27.5-year property	Includes residential rental property
39-year property	Includes nonresidential real property

¹⁵For example, in an effort to jump-start the economy following the September 11, 2001, terrorist attacks, Congress passed the Job Creation and Worker Assistance Act of 2002 (the Act). The Act allows a 30 percent first-year bonus depreciation for assets placed into service after September 11, 2001, but before September 11, 2004. A follow-up provision enacted in 2003 extended the tax savings to assets placed in service before January 1, 2005. And in 2010, Congress extended bonus depreciation for smaller companies. These laws encourage companies to invest in fixed assets because they can front-load depreciation expense, which lowers taxable income and amount of taxes companies pay in the early years of an asset’s life. Although the Act may be a good thing for the economy, it can distort cash flow measures—making them look artificially strong when the allowances are in place but reversing once the bonus depreciation expires. See D. Zion and B. Carcache, “Bonus Depreciation Boomerang,” *Credit Suisse First Boston Equity Research* (February 19, 2004).

Tax Depreciation Methods

Companies compute depreciation expense using the tax basis—usually the cost—of the asset. The depreciation method depends on the MACRS property class, as shown below.

MACRS Property Class	Depreciation Method
3-, 5-, 7-, and 10-year property	Double-declining-balance
15- and 20-year property	150% declining-balance
27.5- and 39-year property	Straight-line

ILLUSTRATION 11A-2
Depreciation Method for Various MACRS Property Classes

Depreciation computations for income tax purposes are based on the **half-year convention**. That is, a half year of depreciation is allowable in the year of acquisition and in the year of disposition.¹⁶ A company depreciates an asset to a zero value so that there is no salvage value at the end of its MACRS life.

Use of IRS-published tables, shown in Illustration 11A-3, simplifies application of these depreciation methods.

Recovery Year	MACRS Depreciation Rates by Class of Property					
	3-year (200% DB)	5-year (200% DB)	7-year (200% DB)	10-year (200% DB)	15-year (150% DB)	20-year (150% DB)
1	33.33	20.00	14.29	10.00	5.00	3.750
2	44.45	32.00	24.49	18.00	9.50	7.219
3	14.81*	19.20	17.49	14.40	8.55	6.677
4	7.41	11.52*	12.49	11.52	7.70	6.177
5		11.52	8.93*	9.22	6.93	5.713
6		5.76	8.92	7.37	6.23	5.285
7			8.93	6.55*	5.90*	4.888
8			4.46	6.55	5.90	4.522
9				6.56	5.91	4.462*
10				6.55	5.90	4.461
11				3.28	5.91	4.462
12					5.90	4.461
13					5.91	4.462
14					5.90	4.461
15					5.91	4.462
16					2.95	4.461
17						4.462
18						4.461
19						4.462
20						4.461
21						2.231

*Switchover to straight-line depreciation.

ILLUSTRATION 11A-3
IRS Table of MACRS Depreciation Rates, by Property Class

Example of MACRS

To illustrate depreciation computations under both MACRS and GAAP straight-line accounting, assume the following facts for a computer and peripheral equipment purchased by Denise Rode Company on January 1, 2013.

¹⁶The tax law requires mid-quarter and mid-month conventions for MACRS purposes in certain circumstances.

Acquisition Date	January 1, 2013
Cost	\$100,000
Estimated useful life	7 years
Estimated salvage value	\$16,000
MACRS class life	5 years
MACRS method	200% declining-balance
GAAP method	Straight-line
Disposal proceeds—January 2, 2020	\$11,000

Using the rates from the MACRS depreciation rate schedule for a 5-year class of property, Rode computes depreciation as follows for tax purposes.

ILLUSTRATION 11A-4

Computation of MACRS Depreciation

MACRS Depreciation		
2013	$\$100,000 \times .20$	= \$ 20,000
2014	$\$100,000 \times .32$	= 32,000
2015	$\$100,000 \times .192$	= 19,200
2016	$\$100,000 \times .1152$	= 11,520
2017	$\$100,000 \times .1152$	= 11,520
2018	$\$100,000 \times .0576$	= 5,760
	Total depreciation	<u>\$100,000</u>

Rode computes the depreciation under GAAP straight-line method, with \$16,000 of estimated salvage value and an estimated useful life of 7 years, as shown in Illustration 11A-5.

