0.75 g in *water R* and dilute to 100.0 mL with the same solvent. Take 5 mL of the solution and cool in an ice-bath. Add 3 mL of *dilute nitric acid R* and

shake. Allow to stand at room temperature for 30 min and filter. The filtrate gives reaction (a) of chlorides (2.3.1).

TESTS

Related substances

A. Impurities eluting before tamsulosin. Liquid chromatography (2.2.29).

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b) Dissolve 4 mg of tamsulosin impurity D CRS and 4 mg of the substance to be examined in the mobile phase and dilute to 20 mL with the mobile phase. Dilute 2 mL of the solution to 20 mL with the mobile phase.

Reference solution (c) Dissolve 4 mg of tamsulosin impurity H CRS and 4 mg of the substance to be examined in the mobile phase and dilute to 20 mL with the mobile phase. Dilute 2 mL of the solution to 20 mL with the mobile phase.

Column:

- size: $l = 0.15$ m, $\varnothing = 4.6$ mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 μ m);
- temperature: 40 °C.

Mobile phase Dissolve 3.0 g of sodium hydroxide R in a mixture of 8.7 mL of perchloric acid R and 1900 mL of water for chromatography R; adjust to pH 2.0 with 0.5 M sodium hydroxide and dilute to 2000 mL with water for chromatography R; to 1400 mL of this solution add 600 mL of acetonitrile for chromatography R.

Flow rate 1.3 mL/min.

Detection Spectrophotometer at 225 nm.

Injection 10 μ L of the test solution and reference solutions (a) and (b).

Run time 1.5 times the retention time of tamsulosin (retention time = about 6 min).

System suitability Reference solution (b):

- resolution: minimum 6.0 between the peaks due to impurity D and tamsulosin.

Limit:

- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

B. Impurities eluting after tamsulosin. Liquid chromatography (2.2.29) as described in test A with the following modifications.

Mobile phase Dissolve 3.0 g of sodium hydroxide R in a mixture of 8.7 mL of perchloric acid R and 1900 mL of water for chromatography R; adjust to pH 2.0 with 0.5 M sodium hydroxide and dilute to 2000 mL with water for chromatography R; add 2000 mL of acetonitrile for chromatography R.

Flow rate 1.0 mL/min.

Injection 10 μ L of the test solution and reference solutions (a) and (c).

Run time 5 times the retention time of tamsulosin (retention time = about 2.5 min).

System suitability Reference solution (c):

- resolution: minimum 2.0 between the peaks due to tamsulosin and impurity H.

Limit:

- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- sum of impurities eluting before tamsulosin in test A and after tamsulosin in test B: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Enantiomeric purity

Liquid chromatography (2.2.29).

Test solution Dissolve 50.0 mg of the substance to be examined in methanol R and dilute to 25.0 mL with the same solvent.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with methanol R. Dilute 1.0 mL of this solution to 10.0 mL with methanol R.

Reference solution (b) Dissolve 5 mg of tamsulosin racemate CRS in methanol R and dilute to 25 mL with the same solvent. Dilute 2 mL of the solution to 10 mL with methanol R.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: amylose derivative of silica gel for chiral separation R;
- temperature: 40 °C.

Mobile phase diethylamine R, methanol R1, anhydrous ethanol R, hexane R (1:150:200:650 V/V/V/V).

Flow rate 0.5 mL/min.

Detection Spectrophotometer at 225 nm.

Injection 10 μ L.

Relative retention With reference to tamsulosin (retention time = about 14 min): impurity G = about 0.8.

System suitability Reference solution (b):

- resolution: minimum 2.0 between the peaks due to impurity G and tamsulosin.

Limit:

- impurity G: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.350 g in 5.0 mL of anhydrous formic acid R, add 75 mL of a mixture of 2 volumes of acetic anhydride R and 3 volumes of glacial acetic acid R. Titrate immediately with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20). Carry out a blank titration.

1 mL of 0.1 M perchloric acid is equivalent to 44.50 mg of C₂₀H₂₉ClN₂O₅S.

IMPURITIES

Specified impurities G.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests

in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, B, C, D, E, F, H, I.

A. 5-[(2R)-2-[[bis[2-(2-ethoxyphenoxy)ethyl]amino]propyl]-2-methoxybenzenesulfonamide,

I. 1-(2-bromoethoxy)-2-ethoxybenzene.

Ph Eur

Tannic Acid

(Ph. Eur. monograph 1477)

Action and use

Astringent.

Ph Eur

DEFINITION

Mixture of esters of glucose with gallic acid and 3-galloyl gallic acid.

CHARACTERS

Appearance

Yellowish-white or slightly brown amorphous light powder or shiny plates.

Solubility

Very soluble in water, freely soluble in acetone, in ethanol (96 per cent) and in glycerol (85 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

A. Dilute 0.1 mL of solution S (see Tests) to 5 mL with water R. Add 0.1 mL of ferric chloride solution R1. A blackish-blue colour is produced which becomes green on the addition of 1 mL of dilute sulfuric acid R.

B. To 1 mL of solution S, add 3 mL of a 1 g/L solution of gelatin R. The mixture becomes turbid and a flocculent precipitate is formed.

C. Dilute 0.1 mL of solution S to 5 mL with water R. Add 0.3 mL of barium hydroxide solution R. A greenish-blue precipitate is formed.

TESTS

Solution S

Dissolve 4.0 g in carbon dioxide-free water R and dilute to 20 mL with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II (2.2.1).

Dextrins, gum, salts, sugars

To 2 mL of solution S, add 2 mL of ethanol (96 per cent) R. The solution is clear. Add 1 mL of ether R. The solution remains clear for at least 10 min.

Resins

To 5 mL of solution S, add 5 mL of water R. The mixture remains clear (2.2.1) for at least 15 min.

Loss on drying (2.2.32)

Maximum 12.0 per cent, determined on 0.200 g by drying at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

STORAGE

Protected from light.

Ph Eur

Tapentadol Hydrochloride

(Ph. Eur. monograph 3035)

C₁₄H₂₄ClNO

257.8

175591-09-0

Action and use

μ-Opioid receptor (OP3, MOR) agonist and noradrenaline reuptake inhibitor; analgesic.

Ph Eur

DEFINITION

3-[(2*R*,3*R*)-1-(Dimethylamino)-2-methylpentan-3-yl]phenol hydrochloride.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

PRODUCTION

It is considered that alkyl methanesulfonate esters are genotoxic and are potential impurities in tapentadol hydrochloride. The manufacturing process should be developed taking into consideration the principles of quality risk management, together with considerations of the quality of starting materials, process capability and validation. The general methods 2.5.37. *Methyl, ethyl and isopropyl methanesulfonate in methanesulfonic acid*, 2.5.38. *Methyl, ethyl and isopropyl methanesulfonate in active substances* and 2.5.39. *Methanesulfonyl chloride in methanesulfonic acid* are available to assist manufacturers.

CHARACTERS**Appearance**

White or almost white powder.

Solubility

Freely soluble in water and in methanol, soluble in anhydrous ethanol, very slightly soluble in heptane.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison tapentadol hydrochloride CRS.

B. It gives reaction (a) of chlorides (2.3.1).

C. Enantiomeric purity (see Tests).

TESTS**Enantiomeric purity**

Liquid chromatography (2.2.29).

Solvent mixture diethylamine R, 2-propanol R, heptane R (0.2:10:89.8 V/V/V).

Test solution Dissolve 10.0 mg of the substance to be examined in a mixture of 40 μL of *diethylamine R* and 2 mL of *2-propanol R* using sonication and dilute to 20.0 mL with *heptane R*.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Reference solution (b) Dissolve 5 mg of *tapentadol impurity A CRS* and 5 mg of the substance to be examined in a mixture of 0.2 mL of *diethylamine R* and 10 mL of *2-propanol R* using sonication and dilute to 100 mL with *heptane R*.

Column:

— *size: l = 0.25 m, Ø = 4.6 mm;*

— *stationary phase: amylose derivative of silica gel for chiral separation R (5 μm).*

Mobile phase diethylamine R, 2-propanol R, heptane R (0.1:2:98 V/V/V).

Flow rate 1 mL/min.

Detection Spectrophotometer at 270 nm.

Injection 20 μL.

Run time 1.5 times the retention time of tapentadol.

Relative retention With reference to tapentadol (retention time = about 13 min): impurity A = about 1.2.

System suitability Reference solution (b):

— *resolution: minimum 2.0 between the peaks due to tapentadol and impurity A.*

Limit:

— *impurity A: maximum 1.0 per cent, calculated as the ratio of the area of the peak due to impurity A to the sum of the areas of the peaks due to tapentadol and impurity A;*
— *reporting threshold: 0.10 per cent (reference solution (a)).*

Related substances

Liquid chromatography (2.2.29).

Solvent mixture phosphoric acid R, methanol R, water R (0.1:20:80 V/V/V).

Test solution (a) Dissolve 30.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

Test solution (b) Dilute 5.0 mL of test solution (a) to 50.0 mL with the solvent mixture.

Reference solution (a) Dissolve 30.0 mg of *tapentadol hydrochloride CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture. Dilute 5.0 mL of the solution to 50.0 mL with the solvent mixture.

Reference solution (b) Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Reference solution (c) Dissolve 3 mg of *tapentadol impurity C CRS* in the solvent mixture and dilute to 5 mL with the solvent mixture. Add 0.5 mL of the solution to 30 mg of the substance to be examined and dilute to 50 mL with the solvent mixture.

Column:

— *size: l = 0.15 m, Ø = 4.6 mm;*

— *stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 μm);*

— *temperature: 35 °C.*

Mobile phase:

- mobile phase A: phosphoric acid R, methanol R2, water for chromatography R (0.1:10:90 V/V/V);
- mobile phase B: phosphoric acid R, water for chromatography R, methanol R2 (0.1:10:90 V/V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 2	100	0
2 - 44	100 → 61	0 → 39
44 - 44.5	61 → 0	39 → 100

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 215 nm.

Injection 20 µL of test solution (a) and reference solutions (b) and (c).

Relative retention With reference to tapentadol (retention time = about 15 min): impurity C = about 0.9.

System suitability Reference solution (c):

- resolution: minimum 1.5 between the peaks due to impurity C and tapentadol.

Calculation of percentage contents:

- for each impurity, use the concentration of tapentadol hydrochloride in reference solution (b).

Limits:

- unspecified impurities: for each impurity, maximum 0.10 per cent;
- total: maximum 0.4 per cent;
- reporting threshold: 0.05 per cent.

Water (2.5.12)

Maximum 0.5 per cent, determined on 0.250 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution (b) and reference solution (a).

Calculate the percentage content of $C_{14}H_{24}ClNO$ taking into account the assigned content of tapentadol hydrochloride CRS.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B, C, D, E.

E. (2R,3R)-3-(3-methoxyphenyl)-N,N,2-trimethylpentan-1-amine.

Ph Eur

Tar**Action and use**

Used in treatment of psoriasis.

DEFINITION

Tar is bituminous liquid obtained from the wood of various trees of the family Pinaceae by destructive distillation and is known in commerce as Stockholm Tar.

CHARACTERISTICS

Dark brown or nearly black, semi-liquid; denser than water. Soluble in ethanol (90%), in ether and in fixed and volatile oils.

IDENTIFICATION

A. The aqueous liquid obtained by shaking 1 g with 20 mL of water for 5 minutes is acidic to litmus paper.

B. Carefully add 0.5 g to 10 mL of *petroleum spirit* (boiling range, 40° to 60°) and allow to stand for 30 minutes. When examined in daylight no fluorescence is produced.

Coal Tar

Action and use

Used in treatment of psoriasis.

Preparations

Betamethasone Valerate and Coal Tar Paste

Coal Tar and Salicylic Acid Ointment

Coal Tar Solution

Strong Coal Tar Solution

Zinc and Coal Tar Paste

DEFINITION

Coal Tar is a product obtained from bituminous coal by destructive distillation at about 1000°.

CHARACTERISTICS

A nearly black, viscous liquid. On exposure to air, the viscosity gradually increases. It burns in air with a luminous, sooty flame. It has a weight per mL of about 1.15 g. Slightly soluble in *water*; partly soluble in *ethanol*, in *ether* and in volatile oils.

IDENTIFICATION

A. A saturated solution is alkaline to *litmus solution*.

B. Carefully add 0.5 g to 10 mL of *petroleum spirit* (boiling range, 40° to 60°) and allow to stand for 30 minutes. When examined in daylight, the supernatant liquid has a blue fluorescence which becomes more intense when viewed under *ultraviolet light* (365 nm).

TESTS

Ash

Not more than 2.0%, Appendix XI J.

Tartaric Acid

(Ph. Eur. monograph 0460)

C₄H₆O₆

150.1

87-69-4

Ph Eur

DEFINITION

(2*R*,3*R*)-2,3-Dihydroxybutanedioic acid.

The substance is of natural origin, obtained by extraction of lees during winemaking.

Content

99.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Very soluble in *water*, freely soluble in *ethanol* (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) is strongly acid (2.2.4).

B. It gives the reactions of tartrates (2.3.1).

TESTS

Solution S

Dissolve 5.0 g in *distilled water R* and dilute to 50 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and not more intensely coloured than reference solution Y₆ (2.2.2, Method II).

Specific optical rotation (2.2.7)

+ 12.0 to + 12.8 (dried substance).

Dissolve 5.00 g in *water R* and dilute to 25.0 mL with the same solvent.

Oxalic acid

Maximum 360 ppm, calculated as anhydrous oxalic acid.

Dissolve 0.80 g in 4 mL of *water R*. Add 3 mL of *hydrochloric acid R* and 1 g of *zinc R* in granules and boil for 1 min. Allow to stand for 2 min. Collect the liquid in a test-tube containing 0.25 mL of a 10 g/L solution of *phenylhydrazine hydrochloride R* and heat to boiling. Cool rapidly, transfer to a graduated cylinder and add an equal volume of *hydrochloric acid R* and 0.25 mL of a 50 g/L solution of *potassium ferricyanide R*. Shake and allow to stand for 30 min. Any pink colour in the solution is not more intense than that in a standard prepared at the same time in the same manner using 4 mL of a 0.1 g/L solution of *oxalic acid R*.

Chlorides (2.4.4)

Maximum 100 ppm.

Dilute 5 mL of solution S to 15 mL with *water R*.

Sulfates (2.4.13)

Maximum 150 ppm.

Dilute 10 mL of solution S to 15 mL with *distilled water R*.

Calcium (2.4.3)

Maximum 200 ppm.

To 5 mL of solution S add 10 mL of a 50 g/L solution of *sodium acetate R* in *distilled water R*.

Loss on drying (2.2.32)

Maximum 0.2 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.650 g in 25 mL of *water R*. Titrate with 1 M *sodium hydroxide* using 0.5 mL of *phenolphthalein solution R* as indicator, until a pink colour is obtained.

1 mL of 1 M *sodium hydroxide* is equivalent to 75.05 mg of C₄H₆O₆.

Ph Eur

Teicoplanin

(Ph. Eur. monograph 2358)

A _{2-1b} C ₈₇ H ₉₅ Cl ₂ N ₉ O ₃₃ M _r 1866		

61036-62-2

Action and use

Glycopeptide antibacterial.

Ph Eur

DEFINITION

Mixture of glycopeptides produced by certain strains of *Actinoplanes teichomyces* sp.; the 6 principal components of the mixture are teicoplanins A₂₋₁ to A₂₋₅ and teicoplanin A₃₋₁, and 2 minor components are teicoplanins A_{2-1a} and A_{2-1b}.

Fermentation product.

Potency

Minimum 900 IU/mg (anhydrous and sodium chloride-free substance).

CHARACTERS

Appearance

White or yellowish, amorphous powder.

Solubility

Freely soluble in water, sparingly soluble in dimethylformamide, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison teicoplanin for identification CRS.

B. Examine the chromatograms obtained in the test for composition.

Results The principal peaks (teicoplanins A₃₋₁, A₂₋₁, A₂₋₂, A₂₋₃, A₂₋₄ and A₂₋₅) and the 2 minor peaks (teicoplanins A_{2-1a} and A_{2-1b}) in the chromatogram obtained with the test solution are similar in retention time and size to the principal peaks in the chromatogram obtained with reference solution (a).

TESTS

Appearance of solution

The solution is clear (2.2.1) and not more intensely coloured than reference solution BY₃ or B₄ (2.2.2, Method I).

Dissolve 0.8 g in 10 mL of water R.

pH (2.2.3)

6.5 to 7.5.

Dissolve 0.50 g in carbon dioxide-free water R and dilute to 10 mL with the same solvent.

Composition

Liquid chromatography (2.2.29): use the normalisation procedure.

Test solution Dissolve 0.100 g of the substance to be examined in water R and dilute to 50.0 mL with the same solvent.

Reference solution (a) Dissolve 20 mg of teicoplanin for identification CRS in water R and dilute to 10.0 mL with the same solvent.

Reference solution (b) Dilute 1.0 mL of reference solution (a) to 10.0 mL with water R. Dilute 1.0 mL of this solution to 20.0 mL with water R.

Reference solution (c) Dissolve 50.0 mg of mesityl oxide CRS (impurity A) in water R and dilute to 25.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with water R. Dilute 1.0 mL of this solution to 100.0 mL with water R.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: spherical end-capped octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase:

— mobile phase A: mix 900 mL of a 3.0 g/L solution of anhydrous sodium dihydrogen phosphate R, adjusted to pH 6.0 with a 40 g/L solution of sodium hydroxide R, and 100 mL of acetonitrile R;

— mobile phase B: mix 300 mL of a 3.0 g/L solution of anhydrous sodium dihydrogen phosphate R, adjusted to pH 6.0 with a 40 g/L solution of sodium hydroxide R, and 700 mL of acetonitrile R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 30	100 → 50	0 → 50
30 - 31	50 → 10	50 → 90
31 - 35	10	90

Flow rate 2.3 mL/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µL of the test solution and reference solutions (a) and (b).

Identification Use the chromatogram supplied with teicoplanin for identification CRS and the chromatogram obtained with reference solution (a) to identify the groups and components.

Relative retention With reference to teicoplanin A₂₋₂ (retention time = about 18 min):

- teicoplanin A₃ group ≤ 0.70:
 - teicoplanin A₃₋₁ = about 0.43.
- teicoplanin A₂ group > 0.70 including:
 - teicoplanin A₂₋₁ group > 0.70 and < 1.00:
 - teicoplanin A_{2-1a} = about 0.85;
 - teicoplanin A_{2-1b} = about 0.88;
 - teicoplanin A₂₋₁ = about 0.93;
 - teicoplanin A₂₋₂ = 1.00;
 - teicoplanin A₂₋₃ group > 1.00 and < 1.12:
 - teicoplanin A₂₋₃ = about 1.03;
 - teicoplanin A₂₋₄ = about 1.12;
 - teicoplanin A₂₋₅ group > 1.12 and < 1.25:
 - teicoplanin A₂₋₅ = about 1.15;
 - teicoplanin A₂₋₆ group ≥ 1.25:
 - teicoplanin-like related substance RS A_{2-6a} = about 1.25;
 - teicoplanin-like related substance RS A_{2-6b} = about 1.30;
 - teicoplanin-like related substance RS A_{2-6c} = about 1.38.

System suitability:

- the chromatogram obtained with reference solution (a) is similar to the chromatogram supplied with teicoplanin for identification CRS;
- resolution: minimum 1.0 between the peaks due to teicoplanin A₂₋₄ and teicoplanin A₂₋₅ in the chromatogram obtained with reference solution (a);
- signal-to-noise ratio: minimum 40 for the peak due to teicoplanin A₂₋₂ in the chromatogram obtained with reference solution (b).

Calculate the percentage contents using the following equations:

$$\begin{aligned} \text{teicoplanin A}_3 \text{ group} &= \frac{0.83 \times S_3}{S_2 + 0.83 \times S_3} \times 100 \\ \text{teicoplanin A}_2 \text{ group} &= \frac{S_2}{S_2 + 0.83 \times S_3} \times 100 \\ \text{teicoplanin A}_{2-1} \text{ group} &= \frac{S_{2-1}}{S_2 + 0.83 \times S_3} \times 100 \\ \text{teicoplanin A}_{2-1a} &= \frac{A_{2-1a}}{S_2 + 0.83 \times S_3} \times 100 \\ \text{teicoplanin A}_{2-1b} &= \frac{A_{2-1b}}{S_2 + 0.83 \times S_3} \times 100 \\ \text{teicoplanin A}_{2-1} &= \frac{A_{2-1}}{S_2 + 0.83 \times S_3} \times 100 \\ \text{teicoplanin A}_{2-2} &= \frac{A_{2-2}}{S_2 + 0.83 \times S_3} \times 100 \end{aligned}$$

$$\begin{aligned} \text{teicoplanin A}_{2-3} \text{ group} &= \frac{S_{2-3}}{S_2 + 0.83 \times S_3} \times 100 \\ \text{teicoplanin A}_{2-3} &= \frac{A_{2-3}}{S_2 + 0.83 \times S_3} \times 100 \\ \text{teicoplanin A}_{2-4} &= \frac{A_{2-4}}{S_2 + 0.83 \times S_3} \times 100 \\ \text{teicoplanin A}_{2-5} \text{ group} &= \frac{S_{2-5}}{S_2 + 0.83 \times S_3} \times 100 \\ \text{teicoplanin A}_{2-5} &= \frac{A_{2-5}}{S_2 + 0.83 \times S_3} \times 100 \\ \text{teicoplanin A}_{2-6} \text{ group} &= \frac{S_{2-6}}{S_2 + 0.83 \times S_3} \times 100 \end{aligned}$$

- S₂ = sum of the areas of the peaks due to teicoplanin A₂ group in the chromatogram obtained with the test solution;
- S₃ = sum of the areas of the peaks due to teicoplanin A₃ group in the chromatogram obtained with the test solution;
- S₂₋₆ = disregard any peak due to impurity A₃; sum of the areas of the peaks with a relative retention greater than or equal to 1.25 in the chromatogram obtained with the test solution;
- S₂₋₁ = sum of the areas of the peaks due to teicoplanin A₂₋₁ group in the chromatogram obtained with the test solution;
- A_{2-1a} = area of the peak due to teicoplanin A_{2-1a} in the chromatogram obtained with the test solution;
- A_{2-1b} = area of the peak due to teicoplanin A_{2-1b} in the chromatogram obtained with the test solution;
- A₂₋₁ = area of the peak due to teicoplanin A₂₋₁ in the chromatogram obtained with the test solution;
- A₂₋₂ = area of the peak due to teicoplanin A₂₋₂ in the chromatogram obtained with the test solution;
- S₂₋₃ = sum of the areas of the peaks due to teicoplanin A₂₋₃ group in the chromatogram obtained with the test solution;
- A₂₋₃ = area of the peak due to teicoplanin A₂₋₃ in the chromatogram obtained with the test solution;
- A₂₋₄ = area of the peak due to teicoplanin A₂₋₄ in the chromatogram obtained with the test solution;
- S₂₋₅ = sum of the areas of the peaks due to teicoplanin A₂₋₅ group in the chromatogram obtained with the test solution;
- A₂₋₅ = area of the peak due to teicoplanin A₂₋₅ in the chromatogram obtained with the test solution;

Limits:

- teicoplanin A₂ group: 84.0 per cent to 98.0 per cent;
- teicoplanin A₂₋₂: 37.0 per cent to 50.0 per cent;
- teicoplanin A₂₋₁ group: 10.0 per cent to 19.0 per cent;
- teicoplanin A₂₋₅ group: 7.0 per cent to 17.0 per cent;
- teicoplanin A₂₋₄: 7.0 per cent to 15.0 per cent;
- teicoplanin A₂₋₅: 7.0 per cent to 15.0 per cent;
- teicoplanin A₂₋₃ group: 5.0 per cent to 11.0 per cent;
- teicoplanin A₃ group: 4.0 per cent to 12.0 per cent;
- teicoplanin A₂₋₃: 4.0 per cent to 8.5 per cent;
- teicoplanin A₂₋₁: 2.0 per cent to 7.0 per cent;
- teicoplanin A_{2-1a}: 0.5 per cent to 5.5 per cent;
- teicoplanin A_{2-1b}: 0.5 per cent to 4.0 per cent;
- teicoplanin A₂₋₆ group: maximum 5.0 per cent;
- disregard limit: 0.25 per cent.

Related substances

Liquid chromatography (2.2.29) as described in the test for composition. Use the normalisation procedure.

Use the chromatogram obtained with reference solution (a) to identify all peaks present above the disregard limit as teicoplanin-like related substances. Any peak present in any part of the chromatogram obtained with the test solution that cannot be correlated to a peak above the disregard limit in reference solution (a) should be considered as a non-teicoplanin-like impurity, unless it is characterized by other means.

A teicoplanin-like related substance is defined as a substance that shares the same glycopeptide core structure of the parent molecule, composed of a linear heptapeptide aglycone, an α -D-mannose and an acetyl- β -D-glucosamine.

The R' side chains in the teicoplanin-like related substances RS A_{2-6a}, RS A_{2-6b} and RS A_{2-6c} are unknown.

Calculate the percentage contents using the following equations:

$$\text{teicoplanin-like related substance (x)} = \frac{A_{RSTLx}}{(S_2 + 0.83 \times S_3)} \times 100$$

A_{RSTLx} = area of the peak due to the teicoplanin-like related substance (x) in the chromatogram obtained with the test solution;

$$\text{non-teicoplanin-like impurity (x)} = \frac{A_{Ix}}{(S_2 + 0.83 \times S_3)} \times 100$$

A_{Ix} = area of the peak due to the non-teicoplanin-like impurity (x) in the chromatogram obtained with the test solution.

Limits:

- teicoplanin-like related substance RS A_{2-6c}: maximum 2.5 per cent;
- teicoplanin-like related substance RS A_{2-6a}: maximum 1.5 per cent;
- teicoplanin-like related substance RS A_{2-6b}: maximum 1.5 per cent;
- any non-teicoplanin-like impurity other than impurity A: maximum 0.5 per cent;
- total non-teicoplanin-like impurities other than impurity A: maximum 1.5 per cent.

Impurity A

Liquid chromatography (2.2.29) as described in the test for composition with the following modifications.

Injection 20 μ L of the test solution and reference solution (c).

Relative retention With reference to teicoplanin A₂₋₂ (retention time = about 18 min): impurity A = about 0.6.

Calculation of percentage content:

- for impurity A, use the concentration of impurity A in reference solution (c).

Limit:

- impurity A: maximum 0.2 per cent.

Chlorides

Maximum 5.0 per cent, expressed as sodium chloride (anhydrous substance).

Dissolve 1.000 g in 300 mL of water R, stir and acidify with 2 mL of nitric acid R. Titrate with 0.1 M silver nitrate, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M silver nitrate is equivalent to 5.844 mg of NaCl.

Water (2.5.12)

Maximum 15.0 per cent, determined on 0.300 g.

ASSAY

Carry out the microbiological assay of antibiotics (2.7.2), using the diffusion method. Use teicoplanin CRS as the reference substance.

STORAGE

Protected from light, at a temperature of 2 °C to 8 °C.

IMPURITIES

Specified impurities A.

A. 4-methylpent-3-en-2-one (mesityl oxide).

Action and use

Angiotensin II (AT₁) receptor antagonist.

Preparation

Telmisartan Tablets

Ph Eur

DEFINITION

4'-[[4-Methyl-6-(1-methyl-1H-benzimidazol-2-yl)-2-propyl-1H-benzimidazol-1-yl]methyl][1,1'-biphenyl]-2-carboxylic acid.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or slightly yellowish, crystalline powder.

Solubility

Practically insoluble in water, slightly soluble in methanol, sparingly soluble in methylene chloride. It dissolves in a 40 g/L solution of sodium hydroxide R.

It shows polymorphism (5.9).

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison telmisartan CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in hot anhydrous ethanol R, evaporate to dryness and record new spectra using the residues.

TESTS

Appearance of solution

The solution is not more intensely coloured than reference solution Y₄ (2.2.2, Method I).

Dissolve 0.5 g in a 40 g/L solution of sodium hydroxide R and dilute to 10 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Test solution To 25 mg of the substance to be examined add about 5 mL of methanol R and 100 μ L of a 40 g/L solution of sodium hydroxide R. Dissolve using sonication and dilute to 50.0 mL with methanol R.

Reference solution (a) Dilute 1.0 mL of the test solution to 10.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 100.0 mL with *methanol R*.

Reference solution (b) Dissolve the contents of a vial of *telmisartan for system suitability CRS* (containing impurities A, B, C, E and F) in 2 mL of *methanol R*.

Reference solution (c) To 5 mg of *telmisartan for peak identification CRS* (containing impurity D) add about 5 mL of *methanol R* and 100 µL of a 40 g/L solution of *sodium hydroxide R*. Dissolve using sonication and dilute to 10 mL with *methanol R*.

Column:

- size: $l = 0.125$ m, $\varnothing = 4.0$ mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 µm) with a pore size of 10 nm;
- temperature: 40 °C.

Mobile phase:

- mobile phase A: dissolve 2.0 g of *potassium dihydrogen phosphate R* and 3.8 g of *sodium pentanesulfonate monohydrate R1* in 900 mL of *water for chromatography R*, adjust to pH 3.0 with *dilute phosphoric acid R* and dilute to 1000 mL with *water for chromatography R*;
- mobile phase B: *methanol R1*, *acetonitrile for chromatography R* (20:80 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 3	70	30
3 - 28	70 → 20	30 → 80

Flow rate 1 mL/min.

Detection Spectrophotometer at 230 nm.

Injection 10 µL.

Identification of impurities Use the chromatogram supplied with *telmisartan for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, E and F; use the chromatogram supplied with *telmisartan for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peak due to impurity D.

Relative retention With reference to telmisartan (retention time = about 15 min): impurity A = about 0.2; impurity E = about 0.6; impurity F = about 0.7; impurity B = about 0.9; impurity C = about 1.5; impurity D = about 1.6.

System suitability Reference solution (b):

- the chromatogram obtained with reference solution (b) is similar to the chromatogram supplied with *telmisartan for system suitability CRS*;
- resolution: minimum 3.0 between the peaks due to impurity B and telmisartan.

Limits:

- impurities C, D: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- impurities A, B: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- total: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

— disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.190 g in 5 mL of *anhydrous formic acid R*. Add 75 mL of *acetic anhydride R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 25.73 mg of $C_{33}H_{30}N_4O_2$.

IMPURITIES

Specified impurities A, B, C, D.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*) E, F, G, H, I, J.

A. 4-methyl-6-(1-methyl-1H-benzimidazol-2-yl)-2-propyl-1H-benzimidazole,

B. 4'-[7-methyl-5-(1-methyl-1H-benzimidazol-2-yl)-2-propyl-1H-benzimidazol-1-yl]methyl[1,1'-biphenyl]-2-carboxylic acid,

C. *tert*-butyl 4'-[[4-methyl-6-(1-methyl-1H-benzimidazol-2-yl)-2-propyl-1H-benzimidazol-1-yl]methyl][1,1'-biphenyl]-2-carboxylate,

D. unknown structure,

E. 1-[(2'-carboxy[1,1'-biphenyl]-4-yl)methyl]-4-methyl-2-propyl-1H-benzimidazole-6-carboxylic acid,

F. 4'-[[4-methyl-6-(1-methyl-1H-benzimidazol-2-yl)-2-propyl-1H-benzimidazol-1-yl]methyl][1,1'-biphenyl]-2-carboxamide,

G. 4'-[[4-methyl-6-(1-methyl-1H-benzimidazol-2-yl)-2-propyl-1H-benzimidazol-1-yl]methyl][1,1'-biphenyl]-2-carbonitrile,

H. *tert*-butyl 4'-(bromomethyl)[1,1'-biphenyl]-2-carboxylate,

I. methyl 4'-[(1,7'-dimethyl-2'-propyl-1H,3'H-[2,5'-bibenzimidazol]-3'-yl)methyl][1,1'-biphenyl]-2-carboxylate,

J. 4'-[(5-chloro-1,7'-dimethyl-2'-propyl-1H,3'H-[2,5'-bibenzimidazol]-3'-yl)methyl][1,1'-biphenyl]-2-carboxylic acid.

Ph Eur

Temazepam

(Ph. Eur. monograph 0954)

$C_{16}H_{13}ClN_2O_2$

300.7

846-50-4

Action and use
Benzodiazepine.

Preparations
Temazepam Oral Solution
Temazepam Tablets

Ph Eur

DEFINITION

(3*RS*)-7-Chloro-3-hydroxy-1-methyl-5-phenyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison temazepam CRS.

TESTS

Impurity A

Maximum 0.05 per cent.

Dissolve 0.400 g in *methylene chloride R* and dilute to 20.0 mL with the same solvent. The absorbance (2.2.25) is not greater than 0.30 at 409 nm.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 10.0 mg of the substance to be examined in a mixture of 1 volume of *water R* and 9 volumes

of methanol R and dilute to 50.0 mL with the same mixture of solvents.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with a mixture of 1 volume of water R and 9 volumes of methanol R. Dilute 2.0 mL of this solution to 10.0 mL with a mixture of 1 volume of water R and 9 volumes of methanol R.

Reference solution (b) Dissolve 1 mg of oxazepam R, 1 mg of temazepam impurity F CRS and 1 mg of temazepam impurity G CRS in a mixture of 1 volume of water R and 9 volumes of methanol R and dilute to 25 mL with the same mixture of solvents.

Reference solution (c) Dissolve 1 mg of temazepam impurity C CRS and 1 mg of temazepam impurity D CRS with a mixture of 1 volume of water R and 9 volumes of methanol R and dilute to 25 mL with the same mixture of solvents.

Column:

- size: $l = 0.15$ m, $\varnothing = 4.6$ mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (3.5 μ m).

Mobile phase:

- mobile phase A: solution containing 4.9 g/L of sodium dihydrogen phosphate R and 0.63 g/L of disodium hydrogen phosphate dodecahydrate R (pH 5.6);
- mobile phase B: methanol R;
- mobile phase C: acetomitrile R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)	Mobile phase C (per cent V/V)
0 - 18	54	39	7
18 - 25	54 → 22	39 → 63	7 → 15
25 - 31	22	63	15
31 - 37	22 → 54	63 → 39	15 → 7

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 230 nm.

Injection 20 μ L.

Relative retention With reference to temazepam (retention time = about 16 min): impurity E = about 0.55; impurity F = about 0.67; impurity G = about 0.73; impurity B = about 0.8; impurity D = about 1.2; impurity C = about 1.3; impurity A = about 1.5.

System suitability Reference solution (b):

- resolution: minimum 1.5 between the peaks due to impurity F and impurity G;
- peak-to-valley ratio: minimum 1.7, where H_p = height above the baseline of the peak due to impurity G and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity B.

Limits:

- correction factors: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity F = 3.2; impurity G = 3.1;
- impurities B, C, D, E, F, G: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- unspecified impurities: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— total: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— disregard limit: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 mL of nitroethane R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 30.07 mg of $C_{16}H_{13}ClN_2O_2$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E, F, G.

A. [5-chloro-2-(methylamino)phenyl]phenylmethanone,

B. (3RS)-7-chloro-3-hydroxy-5-phenyl-1,3-dihydro-2H-1,4-benzodiazepin-2-one (oxazepam),

C. (3RS)-7-chloro-1-methyl-2-oxo-5-phenyl-2,3-dihydro-1H-1,4-benzodiazepin-3-yl acetate,

D. (3RS)-7-chloro-3-methoxy-1-methyl-5-phenyl-1,3-dihydro-2H-1,4-benzodiazepin-2-one,

E. 7-chloro-1-methyl-5-phenyl-1,3-dihydro-2H-1,4-benzodiazepin-2-one 4-oxide,

F. (5RS)-7-chloro-1-methyl-5-phenyl-4,5-dihydro-1H-1,4-benzodiazepine-2,3-dione,

G. (5RS)-7-chloro-1,4-dimethyl-5-phenyl-4,5-dihydro-1H-1,4-benzodiazepine-2,3-dione.

Ph Eur

Temozolomide

(Ph. Eur. monograph 2780)

C₆H₆N₆O₂

194.2

85622-93-1

Action and use

Antineoplastic alkylating agent.

Preparations

Temozolomide Capsules

Temozolomide for Injection

Ph Eur

DEFINITION

3-Methyl-4-oxo-3,4-dihydroimidazo[5,1-d][1,2,3,5]tetrazine-8-carboxamide.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or slightly brown or slightly pink powder.

Solubility

Sparingly soluble in water, soluble in dimethyl sulfoxide, very slightly soluble in ethanol (96 per cent), practically insoluble in toluene.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison temozolomide CRS.

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (d).

TESTS

Related substances

Liquid chromatography (2.2.29).

Test solution (a) Dissolve 25.0 mg of the substance to be examined in dimethyl sulfoxide R and dilute to 25.0 mL with the same solvent.

Test solution (b) Dilute 1.0 mL of test solution (a) to 10.0 mL with dimethyl sulfoxide R.

Reference solution (a) Dilute 1.0 mL of test solution (a) to 100.0 mL with dimethyl sulfoxide R. Dilute 1.0 mL of this solution to 10.0 mL with dimethyl sulfoxide R.

Reference solution (b) In order to prepare impurities A, B and E in situ, mix 5 mL of a 10.3 g/L solution of hydrochloric acid R and 5 mL of test solution (a). Heat the mixture in a water-bath for 1 h.

Reference solution (c) Dissolve 2 mg of temozolomide for peak identification CRS (containing impurity D) in 2 mL of dimethyl sulfoxide R.

Reference solution (d) Dissolve 25.0 mg of temozolomide CRS in dimethyl sulfoxide R and dilute to 25.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with dimethyl sulfoxide R.

Column:

— size: $l = 0.15$ m, $\varnothing = 4.6$ mm;

— stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase 0.94 g/L solution of sodium hexanesulfonate R in a mixture of 4 volumes of methanol R and 96 volumes of a 0.5 per cent V/V solution of glacial acetic acid R.

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 270 nm.

Injection 10 μ L of test solution (a) and reference solutions (a), (b) and (c).

Run time 3 times the retention time of temozolomide.

Identification of impurities Use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B and E; use the chromatogram supplied with temozolomide for peak identification CRS and the chromatogram obtained with reference solution (c) to identify the peak due to impurity D.

Relative retention With reference to temozolomide (retention time = about 11 min): impurity E = about 0.4; impurity D = about 0.5; impurity B = about 0.9; impurity A = about 1.7. The peak due to impurity A in the chromatogram obtained with test solution (a) may be split.

System suitability Reference solution (b):

— resolution: minimum 1.5 between the peaks due to impurity B and temozolomide.

Calculation of percentage contents:

- correction factors: multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.4; impurity E = 0.6;
- for each impurity, use the concentration of temozolomide in reference solution (a).

Limits:

- impurity D: maximum 0.5 per cent;
- impurity A (sum of the peaks): maximum 0.15 per cent;
- impurities B, E: for each impurity, maximum 0.15 per cent;
- unspecified impurities: for each impurity, maximum 0.10 per cent;
- total: maximum 0.8 per cent;
- reporting threshold: 0.05 per cent.

D. 4-diazo-4H-imidazole-5-carboxamide,

E. 3,7-dihydro-4H-imidazo[4,5-d][1,2,3]triazin-4-one (2-azahypoxanthine).

Ph Eur

Water (2.5.32)

Maximum 0.4 per cent, determined on 50.0 mg.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution (b) and reference solution (d).

Calculate the percentage content of C₁₃H₁₁N₃O₄S₂ taking into account the assigned content of temozolomide CRS.

IMPURITIES

Specified impurities A, B, D, E.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) C.

A. 5-amino-1H-imidazole-4-carboxamide,

B. 3-methyl-4-oxo-3,4-dihydroimidazo[5,1-d][1,2,3,5]tetrazine-8-carboxylic acid,

C. 3-methyl-4-oxo-3,4-dihydroimidazo[5,1-d][1,2,3,5]tetrazine-8-carbonitrile,

Tenoxicam

(Ph. Eur. monograph 1156)

C₁₃H₁₁N₃O₄S₂

337.4

59804-37-4

Action and use

Cyclo-oxygenase inhibitor; analgesic; anti-inflammatory.

Preparations

Tenoxicam Injection

Tenoxicam Tablets

Ph Eur

DEFINITION

4-Hydroxy-2-methyl-N-(pyridin-2-yl)-2H-thieno[2,3-e]1,2-thiazine-3-carboxamide 1,1-dioxide.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

Yellow, crystalline powder.

Solubility

Practically insoluble in water, sparingly soluble in methylene chloride, very slightly soluble in anhydrous ethanol. It dissolves in solutions of acids and alkalis.

It shows polymorphism (5.9).

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison tenoxicam CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of methylene chloride R, evaporate to dryness and record new spectra using the residues.

TESTS

Appearance of solution

The solution is clear (2.2.1).

Dissolve 0.10 g in methylene chloride R and dilute to 20 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29). Carry out the test protected from light.

Solvent mixture Mix equal volumes of acetonitrile R and water R. Adjust to apparent pH 3.2 with dilute phosphoric acid R1.

Test solution Dissolve 35 mg of the substance to be examined in the solvent mixture, sonicate and dilute to 50.0 mL with the solvent mixture.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Reference solution (b) Dissolve 7 mg of pyridin-2-amine R (impurity A) in the solvent mixture and dilute to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 100.0 mL with the solvent mixture.

Reference solution (c) Dissolve the contents of a vial of tenoxicam impurity mixture CRS (impurities B, G and H) in 1.0 mL of the test solution.

Column:

- size: $l = 0.15$ m, $\varnothing = 4.6$ mm;
- stationary phase: diisopropylcyanosilyl silica gel for chromatography R (3.5 μ m);
- temperature: 35 °C.

Mobile phase:

- mobile phase A: mix 25 volumes of methanol R2 and 75 volumes of water for chromatography R and adjust to apparent pH 3.2 with dilute phosphoric acid R1;
- mobile phase B: mix 25 volumes of water for chromatography R and 75 volumes of methanol R2 and adjust to apparent pH 3.2 with dilute phosphoric acid R1;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 5	96	4
5 - 16	96 → 76	4 → 24
16 - 25	76	24

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 230 nm.

Injection 20 μ L.

Identification of impurities:

- use the chromatogram obtained with reference solution (b) to identify the peak due to impurity A;
- use the chromatogram supplied with tenoxicam impurity mixture CRS and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities B, G and H; for identification of impurities G and H, which may be inverted in the elution order, take into account the heights of the corresponding peaks in the chromatogram supplied with tenoxicam impurity mixture CRS.

Relative retention With reference to tenoxicam (retention time = about 12 min): impurity A = about 0.1; impurity G = about 0.85; impurity H = about 0.9; impurity B = about 1.3.

System suitability Reference solution (c):

- resolution: minimum 1.3 between the peaks due to impurity H (or G if peaks are inverted) and tenoxicam, and between the peaks due to impurities G and H; if necessary, optimise the apparent pH of the mobile phases within the range 3.0-3.4.

Limits:

- correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.2; impurity B = 2.0;
- impurities A, B: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- total: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Water (2.5.12)

Maximum 0.5 per cent, determined on 1.000 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 5 mL of anhydrous formic acid R. Add 70 mL of anhydrous acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 33.74 mg of $C_{13}H_{11}N_3O_4S_2$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) C, D, E, F, G, H.

A. pyridin-2-amine,

(Ph. Eur. monograph 2021)

$C_{19}H_{26}ClN_5O_4 \cdot 2H_2O$

459.9

70024-40-7

Action and use

Alpha 1-adrenoceptor antagonist.

Ph Eur

DEFINITION

1-(4-Amino-6,7-dimethoxyquinazolin-2-yl)-4-[(2*RS*)-tetrahydrofuran-2-yl]carbonyl]piperazine hydrochloride dihydrate.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or slightly yellow, crystalline powder.

Solubility

Sparingly soluble in water, slightly soluble in methanol, very slightly soluble in ethanol (96 per cent), practically insoluble in acetone.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison *terazosin hydrochloride dihydrate CRS*.

B. It gives reaction (a) of chlorides (2.3.1).

TESTS

Solution S

Dissolve 1.00 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent.

Appearance of solution

The solution is clear (2.2.1) and not more intensely coloured than reference solution *Y₇* (2.2.2, *Method II*).

Dilute 10 mL of solution S to 20 mL with *water R*.

pH (2.2.3)

3.0 to 5.0 for solution S.

Impurities N and O

Liquid chromatography (2.2.29).

Solvent mixture *acetonitrile R1, water R* (20:80 *V/V*).

Test solution Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

Reference solution (a) Dissolve 5 mg of *terazosin impurity A CRS* and 5.0 mg of *terazosin impurity N CRS* in *acetonitrile R1* using sonication, add 5.0 mL of the test solution and dilute to 50.0 mL with *acetonitrile R1*. Dilute 10.0 mL of this solution to 100.0 mL with the solvent mixture.

Reference solution (b) Dilute 10.0 mL of reference solution (a) to 100.0 mL with the solvent mixture.

Column:

— size: *l* = 0.25 m, \varnothing = 4.0 mm;

— stationary phase: octadecylsilyl silica gel for chromatography *R* (5 μ m);

— temperature: 25 °C.

Mobile phase Dissolve 2.80 g of *sodium laurylsulfate R* in 1000.0 mL of *water R* and add 11.0 mL of a solution containing 202.4 g/L of *triethylamine R* and 230.0 g/L of *phosphoric acid R*; adjust to pH 2.5 with *phosphoric acid R*; mix 600 volumes of this solution with 400 volumes of *acetonitrile R1*.

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 210 nm.

Injection 20 μ L.

Run time 4 times the retention time of *terazosin*.

Relative retention With reference to *terazosin* (retention time = about 10 min): *impurity O* = about 0.2; *impurity N* = about 0.3; *impurity A* = about 0.4.

System suitability Reference solution (a):

— *resolution*: minimum 1.5 between the peaks due to *impurities A* and *N*.

Limits:

— *impurity N*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *impurity O*: not more than the area of the peak due to terazosin in the chromatogram obtained with reference solution (b) (0.1 per cent).

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

Reference solution (a) Dilute 2.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 5.0 mL of this solution to 100.0 mL with the mobile phase.

Reference solution (b) Dissolve the contents of a vial of terazosin for system suitability CRS (containing impurities A, B, C, J, K and M) in the mobile phase and dilute to 10 mL with the mobile phase.

Reference solution (c) Dissolve 5.0 mg of terazosin impurity L CRS in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

Reference solution (d) To 5 mg of terazosin impurity E CRS, add 70 mL of methanol R and 30 mL of water R. Allow to stand for at least 1 h to dissolve the substance. Use sonication if necessary.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: octylsilyl silica gel for chromatography R (5 μ m);
- temperature: 30 °C.

Mobile phase Mix 2 volumes of triethylamine R, 350 volumes of acetonitrile R, and 1650 volumes of a solution containing 6 g/L of sodium citrate R and 14.25 g/L of anhydrous citric acid R.

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 245 nm.

Injection 20 μ L.

Run time 4 times the retention time of terazosin.

Identification of impurities Use the chromatogram supplied with terazosin for system suitability CRS and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, J, K and M; use the chromatograms obtained with reference solutions (c) and (d) to identify the peaks due to impurities L and E respectively.

Retention time Terazosin = about 11 min.

System suitability Reference solution (b):

- **resolution**: minimum 1.5 between the peaks due to impurities B and J; if necessary, adjust the proportion of the aqueous component in the mobile phase (an increase in the proportion of the aqueous component increases the retention times);
- the chromatogram obtained is similar to the chromatogram supplied with terazosin for system suitability CRS; in case of insufficient separation of the impurities, reduce the amount of triethylamine in the mobile phase.

Limits:

- **correction factors**: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity C = 0.7; impurity M = 1.6;
- **impurities A, C, E, K**: for each impurity, not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

- **impurity L**: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.1 per cent);
- **impurities B, J, M**: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- **unspecified impurities**: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- **total**: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- **disregard limit**: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Water (2.5.12)

7.0 per cent to 8.6 per cent, determined on 0.200 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in a mixture of 5.0 mL of 0.01 M hydrochloric acid and 50 mL of methanol R. Titrate with 0.1 M sodium hydroxide, determining the end-point potentiometrically (2.2.20). Read the volume added between the 2 points of inflexion.

1 mL of 0.1 M sodium hydroxide is equivalent to 42.39 mg of $C_{19}H_{26}ClN_5O_4$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, E, J, K, L, M, N, O.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). Terbinafine Hydrochloride

(Ph. Eur. monograph 1734)

$C_{21}H_{26}ClN$ 327.9 78628-80-5

Action and use
Antifungal.

Preparation
Terbinafine Tablets

Ph Eur

DEFINITION

(2*E*)-*N*,6,6-Trimethyl-*N*-(naphthalen-1-ylmethyl)hept-2-en-4-yn-1-amine hydrochloride.

Content
99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance
White or almost white powder.

Solubility
Very slightly or slightly soluble in water, freely soluble in anhydrous ethanol and in methanol, slightly soluble in acetone.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison terbinafine hydrochloride CRS.

B. It gives reaction (a) of chlorides (2.3.1) using anhydrous ethanol R as solvent.

TESTS

Related substances

Liquid chromatography (2.2.29). Carry out the test protected from light.

Solvent mixture A acetonitrile R, water R (50:50 V/V).

Solvent mixture B acetonitrile R, methanol R (40:60 V/V).

Buffer solution Dilute 2.0 mL of triethylamine R1 to 950 mL with water R. Adjust to pH 7.5 with a mixture of 5 volumes of glacial acetic acid R and 95 volumes of water R and dilute to 1000.0 mL with water R.

Test solution Dissolve 25 mg of the substance to be examined in solvent mixture A and dilute to 50.0 mL with solvent mixture A.

Reference solution (a) Dissolve 5 mg of terbinafine for system suitability CRS (containing impurities B and E) in 10.0 mL of solvent mixture A.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with solvent mixture A. Dilute 1.0 mL of this solution to 10.0 mL with solvent mixture A.

Column:

- size: $l = 0.15$ m, $\varnothing = 3.0$ mm;
- stationary phase: spherical end-capped octadecylsilyl silica gel for chromatography R (5 μ m);
- temperature: 40 °C.

Mobile phase:

- mobile phase A: buffer solution, solvent mixture B (30:70 V/V);

— mobile phase B: buffer solution, solvent mixture B (5:95 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 4	100	0
4 - 25	100 → 0	0 → 100
25 - 30	0	100

Flow rate 0.8 mL/min.

Detection Spectrophotometer at 280 nm.

Injection 20 μ L.

Identification of impurities Use the chromatogram supplied with terbinafine for system suitability CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities B and E.

Relative retention With reference to terbinafine (retention time = about 15 min): impurity B = about 0.9; impurity E = about 1.7.

System suitability Reference solution (a):

— *resolution*: minimum 2.0 between the peaks due to impurity B and terbinafine.

Limits:

- *correction factor*: for the calculation of content, multiply the peak area of impurity E by 0.5;
- *impurity B*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *impurity E*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 mL of ethanol (96 per cent) R, add 5 mL of 0.01 M hydrochloric acid. Titrate with 0.1 M sodium hydroxide determining the end-point potentiometrically (2.2.20). Read the volume added between the 2 points of inflexion.

1 mL of 0.1 M sodium hydroxide is equivalent to 32.79 mg of $C_{21}H_{26}ClN$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities B, E.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for

demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, C, D, F.

A. *N*-methyl-*N*-(naphthalen-1-yl)methanamine,

B. (2*Z*)-*N*,6,6-trimethyl-*N*-(naphthalen-1-ylmethyl)hept-2-en-4-yn-1-amine (*cis*-terbutaline),

C. (2*E*)-*N*,6,6-trimethyl-*N*-(naphthalen-2-ylmethyl)hept-2-en-4-yn-1-amine (*trans*-isoterbutaline),

D. (2*E*)-*N*,6,6-trimethyl-*N*-[(4-methylnaphthalen-1-yl)methyl]hept-2-en-4-yn-1-amine (4-methylterbutaline),

E. (2*E*,4*E*)-4-(4,4-dimethylpent-2-yn-1-ylidene)-*N,N'*-dimethyl-*N,N'*-bis(naphthalen-1-ylmethyl)pent-2-ene-1,5-diamine,

F. (2*Z*)-*N*,6,6-trimethyl-*N*-(naphthalen-2-ylmethyl)hept-2-en-4-yn-1-amine (*cis*-isoterbutaline).

Ph Eur

Terbutaline Sulfate

Terbutaline Sulphate

(Ph. Eur. monograph 0690)

C₂₄H₄₀N₂O₁₀S

548.6

23031-32-5

Action and use

Beta₂-adrenoceptor agonist; bronchodilator.

Preparation

Terbutaline Tablets

Ph Eur

DEFINITION

Bis[5-[(1*R*S)-2-(*tert*-butylamino)-1-hydroxyethyl]benzene-1,3-diol] sulfate.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in heptane.

It shows polymorphism (5.9).

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison *terbutaline sulfate* CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *aldehyde-free methanol R*, evaporate to dryness and record new spectra using the residues.

B. 5 mL of solution S (see Tests) gives reaction (a) of sulfates (2.3.1).

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and its absorbance (2.2.25) at 400 nm in a 2 cm cell is not greater than 0.11.

Acidity

To 10 mL of solution S add 0.05 mL of *methyl red solution R*. Not more than 1.2 mL of 0.01 M *sodium hydroxide* is required to change the colour of the indicator to yellow.

Optical rotation (2.2.7)

-0.10° to + 0.10°, determined on solution S.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 75.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

Reference solution (a) Dissolve 7.5 mg of *terbutaline impurity C* CRS and 22.5 mg of *terbutaline sulfate* CRS in the

mobile phase and dilute to 50 mL with the mobile phase. Dilute 1 mL of the solution to 100 mL with the mobile phase.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Column:

- size: $l = 0.15$ m, $\varnothing = 4.6$ mm;
- stationary phase: base-deactivated end-capped octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase Prepare a 0.050 M ammonium formate solution as follows: dissolve 3.15 g of ammonium formate R in about 980 mL of water for chromatography R, adjust to pH 3.0 by adding about 8 mL of anhydrous formic acid R and dilute to 1000 mL with water for chromatography R. Dissolve 4.23 g of sodium hexanesulfonate R in 770 mL of the 0.050 M ammonium formate solution, then add 230 mL of methanol R.

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 276 nm.

Injection 20 μ L.

Run time 6 times the retention time of terbutaline.

Identification of impurities Use the chromatogram obtained with reference solution (a) to identify the peak due to impurity C.

Relative retention With reference to terbutaline (retention time = about 10 min): impurity C = about 0.9.

System suitability Reference solution (a):

- resolution: minimum 2.0 between the peaks due to impurity C and terbutaline.

Calculation of percentage contents:

- for each impurity, use the concentration of terbutaline sulfate in reference solution (b).

Limits:

- unspecified impurities: for each impurity, maximum 0.10 per cent;
- total: maximum 0.2 per cent;
- reporting threshold: 0.05 per cent.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

ASSAY

Dissolve 0.400 g in 70 mL of anhydrous acetic acid R with heating. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 54.86 mg of $C_{23}H_{40}N_2O_{10}S$.

IMPURITIES

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, B, C, D.

A. 3,5-dihydroxybenzoic acid (α -resorcylic acid),

B. (4RS)-2-tert-butyl-1,2,3,4-tetrahydroisoquinoline-4,6,8-triol,

67915-31-5

Action and use

Antifungal.

Ph Eur

DEFINITION

1-[4-[[[(2RS,4SR)-2-(2,4-Dichlorophenyl)-2-[(1H-1,2,4-triazol-1-yl)methyl]-1,3-dioxolan-4-yl]methoxy]phenyl]-4-(1-methylethyl)piperazine.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, freely soluble in methylene chloride, soluble in acetone, sparingly soluble in ethanol (96 per cent).

It shows polymorphism (5.9).

IDENTIFICATION

First identification: A.

Second identification: B, C.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison terconazole CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *acetone R*, evaporate to dryness in a current of air and record new spectra using the residues.

B. Thin-layer chromatography (2.2.27).

Test solution Dissolve 30 mg of the substance to be examined in *methanol R* and dilute to 5 mL with the same solvent.

Reference solution (a) Dissolve 30 mg of *terconazole CRS* in *methanol R* and dilute to 5 mL with the same solvent.

Reference solution (b) Dissolve 30 mg of *ketoconazole CRS* and 30 mg of *terconazole CRS* in *methanol R* and dilute to 5 mL with the same solvent.

Plate TLC octadecylsilyl silica gel plate *R*.

Mobile phase ammonium acetate solution *R*, dioxan *R*, *methanol R* (20:40:40 V/V/V).

Application 5 µL.

Development In an unsaturated tank over half of the plate.

Drying In a current of warm air for 15 min.

Detection Expose to iodine vapour until the spots appear and examine in daylight.

System suitability Reference solution (b):

- the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. To 30 mg in a porcelain crucible add 0.3 g of *anhydrous sodium carbonate R*. Heat over an open flame for 10 min. Allow to cool. Take up the residue with 5 mL of *dilute nitric acid R* and filter. To 1 mL of the filtrate add 1 mL of *water R*. The solution gives reaction (a) of chlorides (2.3.1).

TESTS

Optical rotation (2.2.7)

−0.10° to +0.10°.

Dissolve 1.0 g in *methylene chloride R* and dilute to 10 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

Reference solution (a) Dissolve 2.0 mg of *ketoconazole CRS* and 2.5 mg of *terconazole CRS* in *methanol R* and dilute to 100.0 mL with the same solvent.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 5.0 mL of this solution to 20.0 mL with *methanol R*.

Column:

- size: $l = 0.1$ m, $\varnothing = 4.6$ mm;
- stationary phase: base-deactivated octadecylsilyl silica gel for chromatography *R* (3 µm).

Mobile phase:

- mobile phase A: 3.4 g/L solution of tetrabutylammonium hydrogen sulfate *R*;
- mobile phase B: acetonitrile *R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 10	95 → 50	5 → 50
10 - 15	50	50

Flow rate 2 mL/min.

Detection Spectrophotometer at 220 nm.

Injection 10 µL.

Relative retention With reference to *terconazole* (retention time = about 7.5 min): *ketoconazole* = about 0.8; impurity A = about 0.85; impurity B = about 0.9.

System suitability Reference solution (a):

- resolution: minimum 13 between the peaks due to *ketoconazole* and *terconazole*.

Limits:

- *impurities A, B*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);
- *unspecified impurities*: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 70 mL of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically at the 2nd point of inflexion (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 17.75 mg of C₂₆H₃₁Cl₂N₅O₃.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B.

- A. 1-[4-[[[(2RS,4RS)-2-(2,4-dichlorophenyl)-2-[(1H-1,2,4-triazol-1-yl)methyl]-1,3-dioxolan-4-yl]methoxy]phenyl]-4-(1-methylethyl)piperazine,

B. 1-[4-[[[(2RS,4SR)-2-(2,4-dichlorophenyl)-2-[(4H-1,2,4-triazol-4-yl)methyl]-1,3-dioxolan-4-yl]methoxy]phenyl]-4-(1-methylethyl)piperazine.

DEFINITION

(1RS)-1-[4-(1,1-Dimethylethyl)phenyl]-4-[4-(hydroxydiphenylmethyl)piperidin-1-yl]butan-1-ol.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Very slightly soluble in water, freely soluble in methylene chloride, soluble in methanol. It is very slightly soluble in dilute hydrochloric acid.

It shows polymorphism (5.9).

IDENTIFICATION

First identification: C.

Second identification: A, B, D.

A. Melting point (2.2.14): 146 °C to 152 °C.

B. Ultraviolet and visible absorption spectrophotometry (2.2.25).

Test solution Dissolve 50.0 mg in methanol R and dilute to 100.0 mL with the same solvent.

Spectral range 230-350 nm.

Absorption maximum At 259 nm.

Shoulders At 253 nm and 270 nm.

Specific absorbance at the absorption maximum 13.5 to 14.9.

C. Infrared absorption spectrophotometry (2.2.24).

Comparison terfenadine CRS.

D. Thin-layer chromatography (2.2.27).

Test solution Dissolve 50 mg of the substance to be examined in methylene chloride R and dilute to 10 mL with the same solvent.

Reference solution Dissolve 50 mg of terfenadine CRS in methylene chloride R and dilute to 10 mL with the same solvent.

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase methanol R, methylene chloride R (10:90 V/V).

Application 10 µL.

Development Over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 15 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 20.0 mL with the mobile phase.

Reference solution (b) Dissolve 15 mg of terfenadine impurity A CRS in the mobile phase and dilute to 10.0 mL with the mobile phase. To 5.0 mL of this solution, add 5.0 mL of the test solution and dilute to 50.0 mL with the mobile phase.

Reference solution (c) Dilute 10.0 mL of reference solution (a) to 25.0 mL with the mobile phase.

Reference solution (d) Dissolve 0.1 g of potassium iodide R in the mobile phase and dilute to 100 mL with the mobile phase. Dilute 1 mL of this solution to 100 mL with the mobile phase.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: octylsilyl silica gel for chromatography R (5 µm).

Mobile phase Dilute 600 mL of acetonitrile R1 to 1 L with diethylammonium phosphate buffer solution pH 6.0 R.

Flow rate 1 mL/min.

Detection Spectrophotometer at 217 nm.

Injection 20 µL.

Run time 5 times the retention time of terfenadine.

System suitability Reference solution (b):

— resolution: minimum 5.0 between the peaks due to terfenadine and impurity A;

— mass distribution ratio: minimum 2.0 for the peak due to terfenadine; use potassium iodide R as the unretained compound (reference solution (d)).

Limits:

— impurities A, B, C, D, E, F, G, H, I, J: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

— total: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *disregard limit*: 0.025 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.005 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying at 60 °C at a pressure not exceeding 0.5 kPa.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in 50 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 47.17 mg of C₃₂H₄₁NO₂.

0 - 2	76	24
2 - 12	76 → 23	24 → 77

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 249 nm.

Injection 5 μ L of the test solution and reference solutions (a) and (c).

Identification of impurities Use the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A and B.

Relative retention With reference to teriflunomide (retention time = about 5 min): impurity B = about 1.5; impurity A = about 1.6.

System suitability Reference solution (c):

— resolution: minimum 1.5 between the peaks due to impurities B and A;

— signal-to-noise ratio: minimum 10 for the peak due to impurity A.

Calculation of percentage contents:

— for each impurity, use the concentration of teriflunomide in reference solution (a).

Limits:

— impurity A: maximum 0.01 per cent;

— unspecified impurities: for each impurity, maximum 0.10 per cent;

— total: maximum 0.2 per cent;

— reporting threshold: 0.05 per cent; do not disregard the peak due to impurity A.

Water (2.5.32)

Maximum 0.5 per cent, determined on 0.100 g by direct sample introduction.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modifications.

Injection Test solution and reference solution (d).

System suitability Reference solution (d):

— symmetry factor: maximum 1.7 for the peak due to teriflunomide;

— repeatability: maximum relative standard deviation of 1.2 per cent determined on 6 injections.

Calculate the percentage content of $C_{12}H_9F_3N_2O_2$ taking into account the assigned content of teriflunomide for assay CRS.

IMPURITIES

Specified impurities A.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for

demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B.

A. 4-(trifluoromethyl)aniline (leflunomide impurity A),

B. 2-cyano-N-[4-(trifluoromethyl)phenyl]acetamide.

 Val-His-Asn-Phe-OH

C₁₈₁H₂₉₁N₅₅O₅₁S₂ 4118 52232-67-4

Action and use

Parathyroid hormone analogue; treatment of osteoporosis.

Ph Eur

DEFINITION

Tetriacontapeptide in which the sequence of amino acids is the same as that of the 1-34 N-terminal fragment of endogenous human parathyroid hormone (rhPTH).

Content

95.0 per cent to 105.0 per cent (anhydrous, acetic acid- and chloride-free substance).

PRODUCTION

Teriparatide is produced by a method based on recombinant DNA (rDNA) technology. During the course of product development it must be demonstrated that the manufacturing process produces a biologically active protein using a suitable bioassay as approved by the competent authority.

Prior to release, the following tests are carried out on each batch of teriparatide, unless exemption has been granted by the competent authority.

Host-cell-derived proteins

The limit is approved by the competent authority.

Host-cell- and vector-derived DNA

The limit is approved by the competent authority.

CHARACTERS

Appearance

White or almost white, very hygroscopic powder.

Solubility

Freely soluble in water and in methanol, practically insoluble in acetonitrile.

IDENTIFICATION

A. Peptide mapping (2.2.55).

SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS

Solution A Dissolve 230 mg of anhydrous disodium hydrogen phosphate R and 60 mg of sodium dihydrogen phosphate monohydrate R in 100 mL of water R and adjust to pH 7.8 with sodium hydroxide solution R.

Test solution Dissolve the substance to be examined in solution A to obtain a concentration of 1.5 mg/mL and transfer 150 µL of the solution to a clean tube. Add 90 µL of a 0.25 mg/mL solution of glutamyl endopeptidase for peptide mapping R in solution A. Mix and incubate at 37 °C for 18-24 h. Stop the reaction by adding 660 µL of mobile phase A to reach a final digested protein concentration of about 0.25 mg/mL.

NOTE: if a teriparatide concentration of 1.5 mg/mL is not obtainable, a similar ratio of micrograms of endopeptidase per milligram of teriparatide may be used.

Reference solution Prepare at the same time and in the same manner as for the test solution but using teriparatide CRS instead of the substance to be examined.

Blank solution Prepare at the same time and in the same manner as for the test solution but omitting the substance to be examined.

CHROMATOGRAPHIC SEPARATION

Liquid chromatography (2.2.29). Store the solutions at 2-8 °C and use them within 72 h.

Column:

- size: $l = 0.15$ m, $\varnothing = 4.6$ mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (3.5 µm) with a pore size of 30 nm;
- temperature: 40 °C.

Mobile phase:

- mobile phase A: mix 1 mL of trifluoroacetic acid R and 1000 mL of water R; filter and degas;
- mobile phase B: mix 1 mL of trifluoroacetic acid R, 400 mL of water R and 600 mL of acetonitrile for chromatography R; filter and degas;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 6	96	4
6 - 20	96 → 45	4 → 55
20 - 25	45 → 0	55 → 100

Flow rate 1 mL/min.

Detection Spectrophotometer at 214 nm.

Autosampler Set at 2-8 °C.

Injection 20 µL.

System suitability:

- the chromatogram obtained with the reference solution is qualitatively similar to the chromatogram of teriparatide digest supplied with teriparatide CRS;
- in the chromatogram obtained with the reference solution, identify the peaks due to digest fragments I, II, III, IV and V:

symmetry factor Maximum 2.3 for the peak due to fragment IV;

resolution Minimum 1.5 between the peaks due to fragments I and III.

Results The profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with the reference solution.

TESTS

Impurities with molecular masses greater than that of teriparatide

Size-exclusion chromatography (2.2.30): use the normalisation procedure. Store the solutions at 2-8 °C and use them within 72 h.

Test solution Dissolve the substance to be examined in water R to obtain a concentration of 1 mg/mL.

Reference solution Dissolve the contents of a vial of teriparatide CRS in water R to obtain a concentration of 1 mg/mL.

Blank solution water R.

Resolution solution Incubate a vial of teriparatide CRS at 75 °C for 16-24 h. After incubation, dissolve the contents of the vial in water R to obtain a concentration of 1 mg/mL of degraded teriparatide.

Column:

- size: $l = 0.30$ m, $\varnothing = 7.8$ mm;
- stationary phase: hydrophilic silica gel for chromatography R (5-10 μ m) with a pore size of 12.5 nm, of a grade suitable for fractionation of globular proteins of relative molecular mass up to 150 000.

Mobile phase Add 1 mL of trifluoroacetic acid R to 750 mL of water R, mix with 250 mL of acetonitrile for chromatography R and degas.

Flow rate 0.5 mL/min.

Detection Spectrophotometer at 214 nm.

Autosampler Set at 2-8 °C.

Injection 20 μ L.

Run time 1.5 times the retention time of teriparatide monomer.

Retention time Teriparatide monomer = about 17 min.

System suitability:

- the chromatogram obtained with the reference solution is similar to the chromatogram supplied with teriparatide CRS;
- resolution: minimum 2.0 between the peaks due to teriparatide dimer and monomer in the chromatogram obtained with the resolution solution.

Limit:

- sum of the peaks eluted before the principal peak: maximum 0.3 per cent; disregard any peak with a retention time greater than that of the peak due to teriparatide monomer.

Related proteins

Liquid chromatography (2.2.29): use the normalisation procedure. Store the solutions at 2-8 °C and use them within 48 h.

Buffer solution Dissolve 28.4 g of anhydrous sodium sulfate R in 900 mL of water R and adjust to pH 2.3 with phosphoric acid R. Dilute to 1000 mL with water for chromatography R and filter.

Test solution Dissolve the substance to be examined in mobile phase A to obtain a concentration of 0.7 mg/mL.

Reference solution Dissolve the contents of a vial of teriparatide CRS in mobile phase A to obtain a concentration of 0.7 mg/mL.

Blank solution Mobile phase A.

Resolution solution Dissolve the contents of a vial of teriparatide for system suitability CRS in mobile phase A to obtain a concentration of 1 mg/mL.

Column:

- size: $l = 0.15$ m, $\varnothing = 4.6$ mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (3.5 μ m) with a pore size of 30 nm;
- temperature: 40 °C.

Mobile phase:

- mobile phase A: mix 10 volumes of acetonitrile for chromatography R and 90 volumes of the buffer solution and degas; apply mild heating at 20-25 °C while stirring continuously during analysis;
- mobile phase B: mix equal volumes of acetonitrile for chromatography R and the buffer solution and degas; apply mild heating at 20-25 °C while stirring continuously during analysis;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 5	100 → 65	0 → 35
5 - 35	65 → 60	35 → 40
35 - 45	60 → 0	40 → 100

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 214 nm.

Autosampler Set at 2-8 °C.

Injection 20 μ L.

Relative retention With reference to teriparatide (retention time = 20-25 min): related protein A ([MetO⁸, MetO¹⁸]teriparatide) = about 0.40; related protein B ([MetO⁸]teriparatide) = about 0.49; related protein C ([MetO¹⁸]teriparatide) = about 0.57; related protein D = about 1.06; related protein E = about 1.14.

System suitability

- the chromatogram obtained is similar to the chromatogram supplied with teriparatide for system suitability CRS;
- resolution: minimum 1.5 between the peaks due to teriparatide and related protein D;
- symmetry factor: 0.8 to 2.0 for the peak due to teriparatide;

Results:

- the profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

Limits:

- sum of related proteins A, B and C: maximum 0.5 per cent;
- any other related protein: maximum 0.5 per cent;
- total: maximum 2.0 per cent;
- reporting threshold: 0.05 per cent.

Water (2.5.32)

Maximum 7.0 per cent, determined on 10 mg using the evaporation technique:

- temperature: 100 °C;
- heating time: 8 min.

Bacterial endotoxins (2.6.14)

Less than 50 IU/mg.

ASSAY

Acetate

Liquid chromatography (2.2.29): use the normalisation procedure. Store the solutions at 2-8 °C and use them within 72 h.

Test solution Dissolve the substance to be examined in the mobile phase to obtain a concentration of 5 mg/mL.

Reference solutions Dissolve separately 100 mg, 200 mg and 300 mg of *anhydrous sodium acetate R* in the mobile phase and dilute to 100 mL with the mobile phase. Further dilute 1.0 mL of each solution to 10.0 mL with the mobile phase to prepare a standard curve with acetate concentrations in the range of 0.072-0.216 mg/mL.

Plot peak areas versus injected acetate content and perform linear regression to create a standard curve.

Column:

- size: $l = 0.25$ m, $\varnothing = 9.0$ mm;
- stationary phase: ion-exclusion resin for chromatography R (7.5 μ m).

Mobile phase 0.5 per cent *V/V* solution of dilute sulfuric acid R.

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 210 nm.

Autosampler Set at 2-8 °C.

Injection 100 μ L.

Run time 1.5 times the retention time of acetate.

Retention time Acetate = about 10 min.

System suitability:

- **repeatability:** maximum relative standard deviation of 1.25 per cent for the area of the principal peak, determined on 3 injections of the middle reference solution;
- the correlation coefficient (r) calculated for the standard curve is not less than 0.999.

Calculate the acetate content using the standard curve and the area of the peak due to acetate in the chromatogram obtained with the test solution.

Chloride

Liquid chromatography (2.2.29): use the normalisation procedure. Use the solutions within 72 h.

Test solution Dissolve the substance to be examined in water R to obtain a concentration of 1 mg/mL.

Reference solution (a) Dissolve 165.9 mg of sodium chloride R, previously dried at 105 °C for 30 min, in water R and dilute to 100 mL with the same solvent.

Reference solution (b) Dissolve 150 mg of sodium nitrite R in water R and dilute to 100 mL with the same solvent.

Mix 1.0 mL of the solution and 2.5 mL of reference solution (a) and dilute to 100 mL with water R.

Reference solutions Dilute reference solution (a) with water R to prepare a standard curve with at least 4 concentrations in the range of 10-40 μ g/mL.

Plot peak areas versus injected chloride content and perform linear regression to create a standard curve.

Precolumn:

- size: $l = 0.05$ m, $\varnothing = 4.0$ mm;
- stationary phase: strongly basic anion-exchange resin for chromatography R (15 μ m).

Column:

- size: $l = 0.25$ m, $\varnothing = 4.0$ mm;
- stationary phase: strongly basic anion-exchange resin for chromatography R (15 μ m).

Mobile phase Dissolve 285.7 mg of sodium hydrogen carbonate R and 381.6 mg of anhydrous sodium carbonate R in water R and dilute to 2000 mL with the same solvent.

Flow rate 2.0 mL/min.

Detection Conductivity detector; use a self-regenerating anion suppressor at 100 mA.

Injection 50 μ L.

Run time 6 times the retention time of chloride.

Retention time Chloride = about 1.6 min;
nitrite = about 1.8 min.

System suitability Reference solution (b):

- **resolution:** minimum 1.5 between the peaks due to chloride and nitrite;
- **symmetry factor:** maximum 2.0 for the peaks due to chloride and nitrite;
- **repeatability:** maximum relative standard deviation of 2.0 per cent for the areas of the peaks due to chloride and nitrite, determined on 5 injections;
- the correlation coefficient (r) calculated for the standard curve is not less than 0.999.

Calculate the chloride content using the standard curve and the area of the peak due to chloride in the chromatogram obtained with the test solution.

Content

Liquid chromatography (2.2.29) as described in the test for related proteins with the following modifications.

Test solution Dissolve the substance to be examined in the mobile phase to obtain a concentration of 0.25 mg/mL.

Reference solution Dissolve the contents of a vial of teriparatide CRS in the mobile phase to obtain a concentration of 0.25 mg/mL.

Mobile phase Mobile phase A, mobile phase B (63:37 *V/V*); apply mild heating at 20-25 °C while stirring continuously during analysis.

Run time 1.5 times the retention time of teriparatide.

Retention time Teriparatide = about 10 min.

System suitability Reference solution:

- **symmetry factor:** 0.8 to 1.5 for the peak due to teriparatide;
- **repeatability:** maximum relative standard deviation of 1.25 per cent for the area of the peak due to teriparatide, determined on 3 injections.

Calculate the percentage content of teriparatide ($C_{181}H_{291}N_{55}O_{51}S_2$) taking into account the assigned content of teriparatide CRS.

STORAGE

In an airtight container, protected from light, at -10 °C or below.

Ph Eur

Terlipressin

(Ph. Eur. monograph 2646)

$C_{52}H_{74}N_{16}O_{15}S_2$

1227

14636-12-5

Action and use

Vasopressin analogue; treatment of diabetes insipidus, bleeding from varices, dialysis.

Ph Eur

DEFINITION

Glycyl-glycyl-glycyl-L-cysteinyl-L-tyrosyl-L-phenylalanyl-L-glutaminyl-L-asparaginyl-L-cysteinyl-L-prolyl-L-lysylglycinamide cyclic (4→9)-disulfide.

Synthetic dodecapeptide analogue of the natural hormone vasopressin. It is available as an acetate.

Content

95.0 per cent to 105.0 per cent (anhydrous, acetic acid-free substance).

CHARACTERS

Appearance

White or almost white fluffy powder, hygroscopic.

IDENTIFICATION

Carry out either tests A, B or tests A, C.

A. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

B. Nuclear magnetic resonance spectrometry (2.2.69).

Preparation 2.9 mg/mL solution in deuterium oxide R containing 20 µg/mL of deuterated sodium trimethylsilylpropionate R, adjusted to pH 4 with deuterated acetic acid R.

Comparison Dissolve the contents of a vial of terlipressin for NMR identification CRS in deuterium oxide R containing 20 µg/mL of deuterated sodium trimethylsilylpropionate R, adjusted to pH 4 with deuterated acetic acid R, to obtain a concentration of 2.9 mg/mL.

Operating conditions:

- field strength: minimum 300 MHz;
- temperature: 23 °C.

Results Examine the ¹H NMR spectrum from 0 to 9 ppm. The ¹H NMR spectrum obtained is qualitatively similar to the ¹H NMR spectrum obtained with terlipressin for NMR identification CRS.

C. Amino acid analysis (2.2.56). Method 1 for hydrolysis and method 1 for analysis are suitable.

Express the content of each amino acid in moles. Calculate the relative proportions of the amino acids, taking 1/9 of the sum of the number of moles of aspartic acid, glutamic acid, proline, glycine, phenylalanine and lysine as equal to 1. The values fall within the following limits: glycine 3.6 to 4.4; half-cystine 1.4 to 2.2; tyrosine 0.7 to 1.1; phenylalanine, glutamic acid, aspartic acid, proline and lysine 0.9 to 1.1. Not more than traces of other amino acids are present.

TESTS

Specific optical rotation (2.2.7)

−108 to −88 (anhydrous and acetic acid-free substance).

Dissolve 125.0 mg in 25.0 mL of a 1 per cent V/V solution of glacial acetic acid R.

Related substances

Liquid chromatography (2.2.29).

Buffer solution Dissolve 3.30 g of ammonium sulfate R in water for chromatography R and dilute to 5000 mL with the same solvent. Add 1.0 mL of sulfuric acid R and mix well; filter through a membrane filter (nominal pore size 0.45 µm).

Test solution Dissolve 10.0 mg of the substance to be examined in 50.0 mL of a 9 g/L solution of sodium chloride R.

Solution A Dissolve the contents of a vial of terlipressin impurity mixture CRS (containing impurities A, D and L) in 1.0 mL of a 9 g/L solution of sodium chloride R.

Solution B Dissolve the contents of a vial of terlipressin CRS in a 9 g/L solution of sodium chloride R and dilute to 2.5 mL with the same solution.

Reference solution (a) Dilute 1.0 mL of solution B to 2.0 mL with a 9 g/L solution of sodium chloride R.

Reference solution (b) Mix 20 µL of solution A and 500 µL of solution B, and dilute to 1.0 mL with a 9 g/L solution of sodium chloride R.

Reference solution (c) Mix 100 µL of solution A and 500 µL of solution B, and dilute to 1.0 mL with a 9 g/L solution of sodium chloride R.

Reference solution (d) Dilute 1.0 mL of the test solution to 100.0 mL with a 9 g/L solution of sodium chloride R. Dilute 1.0 mL of this solution to 10.0 mL with a 9 g/L solution of sodium chloride R.

Column:

- size: $l = 0.15$ m, $\varnothing = 3.0$ mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 µm);
- temperature: 30 °C.

Mobile phase:

- mobile phase A: methanol R, buffer solution (18.5:81.5 V/V);
- mobile phase B: methanol R, buffer solution (30:70 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 35	100	0
35 - 55	100 → 0	0 → 100
55 - 65	0	100

Flow rate 0.6 mL/min.

Detection Spectrophotometer at 210 nm.

Injection 200 µL of the test solution and reference solutions (a), (b), (c) and (d).

Identification of impurities Use the chromatogram supplied with terlipressin impurity mixture CRS and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, D and L.

Relative retention With reference to terlipressin (retention time = about 21 min): impurity E = about 0.4; impurity C = about 0.5; impurity B = about 0.7; impurity A = about 0.85; impurity G = about 1.2; impurity H = about 1.4; impurities I and F = about 2.0; impurity L = about 2.2; impurity D = about 2.3; impurity K = about 2.5; impurity J = about 2.8.

System suitability:

- resolution: minimum 1.4 between the peak due to impurity A and the principal peak in the chromatogram obtained with reference solution (c); the peaks due to impurities L and D are separated as shown in the chromatogram supplied with terlipressin impurity mixture CRS.
- signal-to-noise ratio: minimum 50 for the peak due to impurity A in the chromatogram obtained with reference solution (b);
- symmetry factor: maximum 2.0 for the peak due to terlipressin in the chromatogram obtained with reference solution (a);
- repeatability: maximum relative standard deviation of 2.0 per cent determined on 5 injections of reference solution (a).

Calculation of percentage contents:

- for each impurity, use the concentration of terlipressin in reference solution (d).

Limits:

- impurity D: maximum 0.6 per cent;

- *unspecified impurities*: for each impurity, maximum 0.5 per cent;
- *total*: maximum 1.5 per cent;
- *reporting threshold*: 0.1 per cent.

Acetic acid (2.5.34)
8.0 per cent to 14.0 per cent.

Test solution Dissolve 20.0 mg of the substance to be examined in a mixture of 5 volumes of mobile phase B and 95 volumes of mobile phase A, and dilute to 20.0 mL with the same mixture of solvents.

Water (2.5.32)
Maximum 10.0 per cent, determined on 10.0 mg using the evaporation technique at 120 °C.

ASSAY
Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection 200 µL of the test solution and reference solution (a).

Calculate the percentage content of terlipressin (C₅₂H₇₄N₁₆O₁₅S₂) taking into account the assigned content of C₅₂H₇₄N₁₆O₁₅S₂ in *terlipressin CRS*.

STORAGE
In an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

LABELLING
The label states the terlipressin content (C₅₂H₇₄N₁₆O₁₅S₂).

IMPURITIES
Specified impurities D.
Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, B, C, E, F, G, H, I, J, K, L.

A. des-1-glycine-terlipressin,

B. des-1,2-diglycine-terlipressin,

C. des-(1-3)-terlipressin,

D. N¹-acetylterlipressin,

Ph Eur

Terpin Monohydrate

(Ph. Eur. monograph 2940)

C₁₀H₂₀O₂·H₂O 190.3 2451-01-6

Action and use
Expectorant.

Ph Eur

DEFINITION
(1*s*,4*s*)-4-(2-Hydroxypropan-2-yl)-1-methylcyclohexan-1-ol monohydrate.

Content
98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS
Appearance
White or almost white, crystalline powder.

Solubility
Slightly soluble in water, soluble in ethanol (96 per cent), slightly soluble in methylene chloride.

mp
About 117 °C.

IDENTIFICATION
A. Infrared absorption spectrophotometry (2.2.24).

Comparison terpin monohydrate CRS.
B. Water (see Tests).

TESTS
Solution S
Dissolve 2.50 g in ethanol (96 per cent) R and dilute to 50.0 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

Acidity or alkalinity

To 10 mL of solution S add 0.1 mL of bromothymol blue solution R1. Not more than 0.2 mL of 0.02 M sodium hydroxide or 0.02 M hydrochloric acid is required to change the colour of the indicator.

Related substances

Gas chromatography (2.2.28): use the normalisation procedure.

Internal standard solution Dissolve 0.500 g of biphenyl R in 1 mL of methylene chloride R and dilute to 25.0 mL with methanol R.

Test solution (a) Dissolve 0.375 g of the substance to be examined in methanol R and dilute to 25.0 mL with the same solvent.

Test solution (b) Dissolve 85.0 mg of the substance to be examined in methanol R, add 2.0 mL of the internal standard solution and dilute to 100.0 mL with methanol R.

Reference solution (a) Dissolve 15.0 mg of trans-terpin (impurity D) in test solution (a) and dilute to 10.0 mL with test solution (a). Dilute 1.0 mL of the solution to 10.0 mL with test solution (a).

Reference solution (b) Dissolve 85.0 mg of terpin monohydrate CRS in methanol R, add 2.0 mL of the internal standard solution and dilute to 100.0 mL with methanol R.

Column:

- material: fused silica;
- size: $l = 30$ m, $\varnothing = 0.32$ mm;
- stationary phase: methylpolysiloxane R (film thickness 1.0 μ m).

Carrier gas helium for chromatography R.

Flow rate 1 mL/min.

Split ratio 1:10.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 11	180
	11 - 14	180 → 270
	14 - 15	270
Injection port		220
Detector		300

Detection Flame ionisation.

Injection 1 μ L of test solution (a) and reference solution (a).

Relative retention With reference to terpin (retention time = about 6.3 min): impurity D = about 1.05; internal standard = about 1.2.

System suitability Reference solution (a):

- peak-to-valley ratio: minimum 3, where H_p = height above the baseline of the peak due to impurity D and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to terpin.

Limits:

- unspecified impurities: for each impurity, maximum 0.10 per cent;
- total: maximum 0.3 per cent;
- reporting threshold: 0.05 per cent.

Water (2.5.12)

8.0 per cent to 10.0 per cent, determined on 0.200 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Gas chromatography (2.2.28) as described in the test for related substances with the following modification.

Injection 0.5 μ L of test solution (b) and reference solution (b).

Calculate the percentage content of terpin using the following expression:

$$\frac{A_1 \times m_2 \times A_4 \times 100}{A_2 \times m_1 \times A_3}$$

- A_1 = area of the peak due to terpin in the chromatogram obtained with test solution (b);
- A_2 = area of the peak due to terpin in the chromatogram obtained with reference solution (b);
- A_3 = area of the peak due to the internal standard in the chromatogram obtained with test solution (b);
- A_4 = area of the peak due to the internal standard in the chromatogram obtained with reference solution (b);
- m_1 = mass of the substance to be examined used to prepare test solution (b), in milligrams;
- m_2 = mass of terpin monohydrate CRS used to prepare reference solution (b), in milligrams.

STORAGE

In an airtight container, protected from light.

IMPURITIES

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, B, C, D.

- A. 2-[(1R)-4-methylcyclohex-3-en-1-yl]propan-2-ol (α -terpineol),

- B. (1S,4S)-1-methyl-4-(prop-1-en-2-yl)cyclohexan-1-ol (*cis*- β -terpineol),

- C. (4R)-1-methyl-4-(prop-1-en-2-yl)cyclohex-1-ene (limonene),

D. (1*r*,4*r*)-4-(2-hydroxypropan-2-yl)-1-methylcyclohexan-1-ol (*trans*-terpin).

Ph Eur

Terpineol

C₁₀H₁₈O

154.3

98-55-5

DEFINITION

Terpineol is a mixture of structural isomers in which *α*-terpineol predominates.

CHARACTERISTICS

A colourless, slightly viscous, liquid which may deposit crystals; odour, pleasant and characteristic.

Very slightly soluble in *water*; freely soluble in *ethanol* (70%); soluble in *ether*.

TESTS

Refractive index

1.4800 to 1.4855, Appendix V E.

Weight per mL

0.931 to 0.935 g, Appendix V G.

Low-boiling substances

Not more than 4.0% v/v distils below 214°, Appendix V C.

Testosterone

(Ph. Eur. monograph 1373)

C₁₉H₂₈O₂

288.4

58-22-0

Action and use

Androgen.

Preparation

Testosterone Implants

Ph Eur

DEFINITION

17β-Hydroxyandrost-4-en-3-one.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white crystalline powder, or colourless or yellowish-white crystals.

Solubility

Practically insoluble in *water*, freely soluble in *ethanol* (96 per cent) and in *methylene chloride*, practically insoluble in *fatty oils*.

mp

About 155 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison *testosterone* for ID and assay CRS.

TESTS

Specific optical rotation (2.2.7)

+106 to +114 (dried substance).

Dissolve 0.250 g in *anhydrous ethanol R* and dilute to 25.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Solvent mixture acetone R, water R (30:70 V/V).

Test solution Dissolve 35.0 mg of the substance to be examined in 30 mL of *acetone R* and dilute to 100.0 mL with *water R*.

Reference solution (a) Dissolve 9 mg of *testosterone for system suitability A CRS* (containing impurities C, G and K) in 8 mL of *acetone R* and dilute to 25 mL with *water R*.

Reference solution (b) Dissolve 7.0 mg of *testosterone impurity I CRS* in 30 mL of *acetone R* and dilute to 100.0 mL with *water R*. Dilute 1.0 mL of the solution to 100.0 mL with the solvent mixture.

Reference solution (c) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Reference solution (d) Dissolve 35.0 mg of *testosterone for ID and assay CRS* in 30 mL of *acetone R* and dilute to 100.0 mL with *water R*.

Column:

— size: *l* = 0.10 m, \varnothing = 4.6 mm;

— stationary phase: end-capped solid core phenylhexylsilyl silica gel for chromatography R (2.7 μ m);

— temperature: 30 °C.

Mobile phase:

— mobile phase A: *water* for chromatography R;

— mobile phase B: *acetone R* for chromatography R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 2.7	65	35
2.7 - 7	65 → 63	35 → 37
7 - 10	63 → 10	37 → 90
10 - 12	10	90

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 242 nm, and for impurity I, at 290 nm.

Injection 20 μ L of the test solution and reference solutions (a), (b) and (c).

Identification of impurities Use the chromatogram supplied with *testosterone for system suitability A CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities C, G and K; use the

chromatogram obtained with reference solution (b) to identify the peak due to impurity I.

Relative retention With reference to testosterone (retention time = about 4 min): impurity I = about 0.84; impurity K = about 0.86; impurity G = about 1.1; impurity C = about 1.3.

System suitability Reference solution (a):

— **peak-to-valley ratio:** minimum 2.0, where H_p = height above the baseline of the peak due to impurity G and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to testosterone.

Calculation of percentage contents:

— for impurity I, use the concentration of impurity I in reference solution (b);
— for impurities other than I, use the concentration of testosterone in reference solution (c).

Limits:

— **impurity C:** maximum 0.3 per cent;
— **impurity I at 290 nm:** maximum 0.2 per cent;
— **impurity K:** maximum 0.15 per cent;
— **unspecified impurities:** for each impurity, maximum 0.10 per cent;
— **total:** maximum 0.6 per cent;
— **reporting threshold:** 0.05 per cent.

Loss on drying (2.2.32)

Maximum 1.0 per cent, determined on 0.500 g by drying in an oven at 105 °C for 2 h.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection 5 µL of the test solution and reference solution (d). Calculate the percentage content of $C_{19}H_{28}O_2$ taking into account the assigned content of testosterone for ID and assay CRS.

STORAGE

Protected from light.

IMPURITIES

Specified impurities C, I, K.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, B, E, G, H, J, L, M.

A. androst-4-ene-3,17-dione (androstenedione),

B. 3-ethoxyandrosta-3,5-dien-17-one (androstenedione ethylenelether),

C. 17α-hydroxyandrost-4-en-3-one (17-epi-testosterone),

E. 3-oxoandrost-4-en-17β-yl acetate (testosterone acetate),

G. androsta-1,4-diene-3,17-dione (androstadienedione),

H. 17β-hydroxyandrosta-1,4-dien-3-one (boldenone),

I. 17β-hydroxyandrosta-4,6-dien-3-one (Δ6-testosterone),

J. 3-methoxyandrosta-3,5-dien-17-one (androstenedione methylenelether),

K. 17β-hydroxyandrosta-4,8-dien-3-one,

L. 17β-hydroxyandrost-4,9(11)-dien-3-one,

M. 17β-hydroxyandrost-4,8(14)-dien-3-one.

Dissolve 0.200 g in *anhydrous ethanol R* and dilute to 20.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

Reference solution (a) Dissolve the contents of a vial of *testosterone decanoate for system suitability CRS* (containing impurities A, B, C, D, E and F) in 1 mL of the mobile phase.

Reference solution (b) Dilute 10.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 20.0 mL with the mobile phase.

Reference solution (c) Dissolve 20.0 mg of *testosterone decanoate CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 μm);
- temperature: 40 °C.

Mobile phase water R, acetonitrile R (5:95 V/V).

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 240 nm.

Injection 20 μL of the test solution and reference solutions (a) and (b).

Run time Twice the retention time of testosterone decanoate.

Identification of impurities Use the chromatogram supplied with *testosterone decanoate for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, D, E and F.

Relative retention With reference to testosterone decanoate (retention time = about 20 min): impurity A = about 0.2; impurity B = about 0.6; impurities C and G = about 0.79; impurity D = about 0.83; impurity E = about 1.3; impurity F = about 1.7.

System suitability Reference solution (a):

- resolution: minimum 1.5 between the peaks due to impurities C and D.

Limits:

- correction factors: for the calculation of content, multiply the peak area of impurity A by 0.7;
- impurities A, B, D, E, F: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- sum of impurities C and G: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- unspecified impurities: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- total: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- disregard limit: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Free acid

Dissolve 0.65 g in 10 mL of *ethanol (96 per cent) R*, previously neutralised to *bromothymol blue solution R3*, and

Testosterone Decanoate

(Ph. Eur. monograph 1736)

$C_{29}H_{46}O_3$

442.7

Action and use

Androgen.

Ph Eur

DEFINITION

3-Oxoandrost-4-en-17β-yl decanoate.

Content

97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, very soluble in acetone, in methylene chloride and in anhydrous ethanol, freely soluble in fatty oils.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison testosterone decanoate CRS.

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

TESTS

Appearance of solution

The solution is clear (2.2.1) and not more intensely coloured than reference solution BY₆ (2.2.2, Method II).

Dissolve 0.20 g in 20 mL of *methanol R*.

Specific optical rotation (2.2.7)

+ 75.0 to + 80.0 (dried substance).

titrate immediately with 0.01 M sodium hydroxide, using 0.1 mL of bromothymol blue solution R3 as indicator. Not more than 0.6 mL of 0.01 M sodium hydroxide is required to change the colour of the indicator to blue.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at a pressure not exceeding 0.7 kPa.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection 20 µL of the test solution and reference solution (c).

Calculate the percentage content of $C_{29}H_{46}O_3$ from the declared content of testosterone decanoate CRS.

STORAGE

At a temperature of 2 °C to 8 °C.

IMPURITIES

Specified impurities A, B, C, D, E, F, G.

A. testosterone,

B. 3-oxoandrost-4-en-17β-yl octanoate (testosterone octanoate),

C. 3-oxoandrost-4-en-17β-yl nonanoate (testosterone nonanoate),

D. 3-oxoandrost-4-en-17β-yl undec-10-enoate (testosterone undecylenate),

E. 3-oxoandrost-4-en-17β-yl undecanoate (testosterone undecanoate),

F. 3-oxoandrost-4-en-17β-yl dodecanoate (testosterone laurate),

G. 3-oxoandrost-4-en-17α-yl decanoate (epitestosterone decanoate).

Ph Eur

Testosterone Enantate

(Ph. Eur. monograph 1048)

400.6

315-37-7

Action and use

Androgen.

Ph Eur

DEFINITION

3-Oxoandrost-4-en-17β-yl heptanoate.

Content

97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

Appearance

White or yellowish-white, crystalline powder.

Solubility

Practically insoluble in water, very soluble in anhydrous ethanol, freely soluble in fatty oils.

IDENTIFICATION

First identification: B.

Second identification: A, C, D.

A. Melting point (2.2.14): 34 °C to 39 °C.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison testosterone enantate CRS.

C. Thin-layer chromatography (2.2.27).

Solvent mixture methanol R, methylene chloride R (10:90 V/V).

Test solution Dissolve 5 mg of the substance to be examined in the solvent mixture and dilute to 10 mL with the solvent mixture.

Reference solution (a) Dissolve 5 mg of testosterone enantate CRS in the solvent mixture and dilute to 10 mL with the solvent mixture.

Reference solution (b) Dissolve 5 mg of testosterone enantate CRS, 5 mg of testosterone decanoate CRS and 5 mg of testosterone isocaproate CRS in the solvent mixture and dilute to 10 mL with the solvent mixture.

Plate TLC octadecylsilyl silica gel F₂₅₄ plate R.

Mobile phase water R, acetonitrile R, 2-propanol R (20:40:60 V/V/V).

Application 5 µL.

Development Over 3/4 of the plate.

Drying In air, then at 100 °C for 10 min; allow to cool.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

Detection B Spray with alcoholic solution of sulfuric acid R; heat at 120 °C for 10 min; allow to cool and examine in daylight.

Results B The principal spot in the chromatogram obtained with the test solution is green and is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

System suitability Reference solution (b):

— the chromatogram shows 3 clearly separated principal spots by each method of visualisation.

D. To about 25 mg add 2 mL of a 10 g/L solution of potassium hydroxide R in methanol R and boil under a reflux condenser for 1 h. Cool. Add 10 mL of water R. Acidify with dilute hydrochloric acid R until blue litmus paper R turns red. Filter and wash the precipitate with a small quantity of water R. The residue, after drying at 60 °C at a pressure not exceeding 0.7 kPa for 3 h, melts (2.2.14) at 150 °C to 153 °C.

TESTS

Specific optical rotation (2.2.7)

+ 81 to + 86 (dried substance).

Dissolve 0.100 g in anhydrous ethanol R and dilute to 10.0 mL with the same solvent.

Impurity A

Maximum 0.16 per cent.

Dissolve 0.50 g in 10 mL of ethanol (96 per cent) R previously neutralised to bromothymol blue solution R3. Titrate immediately with 0.01 M sodium hydroxide using 0.1 mL of bromothymol blue solution R3 as indicator. Not more than 0.6 mL of 0.01 M sodium hydroxide is required to change the colour of the indicator to blue.

Impurity H

Thin-layer chromatography (2.2.27).

Test solution Dissolve 0.100 g of the substance to be examined in 1.0 mL of ethanol (96 per cent) R.

Reference solution Dissolve 3.0 mg of testosterone enantate impurity H CRS in 20.0 mL of ethanol (96 per cent) R.

Plate TLC silica gel plate R.

Mobile phase ethyl acetate R, cyclohexane R1 (40:60 V/V).

Application 1 µL.

Development Over 2/3 of the plate.

Drying In air.

Detection Spray with a 200 g/L solution of toluenesulfonic acid R in ethanol (96 per cent) R and heat at 120 °C for 10 min; examine in ultraviolet light at 366 nm.

System suitability Reference solution:

— the chromatogram shows a clearly visible spot due to impurity H.

Limit:

— impurity H: any spot due to impurity H is not more intense than the principal spot in the chromatogram obtained with the reference solution (0.15 per cent).

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 20 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

Reference solution (a) Dissolve with the aid of ultrasound the contents of a vial of testosterone enantate for system suitability CRS (containing impurities F and G) in the mobile phase and dilute to 1.0 mL with the mobile phase.

Reference solution (b) Dilute 2.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 20.0 mL with the mobile phase.

Reference solution (c) Dissolve 2 mg of testosterone enantate for peak identification CRS (containing impurity E) in 1.0 mL of the mobile phase.

Reference solution (d) Dissolve 2 mg of testosterone caproate CRS (impurity B) and 2 mg of testosterone CRS (impurity D) in the mobile phase and dilute to 5.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 100.0 mL with the mobile phase.

Column:

— size: $l = 0.15$ m, $\varnothing = 4.6$ mm;

— stationary phase: spherical end-capped dodecylsilyl silica gel for chromatography R (4 µm).

Mobile phase water R, acetonitrile R (30:70 V/V).

Flow rate 2.0 mL/min.

Detection Spectrophotometer at 242 nm.

Injection 10 µL.

Run time 1.5 times the retention time of testosterone enantate.

Identification of impurities Use the chromatogram supplied with testosterone enantate for system suitability CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities F and G; use the chromatogram supplied with testosterone enantate for peak identification CRS and the chromatogram obtained with reference solution (c) to identify the peak due to impurity E; use the chromatogram obtained with reference solution (d) to identify the peaks due to impurities B and D.

Relative retention With reference to testosterone enantate (retention time = about 22 min): impurity D = about 0.1; impurity B = about 0.7; impurity E = about 0.8; impurity F = about 0.85; impurity G = about 0.9.

System suitability Reference solution (a):

- **resolution**: minimum 1.3 between the peaks due to impurities F and G.

Limits:

- **correction factor**: for the calculation of content, multiply the peak area of impurity F by 6.3;
- **impurity D**: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);
- **impurities E, F**: for each impurity, not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- **impurity B**: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- **impurity G**: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- **unspecified impurities**: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- **total**: not more than 7 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.7 per cent);
- **disregard limit**: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at a pressure not exceeding 0.7 kPa.

ASSAY

Dissolve 50.0 mg in *anhydrous ethanol R* and dilute to 100.0 mL with the same solvent. Dilute 2.0 mL of the solution to 100.0 mL with *anhydrous ethanol R*. Measure the absorbance (2.2.25) at the absorption maximum at 241 nm. Calculate the content of $C_{26}H_{40}O_3$ taking the specific absorbance to be 422.

STORAGE

Protected from light, at a temperature of 2 °C to 8 °C.

IMPURITIES

Specified impurities A, B, D, E, F, G, H.

A. heptanoic acid,

B. 3-oxoandrost-4-en-17β-yl hexanoate (testosterone caproate),

D. 17β-hydroxyandrost-4-en-3-one (testosterone),

E. 3-oxoandrost-4-en-17α-yl heptanoate (17α-testosterone enantate),

F. 3-oxoandrost-4,6-dien-17β-yl heptanoate (Δ6-testosterone enantate),

G. 3-oxoandrost-4,9(11)-dien-17β-yl heptanoate (Δ9(11)-testosterone enantate),

H. androst-5-ene-3β,17β-diyl diheptanoate.

Reference solution (a) Dissolve 2 mg of testosterone propionate for system suitability CRS (containing impurities A, B and C) in 5.0 mL of methanol R.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with methanol R. Dilute 1.0 mL of this solution to 10.0 mL with methanol R.

Reference solution (c) Dissolve 20.0 mg of testosterone propionate CRS in 50.0 mL of methanol R.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase water R, methanol R (20:80 V/V).

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 254 nm.

Injection 20 μ L of the test solution and reference solutions (a) and (b).

Run time Twice the retention time of testosterone propionate.

Identification of impurities Use the chromatogram supplied with testosterone propionate for system suitability CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B and C.

Relative retention With reference to testosterone propionate (retention time = about 8 min): impurity C = about 0.4; impurity A = about 0.7; impurity B = about 1.4.

System suitability Reference solution (a):

— **peak-to-valley ratio**: minimum 3.0, where H_p = height above the baseline of the peak due to impurity B and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to testosterone propionate.

Limits:

— **impurity A**: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— **impurity C**: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— **unspecified impurities**: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

- *total*: not more than 7 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.7 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (c).

Calculate the percentage content of $C_{22}H_{32}O_3$ taking into account the assigned content of *testosterone propionate CRS*.