ILLUSTRATION 11A-5

Computation of GAAP Depreciation

GAAP Depreciation	
$(\$100,000 - \$16,000) \div 7$	= \$12,000 annual depreciation
	$\times 7$ years
1/1/13–1/2/20	<u>\$84,000</u> total depreciation

The MACRS depreciation recovers the total cost of the asset on an accelerated basis. But, a taxable gain of \$11,000 results from the sale of the asset at January 2, 2020. Therefore, the net effect on taxable income for the years 2013 through 2020 is \$89,000 (\$100,000 depreciation – \$11,000 gain).

Under GAAP, the company recognizes a loss on disposal of \$5,000 (\$16,000 book value – \$11,000 disposal proceeds). The net effect on income before income taxes for the years 2013 through 2020 is \$89,000 (\$84,000 depreciation + \$5,000 loss), the same as the net effect of MACRS on taxable income.

Even though the net effects are equal in amount, the deferral of income tax payments under MACRS from early in the life of the asset to later in life is desirable. The different amounts of depreciation for income tax reporting and financial GAAP reporting in each year are a matter of timing and result in temporary differences, which require **interperiod tax allocation**. (See Chapter 19 for an extended treatment of this topic.)

OPTIONAL STRAIGHT-LINE METHOD

An alternate MACRS method exists for determining depreciation deductions. Based on the straight-line method, it is referred to as the **optional** (elective) **straight-line method**. This method applies to the six classes of property described earlier. The alternate

MACRS applies the straight-line method to the MACRS recovery periods. It ignores salvage value.

Under the optional straight-line method, in the first year in which the property is put in service, the company deducts half of the amount of depreciation that would be permitted for a full year (half-year convention). *Use the half-year convention for homework problems.*

TAX VERSUS BOOK DEPRECIATION

GAAP requires that companies allocate the cost of depreciable assets to expense over the expected useful life of the asset in a systematic and rational manner. Some argue that from a cost-benefit perspective it would be better for companies to adopt the MACRS approach in order to eliminate the necessity of maintaining two different sets of records.

However, the tax laws and financial reporting have different objectives. The purpose of taxation is to raise revenue from constituents in an equitable manner. The purpose of financial reporting is to reflect the economic substance of a transaction as closely as possible and to help predict the amounts, timing, and uncertainty of future cash flows. Because these objectives differ, the adoption of one method for both tax and book purposes in all cases is not in accordance with GAAP.

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 11A

KEY TERM

Modified Accelerated
Cost Recovery System
(MACRS), 614

8 Describe income tax methods of depreciation. Congress enacted a Modified Accelerated Cost Recovery System (MACRS) in the Tax Reform Act of 1986. It applies to depreciable assets placed in service in 1987 and later. The computation of depreciation under MACRS differs from the computation under GAAP in three respects: (1) a mandated tax life, which is generally shorter than the economic life; (2) cost recovery on an accelerated basis; and (3) an assigned salvage value of zero.

DEMONSTRATION PROBLEM

Norwel Company manufactures miniature circuit boards used in smartphones. On June 5, 2014, Norwel purchased a circuit board stamping machine at a retail price of \$24,000. Norwel paid 5% sales tax on this purchase and hired a contractor to build a specially wired platform for the machine for \$1,800, to meet OSHA safety requirements. Norwel estimates the machine will have a 5-year useful life, with a salvage value of \$2,000 at the end of 5 years. Norwel uses straight-line depreciation and employs the “half-year” convention in accounting for partial-year depreciation. Norwel’s fiscal year ends on December 31.

Instructions

- At what amount should Norwel record the acquisition cost of the machine?
- How much depreciation expense should Norwel record in 2014 and in 2015?
- At what amount will the machine be reported in Norwel’s balance sheet at December 31, 2015?
- During 2016, Norwel’s circuit board business is experiencing significant competition from companies with more advanced low-heat circuit boards. As a result, at June 30, 2016, Norwel conducts an impairment evaluation of the stamping machine purchased in 2014. Norwel determines that undiscounted future cash flows for the machine are estimated to be \$15,200 and the fair value of the machine, based on prices in the re-sale market, to be \$13,400. Prepare the journal entry to record an impairment, if any, on the stamping machine.

Solution

(a) Historical cost is measured by the cash or cash equivalent price of obtaining the asset and bringing it to the location and condition for its intended use. For Norwel, this is:

Price	\$24,000
Tax ($\$24,000 \times .05$)	1,200
Platform	<u>1,800</u>
Total	<u><u>\$27,000</u></u>

(b) Depreciable base: $\$27,000 - \$2,000 = \$25,000$

Depreciation expense: $\$25,000 \div 5 = \$5,000$ per year

2014: 1/2 year = $\$5,000 \times .50 = \$2,500$

2015: full year = $\$5,000$

(c) The amount reported on the balance sheet is the cost of the asset less accumulated depreciation:

Machinery	\$27,000
Less: Accumulated depreciation	<u>7,500</u>
Book value	<u><u>\$19,500</u></u>

(d) Norwel first conducts the recoverability test, comparing the book value of the machine to the undiscounted future cash flows. This indicates the future cash flows (\$15,200) are less than the book value (\$17,000*).