E. 3-oxoandrosta-4,6-dien-17β-yl propanoate.

Ph Eur

Tetracaine

(Ph. Eur. monograph 2909)

IMPURITIES

Specified impurities A, C.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B, D, E.

A. 3-oxoandrost-4-en-17β-yl acetate (testosterone acetate),

B. 3-oxoandrost-4-en-17β-yl 2-methylpropanoate (testosterone isobutyrate),

C. 17β-hydroxyandrost-4-en-3-one (testosterone),

D. 3-oxoandrosta-1,4-dien-17β-yl propanoate,

$C_{15}H_{24}N_2O_2$

264.4

94-24-6

Action and use
Local anaesthetic.

Ph Eur

DEFINITION

2-(Dimethylamino)ethyl 4-(butylamino)benzoate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Very slightly soluble in water, freely soluble in methylene chloride, soluble in ethanol (96 per cent).

mp

About 44 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison tetracaine CRS.

TESTS

Appearance of solution

The solution is clear (2.2.1) and colourless (2.2.2, *Method II*).

Dissolve 2.0 g in ethanol (96 per cent) R and dilute to 10 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 0.100 g of the substance to be examined in acetonitrile R and dilute to 50.0 mL with the same solvent.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with acetonitrile R. Dilute 1.0 mL of this solution to 10.0 mL with acetonitrile R.

Reference solution (b) Dissolve 10 mg of 4-aminobenzoic acid R (impurity A), 10 mg of 4-(butylamino)benzoic acid R (impurity B) and 10 mg of methyl 4-(butylamino)benzoate R (impurity C) in acetonitrile R and dilute to 50 mL with the same solvent. Dilute 1 mL of the solution to 10 mL with the test solution.

Column:

- size: $l = 0.15$ m, $\varnothing = 4.6$ mm;
- stationary phase: end-capped octadecylsilyl amorphous organosilica polymer for chromatography R (5 μ m);
- temperature: 30 °C.

Mobile phase:

- mobile phase A: dissolve 1.36 g of potassium dihydrogen phosphate R in water for chromatography R, add 0.5 mL of phosphoric acid R and dilute to 1000 mL with water for chromatography R;
- mobile phase B: acetonitrile R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 3	80	20
3 - 18	80 → 40	20 → 60
18 - 23	40	60

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 300 nm.

Injection 5 μ L.

Identification of impurities Use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B and C.

Relative retention With reference to tetracaine (retention time = about 7 min): impurity A = about 0.4; impurity B = about 1.6; impurity C = about 2.2.

System suitability Reference solution (b):

- resolution: minimum 5.0 between the peaks due to tetracaine and impurity B.

Calculation of percentage contents:

- correction factors: multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.7; impurity C = 0.7;
- for each impurity, use the concentration of tetracaine in reference solution (a).

Limits:

- impurities B, C: for each impurity, maximum 0.15 per cent;
- impurity A: maximum 0.05 per cent;
- unspecified impurities: for each impurity, maximum 0.10 per cent;
- total: maximum 0.3 per cent;
- reporting threshold: 0.05 per cent, except for impurity A.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 30 °C for 2 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 mL of a mixture of 25 volumes of water R and 75 volumes of ethanol (96 per cent) R. Titrate with 0.1 M hydrochloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M hydrochloric acid is equivalent to 26.44 mg of $C_{15}H_{24}N_2O_2$.

STORAGE

In an airtight container, protected from light.

IMPURITIES

Specified impurities A, B, C.

A. 4-aminobenzoic acid,

B. 4-(butylamino)benzoic acid,

C. methyl 4-(butylamino)benzoate.

Action and use

Local anaesthetic.

Preparation

Tetracaine Eye Drops

Ph Eur

DEFINITION

2-(Dimethylamino)ethyl 4-(butylamino)benzoate hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS**Appearance**

White or almost white, slightly hygroscopic, crystalline powder.

Solubility

Freely soluble in water, soluble in ethanol (96 per cent).

It melts at about 148 °C or it may occur in either of 2 other crystalline forms which melt respectively at about 134 °C and 139 °C. Mixtures of these forms melt within the range 134 °C to 147 °C.

IDENTIFICATION

First identification: A, B, D.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison tetracaine hydrochloride CRS.

B. To 10 mL of solution S (see Tests) add 1 mL of ammonium thiocyanate solution R. A white, crystalline precipitate is formed which, after recrystallisation from

water R and drying at 80 °C for 2 h, melts (2.2.14) at about 131 °C.

C. To about 5 mg add 0.5 mL of fuming nitric acid R. Evaporate to dryness on a water-bath, allow to cool and dissolve the residue in 5 mL of acetone R. Add 1 mL of 0.1 M alcoholic potassium hydroxide. A violet colour develops.

D. Solution S gives reaction (a) of chlorides (2.3.1).

TESTS

Solution S

Dissolve 5.0 g in carbon dioxide-free water R and dilute to 50 mL with the same solvent.

Appearance of solution

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dilute 2 mL of solution S to 10 mL with water R.

pH (2.2.3)

4.5 to 6.5.

Dilute 1 mL of solution S to 10 mL with carbon dioxide-free water R.

Related substances

Liquid chromatography (2.2.29). Prepare the solutions immediately before use or store them at 2–8 °C.

Solvent mixture acetone R, water R (20:80 V/V).

Test solution Dissolve 50 mg of the substance to be examined in the solvent mixture and dilute to 50 mL with the solvent mixture.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Reference solution (b) Dissolve the contents of a vial of tetracaine for system suitability CRS (containing impurities A, B and C) in 2 mL of the solvent mixture.

Column:

- size: $l = 0.15$ m, $\varnothing = 4.6$ mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (5 μ m);
- temperature: 30 °C.

Mobile phase:

- mobile phase A: dissolve 1.36 g of potassium dihydrogen phosphate R in water R, add 0.5 mL of phosphoric acid R and dilute to 1000 mL with water R;
- mobile phase B: acetone R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 3	80	20
3 - 18	80 → 40	20 → 60
18 - 23	40	60

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 300 nm.

Injection 10 μ L.

Identification of impurities Use the chromatogram supplied with tetracaine for system suitability CRS and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B and C.

Relative retention With reference to tetracaine (retention time = about 8 min): impurity A = about 0.3; impurity B = about 1.7; impurity C = about 2.1.

System suitability Reference solution (b):

- resolution: minimum 5.0 between the peaks due to tetracaine and impurity B.

Limits:

- correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.6; impurity C = 0.7;
- impurity A: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent);
- impurities B, C: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- total: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 mL of ethanol (96 per cent) R and add 5.0 mL of 0.01 M hydrochloric acid. Carry out a potentiometric titration (2.2.20), using 0.1 M sodium hydroxide. Read the volume added between the 2 points of inflexion.

1 mL of 0.1 M sodium hydroxide is equivalent to 30.08 mg of $C_{15}H_{25}ClN_2O_2$.

STORAGE

In an airtight container, protected from light.

IMPURITIES

Specified impurities A, B, C.

A. 4-aminobenzoic acid,

B. 4-(butylamino)benzoic acid,

C. methyl 4-(butylamino)benzoate.

Ph Eur

Tetracosactide

(Ph. Eur. monograph 0644)

C₁₃₆H₂₁₀N₄₀O₃₁S

2933

16960-16-0

Action and use

Corticotropic peptide.

Preparations

Tetracosactide Injection

Tetracosactide Zinc Injection

Ph. Eur.

DEFINITION

Synthetic tetracosapeptide, in which the sequence of amino acids is the same as that of the first 24 residues of human corticotropin. It increases the rate at which corticoid hormones are secreted by the adrenal glands. It is available as an acetate.

Content

90 per cent to 102 per cent (anhydrous and acetic acid-free substance). By convention, 1 µg of tetracosactide is equivalent to 1 IU of tetracosactide.

CHARACTERS

Appearance

White or yellow, amorphous powder.

Solubility

Sparingly soluble in water.

IDENTIFICATION

A. Examine the chromatograms obtained in the test for related peptides.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

B. Amino acid analysis (2.2.56). For hydrolysis use Method 1 and for analysis use Method 1.

Express the content of each amino acid in moles. Calculate the relative proportions of the amino acids, taking that of valine to be equivalent to 3. The values fall within the following limits: lysine 3.5 to 4.7; histidine 0.9 to 1.1; arginine 2.7 to 3.3; serine 1.1 to 2.2; glutamic acid 0.9 to 1.1; proline 2.5 to 3.5; glycine 1.8 to 2.2; methionine 0.9 to 1.1; tyrosine 1.7 to 2.2; phenylalanine 0.9 to 1.1. Not more than traces of other amino acids are present.

TESTS

Specific optical rotation (2.2.7)

-99 to -109 (anhydrous and acetic acid-free substance).

Dissolve 10.0 mg in 1.0 mL of a mixture of 1 volume of glacial acetic acid R and 99 volumes of water R.

Absorbance (2.2.25)

0.51 to 0.61 (anhydrous and acetic acid-free substance), determined at the absorption maximum between 240 nm and 280 nm, at 276 nm. The ratio of the absorbance at the maximum at 276 nm to the absorbance at 248 nm is 2.4 to 2.9.

Dissolve 1.0 mg in 0.1 M hydrochloric acid and dilute to 5.0 mL with the same acid.

Related peptides

Liquid chromatography (2.2.29): use the normalisation procedure.

Test solution Dissolve an accurately weighed quantity of the substance to be examined in water R to obtain the same concentration as in reference solution (a).

Reference solution (a) Dissolve the contents of a vial of tetracosactide CRS in water R to obtain a concentration of about 1 mg/mL, as indicated in the leaflet provided with the reference standard.

Reference solution (b) In order to prepare impurity A *in situ*, dissolve 1.0 mg of the substance to be examined in 1 mL of a 1 per cent V/V solution of glacial acetic acid R, add 50 µL of a mixture of 1 volume of strong hydrogen peroxide solution R and 999 volumes of water R, and allow to stand for 2 h.

Column:

— size: $l = 0.15$ m, $\phi = 4.6$ mm;

— stationary phase: octadecylsilyl silica gel for chromatography R (3 µm);

— temperature: 25 °C.

Mobile phase:

— mobile phase A: mix 5.0 mL of glacial acetic acid R, 60 mL of acetonitrile R and 5.0 g of ammonium sulfate R and dilute to 1000 mL with water R;

— mobile phase B: mix 5.0 mL of glacial acetic acid R, 310 mL of acetonitrile R and 5.0 g of ammonium sulfate R and dilute to 1000 mL with water R;

— mobile phase C: acetonitrile R.

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)	Mobile phase C (per cent V/V)
0 - 50	55 → 40	45 → 60	0
50 - 50.1	40 → 0	60 → 15	0 → 85
50.1 - 55	0	15	85
55 - 55.1	0 → 55	15 → 45	85 → 0
55.1 - 60	55	45	0

Flow rate 0.8 mL/min.

Detection Spectrophotometer at 275 nm.

Injection 20 µL.

Identification of impurities Use the chromatogram supplied with tetracosactide CRS and the chromatogram obtained with reference solution (a) to identify the peak due to impurity B; use the chromatogram obtained with reference solution (b) to identify the peak due to impurity A.

Relative retention With reference to tetracosactide (retention time = about 26 min): impurity A = about 0.3; impurity B = about 0.95.

System suitability Reference solution (a):

— peak-to-valley ratio: minimum 3, where H_p = height above the baseline of the peak due to impurity B and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to tetracosactide.

Limits:

— impurity A: maximum 3 per cent;

— impurity B: maximum 4 per cent;

— unspecified impurities: for each impurity, maximum 2.5 per cent;

— sum of impurities other than A: maximum 9 per cent.

Acetic acid (2.5.34)

8.0 per cent to 13.0 per cent.

Test solution Dissolve 10.0 mg of the substance to be examined in a mixture of 5 volumes of mobile phase B and 95 volumes of mobile phase A and dilute to 10.0 mL with the same mixture of mobile phases.

Water (2.5.32)

Maximum 14.0 per cent, determined on 20.0-50.0 mg.

Bacterial endotoxins (2.6.14)

Less than 10 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related peptides.

Calculate the content of $C_{136}H_{210}N_{40}O_{31}S$ using the declared content of *tetracosactide CRS*.

STORAGE

Protected from light, at a temperature of 2 °C to 8 °C.

LABELLING

The label states:

- the mass of peptide in the container;
- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

IMPURITIES

Specified impurities A, B.

- A. tetracosactide sulfoxide,
- B. unknown structure.

Ph Eur

Tetracycline

(Ph. Eur. monograph 0211)

$C_{22}H_{24}N_2O_8$

444.4

60-54-8

Action and use

Tetracycline antibacterial.

Ph Eur

DEFINITION

(4*S*,4*aS*,5*aS*,6*S*,12*aS*)-4-(Dimethylamino)-3,6,10,12,12*a*-pentahydroxy-6-methyl-1,11-dioxo-1,4,4*a*,5,5*a*,6,11,12*a*-octahydro-tetracyclic-2-carboxamide.

Substance produced by certain strains of *Streptomyces aerofaciens* or obtained by any other means.

Content

88.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

Yellow, crystalline powder.

Solubility

Very slightly soluble in water, soluble in ethanol (96 per cent) and in methanol, sparingly soluble in acetone. It dissolves in dilute acid and alkaline solutions.

IDENTIFICATION

A. Thin-layer chromatography (2.2.27).

Test solution Dissolve 5 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

Reference solution (a) Dissolve 5 mg of *tetracycline hydrochloride CRS* in *methanol R* and dilute to 10 mL with the same solvent.

Reference solution (b) Dissolve 5 mg of *tetracycline hydrochloride CRS*, 5 mg of *demeclocycline hydrochloride R* and 5 mg of *oxytetracycline hydrochloride R* in *methanol R* and dilute to 10 mL with the same solvent.

Plate TLC octadecylsilyl silica gel F_{254} plate *R*.

Mobile phase Mix 20 volumes of *acetonitrile R*, 20 volumes of *methanol R* and 60 volumes of a 63 g/L solution of *oxalic acid R* previously adjusted to pH 2 with *concentrated ammonia R*.

Application 1 μ L.

Development Over 3/4 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability The chromatogram obtained with reference solution (b) shows 3 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

B. To about 2 mg add 5 mL of *sulfuric acid R*. A violet-red colour develops. Add the solution to 2.5 mL of *water R*. The colour becomes yellow.

C. Dissolve about 10 mg in a mixture of 1 mL of *dilute nitric acid R* and 5 mL of *water R*. Shake and add 1 mL of *silver nitrate solution R2*. Any opalescence in the solution is not more intense than that in a mixture of 1 mL of *dilute nitric acid R*, 5 mL of *water R* and 1 mL of *silver nitrate solution R2*.

TESTS

pH (2.2.3)

3.5 to 6.0.

Suspend 0.1 g in 10 mL of *carbon dioxide-free water R*.

Specific optical rotation (2.2.7)

-260 to -280 (dried substance).

Dissolve 0.250 g in 0.1 M *hydrochloric acid* and dilute to 50.0 mL with the same acid.

Related substances

Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

Test solution Dissolve 25.0 mg of the substance to be examined in 0.01 M *hydrochloric acid* and dilute to 25.0 mL with the same acid.

Reference solution (a) Dissolve 25.0 mg of *tetracycline hydrochloride CRS* in 0.01 M *hydrochloric acid* and dilute to 25.0 mL with the same acid.

Reference solution (b) Dissolve 12.5 mg of *4-epitetracycline hydrochloride CRS* in 0.01 M *hydrochloric acid* and dilute to 50.0 mL with the same acid.

Reference solution (c) Dissolve 10.0 mg of *anhydrotetracycline hydrochloride CRS* in 0.01 M *hydrochloric acid* and dilute to 100.0 mL with the same acid.

Reference solution (d) Dissolve 10.0 mg of *4-epianhydrotetracycline hydrochloride CRS* in 0.01 M *hydrochloric acid* and dilute to 50.0 mL with the same acid.

Reference solution (e) Mix 1.0 mL of reference solution (a), 2.0 mL of reference solution (b) and 5.0 mL of reference solution (d) and dilute to 25.0 mL with 0.01 M hydrochloric acid.

Reference solution (f) Mix 40.0 mL of reference solution (b), 20.0 mL of reference solution (c) and 5.0 mL of reference solution (d) and dilute to 200.0 mL with 0.01 M hydrochloric acid.

Reference solution (g) Dilute 1.0 mL of reference solution (c) to 50.0 mL with 0.01 M hydrochloric acid.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: styrene-divinylbenzene copolymer R (8 μ m);

— temperature: 60 °C.

Mobile phase Weigh 80.0 g of 2-methyl-2-propanol R and transfer to a 1000 mL volumetric flask with the aid of 200 mL of water R; add 100 mL of a 35 g/L solution of dipotassium hydrogen phosphate R adjusted to pH 9.0 with dilute phosphoric acid R, 200 mL of a 10 g/L solution of tetrabutylammonium hydrogen sulfate R adjusted to pH 9.0 with dilute sodium hydroxide solution R and 10 mL of a 40 g/L solution of sodium edetate R adjusted to pH 9.0 with dilute sodium hydroxide solution R; dilute to 1000.0 mL with water R.

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 254 nm.

Injection 20 μ L; inject the test solution and reference solutions (e), (f) and (g).

System suitability:

- **resolution:** minimum 2.5 between the peaks due to impurity A (1st peak) and tetracycline (2nd peak) and minimum 8.0 between the peaks due to tetracycline and impurity D (3rd peak) in the chromatogram obtained with reference solution (e); if necessary, adjust the concentration of 2-methyl-2-propanol in the mobile phase;
- **signal-to-noise ratio:** minimum 3 for the principal peak in the chromatogram obtained with reference solution (g);
- **symmetry factor:** maximum 1.25 for the peak due to tetracycline in the chromatogram obtained with reference solution (e).

Limits:

- **impurity A:** not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (5.0 per cent);
- **impurity B** (eluting on the tail of the principal peak): not more than 0.4 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (f) (2.0 per cent);
- **impurity C:** not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (1.0 per cent);
- **impurity D:** not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.5 per cent).

Loss on drying (2.2.32)

Maximum 13.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.5 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (a).

Calculate the percentage content of $C_{22}H_{24}N_2O_8$.

STORAGE

Protected from light.

IMPURITIES

- A. (4*R*,4*aS*,5*aS*,6*S*,12*aS*)-4-(dimethylamino)-3,6,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-1,4,4*a*,5,5*a*,6,11,12*a*-octahydrotetracene-2-carboxamide (4-epitetracycline),

- B. (4*S*,4*aS*,5*aS*,6*S*,12*aS*)-2-acetyl-4-(dimethylamino)-3,6,10,12,12a-pentahydroxy-6-methyl-4*a*,5*a*,6,12*a*-tetrahydrotetracene-1,11(4*H*,5*H*)-dione (2-acetyl-2-decarbamoylepityl tetracycline),

- C. (4*S*,4*aS*,12*aS*)-4-(dimethylamino)-3,10,11,12a-tetrahydroxy-6-methyl-1,12-dioxo-1,4,4*a*,5,12,12*a*-hexahydrotetracene-2-carboxamide (anhydrotetracycline),

- D. (4*R*,4*aS*,12*aS*)-4-(dimethylamino)-3,10,11,12a-tetrahydroxy-6-methyl-1,12-dioxo-1,4,4*a*,5,12,12*a*-hexahydrotetracene-2-carboxamide (4-epianhydrotetracycline).

DEFINITION

(4S,4aS,5aS,6S,12aS)-4-(Dimethylamino)-3,6,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide hydrochloride.

Substance produced by certain strains of *Streptomyces aerofaciens* or obtained by any other means.

Content

95.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

Yellow, crystalline powder.

Solubility

Soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in acetone. It dissolves in solutions of alkali hydroxides and carbonates. Solutions in water become turbid on standing, owing to the precipitation of tetracycline.

IDENTIFICATION

A. Thin-layer chromatography (2.2.27).

Test solution Dissolve 5 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

Reference solution (a) Dissolve 5 mg of *tetracycline hydrochloride CRS* in *methanol R* and dilute to 10 mL with the same solvent.

Reference solution (b) Dissolve 5 mg of *tetracycline hydrochloride CRS*, 5 mg of *demeclocycline hydrochloride R* and 5 mg of *oxytetracycline hydrochloride R* in *methanol R* and dilute to 10 mL with the same solvent.

Plate TLC octadecylsilyl silica gel F₂₅₄ plate *R*.

Mobile phase Mix 20 volumes of *acetonitrile R*, 20 volumes of *methanol R* and 60 volumes of a 63 g/L solution of *oxalic acid R* previously adjusted to pH 2 with *concentrated ammonia R*.

Application 1 µL.

Development Over 3/4 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability The chromatogram obtained with reference solution (b) shows 3 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

B. To about 2 mg add 5 mL of *sulfuric acid R*. A violet-red colour develops. Add the solution to 2.5 mL of *water R*. The colour becomes yellow.

C. It gives reaction (a) of chlorides (2.3.1).

TESTS

pH (2.2.3)

1.8 to 2.8.

Dissolve 0.1 g in 10 mL of *carbon dioxide-free water R*.

Specific optical rotation (2.2.7)

−240 to −255 (dried substance).

Dissolve 0.250 g in 0.1 M *hydrochloric acid* and dilute to 25.0 mL with the same acid.

Related substances

Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

Test solution Dissolve 25.0 mg of the substance to be examined in 0.01 M *hydrochloric acid* and dilute to 25.0 mL with the same acid.

Reference solution (a) Dissolve 25.0 mg of *tetracycline hydrochloride CRS* in 0.01 M *hydrochloric acid* and dilute to 25.0 mL with the same acid.

Reference solution (b) Dissolve 15.0 mg of *4-epitetracycline hydrochloride CRS* in 0.01 M *hydrochloric acid* and dilute to 50.0 mL with the same acid.

Reference solution (c) Dissolve 10.0 mg of *anhydrotetracycline hydrochloride CRS* in 0.01 M *hydrochloric acid* and dilute to 100.0 mL with the same acid.

Reference solution (d) Dissolve 10.0 mg of *4-epianhydrotetracycline hydrochloride CRS* in 0.01 M *hydrochloric acid* and dilute to 50.0 mL with the same acid.

Reference solution (e) Mix 1.0 mL of reference solution (a), 2.0 mL of reference solution (b) and 5.0 mL of reference solution (d) and dilute to 25.0 mL with 0.01 M *hydrochloric acid*.

Reference solution (f) Mix 20.0 mL of reference solution (b), 10.0 mL of reference solution (c) and 5.0 mL of reference solution (d) and dilute to 200.0 mL using 0.01 M *hydrochloric acid*.

Reference solution (g) Dilute 1.0 mL of reference solution (c) to 50.0 mL with 0.01 M *hydrochloric acid*.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: *styrene-divinylbenzene copolymer R* (8 µm);

— temperature: 60 °C.

Mobile phase Weigh 80.0 g of *2-methyl-2-propanol R* and transfer to a 1000 mL volumetric flask with the aid of 200 mL of *water R*; add 100 mL of a 35 g/L solution of *dipotassium hydrogen phosphate R* adjusted to pH 9.0 with *dilute phosphoric acid R*, 200 mL of a 10 g/L solution of *tetrabutylammonium hydrogen sulfate R* adjusted to pH 9.0 with *dilute sodium hydroxide solution R* and 10 mL of a 40 g/L solution of *sodium edetate R* adjusted to pH 9.0 with *dilute sodium hydroxide solution R*; dilute to 1000.0 mL with *water R*.

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µL; inject the test solution and reference solutions (e), (f) and (g).

System suitability:

— resolution: minimum 2.5 between the peaks due to impurity A (1st peak) and tetracycline (2nd peak) and minimum 8.0 between the peaks due to tetracycline and

impurity D (3rd peak) in the chromatogram obtained with reference solution (e); if necessary, adjust the concentration of 2-methyl-2-propanol in the mobile phase;

- *signal-to-noise ratio*: minimum 3 for the principal peak in the chromatogram obtained with reference solution (g);
- *symmetry factor*: maximum 1.25 for the peak due to tetracycline in the chromatogram obtained with reference solution (e).

Limits:

- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (3.0 per cent);
- *impurity B* (eluting on the tail of the principal peak): not more than 0.5 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (f) (1.5 per cent);
- *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.5 per cent);
- *impurity D*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.5 per cent).

Loss on drying (2.2.32)

Maximum 2.0 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C at a pressure not exceeding 0.7 kPa for 3 h.

Sulfated ash (2.4.14)

Maximum 0.5 per cent, determined on 1.0 g.

Bacterial endotoxins (2.6.14)

Less than 0.5 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (a).

Calculate the percentage content of $C_{22}H_{25}ClN_2O_8$.

STORAGE

Protected from light. If the substance is sterile, store in a sterile, tamper-evident container.

IMPURITIES

- A. (4*R*,4*aS*,5*aS*,6*S*,12*aS*)-4-(dimethylamino)-3,6,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-1,4,4*a*,5,5*a*,6,11,12a-octahydrotetracycline-2-carboxamide (4-epitetracycline),

- B. (4*S*,4*aS*,5*aS*,6*S*,12*aS*)-2-acetyl-4-(dimethylamino)-3,6,10,12,12a-pentahydroxy-6-methyl-4*a*,5*a*,6,12*a*-tetrahydrotetracycline-1,11-(4*H*,5*H*)-dione (2-acetyl-2-decarbamoyletetracycline),

- C. (4*S*,4*aS*,12*aS*)-4-(dimethylamino)-3,10,11,12a-tetrahydroxy-6-methyl-1,12-dioxo-1,4,4*a*,5,12,12a-hexahydrotetracycline-2-carboxamide (anhydrotetracycline),

- D. (4*R*,4*aS*,12*aS*)-4-(dimethylamino)-3,10,11,12a-tetrahydroxy-6-methyl-1,12-dioxo-1,4,4*a*,5,12,12a-hexahydrotetracycline-2-carboxamide (4-epianhydrotetracycline).

Ph Eur

Tetrazepam

(Ph. Eur. monograph 1738)

$C_{16}H_{17}ClN_2O$

288.8

10379-14-3

Action and use

Benzodiazepine; hypnotic.

Ph Eur

DEFINITION

7-Chloro-5-(cyclohex-1-enyl)-1-methyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

Light yellow or yellow crystalline powder.

Solubility

Practically insoluble in water, freely soluble in methylene chloride, soluble in acetonitrile.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison Ph. Eur. reference spectrum of tetrazepam.

TESTS

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 25.0 mg of the substance to be examined in acetonitrile *R* and dilute to 25.0 mL with the same solvent.

Reference solution (a) Dissolve 5.0 mg of the substance to be examined and 5.0 mg of tetrazepam impurity C CRS in acetonitrile R and dilute to 10.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with acetonitrile R.

Reference solution (b) Dilute 1.0 mL of the test solution to 50.0 mL with acetonitrile R. Dilute 1.0 mL of this solution to 10.0 mL with acetonitrile R.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase:

- mobile phase A: mix 40 volumes of acetonitrile R and 60 volumes of a 3.4 g/L solution of potassium dihydrogen phosphate R;
- mobile phase B: acetonitrile R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 35	100	0
35 - 40	100 → 55	0 → 45
40 - 50	55	45

Flow rate 1.5 mL/min.

Detection A spectrophotometer at 229 nm.

Injection 20 μ L.

System suitability Reference solution (a):

- resolution: minimum 2.0 between the peaks due to tetrazepam and to impurity C.

Limits:

- any impurity: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- total: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- disregard limit: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Chlorides (2.4.4)

Maximum 100 ppm.

Dissolve 0.750 g in 10 mL of methylene chloride R and add 15 mL of water R. Shake and separate the 2 layers. Dilute 10 mL of the aqueous layer to 15 mL with water R.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.230 g in 50.0 mL of anhydrous acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 28.88 mg of $C_{16}H_{17}ClN_2O$.

STORAGE

Protected from light.

IMPURITIES

A. 7-chloro-1-methyl-5-(3-oxocyclohex-1-enyl)-1,3-dihydro-2H-1,4-benzodiazepin-2-one,

B. 7-chloro-5-cyclohexyl-1,3-dihydro-2H-1,4-benzodiazepin-2-one,

C. 7-chloro-5-(1-methyl-1,3-dihydro-2H-1,4-benzodiazepin-2-one),

D. 7-chloro-5-(1-chlorocyclohexyl)-1-methyl-1,3-dihydro-2H-1,4-benzodiazepin-2-one,

E. 7-chloro-5-(cyclohex-1-enyl)-1,3-dihydro-2H-1,4-benzodiazepin-2-one.

Ph Eur

DEFINITION

2-[(1*R*)-1,2,3,4-Tetrahydronaphthalen-1-yl]-4,5-dihydro-1*H*-imidazole hydrochloride.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, in anhydrous ethanol and in ethanol (96 per cent), practically insoluble in acetone.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison tetryzoline hydrochloride CRS.

B. Dissolve 50 mg in 10 mL of water *R*. The solution gives reaction (a) of chlorides (2.3.1).

TESTS

Appearance of solution

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 1.0 g in water *R* and dilute to 10 mL with the same solvent.

Related substances

Gas chromatography (2.2.28).

Test solution Dissolve 1.0 g of the substance to be examined in a mixture of 25 volumes of 1 *M* sodium hydroxide and 75 volumes of methanol *R* and dilute to 10 mL with the same mixture of solvents.

Reference solution Dilute 1.0 mL of the test solution to 100.0 mL with a mixture of 25 volumes of 1 *M* sodium hydroxide and 75 volumes of methanol *R*. Dilute 1.0 mL of this solution to 10.0 mL with a mixture of 25 volumes of 1 *M* sodium hydroxide and 75 volumes of methanol *R*.

Column:

— material: fused silica,

— size: $l = 25$ m, $\varnothing = 0.32$ mm,

— stationary phase: methylpolysiloxane *R* (1 μ m).

Carrier gas helium for chromatography *R*.

Split ratio 1:40.

Flow rate 2.5 mL/min.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 8	160
	8 - 11	160 → 220
	11 - 15	220
Injection port		220
Detector		220

Detection Flame ionisation.

Injection 1 μ L.

Relative retention With reference to tetryzoline (retention time = about 12 min): impurity A = about 0.5.

System suitability Reference solution:

— signal-to-noise ratio: minimum 50 for the principal peak.

Limits:

— impurity A: not more than the area of the principal peak in the chromatogram obtained with the reference solution (0.1 per cent),

— any other impurity: for each impurity, not more than the area of the principal peak in the chromatogram obtained with the reference solution (0.1 per cent),

— total: not more than twice the area of the principal peak in the chromatogram obtained with the reference solution (0.2 per cent),

— disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with the reference solution (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 100 mL of a mixture of 3 volumes of anhydrous acetic acid *R* and 7 volumes of acetic anhydride *R*. Titrate with 0.1 *M* perchloric acid, determining the end-point potentiometrically (2.2.20). Carry out a blank titration.

1 mL of 0.1 *M* perchloric acid is equivalent to 23.67 mg of $C_{13}H_{17}ClN_2$.

DEFINITION

1,3-Dimethyl-3,7-dihydro-1H-purine-2,6-dione.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Slightly soluble in water, sparingly soluble in ethanol (96 per cent). It dissolves in solutions of alkali hydroxides, in ammonia and in mineral acids.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D, E.

A. Melting point (2.2.14): 270 °C to 274 °C, determined after drying at 100-105 °C.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison Ph. Eur. reference spectrum of theophylline.

C. Heat 10 mg with 1.0 mL of a 360 g/L solution of potassium hydroxide R in a water-bath at 90 °C for 3 min, then add 1.0 mL of diazotised sulfanilic acid solution R. A red colour slowly develops. Carry out a blank test.

D. Loss on drying (see Tests).

E. It gives the reaction of xanthines (2.3.1).

TESTS

Solution S

Dissolve 0.5 g with heating in carbon dioxide-free water R, cool and dilute to 75 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

Acidity

To 50 mL of solution S add 0.1 mL of methyl red solution R. The solution is red. Not more than 1.0 mL of 0.01 M sodium hydroxide is required to change the colour of the indicator to yellow.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 40.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b) Dissolve 10 mg of theobromine R in the mobile phase, add 5 mL of the test solution and dilute to 100 mL with the mobile phase. Dilute 5 mL of this solution to 50 mL with the mobile phase.

Column:

— size: $l = 0.25$ m, $\varnothing = 4$ mm;

— stationary phase: octadecylsilyl silica gel for chromatography R (7 μ m).

Mobile phase Mix 7 volumes of acetonitrile for chromatography R and 93 volumes of a 1.36 g/L solution of sodium acetate R containing 5.0 mL/L of glacial acetic acid R.

Flow rate 2.0 mL/min.

Detection Spectrophotometer at 272 nm.

Injection 20 μ L.

Run time 3.5 times the retention time of theophylline.

Relative retention With reference to theophylline (retention time = about 6 min): impurity C = about 0.3; impurity B = about 0.4; impurity D = about 0.5; impurity A = about 2.5.

System suitability Reference solution (b):

— resolution: minimum 2.0 between the peaks due to theobromine and theophylline.

Limits:

- impurities A, B, C, D: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

First identification: A, C.

Second identification: A, B, D.

A. Melting point (2.2.14): 143 °C to 146 °C.

B. Dissolve 25 mg in 10 mL of a 0.28 per cent V/V solution of sulfuric acid R and dilute to 50.0 mL with the same solution. Dilute 1.0 mL of this solution to 100.0 mL with a 0.28 per cent V/V solution of sulfuric acid R. Examined between 200 nm and 300 nm (2.2.25), the solution shows 2 absorption maxima, at 211 nm and 251 nm. The ratio of the absorbance measured at the absorption maximum at 251 nm to that measured at the absorption maximum at 211 nm is 2.5 to 2.7.

C. Infrared absorption spectrophotometry (2.2.24).

Preparation Discs.

Comparison thiamazole CRS.

D. Thin-layer chromatography (2.2.27).

Test solution Dissolve 5.0 mg of the substance to be examined in methanol R and dilute to 5.0 mL with the same solvent.

Reference solution (a) Dissolve 5.0 mg of thiamazole CRS in methanol R and dilute to 5.0 mL with the same solvent.

Reference solution (b) Dissolve 5.0 mg of 2-methylimidazole R in methanol R and dilute to 5.0 mL with the same solvent. Dilute 1.0 mL of this solution to 2.0 mL with the test solution.

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase concentrated ammonia R1, 2-propanol R, toluene R (1:24:75 V/V/V).

Application 10 µL.

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

- expose the plate to iodine vapour for 30 min; the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Solution S

Dissolve 2.0 g in water R and dilute to 20.0 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and not more intensely coloured than reference solution B₆ (2.2.2, Method II).

Related substances

Gas chromatography (2.2.28).

Test solution Dissolve 0.100 g of the substance to be examined in chloroform R and dilute to 10.0 mL with the same solvent.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with chloroform R. Dilute 1.0 mL of this solution to 10.0 mL with chloroform R.

Reference solution (b) Dissolve 5.0 mg of thiamazole impurity A CRS, 5.0 mg of 1-methylimidazole R1 and 5.0 mg of thiamazole impurity C CRS in chloroform R and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of this solution to 10.0 mL with chloroform R.

Column:

- material: fused silica,
- size: l = 30.0 m, Ø = 0.25 mm,
- stationary phase: base-deactivated phenyl(5)methyl(95) polysiloxane R (film thickness 0.5 µm).

Carrier gas helium for chromatography R.

Flow rate 1.5 mL/min.

Split ratio 3:20.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 2	100
	2 - 7	100 → 250
	7 - 22	250
Injection port		150
Detector		250

Detection Flame ionisation.

Injection 1 µL.

Relative retention With reference to thiamazole (retention time = about 6.5 min): impurity A = about 0.3; impurity B = about 0.4; impurity C = about 0.7.

System suitability Reference solution (b):

- resolution: minimum 1.5 between the peaks due to impurity A and impurity B.

Limits:

- impurities A, B, C: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent),
- any other impurity: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- total: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),
- disregard limit: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 75 mL of *water R*. Add 15.0 mL of 0.1 M sodium hydroxide, mix and add with stirring, about 30 mL of 0.1 M silver nitrate. Continue the titration with 0.1 M sodium hydroxide, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M sodium hydroxide is equivalent to 11.42 mg of C₄H₆N₂S.

IMPURITIES

Specified impurities A, B, C.

A. 2,2-dimethoxy-N-methylethanamine,

B. 1-methyl-1H-imidazole,

C. 1-methyl-2-(methylsulfanyl)-1H-imidazole.

Ph Eur

Thiamine Hydrochloride

(Ph. Eur. monograph 0303)

C₁₂H₁₈Cl₂N₄OS

337.3

67-03-8

Action and use

Vitamin B₁.

Preparations

Thiamine Injection

Thiamine Tablets

Vitamins B and C Injection

Ph Eur

DEFINITION

3-[(4-Amino-2-methylpyrimidin-5-yl)methyl]-5-(2-hydroxyethyl)-4-methyl-1,3-thiazol-3-ium chloride hydrochloride.

Content

98.5 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Freely soluble in water, soluble in glycerol, slightly soluble in ethanol (96 per cent), practically insoluble in heptane.

IDENTIFICATION

First identification: A, C.

Second identification: B, C.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison thiamine hydrochloride CRS.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *water R*, evaporate to dryness and record new spectra using the residues.

B. Dissolve about 20 mg in 10 mL of *water R*, add 1 mL of dilute acetic acid *R* and 1.6 mL of 1 M sodium hydroxide, heat on a water-bath for 30 min and allow to cool. Add 5 mL of dilute sodium hydroxide solution *R*, 10 mL of potassium ferricyanide solution *R* and 10 mL of butanol *R* and shake vigorously for 2 min. The upper alcoholic layer shows an intense light-blue fluorescence, especially in ultraviolet light at 365 nm. Repeat the test using 0.9 mL of 1 M sodium hydroxide and 0.1 g of anhydrous sodium sulfite *R* instead of 1.6 mL of 1 M sodium hydroxide. Practically no fluorescence is seen.

C. It gives reaction (a) of chlorides (2.3.1).

TESTS

Solution S

Dissolve 2.5 g in carbon dioxide-free water *R* and dilute to 25 mL with the same solvent.

Appearance of solution

The solution is clear (2.2.1) and not more intensely coloured than reference solution Y₇ or GY₇ (2.2.2, Method II).

Dilute 2.5 mL of solution S to 5 mL with *water R*.

pH (2.2.3)

2.7 to 3.3.

Dilute 2.5 mL of solution S to 10 mL with *water R*.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 0.35 g of the substance to be examined in 15.0 mL of a 5 per cent V/V solution of glacial acetic acid *R* and dilute to 100.0 mL with *water R*.

Reference solution (a) Dissolve the contents of a vial of thiamine for system suitability CRS (containing impurities A, B and C) in 1 mL of a 0.75 per cent V/V solution of glacial acetic acid *R*.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with *water R*. Dilute 1.0 mL of this solution to 10.0 mL with *water R*.

Column:

— size: *l* = 0.25 m, Ø = 4.0 mm;

— stationary phase: end-capped octadecylsilyl silica gel for chromatography *R* (5 µm);

— temperature: 45 °C.

Mobile phase:

— mobile phase A: 3.764 g/L solution of sodium hexanesulfonate *R* adjusted to pH 3.1 with phosphoric acid *R*;

— mobile phase B: methanol *RI*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 2	90	10
2 - 27	90 → 70	10 → 30
27 - 35	70 → 50	30 → 50
35 - 42	50	50

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 248 nm.

Injection 25 µL.

Identification of impurities Use the chromatogram supplied with thiamine for system suitability CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B and C.

Relative retention With reference to thiamine (retention time = about 30 min): impurity A = about 0.3; impurity B = about 0.9; impurity C = about 1.2.

System suitability Reference solution (a):

— resolution: minimum 3.0 between the peaks due to impurity B and thiamine; minimum 2.0 between the peaks due to thiamine and impurity C.

Calculation of percentage contents:

— for each impurity, use the concentration of thiamine hydrochloride in reference solution (b).

Limits:

- impurity B: maximum 0.3 per cent;
- impurities A, C: for each impurity, maximum 0.15 per cent;
- unspecified impurities: for each impurity, maximum 0.10 per cent;
- total: maximum 0.5 per cent;
- reporting threshold: 0.05 per cent.

Sulfates (2.4.13)

Maximum 300 ppm.

Dilute 5 mL of solution S to 15 mL with distilled water R.

Water (2.5.12)

Maximum 5.0 per cent, determined on 0.400 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.110 g in 5 mL of anhydrous formic acid R and add 50 mL of acetic anhydride R. Titrate immediately with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20) and carrying out the titration within 2 min. Carry out a blank titration.

1 mL of 0.1 M perchloric acid is equivalent to 16.86 mg of C₁₂H₁₈Cl₂N₄OS.

STORAGE

In a non-metallic container, protected from light.

IMPURITIES

Specified impurities A, B, C.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) D, E, F, G, H.

A. 2-[3-[(4-amino-2-methylpyrimidin-5-yl)methyl]-4-methyl-1,3-thiazol-3-ium-5-yl]ethyl sulfate (thiamine sulfate ester),

B. 3-[(4-aminopyrimidin-5-yl)methyl]-5-(2-hydroxyethyl)-4-methyl-1,3-thiazol-3-ium (desmethylthiamine),

C. 3-[(4-amino-2-methylpyrimidin-5-yl)methyl]-5-(2-chloroethyl)-4-methyl-1,3-thiazol-3-ium (chlorothiamine),

D. 3-[(4-amino-2-methylpyrimidin-5-yl)methyl]-5-(2-hydroxyethyl)-4-methyl-1,3-thiazol-2(3H)-one (oxothiamine),

E. 3-[(4-amino-2-methylpyrimidin-5-yl)methyl]-5-(2-hydroxyethyl)-4-methyl-1,3-thiazol-2(3H)-thione (thioxothiamine),

F. 3-[(4-amino-2-ethylpyrimidin-5-yl)methyl]-5-(2-hydroxyethyl)-4-methyl-1,3-thiazol-3-ium (ethylthiamine),

Action and use
Vitamin B₁.

Ph Eur

DEFINITION

3-[(4-Amino-2-methylpyrimidin-5-yl)methyl]-5-(2-hydroxyethyl)-4-methyl-1,3-thiazol-3-ium nitrate.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or small, colourless crystals.

Solubility

Sparingly soluble in water, freely soluble in boiling water, slightly soluble in ethanol (96 per cent), practically insoluble in heptane.

IDENTIFICATION

First identification: A, C.

Second identification: B, C.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison thiamine nitrate CRS.

B. Dissolve about 20 mg in 10 mL of water R, add 1 mL of dilute acetic acid R and 1.6 mL of 1 M sodium hydroxide, heat on a water-bath for 30 min and allow to cool. Add 5 mL of dilute sodium hydroxide solution R, 10 mL of potassium ferricyanide solution R and 10 mL of butanol R and shake vigorously for 2 min. The upper alcoholic layer shows an intense light-blue fluorescence, especially in ultraviolet light at 365 nm. Repeat the test using 0.9 mL of 1 M sodium hydroxide and 0.2 g of sodium sulfite heptahydrate R instead of 1.6 mL of 1 M sodium hydroxide. Practically no fluorescence is produced.

C. About 5 mg gives the reaction of nitrates (2.3.1).

TESTS

Solution S

Dissolve 1.0 g in carbon dioxide-free water R and dilute to 50 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and not more intensely coloured than reference solution Y₇ (2.2.2, Method II).

pH (2.2.3)

6.8 to 7.6 for solution S.

Related substances

Liquid chromatography (2.2.29).

Thiamphenicol

(Ph. Eur. monograph 0109)

$C_{12}H_{15}Cl_2NO_5S$

356.2

15318-45-3

Action and use

Antibacterial.

Ph Eur

DEFINITION

2,2-Dichloro-*N*-[(1*R*,2*R*)-2-hydroxy-1-(hydroxymethyl)-2-[4-(methylsulfonyl)phenyl]ethyl]acetamide.

Content

98.0 per cent to 100.5 per cent (dried substance).

CHARACTERS**Appearance**

Fine, white or yellowish-white, crystalline powder or crystals.

Solubility

Slightly soluble in water, very soluble in dimethylacetamide, freely soluble in acetonitrile and in dimethylformamide, soluble in methanol, sparingly soluble in acetone and in anhydrous ethanol, slightly soluble in ethyl acetate.

A solution in anhydrous ethanol is dextrorotatory and a solution in dimethylformamide is laevorotatory.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Preparation Dry the substance to be examined and the reference substance at 100-105 °C for 2 h; examine as discs of potassium bromide *R*.

Comparison thiamphenicol *CRS*.

B. Thin-layer chromatography (2.2.27).

Test solution Dissolve 0.1 g of the substance to be examined in methanol *R* and dilute to 10 mL with the same solvent.

Reference solution Dissolve 0.1 g of thiamphenicol *CRS* in methanol *R* and dilute to 10 mL with the same solvent.

Plate silica gel GF₂₅₄ *R* as the coating substance.

Mobile phase methanol R, ethyl acetate R (3:97 V/V).

Application 5 µL.

Development Over a path of 10 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the spot in the chromatogram obtained with the reference solution.

C. To 50-mg in a porcelain crucible add 0.5 g of *anhydrous sodium carbonate R*. Heat over an open flame for 10 min. Allow to cool. Take up the residue with 5 mL of *dilute nitric acid R* and filter. To 1 mL of the filtrate add 1 mL of *water R*. The solution gives reaction (a) of chlorides (2.3.1).

TESTS

Acidity or alkalinity

Shake 0.1 g with 20 mL of *carbon dioxide-free water R* and add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.1 mL of 0.02 M *hydrochloric acid* or 0.02 M *sodium hydroxide* is required to change the colour of the indicator.

Specific optical rotation (2.2.7)

-24 to -21 (dried substance).

Dissolve 1.25 g in *dimethylformamide R* and dilute to 25.0 mL with the same solvent.

Melting point (2.2.14)

163 °C to 167 °C.

Absorbance (2.2.25)

Test solution (a) Dissolve 20 mg in *water R*, heating to about 40 °C, and dilute to 100.0 mL with the same solvent.

Test solution (b) Dilute 2.5 mL of test solution (a) to 50.0 mL with *water R*.

Spectral range 240-300 nm for test solution (a); 200-240 nm for test solution (b).

Absorption maxima At 266 nm and 273 nm for test solution (a); at 224 nm for test solution (b).

Specific absorbances at the absorption maxima:

— at 266 nm: 25 to 28 for test solution (a);

— at 273 nm: 21.5 to 23.5 for test solution (a);

— at 224 nm: 370 to 400 for test solution (b).

Chlorides (2.4.4)

Maximum 200 ppm.

Shake 0.5 g with 30 mL of *water R* for 5 min and filter.

Loss on drying (2.2.32)

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 2.0 g.

ASSAY

Dissolve 0.300 g in 30 mL of *ethanol (96 per cent) R*, add 20 mL of a 500 g/L solution of *potassium hydroxide R*, mix and heat under a reflux condenser for 4 h. Cool, add 100 mL of *water R*, neutralise with *dilute nitric acid R* and add 5 mL of the same acid in excess. Titrate with 0.1 M *silver nitrate*, determining the end-point potentiometrically (2.2.20). Carry out a blank test.

1 mL of 0.1 M *silver nitrate* is equivalent to 17.81 mg of C₁₂H₁₅Cl₂NO₅S.

STORAGE

In an airtight container, protected from light.

Thiocolchicoside Crystallised from Ethanol

(Ph. Eur. monograph 2896)

C₂₇H₃₃NO₁₀S, xC₂H₆O 563.6 (ethanol-free substance)

Anhydrous thiocolchicoside

602-41-5

Action and use

Muscle relaxant.

Ph Eur

DEFINITION

N-[(7*S*,12*aR*_a)-3-(β-D-Glucopyranosyloxy)-1,2-dimethoxy-10-(methylsulfanyl)-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]acetamide.

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

It contains a variable quantity of ethanol.

CHARACTERS

Appearance

Yellow crystalline powder, hygroscopic.

Solubility

Sparingly soluble in water, practically insoluble in acetone and in ethanol (96 per cent).

mp

About 208 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison thiocolchicoside crystallised from ethanol GRS.

TESTS

Appearance of solution

The solution is clear (2.2.1).

Dissolve 0.100 g in *methanol R* and dilute to 10 mL with the same solvent.

Specific optical rotation (2.2.7)

-600 to -570 (anhydrous substance).

Dissolve 0.500 g in *water R* and dilute to 100.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29). Carry out the test protected from light.

Test solution (a) Dissolve 20.0 mg of the substance to be examined in *methanol R* and dilute to 20.0 mL with the same solvent.

Test solution (b) Dilute 1.0 mL of test solution (a) to 10.0 mL with *methanol R*.

Ph Eur

Reference solution (a) Dilute 1.0 mL of test solution (a) to 100.0 mL with *methanol R*. Dilute 2.0 mL of this solution to 10.0 mL with *methanol R*.

Reference solution (b) Dissolve 5 mg of *thiocolchicoside for system suitability CRS* (containing impurities D, E, G, H, K and L) in *methanol R* and dilute to 5 mL with the same solvent.

Reference solution (c) Dissolve 20.0 mg of *thiocolchicoside hydrate CRS* in *methanol R* and dilute to 20.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *methanol R*.

Column:

- size: $l = 0.10$ m, $\varnothing = 2.1$ mm;
- stationary phase: *end-capped ethylene-bridged phenylsilyl silica gel for chromatography (hybrid material) R* (1.7 μ m);
- temperature: 25 °C.

Mobile phase:

- **mobile phase A:** dissolve 0.22 g of *ammonium formate R* in 350 mL of *water for chromatography R* and mix with 25 mL of *tetrahydrofuran R*;
- **mobile phase B:** dilute 45 μ L of *anhydrous formic acid R* in 900 mL of *acetonitrile R* and mix with 100 mL of *tetrahydrofuran R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 2	99	1
2 - 6	99 → 92	1 → 8
6 - 7.5	92 → 70	8 → 30
7.5 - 8.8	70 → 50	30 → 50
8.8 - 9.2	50 → 2	50 → 98
9.2 - 10	2	98

Flow rate 0.4 mL/min.

Detection Spectrophotometer at 370 nm.

Injection 1.0 μ L of test solution (a) and reference solutions (a) and (b).

Identification of impurities Use the chromatogram supplied with *thiocolchicoside for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities D, E, H and L.

Relative retention With reference to *thiocolchicoside* (retention time = about 6 min): impurity D = about 0.2; impurity H = about 0.4; impurity E = about 1.05; impurity L = about 1.11.

System suitability:

- **signal-to-noise ratio:** minimum 50 for the principal peak in the chromatogram obtained with reference solution (a);
- **peak-to-valley ratio:** minimum 1.5, where H_p = height above the baseline of the peak due to impurity E and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to *thiocolchicoside* in the chromatogram obtained with reference solution (b).

Calculation of percentage contents:

- **correction factor:** multiply the peak areas of the following impurities by the corresponding correction factor: impurity D = 1.7; impurity H = 2.8;
- for each impurity, use the concentration of the substance to be examined in reference solution (a).

Limits:

- **impurity D:** maximum 0.4 per cent;
- **impurities E, H:** for each impurity, maximum 0.3 per cent;

- **unspecified impurities:** for each impurity, maximum 0.10 per cent;
- **total:** maximum 1.0 per cent;
- **reporting threshold:** 0.05 per cent; disregard the peak due to impurity L.

Ethanol (2.4.24)

Maximum 1.5 per cent.

Water (2.5.12)

Maximum 2.5 per cent, determined on 0.500 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution (b) and reference solution (c).

Calculate the percentage content of $C_{27}H_{33}NO_{10}S$ taking into account the assigned content of *thiocolchicoside hydrate CRS*.

STORAGE

In an airtight container, protected from light.

IMPURITIES

Specified impurities D, E, H.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*) A, B, C, G, J, K, L.

H. *N*-[(7*S*,12*aR*_a)-3-(β-D-glucopyranosyloxy)-1,2-dimethoxy-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]acetamide (10-demethoxycolchicoside),

Ph Eur

Thiocolchicoside Hydrate

(Ph. Eur. monograph 2814)

$C_{27}H_{33}NO_{10}S \cdot xH_2O$

563.6

1622135-03-8

(anhydrous substance)

Action and use

Muscle relaxant.

Ph Eur

DEFINITION

N-[(7*S*,12*aR*_a)-3-(β-D-Glucopyranosyloxy)-1,2-dimethoxy-10-(methylsulfanyl)-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]acetamide.

Content

96.0 per cent to 102.0 per cent (anhydrous substance).

It contains a variable quantity of water.

CHARACTERS

Appearance

Yellow crystalline powder, slightly hygroscopic.

Solubility

Sparingly soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in acetone.

mp

About 272 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison thiocolchicoside hydrate CRS.

TESTS

Appearance of solution

The solution is clear (2.2.1).

Dissolve 0.100 g in methanol *R* and dilute to 10 mL with the same solvent.

Specific optical rotation (2.2.7)

−600 to −570 (anhydrous substance).

Dissolve 0.500 g in water *R* and dilute to 100.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29). Carry out the test protected from light.

Test solution (a) Dissolve 20.0 mg of the substance to be examined in methanol *R* and dilute to 20.0 mL with the same solvent.

Test solution (b) Dilute 1.0 mL of test solution (a) to 10.0 mL with methanol *R*.

Reference solution (a) Dilute 1.0 mL of test solution (a) to 100.0 mL with methanol *R*. Dilute 2.0 mL of this solution to 10.0 mL with methanol *R*.

Reference solution (b) Dissolve 5 mg of thiocolchicoside for system suitability CRS (containing impurities D, E, G, H, K

and L) in methanol *R* and dilute to 5 mL with the same solvent.

Reference solution (c) Dissolve 20.0 mg of thiocolchicoside hydrate CRS in methanol *R* and dilute to 20.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with methanol *R*.

Column:

— size: $l = 0.10$ m, $\varnothing = 2.1$ mm;

— stationary phase: end-capped ethylene-bridged phenylsilyl silica gel for chromatography (hybrid material) *R* (1.7 μm);

— temperature: 25 °C.

Mobile phase:

— mobile phase A: dissolve 0.22 g of ammonium formate *R* in 350 mL of water for chromatography *R* and mix with 25 mL of tetrahydrofuran *R*;

— mobile phase B: dilute 45 μL of anhydrous formic acid *R* in 900 mL of acetonitrile *R* and mix with 100 mL of tetrahydrofuran *R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 2	99	1
2 - 6	99 → 92	1 → 8
6 - 7.5	92 → 70	8 → 30
7.5 - 8.8	70 → 50	30 → 50
8.8 - 9.2	50 → 2	50 → 98
9.2 - 10	2	98

Flow rate 0.4 mL/min.

Detection Spectrophotometer at 370 nm.

Injection 1.0 μL of test solution (a) and reference solutions (a) and (b).

Identification of impurities Use the chromatogram supplied with thiocolchicoside for system suitability CRS and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities D, E, G, H, K and L.

Relative retention With reference to thiocolchicoside (retention time = about 6 min): impurity D = about 0.2; impurity H = about 0.4; impurity G = about 0.7; impurity K = about 0.8; impurity E = about 1.05; impurity L = about 1.11.

System suitability:

- signal-to-noise ratio: minimum 50 for the principal peak in the chromatogram obtained with reference solution (a);
- peak-to-valley ratio: minimum 1.5, where H_p = height above the baseline of the peak due to impurity E and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to thiocolchicoside in the chromatogram obtained with reference solution (b).

Calculation of percentage contents:

- correction factors: multiply the peak areas of the following impurities by the corresponding correction factor: impurity D = 1.7; impurity H = 2.8;
- for each impurity, use the concentration of thiocolchicoside hydrate in reference solution (a).

Limits:

- impurity E: maximum 1.0 per cent;
- impurity H: maximum 0.7 per cent;
- impurity K: maximum 0.3 per cent;
- impurities D, G: for each impurity, maximum 0.2 per cent;
- unspecified impurities: for each impurity, maximum 0.10 per cent;
- total: maximum 2.5 per cent;

— reporting threshold: 0.05 per cent; disregard the peak due to impurity L.

Water (2.5.12)

Maximum 2.5 per cent, determined on 0.500 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution (b) and reference solution (c).

Calculate the percentage content of $C_{27}H_{33}NO_{10}S$ taking into account the assigned content of *thiocolchicoside hydrate CRS*.

STORAGE

In an airtight container, protected from light.

Ph Eur

Thioctic Acid

(Ph. Eur. monograph 1648)

C₈H₁₄O₂S₂

206.3

1077-28-7

Action and use
Antioxidant.

Ph Eur

DEFINITION

5-[(3*RS*)-1,2-Dithiolan-3-yl]pentanoic acid.

Content

97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

Yellow, crystalline powder.

Solubility

Very slightly soluble in water, very soluble in dimethylformamide, freely soluble in methanol.

mp

About 61 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison thioctic acid CRS.

TESTS

Appearance of solution

The solution is clear (2.2.1).

Dissolve 0.50 g in a 20 g/L solution of *sodium hydroxide R* and dilute to 10 mL with the same solution.

Impurity B

Thin-layer chromatography (2.2.27).

Test solution Dissolve 0.20 g of the substance to be examined in *dimethylformamide R* and dilute to 10 mL with the same solvent.*Reference solution* Dissolve 20 mg of *thioctic acid containing impurity B CRS* in *dimethylformamide R* and dilute to 1.0 mL with the same solvent (1.0 per cent impurity B solution).*Plate* TLC silica gel plate R.*Mobile phase* 25 per cent *V/V* solution of *ammonia R*, *water R*, *ethyl acetate R*, *propanol R* (5:10:40:40 *V/V/V/V*).*Application* 5 μL.*Development* Over 2/3 of the plate.*Drying* At 50 °C for 20 min.*Detection* Expose to iodine vapour for 30 min or until the spots appear.*System suitability* Reference solution:— the chromatogram shows 2 clearly separated principal spots due to impurity B (*R_F* = 0.0) and thioctic acid (*R_F* = about 0.3).

Limit:

— *impurity B*: any spot due to impurity B is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (1.0 per cent).

Related substances

Liquid chromatography (2.2.29). *Protect the solutions from light.**Solvent mixture* A mixture of equal volumes of *acetonitrile R1* and a 0.7 g/L solution of *potassium dihydrogen phosphate R* previously adjusted to pH 3.6 with *phosphoric acid R*.*Test solution* Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.*Reference solution (a)* Dissolve 5 mg of *thioctic acid for system suitability CRS* (containing impurity A) in the solvent mixture and dilute to 5 mL with the solvent mixture.*Reference solution (b)* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.*Reference solution (c)* Dissolve 50.0 mg of *thioctic acid CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture.*Blank solution* Solvent mixture.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;— *stationary phase*: octadecylsilyl silica gel for chromatography R (5 μm);— *temperature*: 35 °C.*Mobile phase* Mix 8 volumes of *acetonitrile R1*, 41 volumes of a 0.7 g/L solution of *potassium dihydrogen phosphate R*

previously adjusted to pH 3.0 with *phosphoric acid R*, and 51 volumes of *methanol R*.

Flow rate 1.2 mL/min.

Detection Spectrophotometer at 215 nm.

Injection 20 µL.

Run time 2.5 times the retention time of thioctic acid.

Relative retention With reference to thioctic acid (retention time = about 6 min): impurity A = about 2.2.

System suitability:

- *resolution*: minimum 6.0 between the peaks due to thioctic acid and impurity A in the chromatogram obtained with reference solution (a);
- *symmetry factor*: maximum 2.0 for the peak due to thioctic acid in the chromatogram obtained with reference solution (c).

Limits:

- *correction factor*: for the calculation of content, multiply the peak area of impurity A by 0.6;
- *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.2 per cent, determined on 1.000 g by drying *in vacuo* at 40 °C for 3 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (c).

Calculate the percentage content of $C_9H_{14}O_2S_2$ from the peak areas and the declared content of *thioctic acid CRS*.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B.

A. 5-[(4RS)-1,2,3-trithian-4-yl]pentanoic acid,

B. α -hydro- ω -hydroxypoly[sulfanediy]l(3-sulfanyl-8-oxooctane-1,8-diyl) (mixture of thioctic acid polymers).

Thiomersal

Thimerosal

(*Ph. Eur. monograph 1625*)

$C_9H_9HgNaO_2S$

404.8

54-64-8

Action and use

Antiseptic; adjuvant in vaccine formulations.

Ph Eur

DEFINITION

Sodium ethyl[2-sulfanylbenzoato(2-)-O,S]mercurate(1-).

Content

97.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, sparingly soluble or soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Melting point (2.2.14): 103 °C to 115 °C.

Dissolve 0.5 g in *water R* and dilute to 10 mL with the same solvent. Add 2 mL of *dilute hydrochloric acid R*. A white precipitate is formed. Wash the precipitate with *water R* and dry *in vacuo* (2.2.32) at a pressure not exceeding 0.7 kPa.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison thiomersal CRS.

C. Treat 50 mg by the oxygen-flask method (2.5.10). Use a mixture of 1 mL of *strong hydrogen peroxide solution R* and 50 mL of *water R* to absorb the combustion products. To the solution add 5 mL of *dilute nitric acid R*. 0.1 mL of this solution gives reaction (a) of mercury (2.3.1). To the remaining part of the solution add 10 mL of *dilute hydrochloric acid R* and filter. 5 mL of the filtrate, without further addition of acid, gives reaction (a) of sulfates (2.3.1).

D. Solution S (see Tests) gives reaction (a) of sodium (2.3.1).

TESTS

Solution S

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 25 mL with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II (2.2.1) and not more intensely coloured than reference solution B₆ (2.2.2, *Method II*).

pH (2.2.3)

6.0 to 8.0.

Dilute 5 mL of solution S to 50 mL with *carbon dioxide-free water R*.

Inorganic mercury compounds

Maximum 0.70 per cent.

Protect the solutions from light throughout the procedure.

Ph Eur

Test solution Dissolve 25 mg of the substance to be examined in *water R* and dilute to 25.0 mL with the same solvent.

Reference solution Dissolve 95.0 mg of *mercuric chloride R* in *water R* and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of the solution to 20.0 mL with *water R*.

Test, reference and blank preparations Label five 10 mL volumetric flasks A, B, C, D and E. Place 5 mL of the test solution in flasks A, B, C and D. To each of the flasks C and D add 0.5 mL of the reference solution. Dilute the contents of flasks A and C to 10 mL with *water R* (blank preparations A and C). Dilute the contents of flasks B and D to 10 mL with a freshly prepared 332 g/L solution of *potassium iodide R* (test preparation B and reference preparation D). Place 5 mL of a 332 g/L solution of *potassium iodide R* in flask E. Dilute to 10 mL with *water R* (blank preparation E).

Measure the absorbance (2.2.25) of each solution (A_a , A_b , A_c , A_d and A_e) at 323 nm using *water R* as the compensation liquid. Calculate the content of inorganic mercury compounds, expressed as Hg from the expression:

$$\frac{(A_b - A_a - A_e) \times m_R \times 0.1847}{(A_d - A_c - A_b + A_a) \times m_T}$$

m_R = mass of mercuric chloride in the reference solution in milligrams,

m_T = mass of the substance to be examined in milligrams.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in a desiccator at a pressure not exceeding 0.7 kPa for 24 h.

ASSAY

Place 0.5 g in a 100 mL long-necked combustion flask, add 5 mL of *sulfuric acid R* and heat gently until charring occurs, continue to heat and add dropwise *strong hydrogen peroxide solution R* until the mixture is colourless. Dilute with *water R*, evaporate until slight fuming occurs, dilute to 10 mL with *water R*, cool down and titrate with 0.1 M *ammonium thiocyanate* using *ferric ammonium sulfate solution R2* as indicator.

1 mL of 0.1 M *ammonium thiocyanate* is equivalent to 20.24 mg of $C_9H_9HgNaO_2S$.

STORAGE

Protected from light.

Ph Eur

Ph Eur

DEFINITION

Mixture of sodium 5-ethyl-5-[(1*RS*)-1-methylbutyl]-4,6-dioxo-1,4,5,6-tetrahydropyrimidine-2-thiolate and anhydrous sodium carbonate.

Content

— *thiopental*: 84.0 per cent to 87.0 per cent (dried substance);

— *sodium*: 10.2 per cent to 11.2 per cent (dried substance).

CHARACTERS

Appearance

Yellowish-white, hygroscopic powder.

Solubility

Freely soluble in water, partly soluble in anhydrous ethanol.

IDENTIFICATION

First identification: A, B, E.

Second identification: A, C, D, E.

A. Acidify 10 mL of solution S (see Tests) with *dilute hydrochloric acid R*. An effervescence is produced. Shake with 20 mL of *1,1-dimethylethyl methyl ether R*. Separate the upper layer, wash with 10 mL of *water R*, dry over *anhydrous sodium sulfate R* and filter. Evaporate the filtrate to dryness and dry the residue at 100-105 °C. Determine the melting point (2.2.14) of the residue. Mix equal parts of the residue and *thiopental CRS* and determine the melting point of the mixture. The difference between the melting points (which are about 160 °C) is not greater than 2 °C.

B. Infrared absorption spectrophotometry (2.2.24).

Preparation Use the residue obtained in Identification test A.

Comparison *thiopental CRS*.

C. Thin-layer chromatography (2.2.27).

Test solution Dissolve 0.1 g of the substance to be examined in *water R* and dilute to 100 mL with the same solvent.

Reference solution Dissolve 85 mg of *thiopental CRS* in 10 mL of *dilute sodium hydroxide solution R* and dilute to 100 mL with *water R*.

Plate TLC silica gel GF₂₅₄ plate R.

Mobile phase *concentrated ammonia R*, *ethanol (96 per cent) R*, *methylene chloride R* (5:15:80 V/V/V); use the lower layer.

Application 10 µL.

Development Over 3/4 of the plate.

Detection Examine immediately in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives the reaction of non-nitrogen substituted barbiturates (2.3.1).

E. It gives reaction (a) of sodium (2.3.1).

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and not more intensely coloured than reference solution GY₃ (2.2.2, *Method II*).

Thiopental Sodium

(*Thiopental Sodium and Sodium Carbonate*, Ph. Eur. monograph 0212)

$C_{11}H_{17}N_2NaO_2S$

264.3

Action and use

Intravenous barbiturate; general anaesthetic.

Preparation

Thiopental Injection

Related substances

Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 5.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b) Dissolve 2 mg of thiopental for system suitability CRS (containing impurities A, B, C and D) in the mobile phase and dilute to 2.0 mL with the mobile phase.

Column:

- size: $l = 0.15$ m, $\varnothing = 4.6$ mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase acetonitrile R1, 1 g/L solution of phosphoric acid R (35:65 V/V).

Flow rate 1 mL/min.

Detection Spectrophotometer at 225 nm.

Injection 10 μ L.

Run time Twice the retention time of thiopental.

Identification of impurities Use the chromatogram supplied with thiopental for system suitability CRS (containing impurities A, B, C and D) and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C and D.

Relative retention With reference to thiopental (retention time = about 20 min): impurity A = about 0.3; impurity B = about 0.4; impurity C = about 0.9; impurity D = about 1.3.

System suitability Reference solution (b):

- resolution: minimum 1.5 between the peaks due to impurities A and B; minimum 1.5 between the peaks due to impurity C and thiopental.

Limits:

- correction factor: for the calculation of content, multiply the peak area of impurity B by 1.5;
- impurity C: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (3.0 per cent);
- impurity B: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- impurity D: not more than 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- unspecified impurities: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- total: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (5.0 per cent);
- disregard limit: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Chlorides (2.4.4)

Maximum 330 ppm.

To 5 mL of solution S add 35 mL of water R and 10 mL of dilute nitric acid R. Shake with 3 quantities, each of 25 mL, of 1,1-dimethylethyl methyl ether R and discard the upper layer. Eliminate the organic solvent from the lower layer by heating

on a water-bath. 15 mL of the solution complies with the test for chlorides.

Loss on drying (2.2.32)

Maximum 2.5 per cent, determined on 0.500 g by drying *in vacuo* at 100 °C for 4 h.

ASSAY**Sodium**

Dissolve 0.400 g in 30 mL of water R. Add 0.1 mL of methyl red solution R and titrate with 0.1 M hydrochloric acid until a red colour is obtained. Boil gently for 2 min. Allow to cool and, if necessary, continue the titration with 0.1 M hydrochloric acid until the red colour is again obtained.

1 mL of 0.1 M hydrochloric acid is equivalent to 2.299 mg of Na.

Thiopental

Dissolve 0.150 g in 5 mL of water R. Add 2 mL of dilute sulfuric acid R and shake with 4 quantities, each of 10 mL, of chloroform R. Combine the chloroform layers, filter and evaporate the filtrate to dryness on a water-bath. Dissolve the residue in 30 mL of previously neutralised dimethylformamide R and add 0.1 mL of a 2 g/L solution of thymol blue R in methanol R. Titrate immediately with 0.1 M lithium methoxide until a blue colour is obtained. Protect the solution from atmospheric carbon dioxide during the titration.

1 mL of 0.1 M lithium methoxide is equivalent to 24.23 mg of $C_{11}H_{18}N_2O_2S$.

STORAGE

In an airtight container, protected from light.

IMPURITIES

Specified impurities B, C, D.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A.

Thioridazine

(Ph. Eur. monograph 2005)

$C_{21}H_{26}N_2S_2$

370.6

50-52-2

Action and use

Dopamine receptor antagonist; neuroleptic.

Ph Eur

DEFINITION

10-[2-[(2RS)-1-Methylpiperidin-2-yl]ethyl]-2-(methylsulfanyl)-10H-phenothiazine

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, very soluble in methylene chloride, freely soluble in methanol, soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison thioridazine CRS.

TESTS

Solution S

Dissolve 1.25 g in methanol R and dilute to 25 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and not more intensely coloured than intensity 6 of the range of reference solutions of the most appropriate colour (2.2.2, Method II).

Related substances

Liquid chromatography (2.2.29). Carry out the test as quickly as possible and protected from light.

Test solution Dissolve 20 mg of the substance to be examined in methanol R and dilute to 100 mL with the same solvent.

Reference solution (a) Dilute 5.0 mL of the test solution to 100.0 mL with methanol R. Dilute 2.0 mL of this solution to 100.0 mL with methanol R.

Reference solution (b) Dissolve the contents of a vial of thioridazine for system suitability CRS (containing impurities A, B, C, D and E) in 1.0 mL of methanol R.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.0$ mm;

— stationary phase: end-capped octadecylsilyl silica gel for chromatography R resistant to bases up to pH 11.

Mobile phase:

— mobile phase A: triethylamine R1, acetonitrile R, water R (2:400:600 V/V/V);

— mobile phase B: triethylamine R1, acetonitrile R (2:1000 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 5	100	0
5 - 35	100 → 5	0 → 95
35 - 40	5	95

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 275 nm.

Injection 25 μ L.

Identification of impurities Use the chromatogram supplied with thioridazine for system suitability CRS and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, D and E.

Relative retention With reference to thioridazine (retention time = about 30 min): impurity D = about 0.1; impurity A = about 0.3; impurity C = about 0.4; impurity B = about 0.5; impurity E = about 0.6.

System suitability Reference solution (b):

— resolution: minimum 3.5 between the peaks due to impurities C and B.

Limits:

- correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.9; impurity B = 2.4; impurity C = 0.5; impurity D = 1.5;
- impurities A, B, C, D, E: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- total: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g in vacuo at 50 °C for 4 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 60 mL of *anhydrous acetic acid R*. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 37.06 mg of C₂₁H₂₆N₂S₂.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) F.

10-[2-[(2RS)-1-Methylpiperidin-2-yl]ethyl]-2-(methylsulfonyl)-10H-phenothiazine hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water and in methanol, soluble in ethanol 96 per cent.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison thioridazine hydrochloride CRS.

B. 0.2 g gives reaction (b) of chlorides (2.3.1).

TESTS

Carry out all operations protected from light.

Appearance of solution

The solution is clear (2.2.1) and not more intensely coloured than intensity 6 of the range of reference solutions of the most appropriate colour (2.2.2, Method II).

Dissolve 1.0 g in methanol R and dilute to 20 mL with the same solvent.

Optical rotation (2.2.7)

-0.10° to + 0.10°.

Dissolve 1.0 g in *methanol R* and dilute to 20.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29). Carry out the test as quickly as possible and protected from light.

Test solution Dissolve 20.0 mg of the substance to be examined in *methanol R* and dilute to 100.0 mL with the same solvent.

Reference solution (a) Dilute 5.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 2.0 mL of this solution to 100.0 mL with *methanol R*.

Reference solution (b) Dissolve the contents of a vial of thioridazine for system suitability GRS (containing impurities A, B, C, D and E) in 1.0 mL of *methanol R*.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.0$ mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 μ m) resistant to bases up to pH 11.

Mobile phase:

- mobile phase A: triethylamine R1, acetonitrile R, water R (2:400:600 V/V/V);
- mobile phase B: triethylamine R1, acetonitrile R (2:1000 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 5	100	0
5 - 35	100 → 5	0 → 95
35 - 40	5	95

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 275 nm.

Injection 25 μ L.

Identification of impurities Use the chromatogram supplied with thioridazine for system suitability GRS to identify the peaks due to impurities A, B, C, D and E.

Relative retention With reference to thioridazine (retention time = about 30 min): impurity D = about 0.1; impurity A = about 0.3; impurity C = about 0.4; impurity B = about 0.5; impurity E = about 0.6; impurity F = about 0.9.

System suitability Reference solution (b):

- resolution: minimum 3.5 between the peaks due to impurities C and B.

Limits:

- correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.9; impurity B = 2.4; impurity C = 0.5; impurity D = 1.5;
- impurities A, B, C, D, E: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- total: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in a mixture of 10 mL of *anhydrous acetic acid R* and 60 mL of *acetic anhydride R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 40.70 mg of $C_{21}H_{27}ClN_2S_2$.

STORAGE

Protected from light.

IMPURITIES

Ph Eur

Thiotepa

$C_6H_{12}N_3PS$

189.2

52-24-4

Action and use

Cytotoxic alkylating agent.

Preparation

Thiotepa Injection

DEFINITION

Thiotepa is phosphorothioic tri(ethyleneamide). It contains not less than 97.0% and not more than 102.0% of $C_6H_{12}N_3PS$, calculated with reference to the anhydrous substance.

CHARACTERISTICS

Fine, white crystalline flakes.

Freely soluble in water, in chloroform and in ethanol (96%).

IDENTIFICATION

A. The infrared absorption spectrum, Appendix II A, is concordant with the reference spectrum of thiotepa (RS 337).

B. Burn 20 mg by the method for oxygen-flask combustion, Appendix VIII C, using 5 mL of 1.25M sodium hydroxide as the absorbing liquid. When the process is complete, dilute to 25 mL with water. To 5 mL of the resulting solution add 0.1 mL of hydrogen peroxide solution (100 vol) and 1 mL of

1M hydrochloric acid, mix and add 0.05 mL of barium chloride solution. The solution becomes turbid.

C. To 2 mL of the solution obtained in test B add 40 mL of water and 4 mL of ammonium molybdate-sulfuric acid solution, mix, add 0.1 g of L-ascorbic acid and boil for 1 minute. A blue colour is produced.

TESTS

Melting point

52° to 57°, Appendix V A.

Clarity of solution

A 2.0% w/v solution is clear, Appendix IV A.

Related substances

Carry out the method for liquid chromatography, Appendix III D, using the following freshly prepared solutions. Solutions (1) and (2) are solutions of the substance being examined in water containing 0.350% w/v and 0.00035% w/v, respectively. For solution (3) dissolve 10 mg of the substance being examined in 2 mL of methanol in a ground-glass-stoppered tube, add 50 µL of a 0.1% v/v solution of orthophosphoric acid, stopper the tube and heat in a water bath at 65° for 50 seconds (generation of methoxythiotepa). Allow the solution to cool and add 1 mL of methanol. For solution (4) dissolve 15 mg of the substance being examined in 10 mL of water, add 1 g of sodium chloride, boil in a water bath for 10 minutes and cool (generation of chloro-adduct).

The chromatographic procedure may be carried out using (a) a stainless steel column (15 cm × 4.6 mm) packed with end-capped octadecylsilyl silica gel for chromatography (5 µm) (Nucleosil C18 is suitable), (b) 15 volumes of acetonitrile and 85 volumes of 0.1M mixed phosphate buffer pH 7.0 as the mobile phase with a flow rate of 1 mL per minute and (c) a detection wavelength of 215 nm.

The chromatogram obtained with solution (3) shows a peak corresponding to methoxythiotepa with a retention time relative to thiotepa of about 1.3 and the chromatogram obtained with solution (4) shows a peak due to the chloro-adduct with a retention time relative to thiotepa of about 3.75. The test is not valid unless the resolution factor between the two principal peaks in the chromatogram obtained with solution (3) is at least 3.

For solution (1) allow the chromatography to proceed for 4 times the retention time of the principal peak. In the chromatogram obtained with solution (1) the area of any peak corresponding to the 'chloro-adduct' (identified from the peak in the chromatogram obtained with solution (4)) is not greater than 1.5 times the area of the principal peak in the chromatogram obtained with solution (2) (0.15%), the area of any other secondary peak is not greater than the area of the principal peak in the chromatogram obtained with solution (2) (0.1%) and the sum of the areas of all the secondary peaks is not greater than twice the area of the principal peak in the chromatogram obtained with solution (2) (0.2%).

Water

Not more than 0.5% w/w, Appendix IX C. Cool the reagents and titration vessel in ice throughout the procedure and use 1.2 g. Complete the procedure as quickly as possible.

ASSAY

Transfer 0.2 g to an iodine flask with the aid of 50 mL of a 20% w/v solution of sodium thiosulfate and titrate immediately with 0.1M hydrochloric acid VS, using 0.05 mL of methyl orange solution as indicator, until a faint red colour persists for 10 seconds. Stopper the flask, allow to stand for 30 minutes

and titrate with 0.1M sodium hydroxide VS using phenolphthalein solution R1 as indicator. Subtract the volume of 0.1M sodium hydroxide VS used from the volume of 0.1M hydrochloric acid VS used. Repeat the operation without the substance being examined. The difference between the titrations represents the amount of hydrochloric acid required. Each mL of 0.1M hydrochloric acid VS is equivalent to 6.307 mg of C₆H₁₂N₃PS.

STORAGE

Thiotepa should be stored at a temperature of 2° to 8°. At higher temperatures it polymerises and becomes inactive.

IMPURITIES

A. 'chloro-adduct',

B. 'hydroxythiotepa A',

C. 'hydroxythiotepa B'.

Threonine

(Ph. Eur. monograph 1049)

C₄H₉NO₃

119.1

72-19-5

Action and use
Amino acid.

Ph Eur

DEFINITION

(2S,3R)-2-Amino-3-hydroxybutanoic acid.

Product of fermentation or of protein hydrolysis.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D.

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

Comparison threonine CRS.

C. Thin-layer chromatography (2.2.27).

Test solution Dissolve 10 mg of the substance to be examined in a 1 per cent V/V solution of hydrochloric acid R and dilute to 50 mL with the same solution.

Reference solution Dissolve 10 mg of threonine CRS in a 1 per cent V/V solution of hydrochloric acid R and dilute to 50 mL with the same solution.

Plate TLC silica gel plate R.

Mobile phase glacial acetic acid R, water R, butanol R (20:20:60 V/V/V).

Application 5 µL.

Development Over 2/3 of the plate.

Drying In air.

Detection Spray with ninhydrin solution R and heat at 105 °C for 15 min.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. Mix 1 mL of a 2 g/L solution of the substance to be examined and 1 mL of a 20 g/L solution of sodium periodate R. Add 0.2 mL of piperidine R and 0.1 mL of a 25 g/L solution of sodium nitroprusside R. A blue colour develops that changes to yellow after a few minutes.

TESTS

Solution S

Dissolve 2.5 g in carbon dioxide-free water R and dilute to 100 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

pH (2.2.3)

5.0 to 6.5 for solution S.

Specific optical rotation (2.2.7)

-29.0 to -27.6 (dried substance).

Dissolve 1.50 g in water R and dilute to 25.0 mL with the same solvent.

Ninhydrin-positive substances

Amino acid analysis (2.2.56). For analysis, use Method 1.

The concentrations of the test solution and the reference solutions may be adapted according to the sensitivity of the equipment used. The concentrations of all solutions are adjusted so that the system suitability requirements described in general chapter 2.2.46 are fulfilled, keeping the ratios of concentrations between all solutions as described.

Solution A dilute hydrochloric acid R1 or a sample preparation buffer suitable for the apparatus used.

Test solution Dissolve 30.0 mg of the substance to be examined in solution A and dilute to 50.0 mL with solution A.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with solution A. Dilute 2.0 mL of this solution to 10.0 mL with solution A.

Reference solution (b) Dissolve 30.0 mg of proline R in solution A and dilute to 100.0 mL with solution A. Dilute 1.0 mL of the solution to 250.0 mL with solution A.

Reference solution (c) Dilute 6.0 mL of ammonium standard solution (100 ppm NH_4) R to 50.0 mL with solution A. Dilute 1.0 mL of this solution to 100.0 mL with solution A.

Reference solution (d) Dissolve 30 mg of isoleucine R (impurity D) and 30 mg of leucine R in solution A and dilute to 50.0 mL with solution A. Dilute 1.0 mL of the solution to 200.0 mL with solution A.

Blank solution Solution A.

Inject suitable, equal amounts of the test, blank and reference solutions into the amino acid analyser. Run a program suitable for the determination of physiological amino acids.

System suitability Reference solution (d):

— **resolution:** minimum 1.5 between the peaks due to impurity D and leucine.

Calculation of percentage contents:

— for any ninhydrin-positive substance detected at 570 nm, use the concentration of threonine in reference solution (a);

— for any ninhydrin-positive substance detected at 440 nm, use the concentration of proline in reference solution (b); if a peak is above the reporting threshold at both wavelengths, use the result obtained at 570 nm for quantification.

Limits:

— **any ninhydrin-positive substance:** for each impurity, maximum 0.2 per cent;
— **total:** maximum 0.5 per cent;
— **reporting threshold:** 0.05 per cent.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

Chlorides (2.4.4)

Maximum 200 ppm.

Dilute 10 mL of solution S to 15 mL with water R.

Sulfates (2.4.13)

Maximum 300 ppm.

Dissolve 0.5 g in distilled water R and dilute to 15 mL with the same solvent.

Ammonium

Amino acid analysis (2.2.56) as described in the test for ninhydrin-positive substances with the following modifications.

Injection Test solution, reference solution (c) and blank solution.

Limit:

— **ammonium at 570 nm:** not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.02 per cent), taking into account the peak due to ammonium in the chromatogram obtained with the blank solution.

Iron (2.4.9)

Maximum 10 ppm.

In a separating funnel, dissolve 1.0 g in 10 mL of dilute hydrochloric acid R. Shake with 3 quantities, each of 10 mL, of methyl isobutyl ketone RI, shaking for 3 min each time. To the combined organic layers add 10 mL of water R and shake for 3 min. Use the aqueous layer.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 5 mL of anhydrous formic acid R.

Add 30 mL of anhydrous acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 11.91 mg of $\text{C}_4\text{H}_9\text{NO}_3$.

STORAGE

Protected from light.

IMPURITIES

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, B, C, D, E.

A. (2S)-2-amino-4-hydroxybutanoic acid (homoserine),

B. (2S)-2-aminopropanoic acid (alanine),

C. (2S)-2-amino-3-methylbutanoic acid (valine),

D. (2S,3S)-2-amino-3-methylpentanoic acid (isoleucine),

E. (2S)-2,6-diaminohexanoic acid (lysine).

Thymol

(Ph. Eur. monograph 0791)

$\text{C}_{10}\text{H}_{14}\text{O}$

150.2

89-83-8

Ph Eur

DEFINITION

5-Methyl-2-(methylethyl)phenol.

CHARACTERS

Appearance

Colourless crystals.

Solubility

Very slightly soluble in water, very soluble in ethanol (96 per cent), freely soluble in essential oils and in fatty oils, sparingly soluble in glycerol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification: B.

Second identification: A, C, D.

A. Melting point (2.2.14): 48 °C to 52 °C.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison thymol CRS.

C. Dissolve 0.2 g with heating in 2 mL of *dilute sodium hydroxide solution R* and add 0.2 mL of *chloroform R*. Heat on a water-bath. A violet colour develops.

D. Dissolve about 2 mg in 1 mL of *anhydrous acetic acid R*. Add 0.15 mL of *sulfuric acid R* and 0.05 mL of *nitric acid R*. A bluish-green colour develops.

TESTS**Appearance of solution**

The solution is not more opalescent than reference suspension IV (2.2.1) and not more intensely coloured than reference solution R₆ (2.2.2, *Method II*).

Dissolve 1.0 g in 10 mL of *dilute sodium hydroxide solution R*.

Acidity

To 1.0 g in a 100 mL glass-stoppered conical flask add 20 mL of *water R*. Boil until dissolution is complete, cool and stopper the flask. Shake vigorously for 1 min. Add a few crystals of the substance to be examined to initiate crystallisation. Shake vigorously for 1 min and filter.

To 5 mL of the filtrate add 0.05 mL of *methyl red solution R* and 0.05 mL of 0.01 M *sodium hydroxide*. The solution is yellow.

Related substances

Gas chromatography (2.2.28).

Test solution Dissolve 0.100 g of the substance to be examined in *ethanol (96 per cent) R* and dilute to 10.0 mL with the same solvent.

Reference solution (a) Dilute 1 mL of the test solution to 100 mL with *ethanol (96 per cent) R*.

Reference solution (b) Dilute 1 mL of reference solution (a) to 10 mL with *ethanol (96 per cent) R*.

Reference solution (c) Dilute 5 mL of reference solution (b) to 10 mL with *ethanol (96 per cent) R*.

Column:

— *material:* glass or steel;

— *size:* $l = 4 \text{ m}$, $\varnothing = 2 \text{ mm}$;

— *stationary phase:* diatomaceous earth for gas chromatography R, impregnated with a mixture suitable for the separation of free fatty acids.

Carrier gas nitrogen for chromatography R.

Flow rate 30 mL/min.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 2	80
	2 - 22	80 → 240
	22 - 37	240
Injection port		250
Detector		300

Detection Flame ionisation.

Injection 1 µL.

System suitability Reference solution (b):

— *signal-to-noise ratio:* minimum 5 for the principal peak.

Limits:

— *total:* not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

— *disregard limit:* the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Residue on evaporation

Maximum 0.05 per cent.

Evaporate 2.00 g on a water-bath and heat in an oven at 100–105 °C for 1 h. The residue weighs not more than 1.0 mg.

STORAGE

Protected from light.

Ph Eur

Tiabendazole

(Ph. Eur. monograph 0866)

C₁₀H₇N₃S

201.2

148-79-8

Action and use

Benzimidazole antihelminthic.

Ph Eur

DEFINITION

Tiabendazole contains not less than 98.0 per cent and not more than the equivalent of 101.0 per cent of 2-(thiazol-4-yl)-1H-benzimidazole, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water, slightly soluble in alcohol and in methylene chloride. It dissolves in dilute mineral acids. It melts at about 300 °C.

IDENTIFICATION

First identification: B.

Second identification: A, C, D.

A. Dissolve 25 mg in 0.1 M *hydrochloric acid* and dilute to 100.0 mL with the same acid. Dilute 2.0 mL of the solution to 100.0 mL with 0.1 M *hydrochloric acid*. Examined between 230 nm and 350 nm (2.2.25), the solution shows two absorption maxima, at 243 nm and 302 nm. The ratio of the absorbance measured at the maximum at 302 nm to that measured at the maximum at 243 nm is 1.8 to 2.1.

B. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *tiabendazole CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for related substances in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 5 mg in 0.1 M hydrochloric acid and dilute to 5 mL with the same acid. Add 3 mg of *p*-phenylenediamine dihydrochloride R and shake until dissolved. Add 0.1 g of zinc powder R, mix, allow to stand for 2 min and add 5 mL of ferric ammonium sulfate solution R2. A bluish-violet colour develops.

TESTS

Related substances

Examine by thin-layer chromatography (2.2.27), using silica gel HP₂₅₄ R as the coating substance.

Test solution (a) Dissolve 0.10 g of the substance to be examined in methanol R and dilute to 10 mL with the same solvent.

Test solution (b) Dilute 2 mL of test solution (a) to 20 mL with methanol R.

Reference solution (a) Dissolve 20 mg of tiabendazole CRS in methanol R and dilute to 20 mL with the same solvent.

Reference solution (b) Dilute 1 mL of test solution (b) to 10 mL with methanol R.

Reference solution (c) Dilute 1 mL of test solution (b) to 25 mL with methanol R.

Apply separately to the plate 20 µL of each solution. Develop over a path of 15 cm using a mixture of 2.5 volumes of water R, 10 volumes of acetone R, 25 volumes of glacial acetic acid R and 62.5 volumes of toluene R. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (1.0 per cent) and at most one such spot is more intense than the spot in the chromatogram obtained with reference solution (c) (0.4 per cent).

o-Phenylenediamine

To 5.0 g in a flask fitted with a ground-glass stopper, add 25 mL of a mixture of 1 volume of methanol R and 2 volumes of water R. Shake for 3 min. Filter through a sintered-glass filter (16) (2.1.2) under reduced pressure. To 10 mL of the filtrate add 0.5 mL of hydrochloric acid R and 0.5 mL of acetylacetone R and shake until the solution is clear. The solution is not more intensely coloured than reference solution R₇ (2.2.2, Method I) (10 ppm).

Water (2.5.12)

Not more than 0.5 per cent, determined on 1.00 g by the semi-micro determination of water.

Sulfated ash (2.4.14)

Not more than 0.2 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 30 mL of anhydrous acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 20.12 mg of C₁₀H₇N₃S.

STORAGE

Store protected from light.

IMPURITIES

A. benzene-1,2-diamine.

Tianeptine Sodium

C₂₁H₂₄ClN₂NaO₄S

458.9

30123-17-2

Action and use
Antidepressant.

Ph Eur

DEFINITION

Sodium 7-[[[(1*R*,*S*)-3-chloro-6-methyl-6,11-dihydrodibenzo[*c,f*][1,2]thiazepin-11-yl]amino]heptanoate *S*, *S*-dioxide.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or yellowish powder, very hygroscopic.

Solubility

Freely soluble in water, in methanol and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison Ph. Eur. reference spectrum of tianeptine sodium.

B. It gives reaction (a) of sodium (2.3.1).

TESTS

Impurity A

Gas chromatography (2.2.28).

Internal standard solution Dilute 1 mL of ethyl 5-bromovalerate R in anhydrous ethanol R and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 250.0 mL with anhydrous ethanol R.

Test solution Dissolve 0.1000 g of the substance to be examined in the internal standard solution and dilute to 2.0 mL with the same solution.

Reference solution Dissolve 10.0 mg of tianeptine impurity A CRS in the internal standard solution and dilute to 200.0 mL with the same solution.

Column:

- material: fused silica,
- size: *l* = 25 m, \varnothing = 0.25 mm,
- stationary phase: cyanopropylpolysiloxane R (film thickness 0.2 µm).

Carrier gas helium for chromatography R.

Linear velocity 26 cm/s.

Split ratio 1:100.

Temperature:

- column: 150 °C,
- injection port and detector: 210 °C.

Detection Flame ionisation.

Injection 1 µL.

Run time Twice the retention time of ethyl 5-bromovalerate.

System suitability Reference solution:

- elution order: ethanol, ethyl 5-bromovalerate, impurity A,

Ph Eur

- *resolution*: minimum 10 between the peaks due to ethyl 5-bromovalerate and impurity A,
- *signal-to-noise ratio*: minimum 20 for the peak due to impurity A.

Limit:

- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.1 per cent).

Related substances

Liquid chromatography (2.2.29).

Solvent mixture Mix 50 volumes of *methanol R* and 50 volumes of *water R*.

Test solution Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 20.0 mL with the solvent mixture.

Reference solution (b) Dissolve 20 mg of *sodium tianeptine for system suitability CRS* in the solvent mixture and dilute to 200 mL with the solvent mixture.

Column:

- *size*: $l = 0.15$ m, $\varnothing = 4.6$ mm,
- *stationary phase*: octadecylsilyl silica gel for chromatography *R* (3 μ m) with a pore size of 0.01 μ m,
- *temperature*: 30 °C.

Mobile phase:

- *mobile phase A*: mix 21 volumes of *methanol R1*, 31.5 volumes of *acetonitrile R1* and 47.5 volumes of a 2 g/L solution of *sodium laurilsulfate R*, adjusted to pH 2.5 with *phosphoric acid R*,
- *mobile phase B*: mix 20 volumes of *methanol R1*, 20 volumes of a 2 g/L solution of *sodium laurilsulfate R*, adjusted to pH 2.5 with *phosphoric acid R* and 60 volumes of *acetonitrile R1*,

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 35	100	0
35 - 45	100 → 40	0 → 60
45 - 60	40	60
60 - 70	40 → 100	60 → 0

Flow rate 1 mL/min.

Detection Spectrophotometer at 220 nm.

Injection 10 μ L.

Relative retention with reference to tianeptine (retention time = about 30 min): impurity C = about 0.4; impurity D1 = about 0.6; impurity D2 = about 0.8; impurity E = about 1.1; impurity B = about 1.7.

System suitability Reference solution (b):

- *resolution*: minimum 2.5 between the peaks due to tianeptine and impurity E.

Limits:

- *any impurity*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- *total*: not more than 8 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent),
- *disregard limit*: area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Water (2.5.12)

Maximum 5.0 per cent, determined on 0.100 g.

ASSAY

Dissolve 0.165 g in 50 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 22.95 mg of $C_{21}H_{24}ClN_2NaO_4S$.

STORAGE

In an airtight container.

IMPURITIES

A. ethyl 7-bromoheptanoate,

B. ethyl 7-[(11RS)-3-chloro-6-methyl-6,11-dihydrodibenzo[*c,f*][1,2]thiazepin-11-yl]amino]heptanoate *S,S*-dioxide,

C. 3-chloro-6-methyldibenzo[*c,f*][1,2]thiazepin-11(6*H*)-one *S,S*-dioxide,

D. 7-[(11RS)-3-chloro-6-methyldibenzo[*c,f*][1,2]thiazepin-11(6*H*)-ylidene]amino]heptanoic acid *S,S*-dioxide,

E. 7,7'-[(11RS)-3-chloro-6-methyl-6,11-dihydrodibenzo[*c,f*][1,2]thiazepin-11-yl]imino]diheptanoic acid *S,S*-dioxide.

Ph Eur

Tiapride Hydrochloride

(Ph. Eur. monograph 1575)

$C_{15}H_{25}ClN_2O_4S$

364.9

51012-33-0

Action and use

Dopamine receptor antagonist; neuroleptic.

Ph Eur

DEFINITION

N-[2-(Diethylamino)ethyl]-2-methoxy-5-(methylsulfonyl)benzamide hydrochloride.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Very soluble in water, soluble in methanol, slightly soluble in anhydrous ethanol.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison tiapride hydrochloride CRS.

B. Solution S (see Tests) gives reaction (a) of chlorides (2.3.1).

TESTS

Solution S

Dissolve 2.5 g in carbon dioxide-free water R and dilute to 50.0 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and its absorbance (2.2.25) at 450 nm is not greater than 0.030.

pH (2.2.3)

4.0 to 6.0 for solution S.

Impurity C

Thin-layer chromatography (2.2.27).

Test solution Dissolve 0.400 g of the substance to be examined in methanol R and dilute to 10 mL with the same solvent.

Reference solution Dissolve 20.0 mg of metoclopramide impurity E CRS (impurity C) in methanol R and dilute to 50 mL with the same solvent. Dilute 2.0 mL of the solution to 20 mL with methanol R.

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase concentrated ammonia R, dioxan R, methanol R, methylene chloride R (2:10:14:90 V/V/V/V).

Application 10 µL.

Development Over 4/5 of the plate.

Drying In air.

Detection Spray with a 2 g/L solution of ninhydrin R in butanol R and heat at 100 °C for 15 min.

Retardation factors Impurity C = about 0.1; tiapride = about 0.6.

Limit:

— *impurity C*: any spot due to impurity C is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.1 per cent).

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

Reference solution (b) Dissolve 5.0 mg of tiapride hydrochloride CRS and 5.0 mg of tiapride *N*-oxide CRS (impurity D) in the mobile phase and dilute to 100.0 mL with the mobile phase.

Column:

— *size*: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— *stationary phase*: base-deactivated end-capped octylsilyl silica gel for chromatography R (5 µm);

— *temperature*: 40 °C.

Mobile phase Dissolve 5.44 g of potassium dihydrogen phosphate R and 0.08 g of sodium octanesulfonate R in 780 mL of water R, adjust to pH 2.7 with phosphoric acid R and dilute to 800 mL with water R; add 150 mL of methanol R and 50 mL of acetonitrile R and mix.

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 240 nm.

Injection 10 µL.

Run time 3 times the retention time of tiapride.

Identification of impurities Use the chromatogram obtained with reference solution (b) to identify the peak due to impurity D.

Relative retention With reference to tiapride (retention time = about 7 min): impurity D = about 1.2.

System suitability Reference solution (b):

— *resolution*: minimum 4.0 between the peaks due to tiapride and impurity D.

Calculation of percentage contents:

— for each impurity, use the concentration of tiapride hydrochloride in reference solution (a).

Limits:

— *unspecified impurities*: for each impurity, maximum 0.10 per cent;

— *total*: maximum 0.2 per cent;

— *reporting threshold*: 0.05 per cent.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 20 mL of anhydrous acetic acid R. Add 20 mL of acetic anhydride R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 36.49 mg of $C_{15}H_{25}ClN_2O_4S$.

IMPURITIES

Specified impurities C.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, B, D.

A. methyl 2-methoxy-5-(methylsulfonyl)benzoate,

B. 2-methoxy-5-(methylsulfonyl)benzoic acid,

C. *N,N*-diethylethane-1,2-diamine,

D. *N*-[2-(diethylamino)ethyl]-2-methoxy-5-(methylsulfonyl)benzamide (tiapride *N*-oxide).

Ph Eur

Tiaprofenic Acid

(Ph. Eur. monograph 1157)

$C_{14}H_{12}O_3S$

260.3

33005-95-7

Action and use

Cyclo-oxygenase inhibitor; analgesic; anti-inflammatory.

Ph Eur

DEFINITION

(2*RS*)-2-(5-Benzoylthiophen-2-yl)propanoic acid.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in acetone, in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

First identification: C.

Second identification: A, B, D.

A. Melting point (2.2.14): 95 °C to 99 °C.

B. Ultraviolet and visible absorption spectrophotometry (2.2.25).

Test solution Dissolve 25.0 mg in *ethanolic hydrochloric acid R* and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of this solution to 50.0 mL with *ethanolic hydrochloric acid R*.

Spectral range 220-350 nm.

Absorption maximum 305 nm.

Shoulder 262 nm.

Specific absorbance at the absorption maximum 550 to 590.

C. Infrared absorption spectrophotometry (2.2.24).

Comparison tiaprofenic acid CRS.

D. Thin-layer chromatography (2.2.27).

Test solution Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 mL with the same solvent.

Reference solution (a) Dissolve 10 mg of *tiaprofenic acid CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent.

Reference solution (b) Dissolve 10 mg of *ketoprofen CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent. Dilute 1 mL of this solution to 2 mL with reference solution (a).

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase acetic acid R, *methylene chloride R*, *acetone R* (1:20:80 V/V/V).

Application 10 µL.

Development Over 3/4 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Retardation factors Tiaprofenic acid = about 0.3; ketoprofen = about 0.4.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated principal spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Appearance of solution

The solution is clear (2.2.1) and not more intensely coloured than reference solution Y₆ (2.2.2, Method II).

Dissolve 2.0 g in *ethanol (96 per cent) R* and dilute to 20 mL with the same solvent.

Optical rotation (2.2.7)

−0.10° to + 0.10°.

Dissolve 0.50 g in *ethyl acetate R* and dilute to 10.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 50.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b) Dilute 5.0 mL of reference solution (a) to 10.0 mL with the mobile phase.

Reference solution (c) Dissolve 10.0 mg of tiaprofenic acid impurity C CRS in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 50.0 mL with the mobile phase.

Reference solution (d) Dilute 1 mL of reference solution (a) to 2 mL with reference solution (c).

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: silica gel for chromatography R (5 μ m).

Mobile phase water for chromatography R, glacial acetic acid R, hexane R, methylene chloride R (0.25:20:500:500 V/V/V/V); add the water to the acetic acid, then hexane and methylene chloride; sonicate the mixture for 2 min. Do not degas with helium during analysis.

Flow rate 1 mL/min.

Detection Spectrophotometer at 250 nm.

Injection 20 μ L.

Run time Twice the retention time of tiaprofenic acid.

Identification of impurities Use the chromatogram obtained with reference solution (c) to identify the peak due to impurity C.

Relative retention With reference to tiaprofenic acid (retention time = about 14 min): impurity C = about 0.86.

System suitability Reference solution (d):

— resolution: minimum 3.0 between the peaks due to impurity C and tiaprofenic acid.

Limits:

- impurity C: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- sum of impurities other than C: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 3 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 25 mL of ethanol (96 per cent) R. Add 25 mL of water R and 0.5 mL of phenolphthalein solution R. Titrate with 0.1 M sodium hydroxide.

1 mL of 0.1 M sodium hydroxide is equivalent to 26.03 mg of $C_{14}H_{12}O_3S$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities C.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). Tibolone

(Ph. Eur. monograph 1739)

$C_{21}H_{28}O_2$

312.5

Action and use

Steroid with estrogenic and progestogenic properties.

Preparation

Tibolone Tablets

Ph Eur

DEFINITION

17-Hydroxy-7 α -methyl-19-nor-17 α -pregn-5(10)-en-20-yn-3-one.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS**Appearance**

White or almost white, crystalline powder or crystals.

Solubility

Practically insoluble in water, soluble in acetone and in methanol.

It shows polymorphism (5.9).

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison Ph. Eur. reference spectrum of tibolone.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined in the minimum volume of *anhydrous ethanol R*, evaporate to dryness on a water-bath and record a new spectrum using the residue.

TESTS**Specific optical rotation (2.2.7)**

+ 100 to + 106 (dried substance).

Dissolve 0.250 g in *anhydrous ethanol R* and dilute to 25.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Select a brand of acetonitrile such that the formation of possible artefact peaks, eluting after impurity C at relative retentions 0.6 to 0.8, is avoided.

Solvent mixture water R, acetonitrile R1 (25:75 V/V).

Test solution Dissolve 40.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

Reference solution (a) Dissolve 4 mg of tibolone for system suitability CRS (containing impurities A, B, C, D and E) in 1 mL of the solvent mixture.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

Column:

— *size*: $l = 0.15$ m, $\varnothing = 4.6$ mm;

— *stationary phase*: spherical end-capped octylsilyl silica gel for chromatography R (5 μ m).