*Cost	\$27,000
Less: Accumulated depreciation ($\$2,500 + \$5,000 + \$2,500$)	<u>10,000</u>
Book value of machine and platform	<u><u>\$17,000</u></u>

Thus, Norwel will record an impairment, based on comparison of the fair value of the machine and platform to the book value. The entry is as follows.

Loss on Impairment ($\$17,000 - \$13,400$)	3,600	
Accumulated Depreciation—Machinery		3,600

FASB CODIFICATION

FASB Codification References

Exercises

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/asclogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

CE11-1 Access the glossary ("Master Glossary") to answer the following.

- (a) What is the definition of amortization?
- (b) What is the definition of impairment?
- (c) What is the definition of recoverable amount?
- (d) What are activities, as they relate to the construction of an asset?

CE11-2 Your client, Barriques Inc., is contemplating a restructuring of its operations, including the possibility of spinning off some of its assets to the original owners. However, management is unsure of the accounting for any impairment on the assets. What does the authoritative literature say about these types of impairments?

CE11-3 Your great-uncle, who is a CPA, is impressed that you are majoring in accounting. But, he believes that depreciation is something that companies do based on past practice, not on the basis of any authoritative guidance. Provide the authoritative literature to support the practice of fixed-asset depreciation.

CE11-4 What is the nature of SEC guidance concerning property, plant, and equipment disclosures?

An additional Codification case can be found in the Using Your Judgment section, on page 637.

Be sure to check the book's companion website for a Review and Analysis Exercise, with solution.

WileyPLUS

Brief Exercises, Exercises, Problems, and many more learning and assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

QUESTIONS

- Distinguish among depreciation, depletion, and amortization.
- Identify the factors that are relevant in determining the annual depreciation charge, and explain whether these factors are determined objectively or whether they are based on judgment.
- Some believe that accounting depreciation measures the decline in the value of fixed assets. Do you agree? Explain.
- Explain how estimation of service lives can result in unrealistically high carrying values for fixed assets.
- The plant manager of a manufacturing firm suggested in a conference of the company's executives that accountants should speed up depreciation on the machinery in the finishing department because improvements were rapidly making those machines obsolete, and a depreciation fund big enough to cover their replacement is needed. Discuss the accounting concept of depreciation and the effect on a business concern of the depreciation recorded for plant assets, paying particular attention to the issues raised by the plant manager.
- For what reasons are plant assets retired? Define inadequacy, supersession, and obsolescence.
- What basic questions must be answered before the amount of the depreciation charge can be computed?
- Workman Company purchased a machine on January 2, 2014, for \$800,000. The machine has an estimated useful life of 5 years and a salvage value of \$100,000. Depreciation was computed by the 150% declining-balance method. What is the amount of accumulated depreciation at the end of December 31, 2015?
- Silverman Company purchased machinery for \$162,000 on January 1, 2014. It is estimated that the machinery will have a useful life of 20 years, salvage value of \$15,000, production of 84,000 units, and working hours of 42,000. During 2014, the company uses the machinery for 14,300 hours, and the machinery produces 20,000 units. Compute depreciation under the straight-line, units-of-output, working hours, sum-of-the-years'-digits, and double-declining-balance methods.
- What are the major factors considered in determining what depreciation method to use?
- Under what conditions is it appropriate for a business to use the composite method of depreciation for its plant assets? What are the advantages and disadvantages of this method?
- If Remmers, Inc. uses the composite method and its composite rate is 7.5% per year, what entry should it make when plant assets that originally cost \$50,000 and have been used for 10 years are sold for \$14,000?