Mobile phase methanol R, acetonitrile R1, water R (8:40:52 V/V/V).

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 205 nm.

Injection 5 μ L.

Run time 3 times the retention time of tibolone.

Identification of impurities Use the chromatogram supplied with tibolone for system suitability CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, D and E.

Relative retention With reference to tibolone (retention time = about 14 min): impurity A = about 0.22; impurity B = about 0.24; impurity C = about 0.58; impurity D = about 1.12; impurity E = about 2.24.

System suitability Reference solution (a):

— *peak-to-valley ratio*: minimum 2.0, where H_p = height above the baseline of the peak due to impurity D and

H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to tibolone.

Limits:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.7; impurity B = 1.5; impurity C = 2.1;
- *impurities A, E*: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *impurity B*: not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);
- *impurity C*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *impurity D*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 60 mL of *tetrahydrofuran R*. Add 25 mL of a 100 g/L solution of *silver nitrate R*. Titrate with 0.1 M *sodium hydroxide*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *sodium hydroxide* is equivalent to 31.25 mg of $C_{21}H_{28}O_2$.

STORAGE

At a temperature of 2 °C to 8 °C.

IMPURITIES

Specified impurities A, B, C, D, E.

A. 10,17-dihydroxy-7 α -methyl-19-nor-10 ξ ,17 α -pregn-4-en-20-yn-3-one,

B. 10-hydroperoxy-17-hydroxy-7α-methyl-19-nor-10ξ,17α-pregn-4-en-20-yn-3-one,

C. 17-hydroxy-7α-methyl-19-nor-10ξ,17α-pregn-4-en-20-yn-3-one,

D. 17-hydroxy-7β-methyl-19-nor-17α-pregn-5(10)-en-20-yn-3-one,

E. 3,3-dimethoxy-7α-methyl-19-nor-17α-pregn-5(10)-en-20-yn-17-ol.

Ph Eur

Ticarcillin Sodium

(Ph. Eur. monograph 0956)

C₁₅H₁₄N₂Na₂O₆S₂

428.4

4697-14-7

Action and use

Penicillin antibacterial.

Preparation

Ticarcillin and Clavulanic Acid Infusion

Ph Eur

DEFINITION

Disodium (2*S*,5*R*,6*R*)-6-[[[(2*R**S*)-2-carboxylato-2-(thiophen-3-yl)acetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo [3.2.0]heptane-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content

89.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or slightly yellow, hygroscopic powder.

Solubility

Freely soluble in water, soluble in methanol.

IDENTIFICATION

First identification: A, D, E.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (2.2.24).

Preparation Dissolve 50 mg of the substance to be examined in 1 mL of water R, add 0.1 mL of hydrochloric acid R1, swirl and allow to stand in iced water for 10 min. Filter the precipitate and rinse with 2 mL of water R. Dissolve in a mixture of 1 volume of water R and 9 volumes of acetone R. Evaporate the solvent almost to dryness, then dry in an oven at 60 °C for 30 min.

Comparison Repeat the operations using ticarcillin monosodium CRS.

B. Thin-layer chromatography (2.2.27).

Test solution Dissolve 25 mg of the substance to be examined in methanol R and dilute to 5 mL with the same solvent.

Reference solution (a) Dissolve 25 mg of ticarcillin monosodium CRS in methanol R and dilute to 5 mL with the same solvent.

Reference solution (b) Dissolve 25 mg of carbenicillin sodium CRS and 25 mg of ticarcillin monosodium CRS in methanol R and dilute to 5 mL with the same solvent.

Plate TLC silanised silica gel plate R.

Mobile phase Mix 10 volumes of acetone R and 90 volumes of a 154 g/L solution of ammonium acetate R, adjusted to pH 5.0 with glacial acetic acid R.

Application 1 µL.

Development Over a path of 12 cm.

Drying In a current of hot air.

Detection Expose to iodine vapour.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 15 cm long and 15 mm in diameter. Moisten with 0.05 mL of water R and add 2 mL of sulfuric acid-formaldehyde reagent R. Mix the contents of the tube by swirling; the solution is brown. Place the test-tube in a water-bath for 1 min; a dark reddish-brown colour develops.

D. It gives reaction (a) of sodium (2.3.1).

E. Specific optical rotation (see Tests).

TESTS

Solution S

Dissolve 2.50 g in carbon dioxide-free water R and dilute to 50 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and not more intensely coloured than reference solution Y₅ (2.2.2, Method II).

pH (2.2.3)

5.5 to 7.5 for solution S.

Specific optical rotation (2.2.7)

+ 172 to + 187 (anhydrous substance).

Dissolve 0.250 g in *water R* and dilute to 25.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 25.0 mg of the substance to be examined in mobile phase A and dilute to 25.0 mL with mobile phase A.

Reference solution (a) Dissolve 20.0 mg of *ticarcillin impurity A CRS* in mobile phase A and dilute to 100.0 mL with mobile phase A. Dilute 5.0 mL of this solution to 50.0 mL with mobile phase A.

Reference solution (b) Dilute 1 mL of the test solution to 50 mL with mobile phase A.

Column:

— size: $l = 0.25$ m, $\varnothing = 4$ mm;

— stationary phase: *octadecylsilyl silica gel for chromatography R* (5 μ m).

Mobile phase:

— mobile phase A: 1.3 g/L solution of *ammonium phosphate R* adjusted to pH 7.0 with *phosphoric acid R*;

— mobile phase B: *methanol R*, mobile phase A (50:50 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 30	100 → 30	0 → 70
30 - 40	30	70

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 220 nm.

Injection 20 μ L.

System suitability Reference solution (b):

— resolution: minimum 2.0 between the 2 principal peaks (diastereoisomers).

Limits:

— *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (4 per cent);

— any other impurity: for each impurity, not more than 1.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (2.5 per cent).

N,N-Dimethylaniline (2.4.26, Method B)

Maximum 20 ppm.

2-Ethylhexanoic acid (2.4.28)

Maximum 0.5 per cent *m/m*.

Water (2.5.12)

Maximum 5.5 per cent, determined on 0.150 g.

Bacterial endotoxins (2.6.14)

Less than 0.05 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (2.2.29).

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 10.0 mL of this solution to 50.0 mL with the mobile phase.

Reference solution Dissolve 50.0 mg of *ticarcillin monosodium CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 10.0 mL of this solution to 50.0 mL with the mobile phase.

Column:

— size: $l = 0.25$ m, $\varnothing = 4$ mm;

— stationary phase: *octadecylsilyl silica gel for chromatography R* (5 μ m).

Mobile phase Mix 20 volumes of *methanol R* and 80 volumes of a 1.3 g/L solution of *ammonium phosphate R* adjusted to pH 7.0 with *phosphoric acid R*.

Flow rate 1 mL/min.

Detection Spectrophotometer at 220 nm.

Injection 20 μ L.

System suitability Reference solution:

— resolution: minimum 2.5 between the 2 principal peaks;

— repeatability: maximum relative standard deviation of 1.0 per cent for the 2 peaks due to ticarcillin after 6 injections.

Calculate the percentage content of ticarcillin sodium as the sum of the areas of the 2 peaks, multiplying the content of ticarcillin monosodium by 1.054.

STORAGE

In an airtight container, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

IMPURITIES

Specified impurities A.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*) B, C, D, E.

A. (2*S*,5*R*,6*R*)-3,3-dimethyl-7-oxo-6-[[[(thiophen-3-yl)acetyl]amino]-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (decarboxyticarcillin),

B. (thiophen-3-yl)acetic acid,

C. 2-(thiophen-3-yl)propanedioic acid (3-thienylmalonic acid),

D. (4*S*)-2-[carboxy[[2-carboxy-2-(thiophen-3-yl)acetyl]amino]methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penicilloic acids of ticarcillin),

E. (4*S*)-2-[[[2-carboxy-2-(thiophen-3-yl)acetyl]amino]methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penilloic acids of ticarcillin).

Ph Eur

Ticagrelor

(Ph. Eur. monograph 3087)

C₂₃H₂₈F₂N₆O₄S

522.6

274693-27-5

Action and use

Platelet aggregation inhibitor.

Ph Eur

DEFINITION

(1*S*,2*S*,3*R*,5*S*)-3-[7-[[[(1*R*,2*S*)-2-(3,4-Difluorophenyl)cyclopropyl]amino]-5-(propylsulfanyl)-3*H*-[1,2,3]triazolo[4,5-*d*]pyrimidin-3-yl]-5-(2-hydroxyethoxy)cyclopentane-1,2-diol.

Content

97.5 per cent to 102.0 per cent (anhydrous substance).

PRODUCTION

It is produced by highly stereoselective methods of manufacture; consideration must be given to the formation of potential stereoisomeric impurities during the manufacturing process, and procedures must be implemented for the appropriate control of these impurities.

CHARACTERS

Appearance

White or almost white to pale pink powder.

Solubility

Practically insoluble in water, freely soluble in methanol, soluble in anhydrous ethanol, practically insoluble in heptane.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison ticagrelor CRS.

TESTS

Impurity E

Liquid chromatography (2.2.29).

Buffer solution 156 g/L solution of sodium dihydrogen phosphate R adjusted to pH 3.0 with phosphoric acid R.

Test solution Dissolve 30.0 mg of the substance to be examined in 2 mL of a mixture of equal volumes of acetonitrile R and water R and dilute to 10.0 mL with water R. Centrifuge for 15 min at about 1200 g or until a clear solution is obtained. Use the clear supernatant.

Reference solution Dissolve 4.5 mg of ticagrelor impurity E CRS ((*R*)-mandelate salt) in acetonitrile R and

dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 100.0 mL with acetonitrile R. Dilute 1.0 mL of this solution to 10.0 mL with water R (solution equivalent to a 24 ng/mL solution of impurity E).

Column:

— size: *l* = 0.15 m, Ø = 4.6 mm;

— stationary phase: octadecylsilyl silica gel for chromatography R (1.8 µm);

— temperature: 55 °C.

Mobile phase:

— mobile phase A: mix 1 volume of the buffer solution and 89 volumes of water for chromatography R and add 10 volumes of acetonitrile for chromatography R;

— mobile phase B: mix 1 volume of the buffer solution and 29 volumes of water for chromatography R and add 70 volumes of acetonitrile for chromatography R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 8	94	6
8 - 9	94 → 0	6 → 100
9 - 20	0	100

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 222 nm.

Injection: 100 µL.

Relative retention With reference to ticagrelor (retention time = about 11.5 min): impurity E = about 0.6.

System suitability Reference solution:

— repeatability: maximum relative standard deviation of 10.0 per cent determined on 6 injections.

Limit:

— impurity E: not more than the area of the principal peak in the chromatogram obtained with the reference solution (8 ppm).

Related substances

Liquid chromatography (2.2.29). Carry out the test protected from light.

Solvent mixture acetonitrile R, water R (35:65 V/V).

Buffer solution 156 g/L solution of sodium dihydrogen phosphate R adjusted to pH 3.0 with phosphoric acid R.

Test solution Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

Reference solution (a) Dissolve 50.0 mg of ticagrelor CRS in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Reference solution (c) Dissolve 5 mg of ticagrelor for system suitability CRS (containing impurities A, B, C and D) in the solvent mixture and dilute to 10 mL with the solvent mixture.

Column:

— size: *l* = 0.15 m, Ø = 3.0 mm;

— stationary phase: base-deactivated end-capped phenylsilyl silica gel for chromatography R (3 µm);

— temperature: 40 °C.

Mobile phase:

— mobile phase A: mix 1 volume of the buffer solution and 89 volumes of water for chromatography R and add 10 volumes of acetonitrile for chromatography R;

— *mobile phase B*: mix 1 volume of the buffer solution and 29 volumes of *water for chromatography R* and add 70 volumes of *acetonitrile for chromatography R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 2	80	20
2 - 42	80 → 25	20 → 75
42 - 47	25	75

Flow rate 0.65 mL/min.

Detection Spectrophotometer at 242 nm.

Injection 5 µL of the test solution and reference solutions (b) and (c).

Identification of impurities Use the chromatogram supplied with *ticagrelor for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify impurities A, B, C and D.

Relative retention With reference to *ticagrelor* (retention time = about 23 min): impurity A = about 0.15; impurity B = about 1.06; impurity C = about 1.23; impurity D = about 1.5.

System suitability Reference solution (c):

— *resolution*: minimum 4.0 between the peaks due to *ticagrelor* and impurity B.

Calculation of percentage contents:

— *correction factor*: multiply the peak area of impurity A by 0.5;

— for each impurity, use the concentration of *ticagrelor* in reference solution (b).

Limits:

— *impurity D*: maximum 0.3 per cent;

— *impurities A, B*: for each impurity, maximum 0.2 per cent;

— *impurity C*: maximum 0.1 per cent;

— *unspecified impurities*: for each impurity, maximum 0.10 per cent;

— *total*: maximum 1.0 per cent;

— *reporting threshold*: 0.05 per cent.

Water (2.5.32)

Maximum 0.5 per cent determined on 0.500 g using the evaporation technique at 130 °C.

Sulfated ash (2.4.14)

Maximum 0.6 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modifications.

Injection Test solution and reference solutions (a) and (c).

Mobile phase Mix 1 volume of the buffer solution and 56 volumes of *water for chromatography R* and add 43 volumes of *acetonitrile for chromatography R*.

Run time 4.5 times the retention time of *ticagrelor*.

Relative retention With reference to *ticagrelor* (retention time = about 6 min): impurity B = about 1.15.

System suitability Reference solution (c):

— *resolution*: minimum 1.5 between the peaks due to *ticagrelor* and impurity B.

Calculate the percentage content of $C_{23}H_{28}F_2N_6O_4S$ using the chromatogram obtained with reference solution (a) and taking into account the assigned content of *ticagrelor CRS*.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E.

A. (1*S*,2*S*,3*R*,5*S*)-3-[7-amino-5-(propylsulfanyl)-3*H*-[1,2,3]triazolo[4,5-*d*]pyrimidin-3-yl]-5-(2-hydroxyethoxy)cyclopentane-1,2-diol,

B. (1*S*,2*S*,3*R*,5*S*)-3-[[3-[(1*R*,2*S*)-2-(3,4-difluorophenyl)cyclopropyl]-5-(propylsulfanyl)-3*H*-[1,2,3]triazolo[4,5-*d*]pyrimidin-7-yl]amino]-5-(2-hydroxyethoxy)cyclopentane-1,2-diol,

C. 2-[[[(1*S*,2*S*,3*S*,4*R*)-4-[7-[[[(1*R*,2*S*)-2-(3,4-difluorophenyl)cyclopropyl]amino]-5-(propylsulfanyl)-3*H*-[1,2,3]triazolo[4,5-*d*]pyrimidin-3-yl]-2,3-dihydroxycyclopentyl]oxy]ethyl]acetate,

D. 2-[[[(3*aR*,4*S*,6*R*,6*aS*)-6-[7-[[[(1*R*,2*S*)-2-(3,4-difluorophenyl)cyclopropyl]amino]-5-(propylsulfanyl)-3*H*-[1,2,3]triazolo[4,5-*d*]pyrimidin-3-yl]-2,2-dimethyltetrahydro-2*H*,3*aH*-cyclopenta[*d*][1,3]dioxol-4-yl]oxy]ethan-1-ol,

Action and use

Inhibition of adenosine diphosphate (ADP)-mediated platelet aggregation; antiplatelet drug.

Ph Eur

DEFINITION

5-(2-Chlorobenzyl)-4,5,6,7-tetrahydrothieno[3,2-c]pyridine hydrochloride.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS**Appearance**

White or almost white, crystalline powder.

Solubility

Sparingly soluble in water and in anhydrous ethanol, very slightly soluble in ethyl acetate.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

Test solution (a) Dissolve 40 mg in water R and dilute to 100.0 mL with the same solvent.

Test solution (b) Dilute 5.0 mL of test solution (a) to 100.0 mL with water R.

Spectral range 250-350 nm for test solution (a); 200-350 nm for test solution (b).

Absorption maxima At 268 nm and 275 nm for test solution (a); at 214 nm and 232 nm for test solution (b).

Absorption ratio $A_{268}/A_{275} = 1.1$ to 1.2.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison ticlopidine hydrochloride CRS.

C. Mix about 6 mg of citric acid monohydrate R and 0.3 mL of acetic anhydride R. Add about 5 mg of the substance to be examined and heat in a water-bath at 80 °C. A red colour develops.

D. About 20 mg gives reaction (a) of chlorides (2.3.1).

TESTS**Appearance of solution**

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 0.5 g in a 1 per cent V/V solution of hydrochloric acid R and dilute to 20 mL with the same solution.

pH (2.2.3)

3.5 to 4.0.

Dissolve 0.5 g in carbon dioxide-free water R and dilute to 20 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Solvent mixture Mobile phase B, mobile phase A (20:80 V/V).

Test solution Dissolve 0.250 g of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

Reference solution Dissolve 5.0 mg of ticlopidine impurity F CRS in the solvent mixture. Add 1.00 mL of the test solution and dilute to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Column:— size: $l = 0.15$ m, $\varnothing = 4.6$ mm;— stationary phase: octadecylsilyl silica gel for chromatography R (5 μ m);

— temperature: 40 °C.

Mobile phase:

— mobile phase A: 0.95 g/L solution of sodium pentanesulfonate monohydrate R, adjusted to pH 3.4 with a 50 per cent V/V solution of phosphoric acid R;

— mobile phase B: methanol R1;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 45	80 → 20	20 → 80
45 - 50	20	80

Flow rate 1.3 mL/min.

Detection Spectrophotometer at 220 nm.

Injection 10 μ L; inject the solvent mixture as a blank.

Identification of impurities Use the chromatogram obtained with the reference solution to identify the peak due to impurity F.

Retention time Ticlopidine = about 15 min.

System suitability Reference solution:

— resolution: minimum 2.0 between the peaks due to ticlopidine and impurity F; if necessary, adjust the pH of mobile phase A;

— signal-to-noise ratio: minimum 50 for the peak due to ticlopidine.

Limits:

— impurity F: not more than 0.5 times the area of the corresponding peak in the chromatogram obtained with the reference solution (0.05 per cent);

— unspecified impurities: for each impurity, not more than the area of the peak due to ticlopidine in the chromatogram obtained with the reference solution (0.10 per cent);

— total: not more than the area of the peak due to ticlopidine in the chromatogram obtained with the reference solution (0.10 per cent);

— disregard limit: 0.5 times the area of the peak due to ticlopidine in the chromatogram obtained with the reference solution (0.05 per cent). Do not disregard the peak due to impurity F.

Formaldehyde

Maximum 20 ppm.

Dissolve 0.200 g in 4.0 mL of water R. Add 0.4 mL of dilute sodium hydroxide solution R. Centrifuge, filter the supernatant through cotton previously impregnated with water R and dilute to 5.0 mL with water R. Transfer to a test-tube. Add 5.0 mL of acetylacetone reagent R1. Place the test-tube in a water-bath at 40 °C for 40 min. The test solution is not more intensely coloured than a standard prepared at the same time and in the same manner using 5.0 mL of a 0.8 ppm solution of formaldehyde (CH₂O), obtained by

dilution of formaldehyde standard solution (5 ppm CH_2O) R with water R. Examine the tubes down their vertical axis.

Water (2.5.12)

Maximum 0.5 per cent, determined on 0.500 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 15 mL of anhydrous acetic acid R. Add 35 mL of acetic anhydride R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 30.02 mg of $\text{C}_{14}\text{H}_{15}\text{Cl}_2\text{NS}$.

IMPURITIES

Specified impurities F.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. Semi-synthetic product derived from a fermentation product.

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS**Appearance**

Orange, hygroscopic, crystalline powder.

Solubility

Freely soluble in water, slightly soluble in anhydrous ethanol and in heptane.

It shows polymorphism (5.9).

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison tigecycline CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

TESTS**pH (2.2.3)**

7.7 to 8.2.

Dissolve 0.500 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29). Carry out the test protected from light. Store the solutions at 2-8 °C and use them within 12 h.

Solution A Solution containing 4.35 g/L of *dipotassium hydrogen phosphate R* and 0.5 g/L of *sodium hydrogensulfite R* adjusted to pH 8.0 with a 56.1 g/L solution of *potassium hydroxide R*.

Test solution (a) Dissolve 50.0 mg of the substance to be examined in solution A and dilute to 100.0 mL with solution A.

Test solution (b) Dilute 10.0 mL of test solution (a) to 50.0 mL with solution A.

Reference solution (a) Dissolve 50.0 mg of *tigecycline CRS* in solution A and dilute to 100.0 mL with solution A. Dilute 10.0 mL of this solution to 50.0 mL with solution A.

Reference solution (b) Dilute 1.0 mL of test solution (a) to 100.0 mL with solution A. Dilute 1.0 mL of this solution to 10.0 mL with solution A.

Reference solution (c) Dissolve 2 mg of *tigecycline impurity B CRS* and 2 mg of *minocycline hydrochloride R* (impurity C) in solution A and dilute to 25 mL with solution A. Dilute 3 mL of the solution to 20 mL with solution A. Dissolve 2.5 mg of *tigecycline for system suitability CRS* (containing impurity A) in 1 mL of this solution and dilute to 5 mL with solution A.

Reference solution (d) Dissolve 2.5 mg of *tigecycline for system suitability CRS* (containing impurity A) in solution A and dilute to 5 mL with solution A.

Column:

— size: $l = 0.15$ m, $\varnothing = 4.6$ mm;

— stationary phase: end-capped octadecylsilyl silica gel for chromatography R (3 μ m);

— temperature: 30 °C.

Mobile phase:

— **mobile phase A:** dissolve 4.35 g of *dipotassium hydrogen phosphate R* and 0.93 g of *sodium edetate R* in 940 mL of *water for chromatography R*, and adjust to pH 6.4 with *phosphoric acid R*; make up to 950 mL with *water for chromatography R* and dilute to 1000 mL with *acetonitrile for chromatography R*;

— **mobile phase B:** dissolve 4.35 g of *dipotassium hydrogen phosphate R* and 0.93 g of *sodium edetate R* in 490 mL of *water for chromatography R*, and adjust to pH 6.4 with *phosphoric acid R*; make up to 500 mL with *water for chromatography R* and dilute to 1000 mL with *acetonitrile for chromatography R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 2	85	15
2 - 42	85 → 57	15 → 43
42 - 57	57 → 0	43 → 100
57 - 60	0	100

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 248 nm.

Injection 25 μ L of test solution (a) and reference solutions (b) and (c).

Identification of impurities Use the chromatogram supplied with *tigecycline for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B and C.

Relative retention With reference to *tigecycline* (retention time = about 20 min): impurity B = about 0.6; impurity A = about 0.7; impurity C = about 1.6.

System suitability Reference solution (c):

— **resolution:** minimum 1.6 between the peaks due to impurities B and A.

Calculation of percentage contents:

— for each impurity, use the concentration of *tigecycline* in reference solution (b).

Limits:

— **impurity A:** maximum 0.6 per cent;

— **impurity C:** maximum 0.2 per cent;

— **impurity B:** maximum 0.15 per cent;

— **unspecified impurities:** for each impurity, maximum 0.10 per cent;

— **total:** maximum 1.0 per cent;

— **reporting threshold:** 0.05 per cent.

Water (2.5.32)

Maximum 2.5 per cent, determined on 60.0 mg using the evaporation technique at 90 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modifications.

Column:

— **stationary phase:** end-capped octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase Mix 14 volumes of *acetonitrile for chromatography R* and 86 volumes of a solution containing 4.35 g/L of *dipotassium hydrogen phosphate R* and 0.93 g/L of *sodium edetate R* previously adjusted to pH 6.2 with *phosphoric acid R*.

Injection 20 µL of test solution (b) and reference solutions (a) and (d).

Run time 4.5 times the retention time of tigeicycline.

Relative retention With reference to tigeicycline (retention time = about 12 min): impurity A = about 0.6.

System suitability Reference solution (d):

— **resolution:** minimum 3.0 between the peaks due to impurity A and tigeicycline.

Calculate the percentage content of $C_{29}H_{39}N_5O_8$ using the chromatogram obtained with reference solution (a) and taking into account the assigned content of tigeicycline CRS.

STORAGE

Under nitrogen, in an airtight container, protected from light, at a temperature of 2 °C to 8 °C. If the substance is sterile, the container is also sterile and tamper-evident.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

IMPURITIES

Specified impurities A, B, C.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) D.

A. (4*R*,4*aS*,5*aR*,12*aS*)-9-[2-(*tert*-butylamino)acetamido]-4,7-bis(dimethylamino)-3,10,12,12*a*-tetrahydroxy-1,11-dioxo-1,4,4*a*,5,5*a*,6,11,12*a*-octahydrotetracene-2-carboxamide,

B. (4*S*,4*aS*,5*aR*,12*aS*)-9-amino-4,7-bis(dimethylamino)-3,10,12,12*a*-tetrahydroxy-1,11-dioxo-1,4,4*a*,5,5*a*,6,11,12*a*-octahydrotetracene-2-carboxamide (9-aminominocycline),

C. (4*S*,4*aS*,5*aR*,12*aS*)-4,7-bis(dimethylamino)-3,10,12,12*a*-tetrahydroxy-1,11-dioxo-1,4,4*a*,5,5*a*,6,11,12*a*-octahydrotetracene-2-carboxamide (minocycline),

D. (7*S*,8*R*)-3-[2-(*tert*-butylamino)acetamido]-7-[[4-carbamoyl-2-(dimethylamino)-3,5,6-trihydroxyphenyl]methyl]-6-carboxy-5,8-dihydroxy-*N,N*-dimethyl-4-oxo-7,8-dihydronaphthalen-1(4*H*)-iminium.

Ph Eur

Tilidine Hydrochloride Hemihydrate

(Ph. Eur. monograph 1767)

and enantiomer, HCl, ½ H₂O

$C_{17}H_{24}ClNO_2 \cdot \frac{1}{2}H_2O$

318.8

255733-17-6

Action and use
Opioid Analgesic.

Ph Eur

DEFINITION

Ethyl (1*RS*,6*SR*)-6-(dimethylamino)-3,6-dihydro[1,1'-biphenyl]-1(2*H*)-carboxylate hydrochloride hemihydrate.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

A suitable antioxidant may be added.

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, very soluble in methylene chloride, freely soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison tilidine hydrochloride hemihydrate CRS.

B. It gives reaction (a) of chlorides (2.3.1).

TESTS

Solution S

Dissolve 1.0 g in carbon dioxide-free water R and dilute to 20 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and not more intensely coloured than reference solution Y₇ (2.2.2, Method II).

Acidity or alkalinity

To 20.0 mL of solution S add 0.2 mL of 0.01 M sodium hydroxide. The pH is not less than 4.1. Add 0.4 mL of 0.01 M hydrochloric acid. The pH is not more than 4.3.

Related substances

Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b) Dissolve 5 mg of tilidine for system suitability CRS (containing impurities D and E) in the mobile phase and dilute to 5 mL with the mobile phase.

Precolumn:

- size: $l = 4$ mm, $\varnothing = 4.0$ mm;
- stationary phase: octadecylsilyl silica gel for chromatography R1 (5 μ m).

Column:

- size: $l = 0.125$ m, $\varnothing = 4.0$ mm;
- stationary phase: octadecylsilyl silica gel for chromatography R1 (5 μ m).

Mobile phase Mix equal volumes of acetonitrile for chromatography R and a 0.98 g/L solution of ammonium carbonate R.

Flow rate 0.8 mL/min.

Detection Spectrophotometer at 220 nm.

Injection 10 μ L.

Run time Twice the retention time of tilidine.

Identification of impurities Use the chromatogram supplied with tilidine for system suitability CRS and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities D and E; impurities D and E may be inverted in the elution order, therefore take into account the heights of the corresponding peaks in the chromatogram supplied with tilidine for system suitability CRS.

Relative retention With reference to tilidine (retention time = about 15 min): impurity E = about 0.4; impurity D = about 0.5 (D and E may be inverted).

System suitability Reference solution (b):

- resolution: minimum 1.5 between the peaks due to impurities E and D.

Calculation of percentage contents:

- correction factor: multiply the peak area of impurity E by 0.5;
- for each impurity, use the concentration of tilidine hydrochloride hemihydrate in reference solution (a).

Limits:

- impurity E: maximum 0.15 per cent;
- unspecified impurities: for each impurity, maximum 0.10 per cent;
- total: maximum 0.5 per cent;
- reporting threshold: 0.05 per cent.

Water (2.5.12)

2.5 per cent to 3.1 per cent, determined on 0.300 g.

ASSAY

Dissolve 0.250 g in a mixture of 10 mL of anhydrous acetic acid R and 50 mL of acetic anhydride R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 30.98 mg of $C_{17}H_{24}ClNO_2$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities E.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, B, C, D.

A. ethyl (1RS,6RS)-6-(dimethylamino)-3,6-dihydro[1,1'-biphenyl]-1(2H)-carboxylate,

B. methyl (1RS,6SR)-6-(dimethylamino)-3,6-dihydro[1,1'-biphenyl]-1(2H)-carboxylate,

C. ethyl (1RS,6SR)-6-(methylamino)-3,6-dihydro[1,1'-biphenyl]-1(2H)-carboxylate,

D. ethyl (2RS)-3-(dimethylamino)-2-phenylpropanoate,

E. ethyl (1RS,6SR)-6-(dimethylamino)-3-oxo-3,6-dihydro[1,1'-biphenyl]-1(2H)-carboxylate.

Timolol Eye Drops

Timolol Tablets

Ph Eur

DEFINITION

(2*S*)-1-[(1,1-Dimethylethyl)amino]-3-[[4-(morpholin-4-yl)-1,2,5-thiadiazol-3-yl]oxy]propan-2-ol (*Z*)-butenedioate.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Soluble in water and in ethanol (96 per cent).

mp

About 199 °C, with decomposition.

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D.

A. Specific optical rotation (2.2.7): -6.2 to -5.7.

Dissolve 1.000 g in 1 M hydrochloric acid and dilute to 10.0 mL with the same acid.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison timolol maleate CRS.

C. Thin-layer chromatography (2.2.27).

Test solution Dissolve 5 mg of the substance to be examined in methanol R and dilute to 5 mL with the same solvent.

Reference solution Dissolve 5 mg of timolol maleate CRS in methanol R and dilute to 5 mL with the same solvent.

Plate TLC silica gel GF₂₅₄ plate R.

Mobile phase concentrated ammonia R, methanol R, methylene chloride R (1:20:80 V/V/V).

Application 10 µL.

Development Over 2/3 of the plate.

Drying In air.

Detection Expose to iodine vapour for 2 h.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. Triturate 0.1 g with a mixture of 1 mL of dilute sodium hydroxide solution R and 3 mL of water R. Shake with

3 quantities, each of 5 mL, of ether R. To 0.1 mL of the aqueous layer add a solution containing 10 mg of resorcinol R in 3 mL of sulfuric acid R. Heat on a water-bath for 15 min; no violet-red colour develops. Neutralise the remainder of the aqueous layer with dilute sulfuric acid R and add 1 mL of bromine water R. Heat on a water-bath for 15 min, then heat to boiling and cool. To 0.2 mL of this solution add a solution containing 10 mg of resorcinol R in 3 mL of sulfuric acid R. Heat on a water-bath for 15 min; a violet-red colour develops. Add 0.2 mL of a 100 g/L solution of potassium bromide R and heat for 5 min on a water-bath; the colour becomes violet-blue.

TESTS

Solution S

Dissolve 0.5 g in carbon dioxide-free water R and dilute to 25 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and not more intensely coloured than reference solution B₈ (2.2.2, Method II).

pH (2.2.3)

3.8 to 4.3 for solution S.

Enantiomeric purity

Liquid chromatography (2.2.29). Carry out the test protected from actinic light.

Solvent mixture methylene chloride R, 2-propanol R (10:30 V/V).

Test solution Dissolve 30.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

Reference solution (a) Dissolve 30 mg of timolol maleate CRS in the solvent mixture and dilute to 10 mL with the solvent mixture.

Reference solution (b) Dissolve 3 mg of (*R*)-timolol CRS (impurity A) in the solvent mixture and dilute to 10.0 mL with the solvent mixture. Dilute 1.0 mL of the solution to 10.0 mL with the solvent mixture.

Reference solution (c) Dilute 1 mL of reference solution (a) to 100 mL with the solvent mixture. Mix 1 mL of this solution with 1 mL of reference solution (b).

Reference solution (d) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: cellulose derivative of silica gel for chiral separation R (5 µm).

Mobile phase diethylamine R, 2-propanol R, hexane R (2:40:960 V/V/V).

Flow rate 1 mL/min.

Detection Spectrophotometer at 297 nm.

Injection 5 µL.

Elution order Impurity A is eluted first.

System suitability:

- resolution: minimum 4.0 between the peaks due to impurity A and the (*S*)-enantiomer in the chromatogram obtained with reference solution (c);
- the retention times of the principal peaks due to the (*S*)-enantiomer in the chromatograms obtained with the test solution and reference solution (a) are identical.

Limit:

- impurity A: not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (1.0 per cent).

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 0.100 g of the substance to be examined in mobile phase A and dilute to 20 mL with mobile phase A.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

Reference solution (b) Dissolve 3 mg of *timolol impurity F CRS* in *methanol R* and dilute to 20.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with mobile phase A (solution A). Dissolve the contents of a vial of *timolol for system suitability CRS* (containing impurities B, C and D) in 1.0 mL of solution A.

Reference solution (c) Dissolve 2 mg of the substance to be examined and 20 mg of *maleic acid R* in 10 mL of *acetonitrile R*. Evaporate 1 mL of the solution to dryness under a stream of *nitrogen R* in an amber glass vial. Heat the open vial at 105 °C for 1 h. Reconstitute the residue with 1.0 mL of mobile phase A (*in situ* preparation of impurity E).

Column:

- size: $l = 0.150\text{ m}$, $\varnothing = 3.9\text{ mm}$;
- stationary phase: *octadecylsilyl silica gel for chromatography R* (5 μm).

Mobile phase:

- *mobile phase A*: mixture of equal volumes of *methanol R* and a 4.32 g/L solution of *sodium octanesulfonate R* previously adjusted to pH 3.0 with *glacial acetic acid R*;
- *mobile phase B*: *methanol R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 10	97.5	2.5
10 - 11	97.5 → 70	2.5 → 30
11 - 20	70	30

Flow rate 1.2 mL/min.

Detection Spectrophotometer at 295 nm.

Injection 20 μL .

Identification of impurities Use the chromatogram supplied with *timolol for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities B, C, D and F; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity E.

Relative retention With reference to timolol (retention time = about 7.5 min): maleic acid = about 0.1; impurity D = about 0.3; impurity E = about 0.4; impurity B = about 0.7; impurity F = about 0.8; impurity C = about 2.1.

System suitability Reference solution (b):

- **resolution**: minimum 1.5 between the peaks due to impurities B and F.

Limits:

- **correction factor**: for the calculation of content, multiply the peak area of impurity D by 0.6;
- **impurities B, C, D, E, F**: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- **unspecified impurities**: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

- **total**: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);
- **disregard limit**: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard any peak due to maleic acid.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.350 g in 60 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 43.25 mg of $\text{C}_{17}\text{H}_{28}\text{N}_4\text{O}_7\text{S}$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E, F.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. Tinidazole

(Ph. Eur. monograph 1051)

 $C_8H_{13}N_3O_4S$

247.3

19387-91-8

Action and use

Antiprotozoal; antibacterial.

Ph Eur

DEFINITION

1-[2-(Ethylsulfonyl)ethyl]-2-methyl-5-nitro-1H-imidazole.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

Almost white or pale yellow, crystalline powder.

Solubility

Practically insoluble in water, soluble in acetone and in methylene chloride, sparingly soluble in methanol.

IDENTIFICATION

First identification: A, C.

Second identification: A, B, D, E.

A. Melting point (2.2.14): 125 °C to 128 °C.

B. Ultraviolet and visible absorption spectrophotometry (2.2.25).

Test solution Dissolve 10.0 mg in *methanol R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

Spectral range 220-350 nm.

Absorption maximum At 310 nm.

Specific absorbance at the absorption maximum 340 to 360.

C. Infrared absorption spectrophotometry (2.2.24).

Comparison tinidazole CRS.

D. Thin-layer chromatography (2.2.27).

Test solution Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

Reference solution Dissolve 20 mg of tinidazole CRS in *methanol R* and dilute to 10 mL with the same solvent.

Plate TLC silica gel GF₂₅₄ plate R.

Pretreatment Heat at 110 °C for 1 h and allow to cool.

Mobile phase butanol R, ethyl acetate R (25:75 V/V).

Application 10 µL.

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

E. To about 10 mg add about 10 mg of *zinc powder R*, 0.3 mL of *hydrochloric acid R* and 1 mL of *water R*. Heat in a water-bath for 5 min and cool. The solution gives the reaction of primary aromatic amines (2.3.1).

TESTS**Appearance of solution**

The solution is clear (2.2.1) and not more intensely coloured than reference solution Y₅ (2.2.2, Method II).

Dissolve 1.0 g in acetone R and dilute to 20 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29). Protect solutions from light.

Test solution Dissolve 10.0 mg of the substance to be examined in 10.0 mL of methanol R and dilute to 100.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b) Dissolve 5.0 mg of tinidazole impurity A CRS and 5.0 mg of tinidazole impurity B CRS in 10.0 mL of methanol R and dilute to 100.0 mL with the mobile phase. Dilute 2.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (c) Dilute 1.0 mL of reference solution (b) to 50.0 mL with the mobile phase.

Column:

— size: $l = 0.25$ m, $\varnothing = 3.0$ mm;

— stationary phase: octylsilyl silica gel for chromatography R (5 μ m).

Regular column conditioning by subsequent flushing with 50 mL of water R, 100 mL of methanol R, 25 mL of water R and 100 mL of the mobile phase is recommended.

Mobile phase acetonitrile R, methanol R, water R (10:20:70 V/V/V).

Flow rate 0.5 mL/min.

Detection Spectrophotometer at 320 nm.

Injection 20 μ L.

Run time 1.5 times the retention time of tinidazole.

Relative retention With reference to tinidazole (retention time = about 6 min): impurity A = about 0.6; impurity B = about 0.7.

System suitability Reference solution (b):

— resolution: minimum 2.0 between the peaks due to impurities A and B.

Limits:

— impurities A, B: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

— unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— total: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);

— disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 25 mL of anhydrous acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 24.73 mg of C₈H₁₃N₃O₄S.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B.

A. 2-methyl-5-nitro-1H-imidazole,

B. 1-[2-(ethylsulfonyl)ethyl]-2-methyl-4-nitro-1H-imidazole.

Ph Eur

Tinzaparin Sodium

(Ph. Eur. monograph 1271)

$n = 1$ to 25, $R = H$ or SO_3Na , $R' = H$ or SO_3Na or $CO-CH_3$
 $R_2 = H$ and $R_3 = CO_2Na$ or $R_2 = CO_2Na$ and $R_3 = H$

Action and use

Low molecular weight heparin.

Preparation

Tinzaparin Sodium Injection

Ph Eur

DEFINITION

Tinzaparin sodium is the sodium salt of a low-molecular-mass heparin that is obtained by controlled enzymatic depolymerisation of heparin from porcine intestinal mucosa using heparinase from *Flavobacterium heparinum*.

The majority of the components have a 2-O-sulfo-4-ene-pyranosuronic acid structure at the non-reducing end and a 2-N,6-O-disulfo-D-glucosamine structure at the reducing end of their chain.

Tinzaparin sodium complies with the monograph on Low-molecular-mass heparins (0828) with the modifications and additional requirements below.

The mass-average relative molecular mass ranges between 5500 and 7500 with a characteristic value of about 6500.

The degree of sulfatation is 1.8 to 2.5 per disaccharide unit.

The potency is not less than 70 IU and not more than 120 IU of anti-factor Xa activity per milligram calculated with reference to the dried substance. The ratio of the anti-

factor Xa activity to anti-factor IIa activity is between 1.5 and 2.5.

IDENTIFICATION

Carry out identification test A as described in the monograph *Low-molecular-mass heparins (0828)* using *tinzaparin sodium CRS*.

Carry out identification test C as described in the monograph *Low-molecular-mass heparins (0828)*. The following requirements apply.

The mass-average relative molecular mass ranges between 5500 and 7500. The mass percentage of chains lower than 2000 is not more than 10.0 per cent. The mass percentage of chains between 2000 and 8000 ranges between 60.0 and 72.0 per cent. The mass percentage of chains above 8000 ranges between 22.0 and 36.0 per cent.

TESTS

Appearance of solution

Dissolve 1.0 g in 10 mL of *water R*. The solution is clear (2.2.1) and not more intensely coloured than intensity 5 of the range of reference solutions of the most appropriate colour (2.2.2, *Method II*)

Absorbance (2.2.25)

Dissolve 50.0 mg in 100 mL of 0.01 M hydrochloric acid. The specific absorbance, measured at 231 nm and calculated with reference to the dried substance, is 8.0 to 12.5.

Ph Eur

Tioconazole

(Ph. Eur. monograph 2074)

$C_{16}H_{13}Cl_3N_2OS$

387.7

Action and use
Antifungal.

Preparation
Tioconazole Nail Solution

Ph Eur

DEFINITION

1-[(2*RS*)-2-[(2-Chlorothiophen-3-yl)methoxy]-2-(2,4-dichlorophenyl)ethyl]-1*H*-imidazole.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Very slightly soluble in water, very soluble in methylene chloride, freely soluble in alcohol.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison Ph. Eur. reference spectrum of tioconazole.

TESTS

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 2.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b) Dissolve 5 mg of *tioconazole for system suitability CRS* in the mobile phase and dilute to 2.5 mL with the mobile phase.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm,

— stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 μ m) with a specific surface area of 170 m²/g, a pore size of 12 nm and a carbon loading of 10 per cent.

Mobile phase Mix 1 volume of a 1.7 g/L solution of *tetrabutylammonium dihydrogen phosphate R* previously adjusted to pH 7.4 with *dilute ammonia R2* and 3 volumes of *methanol R*.

Flow rate 1 mL/min.

Detection Spectrophotometer at 218 nm.

Injection 20 μ L.

Run time 2.5 times the retention time of *tioconazole*.

System suitability Reference solution (b):

— resolution: minimum 1.0 between the peaks due to impurity B and impurity C (locate impurities A, B and C by comparison with the chromatogram provided with *tioconazole for system suitability CRS*).

Limits:

- correction factors: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 1.7; impurity C = 1.7.
- impurities A, B, C: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent),
- unspecified impurities: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent),
- total: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent),
- disregard limit: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Water (2.5.12)

Maximum 0.5 per cent, determined on 1.00 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 38.77 mg of $C_{16}H_{13}Cl_3N_2OS$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) D.

A. 1-[(2RS)-2-(2,4-dichlorophenyl)-2-((thiophen-3-yl)methoxy)ethyl]-1H-imidazole,

B. 1-[(2RS)-2-(2,4-dichlorophenyl)-2-((2,5-dichlorothiophen-3-yl)methoxy)ethyl]-1H-imidazole,

C. 1-[(2RS)-2-((5-bromo-2-chlorothiophen-3-yl)methoxy)-2-(2,4-dichlorophenyl)ethyl]-1H-imidazole,

D. (1RS)-1-(2,4-dichlorophenyl)-2-(1H-imidazol-1-yl)ethanol.

Ph Eur

TioguanineC₅H₅N₅S

167.2

154-42-7

Action and use

Purine analogue; cytostatic.

Preparation

Tioguanine Tablets

DEFINITION

Tioguanine is 2-aminopurine-6(1H)-thione. It contains not less than 96.0% and not more than 102.0% of C₅H₅N₅S, calculated with reference to the dried substance.

CHARACTERISTICS

A pale yellow, crystalline powder.

Practically insoluble in *water* and in *ethanol* (96%).

It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

Heat a suitable quantity at 105° at a pressure not exceeding 0.7 kPa for 5 hours. The *infrared absorption spectrum* of the residue, Appendix II A, is concordant with the *reference spectrum* of tioguanine (RS 340).

TESTS**Phosphate**

To 0.5 g add 2 mL of 5M *sulfuric acid* and heat on a water bath for 5 minutes. Add, dropwise, 5 mL of *nitric acid* and continue heating until a clear solution is obtained. Cool and add 10 mL of *water* and 0.75 mL of a solution prepared by dissolving 8.3 g of *ammonium molybdate* in 40 mL of *water* and adding 33 mL of 5M *sulfuric acid* and sufficient *water* to produce 100 mL. Add 1.0 mL of *strong aminohydroxynaphthalenesulfonic acid solution*, mix and dilute to 25 mL with *water*. Measure the *absorbance* of the resulting solution at 820 nm, Appendix II B, using in the reference cell a solution prepared in the same manner but omitting the substance being examined. The absorbance is not more than that obtained by treating 1.5 mL of *phosphate standard solution* (100 ppm PO₄) in the same manner, beginning at the words 'add 10 mL of *water* ...'.

Free sulfurDissolve 50 mg in 5 mL of 1M *sodium hydroxide*.The solution is *clear*, Appendix IV A.**Related substances**

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions.

- (1) Dissolve 40 mg of the substance being examined in 100 mL of 0.01M *sodium hydroxide* and dilute 1 volume of the resulting solution to 2 volumes with the mobile phase.
- (2) Dilute 1 volume of solution (1) to 100 volumes with a mixture of 1 volume of 0.01M *sodium hydroxide* and 9 volumes of the mobile phase. Further dilute 1 volume of the resulting solution to 5 volumes with the same solvent mixture.
- (3) Dissolve 12 mg of *guanine BPCRS* in 100 mL of 0.01M *sodium hydroxide* and dilute 1 volume of the resulting solution to 20 volumes with the mobile phase.

(4) Dissolve 40 mg each of *tioguanine BPCRS* and *guanine BPCRS* in 100 mL of 0.01M *sodium hydroxide* and dilute 1 volume of the resulting solution to 10 volumes with the mobile phase.

CHROMATOGRAPHIC CONDITIONS

- (a) Use a stainless steel column (5 cm × 4.6 mm) packed with *octadecylsilyl silica gel for chromatography* (5 μm) (Waters Atlantis dC18 is suitable).
 (b) Use isocratic elution and the mobile phase described below.
 (c) Use a flow rate of 2 mL per minute.
 (d) Use an ambient column temperature.
 (e) Use a detection wavelength of 248 nm.
 (f) Inject 10 μL of each solution.

MOBILE PHASE

0.05M *anhydrous sodium dihydrogen orthophosphate* adjusted to pH 3.0 with *orthophosphoric acid*.

SYSTEM SUITABILITY

The test is not valid unless, in the chromatogram obtained with solution (4), the *resolution factor* between the peaks due to *tioguanine* and *guanine* is at least 3.0.

LIMITS

In the chromatogram obtained with solution (1):

the area of any peak corresponding to *guanine* is not greater than the area of the principal peak in the chromatogram obtained with solution (3) (3%);

the area of any other *secondary peak* is not greater than the area of the principal peak in the chromatogram obtained with solution (2) (0.2%);

the sum of the areas of any other *secondary peaks* is not greater than 2.5 times the area of the principal peak in the chromatogram obtained with solution (2) (0.5%).

Disregard any peak with an area less than 0.25 times the area of the principal peak in the chromatogram obtained with solution (2) (0.05%).

Loss on drying

When dried at 105° at a pressure not exceeding 0.7 kPa for 5 hours, loses not more than 1.0% of its weight. Use 1 g.

ASSAY

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions.

- (1) Dissolve 40 mg of the substance being examined in 100 mL of 0.01M *sodium hydroxide* and dilute 1 volume of the resulting solution to 10 volumes with the mobile phase.
 (2) Dissolve 40 mg of *tioguanine BPCRS* in 100 mL of 0.01M *sodium hydroxide* and dilute 1 volume of this solution to 10 volumes with the mobile phase.
 (3) Dissolve 40 mg each of *tioguanine BPCRS* and *guanine BPCRS* in 100 mL of 0.01M *sodium hydroxide* and dilute 1 volume of the resulting solution to 10 volumes with the mobile phase.

CHROMATOGRAPHIC CONDITIONS

The chromatographic conditions described under Related substances may be used.

SYSTEM SUITABILITY

The test is not valid unless, in the chromatogram obtained with solution (3), the *resolution factor* between the peaks due to *tioguanine* and *guanine* is at least 3.0.

DETERMINATION OF CONTENT

Calculate the content of C₅H₅N₅S in the substance being examined from the chromatograms obtained and using the declared content of C₅H₅N₅S in *tioguanine BPCRS*.

Tiotropium Bromide Monohydrate

(Ph. Eur. monograph 2420)

C₁₉H₂₂BrNO₄S₂·H₂O

490.4

411207-31-3

Action and use

Anticholinergic (antimuscarinic) bronchodilator.

Ph Eur

DEFINITION

(1*R*,2*R*,4*S*,5*S*,7*S*)-7-[[Hydroxy[di(thiophen-2-yl)acetyl]oxy]-9,9-dimethyl-3-oxa-9-azatricyclo[3.3.1.0^{2,4}]nonan-9-ium bromide monohydrate.

Content

98.5 per cent to 101.5 per cent (anhydrous substance).

CHARACTERS

Appearance

White or yellowish-white powder or crystals.

Solubility

Sparingly soluble in water, soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison *tiotropium bromide monohydrate CRS*.

B. It gives reaction (a) of bromides (2.3.1).

TESTS

Appearance of solution

The solution is clear (2.2.1) and not more intensely coloured than reference solution Y₆ (2.2.2, *Method II*).

Dissolve 0.2 g in *water R* and dilute to 20 mL with the same solvent.

Impurities G and H

Thin-layer chromatography (2.2.27). Prepare the solutions immediately before use.

Solvent mixture Dilute 1 volume of a 103 g/L solution of *hydrochloric acid R* to 100 volumes with *methanol R*.

Test solution Dissolve 0.40 g of the substance to be examined in the solvent mixture and dilute to 10 mL with the solvent mixture.

Reference solution (a) Dissolve the contents of a vial of *tiotropium impurity mixture CRS* (containing impurities G and H) in 1.0 mL of the solvent mixture.

Reference solution (b) Mix 0.1 mL of the test solution with 0.1 mL of reference solution (a).

Plate TLC silica gel F₂₅₄ plate R (2–10 μm).

Mobile phase *water R*, *anhydrous formic acid R*, *acetonitrile R*, *methylene chloride R* (10:15:35:50 V/V/V/V).

Application 10 µL of the test solution and reference solution (a), and 20 µL of reference solution (b).

Development Over 2/3 of the plate.

Drying In air.

Detection Expose to iodine vapour until the spots are clearly visible (about 15 min); remove the plate and examine immediately.

Retardation factors Impurity G = about 0.33; impurity H = about 0.38; tiotropium = about 0.64.

System suitability Reference solution (b):
— the chromatogram shows 3 clearly separated spots.

Limits:

- **impurity G:** any spot due to impurity G is not more intense than the corresponding spot in the chromatogram obtained with reference solution (a) (0.1 per cent);
- **impurity H:** any spot due to impurity H is not more intense than the corresponding spot in the chromatogram obtained with reference solution (a) (0.1 per cent).

Related substances

Liquid chromatography (2.2.29). Prepare the solutions protected from light.

Test solution Dissolve 50.0 mg of the substance to be examined in mobile phase B and dilute to 25.0 mL with mobile phase B.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase B. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase B.

Reference solution (b) Dissolve 4 mg of tiotropium for system suitability 1 CRS (containing impurity C) in 2.0 mL of mobile phase B.

Column:

- **size:** l = 0.15 m, Ø = 3.0 mm;
- **stationary phase:** propylsilyl silica gel for chromatography R (3.5 µm);
- **temperature:** 50 °C.

Mobile phase:

- **mobile phase A:** dissolve 1.0 g of sodium methanesulfonate R and 5.0 g of potassium dihydrogen phosphate R in about 980 mL of water R, adjust to pH 3.0 with dilute phosphoric acid R and dilute to 1000 mL with water R;
- **mobile phase B:** methanol R1, acetonitrile for chromatography R, mobile phase A (10:40:50 V/V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 3	90	10
3 - 17	90 → 80	10 → 20
17 - 28	80 → 25	20 → 75
28 - 30	25	75

Flow rate 1.2 mL/min.

Detection Spectrophotometer at 240 nm.

Injection 5 µL.

Identification of impurities Use the chromatogram supplied with tiotropium for system suitability 1 CRS and the chromatogram obtained with reference solution (b) to identify the peak due to impurity C.

Relative retention With reference to tiotropium (retention time = about 15 min): impurity C = about 1.2.

System suitability Reference solution (b):

- **resolution:** minimum 2.4 between the peaks due to tiotropium and impurity C.

Limits:

- **unspecified impurities:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- **total:** not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- **disregard limit:** 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Water (2.5.12)

2.5 per cent to 4.0 per cent, determined on 0.300 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.35 g in 100 mL of water R. Add 10 mL of dilute nitric acid R2. Titrate with 0.1 M silver nitrate, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M silver nitrate is equivalent to 47.24 mg of C₁₉H₂₂BrNO₄S₂.

IMPURITIES

Specified impurities G, H.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, C, E, F.

Protective; excipient.

Preparation
Titanium Ointment

Ph Eur

DEFINITION

Content

98.0 per cent to 100.5 per cent.

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water. It does not dissolve in dilute mineral acids but dissolves slowly in hot concentrated sulfuric acid.

IDENTIFICATION

A. When strongly heated, it becomes pale yellow; the colour disappears on cooling.

B. To 5 mL of solution S (see Tests) add 0.1 mL of *strong hydrogen peroxide solution R*. An orange-red colour appears.

C. To 5 mL of solution S add 0.5 g of *zinc R* in granules. After 45 min, the mixture has a violet-blue colour.

TESTS

Solution S

Mix 0.500 g (*m* g) with 5 g of *anhydrous sodium sulfate R* in a 300 mL long-necked combustion flask. Add 10 mL of *water R* and mix. Add 10 mL of *sulfuric acid R* and boil vigorously, with the usual precautions, until a clear solution is obtained. Cool, add slowly a cooled mixture of 30 mL of *water R* and 10 mL of *sulfuric acid R*, cool again and dilute to 100.0 mL with *water R*.

Appearance of solution

Solution S is not more opalescent than reference suspension II (2.2.1) and is colourless (2.2.2, *Method II*).

Acidity or alkalinity

Shake 5.0 g with 50 mL of *carbon dioxide-free water R* for 5 min. Centrifuge or filter until a clear solution is obtained. To 10 mL of the solution add 0.1 mL of *bromothymol blue solution R1*. Not more than 1.0 mL of 0.01 *M* *hydrochloric acid* or 0.01 *M* *sodium hydroxide* is required to change the colour of the indicator.

Water-soluble substances

Maximum 0.5 per cent.

To 10.0 g add a solution of 0.5 g of *ammonium sulfate R* in 150 mL of *water R* and boil for 5 min. Cool, dilute to 200 mL with *water R* and filter until a clear solution is obtained. Evaporate 100 mL of the solution to dryness in a tared evaporating dish and ignite. The residue weighs a maximum of 25 mg.

Elemental impurities

Any method that fulfils the requirements of general chapter 2.4.20. *Determination of elemental impurities* may be used.

Element	Maximum content (ppm)
Antimony	2
Arsenic	1
Barium	20
Lead	5

Iron

Maximum 200 ppm.

To 8 mL of solution S add 4 mL of *water R*. Mix and add 0.05 mL of *bromine water R*. Allow to stand for 5 min and remove the excess of bromine with a current of air. Add 3 mL of *potassium thiocyanate solution R*. Any colour in the solution is not more intense than that in a standard prepared at the same time in the same manner using a mixture of 4 mL of *iron standard solution (2 ppm Fe) R* and 8 mL of a 200 g/L solution of *sulfuric acid R*.

ASSAY

To 300 g of *zinc R* in granules (710) (2.1.4) add 300 mL of a 20 g/L solution of *mercuric nitrate R* and 2 mL of *nitric acid R*, shake for 10 min and wash with *water R*. Pack the amalgamated zinc into a glass tube about 400 mm long and about 20 mm in diameter fitted with a tap and a filter plate. Pass through the column 100 mL of *dilute sulfuric acid R* followed by 100 mL of *water R*, making sure that the amalgam is always covered with liquid. Pass slowly at a rate of about 3 mL/min through the column a mixture of 100 mL of *dilute sulfuric acid R* and 100 mL of *water R* followed by 100 mL of *water R*. Collect the eluate in a 500 mL conical flask containing 50.0 mL of a 150 g/L solution of *ferric ammonium sulfate R* in a mixture of 1 volume of *sulfuric acid R* and 3 volumes of *water R*. Add 0.1 mL of *ferroin R* and titrate immediately with 0.1 *M* *ammonium and cerium nitrate* until a greenish colour is obtained (*n*₁ mL). Pass slowly at a rate of about 3 mL/min through the column a mixture of 50 mL of *dilute sulfuric acid R* and 50 mL of *water R*, followed by 20.0 mL of solution S, a mixture of 50 mL of *dilute sulfuric acid R* and 50 mL of *water R* and finally 100 mL of *water R*. Collect the eluate in a 500 mL conical flask containing 50.0 mL of a 150 g/L solution of *ferric ammonium sulfate R* in a mixture of 1 volume of *sulfuric acid R* and 3 volumes of *water R*. Rinse the lower end of the column with *water R*, add 0.1 mL of *ferroin R* and titrate immediately with 0.1 *M* *ammonium and cerium nitrate* until a greenish colour is obtained (*n*₂ mL).

Calculate the percentage content of TiO_2 using the following expression:

$$\frac{3.99 \times (n_2 - n_1)}{m}$$

m = mass of the substance to be examined used for the preparation of solution S, in grams.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristic may be relevant for titanium dioxide used as opacifier in solid oral dosage forms and in preparations for cutaneous application.

DEFINITION

5-Chloro-*N*-(4,5-dihydro-1*H*-imidazol-2-yl)-2,1,3-benzothiadiazol-4-amine hydrochloride.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or yellowish-white, crystalline powder.

Solubility

Soluble in water, very slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison tizanidine hydrochloride CRS.

B. Solution S (see Tests) gives reaction (a) of chlorides (2.3.1).

TESTS

Solution S

Dissolve 0.5 g in carbon dioxide-free water R and dilute to 50 mL with the same solvent.

pH (2.2.3)

3.7 to 5.0 for solution S.

Impurity H

Thin-layer chromatography (2.2.27).

Test solution Dissolve 0.200 g of the substance to be examined in methanol R and dilute to 5.0 mL with the same solvent.

Reference solution Dissolve 8.0 mg of ethylenediamine R (impurity H) in methanol R and dilute to 100.0 mL with the same solvent.

Plate TLC cellulose plate R.

Mobile phase glacial acetic acid R, water R, methanol R (1:25:75 V/V/V).

Application 5 µL.

Development Over 1/2 of the plate.

Drying In a current of cold air.

Detection Spray with a mixture of 15 volumes of a 20 g/L solution of ninhydrin R in glacial acetic acid R and 85 volumes of butanol R, then heat at 100 °C for 5 min.

Relative retention with reference to tizanidine (R_F = about 0.8): impurity H = about 0.3.

Limit:

— impurity H: any spot due to impurity H is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.2 per cent).

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 30.0 mg of the substance to be examined in mobile phase A, using sonication if necessary, and dilute to 25.0 mL with mobile phase A. Dilute 5.0 mL of the solution to 50.0 mL with mobile phase A.

Reference solution (a) Dissolve 3 mg of tizanidine impurity B CRS in mobile phase A and dilute to 25.0 mL with mobile phase A. Dilute 1.0 mL of the solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with the test solution.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

Reference solution (c) Dissolve 30.0 mg of tizanidine hydrochloride CRS in mobile phase A, using sonication if necessary, and dilute to 25.0 mL with mobile phase A. Dilute 5.0 mL of the solution to 50.0 mL with mobile phase A.

Column:

— size: $l = 0.15$ m, $\varnothing = 4.6$ mm;

— stationary phase: end-capped octadecylsilyl silica gel for chromatography R (3.5 µm);

— temperature: 50 °C.

Mobile phase:

— mobile phase A: mix 18 volumes of acetonitrile R1 and 82 volumes of a 3.86 g/L solution of sodium pentanesulfonate monohydrate R previously adjusted to pH 3.0 with phosphoric acid R;

— mobile phase B: mix 20 volumes of a 3.86 g/L solution of sodium pentanesulfonate monohydrate R previously adjusted to pH 3.0 with phosphoric acid R and 80 volumes of acetonitrile R1;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 15	100	0
15 - 25	100 → 0	0 → 100
25 - 27	0	100

Flow rate 0.6 mL/min.

Detection Spectrophotometer at 230 nm.

Injection 10 µL of the test solution and reference solutions (a) and (b).

Identification of impurities Use the chromatogram obtained with reference solution (a) to identify the peak due to impurity B.

Relative retention With reference to tizanidine (retention time = about 6 min): impurity B = about 1.3.

System suitability Reference solution (a):

— resolution: minimum 4.0 between the peaks due to tizanidine and impurity B.

Calculation of percentage contents:

— for each impurity, use the concentration of tizanidine hydrochloride in reference solution (b).

Limits:

- unspecified impurities: for each impurity, maximum 0.10 per cent;
- total: maximum 0.2 per cent;
- reporting threshold: 0.05 per cent.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (c).

Calculate the percentage content of C₉H₉Cl₂N₅S taking into account the assigned content of tizanidine hydrochloride CRS.

IMPURITIES

Specified impurities H.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, B, C, D, E, F, G, I.

A. N-(4,5-dihydro-1H-imidazol-2-yl)-2,1,3-benzothiadiazol-4-amine,

B. N-(5-chloro-2,1,3-benzothiadiazol-4-yl)thiourea,

C. 1,1'-ethane-1,2-diylbis[3-(5-chloro-2,1,3-benzothiadiazol-4-yl)guanidine],

D. methyl N-(5-chloro-2,1,3-benzothiadiazol-4-yl)carbamimidiothioate,

E. 5-chloro-2,1,3-benzothiadiazol-4-amine,

F. 1,3-bis(5-chloro-2,1,3-benzothiadiazol-4-yl)-1-(4,5-dihydro-1H-imidazol-2-yl)guanidine,

G. (5-chloro-2,1,3-benzothiadiazol-4-yl)cyanamide,

H. ethane-1,2-diamine (ethylenediamine),

I. 4-methylbenzenesulfonic acid (p-toluenesulfonic acid).

Ph Eur

Tobramycin

(Ph. Eur. monograph 0645)

$C_{18}H_{37}N_5O_9$

467.5

32986-56-4

Action and use

Aminoglycoside antibacterial.

Preparations

Tobramycin and Dexamethasone Eye Drops, Suspension

Tobramycin Eye Drops

Tobramycin Inhalation Powder, Hard Capsule

Tobramycin Injection

Tobramycin Nebuliser Solution

Ph Eur

DEFINITION

4-O-(3-Amino-3-deoxy- α -D-glucopyranosyl)-2-deoxy-6-O-(2,6-diamino-2,3,6-trideoxy- α -D-ribo-hexopyranosyl)-L-streptamine.

Substance produced by *Streptomyces tenebrarius* or obtained by any other means.

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

PRODUCTION

It is produced by methods of manufacture designed to eliminate or minimise substances lowering blood pressure.

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification: A.

Second identification: B, C.

A. Nuclear magnetic resonance spectrometry (2.2.33).

Preparation 100 g/L solution in deuterium oxide R.

Comparison 100 g/L solution of tobramycin CRS in deuterium oxide R.

B. Thin-layer chromatography (2.2.27).

Test solution Dissolve 20 mg of the substance to be examined in water R and dilute to 5 mL with the same solvent.

Reference solution (a) Dissolve 20 mg of tobramycin CRS in water R and dilute to 5 mL with the same solvent.

Reference solution (b) Dissolve 4 mg of neomycin sulfate CRS and 4 mg of kanamycin monosulfate CRS in 1 mL of reference solution (a).

Plate TLC silica gel plate R.

Mobile phase methylene chloride R, concentrated ammonia R, methanol R (17:33:50 V/V/V).

Application 5 μ L.

Development Over 2/3 of the plate.

Drying In a current of warm air.

Detection Spray with a mixture of equal volumes of a 2 g/L solution of 1,3-dihydroxynaphthalene R in ethanol (96 per cent) R and a 460 g/L solution of sulfuric acid R; heat at 105 °C for 5-10 min.

System suitability The chromatogram obtained with reference solution (b) shows 3 major spots which are clearly separated.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 5 mg in 5 mL of water R. Add 5 mL of a 1 g/L solution of ninhydrin R in ethanol (96 per cent) R and heat in a water-bath for 3 min. A violet-blue colour develops.

TESTS

pH (2.2.3)

9.0 to 11.0.

Dissolve 1.0 g in 10 mL of carbon dioxide-free water R.

Specific optical rotation (2.2.7)

+ 138 to + 148 (anhydrous substance).

Dissolve 1.00 g in water R and dilute to 25.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Test solution (a) Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase.

Test solution (b) Dilute 10.0 mL of test solution (a) to 100.0 mL with the mobile phase.

Reference solution (a) Dissolve 25.0 mg of tobramycin CRS in the mobile phase and dilute to 100.0 mL with the mobile phase.

Reference solution (b) Dilute 1.0 mL of reference solution (a) to 100.0 mL with the mobile phase.

Reference solution (c) Dilute 1.0 mL of reference solution (a) to 50.0 mL with the mobile phase.

Reference solution (d) Dissolve 10.0 mg of kanamycin B sulfate CRS in 20.0 mL of the mobile phase. To 1.0 mL of this solution, add 2.0 mL of reference solution (a) and dilute to 10.0 mL with the mobile phase.

Reference solution (e) Dilute 10.0 mL of reference solution (a) to 25.0 mL with the mobile phase.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: styrene-divinylbenzene copolymer R (8 μ m) with a pore size of 100 nm;

— temperature: 55 °C.

Mobile phase Mixture prepared with carbon dioxide-free water R containing 52 g/L of anhydrous sodium sulfate R, 1.5 g/L of sodium octanesulfonate R, 3 mL/L of tetrahydrofuran R stabilised with butylhydroxytoluene R, and 50 mL/L of 0.2 M potassium dihydrogen phosphate R previously adjusted to pH 3.0 with dilute phosphoric acid R. Degas.

Flow rate 1.0 mL/min.

Post-column solution carbonate-free sodium hydroxide solution R diluted 25-fold with carbon dioxide-free water R, which is added pulselessly to the column effluent using a 375 μ L polymeric mixing coil.

Flow rate 0.3 mL/min.

Detection Pulsed amperometric detector or equivalent with a gold working electrode, a silver-silver chloride reference electrode and a stainless steel auxiliary electrode which is the cell body, held at respectively +0.05 V detection, +0.75 V oxidation and -0.15 V reduction potentials, with pulse durations according to the instrument used. The temperature of the detector is set at 35 °C.

NOTE to prevent problems due to salt precipitation, the electrochemical cell can be flushed with water R overnight.

Injection 20 μ L using a refrigerated injector (4-8 °C); inject test solution (a) and reference solutions (b), (c) and (d).

Run time 1.5 times the retention time of tobramycin.

Relative retention With reference to tobramycin (retention time = about 18 min): impurity C = about 0.35; impurity B = about 0.40, impurity A = about 0.70.

System suitability:

- *resolution:* minimum 3.0 between the peaks due to impurity A and to tobramycin in the chromatogram obtained with reference solution (d); if necessary, adjust the concentration of sodium octanesulfonate in the mobile phase;
- *signal-to-noise ratio:* minimum 10 for the principal peak in the chromatogram obtained with reference solution (b).

Limits:

- *any impurity:* not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent) and not more than 1 such peak has an area greater than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
- *total:* not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (1.5 per cent);
- *disregard limit:* the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent).

2-Methyl-1-propanol (2.4.24, System B)

Maximum 1.0 per cent *m/m*.

Water (2.5.12)

Maximum 8.0 per cent, determined on 0.30 g.

Sulfated ash (2.4.14)

Maximum 0.3 per cent, determined on 1.0 g.

Bacterial endotoxins (2.6.14)

Less than 2.0 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modifications.

Injection Test solution (b) and reference solution (e).

Calculate the percentage content of tobramycin.

STORAGE

If the substance is sterile, store in a sterile, airtight, tamper-evident container.

IMPURITIES

A. 4-O-(3-amino-3-deoxy- α -D-glucopyranosyl)-2-deoxy-6-O-(2,6-diamino-2,6-dideoxy- α -D-glucopyranosyl)-L-streptomine (kanamycin B),

B. 2-deoxy-4-O-(2,6-diamino-2,3,6-trideoxy- α -D-ribohexopyranosyl)-D-streptomine (nebramine),

C. 2-deoxy-4-O-(2,6-diamino-2,6-dideoxy- α -D-glucopyranosyl)-D-streptomine (neamine).

Ph Eur

Tobramycin Sulfate

($C_{18}H_{37}N_5O_9$)₂·5H₂SO₄ 1425.42

79645-27-5

Action and use
Aminoglycoside antibacterial.

Preparation
Tobramycin Oral Solution

DEFINITION

4-O-(3-Amino-3-deoxy- α -D-glucopyranosyl)-2-deoxy-6-O-(2,6-diamino-2,3,6-trideoxy- α -D-ribo-hexopyranosyl)-L-streptomycin sulfate.

Substance produced by *Streptomyces tenebrarius* or obtained by any other means.

It contains not less than 97.0% and not more than 102.0% of $(C_{18}H_{37}N_5O_9)_2 \cdot 5H_2SO_4$, calculated with reference to the anhydrous substance.

CHARACTERISTICS

A white to off-white powder.

Soluble in *water*.

IDENTIFICATION

A. Carry out the method for *thin-layer chromatography*, Appendix III A, using the following solutions.

(1) Dissolve 90 mg of the substance being examined in sufficient *water* to produce 10 mL.

(2) 0.6% w/v of *tobramycin BPCRS* in *water*.

(3) 0.4% w/v of each of *kanamycin monosulfate BPCRS*, *neomycin sulfate EPCRS* and *tobramycin BPCRS* in *water*.

CHROMATOGRAPHIC CONDITIONS

(a) Use as the coating *silica gel* (Merck silica gel 60 plates are suitable).

(b) Use the mobile phase as described below.

(c) Apply 5 μ L of each solution.

(d) Develop the plate to 15 cm.

(e) After removal of the plate, dry it in a current of warm air, spray with a mixture of equal volumes of a 0.2% w/v solution of *naphthalene-1,3-diol* in *ethanol* (96%) and a 46% w/v solution of *sulfuric acid* and heat at 105° for 5 to 10 minutes.

MOBILE PHASE

17 volumes of *dichloromethane*, 33 volumes of 13.5M *ammonia* and 50 volumes of *methanol*.

SYSTEM SUITABILITY

The test is not valid unless the chromatogram obtained with solution (3) shows three clearly separated principal spots.

CONFIRMATION

The principal spot in the chromatogram obtained with solution (1) corresponds in position, colour and size to that in the chromatogram obtained with solution (2).

B. In the Assay, the chromatogram obtained with solution (1) shows a peak with the same retention time as that of the principal peak in the chromatogram obtained with solution (2).

C. Yields the reactions characteristic of *sulfates*, Appendix VI.

TESTS**Acidity or alkalinity**

pH of a 0.4% w/v solution, 6.0 to 8.0, Appendix V L.

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using the following solutions.

(1) Dissolve 50 mg of the substance being examined in 7 mL of *water*, adjust the pH to 5.5 with 0.5M *sulfuric acid* and add sufficient *water* to produce 10 mL.

(2) Dilute 1 volume of solution (1) to 100 volumes with *water*.

CHROMATOGRAPHIC CONDITIONS

(a) Use as the coating *silica gel for chromatography*.

(b) Use the mobile phase as described below.

(c) Apply 1 μ L of each solution.

(d) Develop the plate to 15 cm.

(e) After removal of the plate, allow it to dry in air, heat at 110° for 10 minutes and spray with a 20% v/v solution of *sodium hypochlorite solution* in *water*. Dry the plate in air and then spray with a solution prepared in the following manner. Dissolve 1.1 g of *potassium iodide* in 60 mL of *water*, boil for 15 minutes and slowly add a suspension containing 1.5 g of *soluble starch* in 10 mL of *water*. Add 25 mL of *water*, boil for 10 minutes, allow to cool and dilute to 100 mL with *water*.

MOBILE PHASE

20 volumes of *water*, 30 volumes of *ethanol* and 50 volumes of a 29.2% w/v solution of *sodium chloride* in *water*.

LIMITS

In the chromatogram obtained with solution (1):

any *secondary spot* is not more intense than the principal spot in the chromatogram obtained with solution (2) (1%).

Sulfated ash

Not more than 1% w/w, Appendix IX A, when determined by the following method. Moisten the charred residue with 2 mL of *nitric acid* and 5 drops of *sulfuric acid*.

Water

Not more than 2.0% w/w, Appendix IX C.

ASSAY

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions. Derivatise solutions (1), (2) and (4) prior to analysis.

(1) Dissolve 30 mg of the substance being examined in sufficient *water* to produce 100 mL.

(2) Add 1 mL of 0.5M *sulfuric acid* to 50 mg of *tobramycin BPCRS*, dissolve in *water*, add sufficient *water* to produce 50 mL and mix. Dilute 1 volume of this solution to 5 volumes with *water*.

(3) Dilute 1 volume of a 0.024% w/v solution of *1-naphtholbenzein* in *acetonitrile* to 5 volumes with derivatised solution (2).

(4) *water* (blank solution).

Derivatise solutions (1), (2) and (4) using the following method. The solutions should be heated at the same temperature and for the same time as indicated below.

Transfer 4 mL of each solution separately into 50-mL volumetric flasks. To each solution add 10 mL of a 1% w/v solution of *1-fluoro-2,4-dinitrobenzene* in *ethanol* (96%) and 10 mL of a solution prepared by diluting 40 mL of a 1.5% w/v solution of *tris(hydroxymethyl)methylamine* in *water* to 200 mL with *dimethyl sulfoxide* and mixing. Heat in a water bath at 60° for 50 minutes. Remove the flasks, allow to stand for 10 minutes and add *acetonitrile* to about 2 mL below the meniscus. Allow to cool to room temperature and add sufficient *acetonitrile* to produce 50 mL.

CHROMATOGRAPHIC CONDITIONS

(a) Use a stainless steel column (30 cm \times 3.9 mm) packed with *octadecylsilyl silica gel for chromatography* (5 μ m) (Nucleosil 5 C18 is suitable).

(b) Use isocratic elution and the mobile phase described below.

(c) Use a flow rate of 1.2 mL per minute.

(d) Use an ambient column temperature.

(e) Use a detection wavelength of 365 nm.

(f) Inject 20 μ L of each solution.

MOBILE PHASE

Dissolve 2.0 g of *tris(hydroxymethyl)aminomethane* in 800 mL of water, add 20 mL of 0.5M sulfuric acid and sufficient acetonitrile to produce 2000 mL. Allow to cool and filter (using a 0.2- μm , or finer, filter).

When the chromatograms are recorded under the prescribed conditions, the retention of 1-naphtholbenzein relative to tobramycin (retention time, about 20 minutes) is about 0.6.

SYSTEM SUITABILITY

The test is not valid unless, in the chromatogram obtained with solution (3), the resolution between the peaks due to 1-naphtholbenzein and tobramycin is at least 4.0.

DETERMINATION OF CONTENT

Calculate the content of $(\text{C}_{18}\text{H}_{37}\text{N}_5\text{O}_9)_2 \cdot 5\text{H}_2\text{SO}_4$ in the substance being examined using the declared content of $\text{C}_{18}\text{H}_{37}\text{N}_5\text{O}_9$ in tobramycin BPCRS. Each mg of $\text{C}_{18}\text{H}_{37}\text{N}_5\text{O}_9$ is equivalent to 1.5245 mg of $(\text{C}_{18}\text{H}_{37}\text{N}_5\text{O}_9)_2 \cdot 5\text{H}_2\text{SO}_4$.

STORAGE

Tobramycin Sulfate should be stored in an airtight container.

all-*rac*-Alpha-Tocopherol

(all-*rac*- α -Tocopherol, Ph. Eur. monograph 0692)

$\text{C}_{29}\text{H}_{50}\text{O}_2$

430.7

10191-41-0

Action and use

Used in prevention and treatment of vitamin E deficiencies.

Ph Eur

DEFINITION

All-*rac*-2,5,7,8-Tetramethyl-2-(4,8,12-trimethyltridecyl)-3,4-dihydro-2H-1-benzopyran-6-ol.

Content

96.0 per cent to 102.0 per cent.

CHARACTERS

Appearance

Clear, colourless or yellowish-brown, viscous, oily liquid.

Solubility

Practically insoluble in water, freely soluble in acetone, in anhydrous ethanol, in methylene chloride and in fatty oils.

IDENTIFICATION

First identification: A, B.

Second identification: A, C.

A. Optical rotation (2.2.7): -0.01° to $+0.01^\circ$.

Dissolve 2.50 g in anhydrous ethanol R and dilute to 25.0 mL with the same solvent.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison α -tocopherol CRS.

C. Thin-layer chromatography (2.2.27).

Test solution Dissolve 10 mg of the substance to be examined in 2 mL of cyclohexane R.

Reference solution Dissolve 10 mg of α -tocopherol CRS in 2 mL of cyclohexane R.

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase ether R, cyclohexane R (20:80 V/V).

Application 10 μL .

Development Over 2/3 of the plate.

Drying In a current of air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Related substances

Gas chromatography (2.2.28): use the normalisation procedure.

Internal standard solution Dissolve 1.0 g of squalane R in cyclohexane R and dilute to 100.0 mL with the same solvent.

Test solution (a) Dissolve 0.100 g of the substance to be examined in 10.0 mL of the internal standard solution.

Test solution (b) Dissolve 0.100 g of the substance to be examined in 10 mL of cyclohexane R.

Reference solution (a) Dissolve 0.100 g of α -tocopherol CRS in 10.0 mL of the internal standard solution.

Reference solution (b) Dissolve 10 mg of the substance to be examined and 10 mg of α -tocopheryl acetate R in cyclohexane R and dilute to 100.0 mL with the same solvent.

Reference solution (c) Dissolve 10 mg of all-*rac*- α -tocopherol for peak identification CRS (containing impurities A and B) in cyclohexane R and dilute to 1 mL with the same solvent.

Reference solution (d) Dilute 1.0 mL of test solution (b) to 100.0 mL with cyclohexane R. Dilute 1.0 mL of this solution to 10.0 mL with cyclohexane R.

Column:

— material: fused silica;

— size: $l = 30 \text{ m}$, $\varnothing = 0.25 \text{ mm}$;

— stationary phase: methylpolysiloxane R (film thickness 0.25 μm).

Carrier gas helium for chromatography R.

Flow rate 1 mL/min.

Split ratio 1:100.

Temperature:

— column: 280 $^\circ\text{C}$;

— injection port and detector: 290 $^\circ\text{C}$.

Detection Flame ionisation.

Injection 1 μL of test solution (b) and reference solutions (b), (c) and (d).

Run time Twice the retention time of all-*rac*- α -tocopherol.

Identification of impurities Use the chromatogram supplied with all-*rac*- α -tocopherol for peak identification CRS and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A and B.

Relative retention With reference to all-*rac*- α -tocopherol (retention time = about 9 min): squalane = about 0.5; impurity A = about 0.7; impurity B = about 0.8; impurities C and D = about 1.05 (eluting immediately after the all-*rac*- α -tocopherol peak).

System suitability Reference solution (b):

— resolution: minimum 3.5 between the peaks due to all-*rac*- α -tocopherol and α -tocopheryl acetate.

Limits:

- *impurity A*: maximum 0.5 per cent;
- *impurity B*: maximum 1.5 per cent;
- *sum of impurities C and D*: maximum 1.0 per cent;
- *any other impurity*: for each impurity, maximum 0.25 per cent;
- *total*: maximum 2.5 per cent;
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (d) (0.1 per cent).

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use* (2034) do not apply.

ASSAY

Gas chromatography (2.2.28) as described in the test for related substances with the following modifications.

Injection Test solution (a) and reference solution (a).

System suitability Reference solution (a):

- *symmetry factor*: minimum 0.6 for the principal peak.

Calculate the percentage content of $C_{29}H_{50}O_2$ from the declared content of α -tocopherol CRS.

STORAGE

Under an inert gas, protected from light.

IMPURITIES

Specified impurities A, B, C, D.

- A. all-*rac-trans*-2,3,4,6,7-pentamethyl-2-(4,8,12-trimethyltridecyl)-2,3-dihydrobenzofuran-5-ol,

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 15	280
Injection port		290
Detector		290

Detection Flame ionisation.

Injection 1 μ L of test solution (b) and reference solution (b).

System suitability Reference solution (b):

- **resolution:** minimum 3.5 between the peaks due to α -tocopherol and α -tocopheryl acetate.

Limits:

- **total:** maximum 4.0 per cent;
- **disregard limit:** 0.1 per cent.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

ASSAY

Gas chromatography (2.2.28) as described in the test for related substances with the following modifications.

Injection Test solution (a) and reference solution (a).

System suitability Reference solution (a):

- **symmetry factor:** minimum 0.6 for the principal peak.

Calculate the percentage content of $C_{29}H_{50}O_2$ taking into account the assigned content of α -tocopherol CRS.

STORAGE

Under an inert gas, protected from light.

IMPURITIES

A. (2R)-2,8-dimethyl-2-[(4R,8R)-4,8,12-trimethyltridecyl]-3,4-dihydro-2H-1-benzopyran-6-ol (RRR- δ -tocopherol),

B. (2R)-2,5,8-trimethyl-2-[(4R,8R)-4,8,12-trimethyltridecyl]-3,4-dihydro-2H-1-benzopyran-6-ol (RRR- β -tocopherol),

C. (2R)-2,7,8-trimethyl-2-[(4R,8R)-4,8,12-trimethyltridecyl]-3,4-dihydro-2H-1-benzopyran-6-ol (RRR- γ -tocopherol).

(all-rac- α -Tocopheryl Acetate, Ph. Eur. monograph 0439)

$C_{31}H_{52}O_3$

472.7

7695-91-2

Action and use

Used in prevention and treatment of vitamin E deficiencies.

Ph Eur

DEFINITION

all-rac-2,5,7,8-Tetramethyl-2-(4,8,12-trimethyltridecyl)-3,4-dihydro-2H-1-benzopyran-6-yl acetate.

Content

96.5 per cent to 102.0 per cent.

CHARACTERS

Appearance

Clear, colourless or slightly greenish-yellow, viscous, oily liquid.

Solubility

Practically insoluble in water, freely soluble in acetone, in anhydrous ethanol and in fatty oils.

IDENTIFICATION

First identification: A, B.

Second identification: A, C.

A. Optical rotation (2.2.7): -0.01° to $+0.01^\circ$.

Dissolve 2.50 g in anhydrous ethanol R and dilute to 25.0 mL with the same solvent.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison α -tocopheryl acetate CRS.

C. Thin-layer chromatography (2.2.27).

Test solution Dissolve about 10 mg of the substance to be examined in 2 mL of cyclohexane R.

Reference solution Dissolve about 10 mg of α -tocopheryl acetate CRS in 2 mL of cyclohexane R.

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase ether R, cyclohexane R (20:80 V/V).

Application 10 μ L.

Development Over 2/3 of the plate.

Drying In a current of air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the

principal spot in the chromatogram obtained with the reference solution.

TESTS

Related substances

Gas chromatography (2.2.28): use the normalisation procedure.

Internal standard solution Dissolve 1.0 g of *squalane R* in *cyclohexane R* and dilute to 100.0 mL with the same solvent.

Test solution (a) Dissolve 0.100 g of the substance to be examined in 10.0 mL of the internal standard solution.

Test solution (b) Dissolve 0.100 g of the substance to be examined in 10 mL of *cyclohexane R*.

Reference solution (a) Dissolve 0.100 g of *α-tocopheryl acetate CRS* in 10.0 mL of the internal standard solution.

Reference solution (b) Dissolve 10 mg of the substance to be examined and 10 mg of *α-tocopherol R* in *cyclohexane R* and dilute to 100.0 mL with the same solvent.

Reference solution (c) Dissolve 10 mg of *all-rac-α-tocopheryl acetate for peak identification CRS* (containing impurities A and B) in *cyclohexane R* and dilute to 1 mL with the same solvent.

Reference solution (d) Dilute 1.0 mL of test solution (b) to 100.0 mL with *cyclohexane R*. Dilute 1.0 mL of this solution to 10.0 mL with *cyclohexane R*.

Column:

- *material*: fused silica;
- *size*: $l = 30\text{ m}$, $\varnothing = 0.25\text{ mm}$;
- *stationary phase*: *methylpolysiloxane R* (film thickness 0.25 μm).

Carrier gas helium for chromatography R.

Flow rate 1 mL/min.

Split ratio 1:100.

Temperature:

- *column*: 280 °C;
- *injection port and detector*: 290 °C.

Detection Flame ionisation.

Injection 1 μL of test solution (b) and reference solutions (a), (b), (c) and (d); inject directly onto the column or via a sufficiently inert, glass-lined injection port using an automatic injection device or other reproducible injection method.

Run time Twice the retention time of *all-rac-α-tocopheryl acetate*.

Identification of impurities Use the chromatogram supplied with *all-rac-α-tocopheryl acetate for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A and B.

Relative retention With reference to *all-rac-α-tocopheryl acetate* (retention time = about 15 min):

- squalane* = about 0.4; *impurity A* = about 0.7;
- impurity B* = about 0.8; *impurity C* = about 0.9;
- impurities D and E* = about 1.05 (eluting immediately after the *all-rac-α-tocopheryl acetate* peak).

System suitability:

- *resolution*: minimum 3.5 between the peaks due to *impurity C* and *all-rac-α-tocopheryl acetate* in the chromatogram obtained with reference solution (b);
- in the chromatogram obtained with reference solution (a), the area of the peak due to *impurity C* is not greater than 0.2 per cent of the area of the peak due to *all-rac-α-tocopheryl acetate*.

Limits:

- *impurities A, C*: for each impurity, maximum 0.5 per cent;
- *impurity B*: maximum 1.5 per cent;
- *sum of impurities D and E*: maximum 1.0 per cent;
- *any other impurity*: for each impurity, maximum 0.25 per cent;
- *total*: maximum 2.5 per cent;
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (d) (0.1 per cent).

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

ASSAY

Gas chromatography (2.2.28) as described in the test for related substances with the following modifications.

Injection Test solution (a) and reference solution (a).

System suitability Reference solution (a):

- *symmetry factor*: minimum 0.6 for the principal peak.

Calculate the percentage content of $\text{C}_{31}\text{H}_{52}\text{O}_3$ from the declared content of *α-tocopheryl acetate CRS*.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E.

A. *all-rac-trans-2,3,4,6,7-pentamethyl-2-(4,8,12-trimethyltridecyl)-2,3-dihydrobenzofuran-5-yl acetate*,

B. *all-rac-cis-2,3,4,6,7-pentamethyl-2-(4,8,12-trimethyltridecyl)-2,3-dihydrobenzofuran-5-yl acetate*,

C. *all-rac-2,5,7,8-tetramethyl-2-(4,8,12-trimethyltridecyl)-3,4-dihydro-2H-1-benzopyran-6-ol* (*all-rac-α-tocopherol*),

D. *4-methoxy-2,3,6-trimethyl-5-[(all-RS,E)-3,7,11,15-tetramethylhexadec-2-enyl]phenyl acetate*,

E. (all-*RS*,all-*E*)-2,6,10,14,19,23,27,31-octamethyltriacont-12,14,18-triene.

RRR-Alpha-Tocopheryl Acetate

(RRR- α -Tocopheryl Acetate, Ph. Eur. monograph 1257)

 $C_{51}H_{92}O_2$

472.7

Action and use

Used in prevention and treatment of vitamin E deficiencies.

Ph Eur

DEFINITION

(2*R*)-2,5,7,8-Tetramethyl-2-[(4*R*,8*R*)-4,8,12-trimethyltridecyl]-3,4-dihydro-2*H*-1-benzopyran-6-yl acetate.

Content

95.0 per cent to 101.0 per cent.

CHARACTERS

Appearance

Clear, colourless or slightly greenish-yellow, viscous, oily liquid.

Solubility

Practically insoluble in water, freely soluble in acetone, in anhydrous ethanol and in fatty oils, soluble in ethanol (96 per cent).

IDENTIFICATION

First identification: A, B.

Second identification: A, C.

A. Optical rotation (2.2.7): + 0.25° to + 0.35°.

Dissolve 2.50 g in anhydrous ethanol *R* and dilute to 25.0 mL with the same solvent.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison α -tocopheryl acetate CRS.

C. Thin-layer chromatography (2.2.27).

Test solution (a) Dissolve 10 mg of the substance to be examined in 2 mL of cyclohexane *R*.

Test solution (b) In a ground-glass stoppered tube, dissolve about 10 mg of the substance to be examined in 2 mL of 2.5 M alcoholic sulfuric acid *R*. Heat on a water-bath for 5 min. Cool and add 2 mL of water *R* and 2 mL of cyclohexane *R*. Shake for 1 min. Use the upper layer.

Reference solution (a) Dissolve 10 mg of α -tocopheryl acetate CRS in 2 mL of cyclohexane *R*.

Reference solution (b) Prepare as described for test solution (b), using α -tocopheryl acetate CRS instead of the substance to be examined.

Plate TLC silica gel F₂₅₄ plate *R*.

Mobile phase ether *R*, cyclohexane *R* (20:80 V/V).

Application 10 μ L.

Development Over 2/3 of the plate.

Drying In a current of air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with test solution (a) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a). In the chromatograms obtained with test solution (b) and reference solution (b), there may be 2 spots depending on the degree of hydrolysis: the spot with the higher R_F value is due to α -tocopheryl acetate and corresponds to the spot in the chromatogram obtained with reference solution (a); the spot with the lower R_F value is due to α -tocopherol.

TESTS

Related substances

Gas chromatography (2.2.28): use the normalisation procedure.

Internal standard solution Dissolve 1.0 g of squalane *R* in cyclohexane *R* and dilute to 100.0 mL with the same solvent.

Ph Eur

Alpha Tocopheryl Acetate Concentrate (Powder Form)

(α -Tocopheryl Acetate Concentrate (Powder Form)
Ph. Eur. monograph 0691)

Action and use

Used in prevention and treatment of vitamin E deficiencies.

Ph Eur

DEFINITION

Preparation obtained either by finely dispersing *all-rac- α -Tocopheryl acetate (0439)* in a suitable carrier of suitable quality (for example gelatin, acacia, carbohydrates, lactoproteins or a mixture thereof) or by adsorbing *all-rac- α -Tocopheryl acetate (0439)* on silicic acid of suitable quality.

Content

90.0 per cent to 115.0 per cent of the α -tocopheryl acetate content stated on the label, which is not less than 25 g per 100 g of concentrate.

CHARACTERS**Appearance**

Almost white, yellowish or light brown, small particles.

Solubility

Practically insoluble or swells or forms a dispersion in water, depending on the formulation.

IDENTIFICATION

First identification: B.

Second identification: A.

A. Thin-layer chromatography (2.2.27).

Test solution To a quantity of the preparation to be examined corresponding to 50 mg of α -tocopheryl acetate add 5 mL of 0.01 M hydrochloric acid and treat with ultrasound at 60 °C. Add 5 mL of anhydrous ethanol R and 10 mL of cyclohexane R, shake for 1 min and centrifuge for 5 min. Use the upper layer.

Reference solution Dissolve 50 mg of α -tocopheryl acetate CRS in cyclohexane R and dilute to 10 mL with the same solvent.

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase ether R, cyclohexane R (20:80 V/V).

Application 10 μ L.

Development 3/4 of the plate.

Drying In a current of air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

B. Examine the chromatograms obtained in the assay.

Results:

- the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a);
- in the chromatogram obtained with reference solution (c) no additional principal peak is observed when compared with the chromatogram obtained with the test solution.

ASSAY

Gas chromatography (2.2.28).

Internal standard solution Dissolve 1.0 g of squalane R in cyclohexane R and dilute to 500.0 mL with the same solvent.

Test solution Weigh accurately a quantity of the preparation to be examined corresponding to about 0.100 g of α -tocopheryl acetate into a 250 mL conical flask. Add 20 mL of 1 M hydrochloric acid and sonicate at 70 °C for 20 min. Add 50 mL of anhydrous ethanol R and 50.0 mL of the internal standard solution. Mix thoroughly for 30 min using a magnetic stirrer. Allow the 2 layers to separate and use the upper layer.

Reference solution (a) Dissolve 0.100 g of α -tocopheryl acetate CRS in 50.0 mL of the internal standard solution.

Reference solution (b) Dissolve 10 mg of α -tocopherol R and 10 mg of α -tocopheryl acetate CRS in 5.0 mL of cyclohexane R.

Reference solution (c) Mix 1.0 mL of the test solution and 1.0 mL of reference solution (a).

Column:

— material: fused silica;

— size: $l = 30$ m, $\varnothing = 0.25$ mm;

— stationary phase: methylpolysiloxane R (film thickness 0.25 μ m).

Carrier gas helium for chromatography R.

Flow rate 1 mL/min.

Split ratio 1:100.

Temperature:

— column: 280 °C;

— injection port and detector: 290 °C.

Detection Flame ionisation.

Injection 1 μ L; inject directly onto the column or via a sufficiently inert, glass-lined injection port.

Run time 1.1 times the retention time of α -tocopheryl acetate.

Relative retention With reference to α -tocopheryl acetate (retention time = about 12 min): squalane = about 0.5; α -tocopherol = about 0.9.

System suitability:

- resolution: minimum 3.5 between the peaks due to α -tocopherol and α -tocopheryl acetate in the chromatogram obtained with reference solution (b);
- in the chromatogram obtained with reference solution (a), the area of the peak due to α -tocopherol is not greater than 0.002 times the area of the peak due to α -tocopheryl acetate (0.2 per cent).

Calculate the percentage content of $C_{31}H_{52}O_3$ from the declared content of α -tocopheryl acetate CRS.

STORAGE

In an airtight, well-filled container, protected from light.

LABELLING

The label states the content of α -tocopheryl acetate, expressed in grams per 100 g of concentrate.

Ph Eur

Used in prevention and treatment of vitamin E deficiencies.

Ph Eur

DEFINITION

(2RS)-2,5,7,8-Tetramethyl-2-[(4RS,8RS)-4,8,12-trimethyltridecyl]-3,4-dihydro-2H-1-benzopyran-6-yl hydrogen succinate.

Content

96.0 per cent to 102.0 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, very soluble in methylene chloride, soluble in acetone and in anhydrous ethanol.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Absorbance (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

Comparison RRR- α -tocopheryl hydrogen succinate CRS.

C. Thin-layer chromatography (2.2.27).

Test solution (a) Dissolve 10 mg of the substance to be examined in 2 mL of cyclohexane R.

Test solution (b) In a ground-glass-stoppered tube, dissolve 10 mg of the substance to be examined in 2 mL of 2.5 M alcoholic sulfuric acid R. Heat on a water-bath for 5 min. Cool and add 2 mL of water R and 2 mL of cyclohexane R. Shake for 1 min. Use the upper layer.

Reference solution (a) Dissolve 10 mg of RRR- α -tocopheryl hydrogen succinate CRS in 2 mL of cyclohexane R.

Reference solution (b) Prepare as described for test solution (b), using RRR- α -tocopheryl hydrogen succinate CRS instead of the substance to be examined.

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase glacial acetic acid R, ether R, cyclohexane R (0.2:20:80 V/V/V).

Application 10 μ L.

Development Over a path of 15 cm.

Drying In a current of air.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spot in the chromatogram obtained with test solution (a) is similar in position and size to the principal spot in the chromatogram obtained with reference

solution (a). In the chromatograms obtained with test solution (b) and reference solution (b), there are 2 spots: the spot with the higher R_F value is due to α -tocopherol, the spot with the lower R_F value is due to DL- α -tocopheryl hydrogen succinate and corresponds to the spot obtained with reference solution (a). Depending on the degree of hydrolysis, the lower spot may be weak or even absent.

Detection B Spray with a mixture of 10 volumes of hydrochloric acid R, 40 volumes of a 2.5 g/L solution of ferric chloride R in ethanol (96 per cent) R and 40 volumes of a 10 g/L solution of phenanthroline hydrochloride R in ethanol (96 per cent) R.

Results B In the chromatograms obtained with test solution (b) and reference solution (b), the spot due to α -tocopherol is orange.

D. Optical rotation (see Tests).

TESTS

Optical rotation (2.2.7)

-0.01° to + 0.01°.

Dissolve 2.50 g in anhydrous ethanol R and dilute to 25.0 mL with the same solvent.

Absorbance (2.2.25)

Solution A Dissolve 0.150 g in anhydrous ethanol R and dilute to 100 mL with the same solvent.

Test solution (a) Dilute 10.0 mL of solution A to 100.0 mL with anhydrous ethanol R.

Test solution (b) Dilute 20.0 mL of solution A to 50.0 mL with anhydrous ethanol R.

Absorption maximum At 284 nm for test solution (a).

Absorption minimum At 254 nm for test solution (b).

Specific absorbance at the absorption maximum 35 to 38 for test solution (a).

Specific absorbance at the absorption minimum 6.0 to 8.0 for test solution (b).

Acid value (2.5.1)

101 to 108, determined on 1.00 g.

Free tocopherol

Maximum 1.0 per cent.

Dissolve 0.500 g in 100 mL of 0.25 M alcoholic sulfuric acid R. Add 20 mL of water R and 0.1 mL of a 2.5 g/L solution of diphenylamine R in sulfuric acid R. Titrate with 0.01 M ammonium and cerium sulfate until a blue colour is obtained that persists for at least 5 s. Carry out a blank titration.

1 mL of 0.01 M ammonium and cerium sulfate is equivalent to 2.154 mg of free tocopherol.

Related substances

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Gas chromatography (2.2.28).

Internal standard solution Dissolve 0.300 g of dotriacontane R in hexane R and dilute to 100.0 mL with the same solvent.

Test solution Weigh 30.0 mg of the substance to be examined into a 20 mL vial. Add 2.0 mL of methanol R, 1.0 mL of dimethoxypropane R and 0.1 mL of hydrochloric acid R. Cap tightly and sonicate. Allow to stand in the dark for 1 h ± 5 min. Remove from the dark, uncapped and

evaporate just to dryness on a steam bath with the aid of a stream of nitrogen. Add 10.0 mL of the internal standard solution. Vortex into solution.

Reference solution Weigh 30.0 mg of RRR- α -tocopheryl hydrogen succinate CRS into a 20 mL vial. Add 2.0 mL of methanol R, 1.0 mL of dimethoxypropane R and 0.1 mL of hydrochloric acid R. Cap tightly and sonicate. Allow to stand in the dark for 1 h ± 5 min. Remove from the dark, uncapped and evaporate just to dryness on a steam bath with the aid of a stream of nitrogen. Add 10.0 mL of the internal standard solution. Vortex into solution.

Column:

— **material:** fused silica;

— **size:** $l = 15$ m, $\varnothing = 0.32$ mm;

— **stationary phase:** methylpolysiloxane R (film thickness 0.25 μ m).

Carrier gas helium for chromatography R.

Flow rate 3-6 mL/min.

Split ratio 1:10 to 1:20.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 10	200 → 250
	10 - 20	250
Injection port		300
Detector		330

Detection Flame ionisation.

Injection 1 μ L; inject directly onto the column or via a glass-lined injection port using an automatic injection device or some other reproducible injection method.

System suitability Reference solution:

— **resolution:** minimum 12.0 between the peaks due to dotriacontane and DL- α -tocopheryl hydrogen succinate.

Interference test Dissolve 0.100 g of the substance to be examined in hexane R and dilute to 50.0 mL with the same solvent. Inject 1 μ L of the solution and record the chromatogram. If a peak is detected with the same retention time as that of the peak due to dotriacontane, calculate the area of this peak relative to the peak area of the substance to be examined. If the relative peak area is greater than 0.5 per cent, use the corrected peak area $S'_{D(\text{corr})}$ for the final calculation.

$$S'_{D(\text{corr})} = S'_D - \frac{S_I \times S'_T}{S_{TI}}$$

- S'_D = area of the peak due to dotriacontane in the chromatogram obtained with the test solution;
- S_I = area of the peak with the same retention time as that of the peak due to dotriacontane in the chromatogram obtained in the interference test;
- S'_T = area of the peak due to DL- α -tocopheryl hydrogen succinate in the chromatogram obtained with the test solution;
- S_{TI} = area of the peak due to DL- α -tocopheryl hydrogen succinate in the chromatogram obtained in the interference test.

Measure the areas of the peaks due to RRR- α -tocopheryl hydrogen succinate CRS (S_T) and dotriacontane (S_D) in the chromatogram obtained with the reference solution and the areas of the peaks due to DL- α -tocopheryl hydrogen succinate (S'_T) and dotriacontane (S'_D) in the chromatogram obtained with the test solution.

Determine the response factor (RF) for DL- α -tocopheryl hydrogen succinate from the areas of the peaks due to RRR- α -tocopheryl hydrogen succinate CRS and dotriacontane in the

chromatogram obtained with the reference solution, using the following expression:

$$\frac{S_D \times m_T}{S_T \times m_D}$$

Calculate the percentage content of DL- α -tocopheryl hydrogen succinate using the following expression:

$$\frac{100 \times S'_T \times m_D \times RF}{S'_{D(\text{corr})} \times m}$$

S_D	=	area of the peak due to dotriacontane in the chromatogram obtained with the reference solution;
$S'_{D(\text{corr})}$	=	corrected area of the peak due to dotriacontane in the chromatogram obtained with the test solution;
S_T	=	area of the peak due to RRR- α -tocopheryl hydrogen succinate CRS in the chromatogram obtained with the reference solution;
S'_T	=	area of the peak due to DL- α -tocopheryl hydrogen succinate in the chromatogram obtained with the test solution;
m_D	=	mass of dotriacontane in the test solution and in the reference solution, in milligrams;
m_T	=	mass of RRR- α -tocopheryl hydrogen succinate CRS in the reference solution, in milligrams;
m	=	mass of the substance to be examined in the test solution, in milligrams.

STORAGE

DEFINITION

(2R)-2,5,7,8-Tetramethyl-2-[(4R,8R)-4,8,12-trimethyltridecyl]-3,4-dihydro-2H-1-benzopyran-6-yl hydrogen succinate.

Content

96.0 per cent to 102.0 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, very soluble in methylene chloride, soluble in acetone and in anhydrous ethanol.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Absorbance (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

Comparison RRR- α -tocopheryl hydrogen succinate CRS.