13. A building that was purchased on December 31, 2000, for \$2,500,000 was originally estimated to have a life of 50 years with no salvage value at the end of that time. Depreciation has been recorded through 2014. During 2015, an examination of the building by an engineering firm discloses that its estimated useful life is 15 years after 2014. What should be the amount of depreciation for 2015?
14. Charlie Parker, president of Spinners Company, has recently noted that depreciation increases cash provided by operations and therefore depreciation is a good source of funds. Do you agree? Discuss.
15. Andrea Torbert purchased a computer for \$8,000 on July 1, 2014. She intends to depreciate it over 4 years using the double-declining-balance method. Salvage value is \$1,000. Compute depreciation for 2015.
16. Walkin Inc. is considering the write-down of its long-term plant because of a lack of profitability. Explain to the management of Walkin how to determine whether a write-down is permitted.
17. Last year, Wyeth Company recorded an impairment on an asset held for use. Recent appraisals indicate that the asset has increased in value. Should Wyeth record this recovery in value?
18. Toro Co. has equipment with a carrying amount of \$700,000. The expected future net cash flows from the equipment are \$705,000, and its fair value is \$590,000. The equipment is expected to be used in operations in the future. What amount (if any) should Toro report as an impairment to its equipment?
19. Explain how gains or losses on impaired assets should be reported in income.
20. It has been suggested that plant and equipment could be replaced more quickly if depreciation rates for income tax and accounting purposes were substantially increased. As a result, business operations would receive the benefit of more modern and more efficient plant facilities. Discuss the merits of this proposition.
21. Neither depreciation on replacement cost nor depreciation adjusted for changes in the purchasing power of the dollar has been recognized as generally accepted accounting principles for inclusion in the primary financial statements. Briefly present the accounting treatment that might be used to assist in the maintenance of the ability of a company to replace its productive capacity.
22. List (a) the similarities and (b) the differences in the accounting treatments of depreciation and cost depletion.
23. Describe cost depletion and percentage depletion. Why is the percentage depletion method permitted?
24. In what way may the use of percentage depletion violate sound accounting theory?
25. In the extractive industries, businesses may pay dividends in excess of net income. What is the maximum permissible? How can this practice be justified?
26. The following statement appeared in a financial magazine: "RRA—or Rah-Rah, as it's sometimes dubbed—has kicked up quite a storm. Oil companies, for example, are convinced that the approach is misleading. Major accounting firms agree." What is RRA? Why might oil companies believe that this approach is misleading?
27. Shumway Oil uses successful-efforts accounting and also provides full-cost results as well. Under full-cost, Shumway Oil would have reported retained earnings of \$42 million and net income of \$4 million. Under successful-efforts, retained earnings were \$29 million, and net income was \$3 million. Explain the difference between full-costing and successful-efforts accounting.
28. **Target** in 2012 reported net income of \$2.9 billion, net sales of \$69.8 billion, and average total assets of \$45.2 billion. What is Target's asset turnover? What is Target's return on assets?
- *29. What is a modified accelerated cost recovery system (MACRS)? Speculate as to why this system is now required for tax purposes.

BRIEF EXERCISES

- 2** **3** **BE11-1** Fernandez Corporation purchased a truck at the beginning of 2014 for \$50,000. The truck is estimated to have a salvage value of \$2,000 and a useful life of 160,000 miles. It was driven 23,000 miles in 2014 and 31,000 miles in 2015. Compute depreciation expense for 2014 and 2015.
- 2** **3** **BE11-2** Lockard Company purchased machinery on January 1, 2014, for \$80,000. The machinery is estimated to have a salvage value of \$8,000 after a useful life of 8 years. (a) Compute 2014 depreciation expense using the straight-line method. (b) Compute 2014 depreciation expense using the straight-line method assuming the machinery was purchased on September 1, 2014.
- 2** **3** **BE11-3** Use the information for Lockard Company given in BE11-2. (a) Compute 2014 depreciation expense using the sum-of-the-years'-digits method. (b) Compute 2014 depreciation expense using the sum-of-the-years'-digits method, assuming the machinery was purchased on April 1, 2014.

- 2 3** **BE11-4** Use the information for Lockard Company given in BE11-2. (a) Compute 2014 depreciation expense using the double-declining-balance method. (b) Compute 2014 depreciation expense using the double-declining-balance method, assuming the machinery was purchased on October 1, 2014.
- 2 3** **BE11-5** Cominsky Company purchased a machine on July 1, 2015, for \$28,000. Cominsky paid \$200 in title fees and county property tax of \$125 on the machine. In addition, Cominsky paid \$500 shipping charges for delivery, and \$475 was paid to a local contractor to build and wire a platform for the machine on the plant floor. The machine has an estimated useful life of 6 years with a salvage value of \$3,000. Determine the depreciation base of Cominsky's new machine. Cominsky uses straight-line depreciation.
- 4** **BE11-6** Dickinson Inc. owns the following assets.

Asset	Cost	Salvage	Estimated Useful Life
A	\$70,000	\$7,000	10 years
B	50,000	5,000	5 years
C	82,000	4,000	12 years

Compute the composite depreciation rate and the composite life of Dickinson's assets.