C. Thin-layer chromatography (2.2.27).

Test solution (a) Dissolve 10 mg of the substance to be examined in 2 mL of cyclohexane R.

Test solution (b) In a ground-glass-stoppered tube, dissolve 10 mg of the substance to be examined in 2 mL of 2.5 M alcoholic sulfuric acid R. Heat on a water-bath for 5 min. Cool and add 2 mL of water R and 2 mL of cyclohexane R. Shake for 1 min. Use the upper layer.

Reference solution (a) Dissolve 10 mg of RRR- α -tocopheryl hydrogen succinate CRS in 2 mL of cyclohexane R.

Reference solution (b) Prepare as described for test

solution (b), using RRR- α -tocopheryl hydrogen succinate CRS instead of the substance to be examined.

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase glacial acetic acid R, ether R, cyclohexane R (0.2:20:80 V/V/V).

Application 10 μ L.

Development Over a path of 15 cm.

Drying In a current of air.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spot in the chromatogram obtained with test solution (a) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a). In the chromatograms obtained with test solution (b) and reference solution (b), there are 2 spots: the spot with the higher R_F value is due to α -tocopherol, the spot with the lower R_F value is due to RRR- α -tocopheryl hydrogen succinate and corresponds to the spot obtained with reference solution (a). Depending on the degree of hydrolysis, the lower spot may be weak or even absent.

Detection B Spray with a mixture of 10 volumes of hydrochloric acid R, 40 volumes of a 2.5 g/L solution of ferric chloride R in ethanol (96 per cent) R and 40 volumes of a 10 g/L solution of phenanthroline hydrochloride R in ethanol (96 per cent) R.

Results B In the chromatograms obtained with test solution (b) and reference solution (b), the spot due to α -tocopherol is orange.

D. After saponification, the resulting RRR- α -tocopherol is dextrorotatory (2.2.7). The specific optical rotation after oxidation to the quinone form is not less than + 24.

Carry out the test avoiding exposure to actinic light. Transfer 1.0 g to a round bottomed, ground-glass-stoppered, 250 mL flask, dissolve in 30 mL of anhydrous ethanol R and heat under reflux for 3 min. While the solution is boiling, add, through the condenser, 20 mL of 2 M alcoholic potassium hydroxide R. Continue heating under reflux for 20 min and, without cooling, add 4.0 mL of hydrochloric acid R dropwise through the condenser. Cool, rinse the condenser with 10 mL of anhydrous ethanol R, transfer the contents of the flask to a 500 mL separating funnel, and rinse the flask with 4 quantities, each of 25 mL, of water R and 4 quantities, each of 25 mL, of ether R. Add the rinsings to the separating funnel. Shake vigorously for 2 min, allow the layers to separate and collect each of the 2 layers in individual separating funnels. Shake the aqueous layer with 2 quantities, each of 50 mL, of ether R and add these extracts to the main ether extract. Wash the combined ether extracts with

4 quantities, each of 100 mL, of water R and discard the washings.

To the ether solution add 40 mL of a 100 g/L solution of potassium ferricyanide R in an 8 g/L solution of sodium hydroxide R and shake for 3 min. Wash the ether solution with 4 quantities, each of 50 mL, of water R, discard the washings and dry the ether layer over anhydrous sodium sulfate R. Evaporate the ether on a water-bath under reduced pressure or in an atmosphere of nitrogen until a few millilitres remain, then complete the evaporation removing the last traces of ether without the application of heat. Immediately dissolve the residue in 25.0 mL of trimethylpentane R and determine the optical rotation.

Calculate the specific optical rotation of the substance in the test solution using as *c* the number of grams equivalent to α -tocopherol (factor 0.811) in 1000 mL.

TESTS

Absorbance (2.2.25)

Solution A Dissolve 0.150 g in anhydrous ethanol R and dilute to 100 mL with the same solvent.

Test solution (a) Dilute 10.0 mL of solution A to 100.0 mL with anhydrous ethanol R.

Test solution (b) Dilute 20.0 mL of solution A to 50.0 mL with anhydrous ethanol R.

Absorption maximum At 284 nm for test solution (a).

Absorption minimum At 254 nm for test solution (b).

Specific absorbance at the absorption maximum 35 to 38 for test solution (a).

Specific absorbance at the absorption minimum 6.0 to 8.0 for test solution (b).

Acid value (2.5.1)

101 to 108, determined on 1.00 g.

Free tocopherol

Maximum 1.0 per cent.

Dissolve 0.500 g in 100 mL of 0.25 M alcoholic sulfuric acid R. Add 20 mL of water R and 0.1 mL of a 2.5 g/L solution of diphenylamine R in sulfuric acid R. Titrate with 0.01 M ammonium and cerium sulfate until a blue colour is obtained that persists for at least 5 s. Carry out a blank titration.

1 mL of 0.01 M ammonium and cerium sulfate is equivalent to 2.154 mg of free tocopherol.

Related substances

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph Substances for pharmaceutical use (2034) do not apply.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Gas chromatography (2.2.28).

Internal standard solution Dissolve 0.300 g of dotriacontane R in hexane R and dilute to 100.0 mL with the same solvent.

Test solution Weigh 30.0 mg of the substance to be examined into a 20 mL vial. Add 2.0 mL of methanol R, 1.0 mL of dimethoxypropane R and 0.1 mL of hydrochloric acid R. Cap tightly and sonicate. Allow to stand in the dark for 1 h \pm 5 min. Remove from the dark, uncap and evaporate just to dryness on a steam bath with the aid of a stream of nitrogen. Add 10.0 mL of the internal standard solution. Vortex into solution.

Reference solution Weigh 30.0 mg of RRR- α -tocopheryl hydrogen succinate CRS into a 20 mL vial. Add 2.0 mL of

methanol R, 1.0 mL of dimethoxypropane R and 0.1 mL of hydrochloric acid R. Cap tightly and sonicate. Allow to stand in the dark for 1 h \pm 5 min. Remove from the dark, uncap and evaporate just to dryness on a steam bath with the aid of a stream of nitrogen. Add 10.0 mL of the internal standard solution. Vortex into solution.

Column:

- material: fused silica;
- size: *l* = 15 m, \varnothing = 0.32 mm;
- stationary phase: methylpolysiloxane R (film thickness 0.25 μ m).

Carrier gas helium for chromatography R.

Flow rate 3-6 mL/min.

Split ratio 1:10 to 1:20.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 10	200 \rightarrow 250
	10 - 20	250
Injection port		300
Detector		330

Detection Flame ionisation.

Injection 1 μ L; inject directly onto the column or via a glass-lined injection port using an automatic injection device or some other reproducible injection method.

System suitability Reference solution:

— resolution: minimum 12.0 between the peaks due to dotriacontane and RRR- α -tocopheryl hydrogen succinate.

Interference test Dissolve 0.100 g of the substance to be examined in hexane R and dilute to 50.0 mL with the same solvent. Inject 1 μ L of the solution and record the chromatogram. If a peak is detected with the same retention time as that of the peak due to dotriacontane, calculate the area of this peak relative to the peak area of the substance to be examined. If the relative peak area is greater than 0.5 per cent, use the corrected peak area $S'_{D(\text{corr})}$ for the final calculation.

$$S'_{D(\text{corr})} = S'_D - \frac{S_I \times S'_T}{S_{TI}}$$

- S'_D = area of the peak due to dotriacontane in the chromatogram obtained with the test solution;
- S_I = area of the peak with the same retention time as that of the peak due to dotriacontane in the chromatogram obtained in the interference test;
- S'_T = area of the peak due to RRR- α -tocopheryl hydrogen succinate in the chromatogram obtained with the test solution;
- S_{TI} = area of the peak due to RRR- α -tocopheryl hydrogen succinate in the chromatogram obtained in the interference test.

Measure the areas of the peaks due to RRR- α -tocopheryl hydrogen succinate CRS (S_T) and dotriacontane (S_D) in the chromatogram obtained with the reference solution and the areas of the peaks due to RRR- α -tocopheryl hydrogen succinate (S'_T) and dotriacontane (S'_D) in the chromatogram obtained with the test solution.

Determine the response factor (RF) for RRR- α -tocopheryl hydrogen succinate from the areas of the peaks due to RRR- α -tocopheryl hydrogen succinate CRS and dotriacontane in the chromatogram obtained with the reference solution, using the following expression:

$$\frac{S_D \times m_T}{S_T \times m_D}$$

Calculate the percentage content of *RRR*- α -tocopheryl hydrogen succinate using the following expression:

$$\frac{100 \times S'_T \times m_D \times RF}{S'_{D(\text{corr})} \times m}$$

S_D	=	area of the peak due to dotriacontane in the chromatogram obtained with the reference solution;
$S'_{D(\text{corr})}$	=	corrected area of the peak due to dotriacontane in the chromatogram obtained with the test solution;
S_T	=	area of the peak due to <i>RRR</i> - α -tocopheryl hydrogen succinate CRS in the chromatogram obtained with the reference solution;
S'_T	=	area of the peak due to <i>RRR</i> - α -tocopheryl hydrogen succinate in the chromatogram obtained with the test solution;
m_D	=	mass of dotriacontane in the test solution and in the reference solution, in milligrams;
m_T	=	mass of <i>RRR</i> - α -tocopheryl hydrogen succinate CRS in the reference solution, in milligrams;
m	=	mass of the substance to be examined in the test solution, in milligrams.

Ph Eur

Tolbutamide

(Ph. Eur. monograph 0304)

$C_{12}H_{18}N_2O_3S$

270.3

64-77-7

Action and use

Inhibition of ATP-dependent potassium channels (sulfonylurea); treatment of diabetes mellitus.

Preparation

Tolbutamide Tablets

Ph Eur

DEFINITION

1-Butyl-3-[(4-methylphenyl)sulfonyl]urea.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, soluble in acetone and in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification: A, C.

Second identification: A, B, D.

A. Melting point (2.2.14): 126 °C to 130 °C.

B. Ultraviolet and visible absorption spectrophotometry (2.2.25).

Test solution (a) Dissolve 25.0 mg in methanol R and dilute to 100.0 mL with the same solvent.

Test solution (b) Dilute 10.0 mL of test solution (a) to 250.0 mL with methanol R.

Spectral range 245-300 nm for test solution (a); 220-235 nm for test solution (b).

Absorption maxima At 258 nm, 263 nm and 275 nm for test solution (a); at 228 nm for test solution (b).

Shoulder At 268 nm for test solution (a).

Specific absorbance at the absorption maximum 480 to 520 for test solution (b).

C. Infrared absorption spectrophotometry (2.2.24).

Comparison tolbutamide CRS.

D. To 0.2 g add 8 mL of a 500 g/L solution of sulfuric acid R and heat under a reflux condenser for 30 min. Allow to cool. Crystals are formed which, after recrystallisation from hot water R and drying at 105 °C, melt (2.2.14) at 135 °C to 140 °C.

TESTS

Appearance of solution

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 0.2 g in 5 mL of dilute sodium hydroxide solution R and add 5 mL of water R.

pH (2.2.3)

4.5 to 5.5.

To 2.0 g add 50 mL of carbon dioxide-free water R and heat at 70 °C for 5 min. Cool rapidly and filter.

Related substances

Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

Test solution Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b) Dissolve 10 mg of toluenesulfonamide R (impurity A) and 10 mg of toluenesulfonylurea R (impurity B) in the mobile phase and dilute to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase Mix 35 volumes of acetonitrile R1 and 65 volumes of a 1.36 g/L solution of potassium dihydrogen phosphate R adjusted to pH 3.5 with phosphoric acid R.

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 230 nm.

Injection 20 μ L.

Run time 1.5 times the retention time of tolbutamide.

Identification of impurities Use the chromatogram obtained with reference solution (b) to identify the peak due to impurities A and B.

Relative retention With reference to tolbutamide (retention time = about 18 min): impurity B = about 0.2; impurity A = about 0.3.

System suitability Reference solution (b):

— resolution: minimum 2.0 between the peaks due to impurities A and B.

Limits:

- *unspecified impurities:* for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total:* not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *disregard limit:* 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in a mixture of 20 mL of *water R* and 40 mL of *ethanol (96 per cent) R*. Titrate with 0.1 M *sodium hydroxide*, using 1 mL of *phenolphthalein solution R* as indicator.

1 mL of 0.1 M *sodium hydroxide* is equivalent to 27.03 mg of $C_{14}H_{12}ClNO_2$.

STORAGE

In an airtight container.

IMPURITIES

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, B, C.

A. (4-methylphenyl)sulfonamide (toluenesulfonamide),

B. 1-[(4-methylphenyl)sulfonyl]urea (toluenesulfonylurea),

C. 1-azepan-1-yl-3-[(4-methylphenyl)sulfonyl]urea (tolazamide).

Cyclo-oxygenase inhibitor; analgesic; anti-inflammatory.

Ph Eur

DEFINITION

2-(3-Chloro-2-methylanilino)benzoic acid.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS**Appearance**

White or slightly yellow, crystalline powder.

Solubility

Practically insoluble in water, soluble in dimethylformamide, sparingly soluble in anhydrous ethanol and in methylene chloride. It dissolves in dilute solutions of alkali hydroxides.

mp

About 213 °C.

IDENTIFICATION

First identification: B.

Second identification: A, C.

A. Dissolve 20 mg in a mixture of 1 volume of 1 M *hydrochloric acid* and 99 volumes of *methanol R* and dilute to 100 mL with the same mixture of solvents. Dilute 5.0 mL of the solution to 50 mL with a mixture of 1 volume of 1 M *hydrochloric acid* and 99 volumes of *methanol R*. Examined between 250 nm and 380 nm (2.2.25), the solution shows 2 absorption maxima, at 286 nm and 345 nm. The ratio of the absorbance measured at the maximum at 286 nm to that measured at the maximum at 345 nm is 1.2 to 1.4.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison *tolfenamic acid CRS*.

C. Thin-layer chromatography (2.2.27).

Test solution Dissolve 25 mg of the substance to be examined in a mixture of 1 volume of *methanol R* and 3 volumes of *methylene chloride R* and dilute to 10 mL with the same mixture of solvents.

Reference solution Dissolve 25 mg of *tolfenamic acid CRS* in a mixture of 1 volume of *methanol R* and 3 volumes of *methylene chloride R* and dilute to 10 mL with the same mixture of solvents.

Plate TLC silica gel GF₂₅₄ plate R.

Mobile phase glacial acetic acid R, dioxan R, toluene R (1:25:90 V/V/V).

Application 10 µL.

Development Over 2/3 of the plate.

Drying In a current of warm air.

Detection Ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS**Related substances**

Liquid chromatography (2.2.29).

Test solution Dissolve 50.0 mg of the substance to be examined in 5 mL of *anhydrous ethanol R* and dilute to 50.0 mL with the mobile phase.

Reference solution (a) Dissolve 25.0 mg of *2-chlorobenzoic acid R* (impurity A) and 25.0 mg of *3-chloro-2-methylaniline R* (impurity B) in 5 mL of *anhydrous ethanol R* and dilute to 50.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 50.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b) Dilute 1.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

Column:

C₂₆H₃₇NO₇

475.6

124937-52-6

Action and use

Anticholinergic.

Preparations

Tolterodine Prolonged-release Capsules

Tolterodine Tablets

Ph Eur

DEFINITION

2-[(1R)-3-[Bis(1-methylethyl)amino]-1-phenylpropyl]-4-methylphenol (2R,3R)-2,3-dihydroxybutanedioate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Springly soluble in water, slightly soluble in anhydrous ethanol, practically insoluble in heptane.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison tolterodine tartrate CRS.

B. Enantiomeric purity (see Tests).

C. It gives reaction (b) of tartrates (2.3.1).

TESTS

Enantiomeric purity

Liquid chromatography (2.2.29).

Solution A Dissolve 0.29 g of sodium dihydrogen phosphate monohydrate R and 0.47 g of disodium hydrogen phosphate dihydrate R in 1 L of water R. Dissolve 1.04 g of tetrabutylammonium bromide R in this solution.

Test solution Dissolve 4.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

Reference solution (a) Dissolve 2 mg of tolterodine for system suitability GRS (containing impurity F) in the mobile phase and dilute to 50.0 mL with the mobile phase.

Reference solution (b) Dilute 0.5 mL of the test solution to 100.0 mL with the mobile phase.

Column:

— size: $l = 0.10$ m, $\varnothing = 2$ mm;— stationary phase: $\alpha 1$ -acid-glycoprotein silica gel for chiral separation R (5 μ m).

Mobile phase 2-methylpropanol R, solution A (7:93 V/V).

Flow rate 0.2 mL/min.

Detection Spectrophotometer at 220 nm.

Injection 20 μ L.

Run time 1.5 times the retention time of tolterodine.

Relative retention With reference to tolterodine (retention time = about 23 min): impurity F = about 0.9.

System suitability Reference solution (a):

— peak-to-valley ratio: minimum 2.5, where H_p = height above the baseline of the peak due to impurity F and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to tolterodine.

Calculation of percentage content:

— for impurity F, use the concentration of tolterodine tartrate in reference solution (b).

Limit:

— impurity F: maximum 0.6 per cent.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 25 mg of the substance to be examined in 10 mL of methanol R1, sonicate until dissolution is complete and dilute to 25.0 mL with methanol R1.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with methanol R1. Dilute 1.0 mL of this solution to 10.0 mL with methanol R1.

Reference solution (b) Dissolve 2 mg of tolterodine impurity E CRS in methanol R1 and dilute to 10.0 mL with methanol R1. Dilute 1.0 mL of the solution to 20.0 mL with methanol R1.

Reference solution (c) Dissolve 25 mg of the substance to be examined in 10 mL of methanol R1. Sonicate until dissolution is complete. Add 5 mL of reference solution (b) and dilute to 25.0 mL with methanol R1.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;— stationary phase: base-deactivated end-capped octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase:

— mobile phase A: mix 5 volumes of triethylamine R2 and 450 volumes of a 2.88 g/L solution of ammonium dihydrogen phosphate R; adjust to pH 5.9 with a 50 per cent V/V solution of phosphoric acid R; add 550 volumes of methanol R1;

— mobile phase B: methanol R1;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 25	100	0
25 - 45	100 → 80	0 → 20

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µL of the test solution and reference solutions (a) and (c).

Identification of impurities Use the chromatogram obtained with reference solution (c) to identify the peak due to impurity E.

Relative retention With reference to tolterodine (retention time = about 7 min): tartaric acid = about 0.2; impurity B = about 0.9.

System suitability Reference solution (c):

— **resolution:** minimum 1.5 between the peaks due to impurity B and tolterodine.

Calculation of percentage contents:

— for each impurity, use the concentration of tolterodine tartrate in reference solution (a).

Limits:

— **unspecified impurities:** for each impurity, maximum 0.10 per cent;

— **total:** maximum 0.3 per cent;

— **reporting threshold:** 0.05 per cent; disregard the peak due to tartaric acid.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in 30.0 mL of *anhydrous acetic acid R* and sonicate until dissolution is complete. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 47.56 mg of C₂₆H₃₇NO₇.

IMPURITIES

Specified impurities F.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, C, D, E, G.

A. (3RS)-3-(2-methoxy-5-methylphenyl)-3-phenylpropan-1-ol_s

C. (3RS)-3-(2-methoxy-5-methylphenyl)-N,N-bis(1-methylethyl)-3-phenylpropan-1-amine,

D. (3RS)-3-(2-methoxy-5-methylphenyl)-N-(1-methylethyl)-3-phenylpropan-1-amine,

E. 4-methyl-2-[(1RS)-3-[(1-methylethyl)amino]-1-phenylpropyl]phenol,

F. 2-[(1S)-3-[bis(1-methylethyl)amino]-1-phenylpropyl]-4-methylphenol,

G. 2-[(1R)-3-[bis(1-methylethyl)amino]-1-phenylpropyl]-4-methylphenol N-oxide.

Ph Eur

Topiramate

(Ph. Eur. monograph 2616)

C₁₂H₂₁NO₈S

339.4

97240-79-4

Action and use
Antiepileptic.

Ph Eur

DEFINITION

2,3:4,5-Bis-O-(propan-2,2-diyl)-β-D-fructopyranose 1-sulfamate.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS**Appearance**

White or almost white, crystalline powder.

Solubility

Slightly soluble in water, freely soluble in methanol and in methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison topiramate CRS.

TESTS**Specific optical rotation (2.2.7)**

-32 to -29 (anhydrous substance).

Dissolve 0.200 g in methanol R and dilute to 50.0 mL with the same solvent.

Impurity A

Thin-layer chromatography (2.2.27).

Test solution Dissolve 40.0 mg of the substance to be examined in 1.0 mL of methanol R.

Reference solution (a) Dissolve 10.0 mg of topiramate impurity A CRS in methanol R and dilute to 50.0 mL with the same solvent. Dilute 2.0 mL of the solution to 5.0 mL with methanol R.

Reference solution (b) Dissolve 40 mg of the substance to be examined in 1 mL of reference solution (a).

Plate TLC silanised silica gel plate R.

Pretreatment Wash the plate with methanol R and allow to dry in air.

Mobile phase methanol R, acetonitrile R, 29 g/L solution of sodium chloride R (15:35:50 V/V/V).

Application 5 µL.

Development Over 2/3 of the plate.

Drying In air.

Detection Spray with a solution prepared by dissolving 3 g of phenol R in 95 mL of ethanol (96 per cent) R and carefully adding 5 mL of sulfuric acid R; allow to dry in air, then heat at 125 °C for 10 min. Use transmittance mode.

Retardation factors Topiramate = about 0.43; impurity A = about 0.55.

System suitability:

— the chromatogram obtained with reference solution (b) shows 2 clearly separated spots due to topiramate and impurity A.

Limit:

— impurity A: any spot due to impurity A is not more intense than the corresponding spot in the chromatogram obtained with reference solution (a) (0.2 per cent).

Related substances

Liquid chromatography (2.2.29).

Solvent mixture acetonitrile R1, mobile phase A (20:80 V/V).

Test solution (a) Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

Test solution (b) Dilute 1.0 mL of test solution (a) to 20.0 mL with the solvent mixture. Dilute 5.0 mL of this solution to 50.0 mL with the solvent mixture.

Reference solution (a) Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Reference solution (b) Dissolve 15.0 mg of topiramate impurity E CRS in the solvent mixture and dilute to 50.0 mL with the solvent mixture. Dilute 5.0 mL of the solution to 200.0 mL with the solvent mixture.

Reference solution (c) Dissolve 5 mg of the substance to be examined in 1 mL of a mixture of 2 volumes of acetonitrile R1, 4 volumes of water for chromatography R and 4 volumes of anhydrous formic acid R. Incubate at 60 °C for 30 min (in situ preparation of impurity C). Dilute 20 µL of the solution to 1 mL with a 25 mg/L solution of fructose R (impurity E).

Reference solution (d) Dissolve 25.0 mg of topiramate CRS in 10.0 mL of the solvent mixture and dilute to 100.0 mL with the solvent mixture. Dilute 5.0 mL of the solution to 50.0 mL with the solvent mixture.

Column:

— size: $l = 0.10$ m, $\varnothing = 4.6$ mm;

— stationary phase: end-capped solid core pentafluorophenylpropylsilyl silica gel for chromatography R (2.6 µm);

— temperature: 40 °C.

Mobile phase:

— mobile phase A: 1.93 g/L solution of ammonium acetate R adjusted to pH 3.5 with glacial acetic acid R;

— mobile phase B: acetonitrile R1;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 5	80	20
5 - 15	80 → 50	20 → 50
15 - 15.1	50 → 80	50 → 20

Flow rate 1.0 mL/min.

Detection Charged aerosol detector:

— range: 100 pA;

— filter: none.

Injection 20 µL of test solution (a) and reference solutions (a), (b) and (c).

Identification of impurities Use the chromatogram obtained with reference solution (b) to identify the peak due to impurity E.

Relative retention With reference to topiramate (retention time = about 5.6 min): impurity E = about 0.18; impurity C = about 0.25.

System suitability Reference solution (c):

— resolution: minimum 4.5 between the peaks due to impurities E and C.

Calculation of percentage contents:

— for impurity E, use the concentration of impurity E in reference solution (b) and the height of the peak due to impurity E;

— for impurities other than E, use the concentration of topiramate in reference solution (a).

Limits:

— impurity E: maximum 0.15 per cent;

— unspecified impurities: for each impurity, maximum 0.10 per cent;

— total: maximum 0.2 per cent;

— reporting threshold: 0.05 per cent.

Water (2.5.12)

Maximum 0.5 per cent, determined on 1.000 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

**ASSAY**

Liquid chromatography (2.2.29) as described in the test for related substances with the following modifications.

Injection Test solution (b) and reference solution (d).

Calculate the percentage content of $C_{12}H_{21}NO_8S$ taking into account the assigned content of *topiramate* CRS.

IMPURITIES

Specified impurities A, E.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B, C, D.

A. 2,3:4,5-bis-*O*-(propan-2,2-diyl)-β-*D*-fructopyranose,

B. 2,3:4,5-bis-*O*-(propan-2,2-diyl)-β-*D*-fructopyranose 1-[*N*-(diethylcarbamoyl)sulfamate],

C. 2,3-*O*-(propan-2,2-diyl)-β-*D*-fructopyranose 1-sulfamate,

D. 2,3:4,5-bis-*O*-(propan-2,2-diyl)-β-*D*-fructopyranose 1-[*N*-[[[2,3:4,5-bis-*O*-(propan-2,2-diyl)-β-*D*-fructopyranosyl]oxy]carbamoyl]sulfamate],

E. *D*-fructopyranose (fructose).

Torasemide

Anhydrous Torasemide

(*Ph. Eur. monograph 2132*)

$C_{16}H_{20}N_4O_3S$

348.4

56211-40-6

Action and use

Thiazide-like diuretic.

Ph Eur

DEFINITION

1-(1-Methylethyl)-3-[[4-[(3-methylphenyl)amino]pyridin-3-yl]sulfonyl]urea.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS**Appearance**

White or almost white powder.

Solubility

Practically insoluble in water, slightly soluble in ethanol (96 per cent). It is sparingly soluble in dilute solutions of alkali hydroxides and slightly soluble in dilute acids.

It shows polymorphism (5.9).

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison anhydrous torasemide CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

TESTS**Related substances**

Liquid chromatography (2.2.29).

Solution A Dissolve 2.7 g of *potassium dihydrogen phosphate R* in 950 mL of *water R*, adjust to pH 3.5 with *phosphoric acid R* and dilute to 1000 mL with *water R*.

Test solution Dissolve 20.0 mg of the substance to be examined in 15 mL of *methanol R* and sonicate for 15 min. Add 22.5 mL of solution A, cool to room temperature and dilute to 50.0 mL with the mobile phase.

Reference solution (a) Dissolve 2.0 mg of *torasemide for system suitability CRS* (containing impurities A, B, C and D) in 2.5 mL of *methanol R* and dilute to 5.0 mL with solution A.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (c) Dissolve the contents of a vial of *torasemide impurity E CRS* in 0.5 mL of *methanol R*. Add 0.5 mL of solution A.

Column:

— *size*: $l = 0.125$ m, $\varnothing = 4.0$ mm;

— *stationary phase*: end-capped octadecylsilyl silica gel for chromatography R (5 μ m);

Ph Eur

— temperature: 30 °C.

Mobile phase methanol R, solution A (40:60 V/V).

Flow rate 0.8 mL/min.

Detection Spectrophotometer at 288 nm.

Injection 20 µL.

Run time 2.5 times the retention time of torasemide.

Identification of impurities Use the chromatogram supplied with torasemide for system suitability CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C and D; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity E.

Relative retention With reference to torasemide (retention time = about 10 min): impurity A = about 0.3; impurity B = about 0.4; impurity C = about 0.5; impurity E = about 0.7; impurity D = about 2.3.

System suitability:

- resolution: minimum 3.0 between the peaks due to impurities B and C in the chromatogram obtained with reference solution (a);
- signal-to-noise ratio: minimum 100 for the principal peak in the chromatogram obtained with reference solution (b).

Limits:

- correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 5.1; impurity B = 0.76;
- impurity B: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- impurities A, C, D, E: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- total: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.6 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 mL of anhydrous acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 34.84 mg of C₁₆H₂₀N₄O₃S.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E.

A. 4-[(3-methylphenyl)-2H-pyrido[4,3-e]-1,2,4-thiadiazin-3(4H)-one 1,1-dioxide,

B. 4-[(3-methylphenyl)amino]pyridine-3-sulfonamide,

C. 1-ethyl-3-[[4-[(3-methylphenyl)amino]pyridin-3-yl]sulfonyl]urea,

D. 1-butyl-3-[[4-[(3-methylphenyl)amino]pyridin-3-yl]sulfonyl]urea,

E. ethyl [[4-[(3-methylphenyl)amino]pyridin-3-yl]sulfonyl] carbamate.

Ph Eur

Tosylchloramide Sodium

(Ph. Eur. monograph 0381)

$C_7H_7ClNNaO_2S \cdot 3H_2O$ 281.7

Action and use
Antiseptic.

Ph Eur

DEFINITION

Sodium *N*-chloro-4-methylbenzene-sulfonimidate trihydrate.

Content

98.0 per cent to 103.0 per cent of $C_7H_7ClNNaO_2S \cdot 3H_2O$.

CHARACTERS

Appearance

White or slightly yellow, crystalline powder.

Solubility

Freely soluble in water, soluble in ethanol (96 per cent).

IDENTIFICATION

- A. Solution S (see Tests) turns *red litmus paper R* blue and then bleaches it.
- B. To 10 mL of solution S add 10 mL of *dilute hydrogen peroxide solution R*. A white precipitate is formed which dissolves on heating. Filter the hot solution and allow to cool. White crystals are formed which, when washed and dried at 100-105 °C, melt (2.2.14) at 137 °C to 140 °C.
- C. Ignite cautiously 1 g, because of the risk of deflagration. Dissolve the residue in 10 mL of *water R*. The solution gives reaction (a) of chlorides (2.3.1).
- D. The solution prepared for identification test C gives reaction (a) of sulfates (2.3.1).
- E. The solution prepared for identification test C gives reaction (b) of sodium (2.3.1).

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II (2.2.1) and is colourless (2.2.2, *Method II*).

pH (2.2.3)

8.0 to 10.0 for solution S.

Ortho compound

To 2 g add 10 mL of *water R*, mix, add 1 g of *sodium metabisulfite R* and heat to boiling. Cool to 0 °C, filter rapidly and wash with 3 quantities, each of 5 mL, of iced *water R*. The precipitate, dried *in vacuo* (2.2.32) at a pressure not exceeding 0.6 kPa, melts (2.2.14) at a minimum of 134 °C.

Residue insoluble in anhydrous ethanol

Maximum 2 per cent.

Shake 1.00 g with 20 mL of *anhydrous ethanol R* for 30 min, filter on a tared filter, wash any residue with 5 mL of *anhydrous ethanol R* and dry at 100-105 °C. The residue weighs a maximum of 20 mg.

ASSAY

Dissolve 0.125 g in 100 mL of *water R* in a ground-glass-stoppered flask. Add 1 g of *potassium iodide R* and 5 mL of *dilute sulfuric acid R*. Allow to stand for 3 min. Titrate with 0.1 M *sodium thiosulfate*, using 1 mL of *starch solution R* as indicator.

1 mL of 0.1 M *sodium thiosulfate* is equivalent to 14.08 mg of $C_7H_7ClNNaO_2S \cdot 3H_2O$.

STORAGE

In an airtight container, protected from light.

Ph Eur

Tragacanth

(Ph. Eur. monograph 0532)

When Powdered Tragacanth is prescribed or demanded, material complying with the requirements below with the exception of Identification test A shall be dispensed or supplied.

9000-65-1

Ph Eur

DEFINITION

Air-hardened, gummy exudate, flowing naturally or obtained by incision from the trunk and branches of *Astragalus gummifer* Labill. and certain other species of *Astragalus* from western Asia.

IDENTIFICATION

- A. Tragacanth occurs in thin, flattened, ribbon-like, white or pale yellow, translucent strips, about 30 mm long and 10 mm wide and up to 1 mm thick, more or less curved, horny, with a short fracture; the surface is marked by fine longitudinal striae and concentric transverse ridges. It may also contain pieces similar in shape but somewhat thicker, more opaque and more difficult to fracture.
- B. Microscopic examination (2.8.23). The powder is white or almost white and forms a mucilaginous gel with about 10 times its mass of *water R*. Examine under a microscope using a 50 per cent *V/V* solution of *glycerol R*. The powder shows in the gummy mass numerous stratified cellular membranes that turn slowly violet when treated with *iodinated zinc chloride solution R*. The gummy mass includes starch grains, isolated or in small groups, usually rounded in shape and sometimes deformed, with diameters varying between 4 µm and 10 µm, occasionally up to 20 µm, and a central hilum visible between crossed nicol prisms.
- C. Examine the chromatograms obtained in the test for acacia.

Results The chromatogram obtained with the test solution shows 3 zones due to galactose, arabinose and xylose. A faint yellowish zone at the solvent front and a greyish-green zone between the zones due to galactose and arabinose may be present.

D. Moisten 0.5 g of the powdered herbal drug (355) (2.9.12) with 1 mL of *ethanol (96 per cent) R* and add gradually, while shaking, 50 mL of *water R* until a homogeneous mucilage is obtained. To 5 mL of the mucilage add 5 mL of *water R* and 2 mL of *barium hydroxide solution R*. A slight flocculent precipitate is formed. Heat on a water-bath for 10 min. An intense yellow colour develops.

TESTS**Acacia**

Thin-layer chromatography (2.2.27).

Test solution To 100 mg of the powdered herbal drug (355) (2.9.12) in a thick-walled centrifuge test-tube, add 2 mL of a 100 g/L solution of *trifluoroacetic acid R*, shake vigorously to dissolve the forming gel, stopper the test-tube and heat the mixture at 120 °C for 1 h. Centrifuge the resulting hydrolysate, transfer the clear supernatant carefully into a 50 mL flask, add 10 mL of *water R* and evaporate the solution to dryness under reduced pressure. To the resulting clear film add 0.1 mL of *water R* and 0.9 mL of *methanol R*. Centrifuge to separate the amorphous precipitate, collect the supernatant and, if necessary, dilute to 1 mL with *methanol R*.

Reference solution Dissolve 10 mg of *arabinose R*, 10 mg of *galactose R*, 10 mg of *rhamnose R* and 10 mg of *xylose R* in 1 mL of *water R* and dilute to 10 mL with *methanol R*.

Plate TLC silica gel plate *R*.

Mobile phase 16 g/L solution of *sodium dihydrogen phosphate R*, *butanol R*, *acetone R* (10:40:50 V/V/V).

Application 10 µL as bands.

Development A Over a path of 10 cm.

Drying A In a current of warm air for a few minutes.

Development B Over a path of 15 cm using the same mobile phase.

Drying B At 110 °C for 10 min.

Detection Spray with *anisaldehyde solution R* and dry at 110 °C for 10 min.

Results The chromatogram obtained with the reference solution shows 4 clearly separated coloured zones due to galactose (greyish-green or green), arabinose (yellowish-green), xylose (greenish-grey or yellowish-grey) and rhamnose (yellowish-green), in order of increasing R_F value; the chromatogram obtained with the test solution does not show a yellowish-green zone corresponding to the zone of rhamnose in the chromatogram obtained with the reference solution.

Methylcellulose

Examine the chromatograms obtained in the test for acacia.

Results The chromatogram obtained with the test solution does not show a red zone near the solvent front.

Sterculia gum

A. Place 0.2 g of the powdered herbal drug (355) (2.9.12) in a 10 mL ground-glass-stoppered cylinder graduated in 0.1 mL. Add 10 mL of *ethanol (60 per cent V/V) R* and shake. Any gel formed occupies not more than 1.5 mL.

B. To 1.0 g of the powdered herbal drug (355) (2.9.12) add 100 mL of *water R* and shake. Add 0.1 mL of *methyl red solution R*. Not more than 5.0 mL of 0.01 M *sodium hydroxide* is required to change the colour of the indicator.

Foreign matter

Maximum 1.0 per cent.

Place 2.0 g of the powdered herbal drug (355) (2.9.12) in a 250 mL round-bottomed flask and add 95 mL of *methanol R*. Swirl to moisten the powder and add 60 mL of *hydrochloric acid R1*. Add a few glass beads about 4 mm in diameter and heat on a water-bath under a reflux condenser for 3 h, shaking occasionally. Remove the glass beads and filter the hot suspension *in vacuo* through a sintered-glass filter (160) (2.1.2). Rinse the flask with a small quantity of *water R* and pass the rinsings through the filter. Wash the residue on the filter with about 40 mL of *methanol R* and dry to constant

mass at 110 °C (about 1 h). Allow to cool in a desiccator and weigh. The residue weighs a maximum of 20 mg.

Flow time

Minimum 10 s, or minimum 50 s if the substance to be examined is to be used for the preparation of emulsions.

Place 1.0 g of the powdered herbal drug (125-250) (2.9.12) in a 1000 mL round-bottomed flask with a ground-glass stopper, add 8.0 mL of *ethanol (96 per cent) R* and close the flask. Disperse the suspension over the inner surface of the flask by shaking, taking care not to wet the stopper. Open the flask and add as a single portion 72.0 mL of *water R*. Stopper the flask and shake vigorously for 3 min. Allow to stand for 24 h and shake vigorously again for 3 min. Eliminate air bubbles by applying vacuum above the mucilage for 5 min. Transfer the mucilage to a 50 mL cylinder. Dip in the mucilage a piece of glass tubing 200 mm long and 6.0 mm in internal diameter and graduated at 20 mm and 120 mm from the lower end; the tubing must not be rinsed with surface-active substances. When the mucilage has reached the upper mark, close the tube with a finger. Withdraw the closed tube, remove the finger and measure with a stopwatch the time needed for the meniscus to reach the lower graduation. Carry out this operation 4 times and determine the average value of the last 3 determinations.

Total ash (2.4.16)

Maximum 4.0 per cent.

Microbial contamination

TAMC: acceptance criterion 10^4 CFU/g (2.6.12).

TYMC: acceptance criterion 10^2 CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

Absence of *Salmonella* (2.6.13).

LABELLING

The label states whether or not the contents are suitable for preparing emulsions.

Ph Eur

Tramadol Hydrochloride

(Ph. Eur. monograph 1681)

$C_{16}H_{26}ClNO_2$

299.8

36282-47-0

Action and use

μ -Opioid receptor (OP3, MOR) agonist and noradrenaline reuptake inhibitor; analgesic.

Preparations

Tramadol Capsules

Tramadol Prolonged-release Capsules

Tramadol Prolonged-release Tablets

Ph Eur

DEFINITION

(1*R*S,2*R*S)-2-[(Dimethylamino)methyl]-1-(3-methoxyphenyl)cyclohexan-1-ol hydrochloride.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS**Appearance**

White or almost white, crystalline powder.

Solubility

Freely soluble in water and in methanol, very slightly soluble in acetone.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Melting point (2.2.14): 180 °C to 184 °C.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison tramadol hydrochloride CRS.

~~C. Examine the chromatograms obtained in the test for impurity E.~~

Results The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. It gives reaction (a) of chlorides (2.3.1).

TESTS**Solution S**

Dissolve 1.0 g in water R and dilute to 20.0 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

Acidity

To 10 mL of solution S, add 0.2 mL of methyl red solution R and 0.2 mL of 0.01 M hydrochloric acid. The solution is red. Not more than 0.4 mL of 0.01 M sodium hydroxide is required to change the colour of the indicator to yellow.

Optical rotation (2.2.7)

-0.10° to +0.10°, determined on solution S.

Impurity E

Thin-layer chromatography (2.2.27).

Test solution (a) Dissolve 0.10 g of the substance to be examined in methanol R and dilute to 2.0 mL with the same solvent.

Test solution (b) Dilute 1 mL of test solution (a) to 10 mL with methanol R.

Reference solution (a) Dissolve 25 mg of tramadol hydrochloride CRS in methanol R and dilute to 5 mL with the same solvent.

Reference solution (b) Dissolve 5.0 mg of tramadol impurity E CRS in methanol R and dilute to 5.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with methanol R.

Reference solution (c) Dissolve 5 mg of tramadol impurity A CRS in 1 mL of reference solution (a).

Plate TLC silica gel F₂₅₄ plate R.

Pretreatment Wash the plate with methanol R.

Mobile phase concentrated ammonia R, 2-propanol R, toluene R (1:19:80 V/V/V).

Application 10 µL.

Development Over 2/3 of the plate. Add concentrated ammonia R to one trough of a twin trough tank then saturate the plate for 20 min. Just before developing, add the mobile phase to the other trough. Place the plate in the trough,

ensuring that the layer of silica gel faces the middle of the tank.

Drying In air.

Detection Expose to iodine vapour for 1 h, then examine in ultraviolet light at 254 nm.

System suitability The chromatogram obtained with reference solution (c) shows 2 clearly separated spots.

Limit Test solution (a):

— *impurity E*: any spot due to impurity E is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.2 per cent).

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 0.15 g of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

Reference solution (a) Dilute 2.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

Reference solution (b) Dissolve 5 mg of tramadol impurity A CRS in 4 mL of the test solution and dilute to 100 mL with the mobile phase.

Column:

— *size*: $l = 0.25$ m, $\varnothing = 4.0$ mm;

— *stationary phase*: base-deactivated end-capped octylsilyl silica gel for chromatography R (5 µm).

Mobile phase 295 volumes of acetonitrile R and 705 volumes of a mixture of 0.2 mL of trifluoroacetic acid R and 100 mL of water for chromatography R.

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 270 nm.

Injection 20 µL.

Run time 4 times the retention time of tramadol.

Identification of impurities Use the chromatogram obtained with reference solution (b) to identify the peak due to impurity A.

Relative retention With reference to tramadol (retention time = about 6 min): impurity A = about 0.85.

System suitability Reference solution (b):

— *resolution*: minimum 2.0 between the peaks due to impurity A and tramadol.

Calculation of percentage contents:

— for each impurity, use the concentration of tramadol hydrochloride in reference solution (a).

Limits:

— *impurity A*: maximum 0.2 per cent;

— *unspecified impurities*: for each impurity, maximum 0.10 per cent;

— *total*: maximum 0.4 per cent;

— *reporting threshold*: 0.02 per cent.

Water (2.5.12)

Maximum 0.5 per cent, determined on 1.000 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.180 g in 50 mL of ethanol (96 per cent) R. Titrate with 0.1 M ethanolic sodium hydroxide, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M ethanolic sodium hydroxide is equivalent to 29.98 mg of C₁₆H₂₆ClNO₂.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, E.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B, C, D.

- A. (1*RS*,2*SR*)-2-[(dimethylamino)methyl]-1-(3-methoxyphenyl)cyclohexan-1-ol,

- B. [2-(3-methoxyphenyl)cyclohex-1-en-1-yl]-*N,N*-dimethylmethanamine,

- C. [(1*RS*)-2-(3-methoxyphenyl)cyclohex-2-en-1-yl]-*N,N*-dimethylmethanamine,

- D. (1*RS*,2*RS*)-2-[(dimethylamino)methyl]-1-(3-hydroxyphenyl)cyclohexan-1-ol,

- E. (2*RS*)-2-[(dimethylamino)methyl]cyclohexan-1-one.

Tramazoline Hydrochloride Monohydrate

(Ph. Eur. monograph 1597)

 $C_{13}H_{18}ClN_3 \cdot H_2O$

269.8

74195-73-6

Action and use

Alpha-adrenoceptor agonist.

Ph Eur

DEFINITION

N-(5,6,7,8-Tetrahydronaphthalen-1-yl)-4,5-dihydro-1*H*-imidazol-2-amine hydrochloride monohydrate.

Content

98.5 per cent to 101.5 per cent (anhydrous substance).

CHARACTERS**Appearance**

White or almost white, crystalline powder.

Solubility

Soluble in water and in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison tramazoline hydrochloride monohydrate CRS.

B. It gives reaction (a) of chlorides (2.3.1).

TESTS**Solution S**

Dissolve 2.5 g in carbon dioxide-free water R and dilute to 50 mL with the same solvent.

Appearance of solutionSolution S is clear (2.2.1) and not more intensely coloured than reference solution Y₆ (2.2.2, Method II).**pH (2.2.3)**

4.9 to 6.3 for solution S.

Related substances

Liquid chromatography (2.2.29).

Solvent mixture acetonitrile R, water R (50:50 V/V).

Test solution Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

Reference solution (a) Dissolve 5.0 mg of tramazoline impurity A CRS and 5.0 mg of tramazoline impurity B CRS in 5 mL of the solvent mixture and add 5 mL of the test solution.

Reference solution (b) Dilute 0.2 mL of reference solution (a) to 100 mL with the solvent mixture.

Column:— size: $l = 0.125$ m, $\varnothing = 4$ mm;— stationary phase: base-deactivated end-capped octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase 2.0 g/L solution of sodium dodecyl sulfate R in a mixture of 6 volumes of 2-propanol R, 42 volumes of acetonitrile R1 and 52 volumes of water for chromatography R.

Flow rate 1.2 mL/min.

Detection Spectrophotometer at 215 nm.

Ph Eur

Injection 5 µL.

Run time 3 times the retention time of tramazoline.

Relative retention With reference to tramazoline (retention time = about 6.5 min): impurity A = about 0.71; impurity B = about 0.86.

System suitability Reference solution (a):

- the chromatogram obtained shows 3 clearly separated peaks;
- **resolution**: minimum 1.5 between the peak due to impurity B and tramazoline.

Limits:

- **impurities A, B**: for each impurity, not more than 3 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- **unspecified impurities**: for each impurity, not more than the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.10 per cent);
- **sum of impurities other than A and B**: not more than twice the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.2 per cent);
- **disregard limit**: 0.2 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.02 per cent).

Water (2.5.12)

6.2 per cent to 7.2 per cent, determined on 0.500 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 2.000 g in a mixture of 5 mL of 0.1 M hydrochloric acid and 75 mL of ethanol (96 per cent) R. Carry out a potentiometric titration (2.2.20) using 1 M sodium hydroxide. Read the volume added between the 2 points of inflexion.

1 mL of 1 M sodium hydroxide is equivalent to 251.8 mg of C₁₃H₁₈ClN₃.

IMPURITIES

Specified impurities A, B.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. (2S,3aR,7aS)-1-[(2S)-2-[[[(2S)-1-Ethoxy-1-oxo-4-phenylbutan-2-yl]amino]propanoyl]octahydro-1H-indole-2-carboxylic acid.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in anhydrous ethanol.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

Comparison trandolapril CRS.

TESTS

Appearance of solution

The solution is not more intensely coloured than reference solution Y₇ (2.2.2, Method II).

Dissolve 1.0 g in methanol R and dilute to 10 mL with the same solvent.

Specific optical rotation (2.2.7)

-18.5 to -16.5 (anhydrous substance).

Dissolve 1.0 g in anhydrous ethanol R and dilute to 50.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 25 mg of the substance to be examined in mobile phase A and dilute to 10.0 mL with mobile phase A.

Reference solution (a) Dilute 1.0 mL of the test solution to 10.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 100.0 mL with mobile phase A.

Reference solution (b) Dissolve 5 mg of trandolapril impurity C CRS and 5 mg of trandolapril impurity D CRS in mobile phase A and dilute to 5 mL with mobile phase A. Dilute 1 mL of the solution to 20 mL with mobile phase A.

Column:

- size: $l = 0.15$ m, $\varnothing = 4.6$ mm;
- stationary phase: end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R (3.5 μ m);
- temperature: 40 °C.

Mobile phase:

- mobile phase A: mix 25 volumes of acetonitrile R1 and 75 volumes of a 6.8 g/L solution of potassium dihydrogen phosphate R previously adjusted to pH 2.5 ± 0.1 with phosphoric acid R;
- mobile phase B: mix equal volumes of acetonitrile R1 and a 6.8 g/L solution of potassium dihydrogen phosphate R previously adjusted to pH 2.2 ± 0.1 with phosphoric acid R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 20	95	5
20 - 35	95 → 5	5 → 95
35 - 45	5	95

Flow rate 1.3 mL/min.

Detection Spectrophotometer at 210 nm.

Injection 20 μ L.

Identification of impurities Use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities C and D.

Relative retention With reference to trandolapril (retention time = about 14.5 min): impurity C = about 2.1; impurity D = about 2.5.

System suitability Reference solution (b):

- resolution: minimum 4 between the peaks due to impurities C and D.

Limits:

- correction factor: for the calculation of content, multiply the peak area of impurity C by 2.2;
- impurity D: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- impurity C: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- sum of impurities other than D: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Water (2.5.32)

Maximum 0.2 per cent, determined on 1.000 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 2.0 g in a porcelain or quartz crucible.

ASSAY

Dissolve 0.300 g in 50 mL of anhydrous acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 43.05 mg of $C_{24}H_{34}N_2O_5$.

STORAGE

Protected from light.

Tranlycypromine Sulfate

and enantiomer

(C₉H₁₁N)₂.H₂SO₄

364.5

13492-01-8

Action and use

Monoamine oxidase inhibitor; antidepressant.

Preparation

Tranlycypromine Tablets

DEFINITION

Tranlycypromine Sulfate is (1*RS*,2*SR*)-2-phenylcyclopropylamine sulfate. It contains not less than 98.0% and not more than 101.0% of (C₉H₁₁N)₂.H₂SO₄, calculated with reference to the dried substance.

CHARACTERISTICS

A white or almost white, crystalline powder.

Soluble in *water*, very slightly soluble in *ethanol* (96%) and in *ether*.**IDENTIFICATION**

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of tranlycypromine sulfate (*RS 345*).

B. Yields the reactions characteristic of *sulfates*, Appendix VI.

TESTS**Related substances**

Carry out the method for *gas chromatography*, Appendix III B, using the following solutions in solution A.

Dissolve 10 mg of 4-*chloroaniline* (internal standard) in sufficient 0.1M *hydrochloric acid* to produce 20 mL (solution A).

(1) Add 5 mL of 1M *sodium hydroxide* to 1 mL of solution A, extract with 10 mL of *dichloromethane*, add 1 mL of *trifluoroacetic anhydride* to the dichloromethane extract and allow to stand for 10 minutes. Evaporate the solution at a

pressure of 2 kPa using a rotary evaporator and a water bath at 20° and dissolve the residue in 2 mL of dichloromethane.

(2) Dissolve 0.1 g of the substance being examined in 5 mL of water, add 1 mL of 5M sodium hydroxide, extract with 10 mL of dichloromethane, add 1 mL of trifluoroacetic anhydride to the dichloromethane extract and allow to stand for 10 minutes. Evaporate the solution at a pressure of 2 kPa using a rotary evaporator and a water bath at 20° and dissolve the residue in 2 mL of dichloromethane.

(3) Dissolve 0.1 g of the substance being examined in 5 mL of water, add 1 mL of solution A and 1 mL of 5M sodium hydroxide, extract with 10 mL of dichloromethane, add 1 mL of trifluoroacetic anhydride to the dichloromethane extract and allow to stand for 10 minutes. Evaporate the solution at a pressure of 2 kPa using a rotary evaporator and a water bath at 20° and dissolve the residue in 2 mL of dichloromethane.

CHROMATOGRAPHIC CONDITIONS

(a) Use a glass column (1.5 m × 4 mm) packed with acid-washed, silanised diatomaceous support (100 to 120 mesh) coated with 3% w/w of cyanopropylmethylphenyl methyl silicone fluid (OV-225 is suitable).

(b) Use helium as the carrier gas at 1.7 mL per minute.

(c) Use isothermal conditions maintained at 170°.

LIMITS

In the chromatogram obtained with solution (3), the area of any secondary peak is not greater than that of the peak due to the trifluoroacetyl derivative of 4-chloroaniline (0.5%).

Loss on drying

When dried to constant weight at 105°, loses not more than 0.5% of its weight. Use 1 g.

Sulfated ash

Not more than 0.1%, Appendix IX A.

ASSAY

Carry out Method I for non-aqueous titration, Appendix VIII A, using 0.3 g and determining the end point potentiometrically. Each mL of 0.1M perchloric acid VS is equivalent to 36.45 mg of (C₉H₁₁N)₂H₂SO₄.

Trapidil

White or almost white, crystalline powder.

Solubility

Freely soluble in water, soluble in ethanol and in methylene chloride.

mp

About 102 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison *trapidil* CRS.

TESTS

Solution S

Dissolve 2.0 g in carbon dioxide-free water R and dilute to 100 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

Acidity or alkalinity

To 10 mL of solution S add 0.2 mL of methyl red solution R and 0.2 mL of 0.01 M hydrochloric acid. The solution is red. Add 0.4 mL of 0.01 M sodium hydroxide. The solution is yellow.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

Reference solution (a) Dissolve 5.0 mg of *trapidil impurity A* CRS in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 50.0 mL with the mobile phase.

Reference solution (b) Dissolve 5.0 mg of *trapidil impurity B* CRS in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 50.0 mL with the mobile phase.

Reference solution (c) Mix equal volumes of reference solution (a) and reference solution (b).

Column:

— size: $l = 0.125$ m, $\varnothing = 4.0$ mm,

— stationary phase: base-deactivated octadecylsilyl silica gel for chromatography R (5 μ m),

Mobile phase 50 mL of methanol R, 75 mL of acetonitrile R and 800 mL of a 1.7 g/L solution of potassium dihydrogen phosphate R adjusted to pH 2.45 with phosphoric acid R; dilute to 1000 mL with water R.

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 205 nm.

Injection 10 μ L.

Run time 3 times the retention time of *trapidil*.

System suitability:

— resolution: minimum of 4.0 between the peaks due to impurity A and impurity B in the chromatogram obtained with reference solution (c).

Limits:

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),

— *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

— any other impurity: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),

- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent).
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.01 per cent).

Chlorides (2.4.4)

Maximum 100 ppm.

Dissolve 0.25 g in 10 mL of *water R* and dilute to 15 mL with *water R*. Prepare the standard using 5 mL of *chloride standard solution (5 ppm Cl) R*.**Ammonium (2.4.1)**

Maximum 20 ppm.

0.50 g complies with limit test A. Prepare the standard using 0.1 mL of *ammonium standard solution (100 ppm NH₄) R*.**Loss on drying (2.2.32)**Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 3 h.**Sulfated ash (2.4.14)**

Maximum 0.1 per cent, determined on 1.0 g.

ASSAYDissolve 0.180 g in 50 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).1 mL of 0.1 M *perchloric acid* is equivalent to 20.53 mg of C₁₀H₁₅N₅.**STORAGE**

Protected from light.

IMPURITIESA. 5-methyl-[1,2,4]triazolo[1,5-*a*]pyrimidin-7-ol,

B. 1,2,4-triazol-3-amine.

Ph Eur

Trazodone HydrochlorideC₁₉H₂₂ClN₅O.HCl

408.3

25332-39-2

Action and use

Monoamine reuptake inhibitor; antidepressant.

Preparations

Trazodone Capsules

Trazodone Tablets

DEFINITIONTrazodone Hydrochloride is 2,3-[4-(3-chloro)phenylpiperazin-1-yl]propyl-1,2,4-triazolo[4,3-*a*]pyridin-3 (2*H*)-one hydrochloride. It contains not less than 99.0% and not more than 101.0% of C₁₉H₂₂ClN₅O.HCl, calculated with reference to the dried substance.**PRODUCTION**

The method of manufacture is such that the level of impurity F, 1-(3-chloropropyl)-3-chlorophenylpiperazine, is not more than 2.5 ppm when determined by a suitable method.

CHARACTERISTICS

A white or almost white, crystalline powder.

Soluble in *water*, sparingly soluble in *ethanol* (96%); practically insoluble in *ether*.**IDENTIFICATION**A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of trazodone hydrochloride (*RS 346*). In the preparation of the disc, avoid excessive grinding when triturating the substance being examined with *potassium chloride*.B. Yields the reactions characteristic of *chlorides*, Appendix VI.**TESTS****Acidity**

pH of a 1% w/v solution, 3.9 to 4.5, Appendix V L.

3-ChloroanilineTo 10 mL of a 1% w/v solution of the substance being examined in a mixture of equal volumes of *water* and *ethanol* add 2 mL of a freshly prepared 5% w/v solution of 4-dimethylaminobenzaldehyde in *ethanol* and 0.1 mL of *hydrochloric acid*. Shake well and allow to stand for 5 minutes. Any yellow colour produced at 5 minutes from the preparation of the solution is not more intense than that produced by treating at the same time and in the same manner 10 mL of a 1 µg per mL solution of 3-chloroaniline in a mixture of equal volumes of *water* and *ethanol* beginning at the words 'add 2 mL...' (100 ppm).**Related substances**

Carry out the procedures protected from light. The combined nominal total content of impurities determined in tests A and B below is not more than 1.0% and no single unknown impurity is more than 0.1%.

A. Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions in the mobile phase.

- (1) 0.1% w/v of the substance being examined.
- (2) 0.0001% w/v of the substance being examined.
- (3) 0.00005% w/v of the substance being examined.
- (4) 0.1% w/v of *trazodone hydrochloride impurity standard BPCRS*.

CHROMATOGRAPHIC CONDITIONS

- Use a stainless steel column (25 cm × 4.6 mm) packed with *octadecylsilyl silica gel for chromatography (5 µm)* (Waters XTerra RP18 or Phenomenex Prodigy are suitable).
- Use isocratic elution and the mobile phase described below.
- Use a flow rate of 2.0 mL per minute.
- Use a column temperature of 40°.
- Use a detection wavelength of 254 nm.
- Inject 20 µL of each solution.

(g) For solution (1), allow the chromatography to proceed for 3 times the retention time of the principal peak.

MOBILE PHASE

0.4 volumes of *diethylamine*, 350 volumes of *acetonitrile* and 650 volumes of *water*. If necessary, adjust the proportions of *acetonitrile* and *water* in the mobile phase to obtain a retention time of about 10 minutes for the principal peak.

SYSTEM SUITABILITY

The test is not valid unless, in the chromatogram obtained with solution (4), the *resolution* between the peaks due to impurity C and trazodone is at least 2.5.

LIMITS

In the chromatogram obtained with solution (1): the area of any peak corresponding to impurity D, identified from reference chromatogram A supplied with *trazodone hydrochloride impurity standard BPCRS*, is not greater than 3 times the area of the principal peak in the chromatogram obtained with solution (2) (0.3%);

the area of any other *secondary peak* with a retention time of less than or equal to impurity E, identified from reference chromatogram A supplied with *trazodone hydrochloride impurity standard BPCRS*, is not greater than the area of the principal peak in the chromatogram obtained with solution (2) (0.1%).

Disregard any peak with an area less than that of the principal peak in the chromatogram obtained with solution (3) (0.05%).

B. Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions in the mobile phase.

- (1) 0.1% w/v of the substance being examined.
- (2) 0.0001% w/v of the substance being examined.
- (3) 0.00005% w/v of the substance being examined.
- (4) 0.1% w/v of *trazodone hydrochloride impurity standard BPCRS*.

CHROMATOGRAPHIC CONDITIONS

- (a) Use a stainless steel column (25 cm × 4.6 mm) packed with *octadecylsilyl silica gel for chromatography* (5 μm) (Waters XTerra RP18 or Phenomenex Prodigy are suitable).
- (b) Use isocratic elution and the mobile phase described below.
- (c) Use a flow rate of 1.7 mL per minute.
- (d) Use a column temperature of 40°.
- (e) Use a detection wavelength of 254 nm.
- (f) Inject 20 μL of each solution.
- (g) For solution (1), allow the chromatography to proceed for at least 5 times the retention time of the principal peak.

MOBILE PHASE

0.4 volumes of *diethylamine*, 320 volumes of *water* and 680 volumes of *acetonitrile*. If necessary, adjust the proportions of *acetonitrile* and *water* in the mobile phase to obtain a retention time of about 2.5 minutes for the principal peak.

SYSTEM SUITABILITY

The test is not valid unless, in the chromatogram obtained with solution (4), the *resolution* between the peaks due to trazodone and impurity E is at least 3.5.

LIMITS

In the chromatogram obtained with solution (1):

the area of any *secondary peak* with a retention time longer than that of impurity E identified from reference chromatogram B, supplied with *trazodone hydrochloride impurity standard BPCRS*, is not greater than the area of the principal peak in the chromatogram obtained with solution (2) (0.1%).

Disregard any peak with an area less than that of the principal peak in the chromatogram obtained with solution (3) (0.05%).

Loss on drying

When dried to constant weight at 105° at a pressure of 3.5 to 6.5 kPa, loses not more than 0.5% of its weight. Use 1 g.

Sulfated ash

Not more than 0.2%, Appendix IX A.

ASSAY

Carry out the procedure protected from light.

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions in the mobile phase.

- (1) 0.01% w/v of the substance being examined.
- (2) 0.01% w/v of *trazodone hydrochloride BPCRS*.

CHROMATOGRAPHIC CONDITIONS

- (a) Use a stainless steel column (25 cm × 4.6 mm) packed with *octylsilyl silica gel for chromatography* (5 μm) (Spherisorb C8 is suitable).
- (b) Use isocratic elution and the mobile phase described below.
- (c) Use a flow rate of 2 mL per minute.
- (d) Use a column temperature of 40°.
- (e) Use a detection wavelength of 254 nm.
- (f) Inject 20 μL of each solution.

MOBILE PHASE

40 volumes of a 0.115% w/v solution of *diammonium hydrogen orthophosphate*, previously adjusted to pH 6.0 with 10% v/v *orthophosphoric acid* or 1M *sodium hydroxide*, and 60 volumes of *methanol*.

DETERMINATION OF CONTENT

Calculate the content of C₁₉H₂₂ClN₅O₂·HCl in the substance being examined using the declared content of C₁₉H₂₂ClN₅O₂·HCl in *trazodone hydrochloride BPCRS*.

STORAGE

Trazodone Hydrochloride should be kept in an airtight container and protected from light.

IMPURITIES

A. 4-(3-chlorophenyl)-1-[3-(3-oxo-2,3-dihydro-1,2,4-triazolo[4,3-a]pyridin-2-yl)propyl]piperazine N¹-oxide

Trehalose Dihydrate

(Ph. Eur. monograph 2297)

$C_{12}H_{22}O_{11} \cdot 2H_2O$

378.3

6138-23-4

Ph Eur

DEFINITION

α -D-Glucopyranosyl α -D-glucopyranoside dihydrate (α , α -trehalose dihydrate). It is obtained by enzymatic modification of starch.

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, slightly soluble in methanol, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison trehalose dihydrate CRS.

B. Dissolve 2 g in 5 mL of *water R*. To 1 mL of this solution add 0.4 mL of a 50 g/L solution of α -naphthol *R* in *ethanol (96 per cent) R* and mix thoroughly. Carefully add 2 mL of *sulfuric acid R*. A violet colour develops at the interface.

C. Dissolve 1 g in 25 mL of *water R*. To 2 mL of this solution add 1 mL of *dilute hydrochloric acid R* and mix. Keep the solution for 20 min at room temperature. Add 4 mL of a 40 g/L solution of *sodium hydroxide R* and 2 mL of a 40 g/L solution of *glycine R* and mix. Heat the solution in a water-bath for 10 min. No brown colour develops.

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*);

pH (2.2.3)
4.5 to 6.5 for solution S.

Specific optical rotation (2.2.7)

+ 197 to + 201 (anhydrous substance), determined on solution S.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 0.100 g of the substance to be examined in *water R* and dilute to 10.0 mL with the same solvent.

Reference solution (a) Dissolve 0.100 g of *trehalose dihydrate CRS* in *water R* and dilute to 10.0 mL with the same solvent.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with *water R*.

Reference solution (c) Dilute 5.0 mL of reference solution (b) to 25.0 mL with *water R*.

Reference solution (d) Dissolve 25 mg of *glucose R* (impurity A) and 25 mg of *maltotriose R* in *water R*, add 2.5 mL of reference solution (a) and dilute to 10.0 mL with *water R*.

Column:

- size: $l = 0.3$ m, $\varnothing = 8$ mm;
- stationary phase: strong cation-exchange resin (sodium form) *R* (6 μ m);
- temperature: 80 °C.

Mobile phase *water R*.

Flow rate 0.4 mL/min.

Detection Refractometer maintained at 40 °C.

Injection 20 μ L of the test solution and reference solutions (b), (c) and (d).

Run time Twice the retention time of trehalose.

Identification of impurities Use the chromatogram obtained with reference solution (d) to identify the peaks due to impurities A and B; impurity B has the same retention time as maltotriose.

Relative retention With reference to trehalose (retention time = about 15 min): impurity B = about 0.9; impurity A = about 1.2.

System suitability Reference solution (d):

- resolution: minimum 1.5 between the peaks due to maltotriose and trehalose.

Limits:

- impurities A, B: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- total: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

Chlorides (2.4.4)

Maximum 125 ppm.

Dilute 4 mL of solution S to 15 mL with *water R*.

Sulfates (2.4.13)

Maximum 200 ppm.

Dilute 7.5 mL of solution S to 15 mL with *distilled water R*.

Soluble starch

Dissolve 1 g in 10 mL of *water R*. Add 0.1 mL of *iodine solution R1*. No blue colour develops.

Water (2.5.12)

9.0 per cent to 11.0 per cent, determined on 0.10 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

Microbial contamination

If intended for use in the manufacture of parenteral preparations:

- TAMC: acceptance criterion 10^2 CFU/g (2.6.12).

If not intended for use in the manufacture of parenteral preparations:

- TAMC: acceptance criterion 10^3 CFU/g (2.6.12);
- TYMC: acceptance criterion 10^2 CFU/g (2.6.12);
- absence of *Escherichia coli* (2.6.13);
- absence of *Salmonella* (2.6.13).

Bacterial endotoxins (2.6.14)

If intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins:

- less than 4 IU/g for parenteral preparations having a concentration of 100 g/L or less of trehalose dihydrate;
- less than 2.5 IU/g for parenteral preparations having a concentration of more than 100 g/L of trehalose dihydrate.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (a).

Calculate the percentage content of trehalose from the declared content of *trehalose dihydrate CRS*.

LABELLING

The label states:

- where applicable, the maximum concentration of bacterial endotoxins;
- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

IMPURITIES

Specified impurities A, B.

A. D-glucopyranose (glucose),

B. oligosaccharides, mainly glucosyltrehalose: mixture of α -D-glucopyranosyl α -D-glucopyranosyl-(1 \rightarrow 4)- α -D-glucopyranoside (4-O-glucosyltrehalose or α -D-maltosyl α -D-glucoside) and α -D-glucopyranosyl-(1 \rightarrow 6)- α -D-glucopyranosyl α -D-glucopyranoside (6-O-glucosyltrehalose or α -D-isomaltosyl α -D-glucoside).

302-79-4

Action and use

Vitamin A analogue (retinoid); treatment of acne.

Preparations

Tretinoin Gel

Tretinoin Solution

Tretinoin, Hydrocortisone and Hydroquinone Cream

Ph Eur

DEFINITION

(2E,4E,6E,8E)-3,7-Dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraenoic acid.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

Yellow or light orange, crystalline powder.

Solubility

Practically insoluble in water, sparingly soluble in methylene chloride, slightly soluble in ethanol (96 per cent).

mp

About 182 °C, with decomposition.

It is sensitive to air, heat and light, especially in solution.

Carry out all operations as rapidly as possible and avoid exposure to actinic light; use freshly prepared solutions.

IDENTIFICATION

First identification: A.

Second identification: B, C.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison tretinoin CRS.

B. Thin-layer chromatography (2.2.27).

Test solution Dissolve 10 mg of the substance to be examined in methylene chloride R and dilute to 10 mL with the same solvent.

Reference solution Dissolve 10 mg of tretinoin CRS in methylene chloride R and dilute to 10 mL with the same solvent.

Plate TLC silica gel GF₂₅₄ plate R.

Mobile phase glacial acetic acid R, acetone R, peroxide-free ether R, cyclohexane R (2:4:40:54 V/V/V/V).

Application 5 µL.

Development Over 3/4 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve about 5 mg in 2 mL of antimony trichloride solution R. An intense red colour develops and later becomes violet.

TESTS

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 0.100 g of the substance to be examined in methanol R and dilute to 50.0 mL with the same solvent.

Reference solution (a) Dissolve 10.0 mg of isotretinoin CRS (impurity A) in methanol R and dilute to 10.0 mL with the same solvent.

Reference solution (b) Mix 1.0 mL of reference solution (a) and 0.5 mL of the test solution and dilute to 25.0 mL with methanol R.

Reference solution (c) Dilute 0.5 mL of the test solution to 100.0 mL with methanol R.

Column:

— size: $l = 0.15$ m, $\varnothing = 4.6$ mm;

— stationary phase: octadecylsilyl silica gel for chromatography R (3 µm).

Mobile phase glacial acetic acid R, water R, methanol R (5:225:770 V/V/V).

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 355 nm.

Injection 10 µL.

Run time 1.2 times the retention time of tretinoin.

Identification of impurities Use the chromatogram obtained with reference solution (a) to identify the peak due to impurity A.

Relative retention With reference to tretinoin (retention time = about 29 min): impurity A = about 0.75.

System suitability Reference solution (b):

— resolution: minimum 5.0 between the peaks due to impurity A and tretinoin.

Limits:

— impurity A: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);

— unspecified impurities: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

— total: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);

— disregard limit: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph Substances for Pharmaceutical use (2034) do not apply.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* for 16 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 70 mL of acetone R. Titrate with 0.1 M tetrabutylammonium hydroxide in 2-propanol, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M tetrabutylammonium hydroxide in 2-propanol is equivalent to 30.04 mg of $C_{20}H_{28}O_2$.

STORAGE

Under an inert gas, in an airtight container, protected from light.

It is recommended that the contents of an opened container be used as soon as possible and any unused part be protected by an atmosphere of inert gas.

IMPURITIES

Specified impurities A.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B, C, D, F, G.

C₉H₁₄O₆

218.2

102-76-1

Action and use

Antifungal.

Ph Eur

DEFINITION

Propane-1,2,3-triyl triacetate.

Content

97.0 per cent to 100.5 per cent (anhydrous substance).

CHARACTERS

Appearance

Clear, colourless, slightly viscous oily liquid.

Solubility

Soluble in water, miscible with ethanol (96 per cent) and toluene.

bp

About 260 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison Ph. Eur. reference spectrum of triacetin.

TESTS

Appearance

It is clear (2.2.1) and not more intensely coloured than reference solution Y₆ (2.2.2, Method II).

Acidity

Dissolve 5.00 g in 25 mL of anhydrous ethanol R, previously neutralised to 0.2 mL of phenolphthalein solution R and add 0.20 mL of 0.1 M sodium hydroxide. The pink colour of the mixture persists for 15 s.

Relative density (2.2.5)

1.159 to 1.164.

Refractive index (2.2.6)

1.429 to 1.432.

Water (2.5.12)

Maximum 0.2 per cent, determined on 5.00 g.

ASSAY

Introduce 0.300 g into a 250 mL borosilicate glass flask fitted with a reflux condenser. Add 25.0 mL of 0.5 M alcoholic potassium hydroxide and a few glass beads. Attach

the condenser and heat under reflux for 30 min. Add 1 mL of phenolphthalein solution RI and titrate immediately with 0.5 M hydrochloric acid. Carry out a blank test under the same conditions. Calculate the content from the difference in consumption of alkali in the main and the blank procedure.

1 mL of 0.5 M alcoholic potassium hydroxide is equivalent to 36.37 mg of $C_{21}H_{27}FO_6$.

STORAGE

In a well-filled container.

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, slightly soluble in methanol, practically insoluble in methylene chloride.

It shows polymorphism (5.9).

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison triamcinolone CRS.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in methanol R, evaporate to dryness, dry the residues at 60 °C at a pressure not exceeding 0.7 kPa and record new spectra using the residues.

B. Thin-layer chromatography (2.2.27). Prepare the solutions immediately before use and protect from light. Examine the plate under ultraviolet light immediately after development.

Test solution Dissolve 10 mg of the substance to be examined in methanol R and dilute to 10 mL with the same solvent.

Reference solution (a) Dissolve 20 mg of triamcinolone CRS in methanol R and dilute to 20 mL with the same solvent.

Reference solution (b) Dissolve 10 mg of dexamethasone CRS in reference solution (a) and dilute to 10 mL with the same solution.

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase Add a mixture of 1.2 volumes of water R and 8 volumes of methanol R to a mixture of 15 volumes of ether R and 77 volumes of methylene chloride R.

Application 5 μ L.

Development Over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability The chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Specific optical rotation (2.2.7)

+ 65 to + 72 (anhydrous substance).

Dissolve 0.100 g in dimethylformamide R and dilute to 10.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29). Prepare the solutions immediately before use and protect from light.

Test solution Dissolve 25.0 mg of the substance to be examined in a mixture of equal volumes of methanol R and water R and dilute to 10.0 mL with the same mixture of solvents.

Reference solution (a) Dissolve 2 mg of triamcinolone CRS and 2 mg of triamcinolone impurity C CRS in a mixture of equal volumes of methanol R and water R and dilute to 100.0 mL with the same mixture of solvents.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with a mixture of equal volumes of methanol R and water R.

Blank methanol R.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm,

— stationary phase: base-deactivated end-capped octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase A mixture prepared as follows: in a 1000 mL volumetric flask mix 525 mL of methanol R with 400 mL of water R and allow to equilibrate; adjust the volume to 1000 mL with water R and mix again.

Flow rate 1 mL/min.

Detection Spectrophotometer set at 238 nm.

Injection 20 μ L.

Run time 4.5 times the retention time of triamcinolone.

Retention time Triamcinolone = about 11 min.

System suitability Reference solution (a):

— resolution: minimum of 1.8 between the peaks due to triamcinolone and to impurity C.

Limits:

— any impurity: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent) and not more than 2 such peaks have an area greater than half the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),

- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2 per cent),
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water (2.5.12)

Maximum 1.0 per cent, determined on 0.500 g.

ASSAY

Prepare the solutions immediately before use and protect from light.

Dissolve 50.0 mg in alcohol R and dilute to 50.0 mL with the same solvent. Dilute 2.0 mL of the solution to 100.0 mL with alcohol R. Measure the absorbance (2.2.25) at the maximum at 238 nm.

Calculate the content of $C_{21}H_{27}FO_6$ taking the specific absorbance to be 389.

STORAGE

Protected from light.

IMPURITIES

- A. 9-fluoro-11β,17-dihydroxy-3,20-dioxopregna-1,4-diene-16α,21-diyl diacetate (triamcinolone 16,21-diacetate),

- B. 9-fluoro-11β,16α,17-trihydroxy-3,20-dioxopregna-1,4-dien-21-yl acetate (triamcinolone 21-acetate),

- C. 9-fluoro-11β,16α,17,21-tetrahydroxypregn-4-ene-3,20-dione (pretriamcinolone).

DEFINITION

9-Fluoro-11β,21-dihydroxy-16α,17-(1-methylethylidenedioxy)pregna-1,4-diene-3,20-dione.

Content

97.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, sparingly soluble in ethanol (96 per cent).

It shows polymorphism (5.9).

IDENTIFICATION

First identification: A, C.

Second identification: B, D.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison triamcinolone acetonide CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of methanol R and evaporate to dryness. Using the residues, prepare halogen salt discs or mulls in liquid paraffin R and record new spectra.

B. Thin-layer chromatography (2.2.27). Prepare the solutions immediately before use and protect from light.

Test solution Dissolve 10 mg of the substance to be examined in methanol R and dilute to 10 mL with the same solvent.

Reference solution (a) Dissolve 20 mg of triamcinolone acetonide CRS in methanol R and dilute to 20 mL with the same solvent.

Reference solution (b) Dissolve 10 mg of triamcinolone hexacetonide CRS in reference solution (a) and dilute to 10 mL with reference solution (a).

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase Add a mixture of 1.2 volumes of water R and 8 volumes of methanol R to a mixture of 15 volumes of ether R and 77 volumes of methylene chloride R.

Application 5 µL.

Development Over 3/4 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm, immediately after development.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

D. Mix about 5 mg with 45 mg of heavy magnesium oxide R and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 mL of water R, 0.05 mL of phenolphthalein solution R1 and about 1 mL of dilute hydrochloric acid R to render the solution colourless. Filter. To a freshly prepared mixture of 0.1 mL of alizarin S solution R and 0.1 mL of zirconyl nitrate solution R, add 1.0 mL of the filtrate. Mix, allow to stand for 5 min and compare the colour of the solution to that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

TESTS

Specific optical rotation (2.2.7)

+ 110 to + 117 (anhydrous substance).

Dissolve 0.100 g in ethanol (96 per cent) R and dilute to 20.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29). Carry out the test protected from light.

Test solution Dissolve 25.0 mg of the substance to be examined in mobile phase B and dilute to 25.0 mL with mobile phase B.

Reference solution (a) Dissolve 5 mg of triamcinolone acetonide for system suitability CRS (containing impurities B and C) in mobile phase B and dilute to 5.0 mL with mobile phase B.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase B. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase B.

Reference solution (c) Dissolve 25.0 mg of triamcinolone acetonide CRS in mobile phase B and dilute to 25.0 mL with mobile phase B.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 µm);

— temperature: 40 °C.

Mobile phase:

— mobile phase A: acetonitrile R, water for chromatography R (32:68 V/V);

— mobile phase B: water for chromatography R, acetonitrile R (35:65 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 20	100	0
20 - 40	100 → 0	0 → 100

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µL of the test solution and reference solutions (a) and (b).

Identification of impurities Use the chromatogram supplied with triamcinolone acetonide for system suitability CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities B and C.

Relative retention With reference to triamcinolone acetonide (retention time = about 16 min): impurity C = about 0.7; impurity B = about 0.8.

System suitability Reference solution (a):

— resolution: minimum 2.5 between the peaks due to impurities C and B.

Limits:

— impurity B: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— impurity C: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);

— unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— total: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water (2.5.12)

Maximum 2.0 per cent, determined on 0.500 g.

ASSAY

Carry out the assay protected from light.

Liquid chromatography (2.2.29) as described in the test for related substances with the following modifications.

Mobile phase Mobile phase A.

Injection Test solution and reference solution (c).

Run time 1.5 times the retention time of triamcinolone acetonide.

Retention time Triamcinolone acetonide = about 16 min.

Calculate the percentage content of $C_{24}H_{31}FO_6$ taking into account the assigned content of triamcinolone acetonide CRS.

STORAGE

Protected from light.

IMPURITIES

Specified impurities B, C.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, D, E, F.

A. 9-fluoro-11β,16α,17,21-tetrahydroxypregna-1,4-diene-3,20-dione (triamcinolone),

B. 9-fluoro-11β,21-dihydroxy-16α,17-(1-methylethylidenedioxy)pregna-1,4,14-triene-3,20-dione (Δ14-triamcinolone acetonide),

C. 9-fluoro-11β,21,21-trihydroxy-16α,17-(1-methylethylidenedioxy)pregna-1,4-diene-3,20-dione (triamcinolone acetonide 21-aldehyde hydrate),

D. 9-chloro-11β,21-dihydroxy-16α,17-(1-methylethylidenedioxy)pregna-1,4-diene-3,20-dione (9α-chloro triamcinolone acetonide),

E. 9-fluoro-11β,21-dihydroxy-16α,17-(1-methylethylidenedioxy)pregna-4-ene-3,20-dione (1,2-dihydrotriamcinolone acetonide),

F. 9-fluoro-11β-hydroxy-16α,17-(1-methylethylidenedioxy)-3,20-dioxopregna-1,4-dien-21-yl acetate (21-acetate triamcinolone acetonide).

Triamcinolone Hexacetonide

(Ph. Eur. monograph 0867)

C₃₀H₄₁FO₇

532.6

5611-51-8

Action and use

Glucocorticoid.

Preparation

Triamcinolone Hexacetonide Injection

Ph Eur

DEFINITION

9-Fluoro-11β-hydroxy-2',2'-dimethyl-3,20-dioxo-(16βH)-[1,3]dioxolo[4',5':16,17]pregna-1,4-dien-21-yl 3,3-dimethylbutanoate.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, sparingly soluble in anhydrous ethanol and in methanol, practically insoluble in heptane.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison triamcinolone hexacetonide CRS.

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

TESTS

Specific optical rotation (2.2.7)

+ 95 to + 101 (anhydrous substance).

Dissolve 0.100 g in methylene chloride R and dilute to 10.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29). Carry out the test protected from light.

Test solution (a) Dissolve 25.0 mg of the substance to be examined in methanol R and dilute to 10.0 mL with the same solvent.

Test solution (b) Dilute 1.0 mL of test solution (a) to 5.0 mL with methanol R.

Reference solution (a) Dissolve 5 mg of triamcinolone hexacetonide for system suitability CRS (containing impurities B and C) in methanol R and dilute to 2.0 mL with the same solvent.

Reference solution (b) Dilute 1.0 mL of test solution (a) to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Ph Eur

Reference solution (c) Dissolve 25.0 mg of triamcinolone hexacetonide CRS in methanol R and dilute to 10.0 mL with the same solvent. Dilute 1.0 mL of the solution to 5.0 mL with methanol R.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: base-deactivated end-capped octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase water for chromatography R, methanol R (25:75 V/V).

Flow rate 2.0 mL/min.

Detection Spectrophotometer at 254 nm.

Injection 20 μ L of test solution (a) and reference solutions (a) and (b).

Run time Twice the retention time of triamcinolone hexacetonide.

Identification of impurities Use the chromatogram supplied with triamcinolone hexacetonide for system suitability CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities B and C.

Relative retention With reference to triamcinolone hexacetonide (retention time = about 8 min): impurity B (epimer 1) = about 0.79; impurity B (epimer 2) = about 0.81; impurity C = about 1.3.

System suitability Reference solution (a):

- resolution: minimum 4.0 between the peaks due to triamcinolone hexacetonide and impurity C.

Calculation of percentage contents:

- for each impurity, use the concentration of triamcinolone hexacetonide in reference solution (b).

Limits:

- impurity B: for the sum of the areas of the 2 epimer peaks, maximum 0.15 per cent;
- unspecified impurities: for each impurity, maximum 0.10 per cent;
- total: maximum 0.3 per cent;
- reporting threshold: 0.05 per cent.

Water (2.5.12)

Maximum 2.0 per cent, determined on 0.50 g.

ASSAY

Carry out the test protected from light.

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection 10 μ L of test solution (b) and reference solution (c).

Calculate the percentage content of $C_{30}H_{41}FO_7$ taking into account the assigned content of triamcinolone hexacetonide CRS.

STORAGE

Protected from light.

IMPURITIES

Specified impurities B.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). Action and use

Sodium channel blocker; potassium-sparing diuretic.

Preparations

Co-triamteride Tablets

Triamterene Capsules

Ph Eur

DEFINITION

6-Phenylpteridine-2,4,7-triamine.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS**Appearance**

Yellow, crystalline powder.

Solubility

Very slightly soluble in water and in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison triamterene CRS.

TESTS**Acidity**

Boil 1.0 g with 20 mL of water R for 5 min, cool, filter and wash the filter with 3 quantities, each of 10 mL, of water R. Combine the filtrate and washings and add 0.3 mL of phenolphthalein solution R. Not more than 1.5 mL of 0.01 M sodium hydroxide is required to change the colour of the indicator.

Impurity D

Gas chromatography (2.2.28).

Internal standard solution Dilute 0.1 mL of nitrobenzene R to 100 mL with methanol R. Dilute 1 mL of this solution to 50 mL with methanol R.

Test solution Introduce 0.800 g of the substance to be examined into a suitable vial, add 5 mL of dimethyl sulfoxide R and heat until the sample is dissolved (do not heat to boiling). Allow to cool. Add 5 mL of cold methanol R to enhance the precipitation of triamterene. Filter and wash the filter with 5 mL of methanol R. Combine the filtrate and washing, add 2.0 mL of the internal standard solution and dilute to 20.0 mL with methanol R.

Reference solution Dissolve 20.0 mg of benzyl cyanide R (impurity D) in methanol R and dilute to 100.0 mL with the same solvent. Dilute 5.0 mL of the solution to 50.0 mL with methanol R. To 2.0 mL of this solution add 2.0 mL of the internal standard solution and 5 mL of dimethyl sulfoxide R and dilute to 20.0 mL with methanol R.

Blank solution Dilute 5 mL of dimethyl sulfoxide R to 20 mL with methanol R.

Column:

- material: fused silica;
- size: $l = 30$ m, $\varnothing = 0.25$ mm;
- stationary phase: macrogol 20 000 R (0.5 μ m).

Carrier gas helium for chromatography R.

Flow rate 1.5 mL/min.

Split ratio 1:15.

Temperature:

- column: 170 °C;
- injection port: 210 °C;
- detector: 230 °C.

Detection Flame ionisation.

Injection 1 μ L.

Run time Twice the retention time of the internal standard.

Relative retention With reference to the internal standard (retention time = about 6 min): impurity D = about 1.6.

System suitability Reference solution:

- resolution: minimum 2.0 between the peak due to impurity D and the nearest peak due to the solvent (blank solution);
- signal-to-noise ratio: minimum 10 for the peak due to impurity D.

Limit:

- impurity D: calculate the ratio (R) of the area of the peak due to impurity D to the area of the peak due to the

internal standard from the chromatogram obtained with the reference solution; from the chromatogram obtained with the test solution, calculate the ratio of the area of the peak due to impurity D to the area of the peak due to the internal standard: this ratio is not greater than R (50 ppm).

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b) Dissolve 5.0 mg of nitrosotriaminopyrimidine CRS (impurity A) in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (c) Dissolve the contents of a vial of triamterene impurity B CRS in 200 μ L of dimethyl sulfoxide R. Add 5.0 mL of the test solution and dilute to 50.0 mL with the mobile phase. Filter the solution through a membrane filter (nominal pore size 0.45 μ m) before injection.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.0$ mm;
- stationary phase: spherical end-capped octylsilyl silica gel for chromatography R (5 μ m).

Mobile phase butylamine R, acetonitrile R, methanol R, water R (2:200:200:600 V/V/V/V), adjusted to pH 5.3 with acetic acid R.

Flow rate 1 mL/min.

Detection Spectrophotometer at 320 nm and at 355 nm.

Injection 50 μ L.

Relative retention With reference to triamterene (retention time = about 5 min): impurity A = about 0.6; impurity B = about 0.8; impurity C = about 1.7.

System suitability:

- resolution: minimum 1.5 between the peaks due to impurity B and triamterene in the chromatogram obtained with reference solution (c) at 355 nm; if necessary, increase the quantity of water R in the mobile phase;
- signal-to-noise ratio: minimum 10 for the principal peak in the chromatogram obtained with reference solution (b) at 320 nm.

Limits:

- correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 1.8; impurity C = 1.5;
- impurity A at 320 nm: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (50 ppm);
- impurities B, C at 355 nm: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- unspecified impurities at 355 nm: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- total at 355 nm: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— disregard limit at 355 nm: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 5 mL of *anhydrous formic acid R* and add 100 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 25.33 mg of $C_{29}H_{34}O_6$.

STORAGE

Protected from light.

Flow rate 1.3 mL/min.

Detection Spectrophotometer at 254 nm.

Injection 20 μL of test solution (a) and reference solutions (a), (b) and (c).

Identification of impurities Use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A and C; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity D.

Relative retentions With reference to the β -anomer of tribenoside (retention time = about 18 min):

- α -anomer = about 1.1; impurity C = about 0.2;
- impurity B = about 0.6; impurity D = about 0.8;
- impurity A = about 1.4.

System suitability Reference solution (b):

- resolution: minimum 3.0 between the peaks due to the α -anomer and to the β -anomer of tribenoside.

Limits:

- impurity A: not more than 1.7 times the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- impurity C: not more than twice the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.5 per cent); if the area of the peak due to impurity C in the chromatogram obtained with the test solution is greater than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.25 per cent), dilute the test solution to obtain an area equal to or smaller than the area of the peak in the chromatogram obtained with reference solution (a); calculate the content of impurity C taking into account the dilution factor;
- impurity D: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.3 per cent);
- any other impurity: not more than the area of the peak due to impurity A in the chromatogram obtained with reference solution (a) (0.3 per cent);
- total: maximum 2.0 per cent;
- disregard limit: 0.17 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (a) (0.05 per cent).

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution (b) and reference solution (b).

Calculate the sum of the percentage contents of the α -anomer and the β -anomer of tribenoside taking into account the assigned content of tribenoside CRS.

STORAGE

Under nitrogen, in an airtight container.

IMPURITIES

A. 3,5,6-tri-O-benzyl-1,2-O-(1-methylethylidene)- α -D-glucofuranose,

Excipient.

Ph Eur

DEFINITION

Tributyl 2-(acetyloxy)propane-1,2,3-tricarboxylate.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

Clear, oily liquid.

Solubility

Not miscible with water, miscible with ethanol (96 per cent) and with methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Preparation Thin films between 2 sodium chloride plates.

Comparison tributyl acetylcitrate CRS.

TESTS**Appearance**

The substance to be examined is clear (2.2.1) and not more intensely coloured than reference solution BY₆ (2.2.2, Method II).

Acidity

Dilute 10 g with 10 mL of previously neutralised ethanol (96 per cent) R and add 0.5 mL of bromothymol blue solution R2. Not more than 0.3 mL of 0.1 M sodium hydroxide is required to change the colour of the indicator to blue.

Refractive index (2.2.6)

1.442 to 1.445.

Related substances

Gas chromatography (2.2.28).

Test solution Dissolve 0.5 g of the substance to be examined in methylene chloride R and dilute to 20 mL with the same solvent.

Reference solution (a) Dissolve 50 mg of the substance to be examined and 50 mg of tributyl citrate R (impurity A) in methylene chloride R and dilute to 20 mL with the same solvent.

Reference solution (b) Dilute 1.0 mL of the test solution to 20.0 mL with methylene chloride R. Dilute 1.0 mL of this solution to 25.0 mL with methylene chloride R.

Reference solution (c) Dissolve the contents of a vial of tributyl acetylcitrate for peak identification CRS (containing impurities B and C) in 1 mL of methylene chloride R.

Column:

- *material*: fused silica;
- *size*: $l = 30$ m, $\varnothing = 0.25$ mm;
- *stationary phase*: cyanopropyl(25)phenyl(25)methyl(50) polysiloxane R (film thickness 0.25 μ m).

Carrier gas helium for chromatography R.

Linear velocity 36 cm/s.

Split ratio 1:20.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 7	70 → 210
	7 - 50	210
Injection port		250
Detector		250

Detection Flame ionisation.

Injection 1 μ L; inject via an inert, glass-lined injection port using an automatic injection device.

Identification of impurities Use the chromatogram supplied with tributyl acetylcitrate for peak identification CRS and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities B and C; use the chromatogram obtained with reference solution (a) to identify the peak due to impurity A.

Relative retention With reference to tributyl acetylcitrate (retention time = about 24 min): impurity B = about 0.70; impurity C = about 0.83; impurity A = about 0.87.

System suitability:

- *resolution*: minimum 2.0 between the peaks due to impurity A and tributyl acetylcitrate in the chromatogram obtained with reference solution (a);
- *repeatability*: maximum relative standard deviation of 5.0 per cent after 6 injections of reference solution (b).

Limits:

- *impurity A*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.6 per cent);
- *impurity C*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);
- *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water (2.5.12)

Maximum 0.25 per cent, determined on 2.00 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Introduce 1.500 g into a 250 mL borosilicate glass flask. Add 25 mL of 2-propanol R, 50 mL of water R, 25.0 mL of 1 M sodium hydroxide and a few glass beads. Heat under a reflux condenser for 3 h. Allow to cool. Add 1 mL of phenolphthalein solution R1 and titrate with 1 M hydrochloric acid. Carry out a blank titration.

1 mL of 1 M sodium hydroxide is equivalent to 100.6 mg of C₂₀H₃₄O₈.

IMPURITIES

Specified impurities A, B, C.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) D, E.

STORAGE

In an airtight container.

Ph Eur

Triclofos Sodium

C₂H₃Cl₃NaO₄P

251.4

7246-20-0

Action and use

Hypnotic.

Preparation

Triclofos Oral Solution

DEFINITION

Triclofos Sodium is sodium 2,2,2-trichloroethyl hydrogen orthophosphate. It contains not less than 41.3% and not more than 43.2% of Cl and not less than 97.0% and not more than 102.0% of C₂H₃Cl₃NaO₄P, both calculated with reference to the dried substance.

CHARACTERISTICS

A white or almost white powder; hygroscopic.

Freely soluble in water; slightly soluble in ethanol (96%); practically insoluble in ether.

IDENTIFICATION

A. The infrared absorption spectrum, Appendix II A, is concordant with the reference spectrum of triclofos sodium (RS 350).

B. Yields the reactions characteristic of sodium salts, Appendix VI.

C. Heat 0.1 g with 1 g of anhydrous sodium carbonate to a dull red heat and maintain for 10 minutes, cool, extract the residue with water and filter. The filtrate yields the reactions characteristic of chlorides and of phosphates, Appendix VI.

TESTS

Acidity

pH of a 2% w/v solution, 3.0 to 4.5, Appendix V L.

Clarity of solution

A 2.0% w/v solution is clear, Appendix IV A.

Chloride

Dissolve 0.1 g in 50 mL of water. 15 mL of the solution complies with the *limit test for chlorides*, Appendix VII (0.17%).

Phosphate

Not more than 1.0%, calculated as PO₄, when determined by the following method. Dissolve 25 mg in 10 mL of water, add 4 mL of 1M sulfuric acid, 1 mL of ammonium molybdate solution and 2 mL of methylaminophenol—sulfite reagent and allow to stand for 15 minutes. Add sufficient water to produce 25 mL, allow to stand for a further 15 minutes and measure the absorbance of a 4 cm layer of the resulting solution at 730 nm, Appendix II B. Calculate the content of phosphate from a calibration curve prepared by treating suitable volumes of a 0.00143% w/v solution of potassium dihydrogen orthophosphate in the same manner.

Loss on drying

When dried at 100° at a pressure not exceeding 0.7 kPa for 3 hours, loses not more than 5.0% of its weight. Use 1 g.

ASSAY**For Cl**

Mix 0.25 g with 1 g of anhydrous sodium carbonate in a nickel crucible about 3 cm in diameter, fill the crucible completely with anhydrous sodium carbonate and invert into a nickel crucible about 4 cm in diameter; cover the smaller crucible with anhydrous sodium carbonate, well pressed down, using about 25 g of anhydrous sodium carbonate in all. Heat for 30 minutes at a dull red heat, cool, transfer to a 400 mL beaker, add 150 mL of water and boil gently for 10 minutes. Filter through absorbent cotton into a 600 mL beaker, washing the residue thoroughly with hot water, until about 400 mL of filtrate has been collected. Cool, cautiously add nitric acid until the solution is neutral to litmus paper and add 3 mL of nitric acid in excess. Add 50 mL of 0.1M silver nitrate VS, allow to stand until precipitation is complete, filter, wash the precipitate with water and titrate the combined filtrate and washings with 0.1M ammonium thiocyanate VS using ammonium iron(III) sulfate solution R2 as indicator. Each mL of 0.1M silver nitrate VS is equivalent to 3.545 mg of Cl.

For C₂H₃Cl₃NaO₄P

Heat 0.2 g in a Kjeldahl flask with 2 mL of sulfuric acid and 2.5 mL of nitric acid until brown fumes cease to be evolved, cool, add 1 mL of nitric acid and heat again. Continue adding nitric acid and heating until brown fumes are no longer evolved and the solution is colourless when cold. Heat until dense, white fumes are evolved, cool, transfer the solution to a flask with the aid of 150 mL of water, add 50 mL of citric—molybdic acid solution and heat slowly to boiling. Swirling the flask continuously, add 25 mL of quinoline solution at first drop wise and then in a steady stream, heat on a water bath for 5 minutes and cool. Filter, wash the precipitate with water until free from acid, transfer the precipitate to a flask with the aid of 100 mL of water, add 50 mL of 0.5M sodium hydroxide VS and shake until dissolved. Titrate the excess of alkali with 0.5M hydrochloric acid VS using phenolphthalein—thymol blue solution as indicator. Each mL of 0.5M sodium hydroxide VS is equivalent to 4.835 mg of C₂H₃Cl₃NaO₄P. Correct the result for the content of phosphate, as determined by the test described above; each mg of PO₄ is equivalent to 2.65 mg of C₂H₃Cl₃NaO₄P.

Triethanolamine

(Trolamine, Ph. Eur. monograph 1577)

C₆H₁₅NO₃

149.2

102-71-6

Action and use

Pharmaceutical aid.

Ph Eur

DEFINITION

2,2',2''-Nitrilotriethanol.

Content

99.0 per cent m/m to 103.0 per cent m/m of total bases (anhydrous substance).

CHARACTERS**Appearance**

Clear, viscous, colourless or slightly yellow liquid, very hygroscopic.

Solubility

Miscible with water and with ethanol (96 per cent), soluble in methylene chloride.

IDENTIFICATION

First identification: B, C.

Second identification: A, B, D.

A. Relative density (2.2.5): 1.120 to 1.130.

B. Refractive index (2.2.6): 1.482 to 1.485.

C. Examine the chromatograms obtained in the test for related substances.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

D. To 1 mL add 0.3 mL of copper sulfate solution R. A blue colour develops. Add 2.5 mL of dilute sodium hydroxide solution R and heat to boiling. The blue colour remains unchanged.

TESTS**Solution S**

Dissolve 12 g in water R and dilute to 20 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and not more intensely coloured than reference solution B₆ (2.2.2, Method II).

Related substances

Gas chromatography (2.2.28).

Internal standard solution Dissolve 5.0 g of 3-aminopropanol R in water R and dilute to 100.0 mL with the same solvent.

Test solution Dissolve 10.0 g of the substance to be examined in water R. Add 1.0 mL of the internal standard solution and dilute to 100.0 mL with water R.

Reference solution (a) Dissolve 1.0 g of trolamine CRS in water R and dilute to 10.0 mL with the same solvent.

Reference solution (b) Dissolve 0.1 g of trolamine impurity A CRS, 0.5 g of trolamine impurity B CRS and 0.1 g of trolamine CRS in water R and dilute to 10.0 mL with the same solvent. To 1.0 mL of this solution add 1.0 mL of the

internal standard solution and dilute to 100.0 mL with water R.

Column:

- material: fused silica;
- size: $l = 25$ m, $\varnothing = 0.25$ mm;
- stationary phase: phenyl(5)methyl(95)polysiloxane R (film thickness 0.50 μ m).

Carrier gas helium for chromatography R.

Flow rate 1 mL/min.

Split ratio 1:35.

	Time (min)	Temperature (°C)
Column	0	60
	0 - 8.5	60 → 230
	8.5 - 14	230
Injection port		260
Detector		280

Detection Flame ionisation.

Injection 2 μ L; if necessary inject a blank solution.

Elution order Impurity A, 3-aminopropanol, impurity B, trolamine.

System suitability Reference solution (b):

- resolution: minimum 2.0 between the peaks due to 3-aminopropanol and impurity A.

Limits:

- **impurity A:** calculate the ratio ($R1$) of the area of the peak due to impurity A to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (b); from the chromatogram obtained with the test solution, calculate the ratio of the area of any peak due to impurity A to the area of the peak due to the internal standard: this ratio is not greater than $R1$ (0.1 per cent);
- **impurity B:** calculate the ratio ($R2$) of the area of the peak due to impurity B to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (b); from the chromatogram obtained with the test solution, calculate the ratio of the area of any peak due to impurity B to the area of the peak due to the internal standard: this ratio is not greater than $R2$ (0.5 per cent);
- **total:** calculate the ratio ($R4$) of the area of the peak due to trolamine to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (b); from the chromatogram obtained with the test solution, calculate the ratio of the sum of the areas of any peaks, apart from the principal peak and the peak due to the internal standard, to the area of the peak due to the internal standard: this ratio is not greater than 10 times $R4$ (1.0 per cent);
- **disregard limit:** 0.5 times the ratio of the area of the peak due to trolamine to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (b) (0.05 per cent).

Impurity C

Gas chromatography (2.2.28).

Solvent mixture acetone R, chloroform R (10:50 V/V).

Preparation of solid phase extraction columns

Column A Fill a glass chromatography column ($l = 400$ mm; $\varnothing = 20$ mm) fitted with a

polytetrafluoroethylene stopcock and a sintered-glass filter (160) (2.1.2) with 3 g of anhydrous sodium sulfate R and cover with a mixture of 17 g of kieselguhr for chromatography R and 3 g of potassium carbonate R. Settle the column bed by gently tapping the column.

Column B Fill a glass chromatography column ($l = 400$ mm; $\varnothing = 20$ mm) fitted with a polytetrafluoroethylene stopcock and a sintered-glass filter (160) (2.1.2) with a slurry of 25 g of silica gel for chromatography R (0.063 to 0.200 mm) in the solvent mixture. Apply slight pressure to settle the column and cover the column bed with 5 g of anhydrous sodium sulfate R.

Standard solution (a) Dissolve 50 μ L of *N*-nitrosodiethanolamine R (impurity C) in methanol R and dilute to 50.0 mL with the same solvent. Dilute 100 μ L of this solution to 100.0 mL with methanol R.

Standard solution (b) Dilute 10.0 mL of standard solution (a) to 50.0 mL with methanol R.

Standard solution (c) Dissolve 50 mg of *N*-nitrosodisopropanolamine R in methanol R and dilute to 50.0 mL with the same solvent. Dilute 100 μ L of this solution to 100.0 mL with methanol R.

Test solution To 2.000 g of the substance to be examined add 200 μ L of methanol R and 0.5 g of sulfamic acid R. Dissolve in 8 mL of water for chromatography R and apply the solution to column A. Rinse the vessel twice with 1.5 mL of water for chromatography R, applying the rinsings to the column as well. After 15 min of equilibration time elute the column with 100 mL of ethyl acetate R, collecting the eluate in a 250 mL distillation flask. Evaporate the eluate to dryness. Take up the residue in 1 mL of the solvent mixture, apply to column B and let it settle. Rinse the flask twice with 2 mL of the solvent mixture, apply the rinsings to the column and let it settle. Wash the column with 100 mL of the solvent mixture and discard. Elute the column with 120 mL of acetone R, collecting the eluate in a 250 mL distillation flask. Evaporate the eluate to dryness. Transfer the residue with the aid of a small volume of acetone R into a vial and evaporate again to dryness under a stream of nitrogen R. Dissolve the residue in 100 μ L of trimethylpentane for chromatography R, add 100 μ L of *N*-methyltrimethylsilyl-trifluoroacetamide R and heat at 70 °C for 1 h.

Reference solution (a) To 2.000 g of the substance to be examined add 200 μ L of standard solution (b) and 0.5 g of sulfamic acid R. Dissolve in 8 mL of water for chromatography R, then proceed exactly as described for the test solution.

Reference solution (b) To 1.0 mL of standard solution (a) add 4.0 mL of standard solution (c) and mix. Transfer 500 μ L of the solution to a vial and evaporate to dryness under a stream of nitrogen R. Dissolve the residue in 200 μ L of trimethylpentane for chromatography R, add 200 μ L of *N*-methyltrimethylsilyl-trifluoroacetamide R and heat at 70 °C for 1 h.

Reference solution (c) In a vial, evaporate 200 μ L of standard solution (b) to dryness under a stream of nitrogen R. Dissolve the residue in 100 μ L of trimethylpentane for chromatography R, add 100 μ L of *N*-methyltrimethylsilyl-trifluoroacetamide R and heat at 70 °C for 1 h.

Blank solution In a gas chromatography vial, evaporate 200 μ L of methanol R to dryness under a stream of nitrogen R. Dissolve the residue in 100 μ L of trimethylpentane for chromatography R add 100 μ L of *N*-methyltrimethylsilyl-trifluoroacetamide R and heat at 70 °C for 1 h.

Column:

- material: fused silica;
- size: $l = 30\text{ m}$; $\varnothing = 0.25\text{ mm}$;
- stationary phase: base-deactivated phenyl(5)methyl(95) polysiloxane R (film thickness $1\ \mu\text{m}$).

Carrier gas helium for chromatography R.

Flow rate 2 mL/min.

Split ratio 1:10.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 5	180 → 280
	5 - 10	280
Injection port		220

Detection Chemoluminescence:

- dual plasma burner in nitrosamine mode;
- burner temperature: 450 °C ;
- oxygen flow rate: $4.4\text{--}5.0\text{ mL/min}$.

Injection 4 μL .

System suitability:

- resolution: minimum 1.3 between the peaks due to impurity C and *N*-nitrosodiisopropanolamine in the chromatogram obtained with reference solution (b);
- recovery: minimum 50 per cent. The difference between the area of the peak due to impurity C in the chromatogram obtained with reference solution (a) and the area of the corresponding peak in the chromatogram obtained with the test solution is not less than 0.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (c).

Limits:

- impurity C: not more than the difference between the area of the peak due to impurity C in the chromatogram obtained with reference solution (a) and the area of the corresponding peak in the chromatogram obtained with the test solution (24).

Water (2.5.12)

Maximum 1.0 per cent, determined on 1.000 g.

Open the titration vessel, introduce the substance to be examined directly into the previously titrated solvent. Stopper the flask immediately.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g. Do not carry out the initial heating on a water-bath.

ASSAY

Dissolve 1.200 g in 75 mL of carbon dioxide-free water R. Add 0.3 mL of methyl red solution R. Titrate with 1 M hydrochloric acid.

1 mL of 1 M hydrochloric acid is equivalent to 0.149 g of $\text{C}_6\text{H}_{15}\text{NO}_3$.

STORAGE

In an airtight container, protected from light.

IMPURITIES

Specified impurities A, B, C.

Comparison Ph. Eur. reference spectrum of triethyl citrate.

C. It gives the reaction of esters (2.3.1).

D. To 0.5 mL add 5 mL of ethanol (96 per cent) R and 4 mL of dilute sodium hydroxide solution R. Boil under reflux for about 10 min. 2 mL of the solution gives the reaction of citrates (2.3.1).

TESTS

Appearance

The substance to be examined is clear (2.2.1) and not more intensely coloured than reference solution BY₆ (2.2.2, Method II).

Acidity

Dilute 10 g with 10 mL of previously neutralised ethanol (96 per cent) R, add 0.5 mL of bromothymol blue solution R2. Not more than 0.3 mL of 0.1 M sodium hydroxide is required to change the colour of the indicator to blue.

Refractive index (2.2.6)

1.440 to 1.446.

Related substances

Gas chromatography (2.2.28): use the normalisation procedure.

Test solution Dissolve 1.0 mL of the substance to be examined in *methylene chloride R* and dilute to 50.0 mL with the same solvent.

Reference solution Dissolve 1.0 mL of the substance to be examined and 0.5 mL of *methyl tridecanoate R* in *methylene chloride R*, then dilute to 50.0 mL with the same solvent.

Column:

- *material*: fused silica;
- *size*: $l = 30$ m, $\varnothing = 0.32$ mm;
- *stationary phase*: *methylpolysiloxane R* (5 μ m).

Carrier gas helium for chromatography R.

Linear velocity About 26 cm/s.

Split ratio About 1:50.

Temperature:

- *column*: 200 °C;
- *injection port and detector*: 220 °C.

Detection Flame ionisation.

Injection 1.0 μ L.

Run time Twice the retention time of triethyl citrate.

Retention time Triethyl citrate = about 13.6 min.

System suitability Reference solution:

- *resolution*: minimum 1.5 between the peaks due to triethyl citrate and methyl tridecanoate.

Limits:

- *any impurity*: for each impurity, maximum 0.2 per cent;
- *total*: maximum 0.5 per cent;
- *disregard limit*: 0.04 per cent.

Water (2.5.12)

Maximum 0.25 per cent, determined on 1.000 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Introduce 1.500 g into a 250 mL borosilicate-glass flask fitted with a reflux condenser. Add 25 mL of *2-propanol R*, 50 mL of *water R*, 25.0 mL of 1 M *sodium hydroxide* and a few glass beads. Heat under a reflux condenser for 1 h.

Allow to cool. Add 1 mL of *phenolphthalein solution R1* and titrate with 1 M *hydrochloric acid*. Carry out a blank titration.

1 mL of 1 M *sodium hydroxide* is equivalent to 92.1 mg of $C_{12}H_{20}O_7$.

STORAGE

In an airtight container.

IMPURITIES

A. triethyl propene-1,2,3-tricarboxylate (triethyl aconitate).

Ph Eur

Trifluoperazine Hydrochloride

(Ph. Eur. monograph 0059)

$C_{21}H_{26}Cl_2F_3N_3S$

480.4

440-17-5

Action and use

Dopamine receptor antagonist; neuroleptic.

Preparation

Trifluoperazine Tablets

Ph Eur

DEFINITION

Trifluoperazine hydrochloride contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 10-[3-(4-methylpiperazin-1-yl)propyl]-2-(trifluoromethyl)-10*H*-phenothiazine dihydrochloride, calculated with reference to the dried substance.

CHARACTERS

A white to pale yellow, crystalline powder, hygroscopic, freely soluble in water, soluble in alcohol.

It melts at about 242 °C, with decomposition.

IDENTIFICATION

A. Protect the solutions from bright light and measure the absorbances immediately. Dissolve 50 mg in 0.1 M *hydrochloric acid* and dilute to 500 mL with the same acid. Examined between 280 nm and 350 nm, the solution shows an absorption maximum (2.2.25) at 305 nm. Dilute 5 mL of the solution to 100 mL with 0.1 M *hydrochloric acid*. Examined between 230 nm and 280 nm, this solution shows an absorption maximum at 255 nm. The specific absorbance at this maximum is about 650.

B. It complies with the identification test for phenothiazines by thin-layer chromatography (2.3.3): use *trifluoperazine hydrochloride CRS* to prepare the reference solution.

C. Place 0.25 g in a 100 mL separating funnel, add 5 mL of *water R* and 2 mL of *dilute sodium hydroxide solution R*. Shake vigorously with 20 mL of *ether R*. Wash the ether layer with 5 mL of *water R*, add 0.15 g of *maleic acid R* and evaporate the ether. The residue, recrystallised from 30 mL of *alcohol R* and dried, melts (2.2.14) at about 192 °C.

D. Dissolve about 0.5 mg in 1 mL of *water R*, add 0.1 mL of *bromine water R* and shake for about 1 min. Add dropwise 1 mL of *sulfuric acid R* with constant, vigorous agitation. A red colour develops.

E. Dissolve about 50 mg in 5 mL of *water R* and add 2 mL of *nitric acid R*. A dark-red colour develops which turns to pale yellow. The solution gives reaction (a) of chlorides (2.3.1).

TESTS**pH (2.2.3)**

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent. The pH of the solution is 1.6 to 2.5.

Related substances

Carry out the test protected from bright light.

Examine by thin-layer chromatography (2.2.27), using a TLC silica gel GF₂₅₄ plate R.

Test solution Dissolve 0.2 g of the substance to be examined in a mixture of 5 volumes of diethylamine R and 95 volumes of methanol R and dilute to 10 mL with the same mixture of solvents. Prepare immediately before use.

Reference solution Dilute 1 mL of the test solution to 200 mL with a mixture of 5 volumes of diethylamine R and 95 volumes of methanol R.

Apply to the plate 10 µL of each solution. Develop over a path of 12 cm using a mixture of 10 volumes of acetone R, 10 volumes of diethylamine R and 80 volumes of cyclohexane R. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

Loss on drying (2.2.32)

Not more than 1.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 50 mL of alcohol R and add 5.0 mL of 0.01 M hydrochloric acid. Carry out a potentiometric titration (2.2.20), using 0.1 M sodium hydroxide. Read the volume added between the 2 points of inflexion.

1 mL of 0.1 M sodium hydroxide is equivalent to 48.04 mg of C₂₁H₂₆Cl₂F₃N₃S.

STORAGE

Store in an airtight container, protected from light.

Ph Eur

Trifluridine

(Ph. Eur. monograph 2910)

C₁₀H₁₁F₃N₂O₅

296.2

70-00-8

Action and use

Pyrimidine nucleoside analogue; antiviral (herpes viruses).

Preparation

Trifluridine Eye Drops

Ph Eur

DEFINITION

1-(2-Deoxy-β-D-erythro-pentofuranosyl)-5-(trifluoromethyl)pyrimidine-2,4(1H,3H)-dione.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Soluble to slightly soluble in water and in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison trifluridine CRS.

TESTS

Specific optical rotation (2.2.7)

+ 47 to + 51 (dried substance).

Dissolve 0.300 g in water R and dilute to 10.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29). Carry out the test protected from light. Use the solutions within 12 h.

Solvent mixture Mobile phase B, mobile phase A (5:95 V/V).

Test solution Dissolve 20.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture. Dilute 1.0 mL of the solution to 10.0 mL with the solvent mixture.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Reference solution (b) Dissolve 20.0 mg of trifluridine CRS in the solvent mixture and dilute to 10.0 mL with the solvent mixture. Dilute 1.0 mL of the solution to 10.0 mL with the solvent mixture.

Reference solution (c) Dissolve 2 mg of 5-carboxyuracil R (impurity C) in the solvent mixture and dilute to 100 mL with the solvent mixture. Dilute 1 mL of the solution to 10 mL with the solvent mixture (solution A). Dissolve the contents of a vial of trifluridine impurity A CRS in 1 mL of solution A.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: base-deactivated end-capped octadecylsilyl silica gel for chromatography R (5 µm).

Mobile phase:

— mobile phase A: 7.8 g/L solution of sodium dihydrogen phosphate R adjusted to pH 6.0 with ammonia R;

— mobile phase B: acetonitrile R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 3	95	5
3 - 10	95 → 85	5 → 15
10 - 15	85	15

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 263 nm.

Autosampler Set at 4 °C.

Injection 20 µL.

Identification of impurities Use the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A and C.

Relative retention With reference to trifluridine (retention time = about 13.8 min): impurity C = about 0.19; impurity A = about 0.21.

System suitability Reference solution (c):

— **resolution**: minimum 1.5 between the peaks due to impurities C and A.

Calculation of percentage contents:

— for each impurity, use the concentration of trifluridine in reference solution (a).

Limits:

- **unspecified impurities**: for each impurity, maximum 0.10 per cent;
- **total**: maximum 0.2 per cent;
- **reporting threshold**: 0.05 per cent.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (b).

Calculate the percentage content of $C_{10}H_{11}F_3N_2O_5$ taking into account the assigned content of *trifluridine CRS*.

IMPURITIES

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, B, C, D, E.

- A. 1-(2-deoxy-β-D-erythro-pentofuranosyl)-2,4-dioxo-1,2,3,4-tetrahydropyrimidine-5-carboxylic acid,

- B. 5-(trifluoromethyl)pyrimidine-2,4(1H,3H)-dione,

- C. 2,4-dioxo-1,2,3,4-tetrahydropyrimidine-5-carboxylic acid (5-carboxyuracil),

- D. 1-(2-deoxy-β-D-erythro-pentofuranosyl)pyrimidine-2,4(1H,3H)-dione,

- E. pyrimidine-2,4(1H,3H)-dione (uracil).

Ph Eur

322-79-2

Action and use

Thromboxane synthesis inhibitor; antiplatelet drug.

Ph Eur

DEFINITION

2-(Acetyloxy)-4-(trifluoromethyl)benzoic acid.

Content

98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, very soluble in anhydrous ethanol, freely soluble in methylene chloride.

mp

About 118 °C, with decomposition.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison triflusal CRS.

TESTS

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 0.200 g of the substance to be examined in *acetonitrile R* and dilute to 20.0 mL with the same solvent. *Prepare the solution immediately before use.*

Reference solution (a) Dissolve 5.0 mg of *triflusal impurity B CRS* in *acetonitrile R* and dilute to 10.0 mL with the same solvent.

Reference solution (b) Dilute 1.0 mL of reference solution (a) to 25.0 mL with *acetonitrile R*.

Reference solution (c) Dissolve 2.5 mg of the substance to be examined in acetonitrile R, add 5 mL of reference solution (a) and dilute to 10.0 mL with acetonitrile R. Prepare the solution immediately before use.

Column:

- size: $l = 0.15$ m, $\varnothing = 4.0$ mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (4–5 μ m).

Mobile phase:

- mobile phase A: 0.5 per cent V/V solution of phosphoric acid R;
- mobile phase B: acetonitrile R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 – 20	80 → 30	20 → 70
20 – 25	30	70

Flow rate 1.2 mL/min.

Detection Spectrophotometer at 237 nm.

Injection 10 μ L of the test solution and reference solutions (b) and (c).

Identification of impurities Use the chromatogram obtained with reference solution (b) to identify the peak due to impurity B.

Relative retention With reference to trifusal (retention time = about 11 min): impurity B = about 1.2.

System suitability Reference solution (c):

- resolution: minimum 3.0 between the peaks due to trifusal and impurity B.

Limits:

- impurity B: not more than 1.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- unspecified impurities: for each impurity, not more than 0.5 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.10 per cent);
- sum of impurities other than B: not more than 0.5 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.1 per cent);
- disregard limit: 0.25 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo*.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Dissolve 0.200 g in 50 mL of anhydrous ethanol R. Titrate with 0.1 M sodium hydroxide, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M sodium hydroxide is equivalent to 24.82 mg of $C_{10}H_{17}F_3O_4$.

STORAGE

In an airtight container, at a temperature not exceeding 25 °C.

IMPURITIES

Specified impurities B.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). D. 2-[[2-(acetyloxy)-4-(trifluoromethyl)benzoyl]oxy]-4-(trifluoromethyl)benzoic acid.

Ph Eur

Medium-chain Triglycerides

Fractionated Coconut Oil

(Ph. Eur. monograph 0868)

Action and use.

Excipient.

When Medium-chain Triglycerides are prepared from the endosperm of *Cocos nucifera* L the title fractionated coconut oil may be used.

Ph Eur

DEFINITION

Mixture of triglycerides of saturated fatty acids, mainly of caprylic (octanoic) acid and of capric (decanoic) acid. The fatty acids are obtained from the hard, dried fraction of the endosperm of *Cocos nucifera* L. or from the dried endosperm of *Elaeis guineensis* Jacq.

Content

Minimum 95.0 per cent of saturated fatty acids with 8 and 10 carbon atoms.

CHARACTERS**Appearance**

Colourless or slightly yellowish, oily liquid.

Solubility

Practically insoluble in water, miscible with ethanol (96 per cent), with methylene chloride, with light petroleum and with fatty oils.

Relative density

About 0.95.

Refractive index

About 1.446.

IDENTIFICATION

First identification: C, D.

Second identification: A, B, D.

A. Iodine value (2.5.4): maximum 1.0.

B. Saponification value (2.5.6): 310 to 360.

C. Composition of fatty acids (see Tests).

D. Viscosity (see Tests).

TESTS**Appearance**

The substance to be examined is clear (2.2.1) and not more intensely coloured than reference solution Y₃ (2.2.2, Method I).

Alkaline impurities

Dissolve 2.00 g in a mixture of 1.5 mL of ethanol (96 per cent) R and 3.0 mL of ether R. Add 0.05 mL of bromophenol blue solution R. Not more than 0.15 mL of 0.01 M hydrochloric acid is required to change the colour of the indicator to yellow.

Viscosity (2.2.9)

25 mPa·s to 33 mPa·s.

Acid value (2.5.1)

Maximum 0.2.

Hydroxyl value (2.5.3, Method A)

Maximum 10.

Peroxide value (2.5.5, Method A)

Maximum 1.0.

Composition of fatty acids

Gas chromatography (2.4.22, Method C) with the following modifications. Use the mixture of calibrating substances in Table 2.4.22.-2.

Column:

- material: fused silica;
- size: $l = 30$ m, $\varnothing = 0.32$ mm;
- stationary phase: macrogol 20 000 R (film thickness 0.5 μ m).

Carrier gas helium for chromatography R.

Flow rate 1.3 mL/min.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 1	70
	1 - 35	70 → 240
	35 - 50	240
Injection port		250
Detector		250

Detection Flame ionisation.

Split ratio 1:100.

Composition of the fatty-acid fraction of the substance:

- caproic acid: maximum 2.0 per cent;
- caprylic acid: 50.0 per cent to 80.0 per cent;
- capric acid: 20.0 per cent to 50.0 per cent;
- lauric acid: maximum 3.0 per cent;
- myristic acid: maximum 1.0 per cent;
- fatty acids of chain length greater than or equal to C₁₆: maximum 1.0 per cent.

Water (2.5.32)

Maximum 0.2 per cent, determined on 1.00 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 2.0 g.

STORAGE

In a well-filled container, protected from light.

LABELLING

The label states, where applicable, that the substance is intended for use in parenteral nutrition.

Ph Eur

Triglycerol Diisostearate

(Ph. Eur. monograph 2032)

Ph Eur

DEFINITION

Mixture of polyglycerol diesters of mainly isostearic acid, obtained by esterification of polyglycerol and isostearic acid. The polyglycerol consists mainly of triglycerol.

CHARACTERS**Appearance**

Clear, yellowish, viscous liquid.

Solubility

Practically insoluble in water, miscible with ethanol (96 per cent) and with fatty oils.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Preparation Film between 2 plates of sodium chloride R.

Comparison triglycerol diisostearate CRS.

B. Composition of fatty acids (see Tests).

TESTS**Appearance of solution**

The solution is not more intensely coloured than reference solution BY₃ (2.2.2, Method I).

Mix 10 mL with 10 mL of ethanol (96 per cent) R.

Acid value (2.5.1)

Maximum 3.0, determined on 1.0 g.

Hydroxyl value (2.5.3, Method A)

180 to 230, determined on 0.25 g.

Iodine value (2.5.4, Method B)

Maximum 5.0.

Peroxide value (2.5.5, Method B)

Maximum 6.0.

Saponification value (2.5.6)

128 to 160.

Composition of fatty acids (2.4.22, Method B)

Use the mixture of calibrating substances in Table 2.4.22.-1.

Composition of the fatty-acid fraction of the substance:

- sum of the contents of the fatty acids eluting between palmitic acid and stearic acid: minimum 60.0 per cent;
- sum of the contents of myristic acid, palmitic acid and stearic acid: maximum 11.0 per cent.

Water (2.5.12)

Maximum 0.5 per cent, determined on 2.00 g.

Sulfated ash

Maximum 0.5 per cent, determined on 1.0 g.

Heat a silica crucible to redness for 30 min, allow to cool in a desiccator and weigh. Evenly distribute 1.00 g of the substance to be examined in the crucible and weigh. Dry at 100-105 °C for 1 h and ignite in a muffle furnace at 600 °C ± 25 °C until the substance is thoroughly charred. Carry out the test for sulfated ash (2.4.14) on the residue obtained, starting with "Moisten the substance to be examined...".

STORAGE

In an airtight container, protected from light.

Ph Eur

Trihexyphenidyl Hydrochloride

(Ph. Eur. monograph 1626)

C₂₀H₃₂ClNO

337.9

52-49-3

Action and use

Anticholinergic.

Preparation

Trihexyphenidyl Tablets

Ph Eur

DEFINITION

(1*R*S)-1-Cyclohexyl-1-phenyl-3-(piperidin-1-yl)propan-1-ol hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Slightly soluble in water, sparingly soluble in ethanol (96 per cent) and in methylene chloride.

mp

About 250 °C, with decomposition.

IDENTIFICATION

First identification A, D.

Second identification B, C, D.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison trihexyphenidyl hydrochloride CRS.

B. Thin-layer chromatography (2.2.27).

Test solution Dissolve 25 mg of the substance to be examined in a mixture of 20 volumes of methanol R and

80 volumes of methylene chloride R and dilute to 10 mL with the same mixture of solvents.

Reference solution Dissolve 25 mg of trihexyphenidyl hydrochloride CRS in a mixture of 20 volumes of methanol R and 80 volumes of methylene chloride R and dilute to 10 mL with the same mixture of solvents.

Plate TLC silica gel G plate R.

Mobile phase diethylamine R, hexane R (5:95 V/V).

Application 5 µL.

Development Over 2/3 of the plate.

Drying In air.

Detection Spray with a 0.1 g/L solution of chloroplatinic acid R in hydrochloric acid R containing 0.4 per cent V/V of hydriodic acid R.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve 0.5 g in 5 mL of warm methanol R and make just alkaline to red litmus paper R with sodium hydroxide solution R. A precipitate is formed which, after recrystallisation from methanol R, melts (2.2.14) at about 113°C to 115 °C.

D. It gives reaction (a) of chlorides (2.3.1).

TESTS

pH (2.2.3)

5.2 to 6.2.

Dissolve 0.5 g with heating in 25 mL of carbon dioxide-free water R. Cool to room temperature and dilute to 50 mL with carbon dioxide-free water R.

Optical rotation (2.2.7)

-0.10° to + 0.10°.

Dissolve 1.25 g in a mixture of 20 volumes of methanol R and 80 volumes of methylene chloride R and dilute to 25.0 mL with the same mixture of solvents.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 200.0 mL with the mobile phase. Dilute 10.0 mL to 50.0 mL with the mobile phase.

Reference solution (b) Dissolve 10.0 mg of trihexyphenidyl impurity A CRS in the mobile phase and dilute to 10.0 mL with the mobile phase.

Reference solution (c) Dilute 1.0 mL of reference solution (b) to 100.0 mL with the mobile phase.

Reference solution (d) To 1 mL of reference solution (b), add 1 mL of the test solution and dilute to 100 mL with the mobile phase.

Column:

— size: $l = 0.15$ m, $\varnothing = 4.6$ mm;

— stationary phase: octadecylsilyl silica gel for chromatography R (5 µm).

Mobile phase Mix 200 mL of water R with 0.2 mL of triethylamine R. Adjust to pH 4.0 with phosphoric acid R and add 800 mL of acetonitrile R.

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 210 nm.

Injection 20 µL.

Run time 3 times the retention time of trihexyphenidyl.

System suitability Reference solution (d):

— **resolution**: minimum 4.0 between the peaks due to trihexyphenidyl and to impurity A.

Limits:

- **impurity A**: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
- **unspecified impurities**: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- **total**: not more than 0.5 per cent;
- **disregard limit**: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 mL of *ethanol* (96 per cent) R and add 5.0 mL of 0.01 M hydrochloric acid. Carry out a potentiometric titration (2.2.20), using 0.1 M sodium hydroxide. Read the volume added between the 2 points of inflexion.

1 mL of 0.1 M sodium hydroxide is equivalent to 33.79 mg of C₂₀H₃₂NINO.

Content

99.0 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Slightly soluble in water, soluble in acetonitrile, sparingly soluble in acetone, slightly soluble in ethanol (96 per cent).

mp

About 133 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison: trimebutine maleate CRS.

TESTS

Appearance of solution

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 0.5 g in *acetone* R, sonicate and dilute to 100 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Solvent mixture Dissolve 0.24 g of *anhydrous sodium dihydrogen phosphate* R in 180 mL of *water* R and adjust to pH 2.5 with *dilute phosphoric acid* R; dilute to 200 mL with *water* R. Add 50 mL of *acetonitrile* R and mix.

Test solution Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Reference solution (b) Dissolve 5 mg of *methyl 3,4,5-trimethoxybenzoate* R (impurity C) in 10 mL of the solvent mixture. Dilute 1 mL of the solution to 20 mL with the solvent mixture.

Reference solution (c) Dissolve the contents of a vial of *trimebutine for system suitability* CRS (containing impurities D and E) in 1 mL of reference solution (b).

Column:

— **size**: *l* = 0.25 m, Ø = 4.6 mm;

— **stationary phase**: *polar end-capped octadecylsilyl silica gel for chromatography* R (5 µm);

— **temperature**: 25 °C.

Mobile phase:

- **mobile phase A**: dissolve 3.6 g of *anhydrous sodium dihydrogen phosphate* R in 990 mL of *water* for chromatography R and adjust to pH 3.0 with *phosphoric acid* R; dilute to 1000 mL with *water* for chromatography R;
- **mobile phase B**: *acetonitrile* R1;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 3	78	22
3 - 6.5	78 → 65	22 → 35
6.5 - 15	65 → 60	35 → 40
15 - 35	60	40

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 215 nm.

Injection 20 µL of the test solution and reference solutions (a) and (c).

Identification of impurities Use the chromatogram supplied with *trimebutine for system suitability* CRS and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities C, D and E.

Relative retention With reference to trimebutine (retention time = about 12 min): maleic acid = about 0.17;

impurity E = about 0.9; impurity D = about 1.3; impurity C = about 1.4.

System suitability Reference solution (c):

- **resolution:** minimum 1.5 between the peaks due to impurities D and C;
- **peak-to-valley ratio:** minimum 10, where H_p = height above the baseline of the peak due to impurity E and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to trimetazidine.

Limits:

- **impurity E:** not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.6 per cent);
- **unspecified impurities:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- **total:** not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- **disregard limit:** 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard any peak due to maleic acid.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 50.35 mg of $C_{26}H_{33}NO_9$.

IMPURITIES

Specified impurities E.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, B, C, D.

A. (2RS)-2-(dimethylamino)-2-phenylbutanol,

B. 3,4,5-trimethoxybenzoic acid,

C. methyl 3,4,5-trimethoxybenzoate,

D. (1RS)-1-[(dimethylamino)methyl]-1-phenylpropyl 3,4,5-trimethoxybenzoate,

E. (2RS)-2-(methylamino)-2-phenylbutyl 3,4,5-trimethoxybenzoate.

Ph Eur

Trimetazidine Hydrochloride

(Trimetazidine Dihydrochloride, Ph. Eur. monograph 1741)

$C_{14}H_{24}Cl_2N_2O_3$

339.3

13171-25-0

Action and use
Vasodilator.

Ph Eur

DEFINITION

1-(2,3,4-Trimethoxybenzyl)piperazine dihydrochloride.

Content

98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder, slightly hygroscopic.

Solubility

Freely soluble in water, sparingly soluble in alcohol.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison Ph. Eur. reference spectrum of trimetazidine dihydrochloride.

B. Dissolve 25 mg in 5 mL of *water R*. 2 mL of the solution gives reaction (a) of chlorides (2.3.1).

TESTS**Appearance of solution**

The solution is clear (2.2.1) and not more intensely coloured than reference solution BY₆ (2.2.2, Method II).

Dissolve 1.0 g in water R and dilute to 10 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 0.200 g of the substance to be examined in water R and dilute to 50.0 mL with the same solvent.

Reference solution (a) Dissolve 20.0 mg of trimetazidine for system suitability CRS in water R and dilute to 5.0 mL with the same solvent.

Reference solution (b) Dilute 2.0 mL of the test solution to 100.0 mL with water R. Dilute 5.0 mL of this solution to 100.0 mL with water R.

Reference solution (c) Dilute 25.0 mL of reference solution (b) to 50.0 mL with water R.

Column:

- size: $l = 0.15$ m, $\varnothing = 4.6$ mm,
- stationary phase: spherical octadecylsilyl silica gel for chromatography R (5 μ m) with a pore size of 10 nm,
- temperature: 30 °C.

Mobile phase:

- mobile phase A: mix 357 volumes of methanol R and 643 volumes of a 2.87 g/L solution of sodium heptanesulfonate R adjusted to pH 3.0 with dilute phosphoric acid R,
- mobile phase B: methanol R,

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 50	95 → 75	5 → 25
50 - 52	75 → 95	25 → 5

Flow rate 1.2 mL/min.

Detection Spectrophotometer at 240 nm.

Equilibration For at least 1 h with the mobile phase at the initial composition.

Injection 10 μ L.

Relative retention With reference to trimetazidine (retention time = about 25 min): impurity D = about 0.2; impurity C = about 0.4; impurity H = about 0.6; impurities A and I = about 0.9; impurity E = about 0.95; impurity F = about 1.4; impurity B = about 1.8.

System suitability:

- peak-to-valley ratio: minimum 3, where H_p = height above the baseline of the peak due to impurity E and H_o = height above the baseline of the lowest point of the curve separating this peak from the principal peak in the chromatogram obtained with reference solution (a);
- signal-to-noise ratio: minimum 10 for the principal peak in the chromatogram obtained with reference solution (c).

Limits:

- correction factors: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.55; impurity C = 0.37; impurity F = 0.71;
- impurities A, B, C, D, E, F, H, I: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

- any other impurity: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- total: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- disregard limit: area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Impurity G

Thin-layer chromatography (2.2.27).

Test solution Dissolve 0.10 g of the substance to be examined in methanol R and dilute to 10 mL with the same solvent.

Reference solution Dissolve 22.6 mg of piperazine hydrate R in methanol R and dilute to 100 mL with the same solvent.

Dilute 10 mL of the solution to 100 mL with methanol R.

Plate TLC silica gel plate R.

Mobile phase concentrated ammonia R, alcohol R (20:80 V/V).

Application 10 μ L.

Development Over 2/3 of the plate.

Drying At 100-105 °C for 30 min.

Detection Spray with iodoplatinate reagent R.

Limit:

- impurity G: any spot due to impurity G is not more intense than the spot in the chromatogram obtained with the reference solution (0.1 per cent, expressed as anhydrous piperazine).

Loss on drying (2.2.32)

Maximum 2.5 per cent, determined on 1.000 g by drying *in vacuo* at 105 °C at a pressure not exceeding 15 kPa.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.120 g in 50.0 mL of water R. Add 1 mL of nitric acid R and titrate with 0.1 M silver nitrate, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M silver nitrate is equivalent to 16.96 mg of C₁₄H₂₄Cl₂N₂O₃.

STORAGE

In an airtight container.

IMPURITIES

Specified impurities A, B, C, D, E, F, G, H, I.

A. 1-(3,4,5-trimethoxybenzyl)piperazine,

B. 1,4-bis(2,3,4-trimethoxybenzyl)piperazine,

C. 2,3,4-trimethoxybenzaldehyde,

D. (2,3,4-trimethoxyphenyl)methanol,

E. 1-(2,4,5-trimethoxybenzyl)piperazine,

F. 1-(2,4,6-trimethoxybenzyl)piperazine,

G. piperazine,

H. ethyl 4-(2,3,4-trimethoxybenzyl)piperazine-1-carboxylate,

I. 1-methyl-4-(2,3,4-trimethoxybenzyl)piperazine (N-methyltrimetazidine).

Ph Eur

Trimethadione

(Ph. Eur. monograph 0440)

C₆H₉NO₃

143.1

127-48-0

Action and use
Antiepileptic.

Ph Eur

DEFINITION

3,5,5-Trimethyloxazolidine-2,4-dione.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

Colourless or almost colourless crystals.

Solubility

Soluble in water, very soluble in ethanol (96 per cent).

IDENTIFICATION

First identification: B.

Second identification: A, C, D.

A. Melting point (2.2.14): 45 °C to 47 °C, determined without previous drying.

B. Infrared absorption spectrophotometry (2.2.24).

Preparation Discs prepared using 3 mg of substance per 0.4 g of potassium bromide R.

Comparison trimethadione CRS.

C. To 2 mL of solution S (see Tests) add 1 mL of barium hydroxide solution R. A white precipitate is formed, which dissolves on addition of 1 mL of dilute hydrochloric acid R.

D. Dissolve 0.3 g in a mixture of 5 mL of alcoholic potassium hydroxide solution R and 5 mL of ethanol (96 per cent) R. Allow to stand for 10 min. Add 0.05 mL of phenolphthalein solution R1 and neutralise exactly with hydrochloric acid R. Evaporate to dryness on a water-bath and take up the residue with 4 quantities, each of 5 mL, of ether R. Filter the combined ether layers and evaporate to dryness. The residue, recrystallised from 5 mL of toluene R and dried, melts (2.2.14) at about 80 °C.

TESTS

Solution S

Dissolve 2.0 g in carbon dioxide-free water R and dilute to 40 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

Acidity or alkalinity

To 10 mL of solution S add 0.1 mL of methyl red solution R. Not more than 0.1 mL of 0.01 M hydrochloric acid or 0.01 M sodium hydroxide is required to change the colour of the indicator.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.00 g by drying in a desiccator over anhydrous silica gel R for 6 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Gas chromatography (2.2.28).

Internal standard solution Dissolve 0.125 g of decanol R in anhydrous ethanol R and dilute to 25 mL with the same solvent.

Test solution Dissolve 0.100 g of the substance to be examined in the internal standard solution and dilute to 10.0 mL with the same solution.

Reference solution Dissolve 0.100 g of trimethadione CRS in the internal standard solution and dilute to 10.0 mL with the same solution.

Column:

- material: stainless steel,
- size: l = 0.75 m, Ø = 3 mm,
- stationary phase: styrene-divinylbenzene copolymer R (125-150 µm).

Carrier gas nitrogen for chromatography R.

Flow rate 20 mL/min.

Temperature:

- column: 210 °C,
- injection port: 240 °C,
- detector: 270 °C.

Detection Flame ionisation.

Injection 1 µL.

Calculate the content of C₆H₉NO₃ from the declared content of trimethadione CRS.

STORAGE

Protected from light.

 Trimethoprim Tablets

Ph Eur

DEFINITION

5-(3,4,5-Trimethoxybenzyl)pyrimidine-2,4-diamine.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS**Appearance**

White or yellowish-white powder.

Solubility

Very slightly soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification: C.

Second identification: A, B, D.

A. Melting point (2.2.14): 199 °C to 203 °C.

B. Dissolve about 20 mg in 0.1 M sodium hydroxide and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of this solution to 10.0 mL with 0.1 M sodium hydroxide. Examined between 230 nm and 350 nm (2.2.25), the solution shows an absorption maximum at 287 nm. The specific absorbance at the absorption maximum is 240 to 250.

C. Infrared absorption spectrophotometry (2.2.24).

Preparation Discs.

Comparison trimethoprim CRS.

D. Dissolve about 25 mg, heating if necessary, in 5 mL of 0.005 M sulfuric acid and add 2 mL of a 16 g/L solution of potassium permanganate R in 0.1 M sodium hydroxide. Heat to boiling and add to the hot solution 0.4 mL of formaldehyde R. Mix, add 1 mL of 0.5 M sulfuric acid, mix and heat again to boiling. Cool and filter. To the filtrate, add 2 mL of methylene chloride R and shake vigorously. The organic layer, examined in ultraviolet light at 365 nm, shows green fluorescence.

TESTS**Appearance of solution**

The solution is not more intensely coloured than reference solution BY₇ (2.2.2, Method II).

Dissolve 0.5 g in 10 mL of a mixture of 1 volume of water R, 4.5 volumes of methanol R and 5 volumes of methylene chloride R.

Related substances

A. Liquid chromatography (2.2.29).

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 200.0 mL with the mobile phase.

Reference solution (b) Dissolve the contents of a vial of trimethoprim for system suitability CRS (containing impurity E) in 1 mL of the mobile phase.

Column:

- size: $l = 0.250$ m, $\varnothing = 4.0$ mm;
- stationary phase: base-deactivated octadecylsilyl silica gel for chromatography R (5 µm).

Mobile phase Mix 30 volumes of methanol R and 70 volumes of a 1.4 g/L solution of sodium perchlorate R adjusted to pH 3.6 with phosphoric acid R.

Flow rate 1.3 mL/min.

Detection Spectrophotometer at 280 nm.

Injection 20 µL loop injector.

Run time 11 times the retention time of trimethoprim.

Relative retention With reference to trimethoprim (retention time = about 5 min): impurity C = about 0.8; impurity E = about 0.9; impurity A = about 1.5; impurity D = about 2.0; impurity G = about 2.1; impurity B = about 2.3; impurity J = about 2.7; impurity F = about 4.0.

System suitability Reference solution (b):

- resolution: minimum 2.5 between the peaks due to impurity E and trimethoprim.

Limits:

- correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.43; impurity E = 0.53; impurity J = 0.66;
- any impurity: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- total: not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- disregard limit: 0.04 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent); disregard any peak

corresponding to impurity H (relative retention = about 10.3).

B. Liquid chromatography (2.2.29).

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 200.0 mL with the mobile phase.

Reference solution (b) Dissolve 5.0 mg of trimethoprim CRS and 5.0 mg of trimethoprim impurity B CRS in the mobile phase and dilute to 100.0 mL with the mobile phase.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: nitrile silica gel for chromatography R (5 μ m) with a specific surface area of 350 m²/g and a pore diameter of 10 nm.

Mobile phase Dissolve 1.14 g of sodium hexanesulfonate R in 600 mL of a 13.6 g/L solution of potassium dihydrogen phosphate R; adjust to pH 3.1 with phosphoric acid R and mix with 400 mL of methanol R.

Flow rate 0.8 mL/min.

Detection Spectrophotometer at 280 nm.

Injection 20 μ L loop injector.

Run time 6 times the retention time of trimethoprim.

Relative retention With reference to trimethoprim (retention time = about 4 min): impurity H = about 1.8; impurity I = about 4.9.

System suitability Reference solution (b):

- resolution: minimum 2.0 between the peaks due to trimethoprim and impurity B.

Limits:

- correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity H = 0.50; impurity I = 0.28;
- any impurity: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- total: not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- disregard limit: 0.04 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent); disregard any peak due to impurity B (relative retention = about 1.3).

Impurity K

Gas chromatography (2.2.28).

Test solution Dissolve 0.500 g of the substance to be examined in 35.0 mL of citrate buffer solution pH 5.0 R, add 10.0 mL of 1,1-dimethylethyl methyl ether R, shake thoroughly and centrifuge for 10 min. Use the upper layer.

Reference solution Dilute 5.0 mL of hydrochloric acid R to 50.0 mL with water R, add 12.5 mg of aniline R and shake thoroughly. Add 10.0 μ L of this solution and 10.0 mL of 1,1-dimethylethyl methyl ether R to 35.0 mL of citrate buffer solution pH 5.0 R, shake thoroughly and centrifuge for 10 min. Use the upper layer.

Column:

- material: fused silica;
- size: $l = 30$ m, $\varnothing = 0.53$ mm;
- stationary phase: methylpolysiloxane R (film thickness 3 μ m).

Carrier gas helium for chromatography R.

Flow rate 12 mL/min.

Temperature:

- column: 80 °C;
- injection port: 230 °C;
- detector: 270 °C.

Detection Nitrogen-phosphorus detector.

Injection 3 μ L.

Run time 15 min.

System suitability Reference solution:

- repeatability: maximum relative standard deviation of 5.0 per cent after 6 injections.

Limit:

- impurity K: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (5 ppm).

Loss on drying (2.2.32)

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 mL of anhydrous acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 29.03 mg of C₁₄H₁₈N₄O₃.

Trimipramine Maleate

(Ph. Eur. monograph 0534)

$C_{24}H_{30}N_2O_4$

410.5

521-78-8

Action and use

Monoamine reuptake inhibitor; tricyclic antidepressant.

Preparation

Trimipramine Tablets

Ph Eur

DEFINITION

(2*RS*)-3-(10,11-Dihydro-5*H*-dibenzo[*b,f*]azepin-5-yl)-*N,N*,2-trimethylpropan-1-amine hydrogen (2*Z*)-but-2-enedioate.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Slightly soluble in water and in ethanol (96 per cent).

IDENTIFICATION

A. Melting point (2.2.14): 140 °C to 144 °C.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison trimipramine maleate GRS.

TESTS

Related substances

Liquid chromatography (2.2.29). Carry out the test protected from light.

Buffer solution pH 7.7 2.64 g/L solution of ammonium phosphate R in water for chromatography R; adjust to pH 7.7 with phosphoric acid R.

Test solution Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 100 mL with the mobile phase.

Reference solution (a) Dissolve 5 mg of the substance to be examined and 5 mg of iminodibenzyl R (impurity F) in the mobile phase and dilute to 10 mL with the mobile phase.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (c) Dissolve the contents of a vial of trimipramine for peak identification GRS (containing impurities A, B, C, D and E) in 1 mL of acetonitrile R1.

Column:

— size: $l = 0.125$ m, $\varnothing = 4.0$ mm;

— stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase acetonitrile R1, buffer solution pH 7.7 (38:62 V/V).

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 210 nm.

Injection 20 μ L.

Run time 3 times the retention time of trimipramine.

Ph Eur

Identification of impurities Use the chromatogram supplied with trimipramine for peak identification CRS and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B, C, D and E; doubling of the peak due to impurity E may be observed.

Relative retention With reference to trimipramine (retention time = about 27 min): impurity A = about 0.1; impurity B = about 0.3; impurity C = about 0.4; impurity D = about 0.5; impurity F = about 1.4; impurity E = about 1.5.

System suitability:

- resolution: minimum 3.5 between the peaks due to trimipramine and impurity F in the chromatogram obtained with reference solution (a);
- the chromatogram obtained with reference solution (c) is similar to the chromatogram supplied with trimipramine for peak identification CRS.

Limits:

- correction factor: for the calculation of content, multiply the peak area of impurity F by 0.5;
- impurity E: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- impurity F: not more than 2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- impurities A, B, C, D: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- total: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.350 g in 50 mL of anhydrous acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 41.05 mg of C₂₄H₃₀N₂O₄.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E, F.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) G.

A. (2RS)-3-(10,11-dihydro-5H-dibenzo[b,f]azepin-5-yl)-N,N,2-trimethylpropan-1-amine N-oxide,

B. (2RS)-3-(10,11-dihydro-5H-dibenzo[b,f]azepin-5-yl)-N,N,2-dimethylpropan-1-amine,

C. (2RS)-3-(5H-dibenzo[b,f]azepin-5-yl)-N,N,2-trimethylpropan-1-amine,

D. imipramine,

E. mixture of the stereoisomers of N-[3-(10,11-dihydro-5H-dibenzo[b,f]azepin-5-yl)-2-methylpropyl]-N,N',N',2-tetramethylpropane-1,3-diamine,

F. 10,11-dihydro-5H-dibenzo[b,f]azepine,

G. 2-methyl-10,11-dihydro-5H-dibenzo[b,f]azepine.

Triprolidine Hydrochloride

 $C_{19}H_{22}N_2, HCl, H_2O$

332.9

6138-79-0

Action and use

Histamine H_1 receptor antagonist; antihistamine.

Preparation

Triprolidine Tablets

DEFINITION

Triprolidine Hydrochloride is (*E*)-2-(3-pyrrolidin-1-yl-1-*p*-tolylprop-1-enyl)pyridine hydrochloride monohydrate. It contains not less than 98.5% and not more than 101.0% of $C_{19}H_{22}N_2, HCl$, calculated with reference to the anhydrous substance.

CHARACTERISTICS

A white, crystalline powder.

Freely soluble in *water*; freely soluble in *ethanol* (96%) and practically insoluble in *ether*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of triprolidine hydrochloride (RS 356).

B. Yields reaction A characteristic of *chlorides*, Appendix VI.

TESTS

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using the following solutions in *methanol*.

- (1) 1.0% w/v of the substance being examined.
- (2) 0.020% w/v of *Z-triprolidine hydrochloride BPCRS*.
- (3) 0.010% w/v of the substance being examined.

CHROMATOGRAPHIC CONDITIONS

- (a) Use as the coating silica gel F_{254} (Merck silica gel 60 F_{254} plates are suitable).
- (b) Use the mobile phase as described below.
- (c) Apply 5 μ L of each solution.
- (d) Develop the plate to 15 cm.
- (e) After removal of the plate, dry in air, examine under *ultraviolet light* (254 nm).

MOBILE PHASE

Equal volumes of *butan-2-one* and *dimethylformamide*.

LIMITS

In the chromatogram obtained with solution (1):

any spot corresponding to *Z-triprolidine* is not more intense than the spot in the chromatogram obtained with solution (2);

and any other *secondary spot* is not more intense than the spot in the chromatogram obtained with solution (3).

Sulfated ash

Not more than 0.1%, Appendix IX A.

Water

4.5 to 6.0% w/w, Appendix IX C. Use 0.4 g.

ASSAY

Carry out Method I for *non-aqueous titration*, Appendix VIII A, using 0.25 g dissolved in a mixture of 50 mL of *anhydrous acetic acid* and 0.5 mL of *acetic anhydride* and *crystal violet solution* as indicator. Each mL of 0.1M *perchloric acid VS* is equivalent to 15.74 mg of $C_{19}H_{22}N_2, HCl$.

Trometamol

(Ph. Eur. monograph 1053)

 $C_4H_{11}NO_3$

121.1

77-86-1

Action and use

Organic amine proton acceptor; alkalinizing agent.

Ph Eur

DEFINITION

Trometamol contains not less than 99.0 per cent and not more than the equivalent of 100.5 per cent of aminomethylidynetri(methanol), calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, or colourless crystals, freely soluble in *water*, sparingly soluble in *alcohol*, very slightly soluble in *ethyl acetate*.

IDENTIFICATION

First identification: B, C.

Second identification: A, B, D.

A. Solution S (see Tests) is strongly alkaline (2.2.4).

B. Melting point (2.2.14): 168 °C to 174 °C.

C. Examine by *infrared absorption spectrophotometry* (2.2.24), comparing with the spectrum obtained with *trometamol CRS*.

D. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

pH (2.2.3)

The pH of freshly prepared solution S is 10.0 to 11.5.

Related substances

Examine by *thin-layer chromatography* (2.2.27), using *silica gel G R* as the coating substance. Wash the plate with *methanol R* before applying the solutions.

Test solution (a) Dissolve 0.20 g in 1 mL of *water R*, with heating, and dilute to 10 mL with *methanol R*.

Test solution (b) Dilute 1 mL of test solution (a) to 10 mL with *methanol R*.

Reference solution (a) Dissolve 20 mg of *trometamol CRS* in *methanol R* and dilute to 10 mL with the same solvent.

Reference solution (b) Dilute 1 mL of test solution (a) to 100 mL with *methanol R*.

Apply to the plate 10 µL of each solution. Develop over a path of 10 cm using a mixture of 10 volumes of *dilute ammonia R1* and 90 volumes of *2-propanol R*. Dry the plate at 100 °C to 105 °C. Spray with a 5 g/L solution of *potassium permanganate R* in a 10 g/L solution of *sodium carbonate R*. After about 10 min examine in daylight. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (1.0 per cent).

Chlorides (2.4.4)

To 10 mL of solution S add 2.5 mL of *dilute nitric acid R* and dilute to 15 mL with *water R*. The solution complies with the limit test for chlorides (100 ppm).

Iron (2.4.9)

Dissolve 1.0 g in *water R* and dilute to 10 mL with the same solvent. The solution complies with the limit test for iron (10 ppm).

Loss on drying (2.2.32)

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Not more than 0.1 per cent, determined on 1.0 g.

Bacterial endotoxins (2.6.14)

Less than 0.03 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Dissolve 0.100 g in 20 mL of *water R*. Add 0.2 mL of *methyl red solution R*. Titrate with 0.1 M *hydrochloric acid* until the colour changes from yellow to red.

1 mL of 0.1 M *hydrochloric acid* is equivalent to 12.11 mg of $C_{17}H_{20}N_2O_2$.

IMPURITIES

A. nitromethylidynetri(methanol).

Ph Eur

Tropicamide

(Ph. Eur. monograph 1159)

$C_{17}H_{20}N_2O_2$

284.4

1508-75-4

Action and use
Anticholinergic.

Preparation
Tropicamide Eye Drops

Ph Eur

DEFINITION

(2*RS*)-*N*-Ethyl-3-hydroxy-2-phenyl-*N*-(pyridin-4-ylmethyl)propanamide.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Slightly soluble in water, freely soluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

First identification: C.

Second identification: A, B, D, E.

A. Melting point (2.2.14): 95 °C to 98 °C.

B. Ultraviolet and visible absorption spectrophotometry (2.2.25).

Test solution Dissolve 20.0 mg in 0.1 M *hydrochloric acid* and dilute to 50.0 mL with the same acid. Dilute 2.0 mL of this solution to 20.0 mL with 0.1 M *hydrochloric acid*.

Spectral range 230-350 nm.

Absorption maximum At 254 nm.

Specific absorbance at the absorption maximum 170 to 190.

C. Infrared absorption spectrophotometry (2.2.24).

Comparison *tropicamide CRS*.

D. Thin-layer chromatography (2.2.27).

Test solution Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 mL with the same solvent.

Reference solution Dissolve 10 mg of *tropicamide CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent.

Plate TLC silica gel F_{254} plate R.

Mobile phase concentrated ammonia R, *methanol R*, *methylene chloride R* (0.5:5:95 V/V/V).

Application 10 µL.

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the spot in the chromatogram obtained with the reference solution.

E. Dissolve about 5 mg in 3 mL of a mixture of 9 mL of *acetic anhydride R*, 1 mL of *acetic acid R* and 0.1 g of *citric acid monohydrate R*. Heat on a water-bath for 5-10 min. A reddish-yellow colour is produced.

TESTS

Appearance of solution

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 0.1 g in *ethanol (96 per cent) R* and dilute to 10 mL with the same solvent.

Optical rotation (2.2.7)

-0.1° to +0.1°.

Dissolve 2.5 g in *anhydrous ethanol R* and dilute to 25.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 50.0 mg of the substance to be examined in 3 mL of acetonitrile R1 and dilute to 50.0 mL with water for chromatography R.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with water for chromatography R. Dilute 1.0 mL of this solution to 10.0 mL with water for chromatography R.

Reference solution (b) Dissolve 5 mg of 4-[(ethylamino)methyl]pyridine R (impurity A), 5.0 mg of tropicamide impurity C CRS and 5.0 mg of tropicamide impurity D CRS in 2 mL of acetonitrile R1 and dilute to 50.0 mL with water for chromatography R. Dilute 1.0 mL of this solution to 10.0 mL with water for chromatography R.

Reference solution (c) Dissolve 5 mg of tropicamide for peak identification CRS (containing impurity B) in 1.0 mL of acetonitrile R1 and dilute to 10.0 mL with water for chromatography R.

Reference solution (d) To 1 mL of reference solution (b) add 1 mL of reference solution (c).

Reference solution (e) Dilute 1.5 mL of reference solution (b) to 10.0 mL with water for chromatography R.

Column:

- size: $l = 0.15$ m, $\varnothing = 4.6$ mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (3 μ m);
- temperature: 40 °C.

Mobile phase Dissolve 0.135 g of sodium dodecyl sulfate R and 3.4 mL of phosphoric acid R in 950 mL of water for chromatography R. Adjust to pH 3.0 with strong sodium hydroxide solution R and dilute to 1000 mL with water for chromatography R. Mix 73 volumes of this solution with 27 volumes of acetonitrile R1.

Flow rate 0.8 mL/min.

Detection Spectrophotometer at 210 nm and at 254 nm.

Injection 15 μ L.

Run time 3 times the retention time of tropicamide.

Identification of impurities Use the chromatogram obtained with reference solution (c) to identify the peak due to impurity B; use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, C and D.

Relative retention With reference to tropicamide (retention time = about 11 min): impurity C = about 0.4; impurity A = about 0.5; impurity D = about 0.8; impurity B = about 2.3.

System suitability Reference solution (d):

- resolution at 210 nm: minimum 2.0 between the peaks due to impurities C and A;
- resolution at 210 nm: minimum 2.0 between the peaks due to impurities A and D.

Limits:

- correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.8; impurity B = 0.6;
- impurity B at 254 nm: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- impurity A at 254 nm: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);

- impurity C at 210 nm: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (e) (0.15 per cent);
- impurity D at 210 nm: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (e) (0.15 per cent);
- unspecified impurities at 254 nm: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- sum of impurities other than C and D at 254 nm: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- disregard limit at 254 nm: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Chlorides (2.4.4)

Maximum 100 ppm.

Dissolve 1.0 g with heating in 8 mL of acetic acid R, cool and dilute to 10 mL with the same acid. Dilute 5 mL of this solution to 15 mL with water R.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 80 °C at a pressure not exceeding 0.7 kPa for 4 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 50 mL of anhydrous acetic acid R. Add 0.2 mL of naphtholbenzein solution R and titrate with 0.1 M perchloric acid until the colour changes from orange to green.

1 mL of 0.1 M perchloric acid is equivalent to 28.44 mg of $C_{17}H_{20}N_2O_2$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D.

A. *N*-(pyridin-4-ylmethyl)ethanamine,

B. *N*-ethyl-2-phenyl-*N*-(pyridin-4-ylmethyl)propenamide,

C. (2*RS*)-3-hydroxy-2-phenylpropanoic acid (tropic acid),

D. phenylacetic acid.

Tropisetron Hydrochloride

(Ph. Eur. monograph 2102)

C₁₇H₂₁ClN₂O₂

320.8

105826-92-4

Action and use

Serotonin 5HT₃ receptor antagonist; antiemetic.

Ph. Eur.

DEFINITION

Hydrochloride of (1*R*,3*r*,5*S*)-8-methyl-8-azabicyclo[3.2.1]oct-3-yl 1*H*-indole-3-carboxylate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble or soluble in water, sparingly soluble in ethanol (96 per cent), very slightly soluble in methylene chloride.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

Test solution Dissolve 50 mg in *methanol R* and dilute to 25.0 mL with the same solvent. Dilute 1.0 mL of this solution to 100.0 mL with *methanol R*.

Spectral range 220-360 nm.

Absorption maxima At 228 nm and 282 nm.

Absorbance ratio A₂₂₈/A₂₈₂ = 1.3 to 1.4.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison *tropisetron hydrochloride CRS*.

C. Thin-layer chromatography (2.2.27).

Test solution Dissolve 5 mg of the substance to be examined in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 5 mL with the same mixture of solvents.

Reference solution Dissolve 5 mg of *tropisetron hydrochloride CRS* in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 5 mL with the same mixture of solvents.

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase *anhydrous formic acid R*, *water R*, *methanol R*, *methylene chloride R* (2:2:30:70 V/V/V/V).

Application 5 µL.

Development Over 2/3 of the plate.

Drying In cold air.

Detection A Examine in ultraviolet light at 254 nm.

Detection B Spray first with a solution prepared as follows: dissolve 0.85 g of *bismuth subnitrate R* in a mixture of 10 mL of *acetic acid R* and 40 mL of *water R*; to 5 mL of this

solution add 5 mL of a 400 g/L solution of *potassium iodide R* and dilute to 100 mL with *water R*. Then spray with *strong hydrogen peroxide solution R*.

Results For both detection methods, the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives reaction (a) of chlorides (2.3.1).

TESTS

Appearance of solution

The solution is clear (2.2.1) and not more intensely coloured than reference solution B₇ (2.2.2, *Method II*).

Dissolve 1.00 g in *water R* and dilute to 20 mL with the same solvent.

Impurity A

Thin-layer chromatography (2.2.27).

Test solution Dissolve 0.200 g of the substance to be examined in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 5.0 mL with the same mixture of solvents.

Reference solution (a) Dissolve 5.0 mg of *tropine CRS* (impurity A) in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 25.0 mL with the same mixture of solvents.

Reference solution (b) Dilute 1.0 mL of the test solution to 20.0 mL with a mixture of equal volumes of *methanol R* and *methylene chloride R*. To 0.1 mL of this solution add 1.0 mL of reference solution (a).

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase *ammonia R*, *methanol R*, *methylene chloride R* (5:40:60 V/V/V).

Application 10 µL.

Development Over 2/3 of the plate.

Drying In a current of cold air.

Detection Dip the plate in *potassium iodobismuthate solution R1*.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Limir:

— *impurity A*: any spot due to impurity A is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.5 per cent).

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 0.100 g of the substance to be examined in mobile phase A and dilute to 20.0 mL with mobile phase A.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

Reference solution (b) Dissolve 5.0 mg of *tropisetron impurity B CRS* and 5 mg of *ethyl indole-3-carboxylate CRS* in mobile phase A and dilute to 20.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 50.0 mL with mobile phase A.

Column:

— *size*: *l* = 0.25 m, \varnothing = 4.6 mm;

— *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

— *mobile phase A*: *triethylamine R*, *acetonitrile R*, *water R*, *methanol R* (0.3:35:400:565 V/V/V/V);

— mobile phase B: triethylamine R, acetonitrile R, water R, methanol R (0.3:100:100:800 V/V/V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 14	100	0
14 - 32	100 → 0	0 → 100
32 - 36	0	100
36 - 37	0 → 100	100 → 0
37 - 52	100	0

Flow rate 2 mL/min.

Detection Spectrophotometer at 280 nm.

Injection 20 µL.

Relative retention With reference to tropisetron (retention time = about 22 min): impurity B = about 0.05; ethyl indole-3-carboxylate = about 0.2.

System suitability Reference solution (b):

— resolution: minimum 4 between the peaks due to impurity B and ethyl indole-3-carboxylate.

Limits:

- impurity B: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- total: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

N,N-Dimethylaniline

Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

Test solution Dissolve 250 mg of the substance to be examined in mobile phase A and dilute to 5.0 mL with mobile phase A.

Reference solution Dissolve 10.0 mg of *N,N*-dimethylaniline R in mobile phase A and dilute to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 100.0 mL with mobile phase A.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: octylsilyl silica gel for chromatography R (5 µm).

Mobile phase:

- mobile phase A: triethylamine R, acetonitrile R, water R, methanol R (0.3:35:400:565 V/V/V/V);
- mobile phase B: triethylamine R, acetonitrile R, water R, methanol R (0.3:100:100:800 V/V/V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 10	100	0
10 - 11	100 → 0	0 → 100
11 - 30	0	100
30 - 31	0 → 100	100 → 0
31 - 50	100	0

Flow rate 1 mL/min.

Detection Spectrophotometer at 248 nm.

Injection 20 µL.

Limit:

— *N,N*-dimethylaniline: not more than the area of the principal peak in the chromatogram obtained with the reference solution (20 ppm).

Loss on drying (2.2.32)

Maximum 0.3 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 10 mL of anhydrous acetic acid R and add 70 mL of acetic anhydride R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 32.08 mg of $C_{17}H_{21}ClN_2O_2$.

IMPURITIES

Specified impurities A, B.

A. (1*R*,3*r*,5*S*)-8-methyl-8-azabicyclo[3.2.1]octan-3-ol (tropine),

B. 1*H*-indole-3-carboxylic acid.

Ph Eur

DEFINITION

(1*R*,3*r*,5*S*)-3-[(Hydroxydiphenylacetyl)oxy]spiro[8-azoniabicyclo[3.2.1]octane-8,1'-pyrrolidinium] chloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS**Appearance**

White or almost white, crystalline powder.

Solubility

Very soluble in water, freely soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison trospium chloride CRS.

B. It gives reaction (a) of chlorides (2.3.1).

TESTS**Solution S**

Dissolve 3.0 g in carbon dioxide-free water R and dilute to 30 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and not more intensely coloured than reference solution B₇ (2.2.2, Method II).

pH (2.2.3)

5.0 to 7.0.

Dilute 5 mL of solution S to 50 mL with carbon dioxide-free water R.

Impurity C

Thin-layer chromatography (2.2.27).

Test solution Dissolve 0.20 g of the substance to be examined in 2.0 mL of methanol R.

Reference solution (a) Dissolve 1.0 mg of trospium impurity C CRS in 2.0 mL of methanol R.

Reference solution (b) Dilute 1.0 mL of test solution to 10.0 mL with methanol R. To 50 µL of this solution add 1 mL of reference solution (a).

Plate TLC silica gel plate R.

Mobile phase glacial acetic acid R, hydrochloric acid R, acetonitrile R (1:3.5:45 V/V/V).

Application 10 µL as bands.

Development Over 2/3 of the plate.

Drying In a current of warm air until the odour of acetic acid is no longer perceptible.

Detection Spray with potassium iodobismuthate solution R and subsequently with a 5 g/L solution of sodium nitrite R.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly visible and separated zones.

Limit:

— **impurity C:** any zone due to impurity C is not more intense than the zone in the chromatogram obtained with reference solution (a) (0.5 per cent).

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 30.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

Reference solution (a) Dissolve 6.0 mg of trospium impurity A CRS in the mobile phase and dilute to 20.0 mL with the mobile phase.

Reference solution (b) Dissolve 7.5 mg of trospium impurity B CRS in the mobile phase and dilute to 5.0 mL with the mobile phase.

Reference solution (c) Dilute a mixture of 0.3 mL of the test solution, 1.0 mL of reference solution (a) and 1.0 mL of reference solution (b) to 100.0 mL with the mobile phase.

Column:

— **size:** $l = 0.25$ m, $\varnothing = 4.6$ mm;

— **stationary phase:** end-capped octylsilyl silica gel for chromatography R (5 µm);

— **temperature:** 40 °C.

Mobile phase Mix 1 volume of triethylamine R and 3 volumes of phosphoric acid R with 700 volumes of water R and add 300 volumes of acetonitrile R.

Flow rate 1 mL/min.

Detection Spectrophotometer at 215 nm.

Injection 20 µL.

Run time 3 times the retention time of trospium.

Relative retention With reference to trospium (retention time = about 10 min): impurity B = about 0.7;

impurity A = about 1.9.

System suitability Reference solution (c):

— **resolution:** minimum 3 between the peaks due to impurity B and trospium.

Limits:

— **impurity B:** not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.5 per cent);

— **impurity A:** not more than 3 times the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.3 per cent);

— **unspecified impurities:** for each impurity, not more than 0.2 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (c) (0.10 per cent);

— **total:** not more than twice the area of the peak due to impurity B in the chromatogram obtained with reference solution (c) (1.0 per cent);

— **disregard limit:** 0.1 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (c) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 mL of water R. Titrate with 0.1 M silver nitrate, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M silver nitrate is equivalent to 42.80 mg of C₂₅H₃₀ClNO₃.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C.

A. hydroxydiphenylacetic acid (benzilic acid),

B. (1*R*,3*r*,5*S*)-8-azabicyclo[3.2.1]oct-3-yl hydroxydiphenylacetate,

C. (1*R*,3*r*,5*S*)-3-hydroxyspiro[8-azoniabicyclo[3.2.1]octane,1'-pyrrolidinium].

Ph Eur

Troxerutin

(Ph. Eur. monograph 2133)

$C_{33}H_{42}O_{19}$

743

7085-55-4

Action and use
Bioflavonoid.

Ph Eur

DEFINITION

Mixture of *O*-hydroxyethylated derivatives of rutoside containing minimum 80 per cent of 2-[3,4-bis(2-hydroxyethoxy)phenyl]-3-[[6-*O*-(6-deoxy- α -L-mannopyranosyl)- β -D-glucopyranosyl]oxy]-5-hydroxy-7-(2-hydroxyethoxy)-4*H*-1-benzopyran-4-one (tris(hydroxyethyl) rutin).

Content

95.0 per cent to 105.0 per cent (dried substance).

CHARACTERS

Appearance

Yellowish-green, crystalline powder, hygroscopic.

Solubility

Freely soluble in water, slightly soluble in ethanol (96 per cent) and practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison troxerutin CRS.

B. Examine the chromatograms obtained in the test for composition.

Results The principal peak in the chromatogram obtained with the test solution is similar in position and size to the principal peak in the chromatogram obtained with the reference solution (a).

TESTS

Composition

Liquid chromatography (2.2.29): use the normalisation procedure.

Test solution Dissolve 10.0 mg of the substance to be examined in the mobile phase, if necessary using an ultrasonic bath and dilute to 10.0 mL with the mobile phase.

Reference solution (a) Dissolve 10.0 mg of troxerutin CRS in the mobile phase, if necessary using an ultrasonic bath and dilute to 10.0 mL with the mobile phase.

Reference solution (b) Dilute 1 mL of reference solution (a) to 10 mL with the mobile phase. Dilute 1 mL of this solution to 100 mL with the mobile phase.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm,

— stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase Mix 20 volumes of acetonitrile R and 80 volumes of a 15.6 g/L solution of sodium dihydrogen phosphate R adjusted to pH 4.4 with dilute phosphoric acid R or dilute sodium hydroxide solution R.

Flow rate 0.5 mL/min.

Detection Spectrophotometer at 350 nm.

Injection 10 μ L.

Run time Twice the retention time of the main compound of troxerutin (tris(hydroxyethyl)rutin).

Relative retention With reference to tris(hydroxyethyl)rutin (retention time = about 25 min): tetrakis(hydroxyethyl)rutin = about 0.5; mono(hydroxyethyl)rutin = about 0.8; bis(hydroxyethyl)rutin = about 1.1.

System suitability Reference solution (a):

- peak-to-valley ratio: minimum 2.0, where H_p = height above the baseline of the peak due to bis(hydroxyethyl)rutin and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to tris(hydroxyethyl)rutin;
- signal-to-noise ratio: minimum 10 for the principal peak in the chromatogram obtained with reference solution (b).

Limits:

- principal peak: minimum 80 per cent,
- any other peak: for each peak, maximum 5 per cent, except for 1 peak which can be maximum 10 per cent.
- disregard limit: area of the principal peak in the chromatogram obtained with reference solution (b).

Ethylene oxide

Head-space gas chromatography (2.2.28).

Test solution To 1.00 g of the substance to be examined in a vial, add 1.0 mL of water R. Mix to obtain a homogeneous solution. Heat at 70 °C for 45 min.

Reference solution To 1.00 g of the substance to be examined in a vial, add 50 μ L of ethylene oxide solution R4 and 950 μ L of water R and close tightly. Mix to obtain a homogeneous solution. Heat at 70 °C for 45 min.

Column:

— material: fused silica,

— size: $l = 30$ m, $\varnothing = 0.32$ mm,

— stationary phase: cyanopropyl(7)phenyl(7)methyl(86) polysiloxane R (film thickness 1 μ m).

Carrier gas helium for chromatography R.

Flow rate 1.1 mL/min.

Static head-space conditions which may be used:

— equilibration temperature: 70 °C,

— equilibration time: 45 min,

- transfer line temperature: 110 °C,
- pressurisation time: 2 min,
- injection time: 12 s.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 5	40
	5 - 18	40 → 200
Injection port		150
Detector		250

Detection Flame ionisation.

Injection 1.0 mL.

The peak due to ethylene oxide is identified by injecting solutions of ethylene oxide of increasing concentration.

Determine the content of ethylene oxide (ppm) in the substance to be examined using the following expression:

$$\frac{A_1 \times m_1}{(A_2 \times m_2) - (A_1 \times m_3)}$$

- A_1 = area of the peak due to ethylene oxide in the chromatogram obtained with the test solution,
 A_2 = area of the peak due to ethylene oxide in the chromatogram obtained with the reference solution,
 m_1 = mass of ethylene oxide in the reference solution, in micrograms,
 m_2 = mass of the substance to be examined in the test solution, in grams,
 m_3 = mass of the substance to be examined in the reference solution, in grams.

Limit:

- ethylene oxide: maximum 1 ppm.

Loss on drying (2.2.32)

Maximum 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulfated ash (2.4.14)

Maximum 0.4 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 100.0 mL of water R. Dilute 10.0 mL of this solution to 100.0 mL with water R. Dilute 10.0 mL to 100.0 mL with water R. Measure the absorbance (2.2.25) at the absorption maximum at 350 nm.

Calculate the percentage content of $C_{33}H_{42}O_{19}$ taking the specific absorbance to be 250.

STORAGE

In an airtight container, protected from light.

Ph Eur

Trypsin

(Ph. Eur. monograph 0694)

9002-07-7

Action and use

Proteolytic enzyme.

Ph Eur

DEFINITION

Trypsin is a proteolytic enzyme obtained by the activation of trypsinogen extracted from the pancreas of mammals. It has an activity of not less than 0.5 microkatal per milligram,

calculated with reference to the dried substance. In solution, it has maximum enzymic activity at pH 8; the activity is reversibly inhibited at pH 3, the pH at which it is most stable.

PRODUCTION

The animals from which trypsin is derived must fulfil the requirements for the health of animals suitable for human consumption.

The method of manufacture is validated to demonstrate that the product, if tested, would comply with the following test.

Histamine (2.6.10)

Not more than 1 µg of histamine base per 0.2 microkatal of trypsin activity. Use a 10 g/L solution of the substance to be examined in 0.0015 M borate buffer solution pH 8.0 R inactivated by heating on a water-bath for 30 min. Carry out dilutions with a 9 g/L solution of sodium chloride R.

CHARACTERS

Appearance

White or almost white, crystalline or amorphous powder, hygroscopic if amorphous.

Solubility

Sparingly soluble in water.

IDENTIFICATION

A. Dilute 1 mL of solution S (see Tests) to 100 mL with water R. In a depression in a white spot-plate, mix 0.1 mL of this solution with 0.2 mL of *tosylarginine methyl ester hydrochloride solution R*. A reddish-violet colour develops within 3 min.

B. Dilute 0.5 mL of solution S to 5 mL with water R. Add 0.1 mL of a 20 g/L solution of *tosyl-L-lysyl-chloromethane hydrochloride R*. Adjust to pH 7.0, shake for 2 h and dilute to 50 mL with water R. In one of the depressions of a white spot-plate, mix 0.1 mL of this solution with 0.2 mL of *tosylarginine methyl ester hydrochloride solution R*. No reddish-violet colour develops within 3 min.

TESTS

Solution S

Dissolve 0.10 g in carbon dioxide-free water R and dilute to 10.0 mL with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension III (2.2.1).

pH (2.2.3)

3.0 to 6.0 for solution S.

Specific absorbance (2.2.25)

13.5 to 16.5, determined at the absorption maximum at 280 nm; maximum 7.0, determined at the absorption minimum at 250 nm.

Dissolve 30.0 mg in 0.001 M hydrochloric acid and dilute to 100.0 mL with the same acid.

Chymotrypsin

Test solution To 1.8 mL of buffer solution pH 8.0 R add 7.4 mL of water R and 0.5 mL of 0.2 M *acetyltyrosine ethyl ester R*. While shaking the solution, add 0.3 mL of solution S and start a timer. After exactly 5 min, measure the pH (2.2.3).

Reference solution Prepare in the same manner as the test solution, replacing solution S by 0.3 mL of a 0.5 g/L solution of *chymotrypsin BRP*, and measure the pH (2.2.3) exactly 5 min after adding the chymotrypsin.

The pH of the test solution is higher than that of the reference solution.

Loss on drying (2.2.32)

Not more than 5.0 per cent, determined on 0.500 g by drying at 60 °C at a pressure not exceeding 0.67 kPa for 2 h.

Microbial contamination

TAMC: acceptance criterion 10^4 CFU/g (2.6.12).

TYMC: acceptance criterion 10^2 CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

Absence of *Salmonella* (2.6.13).

ASSAY

The activity of trypsin is determined by comparing the rate at which it hydrolyses *benzoylarginine ethyl ester hydrochloride R* with the rate at which *trypsin BRP* hydrolyses the same substrate in the same conditions.

Apparatus Use a reaction vessel of about 30 mL capacity provided with:

- a device that will maintain a temperature of 25.0 ± 0.1 °C;
- a stirring device (for example, a magnetic stirrer);
- a lid with holes for the insertion of electrodes, the tip of the burette, a tube for the admission of nitrogen and the introduction of reagents.

An automatic or manual titration device may be used. For the latter, the burette is graduated in 0.005 mL and the pH meter is provided with a wide-range scale and glass-silver-silver chloride or other suitable electrodes.

Test solution Dissolve a suitable quantity of the substance to be examined in 0.001 M hydrochloric acid and dilute to 25.0 mL with the same acid in order to obtain a solution containing approximately 700 nanokatals per millilitre.

Reference solution Dissolve a suitable quantity of *trypsin BRP* in 0.001 M hydrochloric acid and dilute to 25.0 mL with the same acid in order to obtain a solution containing approximately 700 nanokatals per millilitre.

Store the solutions at 0-5 °C. Warm 1 mL of each solution to about 25 °C over 15 min and use 50 µL of each solution for each titration. Carry out the titration in an atmosphere of nitrogen. Transfer 10.0 mL of 0.0015 M borate buffer solution pH 8.0 R to the reaction vessel and, while stirring, add 1.0 mL of a freshly prepared 6.86 g/L solution of *benzoylarginine ethyl ester hydrochloride R*. When the temperature is steady at 25.0 ± 0.1 °C (after about 5 min) adjust to pH 8.0 exactly with 0.1 M sodium hydroxide. Add 50 µL of the test solution and start a timer. Maintain at pH 8.0 by the addition of 0.1 M sodium hydroxide, the tip of the microburette being immersed in the solution; note the volume added every 30 s. Follow the reaction for 8 min. Calculate the volume of 0.1 M sodium hydroxide used per second. Carry out a titration in the same manner using the reference solution and calculate the volume of 0.1 M sodium hydroxide used per second.

Calculate the activity in microkatals per milligram using the following expression:

$$\frac{m' \times V}{m \times V'} \times A$$

- m* = mass of the substance to be examined, in milligrams;
m' = mass of *trypsin BRP*, in milligrams;
V = volume of 0.1 M sodium hydroxide used per second by the test solution;
V' = volume of 0.1 M sodium hydroxide used per second by the reference solution;
A = activity of *trypsin BRP*, in microkatals per milligram.

STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

LABELLING

The label states:

- the activity in microkatals per milligram;
- for the amorphous substance, that it is hygroscopic.

Ph Eur

Tryptophan

(Ph. Eur. monograph 1272)

 $C_{11}H_{12}N_2O_2$

204.2

73-22-3

Ph Eur

DEFINITION

(2S)-2-Amino-3-(1H-indol-3-yl)propanoic acid.

Product of fermentation or of protein hydrolysis.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS**Appearance**

White or almost white, crystalline or amorphous powder.

Solubility

Sparingly soluble in water, slightly soluble in ethanol (96 per cent). It dissolves in dilute solutions of mineral acids and alkali hydroxides.

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D.

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

Comparison *tryptophan CRS*.

C. Thin-layer chromatography (2.2.27).

Solvent mixture *glacial acetic acid R*, *water R* (50:50 V/V).

Test solution Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 50 mL with the solvent mixture.

Reference solution Dissolve 10 mg of *tryptophan CRS* in the solvent mixture and dilute to 50 mL with the solvent mixture.

Plate *TLC silica gel plate R*.

Mobile phase *glacial acetic acid R*, *water R*, *butanol R* (20:20:60 V/V/V).

Application 5 µL.

Development Over 2/3 of the plate.

Drying In air.

Detection Spray with *ninhydrin solution R* and heat at 105 °C for 15 min.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. Dissolve about 20 mg in 10 mL of water R. Add 5 mL of dimethylaminobenzaldehyde solution R6 and 2 mL of hydrochloric acid R1. Heat on a water-bath. A purple-blue colour develops.

TESTS

Appearance of solution

The solution is clear (2.2.1) and not more intensely coloured than reference solution BY₆ (2.2.2, Method II).

Dissolve 0.1 g in 1 M hydrochloric acid and dilute to 10 mL with the same acid.

Specific optical rotation (2.2.7)

-33.0 to -30.0 (dried substance).

Dissolve 0.25 g in water R, heating on a water-bath if necessary, and dilute to 25.0 mL with the same solvent.

Ninhydrin-positive substances

Amino acid analysis (2.2.56). For analysis, use Method 1.

The concentrations of the test solution and the reference solutions may be adapted according to the sensitivity of the equipment used. The concentrations of all solutions are adjusted so that the system suitability requirements described in general chapter 2.2.46 are fulfilled, keeping the ratios of concentrations between all solutions as described.

Solution A dilute hydrochloric acid R1 or a sample preparation buffer suitable for the apparatus used.

Test solution Dissolve 30.0 mg of the substance to be examined in solution A and dilute to 50.0 mL with solution A.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with solution A. Dilute 2.0 mL of this solution to 10.0 mL with solution A.

Reference solution (b) Dissolve 30.0 mg of proline R in solution A and dilute to 100.0 mL with solution A. Dilute 1.0 mL of the solution to 250.0 mL with solution A.

Reference solution (c) Dilute 6.0 mL of ammonium standard solution (100 ppm NH₄) R to 50.0 mL with solution A. Dilute 1.0 mL of this solution to 100.0 mL with solution A.

Reference solution (d) Dissolve 30 mg of isoleucine R and 30 mg of leucine R in solution A and dilute to 50.0 mL with solution A. Dilute 1.0 mL of the solution to 200.0 mL with solution A.

Blank solution Solution A.

Inject suitable, equal amounts of the test, blank and reference solutions into the amino acid analyser. Run a program suitable for the determination of physiological amino acids.

System suitability Reference solution (d):

— **resolution:** minimum 1.5 between the peaks due to isoleucine and leucine.

Calculation of percentage contents:

— for any ninhydrin-positive substance detected at 570 nm, use the concentration of tryptophan in reference solution (a);

— for any ninhydrin-positive substance detected at 440 nm, use the concentration of proline in reference solution (b); if a peak is above the reporting threshold at both wavelengths, use the result obtained at 570 nm for quantification.

Limits:

— **any ninhydrin-positive substance:** for each impurity, maximum 0.2 per cent;

— **total:** maximum 0.5 per cent;

— **reporting threshold:** 0.05 per cent.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

Impurity A and other related substances

Liquid chromatography (2.2.29). Prepare the standard, test and reference solutions immediately before use.

Buffer solution pH 2.3 Dissolve 3.90 g of sodium dihydrogen phosphate R in 1000 mL of water R. Add about 700 mL of a 2.9 g/L solution of phosphoric acid R and adjust to pH 2.3 with the same acid solution.

Solvent mixture acetonitrile R, water R (10:90 V/V).

Standard solution Dissolve 10.0 mg of *N*-acetyltryptophan R in the solvent mixture and dilute to 100.0 mL with the solvent mixture. Dilute 2.0 mL of this solution to 100.0 mL with the solvent mixture.

Test solution (a) Dissolve 0.10 g of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

Test solution (b) Dissolve 0.10 g of the substance to be examined in the standard solution and dilute to 10.0 mL with the standard solution.

Reference solution (a) Dissolve the contents of a vial of 1,1'-ethylidenebistryptophan CRS (impurity A) in 1.0 mL of the solvent mixture.

Reference solution (b) Dissolve the contents of a vial of 1,1'-ethylidenebistryptophan CRS (impurity A) in 1.0 mL of the standard solution.

Reference solution (c) Dilute 0.5 mL of reference solution (a) to 5.0 mL with the solvent mixture.

Column:

— **size:** $l = 0.25$ m, $\varnothing = 4.6$ mm;

— **stationary phase:** octadecylsilyl silica gel for chromatography R (5 μ m);

— **temperature:** 40 °C.

Mobile phase:

— **mobile phase A:** acetonitrile R, buffer solution pH 2.3 (115:885 V/V);

— **mobile phase B:** acetonitrile R, buffer solution pH 2.3 (350:650 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 10	100	0
10 - 45	100 → 0	0 → 100
45 - 65	0	100

Flow rate 0.7 mL/min.

Detection Spectrophotometer at 220 nm.

Injection 20 μ L of test solutions (a) and (b) and reference solutions (b) and (c).

Retention time Tryptophan = about 8 min; *N*-acetyltryptophan = about 29 min; impurity A = about 34 min.

System suitability:

— **resolution:** minimum 8.0 between the peaks due to *N*-acetyltryptophan and impurity A in the chromatogram obtained with reference solution (b); if necessary, adjust the time programme for the elution gradient (an increase in the duration of elution with mobile phase A produces longer retention times and a better resolution);

— **signal-to-noise ratio:** minimum 15 for the principal peak in the chromatogram obtained with reference solution (c);

- *symmetry factor*: maximum 3.5 for the peak due to impurity A in the chromatogram obtained with reference solution (b);
- in the chromatogram obtained with test solution (a) there is no peak with the same retention time as *N*-acetyltryptophan (in such case correct the area of the *N*-acetyltryptophan peak).

Limits Test solution (b):

- *impurity A*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (10 ppm);
- *sum of impurities with a retention time less than that of tryptophan*: not more than 0.6 times the area of the peak due to *N*-acetyltryptophan in the chromatogram obtained with reference solution (b) (100 ppm);
- *sum of impurities with a retention time greater than that of tryptophan and up to 1.8 times the retention time of N-acetyltryptophan*: not more than 1.9 times the area of the peak due to *N*-acetyltryptophan in the chromatogram obtained with reference solution (b) (300 ppm);
- *disregard limit*: 0.02 times the area of the peak due to *N*-acetyltryptophan in the chromatogram obtained with reference solution (b); disregard the peak due to *N*-acetyltryptophan.

Chlorides (2.4.4)

Maximum 200 ppm.

Dissolve 0.25 g in 3 mL of *dilute nitric acid R* and dilute to 15 mL with *water R*. The solution, without any further addition of nitric acid, complies with the test.

Sulfates (2.4.13)

Maximum 300 ppm.

Dissolve 0.5 g in a mixture of 5 volumes of *dilute hydrochloric acid R* and 25 volumes of *distilled water R*, and dilute to 15 mL with the same mixture of solvents.

Ammonium

Amino acid analysis (2.2.56) as described in the test for ninhydrin-positive substances with the following modifications.

Injection Test solution, reference solution (c) and blank solution.

Limit:

- *ammonium at 570 nm*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.02 per cent), taking into account the peak due to ammonium in the chromatogram obtained with the blank solution.

Iron (2.4.9)

Maximum 20 ppm.

In a separating funnel, dissolve 0.50 g in 10 mL of *dilute hydrochloric acid R*. Shake with 3 quantities, each of 10 mL, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 mL of *water R* and shake for 3 min. Examine the aqueous layer.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 3 mL of *anhydrous formic acid R*. Add 50 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20). Carry out a blank titration.

1 mL of 0.1 M *perchloric acid* is equivalent to 20.42 mg of $C_{11}H_{12}N_2O_2$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B, C, D, E, F, G, H, I, J, K, L.

A. 3,3'-[ethane-1,1-diylbis(1*H*-indol-1,3-diyl)]bis[(2*S*)-2-aminopropanoic acid] (ethane-1,1-diylbistryptophan),

B. (2*S*)-2-amino-3-[(3*RS*)-3-hydroxy-2-oxo-2,3-dihydro-1*H*-indol-3-yl]propanoic acid (dioxindolylalanine),

C. (2*S*)-2-amino-4-(2-aminophenyl)-4-oxobutanoic acid (kynurenine),

D. (2*S*)-2-amino-3-(5-hydroxy-1*H*-indol-3-yl)propanoic acid (5-hydroxytryptophan),

E. (2*S*)-2-amino-4-[2-(formylamino)phenyl]-4-oxobutanoic acid (*N*-formylkynurenine),

F. (2*S*)-2-amino-3-(phenylamino)propanoic acid (3-phenylaminoalanine),

Action and use
Amino acid.

Ph Eur

DEFINITION

(2S)-2-Amino-3-(4-hydroxyphenyl)propanoic acid.

Product of fermentation or of protein hydrolysis.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Very slightly soluble in water, practically insoluble in ethanol (96 per cent). It dissolves in dilute mineral acids and in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D, E.

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

Comparison tyrosine CRS.

C. Thin-layer chromatography (2.2.27).

Test solution Dissolve 10 mg of the substance to be examined in 1 mL of dilute ammonia R2 and dilute to 50 mL with water R.

Reference solution Dissolve 10 mg of tyrosine CRS in 1 mL of dilute ammonia R2 and dilute to 50 mL with water R.

Plate TLC silica gel plate R.

Mobile phase concentrated ammonia R1, propanol R (30:70 V/V).

Application 5 µL.

Development Over 2/3 of the plate.

Drying In air.

Detection Spray with ninhydrin solution R and heat at 105 °C for 15 min.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. To about 50 mg add 1 mL of dilute nitric acid R. A dark red colour is produced within 15 min.

E. Dissolve about 30 mg in 2 mL of dilute sodium hydroxide solution R. Add 3 mL of a freshly prepared mixture of equal volumes of a 100 g/L solution of sodium nitrite R and a solution of 0.5 g of sulfanilic acid R in a mixture of 6 mL of hydrochloric acid R1 and 94 mL of water R. An orange-red colour is produced.

TESTS**Appearance of solution**

The solution is clear (2.2.1) and not more intensely coloured than reference solution Y₇ (2.2.2, Method II).

Dissolve 0.5 g in dilute hydrochloric acid R and dilute to 20 mL with the same acid.

Specific optical rotation (2.2.7)

−12.3 to −11.0 (dried substance).

Dissolve 1.25 g in a mixture of equal volumes of dilute hydrochloric acid R and water R and dilute to 25.0 mL with the same mixture of solvents.

Ninhydrin-positive substances

Amino acid analysis (2.2.56). For analysis, use Method 1.

The concentrations of the test solution and the reference solutions may be adapted according to the sensitivity of the equipment used. The concentrations of all solutions are adjusted so that the system suitability requirements described in general chapter 2.2.46 are fulfilled, keeping the ratios of concentrations between all solutions as described.

Solution A dilute hydrochloric acid R1 or a sample preparation buffer suitable for the apparatus used.

Test solution Dissolve 30.0 mg of the substance to be examined in solution A and dilute to 50.0 mL with solution A.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with solution A. Dilute 2.0 mL of this solution to 10.0 mL with solution A.

Reference solution (b) Dissolve 30.0 mg of phenylalanine R (impurity A) in solution A and dilute to 100.0 mL with solution A. Dilute 1.0 mL of the solution to 250.0 mL with solution A.

Reference solution (c) Dissolve 30.0 mg of proline R in solution A and dilute to 100.0 mL with solution A. Dilute 1.0 mL of the solution to 250.0 mL with solution A.

Reference solution (d) Dilute 6.0 mL of ammonium standard solution (100 ppm NH₄) R to 50.0 mL with solution A. Dilute 1.0 mL of this solution to 100.0 mL with solution A.

Reference solution (e) Dissolve 30 mg of isoleucine R and 30 mg of leucine R in solution A and dilute to 50.0 mL with solution A. Dilute 1.0 mL of the solution to 200.0 mL with solution A.

Blank solution Solution A.

Inject suitable, equal amounts of the test, blank and reference solutions into the amino acid analyser. Run a program suitable for the determination of physiological amino acids.

System suitability Reference solution (e):

— **resolution:** minimum 1.5 between the peaks due to isoleucine and leucine.

Calculation of percentage contents:

- for impurity A, use the concentration of impurity A in reference solution (b);
- for any ninhydrin-positive substance detected at 570 nm, use the concentration of tyrosine in reference solution (a);
- for any ninhydrin-positive substance detected at 440 nm, use the concentration of proline in reference solution (c); if a peak is above the reporting threshold at both wavelengths, use the result obtained at 570 nm for quantification.

Limits:

- **impurity A at 570 nm:** maximum 0.5 per cent;
- **any ninhydrin-positive substance:** for each impurity, maximum 0.2 per cent;
- **total:** maximum 0.6 per cent;

— **reporting threshold:** 0.05 per cent.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

Chlorides (2.4.4)

Maximum 200 ppm.

Dissolve 0.25 g in 3 mL of dilute nitric acid R and dilute to 15 mL with water R. The solution, without further addition of nitric acid, complies with the test.

Sulfates (2.4.13)

Maximum 300 ppm.

Dissolve, with gentle heating, 0.5 g in 5 mL of dilute hydrochloric acid R and dilute to 15 mL with distilled water R.

Ammonium

Amino acid analysis (2.2.56) as described in the test for ninhydrin-positive substances with the following modifications.

Injection Test solution, reference solution (d) and blank solution.

Limit:

- **ammonium at 570 nm:** not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.02 per cent), taking into account the peak due to ammonium in the chromatogram obtained with the blank solution.

Iron (2.4.9)

Maximum 10 ppm.

In a separating funnel, dissolve 1.0 g in 10 mL of dilute hydrochloric acid R. Shake with 3 quantities, each of 10 mL, of methyl isobutyl ketone R1, shaking for 3 min each time. To the combined organic layers add 10 mL of water R and shake for 3 min. Use the aqueous layer.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 5 mL of anhydrous formic acid R. Add 30 mL of anhydrous acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 18.12 mg of C₉H₁₁NO₃.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B, C.

A. (2S)-2-amino-3-phenylpropanoic acid (phenylalanine),

B. (2S)-2,6-diaminohexanoic acid (lysine),

C. 3,3'-disulfanediybis[(2R)-2-aminopropanoic acid] (cystine).

Ph Eur

Tyrothricin

(Ph. Eur. monograph 1662)

Gramicidin	Mol. formula	M _r	X	Y

E	C ₆₆ H ₈₈ N ₁₃ O ₁₂	1255	L-Phe	D-Phe	L-Phe

Action and use
Polypeptide antibacterial.

Ph Eur

DEFINITION

Mixture of antimicrobial linear and cyclic polypeptides, isolated from the fermentation broth of *Brevibacillus brevis* Dubos. It consists mainly of gramicidins and tyrocidins as described above; other related compounds may be present in smaller amounts.

Potency

180 IU/mg to 280 IU/mg (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, soluble in ethanol (96 per cent) and in methanol.

IDENTIFICATION

First identification: B.

Second identification: A.

A. Thin-layer chromatography (2.2.27).

Test solution Dissolve 5 mg of the substance to be examined in 4.0 mL of ethanol (96 per cent) R.

Reference solution Dissolve 5 mg of tyrothricin CRS in 4.0 mL of ethanol (96 per cent) R.

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase methanol R, butanol R, water R, acetic acid R, butyl acetate R (2.5:7.5:12:20:40 V/V/V/V/V).

Application 1 µL.

Development Over 2/3 of the plate.

Drying In a current of warm air.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spots or groups of principal spots in the chromatogram obtained with the test solution are similar in position and size to the principal spots or groups of principal spots in the chromatogram obtained with the reference solution. The upper group corresponds to gramicidins, the lower group to tyrocidins.

Detection B Spray with dimethylaminobenzaldehyde solution R2. Heat the plate in a current of warm air until the spots appear.

System suitability Reference solution:

— the chromatogram shows 2 clearly separated spots or groups of spots.

Results B The principal spots or groups of principal spots in the chromatogram obtained with the test solution are similar in position, colour and size to the principal spots or groups of principal spots in the chromatogram obtained with the reference solution. The upper group corresponds to gramicidins, the lower group to tyrocidins.

B. Composition (see Tests).

TESTS

Composition

Liquid chromatography (2.2.29): use the normalisation procedure. Prepare the solutions immediately before use.

Test solution Dissolve 5 mg of the substance to be examined in 2 mL of methanol R and dilute to 5.0 mL with the mobile phase.

Reference solution (a) Dissolve 5 mg of tyrothricin CRS in 2 mL of methanol R and dilute to 5.0 mL with the mobile phase.

Reference solution (b) Dilute 1.0 mL of reference solution (a) to 50.0 mL with the mobile phase.

Column:

— size: l = 0.25 m, Ø = 4.6 mm,

— stationary phase: octadecylsilyl silica gel for chromatography R (5 µm),

— temperature: 60 °C.

Mobile phase 0.79 g/L solution of ammonium sulfate R, methanol R (25:75 V/V).

Flow rate 1.2 mL/min.

Detection Spectrophotometer at 280 nm.

Injection 25 µL.

Run time 6 times the retention time of gramicidin A1. Use the chromatogram obtained with reference solution (a) and the chromatogram supplied with tyrothricin CRS to identify the peaks due to gramicidin A1, gramicidin A2 and the tyrocidins.

Relative retention With reference to gramicidin A1 (retention time = about 10 min): gramicidin C1 = about 0.8;

gramicidin C2 = about 0.9; gramicidin A2 = about 1.1;
tyrocidins = about 1.5 to 6.

System suitability Reference solution (a):

- *peak-to-valley ratio*: minimum 3.0, where H_p = height above the baseline of the peak due to gramicidin A2 and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to gramicidin A1.

Limits:

- *sum of gramicidins*: 25 per cent to 50 per cent,
- *sum of tyrocidins*: 50 per cent to 70 per cent,
- *total*: minimum 85 per cent,
- *disregard limit*: the sum of the areas of the peaks due to gramicidins in the chromatogram obtained with reference solution (b).

Loss on drying (2.2.32)

Maximum 4.0 per cent, determined on 1.000 g by drying under high vacuum at 60 °C for 3 h.

Sulfated ash (2.4.14)

Maximum 1.5 per cent, determined on 1.0 g.

ASSAY

Carry out the microbiological assay of antibiotics (2.7.2) using the turbidimetric method. Use *gramicidin CRS* as the reference substance.

Test solution Prepare a solution of tyrothricin containing about the same amount of gramicidin as the corresponding solution of *gramicidin CRS* i.e. 5 times more concentrated.

STORAGE

In an airtight container, protected from light.

Ph Eur

Ubidecarenone

(Ph. Eur. monograph 1578)

$C_{59}H_{90}O_4$

863

303-98-0

Action and use

Co-enzyme in mitochondrial electron transport.

Ph Eur

DEFINITION

2-[(*all-E*)-3,7,11,15,19,23,27,31,35,39-Decamethyltetraconta-2,6,10,14,18,22,26,30,34,38-decaenyl]-5,6-dimethoxy-3-methylbenzene-1,4-dione.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

Yellow or orange, hygroscopic, crystalline powder.

Solubility

Practically insoluble in water, soluble in acetone, very slightly soluble in anhydrous ethanol.

It gradually decomposes and darkens on exposure to light.

mp

About 48 °C.

Carry out all operations protected from light.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison ubidecarenone CRS.

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

Related substances

Liquid chromatography (2.2.29). Carry out the test protected from light.

Test solution Dissolve 25.0 mg of the substance to be examined in 25.0 mL of *anhydrous ethanol R* by heating at about 50 °C for 2 min. Allow to cool.

Reference solution (a) Dissolve 25.0 mg of *ubidecarenone CRS* in 25.0 mL of *anhydrous ethanol R* by heating at about 50 °C for 2 min. Allow to cool.

Reference solution (b) Dissolve 2 mg of *ubidecarenone impurity D CRS* in 2.0 mL of the test solution by heating at about 50 °C for 2 min. Allow to cool. Dilute 1.0 mL of this solution to 50.0 mL with *anhydrous ethanol R*.

Reference solution (c) Dilute 1.0 mL of the test solution to 100.0 mL with *anhydrous ethanol R*. Dilute 5.0 mL of this solution to 10.0 mL with *anhydrous ethanol R*.

Column:

- *size*: $l = 0.2$ m, $\varnothing = 4.6$ mm;
- *stationary phase*: end-capped octadecylsilyl silica gel for chromatography R (5 μ m);
- *temperature*: 30 °C.

Mobile phase *anhydrous ethanol R*, *methanol R2* (20:80 V/V).

Flow rate 1.7 mL/min.

Detection Spectrophotometer at 275 nm.

Injection 10 μ L of the test solution and reference solutions (b) and (c).

Run time Twice the retention time of ubidecarenone.

Identification of impurities Use the chromatogram obtained with reference solution (b) to identify the peak due to impurity D.

Relative retention With reference to ubidecarenone (retention time = about 14 min): impurity D = about 0.7.

System suitability Reference solution (b):

- *resolution*: minimum 6.5 between the peaks due to impurity D and ubidecarenone.

Calculation of percentage contents:

- for each impurity, use the concentration of ubidecarenone in reference solution (c).

Limits:

- *impurity D*: maximum 0.3 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.6 per cent,
- *reporting threshold*: 0.05 per cent.

Impurity F

Liquid chromatography (2.2.29). Carry out the test protected from light.

Test solution Dissolve 25.0 mg of the substance to be examined in 25.0 mL of *hexane R*.

Reference solution (a) Dissolve the contents of a vial of ubidecarenone for system suitability CRS (containing impurity F) in 1.0 mL of hexane R.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with hexane R.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.0$ mm;

— stationary phase: silica gel for chromatography R (7 μ m).

Mobile phase ethyl acetate R, hexane R (3:97 V/V).

Flow rate 2 mL/min.

Detection Spectrophotometer at 275 nm.

Injection 20 μ L.

Run time 1.2 times the retention time of ubidecarenone.

Identification of impurities Use the chromatogram supplied with ubidecarenone for system suitability CRS and the chromatogram obtained with reference solution (a) to identify the peak due to impurity F.

Relative retention With reference to ubidecarenone (retention time = about 10 min): impurity F = about 0.85.

System suitability Reference solution (a):

— resolution: minimum 1.5 between the peaks due to impurity F and ubidecarenone.

Limit:

— impurity F: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent).

Water (2.5.12)

Maximum 0.2 per cent, determined on 3.00 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (a).

Calculate the percentage content of $C_{59}H_{90}O_4$ taking into account the assigned content of ubidecarenone CRS.

STORAGE

In an airtight container, protected from light.

IMPURITIES

Specified impurities D, F.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, B, C, E, G.

F. 2-[(2*Z*,6*E*,10*E*,14*E*,18*E*,22*E*,26*E*,30*E*,34*E*)-3,7,11,15,19,23,27,31,35,39-decamethyltetraconta-2,6,10,14,18,22,26,30,34,38-decaenyl]-5,6-dimethoxy-3-methylbenzene-1,4-dione (ubidecarenone (*Z*)-isomer),

G. unknown structure.

Ph Eur

Undecenoic Acid

(Undecylenic Acid, Ph. Eur. monograph 0461)

$\text{C}_{11}\text{H}_{20}\text{O}_2$ 184.3 112-38-9

Ph Eur

DEFINITION

Undec-10-enoic acid.

Content

97.0 per cent to 102.0 per cent.

CHARACTERS

Appearance

White or very pale yellow, crystalline mass or colourless or pale yellow liquid.

Solubility

Practically insoluble in water, freely soluble in ethanol (96 per cent) and in fatty and essential oils.

IDENTIFICATION

A. Refractive index (2.2.6): 1.447 to 1.450, determined at 25 ± 0.5 °C.

B. Freezing point (2.2.18): 21 °C to 24 °C.

C. To 2.0 g add 2 mL of freshly distilled *aniline R* and boil under a reflux condenser for 10 min. Allow to cool and add 30 mL of *ether R*. Shake with 3 quantities, each of 20 mL, of *dilute hydrochloric acid R* and then with 20 mL of *water R*. Evaporate the organic layer to dryness on a water-bath. After recrystallising twice from *ethanol (70 per cent V/V) R* and drying *in vacuo* for 3 h, the residue melts (2.2.14) at 66 °C to 68 °C.

D. Dissolve 0.1 g in a mixture of 2 mL of *dilute sulfuric acid R* and 5 mL of *glacial acetic acid R*. Add dropwise 0.25 mL of *potassium permanganate solution R*. The colour of the potassium permanganate is discharged.

TESTS

Peroxide value (2.5.5, Method A)
Maximum 10.

Fixed and mineral oils

To 1.0 g add 5 mL of *sodium carbonate solution R* and 25 mL of *water R* and boil for 3 min. The hot solution is not more opalescent than reference suspension II (2.2.1).

Water-soluble acids

To 1.0 g add 20 mL of *water R* heated to 35-45 °C and shake for 2 min. Cool and filter the aqueous layer through a moistened filter. To 10 mL of the filtrate add 0.1 mL of *phenolphthalein solution R*. Not more than 0.1 mL of 0.1 M *sodium hydroxide* is required to change the colour of the indicator.

Degree of unsaturation

Dissolve 85.0 mg in a mixture of 5 mL of *dilute hydrochloric acid R* and 30 mL of *glacial acetic acid R*. Using 0.05 mL of *indigo carmine solution R1* as indicator, added towards the end of the titration, titrate with 0.0167 M *bromide-bromate* until the colour changes from blue to yellow. 8.9 mL to 9.4 mL of 0.0167 M *bromide-bromate* is required. Carry out a blank titration.

Sulfated ash

 (2.4.14)

Maximum 0.1 per cent, determined on 0.50 g.

ASSAY

Dissolve 0.750 g in 10 mL of *ethanol (96 per cent) R*. Titrate with 0.5 M *sodium hydroxide* using 0.1 mL of *phenolphthalein solution R* as indicator, until a pink colour is obtained.

1 mL of 0.5 M *sodium hydroxide* is equivalent to 92.14 mg of $\text{C}_{11}\text{H}_{20}\text{O}_2$.

STORAGE

In a non-metallic container, protected from light.

Ph Eur

Urea

(Ph. Eur. monograph 0743)

$\text{CH}_4\text{N}_2\text{O}$ 60.1 57-13-6

Action and use

Keratolytic.

Preparation

Urea Cream

Ph Eur

DEFINITION

Carbamide.

Content

98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or transparent crystals, slightly hygroscopic.

Solubility

Very soluble in water, soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D.

A. Melting point (2.2.14): 132 °C to 135 °C.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison urea CRS.

C. Dissolve 0.1 g in 1 mL of *water R*. Add 1 mL of *nitric acid R*. A white, crystalline precipitate is formed.

D. Heat 0.5 g in a test tube until it liquefies and the liquid becomes turbid. Cool, dissolve in a mixture of 1 mL of *dilute sodium hydroxide solution R* and 10 mL of *water R* and add 0.05 mL of *copper sulfate solution R*. A reddish-violet colour is produced.

TESTS

Solution S

Dissolve 10.0 g in *water R* and dilute to 50 mL with the same solvent.

Appearance of solution

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

To 2.5 mL of solution S add 7.5 mL of *water R*.

Alkalinity

To 2.5 mL of solution S add 7.5 mL of *water R*, 0.1 mL of *methyl red solution R* and 0.4 mL of 0.01 M *hydrochloric acid*. The solution is red to orange.

Biuret

Maximum 0.1 per cent.

To 10 mL of solution S add 5 mL of *water R*, 0.5 mL of a 5 g/L solution of *copper sulfate pentahydrate R* and 0.5 mL of *strong sodium hydroxide solution R*. Allow to stand for 5 min. Any reddish-violet colour in the solution is not more intense than that in a standard prepared at the same time in the same manner using 10 mL of a 0.2 g/L solution of *biuret R*.

Ammonium (2.4.1)

Maximum 500 ppm, determined on 0.1 mL of solution S.

Loss on drying (2.2.32)

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 1 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.2000 g in *water R* and dilute to 50.0 mL with the same solvent. Introduce 1.0 mL of the solution into a combustion flask. Add 4 g of a powdered mixture of 100 g of *dipotassium sulfate R*, 5 g of *copper sulfate pentahydrate R* and 2.5 g of *selenium R*, and 3 glass beads. Wash any adhering particles from the neck into the flask with 5 mL of *sulfuric acid R*, allowing it to run down the sides of the flask, and mix the contents by rotation. Close the mouth of the flask loosely, for example by means of a glass bulb with a short stem, to avoid excessive loss of *sulfuric acid*. Heat gradually at first, then increase the temperature until there is vigorous boiling with condensation of *sulfuric acid* in the neck of the flask; take precautions to prevent the upper part of the flask from becoming overheated. Continue the heating for 30 min. Cool, dissolve the solid material by cautiously adding to the mixture 25 mL of *water R*, cool again and place in a steam-distillation apparatus. Add 30 mL of *strong sodium hydroxide solution R* and distil immediately by passing steam through the mixture. Collect the distillate in 15 mL of a 40 g/L solution of *boric acid R* to which has been added 0.2 mL of *methyl red mixed solution R* and enough *water R* to cover the tip of the condenser. Towards the end of the distillation, lower the receiver so that the tip of the condenser is above the surface of the acid. Take precautions to prevent any water on the outer surface of the condenser from reaching the contents of the receiver. Titrate the distillate with 0.01 M *sulfuric acid*.

1 mL of 0.01 M *sulfuric acid* is equivalent to 0.6006 mg of $\text{CH}_4\text{N}_2\text{O}$.

STORAGE

In an airtight container.

Urofollitropin

(Ph. Eur. monograph 0958)

97048-13-0

Action and use

Follicle-stimulating hormone.

Preparation

Urofollitropin Injection

Ph Eur

DEFINITION

Dried preparation containing menopausal gonadotrophin obtained from the urine of post-menopausal women. It has follicle-stimulating activity and no or virtually no luteinising activity.

Potency

Minimum 90 IU of follicle-stimulating hormone (hFSH) per milligram.

Ratio of the number of units of luteinising hormone (interstitial-cell-stimulating hormone) [hLH(ICSH)] to the number of units of follicle-stimulating hormone Maximum 1/60.

PRODUCTION

It is prepared by suitable collection and extraction procedures followed by purification steps.

The method of preparation includes steps that have been shown to remove and/or inactivate extraneous agents. In addition, the process is designed to minimise microbial contamination.

CHARACTERS**Appearance**

Almost white or slightly yellowish powder.

Solubility

Soluble in water.

IDENTIFICATION

When administered to immature female rats as prescribed in the assay, it causes enlargement of the ovaries.

TESTS**Residual luteinising activity**

The International Units of FSH and LH are the activities contained in stated amounts of the International Standard of human urinary follicle-stimulating hormone and luteinising hormone (interstitial-cell-stimulating hormone) which consists of a mixture of a freeze-dried extract of urine of post-menopausal women with lactose. The equivalence in International Units of the International Standard is stated by the World Health Organization.

Use immature female rats approximately 21 days old and having masses such that the difference between the heaviest and the lightest rat is not more than 10 g. Assign the rats at random to 4 equal groups of at least 6 animals. If sets of 4 litter mates are available, assign one litter mate at random from each set to each group and mark according to litter.

Inject subcutaneously into each rat 50 IU of *serum gonadotrophin R* on the first day and 25 IU of *chorionic gonadotrophin R* on the fourth day, each in 0.5 mL of *phosphate-albumin buffered saline pH 7.2 R*.

Choose 3 doses of the reference preparation such that the smallest dose produces a depletion of the ovarian ascorbic acid content in all the rats and the largest dose does not produce a maximal depletion in all the rats. Use doses in geometric progression; as an initial approximation, total doses

Ph Eur

of 0.5 IU, 1.0 IU and 2.0 IU may be tried although the dose to be used will depend on the sensitivity of the animals.

Choose a dose of the preparation to be examined expected to contain 60 X IU of follicle-stimulating hormone (hFSH), in which X = the number of International Units of hLH in the middle dose of the reference preparation.

Dissolve separately the total quantities of the preparation to be examined and of the reference preparation in 1.0 mL of phosphate-albumin buffered saline pH 7.2 R. Inject into a tail vein to each separate group of rats 6 days after the injection of chorionic gonadotrophin. Exactly 4 h after the injection, euthanise the rats and remove the ovaries from each animal. Remove any extraneous fluid and tissue from the ovaries and weigh the ovaries immediately.

Treat the combined ovaries from each rat separately, as follows. Crush and homogenise within 2 min in a freshly prepared 25 g/L solution of metaphosphoric acid R at a temperature of 4 °C and dilute to 7 mL with the same solution. Allow the homogenate to stand for 30 min at 4 °C and centrifuge at 4 °C at approximately 2500 g . Filter the supernatant, if necessary, through a 0.22 μ m filter.

Prepare a fresh solution consisting of a mixture of 2 mL of a 45.3 g/L solution of sodium acetate R adjusted to pH 7 with acetic acid R, 3 mL of water R and 2 mL of dichlorophenolindophenol standard solution R. Mix 2 mL of this solution with 2 mL of the clear supernatant. 30 s after mixing, measure the absorbance (2.2.25) of the solution at the maximum at about 520 nm. Use as reference a solution with a known content of ascorbic acid CRS in a 25 g/L solution of metaphosphoric acid R, treated by the same process.

Calculate the amount of ascorbic acid from the ascorbic acid standard curve obtained and express in milligrams per 0.1 g of ovary to obtain the ascorbic acid content of the ovaries. Calculate the mean and its variance of the ascorbic acid content of the ovaries of the rats treated with the preparation to be examined.

For each dose-group of the reference preparation, plot the mean ascorbic acid content of the ovaries as a function of the logarithm of the dose and analyse the regression of the ascorbic acid content on the logarithm of the dose injected, using standard methods of analysis (the method of least squares).

The test is not valid unless:

- the slope constant b is significant at the 0.05 significance level;
- for the groups treated with the reference preparation, the sum of squares due to linear regression is equal to at least 95 per cent of the total sum of squares of the ascorbic acid content;
- the within-group variance of the ascorbic acid content of the group receiving the preparation to be examined is not significantly different at the 0.05 significance level from the within-group variance of the ascorbic acid content of the groups receiving the reference preparation.

The mean ascorbic acid content of the ovaries of the rats treated with the preparation to be examined is not significantly lower than that of the rats treated with the middle dose of the reference preparation (calculated from the regression equation) at the 0.05 significance level.

Water (2.5.32)

Maximum 5.0 per cent.

Bacterial endotoxins (2.6.14, Method C)

Less than 0.40 IU per International Unit of urofollitropin, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

The follicle-stimulating activity of urofollitropin is estimated by comparing under given conditions its effect in enlarging the ovaries of immature rats treated with chorionic gonadotrophin with the same effect of the International Standard preparation of human urinary follicle-stimulating hormone and luteinising hormone or of a reference preparation calibrated in International Units.

The International Units of FSH and LH are the activities contained in stated amounts of the International Standard of human urinary follicle-stimulating hormone and luteinising hormone (interstitial-cell-stimulating hormone) which consists of a mixture of a freeze-dried extract of urine of post-menopausal women with lactose. The equivalence in International Units of the International Standard is stated by the World Health Organization.

Use immature female rats of the same strain, 19-28 days old, differing in age by not more than 3 days and having masses such that the difference between the heaviest and the lightest rat is not more than 10 g. Assign the rats at random to 6 equal groups of at least 5 animals. If sets of 6 litter mates are available, assign one litter mate from each set to each group and mark according to litter.

Choose 3 doses of the reference preparation and 3 doses of the preparation to be examined such that the smallest dose produces a positive response in some of the rats and the largest dose does not produce a maximal response in all the rats. Use doses in geometric progression and as an initial approximation total doses of 1.5 IU, 3.0 IU and 6.0 IU may be tried although the dose will depend on the sensitivity of the animals used, which may vary widely.

Dissolve separately the total quantities of the preparation to be examined and of the reference preparation corresponding to the daily doses to be used in sufficient phosphate-albumin buffered saline pH 7.2 R such that the daily dose is administered in a volume of about 0.5 mL. The buffer solution shall contain in the daily dose not less than 14 IU of chorionic gonadotrophin to ensure complete luteinisation. Add a suitable antimicrobial preservative such as 4 g/L of phenol or 0.02 g/L of thiomersal. Store the solutions at 5 ± 3 °C.

Inject subcutaneously into each rat the daily dose allocated to its group. Repeat the injection of each dose 24 h and 48 h after the first injection. About 24 h after the last injection, euthanise the rats and remove the ovaries from each animal. Remove any extraneous fluid and tissue from the ovaries and weigh the 2 combined ovaries of each animal immediately. Calculate the results by the usual statistical methods (for example, 5.3) using the mass of the 2 combined ovaries as the response (a suitable correction of the organ mass with reference to the mass of the animal from which it was taken may be applied; an analysis of covariance may be used).

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency.

The confidence limits ($P = 0.95$) of the estimated potency are not less than 64 per cent and not more than 156 per cent of the stated potency.

STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

LABELLING

The label states:

- the number of International Units of follicle-stimulating hormone per container;
- the potency, in International Units of follicle-stimulating hormone per milligram.

Ph Eur

Urokinase

(Ph. Eur. monograph 0695)

9039-53-6

Action and use

Plasminogen activator; fibrinolytic; enzyme.

Ph Eur

DEFINITION

Enzyme, obtained from human urine, that activates plasminogen. It consists of a mixture of low-molecular-mass (LMM) (M_r 33 000) and high-molecular-mass (HMM) (M_r 54 000) forms, the high-molecular-mass form being predominant.

Potency

Minimum 70 000 IU per milligram of protein.

PRODUCTION

It is prepared by suitable collection and extraction procedures followed by purification steps.

The method of preparation includes steps that have been shown to remove and/or inactivate extraneous agents. In addition, the process is designed to minimise microbial contamination and vasoactive substances.

CHARACTERS**Appearance**

White or almost white, amorphous powder.

Solubility

Soluble in water.

IDENTIFICATION

A. Place separately in 2 haemolysis tubes 0.5 mL of citrated human plasma and 0.5 mL of citrated bovine plasma and maintain in a water-bath at 37 °C. To each tube add 0.1 mL of a solution containing a quantity of the substance to be examined equivalent to 1000 IU/mL in phosphate buffer solution pH 7.4 R and 0.1 mL of a solution containing a quantity of human thrombin R equivalent to 20 IU/mL in phosphate buffer solution pH 7.4 R. Shake immediately. In both tubes, a clot forms and lyses within 30 min.

B. Carry out identification by a suitable immunodiffusion test.

TESTS**Appearance of solution**

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 10 mg in 10 mL of water R.

Thromboplastic contaminants

Test solutions Dissolve suitable quantities of the substance to be examined in barbital buffer solution pH 7.4 R to obtain solutions with activities of 5000 IU/mL, 2500 IU/mL, 1250 IU/mL, 625 IU/mL and 312 IU/mL.

To each of 6 haemolysis tubes 1 cm in internal diameter add 0.1 mL of citrated rabbit plasma R. Allocate the test solutions 1 to each of 5 of the tubes; add to each tube 0.1 mL of the solution allocated to it and to the 6th tube add 0.1 mL of barbital buffer solution pH 7.4 R (blank). Incubate the tubes at 25 ± 0.5 °C for 5 min and add 0.1 mL of a 3.675 g/L solution of calcium chloride R. Measure with a stop-watch the coagulation time for each tube. Plot the shortening of the recalcification time (clotting time of the blank minus clotting time measured) against log concentration in International Units. Extrapolate the best-fitting straight line through the 5 points until it reaches the log-concentration axis.

The urokinase activity at the intersection point, which represents the limit concentration for coagulant activity (zero coagulant activity), is not less than 150 IU/mL.

Molecular fractions

Size-exclusion chromatography (2.2.30).

Test solution Dissolve about 1 mg in 1.0 mL of 0.02 M phosphate buffer solution pH 8.0 R. Prepare immediately before use.

Column:

- size: $l = 0.9$ m, $\varnothing = 16$ mm;
- stationary phase: cross-linked dextran for chromatography R3;
- temperature: 5 °C.

Mobile phase 17.5 g/L solution of sodium chloride R in 0.02 M phosphate buffer solution pH 8.0 R.

Flow rate 0.1 mL/min.

Apply the test solution to the head of the column rinsing twice with 0.5 mL portions of the buffer and carry out the elution. The eluate may be collected in fractions of 1 mL. Measure the absorbance (2.2.25) of the eluate at the maximum at 280 nm and plot the individual values on a graph. Draw perpendicular lines towards the axis of the abscissae from the minima before the HMM peak, between the HMM and the LMM peaks, and after the LMM peak, thus identifying the fractions to be considered in calculating the HMM/LMM activity ratio. Pool the HMM fractions and, separately, the LMM fractions. Determine separately the urokinase activity in International Units of each of the fraction pools by the method prescribed under Assay. The ratio of the urokinase activity in the HMM fraction pool to that in the LMM fraction pool is not less than 2.0.

Total protein

Determine the nitrogen content, using 10 mg, by the method of sulfuric acid digestion (2.5.9) and calculate the quantity of protein by multiplying by 6.25.

ASSAY

The potency of urokinase is determined by comparing its capacity to activate plasminogen to form plasmin with the same capacity of a reference preparation of urokinase calibrated in International Units; the formation of plasmin is measured by the determination of the lysis time of a fibrin clot under given conditions.

The International Unit is the activity contained in a stated amount of the International Reference Preparation, which consists of freeze-dried urokinase with lactose.

The equivalence in International Units of the International Reference Preparation is stated by the World Health Organization.

Unless otherwise prescribed, use *phosphate buffer solution pH 7.4 R* containing 30 g/L of *bovine albumin R* for the preparation of the solutions and dilutions used in the assay.

Test solution Prepare a solution of the substance to be examined expected to have an activity of 1000 IU/mL.

Reference solution Prepare a solution of a reference preparation having an activity of 1000 IU/mL.

Keep the test solution and the reference solution in iced water and use within 6 h. Prepare 3 serial 1.5-fold dilutions of the reference preparation such that the longest clot-lysis time is less than 20 min and the shortest clot-lysis time is greater than 3 min. Prepare 3 similar dilutions of the test solution. Keep the solutions in iced water and use within 1 h. Use 24 tubes 8 mm in diameter. Label the tubes T_1 , T_2 and T_3 for the dilutions of the test solution and S_1 , S_2 and S_3 for the dilutions of the reference solution, allocating 4 tubes to each dilution. Place the tubes in iced water. Into each tube, introduce 0.2 mL of the appropriate dilution, 0.2 mL of *phosphate buffer solution pH 7.4 R* containing 30 g/L of *bovine albumin R* and 0.1 mL of a solution of *human thrombin R* having an activity of not less than 20 IU/mL. Place the tubes in a water-bath at 37 °C and allow to stand for 2 min to attain temperature equilibrium. Using an automatic pipette, introduce into the bottom of the 1st tube 0.5 mL of a 10 g/L solution of *bovine euglobulins R*, ensuring mixing. At intervals of 5 s, introduce successively into the remaining tubes 0.5 mL of a 10 g/L solution of *bovine euglobulins R*. Using a stop-watch, measure for each tube the time in seconds that elapses between the addition of the euglobulins solution and the lysis of the clot. Plot the logarithms of the lysis times for the substance to be examined and for the reference preparation against the logarithms of the concentration and calculate the activity of the substance to be examined using the usual statistical methods.

The estimated potency is not less than 90 per cent and not more than 111 per cent of the stated potency.

The confidence limits ($P = 0.95$) of the estimated potency are not less than 80 per cent and not more than 125 per cent of the stated potency.

STORAGE

In an airtight container, protected from light, at a temperature not exceeding 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

LABELLING

The label states the potency in International Units per milligram of protein.

Ph Eur

Ursodeoxycholic Acid

(Ph. Eur. monograph 1275)

$C_{24}H_{40}O_4$

392.6

128-13-2

Action and use

Bile acid; treatment of gallstones.

Preparations

Ursodeoxycholic Acid Capsules

Ursodeoxycholic Acid Tablets

Ursodeoxycholic Acid Oral Suspension

Ph Eur

DEFINITION

3 α ,7 β -Dihydroxy-5 β -cholan-24-oic acid.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, freely soluble in ethanol (96 per cent), slightly soluble in acetone, practically insoluble in methylene chloride.

mp

About 202 °C.

IDENTIFICATION

First identification: A.

Second identification: B, C.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison *ursodeoxycholic acid CRS*.

B. Examine the chromatograms obtained in the test for impurity C.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 10 mg in 1 mL of *sulfuric acid R*. Add 0.1 mL of *formaldehyde solution R* and allow to stand for 5 min. Add 5 mL of *water R*. The suspension obtained is greenish-blue.

TESTS

Specific optical rotation (2.2.7)

+ 58.0 to + 62.0 (dried substance).

Dissolve 0.500 g in *anhydrous ethanol R* and dilute to 25.0 mL with the same solvent.

Impurity C

Thin-layer chromatography (2.2.27).

Solvent mixture *water R*, *acetone R* (10:90 V/V).

Test solution (a) Dissolve 0.40 g of the substance to be examined in the solvent mixture and dilute to 10 mL with the solvent mixture.

Test solution (b) Dilute 1 mL of test solution (a) to 10 mL with the solvent mixture.

Reference solution (a) Dissolve 40 mg of *ursodeoxycholic acid CRS* in the solvent mixture and dilute to 10 mL with the solvent mixture.

Reference solution (b) Dissolve 20 mg of *lithocholic acid CRS* (impurity C) in the solvent mixture and dilute to 10.0 mL with the solvent mixture (solution A). Dilute 2.0 mL of this solution to 100.0 mL with the solvent mixture.

Reference solution (c) To 5 mL of solution A add 10 mg of *chenodeoxycholic acid CRS* (impurity A) and dilute to 50 mL with the solvent mixture.

Plate TLC silica gel plate R.

Mobile phase glacial acetic acid R, acetone R, methylene chloride R (1:30:60 V/V/V).

Application 5 µL.

Development Over 2/3 of the plate.

Drying At 120 °C for 10 min.

Detection Spray immediately with a 47.6 g/L solution of phosphomolybdic acid R in a mixture of 1 volume of sulfuric acid R and 20 volumes of glacial acetic acid R and heat at 120 °C until blue spots appear on a lighter background.

System suitability Reference solution (c):

— the chromatogram shows 2 clearly separated principal spots.

Limit Test solution (a):

— *impurity C*: any spot due to *impurity C* is not more intense than the principal spot in the chromatogram obtained with reference solution (b) (0.1 per cent).

Related substances

Liquid chromatography (2.2.29).

Solvent mixture methanol R, mobile phase (10:90 V/V).

Test solution Dissolve 60 mg of the substance to be examined in the solvent mixture and dilute to 20.0 mL with the solvent mixture.

Reference solution (a) Dissolve the contents of a vial of *ursodeoxycholic acid for system suitability CRS* (containing impurities A and H) in 1.0 mL of the solvent mixture.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Column:

— *size*: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— *stationary phase*: end-capped octadecylsilyl silica gel for chromatography R (5 µm);

— *temperature*: 40 °C ± 1 °C.

Mobile phase Mix 30 volumes of acetonitrile R, 37 volumes of a 0.78 g/L solution of sodium dihydrogen phosphate R adjusted to pH 3 with phosphoric acid R, and 40 volumes of methanol R.

Flow rate 0.8 mL/min.

Detection Refractometer at 35 ± 1 °C.

Injection 150 µL.

Run time 4 times the retention time of *ursodeoxycholic acid*.

Identification of impurities Use the chromatogram supplied with *ursodeoxycholic acid for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A and H.

Relative retention With reference to *ursodeoxycholic acid* (retention time = about 14 min): *impurity H* = about 0.9; *impurity A* = about 2.8.

System suitability Reference solution (a):

— *resolution*: minimum 1.5 between the peaks due to *impurity H* and *ursodeoxycholic acid*.

Limits:

— *impurity A*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— *total*: not more than 15 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent);

~~*disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).~~

Loss on drying (2.2.32)

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.350 g in 50 mL of ethanol (96 per cent) R, previously neutralised to 0.2 mL of phenolphthalein solution R. Add 50 mL of water R and titrate with 0.1 M sodium hydroxide until a pink colour is obtained.

1 mL of 0.1 M sodium hydroxide is equivalent to 39.26 mg of C₂₄H₄₀O₄.

IMPURITIES

Specified impurities A, C.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B, D, E, F, G, H, I.

A. 3α,7α-dihydroxy-5β-cholan-24-oic acid (*chenodeoxycholic acid*),

B. 3α,7α,12α-trihydroxy-5β-cholan-24-oic acid (*cholic acid*),

C. 3 α -hydroxy-5 β -cholan-24-oic acid (lithocholic acid),D. 3 α ,7 β ,12 α -trihydroxy-5 β -cholan-24-oic acid (ursocholic acid),E. 3 α ,12 α -dihydroxy-5 β -cholan-24-oic acid (deoxycholic acid),F. 3 α -hydroxy-7-oxo-5 β -cholan-24-oic acid,G. methyl 3 α ,7 β -dihydroxy-5 β -cholan-24-oate,H. 3 β ,7 β -dihydroxy-5 β -cholan-24-oic acid,I. 5 β -cholane-3 α ,7 β ,24-triol.

Ph Eur

Valaciclovir Hydrochloride

(Ph. Eur. monograph 1768)

C₁₃H₂₁ClN₆O₄

360.8

124832-27-5

Action and use

Purine nucleoside analogue; antiviral (herpesviruses).

Preparation

Valaciclovir Tablets

Ph Eur

DEFINITION

2-[(2-Amino-6-oxo-1,6-dihydro-9H-purin-9-yl)methoxy]ethyl L-valinate hydrochloride.

Content

95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water, slightly soluble in anhydrous ethanol.

It shows polymorphism (5.9).

IDENTIFICATION

Carry out either tests A, B, C, E or tests A, B, D, E.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison anhydrous valaciclovir hydrochloride CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *anhydrous ethanol R* and evaporate to dryness in a desiccator, under high vacuum, over *diphosphorus pentoxide R*. Record new spectra using the residues.

B. It gives reaction (a) of chlorides (2.3.1).

C. It complies with the limit for impurity R given in test A for related substances.

D. Optical rotation (2.2.7): laevorotatory.

Dissolve 2.50 g in *water R* and dilute to 50.0 mL with the same solvent.

E. Water (see Tests).

TESTS

Impurities E, F and G

Thin-layer chromatography (2.2.27).

Test solution Dissolve 0.250 g of the substance to be examined in 2 mL of *water R* and dilute to 5.0 mL with *ethanol (96 per cent) R*.

Reference solution (a) Dissolve 5 mg of *valaciclovir impurity D CRS*, 5.0 mg of *valaciclovir impurity E CRS*, 5.0 mg of *valaciclovir impurity G CRS* and 8.4 mg of *valaciclovir impurity F para-toluenesulfonate CRS* in a mixture of 2 mL of *water R* and 6 mL of *ethanol (96 per cent) R*, and dilute to 10.0 mL with *ethanol (96 per cent) R*.

Reference solution (b) Dilute 3.0 mL of reference solution (a) to 10.0 mL with *ethanol (96 per cent) R*.

Reference solution (c) Dilute 2.0 mL of reference solution (a) to 10.0 mL with *ethanol (96 per cent) R*.

Reference solution (d) Dilute 0.5 mL of reference solution (a) to 10.0 mL with *ethanol (96 per cent) R*.

Plate *TLG silica gel F₇₅₄ plate R* (2–10 µm).

Pretreatment Wash the plate with *methanol R* until the solvent front has migrated over at least 4/5 of the plate; allow the plate to dry.

Mobile phase *concentrated ammonia R, tetrahydrofuran R, methanol R, methylene chloride R* (3:12:34:54 *V/V/V/V*); use freshly prepared mobile phase.

Application 4 µL of the test solution and reference solutions (b), (c) and (d).

Development Over 4/5 of the plate.

Drying In a current of air.

Detection Examine in ultraviolet light at 254 nm for impurities E and G; spray with a 0.1 g/L solution of *fluorescamine R* in *ethylene chloride R* and examine in ultraviolet light at 365 nm for impurity F.

Retardation factors Impurity A = about 0; impurity B = about 0.2; valaciclovir = about 0.3; impurity C = about 0.5; impurity D = about 0.6; impurity E = about 0.7; impurity F = about 0.75; impurity G = about 0.79; impurity C is masked by the leading edge of the spot due to valaciclovir; impurities F and G may co-elute, but this does not adversely affect their quantification because they are visualised differently.

System suitability The chromatograms obtained with reference solutions (b), (c) and (d) each show 3 clearly separated spots when examined under ultraviolet light at 254 nm, due to impurities D, E and G.

Limits:

- **impurity E:** any spot due to impurity E is not more intense than the corresponding spot in the chromatogram obtained with reference solution (c) (0.2 per cent);
- **impurity F:** any spot due to impurity F is not more intense than the corresponding spot in the chromatogram obtained with reference solution (b) (0.3 per cent calculated as hydrochloride salt);
- **impurity G:** any spot due to impurity G is not more intense than the corresponding spot in the chromatogram obtained with reference solution (d) (0.05 per cent).

Related substances

A. Impurities A, B, I and R. Liquid chromatography (2.2.29): use the normalisation procedure.

Test solution Dissolve 50.0 mg of the substance to be examined in a 0.5 per cent *V/V* solution of *hydrochloric acid R* and dilute to 100.0 mL with the same solution.

Reference solution (a) Dissolve 2.5 mg of *valaciclovir for system suitability CRS* (containing impurities A, B, C, D, H, I, J, M and R) in a 0.5 per cent *V/V* solution of *hydrochloric acid R* and dilute to 5.0 mL with the same solution.

Reference solution (b) Dissolve 50.0 mg of *anhydrous valaciclovir hydrochloride CRS* in a 0.5 per cent *V/V* solution of *hydrochloric acid R* and dilute to 100.0 mL with the same solution.

Reference solution (c) Dilute 3.0 mL of the test solution to 100.0 mL with a 0.5 per cent *V/V* solution of *hydrochloric acid R*. Dilute 1.0 mL of this solution to 100.0 mL with a 0.5 per cent *V/V* solution of *hydrochloric acid R*.

Column:

- **size:** $l = 0.15$ m, $\varnothing = 4.0$ mm;
- **stationary phase:** *crown-ether silica gel for chiral separation R* (5 µm);
- **temperature:** 10 °C.

Mobile phase *perchloric acid R, methanol R, water for chromatography R* (0.5:5:95 *V/V/V*).

Flow rate 0.75 mL/min.

Detection Spectrophotometer at 254 nm.

Injection 10 µL of the test solution and reference solutions (a) and (c).

Run time 1.5 times the retention time of valaciclovir.

Identification of impurities Use the chromatogram supplied with *valaciclovir for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A + B, C + R, D, I and M.

Relative retention With reference to valaciclovir (retention time = about 21 min): impurities A and B = about 0.2; impurity I = about 0.4; impurities C and R = about 0.6; impurity D = about 0.7; impurity M = about 1.3.

System suitability Reference solution (a):

- **peak-to-valley ratio:** minimum 1.5, where H_p = height above the baseline of the peak due to impurity D and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurities C and R.

Limits:

- **correction factor:** for the calculation of content, multiply the peak area of impurities A and B by 0.7;
- **impurity R:** maximum 3.0 per cent; for the calculation, subtract the content of impurity C as determined in test B for related substances from the content of the coeluting impurities C and R as determined in this test;
- **sum of impurities A and B:** maximum 2.0 per cent;
- **impurity I:** maximum 0.2 per cent;
- **disregard limit:** the area of the principal peak in the chromatogram obtained with reference solution (c) (0.03 per cent); disregard any peaks due to impurities other than A + B, C + R or I.

B. Liquid chromatography (2.2.29): use the normalisation procedure. Use the solutions within 24 h of preparation.

Solvent mixture *ethanol (96 per cent) R, water R* (20:80 *V/V*).

Test solution Dissolve 40 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

Reference solution (a) Dissolve 2.5 mg of *valaciclovir for system suitability CRS* (containing impurities A, B, C, D, H, I, J, M and R) in the solvent mixture and dilute to 5.0 mL with the solvent mixture.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 20.0 mL with the solvent mixture.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: end-capped phenylhexylsilyl silica gel for chromatography R (5 μ m);
- temperature: 15 °C.

Mobile phase:

- mobile phase A: trifluoroacetic acid R, water for chromatography R (0.2:100 V/V);
- mobile phase B: trifluoroacetic acid R, methanol R2 (0.2:100 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 5	90	10
5 - 35	90 → 60	10 → 40

Flow rate 0.8 mL/min.

Detection Spectrophotometer at 254 nm.

Injection 10 μ L.

Identification of impurities Use the chromatogram supplied with valaciclovir for system suitability CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, D, H, I, J and M.

Relative retention With reference to valaciclovir (retention time = about 19 min): impurity A = about 0.3; impurity B = about 0.4; impurity H = about 0.5; impurity C = about 1.06; impurity I = about 1.09; impurity D = about 1.2; impurity J = about 1.3; impurity M = about 1.6.

System suitability Reference solution (a):

- peak-to-valley ratio: minimum 2.5, where H_p = height above the baseline of the peak due to impurity C and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to valaciclovir;
- the chromatogram obtained is similar to the chromatogram supplied with valaciclovir for system suitability CRS.

Limits:

- impurity M: maximum 1.5 per cent;
- impurity D: maximum 0.5 per cent;
- impurity C: maximum 0.3 per cent;
- impurities H, J: for each impurity, maximum 0.10 per cent;
- unspecified impurities: for each impurity, maximum 0.05 per cent;
- disregard limit: 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.03 per cent); disregard the peaks due to impurities A, B and I.

Limit:

- total for tests A and B: maximum 5.0 per cent.

Chloride

9.4 to 9.9 per cent (anhydrous and solvent-free substance). Dissolve 0.350 g in 100 mL of water R and add 0.2 mL of nitric acid R. Carry out a potentiometric titration (2.2.20), using 0.1 M silver nitrate. Use a silver indicator electrode and a silver-silver chloride reference electrode or a combined silver electrode. Discard the result from the first titration, which is used to condition the electrodes. Carry out a blank titration.

1 mL of 0.1 M silver nitrate is equivalent to 3.543 mg of Cl.

Water (2.5.12)

Maximum 2.0 per cent, determined on 0.250 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in test A for related substances with the following modification.

Injection Test solution and reference solution (b).

Calculate the percentage content of $C_{13}H_{21}N_6O_4$ taking into account the assigned content of anhydrous valaciclovir hydrochloride CRS.

IMPURITIES

Specified impurities A, B, C, D, E, F, G, H, I, J, M, R.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) K, L, N, O, P, Q.

Valaciclovir Hydrochloride Hydrate

Valaciclovir Hydrochloride, Hydrated
(Ph. Eur. monograph 2751)

$C_{13}H_{21}ClN_6O_4 \cdot xH_2O$ 360.8 1218948-84-5
(anhydrous substance)

Action and use

Purine nucleoside analogue; antiviral (herpesviruses).

Preparation

Valaciclovir Tablets

Ph Eur

DEFINITION

2-[(2-Amino-6-oxo-1,6-dihydro-9H-purin-9-yl)methoxy]ethyl L-valinate hydrochloride hydrate.

Content

95.0 per cent to 102.0 per cent (anhydrous substance).

It contains a variable quantity of water.

CHARACTERS

Appearance

White or almost white powder, hygroscopic.

Solubility

Freely soluble in water, very slightly soluble in anhydrous ethanol, practically insoluble in acetonitrile.

It shows polymorphism (5.9).

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Preparation Dissolve the substance to be examined in the minimum volume of *water R*, evaporate to dryness at room temperature and record the spectrum using the residue.

Comparison Repeat the operations using *anhydrous valaciclovir hydrochloride CRS*.

B. It complies with the limit for impurity R (see test A for related substances).

C. Water (see Tests).

D. It gives reaction (a) of chlorides (2.3.1).

TESTS

Impurities G and S

Thin-layer chromatography (2.2.27).

Test solution Dissolve 0.250 g of the substance to be examined in 2 mL of *water R* and dilute to 5.0 mL with *ethanol (96 per cent) R*.

Reference solution Dissolve 5.0 mg of *valaciclovir impurity G CRS* and 5.0 mg of *valaciclovir impurity S CRS* in a mixture of 2 mL of *water R* and 6 mL of *ethanol (96 per cent) R* and dilute to 10.0 mL with *ethanol (96 per cent) R*. Dilute 0.5 mL of the solution to 10.0 mL with *ethanol (96 per cent) R*.

Plate TLC silica gel F_{254} plate *R* (2-10 μ m).

Pretreatment Wash the plate with *methanol R* until the solvent front has migrated over at least 4/5 of the plate; allow to dry in air.

Mobile phase concentrated ammonia *R*, tetrahydrofuran *R*, methanol *R*, methylene chloride *R* (3:12:34:54 V/V/V/V); use freshly prepared mobile phase.

Application 4 μ L.

Development Over 4/5 of the plate.

Drying In a current of air.

Detection Examine in ultraviolet light at 254 nm.

Retardation factors Valaciclovir = about 0.3; impurity S = about 0.7; impurity G = about 0.8.

System suitability The chromatogram obtained with the reference solution shows 2 clearly separated spots due to impurities S and G.

Limits:

- **impurity G**: any spot due to impurity G is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.05 per cent);
- **impurity S**: any spot due to impurity S is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.05 per cent).

Related substances

A. Liquid chromatography (2.2.29): use the normalisation procedure.

Test solution Dissolve 50.0 mg of the substance to be examined in a 0.5 per cent V/V solution of *hydrochloric acid R* and dilute to 100.0 mL with the same solution.

Reference solution (a) Dissolve 2.5 mg of *valaciclovir for system suitability CRS* (containing impurities A, B, C, D, H, M and R) in a 0.5 per cent V/V solution of *hydrochloric acid R* and dilute to 5.0 mL with the same solution.

Reference solution (b) Dissolve 50.0 mg of *anhydrous valaciclovir hydrochloride CRS* in a 0.5 per cent V/V solution of *hydrochloric acid R* and dilute to 100.0 mL with the same solution.

Reference solution (c) Dilute 3.0 mL of the test solution to 100.0 mL with a 0.5 per cent V/V solution of *hydrochloric acid R*. Dilute 1.0 mL of this solution to 100.0 mL with a 0.5 per cent V/V solution of *hydrochloric acid R*.

Column:

- **size**: $l = 0.15$ m, $\varnothing = 4.0$ mm;
- **stationary phase**: crown-ether silica gel for chiral separation *R* (5 μ m);
- **temperature**: 10 °C.

Mobile phase perchloric acid *R*, methanol *R*, water for chromatography *R* (0.5:5:95 V/V/V).

Flow rate 0.75 mL/min.

Detection Spectrophotometer at 254 nm.

Injection 10 μ L of the test solution and reference solutions (a) and (c).

Run time 1.5 times the retention time of valaciclovir.

Identification of impurities Use the chromatogram supplied with *valaciclovir for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A + B, C + R, D and M.

Relative retention With reference to valaciclovir (retention time = about 17 min): impurities A and B = about 0.2; impurities C and R = about 0.6; impurity D = about 0.7; impurity M = about 1.3.

System suitability Reference solution (a):

- **peak-to-valley ratio**: minimum 1.5, where H_p = height above the baseline of the peak due to impurity D and H_v = height above the baseline of the lowest point of

the curve separating this peak from the peak due to impurities C and R.

Limits:

- *correction factor*: for the calculation of content, multiply the peak area of impurities A and B by 0.7;
- *impurity R*: maximum 3.0 per cent; for the calculation, subtract the content of impurity C as determined in test B for related substances from the content of the coeluting impurities C and R as determined in this test;
- *sum of impurities A and B*: maximum 2.0 per cent;
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.03 per cent); disregard any peaks due to impurities other than A + B and C + R.

B. Liquid chromatography (2.2.29): use the normalisation procedure. Use the solutions within 24 h of preparation.

Solvent mixture ethanol (96 per cent) R, water R (20:80 V/V).

Test solution Dissolve 80 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

Reference solution (a) Dissolve 1.6 mg of valaciclovir for system suitability CRS (containing impurities A, B, C, D, H, M and R) in the solvent mixture and dilute to 2.0 mL with the solvent mixture.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 20.0 mL with the solvent mixture.

Reference solution (c) Dissolve 2 mg of valaciclovir impurity P CRS in the solvent mixture and dilute to 25.0 mL with the solvent mixture. Dilute 1.0 mL of the solution to 100.0 mL with the solvent mixture.

Column:

- *size*: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- *stationary phase*: end-capped phenylhexylsilyl silica gel for chromatography R (5 μ m);
- *temperature*: 15 °C.

Mobile phase:

- *mobile phase A*: trifluoroacetic acid R, water for chromatography R (0.2:100 V/V);
- *mobile phase B*: trifluoroacetic acid R, methanol R2 (0.2:100 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 5	90	10
5 - 35	90 → 60	10 → 40
35 - 45	60	40

Flow rate 0.8 mL/min.

Detection Spectrophotometer at 254 nm.

Injection 10 μ L.

Identification of impurities Use the chromatogram supplied with valaciclovir for system suitability CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, D, H and M; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity P.

Relative retention With reference to valaciclovir (retention time = about 20 min): impurity A = about 0.3; impurity B = about 0.4; impurity H = about 0.5; impurity C = about 1.06; impurity D = about 1.2; impurity M = about 1.6; impurity P = about 2.0.

System suitability Reference solution (a):

- *peak-to-valley ratio*: minimum 2.0, where H_p = height above the baseline of the peak due to impurity C and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to valaciclovir.

Limits:

- *impurity M*: maximum 0.6 per cent;
- *impurity D*: maximum 0.3 per cent;
- *impurity C*: maximum 0.2 per cent;
- *impurities H, P*: for each impurity, maximum 0.10 per cent;
- *unspecified impurities*: for each impurity, maximum 0.05 per cent;
- *disregard limit*: 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.03 per cent); disregard the peaks due to impurities A and B.

Limit:

- *total for tests A and B*: maximum 4.0 per cent.

Water (2.5.12)

4.5 per cent to 11.0 per cent, determined on 0.100 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in test A for related substances with the following modification.

Injection Test solution and reference solution (b).

Calculate the percentage content of $C_{13}H_{21}ClN_6O_4$ taking into account the assigned content of anhydrous valaciclovir hydrochloride CRS.

STORAGE

In an airtight container.

IMPURITIES

Specified impurities A, B, C, D, G, H, M, P, R, S.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. Ph Eur

Valine

(Ph. Eur. monograph 0796)

$C_5H_{11}NO_2$

117.1

72-18-4

Action and use
Amino acid.

Ph Eur

DEFINITION

(2*S*)-2-Amino-3-methylbutanoic acid.

Product of fermentation or of protein hydrolysis.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance.

White or almost white, crystalline powder or colourless crystals.

Solubility

Soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification: A, B.

Second identification: A, C.

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

Comparison valine CRS.

C. Thin-layer chromatography (2.2.27).

Test solution Dissolve 10 mg of the substance to be examined in a 10.3 g/L solution of hydrochloric acid R and dilute to 50 mL with the same solution.

Reference solution Dissolve 10 mg of valine CRS in a 10.3 g/L solution of hydrochloric acid R and dilute to 50 mL with the same solution.

Plate TLC silica gel plate R.

Mobile phase glacial acetic acid R, water R, butanol R (20:20:60 V/V/V)

Application 5 µL.

Development Over 2/3 of the plate.

Drying In air.

Detection Spray with ninhydrin solution R and heat at 105 °C for 15 min.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Solution S

Dissolve 2.5 g in water R and dilute to 100 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and not more intensely coloured than reference solution BY₆ (2.2.2, Method II).

Specific optical rotation (2.2.7)

+ 26.5 to + 29.0 (dried substance).

Dissolve 2.00 g in hydrochloric acid R1 and dilute to 25.0 mL with the same acid.

Ninhydrin-positive substances

Amino acid analysis (2.2.56). For analysis, use Method 1.

The concentrations of the test solution and the reference solutions may be adapted according to the sensitivity of the equipment used. The concentrations of all solutions are adjusted so that the system suitability requirements described in general chapter 2.2.46 are fulfilled, keeping the ratios of concentrations between all solutions as described.

Solution A dilute hydrochloric acid R1 or a sample preparation buffer suitable for the apparatus used.

Test solution Dissolve 30.0 mg of the substance to be examined in solution A and dilute to 50.0 mL with solution A.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with solution A. Dilute 2.0 mL of this solution to 10.0 mL with solution A.

Reference solution (b) Dissolve 30.0 mg of proline R in solution A and dilute to 100.0 mL with solution A. Dilute 1.0 mL of the solution to 250.0 mL with solution A.

Reference solution (c) Dilute 6.0 mL of ammonium standard solution (100 ppm NH₄) R to 50.0 mL with solution A. Dilute 1.0 mL of this solution to 100.0 mL with solution A.

Reference solution (d) Dissolve 30 mg of isoleucine R (impurity B) and 30 mg of leucine R (impurity C) in solution A and dilute to 50.0 mL with solution A. Dilute 1.0 mL of the solution to 200.0 mL with solution A.

Reference solution (e) Dissolve 30.0 mg of isoleucine R (impurity B) in solution A and dilute to 100.0 mL with solution A. Dilute 1.0 mL of the solution to 250.0 mL with solution A.

Blank solution Solution A.

Inject suitable, equal amounts of the test, blank and reference solutions into the amino acid analyser. Run a program suitable for the determination of physiological amino acids.

System suitability Reference solution (d):

— **resolution:** minimum 1.5 between the peaks due to impurities B and C.

Calculation of percentage contents:

— for impurity B, use the concentration of impurity B in reference solution (e);
 — for any ninhydrin-positive substance detected at 570 nm, use the concentration of valine in reference solution (a);
 — for any ninhydrin-positive substance detected at 440 nm, use the concentration of proline in reference solution (b);
 if a peak is above the reporting threshold at both wavelengths, use the result obtained at 570 nm for quantification.

Limits:

— **impurity B at 570 nm:** maximum 0.4 per cent;
 — **any ninhydrin-positive substance:** for each impurity, maximum 0.2 per cent;
 — **total:** maximum 1.0 per cent;
 — **reporting threshold:** 0.05 per cent.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

Chlorides (2.4.4)

Maximum 200 ppm.

Dilute 10 mL of solution S to 15 mL with water R.

Sulfates (2.4.13)

Maximum 300 ppm.

Dissolve 0.5 g in distilled water R and dilute to 15 mL with the same solvent.

Ammonium

Amino acid analysis (2.2.56) as described in the test for ninhydrin-positive substances with the following modifications.

Injection Test solution, reference solution (c) and blank solution.

Limit:

— **ammonium at 570 nm:** not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.02 per cent), taking into account the peak due to ammonium in the chromatogram obtained with the blank solution.

Iron (2.4.9)

Maximum 10 ppm.

In a separating funnel, dissolve 1.0 g in 10 mL of dilute hydrochloric acid R. Shake with 3 quantities, each of 10 mL, of methyl isobutyl ketone R1, shaking for 3 min each time. To the combined organic layers add 10 mL of water R and shake for 3 min. Use the aqueous layer.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 3 mL of anhydrous formic acid R. Add 30 mL of anhydrous acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 11.71 mg of $C_5H_{11}NO_2$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities B.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, C.

A. (2S)-2-aminopropanoic acid (alanine),

B. (2S,3S)-2-amino-3-methylpentanoic acid (isoleucine),

C. (2S)-2-amino-4-methylpentanoic acid (leucine).

Ph Eur

Valproic Acid

(Ph. Eur. monograph 1378)

$C_8H_{16}O_2$

99-66-1

Action and use

Antiepileptic.

Ph Eur

DEFINITION

2-Propylpentanoic acid.

Content

99.0 per cent to 101.0 per cent.

CHARACTERS**Appearance**

Colourless or very slightly yellow, clear liquid, slightly viscous.

Solubility

Very slightly soluble in water, miscible with ethanol (96 per cent) and with methylene chloride. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison valproic acid CRS.

TESTS**Appearance of solution**

The solution is clear (2.2.1) and not more intensely coloured than reference solution Y₅ (2.2.2, Method II).

Dissolve 2.0 g in dilute sodium hydroxide solution R and dilute to 10 mL with the same alkaline solution.

Related substances

Gas chromatography (2.2.28).

Test solution Dissolve 0.500 g of the substance to be examined in heptane R and dilute to 100.0 mL with the same solvent.

Reference solution (a) Dissolve 5 mg of valproic acid for system suitability CRS (containing impurity K) in 1.0 mL of heptane R.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with heptane R.

Column:

— material: wide-bore fused silica;

— size: $l = 30$ m, $\varnothing = 0.53$ mm;

— stationary phase: macrogol 20 000 2-nitroterephthalate R (film thickness 0.5 μ m).

Carrier gas helium for chromatography R.

Flow rate 8 mL/min.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 5	80
	5 - 15	80 → 150
	15 - 28.3	150 → 190
	28.3 - 30	190
Injection port		220
Detector		220

Detection Flame ionisation.

Injection 1 μ L.

Relative retention With reference to valproic acid (retention time = about 17 min): impurity K = about 0.97.

System suitability Reference solution (a):

— resolution: minimum 2.0 between the peaks due to impurity K and valproic acid.

Limits:

— impurity K: not more than 0.15 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);

— unspecified impurities: for each impurity, not more than 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent);

— total: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— disregard limit: 0.03 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.03 per cent).

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 25 mL of ethanol (96 per cent) R. Add 2 mL of water R. Titrate with 0.1 M sodium hydroxide, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M sodium hydroxide is equivalent to 14.42 mg of $C_8H_{16}O_2$.

STORAGE

In an airtight container.

IMPURITIES

Specified impurities K.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, B, C, D, E, F, G, H, I, J, L.

Valsartan

(Ph. Eur. monograph 2423)

$C_{24}H_{29}N_5O_3$

435.5

137862-53-4

Action and use

Angiotensin II (AT₁) receptor antagonist.

Preparations

Valsartan Capsules

Valsartan Tablets

Ph Eur

DEFINITION

(2S)-3-Methyl-2-[pentanoyl[[2'-(1H-tetrazol-5-yl)biphenyl-4-yl]methyl]amino]butanoic acid.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

PRODUCTION

As N-nitrosamines are classified as probable human carcinogens, their presence in valsartan should be avoided or limited as much as possible. For this reason, manufacturers of valsartan for human use are expected to perform an assessment of the risk of N-nitrosamine formation and contamination during their manufacturing process; if this assessment identifies a potential risk, the manufacturing process should be modified to minimise contamination and a control strategy implemented to detect and control N-nitrosamine impurities in valsartan. The general chapter 2.5.42. N-Nitrosamines in active substances is available to assist manufacturers.

CHARACTERS

Appearance

White or almost white, hygroscopic powder.

Solubility

Practically insoluble in water, freely soluble in anhydrous ethanol, sparingly soluble in methylene chloride.

IDENTIFICATION

Carry out either tests A, B or tests A, C.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison valsartan CRS.

B. Enantiomeric purity (see Tests).

C. Specific optical rotation (2.2.7): -69.0 to -64.0 (anhydrous substance).

Dissolve 0.200 g in methanol R and dilute to 20.0 mL with the same solvent.

TESTS**Enantiomeric purity**

Liquid chromatography (2.2.29).

Test solution Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

Reference solution (a)—Dissolve 5 mg of valsartan for peak identification CRS (containing impurity A) in the mobile phase and dilute to 5 mL with the mobile phase.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: cellulose derivative of silica gel for chiral separation R (5 μ m).

Mobile phase trifluoroacetic acid R, 2-propanol R, hexane R (0.1:15:85 V/V/V).

Flow rate 0.8 mL/min.

Detection Spectrophotometer at 230 nm.

Injection 10 μ L.

Run time 1.5 times the retention time of valsartan.

Identification of impurities Use the chromatogram supplied with valsartan for peak identification CRS and the chromatogram obtained with reference solution (a) to identify the peak due to impurity A.

Relative retention With reference to valsartan (retention time = about 13 min): impurity A = about 0.6 .

System suitability Reference solution (a):

— resolution: minimum 2.0 between the peaks due to impurity A and valsartan.

Limit:

— impurity A: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent).

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b) Dissolve the contents of a vial of valsartan for system suitability CRS (containing impurity C) in 1 mL of the mobile phase.

Column:

— size: $l = 0.125$ m, $\varnothing = 3.0$ mm;

— stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase glacial acetic acid R, acetonitrile R1, water for chromatography R (1:500:500 V/V/V).

Flow rate 0.4 mL/min.

Detection Spectrophotometer at 225 nm.

Injection 10 μ L.

Run time 6 times the retention time of valsartan.

Identification of impurities Use the chromatogram supplied with valsartan for system suitability CRS and the chromatogram obtained with reference solution (b) to identify the peak due to impurity C.

Relative retention With reference to valsartan (retention time = about 5 min): impurity C = about 0.8 .

System suitability Reference solution (b):

— resolution: minimum 3.0 between the peaks due to impurity C and valsartan.

Limits:

— impurity C: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— total: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Water (2.5.12)

Maximum 2.0 per cent, determined on 0.500 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.170 g in 70 mL of 2-propanol R. Titrate with 0.1 M tetrabutylammonium hydroxide in 2-propanol, determining the endpoint potentiometrically (2.2.20). Perform all operations under nitrogen.

1 mL of 0.1 M tetrabutylammonium hydroxide in 2-propanol is equivalent to 21.78 mg of $C_{24}H_{29}N_5O_3$.

STORAGE

In an airtight container.

IMPURITIES

Specified impurities A, C.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B.

A. (2R)-3-methyl-2-[pentanoyl]butanoic acid, 2'--(1H-tetrazol-5-yl)biphenyl-4-ylmethylamino]

Ph Eur

DEFINITION

Monohydrochloride of (3S,6R,7R,8M,18M,22R,23S,26S,30aM,36R,38aR)-3-(2-amino-2-oxoethyl)-44-[[2-O-(3-amino-2,3,6-trideoxy-3-C-methyl- α -L-xylo-hexopyranosyl)- β -D-glucopyranosyl]oxy]-10,19-dichloro-7,22,28,30,32-pentahydroxy-6-[(2R)-4-

methyl-2-(methylamino)pentanamido]-2,5,24,38,39-pentaoxo-2,3,4,5,6,7,23,24,25,26,36,37,38,38a-tetradecahydro-22H-23,36-(azanomethano)-8,11:18,21-dietheno-13,16:31,35-dimetheno-1H,13H-[1,6,9]oxadiazacyclohexadecino[4,5-m][10,2,16]benzoxadiazacyclotetracosine-26-carboxylic acid (vancomycin B hydrochloride).

Substance produced by certain strains of *Amycolatopsis orientalis*.

Potency

Minimum 1050 IU/mg (anhydrous substance).

CHARACTERS

Appearance

White or almost white, very hygroscopic powder.

Solubility

Freely soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Examine the chromatograms obtained in the test for vancomycin B and related substances.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

B. It gives reaction (a) of chlorides (2.3.1).

TESTS

Appearance of solution

The solution is clear (2.2.1) and its absorbance (2.2.25) at 450 nm is not greater than 0.10, and its absorbance at 370 nm is not greater than 0.65.

Dissolve 2.50 g in water R and dilute to 25.0 mL with the same solvent.

pH (2.2.3)

2.5 to 4.5.

Dissolve 0.50 g in carbon dioxide-free water R and dilute to 10 mL with the same solvent.

Vancomycin B and related substances

Liquid chromatography (2.2.29): use the normalisation procedure.

Solution A Dissolve 7.0 g of tris(hydroxymethyl)aminomethane R in approximately 950 mL of water for chromatography R. Measure the temperature of the solution. Considering the temperature dependency of the buffer, adjust the pH to 8.0-8.3 using a 20 per cent V/V solution of glacial acetic acid R in water for chromatography R and dilute to 1000 mL with water for chromatography R.

Test solution Dissolve 20.0 mg of the substance to be examined in water R and dilute to 5.0 mL with the same solvent.

Reference solution (a) Dissolve 6 mg of vancomycin for system suitability CRS (containing impurities A, C, F, H, I, J, K and M) in 1.5 mL of water R.

Reference solution (b) In order to prepare impurities B, D, E, G and L *in situ*, expose 4 mg of vancomycin for system suitability CRS (containing impurities A, C, F, H, I, J, K and M) to 80-100 per cent relative humidity at $42 \pm 2^\circ\text{C}$ for at least 7 days. Add 1 mL of water R and dissolve the sample completely using sonication.

Reference solution (c) Dilute 1.0 mL of reference solution (a) to 100.0 mL with a 0.1 per cent V/V solution of acetic acid R. Dilute 1.0 mL of this solution to 10.0 mL with a 0.1 per cent V/V solution of acetic acid R.

Column:

- size: $l = 0.15$ m, $\text{Ø} = 2.1$ mm;
- stationary phase: end-capped, charged surface, ethylene-bridged octadecylsilyl silica gel for chromatography (hybrid material) R (1.7 μm);
- temperature: 40 ± 2 °C.

Mobile phase:

- mobile phase A: acetonitrile R, methanol R, solution A (3:4:93 V/V/V);
- mobile phase B: acetonitrile R, methanol R, solution A (10:40:50 V/V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 7	88	12
7 - 21	88 → 75	12 → 25
21 - 35	75 → 25	25 → 75
35 - 37	25	75

Flow rate 0.30 ± 0.02 mL/min.

Detection Spectrophotometer at 280 nm.

Autosampler Set at 5 °C.

Injection 2 μL .

Identification of peaks Use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, C, F, H, I, J, K and M; use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities B, D, E, G and L.

Relative retention With reference to vancomycin B (retention time = about 19 min): impurity E = about 0.37; impurity L = about 0.66; impurity B = about 0.70; impurity A = about 0.76; impurity F = about 0.82; impurity G = about 0.90; impurity H = about 0.94; impurity M = about 1.11; impurity I = about 1.14; impurity J = about 1.20; impurity D = about 1.24; impurity K = about 1.50; impurity C = about 1.86.

System suitability:

- resolution: minimum 1.5 and maximum 4.0 between the peaks due to impurities G and H, and minimum 1.5 and maximum 5.0 between the peaks due to impurities L and B in the chromatogram obtained with reference solution (b). If the resolution between the peaks due to impurities G and H is greater than 4.0, adjust the pH of solution A to a higher value. If the resolution between the peaks due to impurities L and B is greater than 5.0, adjust the pH of solution A to a lower value;
- signal-to-noise ratio: minimum 10 for the peak due to vancomycin B in the chromatogram obtained with reference solution (c).

Limits:

- vancomycin B: minimum 91.0 per cent;
- impurities A, H: for each impurity, maximum 3.0 per cent;
- sum of impurities B and E: maximum 2.0 per cent;
- impurity J: maximum 1.6 per cent;
- impurities D, F, M: for each impurity, maximum 1.5 per cent;
- impurities G, I, K: for each impurity, maximum 1.2 per cent;
- impurity C: maximum 1.0 per cent;
- any other impurity eluting before vancomycin B: for each impurity, maximum 0.8 per cent, and not more than 5 such impurities exceed 0.30 per cent;
- any other impurity eluting after vancomycin B: for each impurity, maximum 0.8 per cent, and not more than 3 such impurities exceed 0.30 per cent;

- total of impurities: maximum 9.0 per cent;
- reporting threshold: 0.10 per cent.

Water (2.5.12)

Maximum 5.0 per cent, determined on 0.500 g.

Sulfated ash (2.4.14)

Maximum 1.0 per cent, determined on 1.00 g.

ASSAY

Carry out the microbiological assay of antibiotics (2.7.2).

Use vancomycin hydrochloride CRS as the reference substance.

STORAGE

In an airtight container, protected from light at a temperature of 2 °C to 8 °C. If the substance is sterile, the container is also sterile and tamper-evident.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

IMPURITIES

Specified impurities A, B, C, D, E, F, G, H, I, J, K, M.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. Ph Eur

Vanillin

(Ph. Eur. monograph 0747)

$C_8H_8O_3$

152.1

121-33-5

Ph Eur

DEFINITION

Vanillin contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-hydroxy-3-methoxybenzaldehyde, calculated with reference to the dried substance.

CHARACTERS

White or slightly yellowish, crystalline powder or needles, slightly soluble in water, freely soluble in alcohol and in methanol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification: B.

Second identification: A, C, D.

A. Melting point (2.2.14): 81 °C to 84 °C.

B. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *vanillin CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for related substances in daylight after spraying. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 5 mL of a saturated solution of the substance to be examined add 0.2 mL of *ferric chloride solution R1*. A blue colour is produced. Heat to 80 °C. The solution becomes brown. On cooling, a white precipitate is formed.

TESTS**Appearance of solution**

Dissolve 1.0 g in *alcohol R* and dilute to 20 mL with the same solvent. The solution is clear (2.2.1) and not more intensely coloured than reference solution B₆ (2.2.2, *Method II*).

Related substances

Examine by thin-layer chromatography (2.2.27), using *silica gel GF₂₅₄ R* as the coating substance.

Test solution (a) Dissolve 0.1 g of the substance to be examined in *methanol R* and dilute to 5 mL with the same solvent.

Test solution (b) Dilute 1 mL of test solution (a) to 10 mL with *methanol R*.

Reference solution (a) Dissolve 10 mg of *vanillin CRS* in *methanol R* and dilute to 5 mL with the same solvent.

Reference solution (b) Dilute 0.5 mL of test solution (a) to 100 mL with *methanol R*.

Apply to the plate 5 µL of each solution. Develop in an unsaturated tank over a path of 10 cm using a mixture of 0.5 volumes of *anhydrous acetic acid R*, 1 volume of *methanol R* and 98.5 volumes of *methylene chloride R*. Dry the plate in a current of cold air. Examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). Spray with *dinitrophenylhydrazine-aceto-hydrochloric solution R* and examine in daylight. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Reaction with sulfuric acid

Dissolve 50 mg in 5 mL of *sulfuric acid R*. After 5 min, the solution is not more intensely coloured than a mixture of 4.9 mL of yellow primary solution and 0.1 mL of red primary solution or a mixture of 4.9 mL of yellow primary solution and 0.1 mL of blue primary solution (2.2.2, *Method I*).

Loss on drying (2.2.32)

Not more than 1.0 per cent, determined on 1.000 g by drying in a desiccator for 4 h.

Sulfated ash (2.4.14)

Not more than 0.05 per cent, determined on 2.0 g.

ASSAY

Dissolve 0.120 g in 20 mL of *alcohol R* and add 60 mL of *carbon dioxide-free water R*. Titrate with 0.1 M *sodium hydroxide*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *sodium hydroxide* is equivalent to 15.21 mg of C₂₃H₃₃N₆O₄S.

STORAGE

Store protected from light.

Ph Eur

Vardenafil Hydrochloride Trihydrate

(Ph. Eur. monograph 2782)

C₂₃H₃₃N₆O₄S·3H₂O

330808-88-3

Action and use

Selective inhibitor of cyclic GMP-specific phosphodiesterase type V with vasodilator action; treatment of erectile dysfunction.

Preparations

Vardenafil Orodispersible Tablets

Vardenafil Tablets

Ph Eur

DEFINITION

2-[2-Ethoxy-5-[(4-ethylpiperazin-1-yl)sulfonyl]phenyl]-5-methyl-7-propylimidazo[5,1-f][1,2,4]triazin-4(3H)-one hydrochloride trihydrate.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS**Appearance**

White or slightly brown or yellow powder.

Solubility

Slightly soluble in water, freely soluble in anhydrous ethanol, practically insoluble in heptane.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison vardenafil hydrochloride CRS.

B. Water (see Tests).

C. It gives reaction (a) of chlorides (2.3.1).

TESTS**Related substances**

Liquid chromatography (2.2.29). *Protect the solutions from light.*

Solvent mixture acetonitrile R, mobile phase A (20:80 V/V).

Test solution (a) Dissolve 50.0 mg of the substance to be examined in 20 mL of *acetonitrile R* and dilute to 100.0 mL with mobile phase A.

Test solution (b) Dilute 15.0 mL of test solution (a) to 50.0 mL with the solvent mixture.

Reference solution (a) Dissolve 50.0 mg of *vardenafil hydrochloride CRS* in 20 mL of *acetonitrile R* and dilute to 100.0 mL with mobile phase A. Dilute 15.0 mL of the solution to 50.0 mL with the solvent mixture.

Reference solution (b) Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Reference solution (c) Dissolve 5 mg of *vardenafil for system suitability CRS* (containing impurity A) in 2 mL of *acetonitrile R* and dilute to 10 mL with mobile phase A.

Column:

- size: $l = 0.25$ m, $\varnothing = 3.0$ mm;
- stationary phase: end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R (5 μ m);
- temperature: 45 °C.

Mobile phase:

- mobile phase A: solution containing 0.7 g/L of *disodium hydrogen phosphate dihydrate R* and 1.3 g/L of *potassium dihydrogen phosphate R*;
- mobile phase B: *acetonitrile for chromatography R*;

Time (min)	Mobile phase A (per cent W/W)	Mobile phase B (per cent W/W)
0 - 2	80	20
2 - 22	80 → 25	20 → 75
22 - 27	25	75

Flow rate 0.5 mL/min.

Detection Spectrophotometer at 242 nm.

Injection 10 μ L of test solution (a) and reference solutions (b) and (c).

Identification of impurities Use the chromatogram supplied with *vardenafil for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peak due to impurity A.

Relative retention With reference to vardenafil (retention time = about 16 min): impurity A = about 0.8.

System suitability Reference solution (c):

- resolution: minimum 5.0 between the peaks due to impurity A and vardenafil.

Calculation of percentage contents:

- for each impurity, use the concentration of vardenafil hydrochloride trihydrate in reference solution (b).

Limits:

- impurity A: maximum 0.15 per cent;
- unspecified impurities: for each impurity, maximum 0.10 per cent;
- total: maximum 0.3 per cent;
- reporting threshold: 0.05 per cent.

Sulfates (2.4.13)

Maximum 400 ppm.

Suspend 0.5 g in 20 mL of a 5.15 g/L solution of *hydrochloric acid R* and stir for 15 min. Filter if complete dissolution is not obtained.

Water (2.5.12)

8.8 per cent to 10.5 per cent, determined on 60.0 mg.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection 10 μ L of test solution (b) and reference solution (a).

Calculate the percentage content of $C_{23}H_{33}ClN_6O_4S$ taking into account the assigned content of *vardenafil hydrochloride CRS*.

IMPURITIES

Specified impurities A.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. Action and use

Non-depolarizing neuromuscular blocker.

Preparation

Vecuronium Bromide for Injection

Ph Eur

DEFINITION

1-[3 α ,17 β -Bis(acetyloxy)-2 β -(piperidin-1-yl)-5 α -androstan-16 β -yl]-1-methylpiperidin-1-ium bromide.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white crystals or crystalline powder.

Solubility

Slightly soluble in water, freely soluble in methylene chloride, sparingly soluble in acetonitrile and in anhydrous ethanol.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

Comparison *vecuronium bromide CRS*.

C. It gives reaction (a) of bromides (2.3.1).

TESTS

Solution S

Dissolve 0.500 g in a 5.15 g/L solution of *hydrochloric acid R* and dilute to 50.0 mL with the same solution.

Appearance of solution

Solution S is clear (2.2.1) and not more intensely coloured than reference solution BY₇ (2.2.2, *Method II*).

Specific optical rotation (2.2.7)

+ 30.5 to + 35.0 (anhydrous substance), determined on solution S.

Impurity B

Thin-layer chromatography (2.2.27).

Test solution Dissolve 0.10 g of the substance to be examined in *methylene chloride R* and dilute to 5.0 mL with the same solvent.

Reference solution (a) Dissolve 5 mg of the substance to be examined and 5 mg of *pancuronium bromide CRS* (impurity B) in *methylene chloride R* and dilute to 5.0 mL with the same solvent.

Reference solution (b) Dissolve 5.0 mg of *pancuronium bromide CRS* (impurity B) in *methylene chloride R* and dilute to 100.0 mL with the same solvent.

Plate TLC silica gel plate R (2-10 μ m).

Mobile phase Dissolve 1 g of *sodium bromide R* in 5 mL of *water R*. Add 85 mL of *2-propanol R*, then 10 mL of *acetonitrile R*.

Application 1 μ L.

Development In an unsaturated tank, over 2/3 of the plate.

Drying In air for 30 min.

Detection Spray with a 2.5 g/L solution of *iodine R* in a mixture of equal volumes of *methanol R* and *methylene chloride R*.

System suitability Reference solution (a):

— the chromatogram shows 2 clearly separated spots.

Limit:

— *impurity B*: any spot due to impurity B is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.25 per cent).

Related substances

Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

Solution A 0.2 g/L solution of *hydrochloric acid R* in *methanol R2*.

Test solution Dissolve 40 mg of the substance to be examined in solution A and dilute to 20.0 mL with solution A.

Reference solution (a) Dissolve 4 mg of *vecuronium for system suitability CRS* (containing impurities C and E) in solution A and dilute to 2.0 mL with the solution A.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with solution A. Dilute 1.0 mL of this solution to 10.0 mL with solution A.

Column:

— *size*: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— *stationary phase*: end-capped octadecylsilyl silica gel for chromatography R (5 μ m);

— *temperature*: 40 °C.

Mobile phase Mix 135 volumes of an 18.0 g/L solution of *tetramethylammonium hydroxide R* previously adjusted to pH 6.9 with *phosphoric acid R*, 250 volumes of *methanol R2* and 615 volumes of *acetonitrile R1*.

Flow rate 2.0 mL/min.

Detection Spectrophotometer at 210 nm.

Autosampler Set at 4 °C.

Injection 20 μ L.

Run time 5 times the retention time of *vecuronium*.

Identification of impurities Use the chromatogram supplied with *vecuronium for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities C and E.

Relative retention With reference to *vecuronium* (retention time = about 5 min): impurity C = about 0.8; impurity E = about 1.2.

System suitability:

— *signal-to-noise ratio*: minimum 28 for the principal peak in the chromatogram obtained with reference solution (b);

— *peak-to-valley ratio*: minimum 2.0, where H_p = height above the baseline of the peak due to impurity E and H_v = height above the baseline of the lowest point of the curve separating this peak from the principal peak in the chromatogram obtained with reference solution (a).

Calculation of percentage contents:

— *correction factor*: multiply the peak area of impurity C by 1.4;

— for each impurity, use the concentration of vecuronium bromide in reference solution (b).

Limits:

- *impurity C*: maximum 0.15 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.2 per cent;
- *reporting threshold*: 0.05 per cent.

Water (2.5.12)

Maximum 4.0 per cent, determined on 0.300 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.450 g in 50 mL of *glacial acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 63.8 mg of $C_{34}H_{57}BrN_2O_4$.

STORAGE

In an airtight container, protected from light and moisture.

IMPURITIES

Specified impurities B, C.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, D, E, F.

A. 2β,16β-di(piperidin-1-yl)-5α-androstane-3α,17β-diyl diacetate,

B. 1,1'-(3α,17β-bis(acetyloxy)-5α-androstane-2β,16β-diyl)bis(1-methylpiperidin-1-ium) (pancuronium),

C. 1-[17β-(acetyloxy)-3α-hydroxy-2β-(piperidin-1-yl)-5α-androstan-16β-yl]-1-methylpiperidin-1-ium,

D. 1-[3α,17β-dihydroxy-2β-(piperidin-1-yl)-5α-androstan-16β-yl]-1-methylpiperidin-1-ium,

E. 1-[3α-(acetyloxy)-17β-hydroxy-2β-(piperidin-1-yl)-5α-androstan-16β-yl]-1-methylpiperidin-1-ium,

F. 2β-(piperidin-1-yl)-17-oxo-5α-androstan-3α-yl acetate.

Ph Eur

Vegetable Fatty Oils

(Ph. Eur. monograph 1579)

Ph Eur

DEFINITION

Vegetable fatty oils are mainly solid or liquid triglycerides of fatty acids. They may contain small amounts of other lipids such as waxes, free fatty acids, partial glycerides or unsaponifiable matters. Vegetable fatty oils are obtained from the seeds, the fruit or the pit/stone/kernel of various plants by expression and/or solvent extraction, then possibly refined and hydrogenated. A suitable antioxidant may be added if necessary.

Virgin oil An oil obtained from raw materials of special quality by mechanical procedures (e.g. by cold expression or centrifugation).

Refined oil An oil obtained by expression and/or solvent extraction, and subsequently either alkali refining (followed by bleaching and any deodorisation) or physical refining.

Hydrogenated oil An oil obtained by expression and/or solvent extraction, and subsequently either alkali refining or

physical refining, then possible bleaching, followed by drying, hydrogenation and subsequent bleaching and deodorisation.

Only alkali-refined oils are used in the manufacture of parenteral preparations.

PRODUCTION

Measures are taken to ensure that the oil complies with the limit for benzo[a]pyrene decided by the competent authority. A limit of 2.0 ppb is set in Commission Regulation (EC) No. 208/2005.

OBTENTION OF A CRUDE OIL

Where the plant has a high oil content, the oil is generally obtained by expression under heating followed by an extraction; where the plant has a low oil content, the oil is generally obtained by direct extraction.

Mechanical procedures

A. Expression

High-pressure screw-pressing It consists of some or all of the following steps: cleaning, drying, dehulling or decorticating, grinding, cooking and flaking.

During *cleaning* the foreign matter is eliminated. *Drying* may be necessary if the seed moisture content is higher than desirable for downstream processing. *Decorticating* is useful to obtain a high-protein meal by reduction of fibre and to reduce impurities in the oil. *Cooking* serves various purposes: completion of the breakdown of oil cells, lowering of the viscosity of the oil, coagulation of the protein in the meal, adjustment of the moisture level, sterilisation of the seed, detoxifying undesirable seed constituents (gossypol for cottonseed) and fixing certain phosphatides in the cake thus lowering subsequent refining losses. The efficacy of the expression process is such that only 3 per cent to 6 per cent of the oil is left in the cake.

Wet screw-pressing The bunches are loaded into cages (for palm fruit) and moved into a horizontal steriliser with application of live steam and heating. The purposes of this steriliser are inactivation of enzymes, loosening of the fruit on the bunch, coagulation of proteins, etc. After heating in a digester, the pulp is fed to a screw-press. The oil is centrifugally clarified and vacuum-dried.

Pre-pressing followed by solvent extraction The same sequence of steps is performed as above. The main function of pre-pressing is to obtain a cake of excellent permeability for the following solvent extraction stage. The extraction is performed either in a percolation-type or in an immersion-type apparatus. The efficacy of the solvent extraction process is such that residual oil levels in meal are generally below 1 per cent.

B. Centrifugation

Centrifugation separates the oily phase from the aqueous phase, which contains water-soluble components and residual solid particles. This operation can be carried out using:

- self-cleaning bowl or disc centrifuges;
- super-decanters, which are horizontal turbines equipped with a cylindrical bowl that tapers slightly at one end and which contains a continuously turning screw that scrapes the sides of the bowl; the screw and the bowl rotate at different speeds; the solid particles are discarded from the tapered end of the bowl and the oil flows out from the other end.

Solvent extraction

Prior to extraction, the following steps are carried out: the seeds are tempered for about a week at a temperature below 24 °C in order to loosen the hull from the seed and allow the seed moisture to attain equilibrium, then the seeds are

cleaned, ground, dehulled and flaked. The most widely used solvent is a mixture of mainly *n*-hexane and methylpentanes (bp: 65-70 °C) commonly referred to as 'hexane'. Due to the major fire and explosive risks of this mixture, liquified gases and supercritical gases may also be used.

REFINING

The objective of refining is to remove impurities and contaminants of the oil with the least possible damage to the triglycerides and with minimal loss of oil. The contents of the following substances are reduced:

- free fatty acids, which may cause deterioration of the oil by oxidation, a smoked taste when heated and a sharp flavour (by alkali refining);
- water, which favours the enzymatic hydrolysis reactions (by alkali refining, drying);
- partial glycerides, which may cause foaming and a bitter taste (by neutralisation, washing);
- phosphatides and phosphorous compounds, which have emulsifying properties and may cause deposits, a darkening of the oil when heated, a cloudy appearance and bad organoleptic stability (by alkali refining);
- colouring matters such as chlorophyll (by alkali refining) and carotenoids (by bleaching);
- glycolipids, which may form colloidal solutions with water;
- free hydrocarbons, paraffin, waxes and resinous materials;
- metals (Fe, Cu, Pb, Sn, Pt, Pd, etc.), which are strong oxidation catalysts;
- pigments such as gossypol (in cottonseed oil) or mycotoxins such as aflatoxin (mainly in arachis seeds);
- pesticides;
- oxidation products (aldehydes, peroxides);
- proteins having possible allergic reactions;
- unsaponifiable matters (sterols, tocopherols and other vitamins);
- polycyclic aromatic hydrocarbons.

Alkali refining

It involves the following steps: degumming if necessary, neutralisation using alkali, washing and drying.

Degumming During this step of the refining, i.e. treatment with water and/or phosphoric acid and/or sodium chloride, the phosphatides, phosphorous compounds and metals are eliminated. The use of this step depends on the nature of the oil.

Neutralisation with alkali This step reduces the free-fatty-acid content below 0.1 per cent; the fatty acids are converted into oil-insoluble soaps, also called 'soapstocks'. Other substances may be removed by adsorption on these soaps: mucilaginous substances, phosphatides, oxidation products, colouring matters, etc. All substances that become insoluble in the oil on hydration are removed. Neutralisation with alkali has the disadvantage of saponifying a portion of neutral oil if the neutralisation is not well conducted.

Washing This operation consists in removing the excess of soaps and alkali as well as the remaining traces of metals, phosphatides and other impurities, using hot water.

Drying The remaining water is eliminated under vacuum before any further steps, such as bleaching.

Physical refining

It involves a steam treatment of the oil under high vacuum at a temperature greater than 235 °C. This technique can only be applied to oils naturally low in phosphatides and metals (palm and coconut) or from which phosphatides and metals have been removed by an acid treatment using concentrated phosphoric acid followed by an adsorptive treatment with

activated bleaching earth (for sunflower, rapeseed, soyabean). Moreover, it cannot be used for heat-sensitive oils (cottonseed oil), which darken.

Bleaching

The common method of bleaching is by adsorption treatment of the oil, which is generally heated at 90 °C for 30 min under vacuum, with bleaching earth (natural or activated) or carbon (activated or not); synthetic silica adsorbents may also be added. Substances that have not been totally removed during refining are eliminated, for example carotenoids and chlorophyll.

Deodorisation

Deodorisation eliminates odours, volatile substances and any residual extraction solvents; it involves injecting dry vapour into the oil, which is kept under vacuum at a high temperature. Different temperatures are used according to the oil: 200-235 °C for 1.5-3 h or greater than 240 °C for 30 min.

One of the main side reactions is thermic decolourisation due to the destruction of carotenoids when the temperature is greater than 150 °C. This technique provokes a loss of substances that may be distilled (free fatty acids, sterols, tocopherols, part of the refined oil), and may cause *cis-trans* isomerisation of the unsaturated fatty-acid double bonds.

WINTERISATION

Elimination of solids and waxes by filtration at low temperature (also called dewaxing). These solids and waxes could affect the appearance of the oil and cause deposits.

HYDROGENATION

The hydrogenation of the dried and/or bleached oil is performed using a catalyst (e.g. Ni, Pt, Pd), at a temperature of about 100-200 °C under hydrogen pressure. The catalyst is then removed by filtration at 90 °C. The hydrogen must be pure: free of poisons for the catalyst, water-free, and low in carbon dioxide, methane and nitrogen contents. Small amounts of polymers may be obtained. *Trans*-fatty acids are formed during partial hydrogenation.

CHROMATOGRAPHIC PURIFICATION

In high-purity applications, mainly for parenteral uses, the oil may be further purified by passing the oil through a column containing an activated earth. A solvent may sometimes be used to improve the efficiency. High-polarity molecules, such as oxidised materials, acids, alcohols, partial glycerides and free sterols, are preferentially removed.

When the oil is used in the manufacture of parenteral preparations, the limits set in the monograph for the acid value, the peroxide value and the water content may be different.

LABELLING

The label states:

- where applicable, that the oil was obtained by expression or extraction;
- where applicable, that the oil is suitable for use in the manufacture of parenteral preparations.

Ph Eur

Hydrogenated Vegetable Oil

68334-00-9

Action and use
Excipient.

DEFINITION

Hydrogenated Vegetable Oil is a mixture of triglycerides of fatty acids of vegetable origin.

CHARACTERISTICS

An almost white, fine powder at room temperature and a pale yellow, oily liquid above its melting point.

Practically insoluble in *water*; soluble in *hexane* and in hot *propan-2-ol*.

IDENTIFICATION

Complies with the tests for Acid value, Iodine value and Saponification value.

TESTS

Melting point

57° to 70°, Appendix V A.

Acid value

Not more than 4.0, Appendix X B.

Iodine value

Not more than 5, Appendix X E, Method B.

Saponification value

175 to 205, Appendix X G, Method II.

Unsaponifiable matter

Not more than 0.8% w/w, Appendix X H.

Loss on drying

When dried at 105° for 4 hours, loses not more than 0.1% of its weight. Use 5 g.

STORAGE

Hydrogenated Vegetable Oil should be stored at a temperature of 8° to 25°.

Venlafaxine Hydrochloride

(Ph. Eur. monograph 2119)

C₁₇H₂₈ClNO₂

313.9

99300-78-4

Action and use

Inhibition of 5HT and noradrenaline reuptake; antidepressant.

Preparations

Venlafaxine Prolonged-release Capsules
Venlafaxine Prolonged-release Tablets
Venlafaxine Tablets

Ph Eur

DEFINITION

1-[(1*RS*)-2-(Dimethylamino)-1-(4-methoxyphenyl)ethyl]cyclohexanol hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS**Appearance**

White or almost white powder.

Solubility

Freely soluble in water and in methanol, soluble in anhydrous ethanol, slightly soluble or practically insoluble in acetone.

It shows polymorphism (5.9).

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison venlafaxine hydrochloride CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in 2-propanol R, evaporate to dryness and record new spectra using the residues.

B. It gives reaction (a) of chlorides (2.3.1).

TESTS**Acidity or alkalinity**

Dissolve 0.20 g in carbon dioxide-free water R and dilute to 10 mL with the same solvent. Add 0.05 mL of methyl red solution R and 0.1 mL of 0.01 M hydrochloric acid.

The solution is pink. Not more than 0.2 mL of 0.01 M sodium hydroxide is required to change the colour of the indicator to yellow.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

Reference solution (b) Dissolve the contents of a vial of venlafaxine for system suitability CRS (containing impurities D and F) in 1.0 mL of the mobile phase.

Column:

— *size:* $l = 0.25$ m, $\varnothing = 4.6$ mm;

— *stationary phase:* end-capped octylsilyl silica gel for chromatography R (5 μ m) with a pore size of 10 nm.

Mobile phase Mix 510 volumes of acetonitrile R and 1490 volumes of a solution prepared as follows: dissolve 17 g of ammonium dihydrogen phosphate R in 1490 mL of water R and adjust to pH 4.4 using phosphoric acid R.

Flow rate 1.2 mL/min.

Detection Spectrophotometer at 225 nm.

Injection 20 μ L.

Run time 10 times the retention time of venlafaxine.

Relative retention With reference to venlafaxine (retention time = about 9 min): impurity D = about 0.9; impurity F = about 3.4.

System suitability Reference solution (b):

— *resolution:* minimum 1.5 between the peaks due to impurity D and venlafaxine.

Limits:

— *impurity F:* not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

- *unspecified impurities:* for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total:* not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *disregard limit:* 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 80 °C for 3 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in a mixture of 5.0 mL of 0.01 M hydrochloric acid and 50 mL of ethanol (96 per cent) R. Carry out a potentiometric titration (2.2.20), using 0.1 M sodium hydroxide. Read the volume added between the 2 points of inflexion. Carry out a blank titration.

1 mL of 0.1 M sodium hydroxide is equivalent to 31.39 mg of $C_{17}H_{28}ClNO_2$.

IMPURITIES

Specified impurities F.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. (2*RS*)-2-(3,4-Dimethoxyphenyl)-5-[[2-(3,4-dimethoxyphenyl)ethyl](methyl)amino]-2-(1-methylethyl)pentanenitrile hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Soluble in water, freely soluble in methanol, sparingly soluble in ethanol (96 per cent).

mp

About 144 °C.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

Test solution Dissolve 20.0 mg in 0.01 M hydrochloric acid and dilute to 100.0 mL with the same acid. Dilute 5.0 mL of this solution to 50.0 mL with 0.01 M hydrochloric acid.

Spectral range 210-340 nm.

Absorption maxima At 229 nm and 278 nm.

Shoulder At 282 nm.

Absorbance ratio $A_{278}/A_{229} = 0.35$ to 0.39.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison verapamil hydrochloride CRS.

C. Thin-layer chromatography (2.2.27).

Test solution Dissolve 10 mg of the substance to be examined in methylene chloride R and dilute to 5 mL with the same solvent.

Reference solution (a) Dissolve 20 mg of verapamil hydrochloride CRS in methylene chloride R and dilute to 10 mL with the same solvent.

Reference solution (b) Dissolve 5 mg of papaverine hydrochloride CRS in reference solution (a) and dilute to 5 mL with the same solution.

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase diethylamine R, cyclohexane R (15:85 V/V).

Application 5 µL.

Development Over 3/4 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated principal spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. It gives reaction (b) of chlorides (2.3.1).

TESTS

Solution S

Dissolve 1.0 g in carbon dioxide-free water R while gently heating and dilute to 20.0 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

pH (2.2.3)

4.5 to 6.0 for solution S.

Optical rotation (2.2.7)

-0.10° to + 0.10°, determined on solution S.

Related substances

Liquid chromatography (2.2.29).

Solvent mixture Mobile phase B, mobile phase A (37:63 V/V).

Test solution Dissolve 25.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

Reference solution (a) Dissolve 5 mg of verapamil hydrochloride CRS, 5 mg of verapamil impurity I CRS and 5 mg of verapamil impurity M CRS in the solvent mixture and dilute to 20 mL with the solvent mixture. Dilute 1 mL of this solution to 10 mL with the solvent mixture.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R (5 μ m).

Mobile phase:

— mobile phase A: 6.97 g/L solution of dipotassium hydrogen phosphate R adjusted to pH 7.20 with phosphoric acid R;

— mobile phase B: acetonitrile R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 22	63	37
22 - 27	63 → 35	37 → 65
27 - 35	35	65

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 278 nm.

Injection 10 μ L.

Relative retention With reference to verapamil (retention time = about 15 min): impurity I = about 1.3; impurity M = about 2.4.

System suitability Reference solution (a):

— resolution: minimum 5.0 between the peaks due to verapamil and impurity I;

— impurity M elutes from the column.

Limits:

— unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— total: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in 50 mL of anhydrous ethanol R and add 5.0 mL of 0.01 M hydrochloric acid. Titrate with 0.1 M

sodium hydroxide, determining the end-point potentiometrically (2.2.20). Measure the volume added between the 2 points of inflexion.

1 mL of 0.1 M sodium hydroxide is equivalent to 49.11 mg of C₂₇H₃₉ClN₂O₄.

STORAGE

Protected from light.

(4*RS*)-4-Aminohex-5-enoic acid.

Content

98.5 per cent to 101.5 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water, slightly soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison vigabatrin CRS.

TESTS

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 50.0 mg of the substance to be examined in water R, using sonication if necessary, and dilute to 5.0 mL with the same solvent.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with water R.

Reference solution (b) Dissolve 7.5 mg of vigabatrin impurity A CRS and 7.5 mg of vigabatrin impurity B CRS in water R and dilute to 50.0 mL with the same solvent. Dilute 2.0 mL of the solution to 20.0 mL with water R.

Reference solution (c) Dissolve 5.0 mg of vigabatrin impurity E CRS and 10.0 mg of vigabatrin impurity D CRS in water R and dilute to 50.0 mL with the same solvent.

To 2.0 mL of the solution add 1.0 mL of reference solution (a) and dilute to 20.0 mL with water R.

Reference solution (d) Dilute 2 mL of reference solution (b) to 10 mL with water R.

Column:

- size: $l = 0.10$ m, $\varnothing = 4.6$ mm;
- stationary phase: end-capped solid core phenylhexylsilyl silica gel for chromatography R (2.7 μ m);
- temperature: 45 °C.

Mobile phase Dissolve 2.1 g of perfluoroheptanoic acid R in a mixture of 195 mL of methanol R2 and 805 mL of water for chromatography R.

Flow rate 1.0 mL/min.

Post-column solution methanol R2.

Post-column flow rate 0.8 mL/min.

Detection Charged aerosol detector (gas source: nitrogen at 35 psi) and, for impurities A and B, spectrophotometer at 210 nm.

Autosampler Set at 15 °C.

Injection 30 μ L of the test solution and reference solutions (b), (c) and (d).

Run time 3 times the retention time of vigabatrin.

Identification of impurities Use the chromatogram obtained with the spectrophotometer and with reference solution (b) to identify the peaks due to impurities A and B; use the chromatogram obtained with the charged aerosol detector and with reference solution (c) to identify the peaks due to impurities D and E.

Relative retention With reference to vigabatrin (retention time = about 11 min): impurity A = about 0.3; impurity E = about 0.5; impurity D = about 0.6; impurity B = about 2.3.

System suitability:

- resolution: minimum 1.5 between the peaks due to impurities E and D in the chromatogram obtained with reference solution (c);
- signal-to-noise ratio: minimum 15 for the peak due to vigabatrin in the chromatogram obtained with reference solution (c); minimum 10 for the peak due to impurity B in the chromatogram obtained with reference solution (d);
- symmetry factor: minimum 0.6 for the peaks due to impurity D and vigabatrin in the chromatogram obtained with reference solution (c); minimum 0.6 for the peaks due to impurities A and B in the chromatogram obtained with reference solution (b).

Calculation of percentage contents:

- for impurities A and B, use the concentration of each impurity in reference solution (b);
- for impurity D, use the concentration of impurity D in reference solution (c);

- for impurities other than A, B and D, use the concentration of vigabatrin in reference solution (c).

Limits:

- impurity D: maximum 0.2 per cent;
- impurities A, B (spectrophotometer at 210 nm): for each impurity, maximum 0.15 per cent;
- unspecified impurities: for each impurity, maximum 0.05 per cent;
- total: maximum 0.5 per cent;
- reporting threshold: 0.03 per cent.

Water (2.5.12)

Maximum 0.5 per cent, determined on 0.300 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 90 mg in 50 mL of glacial acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 12.92 mg of $C_6H_{11}NO_2$.

IMPURITIES

Specified impurities A, B, D.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) E.

A. (5RS)-5-ethenylpyrrolidin-2-one,

B. (2E)-2-(2-aminoethyl)but-2-enoic acid,

D. 4-aminobutanoic acid (GABA),

E. 2-[(2RS)-2-aminobut-3-en-1-yl]propanedioic acid.

Vinblastine Sulphate

(Ph. Eur. monograph 0748)

$C_{46}H_{60}N_4O_{13}S$

909

143-67-9

Action and use

Vinca alkaloid cytotoxic.

Preparation

Vinblastine Injection

Ph Eur

DEFINITION

Vinblastine sulfate contains not less than 95.0 per cent and not more than the equivalent of 104.0 per cent of methyl (3a*R*,4*R*,5*S*,5a*R*,10b*R*,13a*R*)-4-(acetyloxy)-3a-ethyl-9-[(5*S*,7*R*,9*S*)-5-ethyl-5-hydroxy-9-(methoxycarbonyl)-1,4,5,6,7,8,9,10-octahydro-2*H*-3,7-methanoazacycloundecino [5,4-*b*]indol-9-yl]-5-hydroxy-8-methoxy-6-methyl-3a,4,5,5a,6,11,12,13a-octahydro-1*H*-indolizino[8,1-*cd*]carbazole-5-carboxylate sulfate, calculated with reference to the dried substance.

CHARACTERS

A white or slightly yellowish, crystalline powder, very hygroscopic, freely soluble in water, practically insoluble in alcohol.

IDENTIFICATION

A. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the Ph. Eur. reference spectrum of vinblastine sulfate.

B. Examine the chromatograms obtained in the assay. The principal peak in the chromatogram obtained with the test solution is similar in position and approximate size to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

Solution S

Dissolve 50.0 mg in carbon dioxide-free water *R* and dilute to 10.0 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and not more intensely coloured than reference solution Y₇ (2.2.2, Method I).

pH (2.2.3)

Dilute 3 mL of solution S to 10 mL with carbon dioxide-free water *R*. The pH of this solution is 3.5 to 5.0.

Related substances

Examine the chromatograms obtained in the assay. In the chromatogram obtained with the test solution, the area of any peak apart from the principal peak is not greater than the area of the principal peak in the chromatogram obtained with reference solution (c) (2.0 per cent) and the sum of the areas of any such peaks is not greater than 2.5 times the area of the principal peak in the chromatogram obtained with

reference solution (c) (5.0 per cent). Disregard any peak with an area less than that of the peak in the chromatogram obtained with reference solution (d).

Loss on drying

Not more than 15.0 per cent, determined on 3 mg by thermogravimetry (2.2.34). Heat to 200 °C at a rate of 5 °C/min, under a stream of nitrogen for chromatography *R*, at a flow rate of 40 mL/min.

ASSAY

Examine by liquid chromatography (2.2.29).

Keep the solutions in iced water before use.

Test solution Dilute 1.0 mL of solution S (see Tests) to 5.0 mL with water *R*.

Reference solution (a) Dissolve the contents of a vial of vinblastine sulfate CRS in 5.0 mL of water *R* to obtain a concentration of 1.0 mg/mL.

Reference solution (b) Dissolve 1.0 mg of vincristine sulfate CRS in 1.0 mL of reference solution (a).

Reference solution (c) Dilute 1.0 mL of reference solution (a) to 50.0 mL with water *R*.

Reference solution (d) Dilute 1.0 mL of reference solution (c) to 20.0 mL with water *R*.

The chromatographic procedure may be carried out using:

- a stainless steel column 0.25 m long and 4.6 mm in internal diameter packed with octylsilyl silica gel for chromatography *R* (5 µm). Place between the injector and the column a precolumn packed with suitable silica gel,
- as mobile phase at a flow rate of 1.0 mL/min a mixture of 38 volumes of a 1.5 per cent *V/V* solution of diethylamine *R* adjusted to pH 7.5 with phosphoric acid *R*, 12 volumes of acetonitrile *R* and 50 volumes of methanol *R*,
- as detector a spectrophotometer set at 262 nm,
- a loop injector.

Inject 10 µL of each solution and record the chromatograms for 3 times the retention time of the peak due to vinblastine. The assay is not valid unless: in the chromatogram obtained with reference solution (b) the resolution between the peaks due to vincristine and vinblastine is not less than 4; the peak in the chromatogram obtained with reference solution (d) has a signal-to-noise ratio not less than 5. Calculate the percentage content of $C_{46}H_{60}N_4O_{13}S$ from the area of the principal peak in each of the chromatograms obtained with the test solution and reference solution (a) and from the declared content of vinblastine sulfate CRS.

STORAGE

Store in an airtight, glass container, protected from light, at a temperature not exceeding -20 °C. If the substance is sterile, store in a sterile, airtight, tamper-evident glass container.

Action and use
Vasodilator.

Ph Eur

DEFINITION

Methyl 14-hydroxyvincane-14β-carboxylate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, soluble in methylene chloride, slightly soluble in anhydrous ethanol.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

Comparison vincamine CRS.

TESTS

Specific optical rotation (2.2.7)

+ 44.3 to + 49.0 (dried substance).

Dissolve 0.1 g in dimethylformamide R and dilute to 20.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29). Prepare the solutions immediately before use. Dissolve the samples using sonication, while avoiding any overheating.

Test solution Dissolve 50.0 mg of the substance to be examined in 10 mL of tetrahydrofuran R and dilute to 100.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 200.0 mL with the mobile phase.

Reference solution (b) Dissolve 5 mg of vincamine for system suitability CRS (containing impurities A, B and C) in 1 mL of tetrahydrofuran R and dilute to 10 mL with the mobile phase.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: end-capped octadecylsilyl silica gel for chromatography with embedded polar groups R (5 μ m).

Mobile phase tetrahydrofuran R, acetonitrile R, 15.4 g/L solution of ammonium acetate R (17:18:65 V/V/V).

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 272 nm.

Injection 20 μ L.

Run time 3.5 times the retention time of vincamine.

Identification of impurities Use the chromatogram supplied with vincamine for system suitability CRS and the

chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B and C.

Relative retention With reference to vincamine (retention time = about 10 min): impurity A = about 0.8; impurity B = about 0.9; impurity C = about 1.35.

System suitability Reference solution (b):

— resolution: minimum 2.0 between the peaks due to impurity B and vincamine.

Calculation of percentage contents:

— for each impurity, use the concentration of vincamine in reference solution (a).

Limits:

— impurities A, C: for each impurity, maximum 0.5 per cent;

— unspecified impurities: for each impurity, maximum 0.10 per cent;

— total: maximum 1.0 per cent;

— reporting threshold: 0.05 per cent.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 30 mL of a mixture of 1 volume of acetic anhydride R and 5 volumes of anhydrous acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 35.45 mg of $C_{21}H_{26}N_2O_3$.

IMPURITIES

Specified impurities A, C.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B, D.

A. methyl 14-hydroxy-10-methoxyvincane-14β-carboxylate (10-methoxyvincamine),

B. methyl 14-hydroxyvincane-14α-carboxylate (14-epi-vincamine),

DEFINITION

3-(Carbamoyl)-O⁴-deacetyl-3-de(methoxycarbonyl) vincalukoblastine sulfate.

Content
96.0 per cent to 103.0 per cent (anhydrous substance).

CHARACTERS

Appearance
White or almost white, amorphous, hygroscopic substance.

Solubility
Freely soluble in water and in methanol, practically insoluble in cyclohexane.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison Ph. Eur. reference spectrum of vindesine sulfate.

TESTS

Solution S

Dissolve 50 mg in carbon dioxide-free water R and dilute to 10 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and not more intensely coloured than reference solution Y₇ (2.2.2, Method I).

pH (2.2.3)

3.5 to 5.5 for solution S.

Related substances

Liquid chromatography (2.2.29). Keep the solutions in iced water before use.

Test solution—Dissolve 10.0 mg of the substance to be examined in water R and dilute to 10.0 mL with the same solvent.

Reference solution (a) Dilute 1.0 mL of the test solution to 50.0 mL with water R. Dilute 1.0 mL of this solution to 10.0 mL with water R.

Reference solution (b) Dissolve 1.0 mg of desacetylvinblastine CRS in water R, add 1.0 mL of the test solution and dilute to 50.0 mL with water R.

Reference solution (c) In order to prepare impurity A *in situ*, dissolve 0.2 g of the substance to be examined in dilute hydrogen peroxide solution R and dilute to 20.0 mL with the same solvent. Dilute 2.0 mL of the solution to 10.0 mL with water R. Inject the solution within 1 h of preparation.

Column:

— size: $l = 0.15$ m, $\varnothing = 4.6$ mm;

— stationary phase: base-deactivated end-capped octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase:

— mobile phase A: 1.5 per cent V/V solution of diethylamine R adjusted to pH 7.4 with phosphoric acid R;

— mobile phase B: methanol R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 40	49	51
40 - 49	49 → 30	51 → 70
49 - 60	30	70

Flow rate 2 mL/min.

Detection Spectrophotometer at 270 nm.

Injection 200 μ L.

Identification of impurities Use the chromatogram obtained with reference solution (c) to identify the peak due to impurity A.

Relative retention With reference to vindesine (retention time = about 25 min): impurity A = about 0.2.

System suitability Reference solution (b):

- the retention time of vindesine is less than 40 min;
- resolution: minimum 2.0 between the peaks due to vindesine and desacetylvinblastine;
- symmetry factor: maximum 2.0 for the peak due to vindesine.

Limits:

- impurity A: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.8 per cent);
- *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Water (2.5.32)

Maximum 5.0 per cent, determined on 50.0 mg using the evaporation technique at 150 °C; weigh the sample in an inert atmosphere and carry out a blank test.

ASSAY

Liquid chromatography (2.2.29). *Keep the solutions in iced water before use.*

Test solution Dissolve 5.0 mg of the substance to be examined in *water R* and dilute to 10.0 mL with the same solvent.

Reference solution (a) Dissolve and dilute the entire contents of a vial of *vindesine sulfate CRS* with *water R* to yield a concentration of approximately 0.50 mg/mL.

Reference solution (b) Add 1.0 mg of *desacetylvincblastine CRS* to 2.0 mL of reference solution (a).

Column:

- *size*: $l = 0.15$ m, $\varnothing = 4.6$ mm;
- *stationary phase*: octadecylsilyl silica gel for chromatography R (5 μ m).

Mobile phase Mix 38 volumes of a 1.5 per cent *V/V* solution of *diethylamine R*, previously adjusted to pH 7.4 with *phosphoric acid R*, and 62 volumes of *methanol R*.

Flow rate 1 mL/min.

Detection Spectrophotometer at 270 nm.

Injection 20 μ L.

System suitability Reference solution (b):

- *resolution*: minimum 1.5 between the peaks due to vindesine and desacetylvincblastine;
- *symmetry factor*: maximum 2.0 for the peak due to vindesine;
- *repeatability*: maximum relative standard deviation of 1.5 per cent for the peak due to vindesine after 5 injections.

Calculate the percentage content of $C_{43}H_{57}N_5O_{11}S$ taking into account the assigned content of *vindesine sulfate CRS*.

STORAGE

In an airtight, high-density polyethylene container with a high-density polyethylene cap, at a temperature of -50 °C or below. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

IMPURITIES

Specified impurities A.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B, C.

A. 3-(carbamoyl)- O^4 -deacetyl-3-de(methoxycarbonyl)vincaleukoblastine $N^{6'}$ -oxide (vindesine N^3 -oxide),

B. vincaleukoblastine (vinblastine),

C. O^4 -deacetyl-23-demethoxy-23-hydrazinylvincaleukoblastine (deacetylvincblastine hydrazide).

Ph Eur

Vinorelbine Tartrate

(Ph. Eur. monograph 2107)

$C_{53}H_{66}N_4O_{20}$

1079

125317-39-7

Action and use

Vinca alkaloid cytotoxic.

Ph Eur

DEFINITION

4'-Deoxy-3',4'-didehydro-8'-norvincaleukoblastine dihydrogen bis[(2R,3R)-2,3-dihydroxybutanedioate].

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS**Appearance**

White or almost white powder, hygroscopic.

Solubility

Freely soluble in water and in methanol, practically insoluble in hexane.

IDENTIFICATION**A. Infrared absorption spectrophotometry (2.2.24).**

Preparation Dissolve 10 mg in 5 mL of water R.

Add 0.5 mL of sodium hydroxide solution R. Extract with 5 mL of methylene chloride R. Dry the organic layer over anhydrous sodium sulfate R, filter and reduce its volume to about 0.5 mL by evaporation and apply to a disc of potassium bromide R. Evaporate and record the spectrum.

Comparison vinorelbine tartrate CRS, treated as described above.

B. It gives reaction (b) of tartrates (2.3.1).**TESTS****Solution S**

Dissolve a quantity equivalent to 0.140 g of the anhydrous substance in carbon dioxide-free water R and dilute to 10.0 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and its absorbance (2.2.25) at 420 nm is not greater than 0.030.

pH (2.2.3)

3.3 to 3.8 for solution S.

Related substances

Liquid chromatography (2.2.29): use the normalisation procedure.

Solvent mixture Mobile phase A, mobile phase B (45:55 V/V).

Test solution Dissolve 35.0 mg of the substance to be examined in the solvent mixture and dilute to 25.0 mL with the solvent mixture.

Reference solution (a) Dissolve 14 mg of vinorelbine tartrate CRS in water R and dilute to 10 mL with the same solvent. Expose this solution for 1 h to a xenon lamp apparatus at a wavelength of 310-880 nm, supplying a dose of 1600 kJ/m² at a fluence rate of 500 W/m² in order to generate impurity A.

Reference solution (b) Dilute 1.0 mL of the test solution to 20.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 100.0 mL with the solvent mixture.

Reference solution (c) Dissolve 7 mg of vinorelbine for peak identification A CRS (containing impurity K) in the solvent mixture and dilute to 5 mL with the solvent mixture.

Reference solution (d) Dissolve 7 mg of vinorelbine for peak identification B CRS (containing impurities C and I) in the solvent mixture and dilute to 5 mL with the solvent mixture.

Column:

- size: $l = 0.15$ m, $\varnothing = 4.6$ mm;
- stationary phase: spherical end-capped octadecylsilyl silica gel for chromatography R (5 μ m);
- temperature: 30 °C.

Mobile phase:

- mobile phase A: mix 14 mL of diethylamine R and 986 mL of water for chromatography R and adjust to pH 7.5 with dilute phosphoric acid R;
- mobile phase B: acetonitrile R, methanol R (20:80 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 5	45	55
5 - 45	45 → 20	55 → 80
45 - 50	20	80

Flow rate 2.0 mL/min.

Detection Spectrophotometer at 267 nm.

Autosampler Set at 5 °C.

Injection 20 μ L.

Identification of impurities Use the chromatogram obtained with reference solution (a) to identify the peak due to impurity A; use the chromatogram supplied with vinorelbine for peak identification B CRS and the chromatogram obtained with reference solution (d) to identify the peaks due to impurities C and I; use the chromatogram supplied with vinorelbine for peak identification A CRS and the chromatogram obtained with reference solution (c) to identify the peak due to impurity K.

Relative retention With reference to vinorelbine (retention time = about 20 min): impurity C = about 0.65; impurity K = about 0.8; impurity A = about 0.9; impurity I = about 1.2.

System suitability Reference solution (a):

- resolution: minimum 1.5 between the peaks due to impurity A and vinorelbine.

Limits:

- impurity A: maximum 0.3 per cent;
- impurities C, I, K: for each impurity, maximum 0.2 per cent;
- unspecified impurities: for each impurity, maximum 0.10 per cent;
- total: maximum 0.5 per cent;
- reporting threshold: 0.05 per cent (principal peak in the chromatogram obtained with reference solution (b)).

Boron

Maximum 50 ppm.

Test solution Dissolve 0.10 g of the substance to be examined in 2 mL of water R. Slowly add 10.0 mL of sulfuric acid R while cooling in iced water. Stir and allow to warm to room temperature. Add 10.0 mL of a 0.5 g/L solution of carminic acid R in sulfuric acid R.

Reference solution Dilute 2.5 mL of a 0.572 g/L solution of boric acid R to 100.0 mL with water R. To 2.0 mL of this solution slowly add 10.0 mL of sulfuric acid R while cooling in iced water. Stir and allow to warm to room temperature. Add 10.0 mL of a 0.5 g/L solution of carminic acid R in sulfuric acid R.

Blank solution To 2.0 mL of water R slowly add 10.0 mL of sulfuric acid R while cooling in iced water. Stir and allow to warm to room temperature. Add 10.0 mL of a 0.5 g/L solution of carminic acid R in sulfuric acid R.

After 45 min, measure the absorbance (2.2.25) of the test solution and the reference solution, between 560 nm and 650 nm, using the blank solution as compensation liquid. The maximum absorbance value of the test solution is not greater than that of the reference solution.

Fluorides

Maximum 50 ppm.

Potentiometry (2.2.36, Method I) using a fluoride-selective indicator electrode and a silver-silver chloride reference electrode.

Test solution Dissolve 0.19 g of the substance to be examined in 20 mL of *water R*. Add 5.0 mL of *total-ionic-strength-adjustment buffer R* and dilute to 50 mL with *water R*.
Reference solutions To 0.6 mL, 0.8 mL, 1.0 mL, 1.2 mL and 1.4 mL of *fluoride standard solution (10 ppm F) R*, add 5.0 mL of *total-ionic-strength-adjustment buffer R* and dilute to 50 mL with *water R*.

Introduce the electrodes into the reference solutions and allow to stand for 5 min. Determine the potential difference between the electrodes after 1 min of stabilisation. Using semi-logarithmic paper plot the potential difference obtained for each reference solution as a function of concentration of fluoride. Using exactly the same conditions, determine the potential difference obtained with the test solution and calculate the content of fluoride.

Water (2.5.12)

Maximum 4.0 per cent, determined on 0.250 g.

ASSAY

Dissolve 0.350 g in 40 mL of *glacial acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 53.96 mg of $C_{53}H_{66}N_4O_{20}$.

STORAGE

Under an inert gas, protected from light, at a temperature not exceeding $-15^{\circ}C$.

IMPURITIES

Specified impurities A, C, I, K.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. - B. methyl (13*aS*,13*bS*)-13*a*-ethyl-2,3,5,6,13*a*,13*b*-hexahydro-1*H*-indolo[3,2,1-*de*]pyrido[3,2,1-*ij*][1,5]naphthyridine-12-carboxylate (apovincamine),

- C. ethyl (13*aS*,13*bS*)-13*a*-ethyl-10-methoxy-2,3,5,6,13*a*,13*b*-hexahydro-1*H*-indolo[3,2,1-*de*]pyrido[3,2,1-*ij*][1,5]naphthyridine-12-carboxylate (methoxyvincinopetine),

- D. ethyl (12*RS*,13*aRS*,13*bRS*)-13*a*-ethyl-2,3,5,6,12,13,13*a*,13*b*-octahydro-1*H*-indolo[3,2,1-*de*]pyrido[3,2,1-*ij*][1,5]naphthyridine-12-carboxylate (dihydrovincinopetine).

Vitamin A

(*Ph. Eur. monograph 0217*)

In the British Pharmacopoeia, the term 'Retinol' is used within titles for preparations containing synthetic ester(s) and the term 'Vitamin A' within the title for the preparation containing material of natural origin.

Substance	R	Molecular formula	M_r
all-(<i>E</i>)-retinol	H	$C_{20}H_{30}O$	286.5
all-(<i>E</i>)-retinol acetate	CO-CH ₃	$C_{22}H_{32}O_2$	328.5
all-(<i>E</i>)-retinol propionate	CO-C ₂ H ₅	$C_{23}H_{34}O_2$	342.5
all-(<i>E</i>)-retinol palmitate	CO-C ₁₅ H ₃₁	$C_{36}H_{60}O_2$	524.9

Preparation

Paediatric Vitamins A, C and D Oral Drops

Ph Eur

DEFINITION

Vitamin A Refers to a number of substances of very similar structure (including (*Z*)-isomers) found in animal tissues and possessing similar activity. The principal and biologically most active substance is all-(*E*)-retinol (all-(*E*)-3,7-dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraen-1-ol; $C_{20}H_{30}O$). Vitamin A is generally used in the form of esters such as the acetate, propionate and palmitate.

Synthetic retinol ester Refers to an ester (acetate, propionate or palmitate) or a mixture of synthetic retinol esters.

The activity of vitamin A is expressed in retinol equivalents (R.E.). 1 mg R.E. corresponds to the activity of 1 mg of all-(*E*)-retinol. The activity of the other retinol esters is calculated stoichiometrically, so that 1 mg R.E. of vitamin A corresponds to the activity of:

- 1.147 mg of all-(*E*)-retinol acetate,
- 1.195 mg of all-(*E*)-retinol propionate,
- 1.832 mg of all-(*E*)-retinol palmitate.

International Units (IU) are also used to express the activity of vitamin A. 1 IU of vitamin A is equivalent to the activity of 0.300 µg of all-(*E*)-retinol. The activity of the other retinol esters is calculated stoichiometrically, so that 1 IU of vitamin A is equivalent to the activity of:

- 0.344 µg of all-(*E*)-retinol acetate,
- 0.359 µg of all-(*E*)-retinol propionate,
- 0.550 µg of all-(*E*)-retinol palmitate,

1 mg of retinol equivalent is equivalent to 3333 IU.

CHARACTERS**Appearance**

Retinol acetate: pale-yellow crystals (mp: about 60 °C). Once melted retinol acetate tends to yield a supercooled melt.

Retinol propionate: reddish-brown oily liquid.

Retinol palmitate: a fat-like, light yellow solid or a yellow oily liquid, if melted (mp: about 26 °C).

Solubility

All retinol esters are practically insoluble in water, soluble or partly soluble in anhydrous ethanol and miscible with organic solvents.

Ph Eur

Vitamin A and its esters are very sensitive to the action of air, oxidising agents, acids, light and heat.

Carry out the assay and all tests as rapidly as possible, avoiding exposure to actinic light and air, oxidising agents, oxidation catalysts (e.g. copper, iron), acids and heat; use freshly prepared solutions.

IDENTIFICATION

A. Thin-layer chromatography (2.2.27).

Test solution Prepare a solution containing about 3.3 IU of vitamin A per microlitre in cyclohexane R containing 1 g/L of butylhydroxytoluene R.

Reference solution Prepare a 10 mg/mL solution of retinol esters CRS (i.e. 3.3 IU of each ester per microlitre) in cyclohexane R containing 1 g/L of butylhydroxytoluene R.

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase ether R, cyclohexane R (20:80 V/V).

Application 3 µL.

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution:

- the chromatogram shows the individual spots of the corresponding esters. The elution order from bottom to top is: retinol acetate, retinol propionate and retinol palmitate.

Results The composition of esters is confirmed by the correspondence of the principal spot or spots of the test solution with those obtained with the reference solution.

B. Related substances (see Tests).

TESTS

Retinol

Thin-layer chromatography (2.2.27).

Test solution Prepare a solution in cyclohexane R, stabilised with a solution containing 1 g/L of butylhydroxytoluene R, containing about 330 IU of vitamin A per microlitre.

Reference solution Shake 1 mL of the test solution with 20 mL of 0.1 M tetrabutylammonium hydroxide in 2-propanol for 2 min and dilute to 100 mL with cyclohexane R, stabilised with a solution containing 1 g/L of butylhydroxytoluene R.

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase ether R, cyclohexane R (20:80 V/V).

Application 3 µL.

Development Over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution:

- in the chromatogram obtained no or only traces of the retinol esters are seen.

Limit Any spot corresponding to retinol in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with the reference solution (1.0 per cent).

Related substances

Ultraviolet and visible absorption spectrophotometry (2.2.25).

Test solution The solution described under Activity.

Absorption maximum At 325 nm to 327 nm.

Absorbance ratios:

- A_{300}/A_{326} = maximum 0.60;
- A_{350}/A_{326} = maximum 0.54;
- A_{370}/A_{326} = maximum 0.14.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use* (2034) do not apply.

ACTIVITY

The activity of the substance is determined in order to be taken into account for the production of concentrates.

Dissolve 25-100 mg, weighed with an accuracy of 0.1 per cent, in 5 mL of pentane R and dilute with 2-propanol R1 to a presumed concentration of 10 IU/mL to 15 IU/mL. Measure the absorbance (2.2.25) at the absorption maximum at 326 nm. Calculate the activity of vitamin A in International Units per gram from the expression:

$$\frac{A_{326} \times V \times 1900}{100 \times m}$$

A_{326}	=	absorbance at 326 nm,
m	=	mass of the substance to be examined, in grams,
V	=	total volume to which the substance to be examined is diluted to give 10 IU/mL to 15 IU/mL,
1900	=	factor to convert the specific absorbance of esters of retinol into International Units per gram.

STORAGE

In an airtight container, protected from light.

Once the container has been opened, its contents are to be used as soon as possible; any part of the contents not used at once should be protected by an atmosphere of inert gas.

LABELLING

The label states:

- the number of International Units per gram,
- the name of the ester or esters.

IMPURITIES

A. R = H, CO-CH₃: kitols (Diels-Alder dimers of vitamin A),

B. (3E,5E,7E)-3,7-dimethyl-9-[(1Z)-2,6,6-trimethylcyclohex-2-enylidene]nona-1,3,5,7-tetraene (anhydro-vitamin A),

C. (3E,5E,7E)-3,7-dimethyl-9-[(1Z)-2,6,6-trimethylcyclohex-2-enylidene]nona-3,5,7-trien-1-ol (retro-vitamin A),

D. oxidation products of vitamin A.

Ph Eur

Natural Vitamin A Ester Concentrate

DEFINITION

Natural Vitamin A Ester Concentrate consists of a natural ester or a mixture of natural esters of retinol or of a solution of the ester or mixture of esters in Arachis Oil or other suitable vegetable oil. It contains in 1 g not less than 485,000 IU of vitamin A and not less than 97.0% of the number of IU of vitamin A stated on the label. It may contain a suitable antioxidant or mixture of antioxidants.

CHARACTERISTICS

A yellow oil or a mixture of oil and crystalline material which yields a homogeneous yellow oil on warming.

Solubility

Practically insoluble in *water*; soluble or partly soluble in *ethanol* (96%); miscible with *ether* and with *petroleum spirit*.

IDENTIFICATION

A. Dissolve a quantity containing 10 IU in a mixture of 100 parts of *absolute ethanol* and 1 part of *hydrochloric acid*. The *light absorption*, Appendix II B, of the solution immediately after preparation exhibits a single maximum at 326 nm. Heat the solution in a water bath for 30 seconds and cool rapidly. The *light absorption* in the range 300 to 400 nm exhibits a low maximum or inflection at 332 nm and sharp maxima at 348, 367 and 389 nm.

B. Dissolve a quantity containing 30 IU in 1 mL of *chloroform* and add 10 mL of *antimony trichloride solution*. A transient bright blue colour is produced immediately.

TESTS

Acid value

Not more than 2.0, Appendix X B.

Peroxide value

Place 1 g in a boiling tube (20 cm × 2.5 cm) and dissolve in 20 mL of a mixture of 2 volumes of *glacial acetic acid* and 1 volume of *ethanol-free chloroform*. Add 1 g of finely powdered *potassium iodide* and pass a rapid current of *oxygen-free nitrogen* through the mixture for 1 minute. Stopper the tube loosely, partly immerse in boiling water for 30 seconds and then in water at 80° for 2 minutes, tighten the stopper and cool rapidly. Transfer the contents to a flask containing 25 mL of a freshly prepared 1% w/v solution of *potassium iodide*, rinse the tube with a further 25 mL of the potassium iodide solution, shake the combined solution and rinsings and titrate with 0.01M *sodium thiosulfate VS*. Repeat the procedure without the concentrate. The difference between the titrations does not exceed 1.4 mL.

Retinol

Carry out the method for *descending paper chromatography*, Appendix III E, using a mixture of 70 volumes of 1,4-dioxan, 15 volumes of *methanol* and 15 volumes of *water* containing 1% w/v of *butylated hydroxyanisole* in the bottom of the tank and as the mobile phase. Saturate the paper with a 10% w/v solution of *liquid paraffin* in *petroleum spirit* (boiling range, 40° to 60°) and dry without the aid of heat. Apply separately to the impregnated paper 5 µL and 10 µL of each of the following freshly prepared solutions. For solution (1) dissolve sufficient of the concentrate in *petroleum spirit* (boiling range, 40° to 60°) to yield a solution containing 16,150 to 17,850 IU per mL. For solution (2) mix a quantity of the concentrate containing not less than 500 IU of vitamin A and not more than 1 g of fat with 30 mL of *absolute ethanol* and 3 mL of a 50% w/w solution of *potassium hydroxide*. Boil gently under a reflux condenser in a current of *oxygen-free nitrogen* for 30 minutes, cool rapidly and add 30 mL of

water. Transfer the hydrolysate to a separating funnel using three 50 mL quantities of *ether* and extract the vitamin A by shaking for 1 minute. After complete separation discard the aqueous layer and wash the extract with four 50 mL quantities of *water*, mixing very cautiously during the first two washes to avoid the formation of emulsions. Evaporate the separated extract to about 5 mL and remove the remaining solvent in a current of *oxygen-free nitrogen* without the application of heat. Dissolve the residue in sufficient *petroleum spirit* (boiling range, 40° to 60°) to produce a solution of retinol containing about 340 IU per mL.

Develop until the solvent front approaches the bottom of the paper. Examine the dried paper under *ultraviolet light* (365 nm). The fluorescence of any spot corresponding to retinol in the chromatograms obtained with solution (1) is not more intense than that of the spot in the corresponding chromatogram obtained with solution (2).

ASSAY

Carry out the test as rapidly as possible, avoiding exposure to actinic light and air, oxidising agents, oxidation catalysts (e.g. copper and iron) and acids.

Examine by *ultraviolet absorption spectrophotometry*, Appendix II B (Method A). If method A is found not to be valid, examine by *liquid chromatography*, Appendix III D (Method B).

Method A

Test solution To a quantity of the substance being examined containing 50,000 IU in a round-bottomed flask, add 3 mL of a freshly prepared 50% w/w solution of *potassium hydroxide* and 30 mL of *absolute ethanol*. Boil under a reflux condenser in a current of *nitrogen* for 30 minutes. Cool rapidly and add 30 mL of *water*. Extract with four 50 mL quantities of *ether* discarding the lower layer after complete separation. Wash the combined upper layers with four 50 mL quantities of *water* and evaporate to dryness under a gentle current of *nitrogen* at a temperature not exceeding 30° or in a rotary evaporator at a temperature not exceeding 30° under reduced pressure (water ejector). Dissolve the residue in sufficient *propan-2-ol* to give an expected concentration of vitamin A equivalent to 10 to 15 IU per mL.

Measure the *absorbances*, Appendix II B, of the solution at 300 nm, 310 nm, 325 nm and 334 nm and at the wavelength of maximum absorption with a suitable spectrophotometer in 1-cm specially matched cells, using *propan-2-ol* as the compensation liquid.

Calculate the content of vitamin A, as all-*trans*-retinol, in IU per gram from the expression:

$$A_{325} \times \frac{1830}{100m} \times V$$

where A_{325} = absorbance at 325 nm,
 m = mass of the substance to be examined in grams,
 V = total volume of solution containing 10 IU to 15 IU of vitamin A per mL,
 1830 = conversion factor for the specific absorbance of all-*trans*-retinol in IU.

The above expression can be used only if A_{325} has a value of not greater than $A_{325, \text{corr}} / 0.970$ where $A_{325, \text{corr}}$ is the corrected absorbance at 325 nm and is given by the equation:

$$A_{325, \text{corr}} = 6.815A_{325} - 2.555A_{310} - 4.260A_{334}$$

where A designates the absorbance at the wavelength indicated by the subscript.

If A_{325} has a value greater than $A_{325, \text{corr}} / 0.970$, calculate the content of vitamin A from the expression:

$$A_{325, \text{corr}} \times \frac{1830}{100m} \times V$$

The assay is not valid unless:

- (a) the wavelength of maximum absorption lies between 323 nm and 327 nm and
 (b) the absorbance at 300 nm relative to that at 325 nm is at most 0.73.

Method B

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions. Prepare solution (1) as follows. To a quantity of the substance being examined containing 50,000 IU in a round-bottomed flask, add 5 mL of a freshly prepared 10% w/v solution of *ascorbic acid* and 10 mL of a freshly prepared 80% w/v solution of *potassium hydroxide* and 100 mL of *ethanol* (96%). Boil under a reflux condenser on a water bath for 15 minutes.

Add 100 mL of a 1% w/v solution of *sodium chloride* and cool. Transfer the solution to a 500 mL separating funnel rinsing the round-bottomed flask with about 75 mL of a 1% w/v solution of *sodium chloride* and then with 150 mL of a mixture of equal volumes of *petroleum spirit* (boiling range, 40° to 60°) and *ether*. Shake for 1 minute. When the layers have separated completely, discard the lower layer and wash the upper layer, first with 50 mL of a 3% w/v solution of *potassium hydroxide* in a 10% v/v solution of *ethanol* (96%) and then with three 50 mL quantities of a 1% w/v solution of *sodium chloride*. Filter the upper layer through 5 g of *anhydrous sodium sulfate* on a fast filter paper into a 250 mL flask suitable for a rotary evaporator. Wash the funnel with 10 mL of fresh extraction mixture, filter and combine the upper layers. Distil them at a temperature not exceeding 30° under reduced pressure (water ejector) and fill with *nitrogen* when evaporation is completed. Alternatively evaporate the solvent under a gentle current of *nitrogen* at a temperature not exceeding 30°. Dissolve the residue in *propan-2-ol*, transfer to a 25 mL volumetric flask and dilute to 25 mL with *propan-2-ol*. Gentle heating in an ultrasonic bath may be required. For solution (2) prepare a solution of *retinyl acetate EPCRS* in *propan-2-ol R1* so that 1 mL contains about 1000 IU of all-*trans*-retinol.

The exact concentration of solution (2) is assessed by ultraviolet absorption spectrophotometry, Appendix II B. Dilute solution (2) with *propan-2-ol R1* to a presumed concentration of 10 IU per mL to 15 IU per mL and measure the absorbance at 326 nm in matched 1-cm cells using *propan-2-ol R1* as the compensation liquid.

Calculate the content of vitamin A in IU per mL of solution (2) from the following expression, taking into account the assigned content of *retinyl acetate EPCRS*:

$$A_{326} \times \frac{1900 \times V_2}{100 \times V_1}$$

where	A_{326}	=	absorbance at 326 nm,
	V_2	=	volume of the diluted solution,
	V_1	=	volume of solution (2) used,
	1900	=	conversion factor for the specific absorbance of <i>retinyl acetate EPCRS</i> in IU.

For solution (3) proceed as described for solution (1) but use 2 mL of solution (2) in place of the substance being examined.

The exact concentration of solution (3) is assessed by ultraviolet absorption spectrophotometry, Appendix II B. Dilute

solution (3) with *propan-2-ol R1* to a presumed concentration of 10 IU per mL to 15 IU per mL of all-*trans*-retinol and measure the absorbance at 325 nm in matched 1 cm cells using *propan-2-ol R1* as the compensation liquid.

Calculate the content of all-*trans*-retinol in IU per millilitre of solution (3) from the expression:

$$A_{325} \times \frac{1830 \times V_4}{100 \times V_3}$$

where	A_{325}	=	absorbance at 325 nm,
	V_3	=	volume of the diluted solution,
	V_4	=	volume of solution (3) used,
	1830	=	conversion factor for the specific absorbance of all- <i>trans</i> -retinol in IU.

The chromatographic procedure may be carried out using (a) a stainless steel column (25 cm × 4.6 mm) packed with *octadecylsilyl silica gel for chromatography* (5 µm to 10 µm), (b) as mobile phase at a flow rate of 1 mL per minute a mixture of 3 volumes of *water* and 97 volumes of *methanol*, (c) a detection wavelength of 325 nm, (d) a 10 µL loop injector and (e) an electronic integrator.

Inject in triplicate solution (1) and solution (3).

The retention time of all-*trans*-retinol is 5 minute ± 1 minute.

The assay is not valid unless (a) the chromatogram obtained with solution (1) shows a peak corresponding to that of all-*trans*-retinol in the chromatogram obtained with solution (3), (b) when using the method of standard additions to solution (1) there is greater than 95% recovery of the added *retinyl acetate EPCRS*, and (c) the recovery of all-*trans*-retinol in solution (3) as assessed by direct absorption spectrophotometry is greater than 95%.

Calculate the content of vitamin A using the following expression:

$$A_1 \times \frac{C \times V}{A_2} \times \frac{1}{m}$$

where	A_1	=	area of the peak corresponding to all- <i>trans</i> -retinol in the chromatogram obtained with solution (1),
	A_2	=	area of the peak corresponding to all- <i>trans</i> -retinol in the chromatogram obtained with solution (3),
	C	=	concentration of <i>retinyl acetate EPCRS</i> in solution (2) as assessed prior to the saponification in International Units per mL (1000 IU per mL),
	V	=	volume of solution (2) treated,
	m	=	mass of the substance being examined in solution (1).

STORAGE

Vitamin A Ester Concentrate (Natural) should be kept in an airtight container, protected from light and stored at a temperature of 8° to 15°. Once the container has been opened its contents should be used as soon as possible; any part of the contents not used at once should be protected by an atmosphere of an inert gas.

LABELLING

The label states (1) the number of IU (Units) of vitamin A per g; (2) the name of the ester or esters; (3) the name and proportion of the principal excipients; (4) the method of restoring the solution if partial crystallisation has occurred.

Voriconazole

(Ph. Eur. monograph 2576)

C₁₆H₁₄F₃N₅O

349.3

137234-62-9

Action and use

Antifungal.

Ph Eur

DEFINITION

(2*R*,3*S*)-2-(2,4-Difluorophenyl)-3-(5-fluoropyrimidin-4-yl)-1-(1*H*-1,2,4-triazol-1-yl)butan-2-ol.

Content

97.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Very slightly soluble in water, freely soluble in acetone and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison voriconazole CRS.

B. Enantiomeric purity (see Tests).

TESTS

Appearance of solution

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 0.5 g in a 103 g/L solution of hydrochloric acid R and dilute to 20 mL with the same solution.

Enantiomeric purity

Liquid chromatography (2.2.29).

Test solution Dissolve 25.0 mg of the substance to be examined in 2 mL of acetonitrile R and dilute to 50.0 mL with the mobile phase.

Reference solution (a) Dissolve 5.0 mg of voriconazole impurity D CRS in 2 mL of acetonitrile R and dilute to 50.0 mL with the mobile phase.

Reference solution (b) Dissolve 25 mg of the substance to be examined in 2 mL of acetonitrile R, add 1 mL of reference solution (a) and dilute to 50.0 mL with the mobile phase.

Reference solution (c) Dilute 1.0 mL of reference solution (a) to 100.0 mL with the mobile phase.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;— stationary phase: silica gel BC for chiral chromatography R (5 μ m);

— temperature: 30 °C.

Mobile phase Mix 18 volumes of acetonitrile R and 82 volumes of a 0.77 g/L solution of ammonium acetate R previously adjusted to pH 5.0 with glacial acetic acid R.

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 256 nm.

Injection 20 μ L of the test solution and reference solutions (b) and (c).

Run time 2.5 times the retention time of voriconazole.

Relative retention With reference to voriconazole (retention time = about 7 min): impurity D = about 1.5.

System suitability Reference solution (b):

— resolution: minimum 4.0 between the peaks due to voriconazole and impurity D.

Limit:

— impurity D: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent).

Impurity E

Liquid chromatography (2.2.29).

Test solution Dissolve 50.0 mg of the substance to be examined in 5.0 mL of methanol R and dilute to 10.0 mL with the mobile phase.

Reference solution (a) Dissolve 25.0 mg of voriconazole impurity E CRS in 50 mL of methanol R and dilute to 100.0 mL with the mobile phase.

Reference solution (b) Dissolve 17 mg of sodium chloride R in water R and dilute to 200.0 mL with the same solvent. Mix 1 mL of the solution, 1 mL of reference solution (a) and 25 mL of methanol R and dilute to 50.0 mL with the mobile phase.

Reference solution (c) To 1.0 mL of reference solution (a) add 25 mL of methanol R and dilute to 50.0 mL with the mobile phase.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.0$ mm;— stationary phase: strongly basic anion-exchange resin for chromatography R (8.5 μ m);

— temperature: 40 °C.

Mobile phase To 1500 mL of water R add 500 mL of methanol R, mix and degas; add about 175 μ L of a 470 g/L solution of sodium hydroxide R and mix.

Flow rate 1.0 mL/min.

Detection Conductivity detector; use a self-regenerating anion suppressor.

Injection 20 μ L of the test solution and reference solutions (b) and (c).

Run time Twice the retention time of impurity E.

Relative retention With reference to impurity E (retention time = about 4 min): chloride = about 1.5.

System suitability:

— resolution: minimum 3.5 between the peaks due to impurity E and chloride in the chromatogram obtained with reference solution (b);

— symmetry factor: maximum 1.7 for the peak due to impurity E in the chromatogram obtained with reference solution (c).

Limit:

— impurity E: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent).

Related substances

Liquid chromatography (2.2.29).

Test solution (a) Dissolve 50.0 mg of the substance to be examined in the mobile phase, sonicating if necessary, and dilute to 100.0 mL with the mobile phase. Mix well to ensure complete dissolution.

Test solution (b) Dilute 5.0 mL of test solution (a) to 100.0 mL with the mobile phase.

Reference solution (a) Dissolve 50.0 mg of voriconazole CRS in the mobile phase, sonicating if necessary, and dilute to 100.0 mL with the mobile phase. Mix well to ensure complete dissolution. Dilute 5.0 mL of the solution to 100.0 mL with the mobile phase.

Reference solution (b) Suspend 0.100 g of the substance to be examined in 10 mL of a 40 g/L solution of sodium hydroxide R and dilute to 20 mL with the mobile phase; sonicate if necessary. Allow to stand for 30 min. Dilute 1.0 mL of the solution to 100.0 mL with the mobile phase (*in situ* degradation to obtain impurities A and C).

Reference solution (c) Dilute 1.0 mL of test solution (a) to 100.0 mL with the mobile phase and mix. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase and mix well.

Reference solution (d) Dissolve 2 mg of voriconazole impurity B CRS in the mobile phase and dilute to 200 mL with the mobile phase. Dilute 1.0 mL of the solution to 10.0 mL with the mobile phase.

Column:

- size: $l = 0.15$ m, $\varnothing = 3.9$ mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (4 μ m);
- temperature: 35 °C.

Mobile phase Mix 15 volumes of acetonitrile R, 30 volumes of methanol R and 55 volumes of a 1.90 g/L solution of ammonium formate R previously adjusted to pH 4.0 with anhydrous formic acid R while stirring continuously.

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 256 nm.

Injection 20 μ L of test solution (a) and reference solutions (b), (c) and (d).

Run time 3 times the retention time of voriconazole.

Identification of impurities Use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and C; use the chromatogram obtained with reference solution (d) to identify the peak due to impurity B.

Relative retention With reference to voriconazole (retention time = about 8 min): impurity A = about 0.25; impurity C = about 0.3; impurity B = about 0.6.

System suitability Reference solution (b):

- resolution: minimum 1.8 between the peaks due to impurities A and C.

Limis:

- correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.7; impurity B = 2.1; impurity C = 0.7;
- impurities A, B, C: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.15 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);
- sum of impurities A, B, C, D, E and unspecified impurities: maximum 0.5 per cent;
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Water (2.5.12)

Maximum 0.4 per cent, determined on 1.00 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

Bacterial endotoxins (2.6.14)

Less than 0.2 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution (b) and reference solution (a).

Calculate the percentage content of $C_{16}H_{14}F_3N_5O$ from the declared content of voriconazole CRS.

STORAGE

If the substance is sterile, store in a sterile, airtight, tamper-evident container.

IMPURITIES

Specified impurities A, B, C, D, E.

A. 1-(2,4-difluorophenyl)-2-(1H-1,2,4-triazol-1-yl)ethanone,

B. (2RS,3SR)-2-(2,4-difluorophenyl)-3-pyrimidin-4-yl-1-(1H-1,2,4-triazol-1-yl)butan-2-ol,

C. 4-ethyl-5-fluoropyrimidine,

D. (2S,3R)-2-(2,4-difluorophenyl)-3-(5-fluoropyrimidin-4-yl)-1-(1H-1,2,4-triazol-1-yl)butan-2-ol (voriconazole enantiomer),

E. [(1*R*,4*S*)-7,7-dimethyl-2-oxobicyclo[2.2.1]hept-1-yl]methanesulfonic acid ((±)-10-camphorsulfonic acid).

Ph Eur

Warfarin Sodium

(Ph. Eur. monograph 0698)

$C_{19}H_{15}NaO_4$

330.3

129-06-6

Action and use

Vitamin K epoxide reductase inhibitor; oral anticoagulant (coumarin).

Preparations

Warfarin Oral Suspension

Warfarin Tablets

Ph Eur

DEFINITION

Sodium 2-oxo-3-[(1*R*,*S*)-3-oxo-1-phenylbutyl]-2*H*-1-benzopyran-4-olate.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, hygroscopic, amorphous powder.

Solubility

Very soluble in water and in ethanol (96 per cent), soluble in acetone, very slightly soluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison warfarin sodium CRS.

B. Propan-2-ol (see Tests).

C. It gives reaction (b) of sodium (2.3.1).

TESTS

Appearance of solution

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 1.0 g in water R and dilute to 20 mL with the same solvent.

pH (2.2.3)

7.6 to 8.6.

Dissolve 1.0 g in carbon dioxide-free water R and dilute to 100 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Solvent mixture methanol R, water R (25:75 V/V).

Test solution Dissolve 40.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

Reference solution (a) Dissolve 2 mg of 4-hydroxycoumarin R (impurity B) and 2 mg of benzalacetone R (impurity C) in 25 mL of methanol R and dilute to 100 mL with water R.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.0$ mm;

— stationary phase: cyanosilyl silica gel for chromatography R (5 μ m);

— temperature: 30 °C.

Mobile phase glacial acetic acid R, acetonitrile R, water R (1:25:75 V/V/V).

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 260 nm.

Injection 20 μ L.

Run time Twice the retention time of warfarin.

Identification of impurities Use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities B and C.

Relative retention With reference to warfarin (retention time = about 9 min): impurity B = about 0.4; impurity C = about 0.6.

System suitability Reference solution (a):

— resolution: minimum 2.0 between the peaks due to impurities B and C.

Limits:

— correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.5; impurity C = 0.4;

— impurities B, C: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);

— unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— total: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Phenolic ketones

Dissolve 1.25 g in a 20 g/L solution of sodium hydroxide R and dilute to 10.0 mL with the same solvent.

The absorbance (2.2.25) is maximum 0.20 measured at 385 nm within 15 min of preparing the solution.

Propan-2-ol (2.4.24, System A)

Maximum 0.5 per cent.

Water (2.5.12)

Maximum 4.0 per cent, determined on 0.750 g.

ASSAY

Dissolve 0.100 g in 0.01 M sodium hydroxide and dilute to 100.0 mL with the same solvent. Dilute 10.0 mL of the solution to 100.0 mL with 0.01 M sodium hydroxide. Dilute 10.0 mL of this solution to 100.0 mL with 0.01 M sodium hydroxide. Measure the absorbance (2.2.25) at the absorption maximum at 308 nm.

Calculate the percentage content of $C_{19}H_{15}NaO_4$ taking the specific absorbance to be 431.

STORAGE

In an airtight container, protected from light.

IMPURITIES

Specified impurities B, C.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A.

A. (5RS)-3-(2-hydroxyphenyl)-5-phenylcyclohex-2-enone,

B. 4-hydroxy-2H-1-benzopyran-2-one (4-hydroxycoumarin),

Ph Eur

Warfarin Sodium Clathrate

(Ph. Eur. monograph 0699)

Action and use

Vitamin K epoxide reductase inhibitor; oral anticoagulant (coumarin).

Preparation

Warfarin Tablets

Ph Eur

DEFINITION

Mixture, in the form of a clathrate, of warfarin sodium (sodium 2-oxo-3-[(1RS)-3-oxo-1-phenylbutyl]-2H-1-benzopyran-4-olate) and propan-2-ol in molecular proportions 2:1 (equivalent to about 92 per cent of warfarin sodium).

Content

- warfarin sodium: 98.0 per cent to 102.0 per cent (anhydrous and propan-2-ol-free substance);
- propan-2-ol: 8.0 per cent to 8.5 per cent.

CHARACTERS

Appearance

White or almost white, hygroscopic, crystalline powder.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent), soluble in acetone, very slightly soluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison warfarin sodium clathrate CRS.

B. Propan-2-ol (see Tests).

C. It gives reaction (b) of sodium (2.3.1).

TESTS

Appearance of solution

The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 1.0 g in water R and dilute to 20 mL with the same solvent.

Ph Eur

Purified Water

(Ph. Eur. monograph 0008)

H₂O 18.02

Ph Eur

**DEFINITION**

Water for the preparation of medicines other than those that are required to be both sterile and apyrogenic, unless otherwise justified and authorised.

PURIFIED WATER IN BULK**PRODUCTION**

Purified water in bulk is prepared by distillation, by ion exchange, by reverse osmosis or by any other suitable method from water that complies with the regulations on water intended for human consumption laid down by the competent authority.

Purified water in bulk is stored and distributed in conditions designed to prevent growth of micro-organisms and to avoid any other contamination.

Microbiological monitoring

During production and subsequent storage, appropriate measures are taken to ensure that the microbial count is adequately controlled and monitored. Appropriate alert and action levels are set so as to detect adverse trends. Under normal conditions, an appropriate action level is a microbial count of 100 CFU/mL, determined by filtration through a membrane with a nominal pore size not greater than 0.45 µm, using R2A agar and incubating at 30-35 °C for not less than 5 days. The size of the sample is to be chosen in relation to the expected result.

R2A agar

Yeast extract	0.5 g
Proteose peptone	0.5 g
Casein hydrolysate	0.5 g
Glucose	0.5 g
Starch	0.5 g
Dipotassium hydrogen phosphate	0.3 g
Magnesium sulfate, anhydrous	0.024 g
Sodium pyruvate	0.3 g
Agar	15.0 g
Purified water	to 1000 mL

Adjust the pH so that after sterilisation it is 7.2 ± 0.2. Sterilise by heating in an autoclave at 121 °C for 15 min.

Growth promotion of R2A agar

— **Preparation of test strains.** Use standardised stable suspensions of test strains or prepare them as stated in Table 0008.-1. Seed lot culture maintenance techniques (seed-lot systems) are used so that the viable micro-organisms used for inoculation are not more than 5 passages removed from the original master seed-lot. Grow each of the bacterial strains separately as described in Table 0008.-1. Use buffered sodium chloride-peptone solution pH 7.0 or phosphate buffer solution pH 7.2 to make test suspensions. Use the suspensions within 2 h, or within 24 h if stored at 2-8 °C. As an alternative to preparing and then diluting a fresh suspension of vegetative cells of *Bacillus subtilis*, a stable spore suspension is prepared and then an appropriate volume of the spore suspension is used for test inoculation. The stable spore suspension may be maintained at 2-8 °C for a validated period of time.

— **Growth promotion.** Test each batch of ready-prepared medium and each batch of medium, prepared either from dehydrated medium or from the ingredients described. Inoculate plates of R2A agar separately with a small number (not more than 100 CFU) of the micro-organisms indicated in Table 0008.-1. Incubate under the conditions described in the table. Growth obtained must not differ by a factor greater than 2 from the calculated value for a standardised inoculum. For a freshly prepared inoculum, growth of the micro-organisms must be comparable to that obtained with a previously tested and approved batch of medium.

Table 0008.-1. – Growth promotion of R2A agar

Micro-organism	Preparation of the test strain	Growth promotion
<i>Pseudomonas aeruginosa</i> such as: ATCC 9027 NCIMB 8626 CIP 82.118 NBRC 13275	Casein soyabean digest agar or casein soyabean digest broth 30-35 °C 18-24 h	R2A agar ≤ 100 CFU 30-35 °C ≤ 3 days
<i>Bacillus subtilis</i> such as: ATCC 6633 NCIMB 8054 CIP 52.62 NBRC 3134	Casein soyabean digest agar or casein soyabean digest broth 30-35 °C 18-24 h	R2A agar ≤ 100 CFU 30-35 °C ≤ 3 days

Total organic carbon or oxidisable substances

Carry out the test for total organic carbon (2.2.44) with a limit of 0.5 mg/L or alternatively the following test for oxidisable substances: to 100 mL add 10 mL of dilute sulfuric acid R and 0.1 mL of 0.02 M potassium permanganate and boil for 5 min; the solution remains faintly pink.

Conductivity

Determine the conductivity off-line or in-line under the following conditions.

EQUIPMENT

Conductivity cell:

- electrodes of a suitable material such as stainless steel;
- cell constant: the cell constant is generally certified by the supplier and is subsequently verified at suitable intervals using a certified reference solution with a conductivity less than 1500 µS·cm⁻¹ or by comparison with a cell having a certified cell constant; the cell constant is confirmed if the

value found is within 2 per cent of the certified value, otherwise re-calibration must be performed.

Conductometer Accuracy of 0.1 µS·cm⁻¹ or better at the lowest range.

System calibration (conductivity cell and conductometer):

- against one or more suitable certified reference solutions;
- accuracy: within 3 per cent of the measured conductivity plus 0.1 µS·cm⁻¹.

Conductometer calibration Calibration is carried out for each range of measurement to be used, after disconnection of the conductivity cell, using certified precision resistors or equivalent devices with an uncertainty not greater than 0.1 per cent of the certified value.

If in-line conductivity cells cannot be dismantled, system calibration may be performed against a calibrated conductivity-measuring instrument with a conductivity cell placed close to the cell to be calibrated in the water flow.

Temperature measurement Tolerance ± 2 °C.

PROCEDURE

Measure the conductivity without temperature compensation, recording simultaneously the temperature. Temperature-compensated measurement may be performed after suitable validation.

The water to be examined meets the requirements if the measured conductivity at the recorded temperature is not greater than the value in Table 0008.-2.

Table 0008.-2. – Temperature and conductivity requirements

Temperature (°C)	Conductivity (µS·cm ⁻¹)
0	2.4
10	3.6
20	4.3
25	5.1
30	5.4
40	6.5
50	7.1
60	8.1
70	9.1
75	9.7
80	9.7
90	9.7
100	10.2

For temperatures not listed in Table 0008.-2, calculate the maximal permitted conductivity by interpolation between the next lower and next higher data points in the table.

Elemental impurities

If purified water in bulk does not meet the requirement for conductivity prescribed for *Water for injections (0169)* in bulk, a risk assessment according to general chapter 5.20. *Elemental impurities* is carried out. The risk assessment should consider the role of water in the manufacturing process, in particular when water is used in a process but is no longer present in the final product.

CHARACTERS

Appearance

Clear and colourless liquid.

TESTS

Nitrates

Maximum 0.2 ppm.

Place 5 mL in a test-tube immersed in iced water, add 0.4 mL of a 100 g/L solution of potassium chloride R, 0.1 mL

of *diphenylamine solution R* and, dropwise with shaking, 5 mL of *nitrogen-free sulfuric acid R*. Transfer the tube to a water-bath at 50 °C. After 15 min, any blue colour in the solution is not more intense than that in a reference solution prepared at the same time in the same manner using a mixture of 4.5 mL of *nitrate-free water R* and 0.5 mL of *nitrate standard solution (2 ppm NO₃) R*.

Aluminium (2.4.17)

Maximum 10 ppb, if intended for use in the manufacture of dialysis solutions.

Prescribed solution To 400 mL of the water to be examined add 10 mL of *acetate buffer solution pH 6.0 R* and 100 mL of *distilled water R*.

Reference solution Mix 2 mL of *aluminium standard solution (2 ppm Al) R*, 10 mL of *acetate buffer solution pH 6.0 R* and 98 mL of *distilled water R*.

Blank solution Mix 10 mL of *acetate buffer solution pH 6.0 R* and 100 mL of *distilled water R*.

Bacterial endotoxins (2.6.14)

Less than 0.25 IU/mL, if intended for use in the manufacture of dialysis solutions without a further appropriate procedure for removal of bacterial endotoxins.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of dialysis solutions.

PURIFIED WATER IN CONTAINERS

DEFINITION

Purified water in bulk that has been filled and stored in conditions designed to assure the required microbiological quality. It is free from any added substances.

CHARACTERS

Appearance

Clear and colourless liquid.

TESTS

It complies with the tests prescribed in the section on Purified water in bulk and with the following additional tests.

Acidity or alkalinity

To 10 mL, freshly boiled and cooled in a borosilicate glass flask, add 0.05 mL of *methyl red solution R*. The solution is not coloured red.

To 10 mL add 0.1 mL of *bromothymol blue solution R1*. The solution is not coloured blue.

Oxidisable substances

To 100 mL add 10 mL of *dilute sulfuric acid R* and 0.1 mL of *0.02 M potassium permanganate* and boil for 5 min. The solution remains faintly pink.

Chlorides

To 10 mL add 1 mL of *dilute nitric acid R* and 0.2 mL of *silver nitrate solution R2*. The solution shows no change in appearance for at least 15 min.

Sulfates

To 10 mL add 0.1 mL of *dilute hydrochloric acid R* and 0.1 mL of *barium chloride solution R1*. The solution shows no change in appearance for at least 1 h.

Ammonium

Maximum 0.2 ppm.

To 20 mL add 1 mL of *alkaline potassium tetraiodomercurate solution R*. After 5 min, examine the solution down the vertical axis of the tube. The solution is not more intensely coloured than a standard prepared at the same time by

adding 1 mL of *alkaline potassium tetraiodomercurate solution R* to a mixture of 4 mL of *ammonium standard solution (1 ppm NH₄) R* and 16 mL of *ammonium-free water R*.

Calcium and magnesium

To 100 mL add 2 mL of *ammonium chloride buffer solution pH 10.0 R*, 50 mg of *mordant black 11 triturate R* and 0.5 mL of *0.01 M sodium edetate*. A pure blue colour is produced.

Residue on evaporation

Maximum 0.001 per cent.

Evaporate 100 mL to dryness on a water-bath and dry in an oven at 100-105 °C. The residue weighs a maximum of 1 mg.

Microbial contamination

TAMC: acceptance criterion 10² CFU/mL (2.6.12).

Use casein soya bean digest agar.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of dialysis solutions.

Ph Eur

Water for Injections

(Ph. Eur. monograph 0169)

H₂O 18.02

Ph Eur

DEFINITION

Water for the preparation of medicines for parenteral administration when water is used as vehicle (water for injections in bulk) and for dissolving or diluting substances or preparations for parenteral administration (sterilised water for injections).

WATER FOR INJECTIONS IN BULK

PRODUCTION

Water for injections in bulk is obtained from water that complies with the regulations on water intended for human consumption laid down by the competent authority or from purified water. It is produced either:

- by distillation in an apparatus of which the parts in contact with the water are of neutral glass, quartz or a suitable metal and which is fitted with an effective device to prevent the entrainment of droplets; or
- by a purification process that is equivalent to distillation. Reverse osmosis, which may be single-pass or double-pass, coupled with other appropriate techniques such as electro-deionisation, ultrafiltration or nanofiltration, is suitable. Notice is given to the supervisory authority of the manufacturer before implementation.

For all methods of production, correct operation monitoring and maintenance of the system are essential. In order to ensure the appropriate quality of the water, validated procedures, in-process monitoring of the electrical conductivity, and regular monitoring of total organic carbon and microbial contamination are applied.

The first portion of water obtained when the system begins to function is discarded.

Water for injections in bulk is stored and distributed in conditions designed to prevent growth of micro-organisms and to avoid any other contamination.

Microbiological monitoring

During production and subsequent storage, appropriate measures are taken to ensure that the microbial count is adequately controlled and monitored. Appropriate alert and action levels are set so as to detect adverse trends. Under normal conditions, an appropriate action level is a microbial count of 10 CFU per 100 mL when determined by filtration through a membrane with a nominal pore size not greater than 0.45 µm, using R2A agar, using at least 200 mL of water for injections in bulk and incubating at 30-35 °C for not less than 5 days. For aseptic processing, stricter alert levels may need to be applied.

R2A agar

Yeast extract	0.5 g
Proteose peptone	0.5 g
Casein hydrolysate	0.5 g
Glucose	0.5 g
Starch	0.5 g
Dipotassium hydrogen phosphate	0.3 g
Magnesium sulfate, anhydrous	0.024 g
Sodium pyruvate	0.3 g
Agar	15.0 g
Purified water	to 1000 mL

Adjust the pH so that after sterilisation it is 7.2 ± 0.2 . Sterilise by heating in an autoclave at 121 °C for 15 min.

Growth promotion of R2A agar

- **Preparation of test strains.** Use standardised stable suspensions of test strains or prepare them as stated in Table 0169.-1. Seed lot culture maintenance techniques (seed-lot systems) are used so that the viable micro-organisms used for inoculation are not more than 5 passages removed from the original master seed-lot. Grow each of the bacterial strains separately as described in Table 0169.-1. Use buffered sodium chloride-peptone solution pH 7.0 or phosphate buffer solution pH 7.2 to make test suspensions. Use the suspensions within 2 h, or within 24 h if stored at 2-8 °C. As an alternative to preparing and then diluting a fresh suspension of vegetative cells of *Bacillus subtilis*, a stable spore suspension is prepared and then an appropriate volume of the spore suspension is used for test inoculation. The stable spore suspension may be maintained at 2-8 °C for a validated period of time.
- **Growth promotion.** Test each batch of ready-prepared medium and each batch of medium, prepared either from dehydrated medium or from the ingredients described. Inoculate plates of R2A agar separately with a small number (not more than 100 CFU) of the micro-organisms indicated in Table 0169.-1. Incubate under the conditions described in the table. Growth obtained must not differ by a factor greater than 2 from the calculated value for a standardised inoculum. For a freshly prepared inoculum, growth of the micro-organisms must be comparable to that obtained with a previously tested and approved batch of medium.

Total organic carbon (2.2.44)

Maximum 0.5 mg/L.

Conductivity

Determine the conductivity off-line or in-line under the following conditions.

Table 0169.-1. – Growth promotion of R2A agar

Micro-organism	Preparation of the test strain	Growth promotion
<i>Pseudomonas aeruginosa</i> such as: ATCC 9027 NCIMB 8626 CIP 82.118 NBRC 13275	Casein soyabean digest agar or casein soyabean digest broth 30-35 °C 18-24 h	R2A agar ≤ 100 CFU 30-35 °C ≤ 3 days
<i>Bacillus subtilis</i> such as: ATCC 6633 NCIMB 8054 CIP 52.62 NBRC 3134	Casein soyabean digest agar or casein soyabean digest broth 30-35 °C 18-24 h	R2A agar ≤ 100 CFU 30-35 °C ≤ 3 days

EQUIPMENT**Conductivity cell:**

- electrodes of a suitable material such as stainless steel;
- cell constant: the cell constant is generally certified by the supplier and is subsequently verified at suitable intervals using a certified reference solution with a conductivity less than $1500 \mu\text{S}\cdot\text{cm}^{-1}$ or by comparison with a cell having a certified cell constant. The cell constant is confirmed if the value found is within 2 per cent of the certified value, otherwise re-calibration must be performed.

Conductometer Accuracy of $0.1 \mu\text{S}\cdot\text{cm}^{-1}$ or better at the lowest range.

System calibration (conductivity cell and conductometer):

- against one or more suitable certified reference solutions;
- accuracy: within 3 per cent of the measured conductivity plus $0.1 \mu\text{S}\cdot\text{cm}^{-1}$.

Conductometer calibration Calibration is carried out for each range of measurement to be used, after disconnection of the conductivity cell, using certified precision resistors or equivalent devices with an uncertainty not greater than 0.1 per cent of the certified value.

If in-line conductivity cells cannot be dismantled, system calibration may be performed against a calibrated conductivity-measuring instrument with a conductivity cell placed close to the cell to be calibrated in the water flow.

Temperature measurement Tolerance ± 2 °C.

PROCEDURE**Stage 1**

1. Measure the conductivity without temperature compensation, recording simultaneously the temperature. Temperature-compensated measurement may be performed after suitable validation.
2. Using Table 0169.-2, find the closest temperature value that is not greater than the measured temperature. The corresponding conductivity value is the limit at that temperature.
3. If the measured conductivity is not greater than the value in Table 0169.-2, the water to be examined meets the requirements of the test for conductivity. If the conductivity is higher than the value in Table 0169.-2, proceed with stage 2.

Table 0169.-2. – Stage 1 Temperature and conductivity requirements (for non-temperature-compensated conductivity measurements)

Temperature (°C)	Conductivity ($\mu\text{S}\cdot\text{cm}^{-1}$)
0	0.6
5	0.8
10	0.9
15	1.0
20	1.1
25	1.3
30	1.4
35	1.5
40	1.7
45	1.8
50	1.9
55	2.1
60	2.2
65	2.4
70	2.5
75	2.7
80	2.7
85	2.7
90	2.7
95	2.9
100	3.1

Stage 2

4. Transfer a sufficient amount of the water to be examined (100 mL or more) to a suitable container, and stir the test sample. Adjust the temperature, if necessary, and while maintaining it at 25 ± 1 °C, begin vigorously agitating the test sample while periodically observing the conductivity. When the change in conductivity (due to uptake of atmospheric carbon dioxide) is less than $0.1 \mu\text{S}\cdot\text{cm}^{-1}$ per 5 min, note the conductivity.

5. If the conductivity is not greater than $2.1 \mu\text{S}\cdot\text{cm}^{-1}$, the water to be examined meets the requirements of the test for conductivity. If the conductivity is greater than $2.1 \mu\text{S}\cdot\text{cm}^{-1}$, proceed with stage 3.

Stage 3

6. Perform this test within approximately 5 min of the conductivity determination in step 5 under stage 2, while maintaining the sample temperature at 25 ± 1 °C. Add a recently prepared saturated solution of *potassium chloride R* to the test sample (0.3 mL per 100 mL of the test sample), and determine the pH (2.2.3) to the nearest 0.1 pH unit.

7. Using Table 0169.-3, determine the conductivity limit at the measured pH value in step 6. If the measured conductivity in step 4 under stage 2 is not greater than the conductivity requirements for the pH determined, the water to be examined meets the requirements of the test for conductivity. If either the measured conductivity is greater than this value or the pH is outside the range of 5.0-7.0, the water to be examined does not meet the requirements of the test for conductivity.

Table 0169.-3. – Stage 3 pH and conductivity requirements (for atmosphere- and temperature-equilibrated samples)

pH	Conductivity ($\mu\text{S}\cdot\text{cm}^{-1}$)
5.0	4.7
5.1	4.1
5.2	3.6
5.3	3.3
5.4	3.0
5.5	2.8
5.6	2.6
5.7	2.5
5.8	2.4
5.9	2.4
6.0	2.4
6.1	2.4
6.2	2.5
6.3	2.4
6.4	2.3
6.5	2.2
6.6	2.1
6.7	2.6
6.8	3.1
6.9	3.8
7.0	4.6

CHARACTERS**Appearance**

Clear and colourless liquid.

TESTS**Nitrates**

Maximum 0.2 ppm.

Place 5 mL in a test-tube immersed in iced water, add 0.4 mL of a 100 g/L solution of *potassium chloride R*, 0.1 mL of *diphenylamine solution R* and, dropwise with shaking, 5 mL of *nitrogen-free sulfuric acid R*. Transfer the tube to a water-bath at 50 °C. After 15 min, any blue colour in the solution is not more intense than that in a reference solution prepared at the same time in the same manner using a mixture of 4.5 mL of *nitrate-free water R* and 0.5 mL of *nitrate standard solution (2 ppm NO₃) R*.

Aluminium (2.4.17)

Maximum 10 ppb, if intended for use in the manufacture of dialysis solutions.

Prescribed solution To 400 mL of the water to be examined add 10 mL of *acetate buffer solution pH 6.0 R* and 100 mL of *distilled water R*.

Reference solution Mix 2 mL of *aluminium standard solution (2 ppm Al) R*, 10 mL of *acetate buffer solution pH 6.0 R* and 98 mL of *distilled water R*.

Blank solution Mix 10 mL of *acetate buffer solution pH 6.0 R* and 100 mL of *distilled water R*.

Bacterial endotoxins (2.6.14)

Less than 0.25 IU/mL.

STERILISED WATER FOR INJECTIONS**DEFINITION**

Water for injections in bulk that has been distributed into suitable containers, closed and sterilised by heat in conditions which ensure that the product still complies with the test for bacterial endotoxins. Sterilised water for injections is free from any added substances.

Examined in suitable conditions of visibility, it is clear and colourless.

Each container contains a sufficient quantity of water for injections to permit the nominal volume to be withdrawn.

TESTS

Acidity or alkalinity

To 20 mL add 0.05 mL of *phenol red solution R*. If the solution is yellow, it becomes red on the addition of 0.1 mL of 0.01 M sodium hydroxide; if red, it becomes yellow on the addition of 0.15 mL of 0.01 M hydrochloric acid.

Conductivity

Maximum $25 \mu\text{S}\cdot\text{cm}^{-1}$ for containers with a nominal volume of 10 mL or less; maximum $5 \mu\text{S}\cdot\text{cm}^{-1}$ for containers with a nominal volume greater than 10 mL.

Use equipment and the calibration procedure as defined under *Water for injections in bulk*, maintaining the sample temperature at $25 \pm 1^\circ\text{C}$.

Oxidisable substances

For containers with a nominal volume less than 50 mL: heat 100 mL to boiling with 10 mL of *dilute sulfuric acid R*, add 0.4 mL of 0.02 M potassium permanganate and boil for 5 min; the solution remains faintly pink.

For containers with a nominal volume equal to or greater than 50 mL: heat 100 mL to boiling with 10 mL of *dilute sulfuric acid R*, add 0.2 mL of 0.02 M potassium permanganate and boil for 5 min; the solution remains faintly pink.

Chlorides (2.4.4)

Maximum 0.5 ppm for containers with a nominal volume of 100 mL or less.

15 mL complies with the limit test for chlorides. Prepare the standard using a mixture of 1.5 mL of *chloride standard solution (5 ppm Cl) R* and 13.5 mL of *water R*. Examine the solutions down the vertical axes of the tubes.

For containers with a nominal volume greater than 100 mL, use the following test: to 10 mL add 1 mL of *dilute nitric acid R* and 0.2 mL of *silver nitrate solution R2*. The solution shows no change in appearance for at least 15 min.

Nitrates

Maximum 0.2 ppm.

Place 5 mL in a test-tube immersed in iced water, add 0.4 mL of a 100 g/L solution of *potassium chloride R*, 0.1 mL of *diphenylamine solution R* and, dropwise with shaking, 5 mL of *nitrogen-free sulfuric acid R*. Transfer the tube to a water-bath at 50°C . After 15 min, any blue colour in the solution is not more intense than that in a reference solution prepared at the same time in the same manner using a mixture of 4.5 mL of *nitrate-free water R* and 0.5 mL of *nitrate standard solution (2 ppm NO₃) R*.

Sulfates

To 10 mL add 0.1 mL of *dilute hydrochloric acid R* and 0.1 mL of *barium chloride solution R1*. The solution shows no change in appearance for at least 1 h.

Aluminium (2.4.17)

Maximum 10 ppb, if intended for use in the manufacture of dialysis solutions.

Prescribed solution To 400 mL of the water to be examined add 10 mL of *acetate buffer solution pH 6.0 R* and 100 mL of *distilled water R*.

Reference solution Mix 2 mL of *aluminium standard solution (2 ppm Al) R*, 10 mL of *acetate buffer solution pH 6.0 R* and 98 mL of *distilled water R*.

Blank solution Mix 10 mL of *acetate buffer solution pH 6.0 R* and 100 mL of *distilled water R*.

Ammonium

For containers with a nominal volume less than 50 mL: maximum 0.6 ppm; for containers with a nominal volume equal to or greater than 50 mL: maximum 0.2 ppm.

Containers with a nominal volume less than 50 mL: to 20 mL add 1 mL of *alkaline potassium tetraiodomercurate solution R*; after 5 min, examine the solution down the vertical axis of the tube; the solution is not more intensely coloured than a standard prepared at the same time by adding 1 mL of *alkaline potassium tetraiodomercurate solution R* to a mixture of 4 mL of *ammonium standard solution (3 ppm NH₄) R* and 16 mL of *ammonium-free water R*.

Containers with a nominal volume equal to or greater than 50 mL: to 20 mL add 1 mL of *alkaline potassium tetraiodomercurate solution R*; after 5 min, examine the solution down the vertical axis of the tube; the solution is not more intensely coloured than a standard prepared at the same time by adding 1 mL of *alkaline potassium tetraiodomercurate solution R* to a mixture of 4 mL of *ammonium standard solution (1 ppm NH₄) R* and 16 mL of *ammonium-free water R*.

Calcium and magnesium

To 100 mL add 2 mL of *ammonium chloride buffer solution pH 10.0 R*, 50 mg of *mordant black 11 triturate R* and 0.5 mL of 0.01 M sodium edetate. A pure blue colour is produced.

Residue on evaporation

Maximum 4 mg (0.004 per cent) for containers with a nominal volume of 10 mL or less; maximum 3 mg (0.003 per cent) for containers with a nominal volume greater than 10 mL.

Evaporate 100 mL to dryness on a water-bath and dry in an oven at $100\text{--}105^\circ\text{C}$.

Particulate contamination: sub-visible particles (2.9.19)

It complies with test A or test B, as appropriate.

Sterility (2.6.1)

It complies with the test for sterility.

Bacterial endotoxins (2.6.14)

Less than 0.25 IU/mL.

Ph Eur

Water for Preparation of Extracts

(Ph. Eur. monograph 2249)

Ph Eur

DEFINITION

Water intended for the preparation of *Herbal drug extracts (0765)* complies with the sections *Purified water in bulk or Purified water in containers in the monograph Purified water (0008)*, or is water intended for human consumption of a quality equivalent to that defined in Directive 98/83/EC which is monitored according to the Production section described below.

PRODUCTION

When water intended for human consumption is used as water for preparation of extracts it is a clear, colourless liquid. It is stored (where necessary) and distributed under conditions designed to prevent growth of micro-organisms and to avoid other contamination.

For monitoring purposes, the following tests are carried out at regular intervals to demonstrate consistency in the quality of the water used for the preparation of extracts.

Conductivity (2.2.38)

Maximum $2500 \mu\text{S}\cdot\text{cm}^{-1}$, measured at 20°C .

Nitrate

Liquid chromatography (2.2.29).

Test solution The substance to be examined.

Reference solution Dissolve 0.163 g of potassium nitrate R and 0.149 g of potassium bromide R in water R and dilute to 100.0 mL with the same solvent. Dilute 5.0 mL of the solution to 100.0 mL with water R.

Column:

— size: $l = 0.25$ m, $\varnothing = 4$ mm;

— stationary phase: anion-exchange resin R3.

Mobile phase Dissolve 0.265 g of anhydrous sodium carbonate R and 0.210 g of sodium hydrogen carbonate R in water R and dilute to 1000.0 mL with the same solvent.

Flow rate 1.2 mL/min.

Detection Conductivity detector, using a self-regenerating anion suppressor.

Injection 25 μ L.

Run time Twice the retention time of nitrate.

Relative retention With reference to nitrate (retention time = about 7 min): bromide = about 0.9.

System suitability Reference solution:

— resolution: minimum 2.0 between the peaks due to bromide and nitrate.

Limit:

— nitrate: maximum 50 ppm.

Microbiological monitoring

Appropriate measures are taken to ensure that the microbial count is adequately controlled and monitored. Appropriate alert and action levels are set so as to detect adverse trends.

Under normal conditions, an appropriate action level is a microbial count of 100 CFU/mL, determined by filtration through a membrane with a nominal pore size not greater than 0.45 μ m, using casein soya bean digest agar and incubating at 30-35 °C for not less than 5 days.

The size of the sample is to be chosen in relation to the expected result.

Casein soya bean digest agar

Pancreatic digest of casein	15.0 g
Papaic digest of soya bean	5.0 g
Sodium chloride	5.0 g
Agar	15.0 g
Purified water	to 1000 mL

Adjust the pH so that after sterilisation it is 7.3 ± 0.2 .

Sterilise in an autoclave using a validated cycle.

Growth promotion of casein soya bean digest agar

— *Preparation of test strains.* Use standardised stable suspensions of test strains or prepare them as stated in Table 2249.-1. Seed lot culture maintenance techniques (seed-lot systems) are used so that the viable micro-organisms used for inoculation are not more than 5 passages removed from the original master seed-lot. Grow each of the bacterial strains separately as described in Table 2249.-1. Use buffered sodium chloride-peptone solution pH 7.0 or phosphate buffer solution pH 7.2 to make test suspensions. Use the suspensions within 2 h, or within 24 h if stored at 2-8 °C. As an alternative to preparing and then diluting a fresh suspension of vegetative cells of *Bacillus subtilis*, a stable spore suspension is prepared and then an appropriate volume of the spore suspension is used for test inoculation. The stable spore suspension may be maintained at 2-8 °C for a validated period of time.

— *Growth promotion.* Test each batch of ready-prepared medium and each batch of medium, prepared either from dehydrated medium or from the ingredients described. Inoculate plates of casein soya bean digest agar separately with a small number (not more than 100 CFU) of the micro-organisms indicated in Table 2249.-1. Incubate under the conditions described in this table. Growth obtained must not differ by a factor greater than 2 from the calculated value for a standardised inoculum. For a freshly prepared inoculum, growth of the micro-organisms must be comparable to that obtained with a previously tested and approved batch of medium.

Table 2249.-1. — *Growth promotion of casein soya bean digest agar*

Micro-organism	Preparation of the test strain	Growth promotion
<i>Pseudomonas aeruginosa</i> such as: ATCC 9027 NCIMB 8626 CIP 82.118 NBRC 13275	Casein soya bean digest agar or casein soya bean digest broth 30-35 °C 18-24 h	Casein soya bean digest agar ≤ 100 CFU 30-35 °C ≤ 3 days
<i>Bacillus subtilis</i> such as: ATCC 6633 NCIMB 8054 CIP 52.62 NBRC 3134	Casein soya bean digest agar or casein soya bean digest broth 30-35 °C 18-24 h	Casein soya bean digest agar ≤ 100 CFU 30-35 °C ≤ 3 days

Ph Eur

Virgin Wheat-germ Oil

(Ph. Eur. monograph 1480)

Ph Eur

DEFINITION

Fatty oil obtained from the germ of the grain of *Triticum aestivum* L. by cold expression or other suitable mechanical means.

PRODUCTION

The oil is prepared using materials and methods designed to ensure that the content of brassicasterol (2.4.23) in the sterol fraction of the oil is not greater than 0.3 per cent.

CHARACTERS

Appearance

Clear, light yellow or golden-yellow liquid.

Solubility

Practically insoluble in water and in ethanol (96 per cent), miscible with light petroleum (bp: 40-60 °C).

Relative density

About 0.925.

Refractive index

About 1.475.

IDENTIFICATION

First identification: B.

Second identification: A.

A. Identification of fatty oils by thin-layer chromatography (2.3.2).

Results The chromatogram obtained is similar to the corresponding chromatogram shown in Figure 2.3.2.-1.

B. Composition of fatty acids (see Tests).

TESTS**Acid value (2.5.1)**

Maximum 20.0.

Peroxide value (2.5.5, Method A)

Maximum 15.0.

Unsaponifiable matter (2.5.7)

Maximum 5.0 per cent, determined on 5.0 g.

Composition of fatty acids (2.4.22, Method C)*Composition of the fatty-acid fraction of the oil:*— *palmitic acid*: 14.0 per cent to 19.0 per cent;— *stearic acid*: maximum 2.0 per cent;— *oleic acid*: 12.0 per cent to 23.0 per cent;— *linoleic acid*: 52.0 per cent to 59.0 per cent;— *linolenic acid*: 3.0 per cent to 10.0 per cent;— *eicosenoic acid*: maximum 2.0 per cent.**Water (2.5.32)**

Maximum 0.1 per cent, determined on 1.00 g.

STORAGE

In an airtight, well-filled container, protected from light.

Ph Eur

Refined Wheat-germ Oil

(Ph. Eur. monograph 1379)

Ph Eur

DEFINITION

Fatty oil obtained from the germ of the grain of *Triticum aestivum* L. by cold expression or by other suitable mechanical means and/or by extraction. It is then refined. A suitable antioxidant may be added.

PRODUCTION

The oil is prepared using materials and methods designed to ensure that the content of brassicasterol (2.4.23) in the sterol fraction of the oil is not greater than 0.3 per cent.

CHARACTERS**Appearance**

Clear, light yellow liquid.

Solubility

Practically insoluble in water and in ethanol (96 per cent), miscible with light petroleum (bp: 40-60 °C).

Relative density

About 0.925.

Refractive index

About 1.475.

IDENTIFICATION*First identification: B.**Second identification: A.*

A. Identification of fatty oils by thin-layer chromatography (2.3.2).

Results The chromatogram obtained is similar to the corresponding chromatogram shown in Figure 2.3.2.-1.

B. Composition of fatty acids (see Tests).

TESTS**Acid value (2.5.1)**

Maximum 0.9, or maximum 0.3 if intended for use in the manufacture of parenteral preparations.

Peroxide value (2.5.5, Method A)

Maximum 10.0, or maximum 5.0 if intended for use in the manufacture of parenteral preparations.

Unsaponifiable matter (2.5.7)

Maximum 5.0 per cent, determined on 5.0 g.

Alkaline impurities (2.4.19)

It complies with the test.

Composition of fatty acids (2.4.22, Method C)

Use the mixture of calibrating substances in Table 2.4.22.-3.

Composition of the fatty-acid fraction of the oil:— *palmitic acid*: 14.0 per cent to 19.0 per cent;— *stearic acid*: maximum 2.0 per cent;— *oleic acid*: 12.0 per cent to 23.0 per cent;— *linoleic acid*: 52.0 per cent to 59.0 per cent;— *linolenic acid*: 3.0 per cent to 10.0 per cent;— *eicosenoic acid*: maximum 2.0 per cent.**Water (2.5.32)**

Maximum 0.1 per cent, determined on 1.00 g.

STORAGE

In an airtight, well-filled container, protected from light.

LABELLING*The label states:*

- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations;
- whether the oil is obtained by mechanical means, by extraction or by a combination of the 2.

Ph Eur

Wool Alcohols**Wool Wax Alcohols**

(Ph. Eur. monograph 0593)

Preparation

Wool Alcohols Ointment

Ph Eur

DEFINITION

Mixture of sterols and higher aliphatic alcohols from wool fat. A suitable antioxidant may be added.

Content

Minimum 30.0 per cent of cholesterol.

CHARACTERS**Appearance**

Pale-yellow or brownish-yellow, brittle mass becoming plastic on heating.

Solubility

Practically insoluble in water, soluble in boiling anhydrous ethanol and in methylene chloride, slightly soluble in ethanol (90 per cent V/V).

IDENTIFICATION

Dissolve 50 mg in 5 mL of *methylene chloride R* and add 1 mL of *acetic anhydride R* and 0.1 mL of *sulfuric acid R*. Within a few seconds, a green colour develops.

TESTS**Appearance of solution**

To 1.0 g add 10 mL of *light petroleum R1* and shake while warming in a water-bath. The substance dissolves completely. After cooling, the solution is clear (2.2.1).

Alkalinity

Dissolve 2.0 g in 25 mL of hot *ethanol (90 per cent V/V) R* and add 0.5 mL of *phenolphthalein solution R1*. No red colour develops.

Melting point (2.2.15)

Minimum 56 °C.

Melt the substance to be examined by heating in a water-bath at a temperature which exceeds the expected melting point by not more than 10 °C; introduce the substance to be examined into the capillary tubes and allow to stand on ice for at least 2 h.

Water-absorption capacity

Place 0.6 g of the substance to be examined and 9.4 g of *white soft paraffin R* in a mortar and melt on a water-bath. Allow to cool and incorporate 20 mL of *water R*, added in portions. Within 24 h no water is released from the almost white, ointment-like emulsion.

Acid value (2.5.1)

Maximum 2.0.

If necessary, heat in a water-bath under a reflux condenser to dissolve the substance to be examined.

Hydroxyl value (2.5.3, Method A)

120 to 180.

Peroxide value (2.5.5, Method A)

Maximum 15.

Take from the substance to be examined wedge-shaped pieces whose base consists of part of the surface. Melt the pieces before carrying out the determination. Before adding 0.5 mL of *saturated potassium iodide solution R*, cool the solution obtained to room temperature.

Saponification value (2.5.6)

Maximum 12.0, determined on 10.00 g. Heat under reflux for 4 h.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 2.000 g by drying in an oven at 105 °C.

Total ash (2.4.16)

Maximum 0.1 per cent.

ASSAY

Gas chromatography (2.2.28). *Homogenise the sample before use.*

Internal standard solution Dissolve 0.125 g of *pregnenolone isobutyrate CRS* in *heptane R* and dilute to 50.0 mL with the same solvent.

Test solution Dissolve 75.0 mg of the substance to be examined in 10.0 mL of the internal standard solution and dilute to 25.0 mL with *heptane R*.

Reference solution Dissolve 25.0 mg of *cholesterol CRS* in 10.0 mL of the internal standard solution and dilute to 25.0 mL with *heptane R*.

Injection liner:

- *packing material*: quartz wool;
- *size*: $l = 78.5$ mm, $\varnothing = 4.0$ mm.

Column:

- *material*: fused silica;
- *size*: $l = 30$ m, $\varnothing = 0.25$ mm;
- *stationary phase*: *methylpolysiloxane R* (film thickness 0.25 μ m).

Carrier gas *helium for chromatography R*.

Flow rate 1 mL/min.

Split ratio 1:50.

Temperature:

- *column*: 275 °C;
- *injection port*: 285 °C;
- *detector*: 300 °C.

Detection Flame ionisation.

Injection 1 μ L.

Relative retention With reference to *pregnenolone isobutyrate* (retention time = about 8 min): *cholesterol* = about 1.2.

System suitability Reference solution:

— *resolution*: minimum 5.0 between the peaks due to *pregnenolone isobutyrate* and *cholesterol*.

Calculate the percentage content of *cholesterol* in the substance to be examined taking into account the assigned content of *cholesterol CRS*.

STORAGE

In a well-filled container, protected from light.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for wool alcohols used in water-emulsifying ointments and lipophilic creams.

Melting point

(see Tests).

Water-absorption capacity

(see Tests).

Ph Eur

Wool Fat

Anhydrous Lanolin

(Ph. Eur. monograph 0134)

Ph Eur

DEFINITION

Purified, anhydrous, waxy substance obtained from the wool of sheep (*Ovis aries*). A suitable antioxidant may be added.

CHARACTERS

Appearance

Yellow, unctuous substance. When melted, it is a clear or almost clear, yellow liquid. A solution in light petroleum is opalescent.

Solubility

Practically insoluble in water, slightly soluble in boiling anhydrous ethanol.

Characteristic odour.

IDENTIFICATION

A. In a test-tube, dissolve 0.5 g in 5 mL of *methylene chloride R* and add 1 mL of *acetic anhydride R* and 0.1 mL of *sulfuric acid R*. A green colour develops.

B. Dissolve 50 mg in 5 mL of *methylene chloride R*, add 5 mL of *sulfuric acid R* and shake. A red colour develops and an intense green fluorescence appears in the lower layer when examined in daylight, with illumination from behind the observer.

TESTS

Water-soluble acid or alkaline substances

Melt 5.0 g on a water-bath and shake vigorously for 2 min with 75 mL of *water R* previously heated to 90-95 °C. Allow

to cool and filter through filter paper previously rinsed with water R. To 60 mL of the filtrate (which may not be clear) add 0.25 mL of bromothymol blue solution R1. Not more than 0.2 mL of 0.02 M hydrochloric acid or 0.15 mL of 0.02 M sodium hydroxide is required to change the colour of the indicator.

Water-absorption capacity

Place 10 g of molten wool fat in a mortar and allow to cool to room temperature. Weigh the mortar. Add water R in portions of 0.2-0.5 mL from a burette, stirring vigorously after each addition to incorporate the water R. Instead of a pestle, use a high-density polypropylene cylindrical rod (120 mm long and 10 mm in diameter, for example). The end-point is reached when visible droplets remain which cannot be incorporated. Weigh the mortar again and determine the amount of water absorbed by weight difference. Not less than 20 mL of water R is absorbed.

Acid value (2.5.1)

Maximum 1.0, determined on 5.0 g dissolved in 25 mL of the prescribed mixture of solvents.

Peroxide value (2.5.5, Method A)

Maximum 20.

Before adding 0.5 mL of saturated potassium iodide solution R, cool the solution obtained to room temperature.

Saponification value (2.5.6)

90 to 105, determined on 2.00 g while heating under reflux for 4 h.

Water-soluble oxidisable substances

To 10 mL of the filtrate obtained in the test for water-soluble acid or alkaline substances add 1 mL of dilute sulfuric acid R and 0.1 mL of 0.02 M potassium permanganate. After 10 min, the solution is not completely decolourised.

Paraffins

Maximum 1.0 per cent.

The tap and cotton plugs used must be free from grease Prepare a column of anhydrous aluminium oxide 0.23 m long and 20 mm in diameter by adding a slurry of anhydrous aluminium oxide R and light petroleum R1 to a glass tube fitted with a tap and containing light petroleum R1 (before use, dehydrate the anhydrous aluminium oxide by heating it in an oven at 600 °C for 3 h). Allow to settle and reduce the depth of the layer of solvent above the column to about 40 mm. Dissolve 3.0 g of the substance to be examined in 50 mL of warm light petroleum R1, cool, pass the solution through the column at a flow rate of 3 mL/min and wash with 250 mL of light petroleum R1. Concentrate the combined eluate and washings to low bulk by distillation, evaporate to dryness on a water-bath and heat the residue at 105 °C for periods of 10 min until 2 successive weighings do not differ by more than 1 mg. The residue weighs a maximum of 30 mg.

Pesticide residues

Maximum 0.05 ppm for each organochlorine pesticide, 0.5 ppm for each other pesticide and 1 ppm for the sum of all the pesticides.

All glassware used is thoroughly washed using phosphate-free detergent as follows. The glassware is immersed in a bath of detergent solution (5 per cent in deionised water) and allowed to soak for 24 h. The detergent is washed off with copious amounts of acetone and hexane for pesticide analysis. It is important to keep glassware specifically for pesticide analyses, it must not be mixed up with glassware used for other applications. The glassware used must be free of chlorinated solvents, plastics and rubber materials, in particular phthalate plasticisers, oxygenated compounds and nitrogenated solvents such as acetonitrile.

Use hexane, toluene and acetone for pesticide analysis. Use HPLC grade reagents for ethyl acetate, cyclohexane and water.

The test consists of the isolation of pesticide residues by size-exclusion chromatography (2.2.30) followed by solid phase extraction and identification by gas chromatography coupled with an electron capture detector or a thermionic detector.

ISOLATION OF THE PESTICIDE RESIDUES

As detector, use a UV-visible spectrophotometer set at a wavelength of 254 nm to calibrate the chromatographic column for gel permeation.

Calibration is extremely important in gel permeation chromatography (GPC) to check that the pressure, solvent flow rate, solvent ratio, temperature and column conditions remain constant. The gel permeation column is to be calibrated at regular intervals using a standard mixture prepared as follows: into a 1000 mL volumetric flask, introduce 50.00 g of maize oil R, 0.20 g of methoxychlor R and 50.0 mg of perylene R. Dilute to 1000.0 mL with a mixture of equal volumes of cyclohexane R and ethyl acetate R. To calibrate the column, set the mobile phase at a flow rate of 5 mL/min with a mixture of equal volumes of cyclohexane R and ethyl acetate R. Inject 5 mL of the standard mixture and record the resulting chromatogram.

The retention times for the analytes must not vary by more than ± 5 per cent between calibrations. If the retention time shift is greater than ± 5 per cent, take corrective action.

Excessive retention time shifts may be caused by:

- poor laboratory temperature control;
- the pump containing air; this can be verified by measuring the flow rate: collect 25 mL of column eluate in a volumetric flask and record the time (300 ± 5 s);
- a leak in the system.

Changes in pressure, in mobile phase flow rate or in column temperature conditions, as well as column contamination, can affect pesticide retention times and are to be monitored. If the flow rate or column pressure are outside desired bands the precolumn or column is to be replaced.

Test solution In a volumetric flask, dissolve 1 g of the substance to be examined, accurately weighed, in a mixture of 1 volume of ethyl acetate R and 7 volumes of cyclohexane R. Add 1 mL of an internal standard (2 ppm, either isodrin R or diallimphos R) and dilute to 20 mL. *The internal standard solutions are used to establish that recoveries of the pesticides from the GPC purification stage, evaporation and solid phase extraction stage are at acceptable levels. Recovery levels of the internal standard solutions from the wool fat are determined by comparing the peak areas of the wool fat extracts with peak areas of solutions of the internal standards.*

Precolumn:

- size: $l = 0.075$ m, $\varnothing = 21.2$ mm;
- stationary phase: styrene-divinylbenzene copolymer R (5 μ m).

Gel permeation column:

- size: $l = 0.3$ m, $\varnothing = 21.2$ mm;
- stationary phase: styrene-divinylbenzene copolymer R (5 μ m).

Mobile phase ethyl acetate R, cyclohexane R (10:70 V/V).

Flow rate 5 mL/min.

Detection Spectrophotometer at 254 nm.

Inject 5 mL of the test solution. Discard the first 95 mL (19 min) of eluate containing the substance to be examined. Collect the next 155 mL of eluate (31 min) containing any pesticide residues in an evaporating vessel.

Place the 155 mL of the eluate collected from the gel permeation chromatography column into an evaporating vessel. Place this vessel in an autoevaporator setting the

water-bath temperature at 45 °C and the nitrogen pressure at 55 kPa. Evaporate the eluate down to 0.5 mL.

To prepare the solid phase extraction cartridges take some *magnesium silicate for pesticide residue analysis R* and heat it in a muffle furnace at 700 °C for 4 h to remove moisture and polychlorinated biphenyls. Subsequently allow the magnesium silicate to cool for 2 h and transfer it directly to an oven at 100-105 °C, and allow to stand for 30 min.

Transfer the magnesium silicate to a stoppered glass jar and allow to equilibrate for 48 h. This material may be used for up to 2 weeks. After that period the magnesium silicate is to be reactivated, by heating at 600 °C for 2 h in a muffle furnace. Remove the magnesium silicate from the furnace, cool and store in a stoppered glass jar. The magnesium silicate is deactivated by adding 1 per cent of *water R*. After the water has been added, shake the magnesium silicate intermittently over 15 min just prior to use. The deactivated magnesium silicate is suitable for use for up to 1 week. It is essential that only deactivated magnesium silicate is used.

Take a 6 mL empty solid phase extraction cartridge and weigh into the cartridge 1 g of the deactivated magnesium silicate.

At this stage the GPC fraction still contains about 10 per cent of the substance to be examined, so further clean-up is necessary. A separate isolation procedure is carried out a) for organochlorine and synthetic pyrethroid pesticides and b) for organophosphorus pesticides. Place a preconditioned solid phase extraction cartridge containing 1 g of deactivated *magnesium silicate for pesticide residue analysis R* onto a vacuum manifold.

Condition the cartridge by adding 10 mL of *toluene R* and allowing the solvent to elute through the cartridge. Place the 0.5 mL of the solvent fraction from the evaporating vessel on the preconditioned cartridge. Elute the pesticide fractions from the cartridges using 20 mL of either of the 2 different solvent systems shown below:

a) for determination of the organochlorine and synthetic pyrethroid pesticides: *toluene R*; a very small amount of the substance to be examined is co-eluted;

b) for determination of the organophosphorus pesticides: a mixture of 2 volumes of *acetone R* and 98 volumes of *toluene R*; this solvent system is used to elute all the pesticides including the more polar organophosphorus pesticides; unfortunately, some of the substance to be examined is co-eluted with this solvent system, which can interfere with the electron capture detector.

Collect the eluate from the extraction cartridges in 25 mL glass vials. Quantitatively transfer the eluate to an evaporating vessel, washing the vial with 3 quantities, each of 10 mL, of *hexane R*.

Place the evaporating vessel on the autoevaporator and evaporate the solid phase extraction fractions down to 0.5 mL. The water-bath temperature is set at 45 °C and the nitrogen pressure is 55 kPa.

Examine the residues by gas chromatography (2.2.28) using electron capture and thermionic detectors as described below.

Recovery Calculate the recovery correction factor (R_{cf}) of the internal standards (*ditalimphos R* or *isodrin R*) added to the test solution using the following expression:

$$\frac{A_2}{A_1} \times 100$$

A_1 = peak area of an internal standard 1 ppm in solution;
 A_2 = peak area of internal standard extracted from the test solution.

5 mL of the 20 mL test solution containing 1 mL of 2 ppm internal standard concentrated to 0.5 mL is equivalent to 1 ppm of the internal standard in the solution.

If the recovery of the internal standards falls outside the range of 70 per cent to 110 per cent the test is not valid.

Reference solutions Prepare reference solutions of pesticides using the pesticides standards at a concentration of 0.5 ppm (see composition of reference solutions A to D in Table 0134.-1). Commercially available pesticides may be purchased. The individual standards have a concentration of 10 ppm.

Table 0134.-1. – *Composition of the reference solutions*

Reference solution A (0.5 ppm or 0.5 mg/L) (organochlorine and synthetic pyrethroid pesticides)	Reference solution B (0.5 ppm or 0.5 mg/L) (organochlorine and synthetic pyrethroid pesticides)
<i>Cyhalothrin R</i>	<i>Aldrin R</i>
<i>Cypermethrin R</i>	<i>o,p'-DDT R</i>
<i>o,p'-DDE R</i>	<i>o,p'-DDD R</i>
<i>p,p'-DDE R</i>	<i>p,p'-DDD R</i>
<i>p,p'-DDT R</i>	<i>Dieldrin R</i>
<i>Deltamethrin R</i>	<i>α-Endosulfan R</i>
<i>Endrin R</i>	<i>β-Endosulfan R</i>
<i>Heptachlor R</i>	<i>Fenvalerate R</i>
<i>Heptachlor epoxide R</i>	<i>α-Hexachlorocyclohexane R</i>
<i>Hexachlorobenzene R</i>	<i>β-Hexachlorocyclohexane R</i>
<i>Lindane R</i>	<i>δ-Hexachlorocyclohexane R</i>
<i>Tecnazene R</i>	<i>Methoxychlor R</i>
	<i>Permethrin R</i>
Reference solution C (0.5 ppm or 0.5 mg/L) (organophosphorus pesticides)	Reference solution D (0.5 ppm or 0.5 mg/L) (organophosphorus pesticides)
<i>Bromophos-ethyl R</i>	<i>Bromophos R</i>
<i>Carbophenothion R</i>	<i>Chlorpyrifos R</i>
<i>Chlorfenvinphos R</i>	<i>Chlorpyrifos-methyl R</i>
<i>Diazinon R</i>	<i>Coumaphos R</i>
<i>Dichlofenthion R</i>	<i>Phosalone R</i>
<i>Ethion R</i>	<i>Pyrimiphos-ethyl R</i>
<i>Fenchlorphos R</i>	<i>Tetrachlorvinphos R</i>
<i>Malathion R</i>	
<i>Propetamphos R</i>

<i>Cypermethrin R</i> (0.1 mg/L)	<i>Diazinon R</i> (0.05 mg/L)
<i>o,p'-DDD R</i> (0.01 mg/L)	<i>Ethion R</i> (0.05 mg/L)
<i>Deltamethrin R</i> (0.1 mg/L)	<i>Fenchlorphos R</i> (0.05 mg/L)
<i>Endrin R</i> (0.01 mg/L)	<i>Propetamphos R</i> (0.05 mg/L)
<i>β-Hexachlorocyclohexane R</i> (0.01 mg/L)	
Reference solution G (internal standard organophosphorus pesticide)	Reference solution H (internal standard organochlorine pesticide)
<i>Ditalimphos R</i> (2 ppm or 2.0 mg/L)	<i>Isodrin R</i> (2 ppm or 2.0 mg/L)
<i>Ditalimphos R</i> (1 ppm or 1.0 mg/L)	<i>Isodrin R</i> (1 ppm or 1.0 mg/L)

At the same time prepare solutions of pesticides equivalent to the limit of detection of the method (see recommended compositions in Table 0134.-1). These reference solutions are used to optimise the electron capture detector and thermionic detector to achieve the detection limits of the method (reference solutions E and F).

To prepare the reference solutions at the different concentrations use a calibrated pipette and volumetric flasks. To prepare the internal standard solutions G and H use a four-place analytical balance, pipette and volumetric flasks.

IDENTIFICATION AND QUANTIFICATION OF THE PESTICIDE RESIDUES

To identify any pesticide residues compare the chromatograms obtained with chromatograms obtained with reference solutions A to D.

The identity of the pesticides can be confirmed by spiking samples or overlaying chromatograms using an integration package on a computer. The interpretation of pesticides in trace residue analyses is extremely complex. The detectors, particularly the electron capture detector, are prone to interference, both from the substance to be examined itself, and from solvents, reagents and apparatus used in the extraction. These peaks can easily be misinterpreted or quoted as a false positive. Confirmation of pesticides can be achieved by running samples and standards on different capillary columns (see chromatographic systems A or B described below). The peaks can be identified by using the information in Table 0134.-2.

A knowledge of the different responses the pesticides have with the 2 detectors is useful in identification of unknown peaks.

Table 0134.-2. - Elution order of the pesticides on chromatographic systems A and B

Chromatographic system A	Chromatographic system B
Tecnazene	Tecnazene
α -Hexachlorocyclohexane	Hexachlorobenzene
Hexachlorobenzene	α -Hexachlorocyclohexane
β -Hexachlorocyclohexane	Diazinon
Lindane	Lindane
Propetamphos	Propetamphos
δ -Hexachlorocyclohexane	Heptachlor
Diazinon	Dichlofenthion
Dichlofenthion	Aldrin
Chlorpyrifos-methyl	Chlorpyrifos-methyl
Heptachlor	Fenclorphos
Fenclorphos	β -Hexachlorocyclohexane
Aldrin	δ -Hexachlorocyclohexane
Malathion	Pirimiphos-ethyl
Chlorpyrifos	Chlorpyrifos
Bromophos	Bromophos
Pirimiphos-ethyl	Malathion
Heptachlor epoxide	Heptachlor epoxide
Chlorfenvinphos (E)	<i>o,p'</i> -DDE
Chlorfenvinphos (Z)	Chlorfenvinphos (E)
Bromophos-ethyl	α -Endosulfan
<i>o,p'</i> -DDE	Chlorfenvinphos (Z)
α -Endosulfan	Bromophos-ethyl
Tetrachlorvinphos	<i>p,p'</i> -DDE
Dieldrin	Dieldrin
<i>p,p'</i> -DDE	Tetrachlorvinphos
<i>o,p'</i> -DDT	<i>o,p'</i> -DDT
Endrin	Endrin
β -Endosulfan	<i>o,p'</i> -DDD
<i>o,p'</i> -DDD	<i>p,p'</i> -DDD
<i>p,p'</i> -DDD	β -Endosulfan
Ethion	Ethion
Carbophenothion	<i>p,p'</i> -DDT
<i>p,p'</i> -DDT	Carbophenothion
Methoxychlor	Methoxychlor
Phosalone	Cyhalothrin
Cyhalothrin (2 isomers)	<i>cis</i> -Permethrin
<i>cis</i> -Permethrin	Phosalone
<i>trans</i> -Permethrin	<i>trans</i> -Permethrin
Coumaphos	Cypermethrin (4 isomers)
Cypermethrin (4 isomers)	Coumaphos
Coumaphos	Fenvalerate (2 isomers)
Fenvalerate (2 isomers)	Deltamethrin
Deltamethrin	Deltamethrin

Once the pesticides have been identified, calculate the content of each pesticide using the following expression:

$$C_p = \frac{P_p \times D \times C_e}{P_e} \times \frac{100}{R_{cf}}$$

- C_p = concentration of identified pesticide (ppm);
 P_p = peak area of the individual pesticide in the test sample obtained;
 C_e = concentration of the individual pesticide in the external standard (ppm);
 P_e = peak area of the individual pesticide in the external standard;
 D = dilution factor;
 R_{cf} = recovery correction factor.

The dilution factor (D) can be defined as follows:

$$\frac{V_1}{m \times \frac{V_2}{V_3}}$$

- V_1 = volume of sample obtained after the 2nd evaporation stage;
 m = sample weight;
 V_2 = GPC injection volume;
 V_3 = sample volumetric flask volume.

Chromatographic system A:

Precolumn:

- material: deactivated silica;
- size: $l = 4.5$ m, $\varnothing = 0.53$ mm.

Column:

- material: fused silica;
- size: $l = 60$ m, $\varnothing = 0.25$ mm;
- stationary phase: *phenyl(5)methyl(95)polysiloxane R* (film thickness 0.25 μ m).

Carrier gas helium for chromatography R.

Linear velocity 25 cm/s.

Pressure 180 kPa.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 1	75
	1 - 5	75 → 175
	5 - 30	175 → 275
	30 - 40	275 → 285
	40 - 55	285
Injection port		300
Detector		350

Detection Electron capture or thermionic specific detector.

Injection 2 μ L.

Chromatographic system B Which may be used for confirmation analysis:

Precolumn:

- material: deactivated silica;
- size: $l = 4.5$ m, $\varnothing = 0.53$ mm.

Column:

- material: fused silica;
- size: $l = 60$ m, $\varnothing = 0.25$ mm;
- stationary phase: *cyanopropyl(7)phenyl(7)methyl(86)polysiloxane R* (film thickness 0.25 μ m).

Carrier gas helium for chromatography R.

Linear velocity 25 cm/s.

Pressure 180 kPa.

	1 - 5	75 → 175
	5 - 30	175 → 275
	30 - 40	275 → 285
	40 - 55	285
Injection port		300
Detector		350

Detection Electron capture or thermionic specific detector.

Injection 2 µL.

Chlorides

Maximum 150 ppm.

Boil 1.0 g with 20 mL of *ethanol (90 per cent V/V) R* in a round-bottomed flask fitted with a reflux condenser for 5 min. Cool, add 40 mL of *water R* and 0.5 mL of *nitric acid R* and filter. To the filtrate add 0.15 mL of a 10 g/L solution of *silver nitrate R* in *ethanol (90 per cent V/V) R*. Allow to stand for 5 min protected from light.

Any opalescence in the solution is not more intense than that in a standard prepared at the same time by adding 0.15 mL of a 10 g/L solution of *silver nitrate R* in *ethanol (90 per cent V/V) R* to a mixture of 0.2 mL of 0.02 M *hydrochloric acid*, 20 mL of *ethanol (90 per cent V/V) R*, 40 mL of *water R* and 0.5 mL of *nitric acid R*.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 1 h.

Sulfated ash (2.4.14)

Maximum 0.15 per cent.

Ignite 5.0 g and use the residue to determine the sulfated ash.

STORAGE

At a temperature not exceeding 25 °C.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for wool fat used in water-emulsifying ointments and lipophilic creams.

Water-absorption capacity

(see Tests).

Drop point (2.2.17, Method A)

To fill the metal cup, melt the wool fat on a water-bath, cool to about 50 °C, pour into the cup and allow to stand at 15-20 °C for 24 h. The drop point is typically 38 °C to 44 °C.

Hydrogenated Wool Fat

(Ph. Eur. monograph 0969)

Ph Eur

**DEFINITION**

Mixture of higher aliphatic alcohols and sterols obtained from the direct, high-pressure, high-temperature hydrogenation of *wool fat (0134)* during which the esters and acids present are reduced to the corresponding alcohols. A suitable antioxidant may be added.

CHARACTERS**Appearance**

White or pale yellow, unctuous substance.

Solubility

Practically insoluble in water, soluble in boiling anhydrous ethanol and in light petroleum.

IDENTIFICATION

First identification: B.

Second identification: A, C.

A. Melting point (see Tests).

B. Examine the chromatograms obtained in the test for fatty alcohols and sterols.

Results The principal peaks in the chromatogram obtained with the test solution are similar in retention time and size to the principal peaks in the chromatogram obtained with reference solution (a).

C. Dissolve 50 mg in 5 mL of *methylene chloride R* and add 1 mL of *acetic anhydride R* and 0.1 mL of *sulfuric acid R*. A green colour is produced.

TESTS**Melting point (2.2.15)**

45 °C to 55 °C. Allow to stand at 20 °C for 16 h.

Acid value (2.5.1)

Maximum 1.0, determined on 5.0 g.

Hydroxyl value (2.5.3, Method A)

140 to 180.

Saponification value (2.5.6)

Maximum 8.0. Heat under reflux for 4 h.

Fatty alcohols and sterols

Gas chromatography (2.2.28).

Test solution Dissolve 0.25 g of the substance to be examined in 60 mL of *anhydrous ethanol R* and dilute to 100.0 mL with the same solvent.

Reference solution (a) Dissolve 0.25 g of *hydrogenated wool fat CRS* in 60 mL of *anhydrous ethanol R* and dilute to 100.0 mL with the same solvent.

Reference solution (b) Dissolve 50 mg of *cetyl alcohol CRS* and 50 mg of *stearyl alcohol CRS* in 60 mL of *anhydrous ethanol R* and dilute to 100.0 mL with the same solvent.

Column:

- **material:** fused silica;
- **size:** $l = 30$ m, $\varnothing = 0.25$ mm;
- **stationary phase:** *methylpolysiloxane R* or another non-polar phase (film thickness 0.25 µm).

Carrier gas helium for chromatography R.

Flow rate 1 mL/min.

Figure 0969.-1. — Chromatogram for the test for fatty alcohols and sterols in hydrogenated wool fat: reference solution (a)

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 5	100
	5 - 45	100 → 300
	45 - 60	300
Injection port		325
Detector		350

Detection Flame ionisation.

Injection 1 µL.

Results The chromatogram obtained with the test solution does not differ significantly from the chromatogram obtained with reference solution (a) (Figure 0969.-1) and it does not show enhanced peaks with retention times corresponding to cetyl alcohol and stearyl alcohol present in the chromatogram obtained with reference solution (b).

Loss on drying (2.2.32)

Maximum 3.0 per cent, determined on 2.000 g by drying in an oven at 105 °C for 1 h.

Total ash (2.4.16)

Maximum 0.1 per cent, determined on 5.0 g.

STORAGE

In a well-filled container, protected from light.

Hydrous Wool Fat

Lanolin

(Ph. Eur. monograph 0135)

Ph Eur

DEFINITION

Mixture of 75 per cent *m/m* of wool fat and 25 per cent *m/m* of water. It is obtained by the gradual addition of water to melted wool fat with continuous stirring. A suitable antioxidant may be added.

CHARACTERS

Appearance

Pale yellow, unctuous substance.

IDENTIFICATION

A. In a test-tube, dissolve 0.5 g in 5 mL of *methylene chloride R* and add 1 mL of *acetic anhydride R* and 0.1 mL of *sulfuric acid R*. A green colour develops.

B. Dissolve 50 mg in 5 mL of *methylene chloride R*, add 5 mL of *sulfuric acid R* and shake. A red colour develops and an intense green fluorescence appears in the lower layer when examined in daylight, with illumination from behind the observer.

TESTS

Water-soluble acid or alkaline substances

Melt 6.7 g on a water-bath and shake vigorously for 2 min with 75 mL of *water R* previously heated to 90-95 °C. Allow to cool and filter through filter paper previously rinsed with *water R*. To 60 mL of the filtrate (which may not be clear) add 0.25 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of 0.02 M *hydrochloric acid* or 0.15 mL of 0.02 M

Ph Eur

sodium hydroxide is required to change the colour of the indicator.

Drop point (2.2.17)

38 °C to 44 °C.

To fill the metal cup, melt the residue obtained in the test for wool-fat content on a water-bath, cool to about 50 °C, pour into the cup and allow to stand at 15-20 °C for 24 h.

Water-absorption capacity

Place 10 g of the residue obtained in the test for wool-fat content in a mortar. Add *water R* in portions of 0.2-0.5 mL from a burette, stirring vigorously after each addition to incorporate the *water R*. The end-point is reached when visible droplets remain which cannot be incorporated. Not less than 20 mL of *water R* is absorbed.

Acid value (2.5.1)

Maximum 0.8, determined on 5.0 g dissolved in 25 mL of the prescribed mixture of solvents.

Peroxide value (2.5.5, Method A)

Maximum 15.

Saponification value (2.5.6)

67 to 79, determined on 2.00 g while heating under reflux for 4 h.

Water-soluble oxidisable substances

To 10 mL of the filtrate obtained in the test for water-soluble acid or alkaline substances add 1 mL of *dilute sulfuric acid R* and 0.1 mL of 0.02 M *potassium permanganate*. After 10 min, the solution is not completely decolourised.

Paraffins

Maximum 1.0 per cent.

The tap and cotton plugs used must be free from grease Prepare a column of anhydrous aluminium oxide 230 mm long and 20 mm in diameter by adding a slurry of *anhydrous aluminium oxide R* and *light petroleum R1* to a glass tube fitted with a tap and containing *light petroleum R1*. Allow to settle and reduce the depth of the layer of solvent above the column to about 40 mm. Dissolve 3.0 g of the residue obtained in the test for wool-fat content in 50 mL of warm *light petroleum R1*, cool, pass the solution through the column at a rate of 3 mL/min and wash with 250 mL of *light petroleum R1*. Concentrate the combined eluate and washings to low bulk by distillation, evaporate to dryness on a water-bath and heat the residue at 105 °C for periods of 10 min until 2 successive weighings do not differ by more than 1 mg. The residue weighs a maximum of 30 mg.

Chlorides

Maximum 115 ppm.

Boil 1.3 g with 20 mL of *ethanol (90 per cent V/V) R* under a reflux condenser for 5 min. Cool, add 40 mL of *water R* and 0.5 mL of *nitric acid R* and filter. To the filtrate add 0.15 mL of a 10 g/L solution of *silver nitrate R* in *ethanol (90 per cent V/V) R*. Allow to stand for 5 min, protected from light. Any opalescence in the solution is not more intense than that in a standard prepared at the same time by adding 0.15 mL of a 10 g/L solution of *silver nitrate R* in *ethanol (90 per cent V/V) R* to a mixture of 0.2 mL of 0.02 M *hydrochloric acid*, 20 mL of *ethanol (90 per cent V/V) R*, 40 mL of *water R* and 0.5 mL of *nitric acid R*.

Sulfated ash (2.4.14)

Maximum 0.1 per cent.

Ignite 5.0 g and use the residue.

Wool-fat content

72.5 per cent to 77.5 per cent.

In a suitable tared dish containing a glass rod, heat 30.0 g to constant mass on a water-bath, stirring continuously. Weigh the residue.

STORAGE

At a temperature not exceeding 25 °C.

Ph Eur

Xanthan Gum

(Ph. Eur. monograph 1277)

11138-66-2

Action and use

Excipient

Ph Eur

DEFINITION

High-molecular-mass anionic polysaccharide produced by fermentation of carbohydrates with *Xanthomonas campestris*. It consists of a principal chain of $\beta(1\rightarrow4)$ -linked D-glucose units with trisaccharide side chains, on alternating anhydroglucose units, consisting of 1 glucuronic acid unit included between 2 mannose units. Most of the terminal units contain a pyruvate moiety and the mannose unit adjacent to the principal chain may be acetylated at C-6.

Xanthan gum has a relative molecular mass of approximately 1×10^6 . It exists as the sodium, potassium or calcium salt.

Content

Minimum 1.5 per cent of pyruvate acetal groups ($C_3H_3O_2$; M_r 71.1) (dried substance).

CHARACTERS

Appearance

White or yellowish-white, free-flowing powder.

Solubility

Soluble in water giving a highly viscous solution, practically insoluble in organic solvents.

IDENTIFICATION

A. In a flask, suspend 1 g in 15 mL of 0.1 M *hydrochloric acid*. Close the flask with a fermentation bulb containing *barium hydroxide solution R* and heat carefully for 5 min. The barium hydroxide solution shows a white turbidity.

B. To 300 mL of *water R*, previously heated to 80 °C and stirred rapidly with a mechanical stirrer in a 400 mL beaker, add, at the point of maximum agitation, a dry blend of 1.5 g of *carob bean gum R* and 1.5 g of the substance to be examined. Stir until the mixture forms a solution, and then continue stirring for 30 min or longer. Do not allow the water temperature to drop below 60 °C during stirring. Discontinue stirring and allow the mixture to stand for at least 2 h. A firm rubbery gel forms after the temperature drops below 40 °C but no such gel forms in a 1 per cent control solution of the sample prepared in the same manner but omitting the carob bean gum.

TESTS

pH (2.2.3)

6.0 to 8.0 for a 10.0 g/L solution in *carbon dioxide-free water R*.

2-Propanol

Gas chromatography (2.2.28).

Internal standard solution Dilute 0.50 g of 2-methyl-2-propanol R to 500 mL with water R.

Test solution To 200 mL of water R in a 1000 mL round-bottomed flask, add 5.0 g of the substance to be examined and 1 mL of a 10 g/L emulsion of dimeticone R in liquid paraffin R, stopper the flask and shake for 1 h. Distil about 90.0 mL, mix the distillate with 4.0 mL of the internal standard solution and dilute to 100.0 mL with water R.

Reference solution Dilute a suitable quantity of 2-propanol R, accurately weighed, with water R to obtain a solution having a known concentration of 2-propanol of about 1 mg/mL. To 4.0 mL of this solution add 4.0 mL of the internal standard solution and dilute to 100.0 mL with water R.

Column:

- size: $l = 1.8$ m, $\varnothing = 4.0$ mm;
- stationary phase: ethylvinylbenzene-divinylbenzene copolymer R (149-177 μm).

Carrier gas helium for chromatography R.

Flow rate 30 mL/min.

Temperature:

- column: 165 °C;
- injection port and detector: 200 °C.

Detection Flame ionisation.

Injection 5 μL .

Relative retention With reference to 2-propanol: 2-methyl-2-propanol = about 1.5.

Limit:

- 2-propanol: maximum 750 ppm.

Loss on drying (2.2.32)

Maximum 15.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2.5 h.

Total ash (2.4.16)

6.5 per cent to 16.0 per cent.

ASSAY

Test solution Dissolve a quantity of the substance to be examined corresponding to 120.0 mg of the dried substance in water R and dilute to 20.0 mL with the same solvent.

Reference solution Dissolve 45.0 mg of pyruvic acid R in water R and dilute to 500.0 mL with the same solvent.

Place 10.0 mL of the test solution in a 50 mL round-bottomed flask, add 20.0 mL of 0.1 M hydrochloric acid and weigh. Boil on a water-bath under a reflux condenser for 3 h. Weigh and adjust to the initial mass with water R. In a separating funnel mix 2.0 mL of the solution with 1.0 mL of dinitrophenylhydrazine-hydrochloric solution R. Allow to stand for 5 min and add 5.0 mL of ethyl acetate R. Shake and allow the solids to settle. Collect the upper layer and shake with 3 quantities, each of 5.0 mL, of sodium carbonate solution R. Combine the aqueous layers and dilute to 50.0 mL with sodium carbonate solution R. Mix. Treat 10.0 mL of the reference solution at the same time and in the same manner as for the test solution.

Immediately measure the absorbance (2.2.25) of the 2 solutions at 375 nm, using sodium carbonate solution R as the compensation liquid.

The absorbance of the test solution is not less than that of the reference solution, which corresponds to a content of pyruvoyl groups of not less than 1.5 per cent.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter

5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for xanthan gum used as viscosity-increasing agent.

Viscosity

(2.2.10): typically minimum 600 mPa·s.

Add 3.0 g (dried substance) within 45-90 s into 250 mL of a 12 g/L solution of potassium chloride R in a 500 mL beaker stirring with a low-pitch propeller-type stirrer rotating at 800 r/min. When adding the substance take care that agglomerates are destroyed. Add an additional quantity of 44 mL of water R, to rinse any adhering residue from the walls of the beaker. Stir the preparation at 800 r/min for 2 h whilst maintaining the temperature at 24 ± 1 °C. Determine the viscosity within 15 min at 24 ± 1 °C using a rotating viscosimeter set at 60 r/min and equipped with a rotating spindle 1.78 mm high and 12.60 mm in diameter which is attached to a shaft 3.2 mm in diameter. The distance from the top of the cylinder to the lower tip of the shaft should be 25.60 mm and the immersion depth 50.0 mm.

The following characteristics may be relevant for xanthan gum used as matrix former in prolonged-release tablets.

Viscosity

See test above.

Particle-size distribution (2.9.31 or 2.9.38)

Powder flow (2.9.36)

Ph Eur

Xylitol

(Ph. Eur. monograph 1381)

$\text{C}_5\text{H}_{12}\text{O}_5$

152.1

87-99-0

Action and use
Sweetening agent.

Ph Eur

DEFINITION

Meso-xylitol.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or crystals.

Solubility

Very soluble in water, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification: B.

Second identification: A, C.

A. Melting point (2.2.14): 92 °C to 96 °C.

B. Infrared absorption spectrophotometry (2.2.24).

Preparation Mulls in liquid paraffin R.

Comparison xylitol CRS.

C. Thin-layer chromatography (2.2.27).

Test solution Dissolve 25 mg of the substance to be examined in water R and dilute to 10 mL with the same solvent.

Reference solution (a) Dissolve 25 mg of xylitol CRS in water R and dilute to 10 mL with the same solvent.

Reference solution (b) Dissolve 25 mg of mannitol R and 25 mg of xylitol R in water R and dilute to 10 mL with the same solvent.

Plate TLC silica gel plate R.

Mobile phase water R, ethyl acetate R, propanol R (10:20:70 V/V/V).

Application 2 µL.

Development Over 3/4 of the plate.

Drying In air.

Detection Spray with 4-aminobenzoic acid solution R, dry in a current of cold air until the acetone is removed, then heat at 100 °C for 15 min; allow to cool, spray with a 2 g/L solution of sodium periodate R, dry in a current of cold air, then heat at 100 °C for 15 min.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS**Appearance of solution**

The solution is not more opalescent than reference suspension IV (2.2.1) and not more intensely coloured than reference solution BY₇ (2.2.2, Method II).

Dissolve 2.5 g in water R and dilute to 50.0 mL with the same solvent.

Conductivity (2.2.38)

Maximum 20 µS·cm⁻¹.

Dissolve 20.0 g in carbon dioxide-free water R prepared from distilled water R and dilute to 100.0 mL with the same solvent. Measure the conductivity of the solution while gently stirring with a magnetic stirrer.

Reducing sugars

Maximum 0.2 per cent, calculated as glucose equivalent.

Dissolve 5.0 g in 6 mL of water R with the aid of gentle heat. Cool and add 20 mL of cupri-citric solution R and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 mL of a 2.4 per cent V/V solution of glacial acetic acid R and 20.0 mL of 0.025 M iodine. With continuous shaking, add 25 mL of a mixture of 6 volumes of hydrochloric acid R and 94 volumes of water R and, when the precipitate has dissolved, titrate the excess of iodine with 0.05 M sodium thiosulfate using 1 mL of starch solution R, added towards the end of the titration, as

indicator. Not less than 12.8 mL of 0.05 M sodium thiosulfate is required.

Related substances

Gas chromatography (2.2.28).

Internal standard solution Dissolve 5 mg of erythritol R in water R and dilute to 25.0 mL with the same solvent.

Test solution (a) Dissolve 5.000 g of the substance to be examined in water R and dilute to 100.0 mL with the same solvent.

Test solution (b) Dilute 1.0 mL of test solution (a) to 10.0 mL with water R.

Reference solution (a) Dissolve 5.0 mg each of L-arabinitol CRS (impurity A), galactitol CRS (impurity B), mannitol CRS (impurity C) and sorbitol CRS (impurity D) in water R and dilute to 20.0 mL with the same solvent.

Reference solution (b) Dissolve 50.0 mg of xylitol CRS in water R and dilute to 10.0 mL with the same solvent.

Pipette 1.0 mL of test solutions (a) and (b) and reference solutions (a) and (b) into 4 separate 100 mL round-bottomed flasks. Add 1.0 mL of the internal standard solution to each of the flasks containing test solution (a) or reference solution (a), and 5.0 mL of the internal standard solution to each of the flasks containing test solution (b) or reference solution (b). Evaporate each mixture to dryness in a water-bath at 60 °C by suitable means. Dissolve each dry residue in 1 mL of anhydrous pyridine R, add 1 mL of acetic anhydride R to each flask and boil each solution under reflux for 1 h to complete acetylation.

Column:

— size: $l = 30$ m, $\varnothing = 0.25$ mm;

— stationary phase: cyanopropyl(7)phenyl(7)methyl(86) polysiloxane R (0.25 µm).

Carrier gas nitrogen R.

Flow rate 1 mL/min.

Split ratio 1:50 to 1:100.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 1	170
	1 - 6	170 → 230
	6 - 30	230
Injection port		250
Detector		250

Detection Flame ionisation.

Injection 1 µL of test solution (a) and reference solution (a) (solutions obtained after derivatisation).

Relative retention With reference to xylitol (retention time = about 15 min): internal standard = about 0.6; impurity A = about 0.9; impurity C = about 1.4; impurity B = about 1.45; impurity D = about 1.5.

System suitability Reference solution (a):

— resolution: minimum 2.0 between the peaks due to impurities B and D.

Calculate the percentage content of each related substance in the substance to be examined using the following expression:

$$100 \times \frac{m_i}{m_u} \times \frac{R_r}{R_i}$$

m_i = mass of the particular component in 1 mL of reference solution (a), in milligrams;

- m_a = mass of the substance to be examined in 1 mL of test solution (a), in milligrams;
 R_t = ratio of the area of the peak due to the particular derivatised component to the area of the peak due to the derivatised internal standard in the chromatogram obtained with reference solution (a);
 R_n = ratio of the area of the peak due to the particular derivatised component to the area of the peak due to the derivatised internal standard in the chromatogram obtained with test solution (a).

The sum of the percentage contents of the related substances in the chromatogram obtained with test solution (a) is not greater than 2.0 per cent. Disregard any peak with an area corresponding to a percentage content of 0.05 per cent or less.

Lead (2.4.10)

Maximum 0.5 ppm.

Dissolve the substance to be examined in 150.0 mL of the prescribed mixture of solvents.

Nickel (2.4.15)

Maximum 1 ppm.

Dissolve the substance to be examined in 150.0 mL of the prescribed mixture of solvents.

Water (2.5.12)

Maximum 1.0 per cent, determined on 1.00 g.

Bacterial endotoxins (2.6.14)

Less than 4 IU/g if the concentration is less than 100 g/L of xylitol and less than 2.5 IU/g if the concentration is 100 g/L or more of xylitol, when intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Gas chromatography (2.2.28) as described in the test for related substances with the following modifications.

Injection 1 μ L of test solution (b) and reference solution (b) (solutions obtained after derivatisation).

Calculate the percentage content of $C_5H_{12}O_5$ using the following expression:

$$T \times \frac{m_t}{m_b} \times \frac{R_b}{R_t}$$

- T = declared percentage content of xylitol CRS;
 m_t = mass of xylitol CRS in 1 mL of reference solution (b), in milligrams;
 m_b = mass of the substance to be examined in 1 mL of test solution (b), in milligrams;
 R_t = ratio of the area of the peak due to derivatised xylitol to the area of the peak due to the derivatised internal standard in the chromatogram obtained with reference solution (b);
 R_b = ratio of the area of the peak due to derivatised xylitol to the area of the peak due to the derivatised internal standard in the chromatogram obtained with test solution (b).

LABELLING

The label states:

- where applicable, the maximum concentration of bacterial endotoxins;
- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

Application 5 µL.

Development Over 2/3 of the plate.

Drying In air.

Chlorine treatment At the bottom of a chromatographic tank place a beaker containing a mixture of 1 volume of hydrochloric acid R1, 1 volume of water R and 2 volumes of a 15 g/L solution of potassium permanganate R. Close the tank and allow to stand for 15 min. Place the dried plate in the tank and reclose the tank. Leave the plate in contact with the chlorine vapour for 5 min. Withdraw the plate and place it in a current of cold air until the excess of chlorine is removed and an area of the coating below the points of application does not give a blue colour with a drop of potassium iodide and starch solution R.

Detection Spray with potassium iodide and starch solution R.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve about 0.5 mg in 1 mL of methanol R. Add 0.5 mL of a freshly prepared 50 g/L solution of sodium nitroprusside R and 0.5 mL of a 20 g/L solution of sodium hydroxide R. Allow to stand for 10 min and add 1 mL of an 80 g/L solution of sodium hydrogen carbonate R. A violet colour develops.

D. Dissolve 0.2 g in 1 mL of water R, add 2.5 mL of ethanol (96 per cent) R and 2 mL of 1 M sodium hydroxide. Mix thoroughly and examine in ultraviolet light at 365 nm. The solution shows no fluorescence or at most the same fluorescence as a blank solution prepared in the same manner. The identification is not valid unless a solution prepared in the same manner using naphazoline hydrochloride CRS instead of the substance to be examined shows a distinct bluish fluorescence.

E. It gives reaction (a) of chlorides (2.3.1).

TESTS

Appearance of solution

The solution is clear (2.2.1) and not more intensely coloured than reference solution Y₆ (2.2.2, Method II).

Dissolve 2.5 g in water R and dilute to 50.0 mL with the same solvent.

Acidity or alkalinity

Dissolve 0.25 g in carbon dioxide-free water R and dilute to 25 mL with the same solvent. Add 0.1 mL of methyl red solution R and 0.1 mL of 0.01 M hydrochloric acid.

The solution is red. Not more than 0.2 mL of 0.01 M sodium hydroxide is required to change the colour of the indicator to yellow.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 50.0 mg of the substance to be examined in water R and dilute to 50.0 mL with the same solvent. Allow to stand for 1 h before injection.

Reference solution (a) Dilute 5.0 mL of the test solution to 100.0 mL with water R. Dilute 2.0 mL of this solution to 100.0 mL with water R.

Reference solution (b) Dissolve 5.0 mg of xylometazoline impurity A CRS and 5 mg of the substance to be examined in water R and dilute to 50.0 mL with the same solvent. Dilute 10.0 mL of this solution to 50.0 mL with water R.

Reference solution (c) Dilute 5.0 mL of reference solution (b) to 50.0 mL with water R.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography with embedded polar groups R (5 µm).

Mobile phase:

- mobile phase A: 1.36 g/L solution of potassium dihydrogen phosphate R adjusted to pH 3.0 with phosphoric acid R;
- mobile phase B: acetonitrile for chromatography R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 5	70	30
5 - 20	70 → 15	30 → 85
20 - 35	15	85

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 220 nm.

Injection 10 µL.

Relative retention With reference to xylometazoline (retention time = about 7.2 min): impurity A = about 0.79.

System suitability Reference solution (b):

- resolution: minimum 2.5 between the peaks due to impurity A and xylometazoline.

Limits:

- impurity A: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- total: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 25 mL of anhydrous acetic acid R and add 10 mL of acetic anhydride R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 28.08 mg of C₁₆H₂₅ClN₂.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is

therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B, C, D, E, F.

A. *N*-(2-aminoethyl)-2-[4-(1,1-dimethylethyl)-2,6-dimethylphenyl]acetamide,

B. 2-(chloromethyl)-5-(1,1-dimethylethyl)-1,3-dimethylbenzene,

C. [4-(1,1-dimethylethyl)-2,6-dimethylphenyl]acetonitrile,

D. 1-(1,1-dimethylethyl)-3,5-dimethylbenzene,

E. ethane-1,2-diamine mono(4-methylbenzenesulfonate),

F. [4-(1,1-dimethylethyl)-2,6-dimethylphenyl]acetic acid.

Ph Eur

Xylose

(Ph. Eur. monograph 1278)

C₅H₁₀O₅

150.1

58-86-6

Ph Eur

DEFINITION

D-Xylopyranose.

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless needles.

Solubility

Freely soluble in water, soluble in hot ethanol (96 per cent).

IDENTIFICATION

First identification: A.

Second identification: B, C.

A. Infrared absorption spectrophotometry (2.2.24).

Preparation Discs.

Comparison xylose CRS.

B. Thin-layer chromatography (2.2.27).

Solvent mixture water R, methanol R (2:3 V/V).

Test solution Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 20 mL with the solvent mixture.

Reference solution (a) Dissolve 10 mg of xylose CRS in the solvent mixture and dilute to 20 mL with the solvent mixture.

Reference solution (b) Dissolve 10 mg of fructose R, 10 mg of glucose R and 10 mg of xylose R in the solvent mixture and dilute to 20 mL with the solvent mixture.

Plate TLC silica gel plate R.

Mobile phase water R, methanol R, anhydrous acetic acid R, ethylene chloride R (10:15:25:50 V/V/V/V); measure the volumes accurately since a slight excess of water produces cloudiness.

Application 2 µL; thoroughly dry the points of application.

Development Over a path of 15 cm.

Drying In a current of warm air.

Detection Spray with a 5 g/L solution of thymol R in a mixture of 5 volumes of sulfuric acid R and 95 volumes of ethanol (96 per cent) R. Heat in an oven at 130 °C for 10 min.

System suitability Reference solution (b):

— the chromatogram shows 3 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 0.1 g in 10 mL of water R. Add 3 mL of cupri-tartaric solution R and heat. An orange or red precipitate is formed.

TESTS

Solution S

Dissolve 10.0 g in carbon dioxide-free water R and dilute to 100 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

Acidity or alkalinity

To 50 mL of solution S add 0.3 mL of phenolphthalein solution R1. The solution is colourless. Not more than 0.2 mL of 0.1 M sodium hydroxide is required to change the colour of the indicator to pink.

Specific optical rotation (2.2.7)

+ 18.5 to + 19.5 (dried substance).

Dissolve 10.0 g in 80 mL of water R, add 1 mL of dilute ammonia R2 and dilute to 100.0 mL with water R. Allow to stand for 30 min.

Chlorides (2.4.4)

Maximum 330 ppm.

Dilute 1.5 mL of solution S to 15 mL with water R.

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C at a pressure not exceeding 0.7 kPa.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

TESTS

Solution S

Dissolve 0.500 g in carbon dioxide-free water R with heating, allow to cool to room temperature and dilute to 50.0 mL with the same solvent.

pH (2.2.3)

3.5 to 5.5 for solution S.

Specific optical rotation (2.2.7)

+ 101.0 to + 105.0 (dried substance), determined on solution S.

Related substances

Liquid chromatography (2.2.29). Prepare the solutions protected from light.

Test solution Dissolve 10.0 mg of the substance to be examined in methanol R and dilute to 50.0 mL with the same solvent.

Reference solution (a) Dissolve 5.0 mg of yohimbine hydrochloride CRS (containing impurities A, F and G) in methanol R and dilute to 25.0 mL with the same solvent.

Reference solution (b) Dilute 1.0 mL of reference solution (a) to 100.0 mL with methanol R.

Reference solution (c) Dilute 1.0 mL of reference solution (b) to 10.0 mL with methanol R.

Column:

— size: $l = 0.125$ m, $\varnothing = 4.0$ mm;

— stationary phase: octylsilyl silica gel for chromatography R (4 μ m);

— temperature: 40 °C.

Mobile phase Mix 50 mL of a 9.08 g/L solution of potassium dihydrogen phosphate R, 100 mL of an 11.88 g/L solution of disodium hydrogen phosphate dihydrate R, 285 mL of acetonitrile R, 4.0 g of sodium laurilsulfate R and 355 mL of water R.

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 229 nm.

Injection 10 μ L.

Run time 3 times the retention time of yohimbine.

Relative retention With reference to yohimbine (retention time = about 7 min): impurity F = about 0.65; impurity G = about 0.70; impurity A = about 0.75.

System suitability Reference solution (a):

- **peak-to-valley ratio:** minimum 1.3, where H_p = height above the baseline of the peak due to impurity G and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity A; and minimum 1.3, where H_p = height above the baseline of the peak due to impurity G and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity F.

Limits:

- **sum of impurities A and G:** not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- **impurity F:** not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.4 per cent);
- **unspecified impurities:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);
- **total:** not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);

DEFINITION

(2R,3R,4S)-3-Acetamido-4-carbamimidamido-2-[(1R,2R)-1,2,3-trihydroxypropyl]-3,4-dihydro-2H-pyran-6-carboxylic acid hydrate.

Content

97.0 per cent to 102.0 per cent (dried substance).

It contains a variable quantity of water.

CHARACTERS

Appearance

White or almost white, slightly hygroscopic powder.

Solubility

Slightly soluble in water, practically insoluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

Comparison zanamivir hydrate CRS.

TESTS

Specific optical rotation (2.2.7)

+ 36.0 to + 38.5 (dried substance).

Dissolve 0.250 g in 25.0 mL of water R; sonicate until dissolution is complete.

Related substances

Liquid chromatography (2.2.29).

Test solution (a) Dissolve 23.0 mg of the substance to be examined in 20 mL of water R and dilute to 50.0 mL with acetonitrile R1.

Test solution (b) Dilute 5.0 mL of test solution (a) to 50.0 mL with the mobile phase.

Reference solution (a) Dissolve 23.0 mg of zanamivir for assay CRS in 20 mL of water R and dilute to 50.0 mL with acetonitrile R1. Dilute 5.0 mL of the solution to 50.0 mL with the mobile phase.

Reference solution (b) Dissolve 5 mg of zanamivir for system suitability CRS (containing impurities A, B, C and E) in 6 mL of water R and dilute to 10 mL with acetonitrile R1.

Reference solution (c) Dilute 1.0 mL of test solution (a) to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (d) Dissolve 3.0 mg of zanamivir impurity F CRS in the mobile phase and dilute to 100.0 mL with the mobile phase.

Reference solution (e) Dilute 1.0 mL of reference solution (d) to 100.0 mL with the mobile phase. Dilute 3.0 mL of this solution to 20.0 mL with the mobile phase.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: amino alkyl vinyl polymer for chromatography R (5 μ m);
- temperature: 30 °C.

Mobile phase 0.7 g/L solution of sulfuric acid R previously adjusted to pH 5.5 with dilute ammonia R3, acetonitrile R1 (40:60 V/V).

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 234 nm.

Preconditioning of the column Prior to first use, rinse with a 0.7 g/L solution of ammonium sulfate R at 1.5 mL/min at 30 °C for about 1 h; prior to each use, rinse with the mobile phase for at least 8 h.

Injection 20 μ L of test solution (a) and reference solutions (b), (c) and (e).

Run time 3 times the retention time of zanamivir.

Identification of impurities Use the chromatogram supplied with zanamivir for system suitability CRS and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C and E; use the chromatogram obtained with reference solution (e) to identify the peak due to impurity F.

Relative retention With reference to zanamivir (retention time = about 9 min): impurity F = about 0.3; impurity B = about 0.6; impurity C = about 0.75; impurity E = about 0.8; impurity A = about 2.6.

System suitability:

- signal-to-noise ratio: minimum 10 for the principal peak in the chromatogram obtained with reference solution (e);
- peak-to-valley ratio: minimum 2.5, where H_p = height above the baseline of the peak due to impurity E and H_v = height above the baseline of the lowest point of the

curve separating this peak from the peak due to impurity C in the chromatogram obtained with reference solution (b).

Calculation of percentage contents:

- for impurity F, use the concentration of impurity F in reference solution (e);
- for impurities other than F, use the concentration of zanamivir hydrate in reference solution (c).

Limits:

- impurity A: maximum 0.5 per cent;
- impurity B: maximum 0.3 per cent;
- impurity C: maximum 0.2 per cent;
- impurity F: maximum 0.01 per cent;
- unspecified impurities: for each impurity, maximum 0.10 per cent;
- total: maximum 1.2 per cent;
- reporting threshold: 0.05 per cent, except for impurity F.

Loss on drying (2.2.32)

4.0 per cent to 9.0 per cent, determined on 1.000 g by drying in vacuo at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection Test solution (b) and reference solution (a).

Calculate the percentage content of $C_{12}H_{20}N_4O_7$ taking into account the assigned content of zanamivir for assay CRS.

STORAGE

In an airtight container, protected from light.

DEFINITION

3'-Azido-3'-deoxythymidine.

Content

97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or slightly brownish powder.

Solubility

Sparsingly soluble in water, soluble in anhydrous ethanol, practically insoluble in heptane.

It shows polymorphism (5.9).

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

Comparison zidovudine GRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *water R*, evaporate to dryness in a desiccator, under high vacuum over *diphosphorus pentoxide R* and record new spectra using the residues.

TESTS

Appearance of solution

The solution is not more opalescent than reference suspension I (2.2.1) and not more intensely coloured than reference solution BY₅ (2.2.2, Method II).

Dissolve 0.5 g in 50 mL of *water R*, heating if necessary.

Specific optical rotation (2.2.7)

+ 60.5 to + 63.0 (dried substance), measured at 25 °C.

Dissolve 0.50 g in *anhydrous ethanol R* and dilute to 50.0 mL with the same solvent.

Related substances

A. Liquid chromatography (2.2.29).

Solvent mixture Mix 4 volumes of *acetonitrile R*, 20 volumes of *methanol R* and 76 volumes of a 2 g/L solution of *ammonium acetate R* previously adjusted to pH 6.8 with *dilute acetic acid R*.

Test solution (a) Dissolve 20.0 mg of the substance to be examined in the solvent mixture and dilute to 20.0 mL with the solvent mixture.

Test solution (b) Dilute 10.0 mL of test solution (a) to 50.0 mL with the solvent mixture.

Reference solution (a) Dissolve 2 mg of zidovudine impurity B CRS in the solvent mixture and dilute to 50 mL with the solvent mixture. Dilute 1 mL of the solution to 20 mL with the solvent mixture.

Reference solution (b) Dissolve 5 mg of zidovudine for system suitability A CRS (containing impurity G) in reference solution (a) and dilute to 5 mL with reference solution (a).

Reference solution (c) Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Reference solution (d) Dissolve 20.0 mg of zidovudine CRS in the solvent mixture and dilute to 20.0 mL with the solvent mixture. Dilute 10.0 mL of the solution to 50.0 mL with the solvent mixture.

Reference solution (e) Dissolve 1 mg of zidovudine impurity D CRS in a mixture of 4 volumes of acetonitrile R, 40 volumes of methanol R and 56 volumes of a 2 g/L solution of ammonium acetate R previously adjusted to pH 6.8 with dilute acetic acid R and dilute to 50 mL with the same mixture of solvents. Dilute 5 mL of the solution to 10 mL with the same mixture of solvents.

Column:

- size: $l = 0.25 \text{ m}$, $\varnothing = 4.6 \text{ mm}$;
- stationary phase: base-deactivated end-capped octadecylsilyl silica gel for chromatography R (5 μm).

Mobile phase:

- mobile phase A: 2 g/L solution of ammonium acetate R adjusted to pH 6.8 with dilute acetic acid R;
- mobile phase B: acetonitrile R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 3	95	5
3 - 18	95 → 85	5 → 15
18 - 28	85 → 30	15 → 70
28 - 43	30	70

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 265 nm.

Injection 20 μL of test solution (a) and reference solutions (b), (c) and (e).

Identification of impurities Use the chromatogram supplied with zidovudine for system suitability A CRS and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities B, and G; use the chromatogram obtained with reference solution (e) to identify the peak due to impurity D.

Relative retention With reference to zidovudine (retention time = about 16 min): impurity B = about 1.05; impurity G = about 1.5; impurity D = about 2.0.

System suitability Reference solution (b):

- resolution: minimum 2.0 between the peaks due to zidovudine and impurity B.

Calculation of percentage contents:

- for each impurity, use the concentration of zidovudine in reference solution (c).

Limits:

- impurity G: maximum 0.2 per cent;

- unspecified impurities: for each impurity, maximum 0.10 per cent;
- reporting threshold: 0.05 per cent; disregard any peak due to impurity D and any peak eluting after this impurity.

B. Liquid chromatography (2.2.29).

Test solution Dissolve 0.5 g of the substance to be examined in 10 mL of acetonitrile R and dilute to 100.0 mL with the mobile phase.

Reference solution (a) Dissolve 5.0 mg of zidovudine impurity D CRS in acetonitrile R and dilute to 10.0 mL with the same solvent.

Reference solution (b) Dilute 1.0 mL of reference solution (a) to 100.0 mL with the mobile phase.

Reference solution (c) Dilute 1 mL of reference solution (a) to 50 mL with the test solution.

Column:

- size: $l = 0.15 \text{ m}$, $\varnothing = 4.6 \text{ mm}$;
- stationary phase: base-deactivated end-capped octadecylsilyl silica gel for chromatography R (5 μm).

Mobile phase water for chromatography R, acetonitrile R1 (30:70 V/V).

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 210 nm.

Injection 20 μL of the test solution and reference solutions (b) and (c).

Run time 10 times the retention time of zidovudine.

Identification of impurities Use the chromatogram obtained with reference solution (b) to identify the peak due to impurity D.

Relative retention With reference to zidovudine (retention time = about 1.5 min): impurity D = about 2.5.

System suitability Reference solution (c):

- resolution: minimum 5.0 between the peaks due to zidovudine and impurity D.

Calculation of percentage contents:

- for each impurity, use the concentration of impurity D in reference solution (b).

Limits:

- unspecified impurities: for each impurity, maximum 0.10 per cent;
- reporting threshold: 0.05 per cent; disregard any peak eluting before impurity D.

Limit:

- total for tests A and B: maximum 1.0 per cent.

Loss on drying (2.2.32)

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in test A for related substances with the following modification.

Injection Test solution (b) and reference solution (d).

Calculate the percentage content of $\text{C}_{10}\text{H}_{13}\text{N}_5\text{O}_4$ taking into account the assigned content of zidovudine CRS.

STORAGE

Protected from light.

IMPURITIES

Test A for related substances: A, B, C, E, F, G.

Test B for related substances: D, J, K.

Specified impurities G.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, B, C, D, E, F, J, K.

A. 3'-deoxy-2',3'-didehydrothymidine,

B. 3'-chloro-3'-deoxythymidine,

C. 5-methylpyrimidine-2,4(1H,3H)-dione (thymine),

D. triphenylmethanol,

E. thymidine,

F. 3'-epi-thymidine,

G. 3'-(3'-azido-3'-deoxythymidin-3-yl)-3'-deoxythymidine,

J. 3'-azido-3'-deoxy-5'-O-(triphenylmethyl)thymidine (trityl-zidovudine),

K. 1,1,1'-(methoxymethanetriyl)tribenzene (methyl trityl ether).

Ph Eur

Zinc Acetate

(Zinc Acetate Dihydrate, Ph. Eur. monograph 1482)

$C_4H_6O_4Zn \cdot 2H_2O$

219.5

5970-45-6

Action and use

Astringent.

Preparation

Erythromycin and Zinc Acetate Lotion

Ph Eur

DEFINITION

Content

99.0 per cent to 101.0 per cent of $C_4H_6O_4Zn \cdot 2H_2O$.

CHARACTERS

Appearance

White or almost white crystalline powder or flakes.

Solubility

Freely soluble in water, soluble in ethanol (96 per cent).

IDENTIFICATION

- A. It gives reaction (a) of acetates (2.3.1).
B. It gives the reaction of zinc (2.3.1).

TESTS**Solution S**

Dissolve 10.0 g in carbon dioxide-free water R prepared from distilled water R and dilute to 100 mL with the same solvent.

Appearance of solution

Solution S is clear (2.2.1) and colourless (2.2.2, Method I).

pH (2.2.3)

5.8 to 7.0.

Dilute 10 mL of solution S to 20 mL with carbon dioxide-free water R.

Reducing substances

Boil for 5 min a mixture of 10 mL of solution S, 90 mL of water R, 5 mL of dilute sulfuric acid R and 1.5 mL of a 0.3 g/L solution of potassium permanganate R. The pink colour of the solution remains.

Chlorides (2.4.4)

Maximum 50 ppm.

Dilute 10 mL of solution S with 15 mL of water R.

Sulfates (2.4.13)

Maximum 100 ppm, determined on solution S.

Aluminium

Maximum 5 ppm.

Atomic absorption spectrometry (2.2.23, Method I).

Test solution Dissolve 2.50 g in 20 mL of a 200 g/L solution of cadmium- and lead-free nitric acid R and dilute to 25.0 mL with the same acid solution.

Reference solutions Prepare the reference solutions using aluminium standard solution (200 ppm Al) R, diluted with a 200 g/L solution of cadmium- and lead-free nitric acid R.

Source Aluminium hollow-cathode lamp.

Wavelength 309.3 nm.

Atomisation device Air-acetylene or acetylene-nitrous oxide flame.

Arsenic (2.4.2, Method A)

Maximum 2 ppm, determined on 0.5 g.

Cadmium

Maximum 2 ppm.

Atomic absorption spectrometry (2.2.23, Method I).

Test solution Use the solution described in the test for aluminium.

Reference solutions Prepare the reference solutions using cadmium standard solution (0.1 per cent Cd) R, diluted with a 200 g/L solution of cadmium- and lead-free nitric acid R.

Source Cadmium hollow-cathode lamp.

Wavelength 228.8 nm.

Atomisation device Air-acetylene flame.

Copper

Maximum 50 ppm.

Atomic absorption spectrometry (2.2.23, Method I).

Test solution Use the solution described in the test for iron.

Reference solutions Prepare the reference solutions using copper standard solution (10 ppm Cu) R, diluted with a 200 g/L solution of cadmium- and lead-free nitric acid R.

Source Copper hollow-cathode lamp.

Wavelength 324.8 nm.

Atomisation device Air-acetylene flame.

Iron

Maximum 50 ppm.

Atomic absorption spectrometry (2.2.23, Method I).

Test solution Dissolve 1.25 g in 20 mL of a 200 g/L solution of cadmium- and lead-free nitric acid R and dilute to 25.0 mL with the same acid solution.

Reference solutions Prepare the reference solutions using iron standard solution (20 ppm Fe) R, diluted with a 200 g/L solution of cadmium- and lead-free nitric acid R.

Source Iron hollow-cathode lamp.

Wavelength 248.3 nm.

Atomisation device Air-acetylene flame.

Lead

Maximum 10 ppm.

Atomic absorption spectrometry (2.2.23, Method I).

Test solution Dissolve 5.00 g in 20 mL of a 200 g/L solution of cadmium- and lead-free nitric acid R and dilute to 25.0 mL with the same acid solution.

Reference solutions Prepare the reference solutions using lead standard solution (0.1 per cent Pb) R, diluted with a 200 g/L solution of cadmium- and lead-free nitric acid R.

Source Lead hollow-cathode lamp.

Wavelength 283.3 nm.

Atomisation device Air-acetylene flame.

ASSAY

Dissolve 0.200 g in 5 mL of dilute acetic acid R. Carry out the complexometric titration of zinc (2.5.11).

1 mL of 0.1 M sodium edetate is equivalent to 21.95 mg of $C_4H_6O_4Zn \cdot 2H_2O$.

STORAGE

In a non-metallic container.

Ph Eur

Zinc Acexamate

(Ph. Eur. monograph 1279)

$C_{16}H_{28}N_2O_6Zn$

409.8

70020-71-2

Ph Eur

DEFINITION

Zinc bis(6-acetamidohexanoate).

Content

97.5 per cent to 101.0 per cent (dried substance).

CHARACTERS**Appearance**

White or almost white, crystalline powder.

Solubility

Soluble in water, practically insoluble in acetone and in ethanol (96 per cent). It dissolves in dilute nitric acid.

mp

About 198 °C.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison zinc acexamate CRS.

B. 5 mL of solution S (see Tests) gives the reaction of zinc (2.3.1).

TESTS**Solution S**

Dissolve 0.5 g in carbon dioxide-free water R and dilute to 20 mL with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension IV (2.2.1) and is colourless (2.2.2, Method II).

pH (2.2.3)

5.0 to 7.0 for solution S.

Impurity B

Thin-layer chromatography (2.2.27).

Test solution Dissolve 0.30 g of the substance to be examined in water R and dilute to 10 mL with the same solvent.

Reference solution Dissolve 15 mg of 6-aminohexanoic acid R (impurity B) in water R and dilute to 10 mL with the same solvent. Dilute 1 mL of this solution to 10 mL with water R.

Plate TLC silica gel plate R.

Mobile phase ammonia R, water R, ethanol (96 per cent) R (2:30:68 V/V/V).

Application 5 µL; allow to dry in air.

Development Over a path of 15 cm.

Drying In a current of warm air.

Detection Spray with ninhydrin solution R and heat at 100-105 °C for 15 min.

Limit:

— **impurity B:** any spot due to impurity B is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.5 per cent).

Related substances

Liquid chromatography (2.2.29).

Test solution (a) Dissolve 0.50 g of the substance to be examined in water R and dilute to 100.0 mL with the same solvent.

Test solution (b) To 20.0 mL of test solution (a), add 20 mL of the mobile phase and 0.4 mL of a 100 g/L solution of phosphoric acid R, then dilute to 50.0 mL with the mobile phase.

Reference solution (a) Dissolve 40 mg of *N*-acetyl-ε-caprolactam R (impurity C) in water R and dilute to 100.0 mL with the same solvent.

Reference solution (b) Dilute 5.0 mL of reference solution (a) to 100.0 mL with water R.

Reference solution (c) Dissolve 20 mg of zinc acexamate impurity A CRS in water R and dilute to 50.0 mL with the same solvent.

Reference solution (d) Dissolve 40 mg of ε-caprolactam R (impurity D) in water R and dilute to 100.0 mL with the same solvent. Dilute 5.0 mL of this solution to 100.0 mL with water R.

Reference solution (e) To 20 mL of test solution (a), add 5 mL of reference solution (b), 5 mL of reference solution (c), 5 mL of reference solution (d) and 0.4 mL of a 100 g/L solution of phosphoric acid R, then dilute to 50 mL with the mobile phase.

Reference solution (f) To 5.0 mL of reference solution (c), add 5.0 mL of reference solution (b), 5.0 mL of reference solution (d) and 0.4 mL of a 100 g/L solution of phosphoric acid R, then dilute to 50.0 mL with the mobile phase.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.0$ mm;

— **stationary phase:** end-capped octadecylsilyl silica gel for chromatography R (5 µm).

Mobile phase Mix 0.2 volumes of phosphoric acid R, 8 volumes of acetonitrile R1 and 92 volumes of water for chromatography R, then adjust to pH 4.5 with dilute ammonia R1.

Flow rate 1.2 mL/min.

Detection Spectrophotometer at 210 nm.

Injection 20 µL of test solution (b) and reference solutions (b), (e) and (f).

Run time 8 times the retention time of zinc acexamate.

Elution order Zinc acexamate, impurity D, impurity A, impurity C.

System suitability Reference solution (e):

— **resolution:** minimum 3.0 between the peaks due to zinc acexamate and impurity D; if necessary, adjust the mobile phase to pH 4.7 with dilute ammonia R1.

Limits:

— **impurity A:** not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (2 per cent);

— **impurities C, D:** for each impurity, not more than 1.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.15 per cent);

— **unspecified impurities:** for each impurity, not more than 0.5 times the area of the peak due to impurity C in the chromatogram obtained with reference solution (f) (0.05 per cent);

— **sum of impurities other than A:** not more than 5 times the area of the peak due to impurity C in the chromatogram obtained with reference solution (f) (0.5 per cent);

— **disregard limit:** 0.5 times the area of the peak due to impurity C in the chromatogram obtained with reference solution (f) (0.05 per cent).

Iron

Maximum 50 ppm.

Atomic absorption spectrometry (2.2.23, Method I).

Test solution Dissolve 1.25 g in 20 mL of a 200 g/L solution of cadmium- and lead-free nitric acid R and dilute to 25.0 mL with the same acid solution.

Reference solutions Prepare the reference solutions using iron standard solution (20 ppm Fe) R, diluting with a 200 g/L solution of cadmium- and lead-free nitric acid R.

Source Iron hollow-cathode lamp.

Wavelength 248.3 nm.

Atomisation device Air-acetylene flame.

Loss on drying (2.2.32)

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.400 g in 10 mL of dilute acetic acid R. Carry out the complexometric titration of zinc (2.5.11).

1 mL of 0.1 M sodium edetate is equivalent to 40.98 mg of $C_{16}H_{28}N_2O_6Zn$.

STORAGE

In a non-metallic container.

IMPURITIES

Specified impurities A, B, C, D.

A. 6-(6-acetamidohexanamido)hexanoic acid,

B. 6-aminohexanoic acid (6-aminocaproic acid),

C. 1-acetylazepan-2-one (*N*-acetyl-ε-caprolactam),

D. azepan-2-one (ε-caprolactam).

Ph Eur

Zinc Chloride

(Ph. Eur. monograph 0110)

ZnCl₂

136.3

7646-85-7

Ph Eur

DEFINITION

Content

95.0 per cent to 100.5 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder or cast in white or almost white sticks, deliquescent.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent) and in glycerol.

IDENTIFICATION

A. Dissolve 0.5 g in *dilute nitric acid R* and dilute to 10 mL with the same acid. The solution gives reaction (a) of chlorides (2.3.1).

B. 5 mL of solution S (see Tests) gives the reaction of zinc (2.3.1).

TESTS

Solution S

To 2.0 g add 38 mL of *carbon dioxide-free water R* prepared from *distilled water R* and add *dilute hydrochloric acid R* dropwise until dissolution is complete. Dilute to 40 mL with *carbon dioxide-free water R* prepared from *distilled water R*.

pH (2.2.3)

4.6 to 5.5.

Dissolve 1.0 g in 9 mL of *carbon dioxide-free water R*, ignoring any slight turbidity.

Oxychlorides

Dissolve 10.0 g in 10 mL of *carbon dioxide-free water R*.

The solution is not more opalescent than reference suspension II (2.2.1). To 1.5 mL of the solution add 7.5 mL of *ethanol (96 per cent) R*. The solution may become cloudy

within 10 min. Any cloudiness disappears on the addition of 0.2 mL of *dilute hydrochloric acid R*.

Sulfates (2.4.13)

Maximum 200 ppm.

Dilute 5 mL of solution S to 15 mL with *distilled water R*.

Prepare the standard using a mixture of 5 mL of *sulfate standard solution (10 ppm SO₄) R* and 10 mL of *distilled water R*.

Aluminium, calcium, iron, magnesium

To 8 mL of solution S add 2 mL of *concentrated ammonia R* and shake. The solution is clear (2.2.1) and colourless (2.2.2, *Method II*). Add 1 mL of *disodium hydrogen phosphate solution R*. The solution remains clear for at least 5 min.

Add 0.2 mL of *sodium sulfide solution R*. A white precipitate is formed and the supernatant remains colourless.

Ammonium (2.4.1)

Maximum 400 ppm.

Dilute 0.5 mL of solution S to 15 mL with *water R*.

ASSAY

Dissolve 0.250 g in 5 mL of *dilute acetic acid R*. Carry out the complexometric titration of zinc (2.5.11).

1 mL of 0.1 M *sodium edetate* is equivalent to 13.63 mg of ZnCl₂.

STORAGE

In a non-metallic container.

Ph Eur

Zinc Gluconate

(Ph. Eur. monograph 2164)

C₁₂H₂₂ZnO₁₄·xH₂O

455.7

(anhydrous substance)

Ph Eur

DEFINITION

Anhydrous or hydrated zinc D-gluconate.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, hygroscopic, crystalline powder.

Solubility

Soluble in water, practically insoluble in anhydrous ethanol and in methylene chloride.

IDENTIFICATION

A. Thin-layer chromatography (2.2.27).

Test solution Dissolve 20 mg of the substance to be examined in 1 mL of *water R*.

Reference solution Dissolve 20 mg of *calcium gluconate CRS* in 1 mL of *water R*, heating if necessary in a water-bath at 60 °C.

Plate TLC silica gel plate R (5–40 μm) [or TLC silica gel plate R (2–10 μm)].

Mobile phase concentrated ammonia R, ethyl acetate R, water R, ethanol (96 per cent) R (10:10:30:50 V/V/V/V).

Application 1 µL.

Development Over 3/4 of the plate.

Drying At 100-105 °C for 20 min, then allow to cool to room temperature.

Detection Spray with a solution containing 25 g/L of ammonium molybdate R and 10 g/L of cerium sulfate R in dilute sulfuric acid R, and heat at 100-105 °C for about 10 min.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. Dissolve 0.1 g in 5 mL of water R. Add 0.5 mL of potassium ferrocyanide solution R. A white precipitate is formed that does not dissolve upon the addition of 5 mL of hydrochloric acid R.

TESTS

Solution S

Dissolve 1.0 g in water R and dilute to 50 mL with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II (2.2.1) and not more intensely coloured than reference solution Y₆ (2.2.2, Method II).

Sucrose and reducing sugars

Dissolve 0.5 g in a mixture of 2 mL of hydrochloric acid R1 and 10 mL of water R. Boil for 5 min, allow to cool, add 10 mL of sodium carbonate solution R and allow to stand for 10 min. Dilute to 25 mL with water R and filter. To 5 mL of the filtrate add 2 mL of cupri-tartaric solution R and boil for 1 min. Allow to stand for 2 min. No red precipitate is formed.

Chlorides (2.4.4)

Maximum 500 ppm.

Dilute 5 mL of solution S to 15 mL with water R.

Sulfates (2.4.13)

Maximum 500 ppm.

Dissolve 2.0 g in a mixture of 10 mL of acetic acid R and 90 mL of distilled water R.

Cadmium

Maximum 2 ppm.

Atomic absorption spectrometry (2.2.23, Method II).

Test solution Dissolve 5.00 g in 20 mL of deionised distilled water R with the aid of ultrasound and dilute to 25.0 mL with the same solvent.

Reference solutions Prepare the reference solutions using cadmium standard solution (0.1 per cent Cd) R, diluting with deionised distilled water R.

Source Cadmium hollow-cathode lamp.

Wavelength 228.8 nm.

Atomisation device Air-acetylene flame.

Water (2.5.32)

Maximum 12.0 per cent, determined on 80.0 mg.

Microbial contamination

TAMC: acceptance criterion 10³ CFU/g (2.6.12).

TYMC: acceptance criterion 10² CFU/g (2.6.12).

ASSAY

Dissolve 0.400 g in 5 mL of dilute acetic acid R. Carry out the complexometric titration of zinc (2.5.11).

1 mL of 0.1 M sodium edetate is equivalent to 45.57 mg of C₁₂H₂₂ZnO₁₄.

STORAGE

In a non-metallic, airtight container.

Zinc and Coal Tar Paste

Ph Eur

DEFINITION

Content

99.0 per cent to 100.5 per cent (ignited substance).

CHARACTERS

Appearance

Soft, white or faintly yellowish-white, amorphous powder, free from gritty particles.

Solubility

Practically insoluble in water and in ethanol (96 per cent). It dissolves in dilute mineral acids.

IDENTIFICATION

A. It becomes yellow when strongly heated; the yellow colour disappears on cooling.

B. Dissolve 0.1 g in 1.5 mL of dilute hydrochloric acid R and dilute to 5 mL with water R. The solution gives the reaction of zinc (2.3.1).

TESTS

Alkalinity

Shake 1.0 g with 10 mL of boiling water R. Add 0.1 mL of phenolphthalein solution R and filter. If the filtrate is red, not more than 0.3 mL of 0.1 M hydrochloric acid is required to change the colour of the indicator.

Carbonates and substances insoluble in acids

Dissolve 1.0 g in 15 mL of dilute hydrochloric acid R. It dissolves without effervescence and the solution is not more opalescent than reference suspension II (2.2.1) and is colourless (2.2.2, Method II).

Arsenic (2.4.2, Method A)

Maximum 5 ppm, determined on 0.2 g.

Cadmium

Maximum 10 ppm.

Atomic absorption spectrometry (2.2.23, Method II).

Test solution Dissolve 2.0 g in 14 mL of a mixture of equal volumes of water R and cadmium- and lead-free nitric acid R, boil for 1 min, cool and dilute to 100.0 mL with water R.

Reference solutions Prepare the reference solutions using *cadmium standard solution (0.1 per cent Cd) R* and diluting with a 3.5 per cent *V/V* solution of *cadmium- and lead-free nitric acid R*.

Source Cadmium hollow-cathode lamp.

Wavelength 228.8 nm.

Atomisation device Air-acetylene or air-propane flame.

Iron (2.4.9)

Maximum 200 ppm.

Dissolve 50 mg in 1 mL of *dilute hydrochloric acid R* and dilute to 10 mL with *water R*. Use in this test 0.5 mL of *thioglycolic acid R*.

Lead

Maximum 50 ppm.

Atomic absorption spectrometry (2.2.23, *Method II*).

Test solution Dissolve 5.0 g in 24 mL of a mixture of equal volumes of *water R* and *cadmium- and lead-free nitric acid R*, boil for 1 min, cool and dilute to 100.0 mL with *water R*.

Reference solutions Prepare the reference solutions using *lead standard solution (0.1 per cent Pb) R* and diluting with a 3.5 per cent *V/V* solution of *cadmium- and lead-free nitric acid R*.

Source Lead hollow-cathode lamp.

Wavelength 283.3 nm; 217.0 nm may be used depending on the apparatus.

Atomisation device Air-acetylene flame.

Loss on ignition

Maximum 1.0 per cent, determined on 1.00 g by ignition to constant mass at 500 ± 50 °C.

ASSAY

Dissolve 0.150 g in 10 mL of *dilute acetic acid R*. Carry out the complexometric titration of zinc (2.5.11).

1 mL of 0.1 M *sodium edetate* is equivalent to 8.14 mg of ZnO.

Ph Eur

Zinc Stearate

(Ph. Eur. monograph 0306)

557-05-1

Action and use

Excipient.

Ph Eur

DEFINITION

Zinc stearate $[(C_{17}H_{35}COO)_2Zn; M_r 632]$ may contain varying proportions of zinc palmitate $[(C_{15}H_{31}COO)_2Zn; M_r 576.2]$ and zinc oleate $[(C_{17}H_{33}COO)_2Zn; M_r 628]$.

Content

10.0 per cent to 12.0 per cent of Zn.

CHARACTERS

Appearance

Light, white or almost white, amorphous powder, free from gritty particles.

Solubility

Practically insoluble in water and in anhydrous ethanol.

IDENTIFICATION

A. Freezing point (2.2.18): minimum 53 °C, determined on the residue obtained in the preparation of solution S (see Tests).

B. Neutralise 5 mL of solution S to *red litmus paper R* with *strong sodium hydroxide solution R*. The solution gives the reaction of zinc (2.3.1).

TESTS

Solution S

To 5.0 g add 50 mL of *ether R* and 40 mL of a 7.5 per cent *V/V* solution of *nitric acid R* in *distilled water R*. Heat under a reflux condenser until dissolution is complete. Allow to cool. In a separating funnel, separate the aqueous layer and shake the ether layer with 2 quantities, each of 4 mL, of *distilled water R*. Combine the aqueous layers, wash with 15 mL of *ether R* and heat on a water-bath until ether is completely eliminated. Allow to cool and dilute to 50.0 mL with *distilled water R* (solution S). Evaporate the ether layer to dryness and dry the residue at 105 °C.

Appearance of solution

Solution S is not more intensely coloured than reference solution Y₆ (2.2.2, *Method II*).

Appearance of solution of fatty acids

Dissolve 0.5 g of the residue obtained in the preparation of solution S in 10 mL of *chloroform R*. The solution is clear (2.2.1) and not more intensely coloured than reference solution Y₅ (2.2.2, *Method II*).

Acidity or alkalinity

Shake 1.0 g with 5 mL of *ethanol (96 per cent) R* and add 20 mL of *carbon dioxide-free water R* and 0.1 mL of *phenol red solution R*. Not more than 0.3 mL of 0.1 M *hydrochloric acid* or 0.1 mL of 0.1 M *sodium hydroxide* is required to change the colour of the indicator.

Acid value of the fatty acids (2.5.1)

195 to 210.

Dissolve 0.20 g of the residue obtained in the preparation of solution S in 25 mL of the prescribed mixture of solvents.

Chlorides (2.4.4)

Maximum 250 ppm.

Dilute 2 mL of solution S to 15 mL with *water R*.

Sulfates (2.4.13)

Maximum 0.6 per cent.

Dilute 1 mL of solution S to 50 mL with *distilled water R*.

Dilute 12.5 mL of this solution to 15 mL with *distilled water R*.

ASSAY

To 1.000 g add 50 mL of *dilute acetic acid R* and boil for at least 10 min or until the layer of fatty acids is clear, adding more *water R* as necessary to maintain the original volume. Cool and filter. Wash the filter and the flask with *water R* until the washings are no longer acid to *blue litmus paper R*. Combine the filtrate and washings. Carry out the complexometric titration of zinc (2.5.11).

1 mL of 0.1 M *sodium edetate* is equivalent to 6.54 mg of Zn.

Maximum 300 ppm.

Dilute 3.3 mL of solution S to 15 mL with water R.

Iron (2.4.9)
Maximum 100 ppm.

Dilute 2 mL of solution S to 10 mL with water R. Use in this test 0.5 mL of thioglycollic acid R.

ASSAY

Dissolve 0.200 g in 5 mL of dilute acetic acid R. Carry out the complexometric titration of zinc (2.5.11).

1 mL of 0.1 M sodium edetate is equivalent to 26.95 mg of ZnSO₄·6H₂O.

STORAGE

In a non-metallic, airtight container.

Ph Eur

Zinc Sulfate Monohydrate

(Ph. Eur. monograph 2159)

ZnSO₄·H₂O 179.5

Action and use
Astringent.

Preparations
Zinc Sulfate Capsules
Zinc Sulfate Tablets

Ph Eur

DEFINITION

Content
99.0 per cent to 101.0 per cent.

CHARACTERS

Appearance
White or almost white, crystalline powder, or colourless, transparent crystals.

Solubility
Very soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

- A. Solution S (see Tests) gives the reactions of sulfates (2.3.1).
B. Solution S gives the reaction of zinc (2.3.1).
C. It complies with the limits of the assay.

TESTS

Solution S
Dissolve 2.5 g in carbon dioxide-free water R and dilute to 50 mL with the same solvent.

Appearance of solution
Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

pH (2.2.3)
4.0 to 5.6 for solution S.

Chlorides (2.4.4)
Maximum 300 ppm.

Dilute 3.3 mL of solution S to 15 mL with water R.

Iron (2.4.9)
Maximum 100 ppm.

Dilute 2 mL of solution S to 10 mL with water R.
Use 0.5 mL of thioglycolic acid R in this test.

ASSAY

Dissolve 0.160 g in 5 mL of dilute acetic acid R. Carry out the complexometric titration of zinc (2.5.11).

1 mL of 0.1 M sodium edetate is equivalent to 17.95 mg of ZnSO₄·H₂O.

STORAGE

In a non-metallic container.

Zinc Undecenoate

(Zinc Undecylenate, Ph. Eur. monograph 0539)

C₂₂H₃₈O₄Zn 431.9 557-08-4

Action and use
Used topically in treatment of fungal infections.

Ph Eur

DEFINITION

Zinc di(undec-10-enoate).

Content
98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance
White or almost white, fine powder.

Solubility
Practically insoluble in water and in ethanol (96 per cent).

mp
116 °C to 121 °C, it may leave a slight solid residue.

IDENTIFICATION

A. To 2.5 g add 10 mL of water R and 10 mL of dilute sulfuric acid R. Shake with 2 quantities, each of 10 mL, of ether R. Reserve the aqueous layer for identification test C. Wash the combined ether layers with water R and evaporate to dryness. To the residue add 2 mL of freshly distilled aniline R and boil under a reflux condenser for 10 min. Allow to cool and add 30 mL of ether R. Shake with 3 quantities, each of 20 mL, of dilute hydrochloric acid R and then with 20 mL of water R. Evaporate the organic layer to dryness on a water-bath. The residue, after recrystallisation twice from ethanol (70 per cent V/V) R and drying in vacuo for 3 h, melts (2.2.14) at 66 °C to 68 °C.

B. Dissolve 0.1 g in a mixture of 2 mL of dilute sulfuric acid R and 5 mL of glacial acetic acid R. Add dropwise 0.25 mL of potassium permanganate solution R. The colour of the potassium permanganate solution is discharged.

C. A mixture of 1 mL of the aqueous layer obtained in identification test A and 4 mL of water R gives the reaction of zinc (2.3.1).

TESTS

Alkalinity
Mix 1.0 g with 5 mL of ethanol (96 per cent) R and 0.5 mL of phenol red solution R. Add 50 mL of carbon dioxide-free water R and examine immediately. No reddish colour appears.

Alkali and alkaline-earth metals

Maximum 2.0 per cent.

To 1.0 g add 25 mL of water R and 5 mL of hydrochloric acid R and heat to boiling. Filter whilst hot. Wash the filter and the residue with 25 mL of hot water R. Combine the filtrate and washings and add concentrated ammonia R until alkaline. Add 7.5 mL of thioacetamide solution R and heat on a water-bath for 30 min. Filter and wash the precipitate with 2 quantities, each of 10 mL, of water R. Combine the filtrate and washings, evaporate to dryness on a water-bath and ignite. The residue weighs a maximum of 20 mg.

Ph Eur

Sulfates (2.4.13)

Maximum 500 ppm.

To 0.1 g add a mixture of 2 mL of *dilute hydrochloric acid R* and 10 mL of *distilled water R* and heat to boiling. Cool, filter and dilute to 15 mL with *distilled water R*. Prepare the standard using 5 mL of *sulfate standard solution (10 ppm SO₄) R* and 10 mL of *distilled water R*.

Loss on drying (2.2.32)

Maximum 1.5 per cent, determined on 0.500 g by drying in an oven at 105 °C.

Degree of unsaturation

Dissolve 0.100 g in a mixture of 5 mL of *dilute hydrochloric acid R* and 30 mL of *glacial acetic acid R*. Using 0.05 mL *indigo carmine solution R1*, added towards the end of the titration as indicator. Titrate with 0.0167 M *bromide-bromate* until the colour changes from blue to yellow. 9.1 mL to 9.4 mL of 0.0167 M *bromide-bromate* is required. Carry out a blank titration.

ASSAY

To 0.350 g add 25 mL of *dilute acetic acid R* and heat to boiling. Carry out the complexometric titration of zinc (2.5.11).

1 mL of 0.1 M *sodium edetate* is equivalent to 43.19 mg of C₂₂H₂₂Cl₂N₄OS.H₂O.

STORAGE

Protected from light.

Ph Eur

Ziprasidone Hydrochloride Monohydrate

(Ph. Eur. monograph 2421)

C₂₁H₂₂Cl₂N₄OS.H₂O

467.4

138982-67-9

Action and use

Dopamine D₂ receptor antagonist; serotonin 5HT₂ receptor antagonist; neuroleptic.

Ph Eur

DEFINITION

5-[2-[4-(1,2-Benzisothiazol-3-yl)piperazin-1-yl]ethyl]-6-chloro-1,3-dihydro-2H-indol-2-one hydrochloride monohydrate.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS**Appearance**

White or slightly pink powder.

Solubility

Practically insoluble in water, slightly soluble in methanol and in methylene chloride.

It shows polymorphism (5.9).

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison ziprasidone hydrochloride monohydrate CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

B. Suspend 30 mg in 2 mL of *water R*, acidify with 0.15 mL of *dilute nitric acid R* and filter. The clear filtrate gives reaction (a) of chlorides (2.3.1).

TESTS**Related substances**

Liquid chromatography (2.2.29). Carry out the test protected from light and prepare the solutions immediately before use.

Solvent mixture A water R, *methanol R* (40:60 V/V).

Solvent mixture B hydrochloric acid R, *water R*, *methanol R* (0.04:20:80 V/V/V).

Test solution (a) Dissolve 23 mg of the substance to be examined in solvent mixture A and dilute to 100.0 mL with solvent mixture A.

Test solution (b) Dissolve 23 mg of the substance to be examined in solvent mixture B and dilute to 50.0 mL with solvent mixture B.

Reference solution (a) Dissolve 2.5 mg of ziprasidone for system suitability 1 CRS (containing impurities A, B and C) in solvent mixture A and dilute to 10.0 mL with solvent mixture A.

Reference solution (b) Dilute 1.0 mL of test solution (b) to 100.0 mL with solvent mixture B. Dilute 1.0 mL of this solution to 10.0 mL with solvent mixture B.

Reference solution (c) Dissolve the contents of a vial of ziprasidone for system suitability 2 CRS (containing impurities D and E) in 1.0 mL of solvent mixture B.

A. Column:

- size: $l = 0.15$ m, $\varnothing = 4.6$ mm;
- stationary phase: spherical octylsilyl silica gel for chromatography R (5 μ m);
- temperature: 40 °C.

Mobile phase:

- mobile phase A: mix 40 volumes of *methanol R* and 60 volumes of a 6.8 g/L solution of *potassium dihydrogen phosphate R* previously adjusted to pH 2.5 with *phosphoric acid R*;
- mobile phase B: *methanol R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 20	100	0
20 - 21	100 → 0	0 → 100
21 - 24	0	100

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 229 nm.

Injection 20 μ L of test solutions (a) and (b) and reference solutions (a) and (b).

Identification of impurities Use the chromatogram supplied with ziprasidone for system suitability 1 CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B and C.

Relative retention With reference to ziprasidone (retention time = about 7 min): impurity A = about 0.4; impurity B = about 0.8; impurity C = about 0.9.

System suitability Reference solution (a):

- *peak-to-valley ratio*: minimum 1.2, where H_p = height above the baseline of the peak due to impurity C and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity B.

Limits:

- *correction factor*: for the calculation of content, multiply the peak area of impurity A by 0.7;
- *impurity B in test solution (b)*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *impurity A in test solution (b)*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *impurity C in test solution (a)*: not more than 0.75 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *unspecified impurities in test solution (b)*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *disregard limit in test solution (b)*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard the peak due to impurity C and any peak with a retention time greater than 20 min.

B. Column:

- *size*: $l = 0.15$ m, $\varnothing = 4.6$ mm;
- *stationary phase*: spherical octylsilyl silica gel for chromatography R (5 μ m);
- *temperature*: 35 °C.

Mobile phase Mix 5 volumes of methanol R, 40 volumes of a 6.8 g/L solution of potassium dihydrogen phosphate R adjusted to pH 6.0 with a 280 g/L solution of potassium hydroxide R, and 55 volumes of acetonitrile R1.

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 229 nm.

Injection 20 μ L of test solution (b) and reference solutions (b) and (c).

Run time 11 times the retention time of ziprasidone.

Identification of impurities Use the chromatogram supplied with ziprasidone for system suitability 2 CRS and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities D and E.

Relative retention With reference to ziprasidone (retention time = about 4.5 min): impurity D = about 2.0; impurity E = about 3.0.

System suitability Reference solution (c):

- *resolution*: minimum 6.0 between the peaks due to ziprasidone and impurity D.

Limits:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity D = 1.4; impurity E = 0.5;
- *impurities D, E*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak eluting before the peak due to ziprasidone.

Limit:

- *total for tests A and B*: maximum 0.5 per cent.

Water (2.5.12)

3.7 per cent to 5.0 per cent, determined on 0.250 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29). Carry out the test protected from light and prepare the solutions immediately before use.

Solvent mixture water R, methanol R (40:60 V/V).

Test solution Dissolve 23.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

Reference solution Dissolve 23.0 mg of ziprasidone hydrochloride monohydrate CRS in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

Column:

- *size*: $l = 0.15$ m, $\varnothing = 4.6$ mm;
- *stationary phase*: spherical octylsilyl silica gel for chromatography R (5 μ m);
- *temperature*: 40 °C.

Mobile phase Mix 40 volumes of methanol R and 60 volumes of a 6.8 g/L solution of potassium dihydrogen phosphate R adjusted to pH 3.0 with phosphoric acid R.

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 229 nm.

Injection 20 μ L.

Run time Twice the retention time of ziprasidone.

Retention time Ziprasidone = about 7 min.

System suitability Reference solution:

- *symmetry factor*: maximum 2.0 for the peak due to ziprasidone.

Calculate the percentage content of $C_{21}H_{22}Cl_2N_4OS$ from the declared content of ziprasidone hydrochloride monohydrate CRS.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E.

A. 3-piperazin-1-yl-1,2-benzisothiazole,

B. 5-[2-[4-(1,2-benzisothiazol-3-yl)piperazin-1-yl]ethyl]-6-chloro-1H-indole-2,3-dione,

C. 2-[2-amino-5-[2-[4-(1,2-benzisothiazol-3-yl)piperazin-1-yl]ethyl]-4-chlorophenyl]acetic acid,

D. 5,5'-bis[2-[4-(1,2-benzisothiazol-3-yl)piperazin-1-yl]ethyl]-6,6'-dichloro-3-hydroxy-1,1',3,3'-tetrahydro-2H,2'H-3,3'-biindole-2,2'-dione,

E. 3-(1,2-benzisothiazol-3-yl)-5-[2-[4-(1,2-benzisothiazol-3-yl)piperazin-1-yl]ethyl]-6-chloro-1,3-dihydro-2H-indol-2-one.

Ph Eur

DEFINITION

5-[2-[4-(1,2-Benzisothiazol-3-yl)piperazin-1-yl]ethyl]-6-chloro-1,3-dihydro-2H-indol-2-one methanesulfonate trihydrate.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

PRODUCTION

It is considered that alkyl methanesulfonate esters are genotoxic and are potential impurities in ziprasidone mesilate trihydrate. The manufacturing process should be developed taking into consideration the principles of quality risk management, together with considerations of the quality of starting materials, process capability and validation.

The general methods 2.5.37. *Methyl, ethyl and isopropyl methanesulfonate in methanesulfonic acid*, 2.5.38. *Methyl, ethyl and isopropyl methanesulfonate in active substances* and 2.5.39. *Methanesulfonyl chloride in methanesulfonic acid* are available to assist manufacturers.

CHARACTERS

Appearance

White or almost white powder.

Solubility

Very slightly soluble in water, slightly soluble in methanol, practically insoluble in acetonitrile.

It shows polymorphism (5.9).

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison ziprasidone mesilate trihydrate CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

TESTS

Related substances

Carry out the tests protected from light and prepare the solutions immediately before use.

A. Liquid chromatography (2.2.29).

Solvent mixture hydrochloric acid R, water R, methanol R (0.04:40:60 V/V/V).

Test solution (a) Dissolve 27.0 mg of the substance to be examined in 35 mL of the solvent mixture, sonicate for about 2 min and shake. Dilute to 50.0 mL with the solvent mixture.

Test solution (b) Dilute 2.0 mL of test solution (a) to 20.0 mL with the solvent mixture.

Reference solution (a) Dissolve 27.0 mg of ziprasidone hydrochloride monohydrate CRS in 35 mL of the solvent mixture, sonicate for about 2 min and shake. Dilute to 50.0 mL with the solvent mixture. Dilute 2.0 mL of the solution to 20.0 mL with the solvent mixture.

Reference solution (b) Dissolve 2.5 mg of ziprasidone for system suitability 1 CRS (containing impurities B and C) in a mixture of 40 volumes of water R and 60 volumes of methanol R and dilute to 10 mL with the same mixture of solvents.

Reference solution (c) Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Column:

— size: $l = 0.15$ m, $\varnothing = 3.9$ mm;

- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 µm);
- temperature: 40 °C.

Mobile phase:

- mobile phase A: mix 40 volumes of methanol R1 and 60 volumes of a 6.8 g/L solution of potassium dihydrogen phosphate R previously adjusted to pH 3.0 with phosphoric acid R;
- mobile phase B: methanol R1;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 40	100	0
40 - 41	100 → 0	0 → 100
41 - 50	0	100

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 229 nm.

Injection 20 µL of test solution (a) and reference solutions (b) and (c).

Identification of impurities Use the chromatogram supplied with ziprasidone for system suitability 1 CRS and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities B and C.

Relative retention With reference to ziprasidone (retention time = about 6 min): impurity B = about 0.8; impurity C = about 0.9.

System suitability Reference solution (b):

- peak-to-valley ratio: minimum 1.5, where H_p = height above the baseline for the peak due to impurity C and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity B; minimum 2.0, where H_p = height above the baseline for the peak due to impurity C and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to ziprasidone.

Calculation of percentage contents:

- for each impurity, use the concentration of ziprasidone mesilate trihydrate in reference solution (c).

Limits:

- impurity B: maximum 0.15 per cent;
- unspecified impurities: for each impurity, maximum 0.10 per cent;
- reporting threshold: 0.05 per cent; disregard any peak with a retention time greater than 40 min.

B. Liquid chromatography (2.2.29).

Solvent mixture hydrochloric acid R, water R, methanol R (0.04:20:80 V/V/V).

Test solution Dissolve 27 mg of the substance to be examined in 35 mL of the solvent mixture, sonicate for about 2 min and shake. Dilute to 50.0 mL with the solvent mixture.

Reference solution (a) Dissolve the contents of a vial of ziprasidone for system suitability 2 CRS (containing impurities D and E) in 1 mL of the solvent mixture.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Column:

- size: $l = 0.15$ m, $\varnothing = 3.9$ mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 µm);

- temperature: 35 °C.

Mobile phase Mix 8 volumes of methanol R1, 42 volumes of acetonitrile for chromatography R and 50 volumes of a solution prepared as follows: dissolve 3.4 g of potassium dihydrogen phosphate R and 21.6 g of sodium octanesulfonate R in 900 mL of water for chromatography R, adjust to pH 3.0 with phosphoric acid R and dilute to 1000 mL with water for chromatography R.

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 229 nm.

Injection 20 µL.

Run time 15 times the retention time of ziprasidone.

Identification of impurities Use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities D and E.

Relative retention With reference to ziprasidone (retention time = about 3 min): impurity E = about 2.6; impurity D = about 7.8.

System suitability Reference solution (a):

- resolution: minimum 5.0 between the peaks due to impurities E and D.

Calculation of percentage contents:

- for each impurity, use the concentration of ziprasidone mesilate trihydrate in reference solution (b).

Limits:

- impurity D: maximum 0.15 per cent;
- unspecified impurities: for each impurity, maximum 0.10 per cent;
- reporting threshold: 0.05 per cent; disregard any peak eluting before the peak due to ziprasidone.

Limit:

- total for tests A and B: maximum 0.2 per cent.

Water (2.5.12)

8.5 per cent to 10.1 per cent, determined on 0.050 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

Bacterial endotoxins (2.6.14)

Less than 17.5 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (2.2.29) as described in test A for related substances with the following modifications.

Injection 20 µL of test solution (b) and reference solution (a).

System suitability Reference solution (a):

- symmetry factor: maximum 1.7 for the peak due to ziprasidone.

Calculate the percentage content of $C_{22}H_{25}ClN_4O_4S_2$ taking into account the assigned content of ziprasidone hydrochloride monohydrate CRS and a conversion factor of 1.133.

STORAGE

Protected from light. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

IMPURITIES

Test A for related substances

A, B, C.

Test B for related substances

D, E.

Specified impurities B, D.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, C, E.

A. 3-(1,2-benzisothiazol-3-yl)piperazin-1-yl-1,2-benzisothiazole,

B. 5-[2-[4-(1,2-benzisothiazol-3-yl)piperazin-1-yl]ethyl]-6-chloro-1H-indole-2,3-dione,

C. 2-[2-amino-5-[2-[4-(1,2-benzisothiazol-3-yl)piperazin-1-yl]ethyl]-4-chlorophenyl]acetic acid,

D. 5,5'-bis[2-[4-(1,2-benzisothiazol-3-yl)piperazin-1-yl]ethyl]-6,6'-dichloro-3-hydroxy-1,1',3,3'-tetrahydro-2H,2'H-3,3'-biindole-2,2'-dione,

E. 3-(1,2-benzisothiazol-3-yl)-5-[2-[4-(1,2-benzisothiazol-3-yl)piperazin-1-yl]ethyl]-6-chloro-1,3-dihydro-2H-indol-2-one.

Zoledronic Acid Monohydrate

(Ph. Eur. monograph 2743)

$C_5H_{10}N_2O_7P_2 \cdot H_2O$

290.1

165800-06-6

Action and use

Bisphosphonate; treatment of osteolytic lesions, hypercalcaemia.

Ph Eur

DEFINITION

[1-Hydroxy-2-(1H-imidazol-1-yl)ethane-1,1-diyl] bis(phosphonic acid) monohydrate.

Content

99.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Slightly soluble in water, practically insoluble in anhydrous ethanol and in heptane.

IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison zoledronic acid monohydrate CRS.

B. Water (see Tests).

TESTS

Appearance of solution

The solution is clear (2.2.1) and not more intensely coloured than reference solution B₇ or BY₇ (2.2.2, Method II).

Dissolve 0.5 g in a 4 g/L solution of sodium hydroxide R and dilute to 50.0 mL with the same solution.

pH (2.2.3)

1.8 to 2.8.

Dissolve 0.150 g in carbon dioxide-free water R and dilute to 50.0 mL with the same solvent. Sonicate for 10 min, if necessary.

Related substances

Liquid chromatography (2.2.29).

Solution A Dissolve 10.8 g of sodium octanesulfonate R and 37 mg of sodium edetate R in water for chromatography R, add 10 mL of perchloric acid R and 2 mL of phosphoric acid R and dilute to 1000 mL with water for chromatography R.

Test solution Dissolve 40.0 mg of the substance to be examined in the mobile phase; sonicate for 30 min, and dilute to 20.0 mL with the mobile phase.

Reference solution (a) Dissolve 2 mg of zoledronic acid impurity A CRS, 5 mg of zoledronic acid impurity B CRS and 2 mg of sodium nitrate R in the mobile phase and dilute to 50 mL with the mobile phase. To 1 mL of the solution add 7 mL of the mobile phase and dilute to 20 mL with the test solution.

Reference solution (b) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Ph Eur

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: end-capped phenylhexylsilyl silica gel for chromatography R (5 μ m);
- temperature: 20 °C.

Mobile phase acetonitrile R1, solution A (4:96 V/V).

Flow rate 0.6 mL/min.

Detection Spectrophotometer at 215 nm.

Preconditioning Precondition the instrument and the column once before each series of injections as follows:

- instrument: rinse the instrument without a column with a 25 per cent V/V solution of acetic acid R at 5 mL/min for about 20 min. Then, rinse with water for chromatography R at 5 mL/min for about 2 h;
- column: rinse the column with the mobile phase at 0.6 mL/min for about 1 h. During the rinsing, inject the test solution 15 times, applying a run time of about 3 min for each injection.

Injection 10 μ L.

Run time 5 times the retention time of zoledronic acid.

Identification of impurities Use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A and B and the nitrate ion.

Relative retention With reference to zoledronic acid (retention time = about 6 min): nitrate = about 0.6; impurity B = about 0.7; impurity A = about 0.9.

System suitability Reference solution (a):

- resolution: minimum 1.5 between the peaks due to impurity A and zoledronic acid; minimum 1.5 between the peaks due to the nitrate ion and impurity B.

Calculation of percentage contents:

- correction factor: multiply the peak area of impurity B by 1.9;
- for each impurity, use the concentration of zoledronic acid monohydrate in reference solution (b).

Limits:

- impurity B: maximum 0.5 per cent;
- unspecified impurities: for each impurity, maximum 0.10 per cent;
- total: maximum 0.5 per cent;
- reporting threshold: 0.05 per cent, disregard the peak due to the nitrate ion.

Impurities E and F

Liquid chromatography (2.2.29).

Test solution Dissolve 50.0 mg of the substance to be examined in mobile phase B, sonicate if necessary, and dilute to 10.0 mL with mobile phase B.

Reference solution (a) Dissolve 95.0 mg of anhydrous sodium dihydrogen phosphate R and 79.0 mg of phosphorous acid R (impurity E) in water R and dilute to 100.0 mL with the same solvent.

Reference solution (b) Dissolve 34.0 mg of sodium chloride R in water R and dilute to 100.0 mL with the same solvent.

Reference solution (c) To 1.0 mL of reference solution (a) add 0.5 mL of reference solution (b) and dilute to 100.0 mL with mobile phase B.

Reference solution (d) Dilute 0.1 mL of reference solution (a) to 100 mL with mobile phase B.

Precolumn:

- size: $l = 0.05$ m, $\varnothing = 4.0$ mm;
- stationary phase: anion-exchange resin R (13 μ m).

Column:

- size: $l = 0.25$ m, $\varnothing = 4.0$ mm;
- stationary phase: anion-exchange resin R (9 μ m);
- temperature: 30 °C.

Mobile phase:

- mobile phase A: carbon dioxide-free water R;
- mobile phase B: 4.0 g/L solution of sodium hydroxide R in carbon dioxide-free water R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 13	80 → 70	20 → 30
13 - 17	70 → 60	30 → 40
17 - 29	60	40

Flow rate 1.0 mL/min.

Detection Conductivity detector; use a self-regenerating anion suppressor.

Injection 20 μ L.

Identification of impurities Use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities E and F; use the chromatogram obtained with reference solution (b) to identify the peak due to the chloride ion.

Relative retention With reference to chloride (retention time = about 5 min): impurity E = about 1.2; impurity F = about 3.4.

System suitability:

- resolution: minimum 1.5 between the peaks due to the chloride ion and impurity E in the chromatogram obtained with reference solution (c);
- signal-to-noise ratio: minimum 10 for the peak due to impurity F in the chromatogram obtained with reference solution (d).

Calculation of percentage contents:

- for each impurity, use the concentration of the corresponding impurity in reference solution (c).

Limits:

- impurities E, F: for each impurity, maximum 0.15 per cent.

Water (2.5.12)

5.0 per cent to 7.5 per cent, determined on 0.100 g.

ASSAY

Dissolve 0.150 g in 50 mL of carbon dioxide-free water R. Sonicate for 10 min, if necessary. Titrate with 0.1 M sodium hydroxide, determining the end-point potentiometrically (2.2.20). Read the volume added at the 3rd inflexion point. 1 mL of 0.1 M sodium hydroxide is equivalent to 9.07 mg of C₅H₁₀N₂O₇P₂.

IMPURITIES

Specified impurities- B, E, F.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, C, D.

- A. [1-(2-hydroxy-2,2-diphosphonoethyl)-1H-imidazol-3-yl]acetate,

- B. 1,3-bis(2-hydroxy-2,2-diphosphonoethyl)-1H-imidazol-3-ium,

- C. 1H-imidazole,

- D. (1H-imidazol-1-yl)acetic acid,

- E. phosphonic acid (phosphorous acid),

- F. phosphoric acid.

Ph Eur

Zolmitriptan

(Ph. Eur. monograph 2737)

C₁₆H₂₁N₃O₂

287.4

139264-17-8

Action and use

Serotonin 5HT₁ receptor agonist; treatment of migraine.

Ph Eur

DEFINITION

(4S)-4-[[3-[2-(Dimethylamino)ethyl]-1H-indol-5-yl]methyl]-1,3-oxazolidin-2-one.

Content

97.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Slightly soluble or very slightly soluble in water, freely soluble in methanol, sparingly soluble in acetone.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison zolmitriptan CRS.

TESTS

Enantiomeric purity

Liquid chromatography (2.2.29).

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b) Dissolve 5 mg of zolmitriptan impurity A CRS in the mobile phase and dilute to 5.0 mL with the mobile phase. To 1.0 mL of the solution add 1.0 mL of the test solution and dilute to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 50.0 mL with the mobile phase.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: amylose derivative of silica gel for chiral separation R (5 μ m);
- temperature: 35 °C.

Mobile phase diethylamine R, 2-propanol R, methanol R, heptane R (0.1:10:15:75 V/V/V/V).

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 285 nm.

Injection 10 μ L.

Run time Twice the retention time of zolmitriptan.

Relative retention With reference to zolmitriptan (retention time = about 7 min): impurity A = 0.7.

System suitability Reference solution (b):

- resolution: minimum 2.0 between the peaks due to impurity A and zolmitriptan.

Calculation of percentage content:

- for impurity A, use the concentration of zolmitriptan in reference solution (a).

Limit:

- impurity A: maximum 0.10 per cent.

Related substances

Liquid chromatography (2.2.29).

Solvent mixture Mobile phase B, mobile phase A (10:90 V/V).

Test solution (a) Dissolve 10.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

Test solution (b) Dilute 1.0 mL of test solution (a) to 5.0 mL with the solvent mixture.

Reference solution (a) Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Reference solution (b) Dissolve 5 mg of zolmitriptan for system suitability CRS (containing impurities C, H and I) in the solvent mixture and dilute to 5.0 mL with the solvent mixture.

Reference solution (c) Dissolve 10.0 mg of zolmitriptan CRS in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

mixture. Dilute 1.0 mL of the solution to 5.0 mL with the solvent mixture.

Column:

- size: $l = 0.10$ m, $\varnothing = 3.0$ mm;
- stationary phase: end-capped solid core phenylhexylsilyl silica gel for chromatography R (2.7 μ m);
- temperature: 20 °C.

Mobile phase A Dissolve 2.72 g of potassium dihydrogen phosphate R and 0.94 g of sodium hexanesulfonate R in water for chromatography R, adjust to pH 2.0 with phosphoric acid R and dilute to 1000 mL with water for chromatography R;

Mobile phase B acetonitrile R1;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 0.5	90	10
0.5 - 4	90 → 85	10 → 15
4 - 8	85	15
8 - 9	85 → 80	15 → 20
9 - 10	80	20
10 - 12	80 → 70	20 → 30
12 - 13	70	30

Flow rate 0.8 mL/min.

Detection Spectrophotometer at 210 nm.

Injection 2 μ L of test solution (a) and reference solutions (a) and (b).

Identification of impurities Use the chromatogram supplied with zolmitriptan for system suitability CRS and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities C, H and I.

Relative retention With reference to zolmitriptan (retention time = about 5 min): impurity H = about 0.97; impurity I = about 1.1; impurity C = about 2.0.

System suitability Reference solution (b):

- peak-to-valley ratio: minimum 8, where H_p = height above the baseline of the peak due to impurity H and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to zolmitriptan; minimum 1.5, where H_p = height above the baseline of the peak due to impurity I and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to zolmitriptan.

Calculation of percentage contents:

- correction factor: multiply the peak area of impurity C by 2.0;
- for each impurity, use the concentration of zolmitriptan in reference solution (a).

Limis:

- impurity C: maximum 0.15 per cent;
- unspecified impurities: for each impurity, maximum 0.10 per cent;
- total: maximum 0.5 per cent;
- reporting threshold: 0.05 per cent.

Water (2.5.12)

Maximum 0.5 per cent, determined on 0.500 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modifications.

Detection Spectrophotometer at 283 nm.

Injection 2 μ L of test solution (b) and reference solution (c).

Calculate the percentage content of $C_{16}H_{21}N_3O_2$ taking into account the assigned content of zolmitriptan CRS.

IMPURITIES

Specified impurities A, C.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) B, D, E, F, G, H, I.

Zolpidem Tartrate

(Ph. Eur. monograph 1280)

C₄₂H₄₈N₆O₈

765

99294-93-6

Action and use
Non-benzodiazepine hypnotic.

Preparation
Zolpidem Tablets

Ph Eur

DEFINITION

Bis[*N,N*-dimethyl-2-[6-methyl-2-(4-methylphenyl)imidazo[1,2-*a*]pyridin-3-yl]acetamide] (2*R*,3*R*)-2,3-dihydroxybutanedioate.

Content

98.5 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, hygroscopic, crystalline powder.

Solubility

Slightly soluble in water, sparingly soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

First identification: A, C.

Second identification: B, C.

A. Infrared absorption spectrophotometry (2.2.24).

Preparation Dissolve 0.10 g in 10 mL of a 10.3 g/L solution of hydrochloric acid R. Add 10 mL of water R. Add dropwise with stirring 1 mL of dilute ammonia R2. Filter and collect the resulting precipitate. Wash the precipitate with water R and then dry at 105 °C for 2 h. Examine the precipitate as a disc.

Comparison Repeat the operations using 0.10 g of zolpidem tartrate CRS.

B. Thin-layer chromatography (2.2.27).

Test solution Dissolve 50 mg of the substance to be examined in 5 mL of methanol R, add 0.1 mL of diethylamine R and dilute to 10 mL with methanol R.

Reference solution (a) Dissolve 50 mg of zolpidem tartrate CRS in 5 mL of methanol R, add 0.1 mL of diethylamine R and dilute to 10 mL with methanol R.

Reference solution (b) Dissolve 50 mg of flunitrazepam CRS in 5 mL of methylene chloride R and dilute to 10 mL with the same solvent. Mix 1 mL of this solution and 1 mL of reference solution (a).

Plate TLC silica gel F₂₅₄ plate R.

Mobile phase diethylamine R, cyclohexane R, ethyl acetate R (10:45:45 V/V/V).

Application 5 µL.

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Retardation factors Zolpidem = about 0.3; flunitrazepam = about 0.5.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 0.1 g in 1 mL of methanol R, heating gently. 0.1 mL of this solution gives reaction (b) of tartrates (2.3.1).

TESTS

Appearance of solution

The solution is clear (2.2.1) and not more intensely coloured than reference solution Y₆ or BY₆ (2.2.2, Method II). Prepare the solutions protected from light and carry out the test as rapidly as possible.

Triturate 0.25 g with 0.125 g of tartaric acid R. Dissolve the mixture in 20 mL of water R and dilute to 25 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29).

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b) Dissolve 2.5 mg of zolpidem for system suitability CRS (containing impurities A and B) in the mobile phase and dilute to 5 mL with the mobile phase.

Column:

- size: $l = 0.15$ m, $\varnothing = 3.9$ mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (4 μ m).

Mobile phase Mix 18 volumes of acetonitrile R, 23 volumes of methanol R and 59 volumes of a 5.6 g/L solution of phosphoric acid R previously adjusted to pH 5.5 with triethylamine R.

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 254 nm.

Injection 20 μ L.

Run time 4 times the retention time of zolpidem.

Identification of impurities Use the chromatogram supplied with zolpidem for system suitability CRS and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and B.

Relative retention With reference to zolpidem (retention time = about 7 min): tartaric acid = about 0.1; impurity A = about 0.8; impurity B = about 3.6.

System suitability Reference solution (b):

- resolution: minimum 2.0 between the peaks due to impurity A and zolpidem.

Calculation of percentage contents:

- for each impurity, use the concentration of zolpidem tartrate in reference solution (a).

Limits:

- impurity B: maximum 0.15 per cent;
- unspecified impurities: for each impurity, maximum 0.10 per cent;
- total: maximum 0.2 per cent;
- reporting threshold: 0.05 per cent; disregard the peak due to tartaric acid.

Water (2.5.12)

Maximum 3.0 per cent, determined on 0.500 g.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in a mixture of 20 mL of anhydrous acetic acid R and 20 mL of acetic anhydride R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20). Carry out a blank titration.

1 mL of 0.1 M perchloric acid is equivalent to 38.24 mg of $C_{22}H_{28}N_2O_2$.

STORAGE

In an airtight container, protected from light.

IMPURITIES

Specified impurities B.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is

therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use) A, C, D, E, F.

A. *N,N*-dimethyl-2-[7-methyl-2-(4-methylphenyl)imidazo[1,2-*a*]pyridin-3-yl]acetamide,

Action and use
Non-benzodiazepine hypnotic.

Preparation
Zopiclone Tablets

Ph Eur

DEFINITION

(5*RS*)-6-(5-Chloropyridin-2-yl)-7-oxo-6,7-dihydro-5*H*-pyrrolo[3,4-*b*]pyrazin-5-yl 4-methylpiperazine-1-carboxylate.

Content
98.5 per cent to 100.5 per cent.

CHARACTERS

Appearance
White or slightly yellowish powder.

Solubility
Practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in acetone, practically insoluble in ethanol (96 per cent). It dissolves in dilute mineral acids.

IDENTIFICATION

First identification: B.

Second identification: A, C.

A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

Test solution Dissolve 50.0 mg in a 3.5 g/L solution of hydrochloric acid *R* and dilute to 100.0 mL with the same solvent. Dilute 2.0 mL of this solution to 100.0 mL with a 3.5 g/L solution of hydrochloric acid *R*.

Spectral range 220–350 nm.

Absorption maximum At 303 nm.

Specific absorbance at the absorption maximum 340 to 380.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison zopiclone *CRS*.

C. Thin-layer chromatography (2.2.27).

Test solution Dissolve 10 mg of the substance to be examined in methylene chloride *R* and dilute to 10 mL with the same solvent.

Reference solution Dissolve 10 mg of zopiclone *CRS* in methylene chloride *R* and dilute to 10 mL with the same solvent.

Plate TLC silica gel GF₂₅₄ plate *R*.

Mobile phase triethylamine *R*, acetone *R*, ethyl acetate *R* (2:50:50 *V/V/V*).

Application 10 µL.

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the

principal spot in the chromatogram obtained with the reference solution.

TESTS

Solution S

Dissolve 1.0 g in dimethylformamide *R* and dilute to 20.0 mL with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II (2.2.1) and not more intensely coloured than intensity 5 of the range of reference solutions of the most appropriate colour (2.2.2, Method II).

Optical rotation (2.2.7)

−0.05° to + 0.05°.

Dilute 10.0 mL of solution S to 50.0 mL with dimethylformamide *R*.

Related substances

Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

Test solution Dissolve 40.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

Reference solution (a) Dilute 2.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b) Dissolve 4.0 mg of zopiclone oxide *CRS* (impurity A) in the mobile phase and dilute to 10.0 mL with the mobile phase. To 5.0 mL of the solution add 0.5 mL of the test solution and dilute to 50.0 mL with the mobile phase.

Reference solution (c) Dissolve 2.0 mg of zopiclone impurity B *CRS* in the mobile phase and dilute to 5.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 100.0 mL with the mobile phase.

Column:

— size: $l = 0.25$ m, $\varnothing = 4.6$ mm;

— stationary phase: end-capped octadecylsilyl silica gel for chromatography *R* (5 µm);

— temperature: 30 °C.

Mobile phase Mix 38 volumes of acetonitrile *R* and 62 volumes of a solution containing 8.1 g/L of sodium laurilsulfate *R* and 1.6 g/L of sodium dihydrogen phosphate *R*, previously adjusted to an apparent pH of 3.5 with a 10 per cent *V/V* solution of phosphoric acid *R*.

Flow rate 1.5 mL/min.

Detection Spectrophotometer at 303 nm.

Injection 20 µL.

Run time 1.5 times the retention time of zopiclone.

Identification of impurities Use the chromatogram obtained with reference solution (c) to identify the peak due to impurity B.

Retention time Zopiclone = 27 min to 31 min; if necessary, adjust the concentration of acetonitrile in the mobile phase.

Relative retention With reference to zopiclone: impurity B = about 0.1; impurity A = about 0.9.

System suitability Reference solution (b):

— resolution: minimum 3.0 between the peaks due to impurity A and zopiclone; if necessary, adjust the mobile phase to pH 4.0 with a 10 per cent *V/V* solution of phosphoric acid *R*.

Limits:

- *impurity B*: not more than twice the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total (excluding impurity B)*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

2-Propanol

Gas chromatography (2.2.28).

Internal standard solution Dilute 5 mL of ethanol R1 to 100 mL with ethylene chloride R. Dilute 1 mL of the solution to 10 mL with ethylene chloride R.

Test solution Dissolve 0.25 g of the substance to be examined in ethylene chloride R, add 0.5 mL of the internal standard solution and dilute to 5.0 mL with ethylene chloride R.

Reference solution Dilute 4.5 mL of 2-propanol R to 100.0 mL with ethylene chloride R. To 1.0 mL of the solution add 10.0 mL of the internal standard solution and dilute to 100.0 mL with ethylene chloride R.

Column:

- *material*: fused silica;
- *size*: $l = 10$ m, $\varnothing =$ about 0.53 mm;
- *stationary phase*: styrene-divinylbenzene copolymer R (film thickness 20 μ m).

Carrier gas helium for chromatography R.

Flow rate 4 mL/min.

DEFINITION

2-[4-[3-[(9Z)-2-Chloro-9H-thioxanthen-9-ylidene]propyl]piperazin-1-yl]ethyl decanoate.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

Yellow, viscous, oily liquid.

Solubility

Very slightly soluble in water, very soluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison Ph. Eur. reference spectrum of zuclopenthixol decanoate.

TESTS

Appearance of solution

The solution is clear (2.2.1).

Using an ultrasonic bath, dissolve 1.0 g in ethanol (96 per cent) R and dilute to 20.0 mL with the same solvent.

Related substances

Liquid chromatography (2.2.29). Carry out the test protected from light and prepare the solutions immediately before use.

Solution A Dissolve 8.89 g of docusate sodium R in water for chromatography R, stirring for about 6-8 h, and dilute to 1000 mL with the same solvent.

Test solution Dissolve 25.0 mg of the substance to be examined in acetonitrile R and dilute to 100.0 mL with the same solvent.

Reference solution (a) Dilute 1.0 mL of the test solution to 100.0 mL with acetonitrile R.

Reference solution (b) Dissolve 5.0 mg of zuclopenthixol impurity B CRS in acetonitrile R and dilute to 100.0 mL with the same solvent. Dilute 5.0 mL of this solution to 100.0 mL with acetonitrile R.

Reference solution (c) Dissolve the contents of a vial of zuclopenthixol for system suitability CRS (containing impurities A, B and C) in 1 mL of methanol R.

Column:

- size: $l = 0.25$ m, $\varnothing = 4.6$ mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 μ m);
- temperature: 40 °C.

Mobile phase Mix 25 volumes of solution A and 75 volumes of anhydrous ethanol R, then add 0.1 volumes of phosphoric acid R.

Flow rate 1.0 mL/min.

Detection Spectrophotometer at 270 nm.

Injection 20 μ L.

Run time Twice the retention time of zuclopenthixol decanoate.

Identification of impurities Use the chromatogram supplied with zuclopenthixol for system suitability CRS and the chromatograms obtained with reference solutions (b) and (c) to identify the peaks due to impurities A, B and C.

Relative retention With reference to zuclopenthixol decanoate (retention time = about 12 min): impurity C = about 0.4; impurity B = about 0.5; impurity A = about 1.1.

System suitability Reference solution (c):

- peak-to-valley ratio: minimum 2.0, where H_p = height above the baseline of the peak due to impurity C and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity B; and minimum 2.5, where H_p = height above the baseline of the peak due to impurity A and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to zuclopenthixol decanoate.

Limits:

- impurity A: not more than 1.3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.3 per cent);
- impurity B: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- impurity C: not more than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- unspecified impurities: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- total: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent);
- disregard limit: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying (2.2.32)

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 3 h.

Sulfated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

CHARACTERISTICS

A yellowish, viscous oil.

Very slightly soluble in *water*; very soluble in *dichloromethane*, in *ethanol* (96%) and in *ether*.

IDENTIFICATION

A. The *light absorption* of a 0.0015% w/v solution in *ethanol* (96%), Appendix II B, in the range 210 to 350 nm exhibits two maxima at 230 and 268 nm. The *absorbances* at the maxima are about 1.18 and 0.51 respectively.

B. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of zuclopenthixol acetate (RS 363).

TESTS**Related substances**

Carry out the method for *thin-layer chromatography*, Appendix III A, using the following solutions protected from light.

(1) 0.250% w/v of the substance being examined in *dichloromethane*.

(2) Dilute 1 volume of solution (1) to 100 volume with *dichloromethane*, further dilute 1 volume of this solution to 10 volumes with the same solvent.

(3) Dilute 1 volume of solution (2) to 2 volumes with *dichloromethane*.

(4) 0.00050% w/v of 2-chlorothioxanthone BPCRS in *dichloromethane*.

(5) 0.000625% w/v of zuclopenthixol hydrochloride BPCRS in a solution containing 3 drops of *diethylamine* in *dichloromethane*.

CHROMATOGRAPHIC CONDITIONS

(a) Use as the coating *silica gel F₂₅₄* (Merck silica gel 60 F254 plates are suitable).

(b) Use an unlined tank and the mobile phase as described below.

(c) Apply 4 µL of each solution.

(d) Develop the plate to 10 cm.

(e) After removal of the plate, allow it to dry in air, spray with a mixture of equal volumes of *sulfuric acid* and *absolute ethanol*, heat at 110° for 5 minutes and examine under *ultraviolet light* (365 nm) immediately.

MOBILE PHASE

10 volumes of *diethylamine*, 40 volumes of *dichloromethane* and 50 volumes of *cyclohexane*.

LIMITS

In the chromatogram obtained with solution (1):

any spot corresponding to 2-chlorothioxanthone is not more intense than the spot in the chromatogram obtained with solution (4) (0.2%);

any spot corresponding to zuclopenthixol is not more intense than the spot in the chromatogram obtained with solution (5) (0.25%);

any other *secondary spot* is not more intense than the spot in the chromatogram obtained with solution (2) (0.1%);

not more than three other secondary spots are more intense than the spot in the chromatogram obtained with solution (3) (0.05%).

trans-Isomer

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions in *dichloromethane* protected from light.

(1) 0.040% w/v of the substance being examined.

(2) 0.00046% w/v of *trans-clopenthixol acetate dihydrochloride BPCRS* (equivalent to 0.00040% w/v of *trans-clopenthixol acetate*).

(3) 0.020% w/v of the substance being examined and 0.023% w/v of *trans-clopenthixol acetate dihydrochloride BPCRS*.

CHROMATOGRAPHIC CONDITIONS

(a) Use stainless steel column (25 cm x 4.6 mm) packed with *silica gel for chromatography* (5 µm) (Spherisorb S 5W is suitable).

(b) Use isocratic elution and the mobile phase described below.

(c) Use a flow rate of 2 mL per minute.

(d) Use ambient temperature.

(e) Use a detection wavelength of 254 nm.

(f) Inject 15 µL of each solution.

MOBILE PHASE

0.03 volume of 13.5M *ammonia*, 45 volumes of *dichloromethane*, 45 volumes of *heptane* and 50 volumes of *acetonitrile*.

SYSTEM SUITABILITY

The test is not valid unless, in the chromatogram obtained with solution (3), the *resolution* between the principal peaks is at least 2.6.

LIMITS

In the chromatogram obtained with solution (1), the area of any peak corresponding to *trans-clopenthixol acetate* is not greater than the area of the peak in the chromatogram obtained with solution (2) (1%).

Loss on drying

When dried at 60° at a pressure not exceeding 0.7 kPa for 3 hours, loses not more than 0.4% of its weight, Appendix XI D. Use 1 g.

Sulfated ash

Not more than 0.1%, Appendix IX A.

ASSAY

Dissolve 0.2 g in 50 mL of *anhydrous acetic acid* and carry out Method I for *non-aqueous titration*, Appendix VIII A, determining the end point potentiometrically. Each mL of 0.1M *perchloric acid VS* is equivalent to 22.15 mg of C₂₄H₂₇ClN₂O₂S.

STORAGE

Zuclopenthixol Acetate should be protected from light and stored at a temperature not exceeding -20°.

IMPURITIES

A. *trans-clopenthixol acetate* (*trans-isomer*),

B. 2-chlorothioxanthone,

ASSAY

Dissolve 0.250 g in 50 mL of *anhydrous acetic acid R*. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 27.76 mg of $C_{32}H_{43}ClN_2O_2S$.

STORAGE

Under an inert gas in an airtight container, protected from light, at $-20\text{ }^{\circ}\text{C}$ or below.

IMPURITIES

Specified impurities A, B, C.

A. 2-[4-[3-[(9E)-2-chloro-9H-thioxanthen-9-ylidene]propyl]piperazin-1-yl]ethyl decanoate,

B. 2-chloro-9H-thioxanthen-9-one,

C. 2-[4-[3-[(9Z)-2-chloro-9H-thioxanthen-9-ylidene]propyl]piperazin-1-yl]ethanol.

Ph Eur

Zuclopenthixol Hydrochloride

$C_{22}H_{25}ClN_2OS, 2HCl$ 473.9

633-59-0

Action and use

Dopamine receptor antagonist; neuroleptic.

Preparation

Zuclopenthixol Tablets

DEFINITION

Zuclopenthixol Hydrochloride is (Z)-2-[4-[3-(2-chlorothioxanthene-9-ylidene)propyl]piperazin-1-yl]ethanol dihydrochloride. It contains not less than 98.0% and not

more than 101.0% of $C_{22}H_{25}ClN_2OS, 2HCl$, calculated with reference to the anhydrous substance.

CHARACTERISTICS

An off-white, granular powder.

Very soluble in *water*; sparingly soluble in *ethanol (96%)*; very slightly soluble in *ether*.

IDENTIFICATION

A. The *light absorption* of a 0.0015% w/v solution in *ethanol (96%)*, Appendix II B, in the range 210 to 350 nm exhibits two maxima at 230 and 268 nm. The *absorbances* at the maxima are about 1.0 and 0.4, respectively.

B. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of zuclopenthixol hydrochloride (RS 365).

C. Yields reaction A characteristic of *chlorides*, Appendix VI.

TESTS**Acidity**

pH of a 1.0% w/v solution, 2.0 to 3.0, Appendix V L.

Free amine

Carry out the method for *thin-layer chromatography*, Appendix III A, using the following solutions protected from light.

Solvent A Shake 0.6 mL of *diethylamine* with 150 mL of *ethanol (96%)* and add sufficient *ethanol (96%)* to produce 200 mL.

(1) 0.25% w/v solution of the substance being examined in solvent A.

(2) Dilute 1 volume of solution (1) to 400 volumes with solvent A.

CHROMATOGRAPHIC CONDITIONS

(a) Use a *TLC silica gel F₂₅₄ plate* (Merck plates are suitable).

(b) Use the mobile phase as described below.

(c) Apply 4 μL of each solution.

(d) Develop the plate to 10 cm.

(e) After removal of the plate, allow it to dry in air, spray with a mixture of equal volumes of *sulfuric acid* and *absolute ethanol*, heat at 110° for 5 minutes and examine under *ultraviolet light (365 nm)* immediately.

MOBILE PHASE

2 volumes of *water*, 10 volumes of 13.5M *ammonia*, 20 volumes of *butan-1-ol* and 65 volumes of *acetone*.

LIMITS

In the chromatogram obtained with solution (1) any *secondary spot* of the same colour and at an *R_f* value lower than that of the principal spot is not more intense than the spot in the chromatogram obtained solution (2) (0.25%).

Related substances

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions protected from light.

Solution A 18 volumes of *acetonitrile* and 82 volumes of *water*.

(1) Dissolve 20 mg of the substance being examined in 200 mL of solution A.

(2) Dilute 1 volume of solution (1) to 100 volumes with solution A and further dilute 1 volume of this solution to 10 volumes with solution A.

(3) Dilute 3 volumes of solution (1) to 100 volumes with solution A.

(4) 0.002% w/v each of *zuclopenthixol hydrochloride* BPCRS and *trans-clopenthixol hydrochloride* BPCRS (impurity B) in solution A.

CHROMATOGRAPHIC CONDITIONS

- Use a stainless steel column (5 cm × 2.1 mm) packed with *octadecylsilyl silica gel for chromatography* (3.5 μm) (Symmetry Shield RP18 is suitable).
- Use gradient elution and the mobile phase described below.
- Use a flow rate of 0.6 mL per minute.
- Use a column temperature 40°.
- Use a detection wavelength of 270 nm.
- Inject 5 μL of each solution.

MOBILE PHASE

Mobile phase A 1 volume of *trifluoroacetic acid* and 25 volumes of *water*.

Mobile phase B 1 volume of *trifluoroacetic acid* and 25 volumes of *acetonitrile*.

Mobile phase C *methanol*.

Time (Minutes)	Mobile phase A (% v/v)	Mobile phase B (% v/v)	Mobile phase C (% v/v)	Comment
0-8	82	18	0	isocratic
8-17	82→5	18→10	0→85	linear gradient
17-19	5→82	10→18	85→0	linear gradient
19-30	82	18	0	re-equilibration

When the chromatograms are recorded under the prescribed conditions, the retention times relative to *zuclopenthixol* (retention time about 6 minutes) are: impurity A, about 0.1; impurity B, about 1.2.

SYSTEM SUITABILITY

The test is not valid unless, in the chromatogram obtained with solution (4), the *resolution* between the peaks corresponding to *zuclopenthixol* and impurity B is at least 2.0.

LIMITS

In the chromatogram obtained with solution (1):

The area of any peak due to *trans-zuclopenthixol* is not greater than the area of the principal peak in the chromatogram obtained with solution (3) (3%);

The area of any other *secondary peak* is not greater than the area of the principal peak in the chromatogram obtained with solution (2) (0.1%).

The sum of the areas of any *secondary peak*, excluding *trans-clopenthixol hydrochloride*, is not greater than 5 times the area of the principal peak in the chromatogram obtained with solution (2) (0.5%).

Disregard any peak with an area less than half the area of the principal peak in the chromatogram obtained with solution (2) (0.05%).

Water

Not more than 2.5%, determined on 0.5 g, Appendix IX C.

Sulfated ash

Not more than 0.1%, Appendix IX A.

ASSAY

Dissolve 0.5 g in 50 mL of *anhydrous acetic acid* and carry out Method I for *non-aqueous titration*, Appendix VIII A, using *crystal violet solution* as indicator. Each mL of 0.1M

perchloric acid VS is equivalent to 23.70 mg of C₂₂H₂₇Cl₃N₂OS.

STORAGE

Zuclopenthixol Hydrochloride should be protected from light.

IMPURITIES

A. 2-chloro-9-(1-hydroxy-3-(4-(2-hydroxyethyl))piperazin-1-ylpropyl)thioxanthene-9-ol,

B. *trans-clopenthixol*,

C. 2-chlorothioxanthone,

D. 9-allyl-2-chlorothioxanthene-9-ol,

E. 9-allylidene-2-chlorothioxanthene,

F. 2-chloro-9-(3-piperazin-1-ylpropylidene)thioxanthene.