- 4** **BE11-7** Holt Company purchased a computer for \$8,000 on January 1, 2013. Straight-line depreciation is used, based on a 5-year life and a \$1,000 salvage value. In 2015, the estimates are revised. Holt now feels the computer will be used until December 31, 2016, when it can be sold for \$500. Compute the 2015 depreciation.
- 5** **BE11-8** Jurassic Company owns equipment that cost \$900,000 and has accumulated depreciation of \$380,000. The expected future net cash flows from the use of the asset are expected to be \$500,000. The fair value of the equipment is \$400,000. Prepare the journal entry, if any, to record the impairment loss.
- 6** **BE11-9** Everly Corporation acquires a coal mine at a cost of \$400,000. Intangible development costs total \$100,000. After extraction has occurred, Everly must restore the property (estimated fair value of the obligation is \$80,000), after which it can be sold for \$160,000. Everly estimates that 4,000 tons of coal can be extracted. If 700 tons are extracted the first year, prepare the journal entry to record depletion.
- 7** **BE11-10** In its 2011 annual report, **Campbell Soup Company** reports beginning-of-the-year total assets of \$6,276 million, end-of-the-year total assets of \$6,862 million, total sales of \$7,719 million, and net income of \$805 million. (a) Compute Campbell's asset turnover. (b) Compute Campbell's profit margin on sales. (c) Compute Campbell's return on assets using (1) asset turnover and profit margin and (2) net income.
- 8** ***BE11-11** Francis Corporation purchased an asset at a cost of \$50,000 on March 1, 2014. The asset has a useful life of 8 years and a salvage value of \$4,000. For tax purposes, the MACRS class life is 5 years. Compute tax depreciation for each year 2014–2019.

EXERCISES

- 2 3** **E11-1 (Depreciation Computations—SL, SYD, DDB)** Deluxe Ezra Company purchases equipment on January 1, Year 1, at a cost of \$469,000. The asset is expected to have a service life of 12 years and a salvage value of \$40,000.

Instructions

- Compute the amount of depreciation for each of Years 1 through 3 using the straight-line depreciation method.
 - Compute the amount of depreciation for each of Years 1 through 3 using the sum-of-the-years'-digits method.
 - Compute the amount of depreciation for each of Years 1 through 3 using the double-declining-balance method. (In performing your calculations, round constant percentage to the nearest one-hundredth of a point and round answers to the nearest dollar.)
- 2 3** **E11-2 (Depreciation—Conceptual Understanding)** Rembrandt Company acquired a plant asset at the beginning of Year 1. The asset has an estimated service life of 5 years. An employee has prepared depreciation schedules for this asset using three different methods to compare the results of using one method with the results of using other methods. You are to assume that the following schedules have been correctly prepared for this asset using (1) the straight-line method, (2) the sum-of-the-years'-digits method, and (3) the double-declining-balance method.

Year	Straight-Line	Sum-of-the-Years'-Digits	Double-Declining-Balance
1	\$ 9,000	\$15,000	\$20,000
2	9,000	12,000	12,000
3	9,000	9,000	7,200
4	9,000	6,000	4,320
5	9,000	3,000	1,480
Total	<u>\$45,000</u>	<u>\$45,000</u>	<u>\$45,000</u>

Instructions

Answer the following questions.

- What is the cost of the asset being depreciated?
- What amount, if any, was used in the depreciation calculations for the salvage value for this asset?
- Which method will produce the highest charge to income in Year 1?
- Which method will produce the highest charge to income in Year 4?
- Which method will produce the highest book value for the asset at the end of Year 3?
- If the asset is sold at the end of Year 3, which method would yield the highest gain (or lowest loss) on disposal of the asset?

- 2 3** **E11-3 (Depreciation Computations—SYD, DDB—Partial Periods)** Judds Company purchased a new plant asset on April 1, 2014, at a cost of \$711,000. It was estimated to have a service life of 20 years and a salvage value of \$60,000. Judds' accounting period is the calendar year.

Instructions

- Compute the depreciation for this asset for 2014 and 2015 using the sum-of-the-years'-digits method.
- Compute the depreciation for this asset for 2014 and 2015 using the double-declining-balance method.

- 2 3** **E11-4 (Depreciation Computations—Five Methods)** Jon Seceda Furnace Corp. purchased machinery for \$315,000 on May 1, 2014. It is estimated that it will have a useful life of 10 years, salvage value of \$15,000, production of 240,000 units, and working hours of 25,000. During 2015, Seceda Corp. uses the machinery for 2,650 hours, and the machinery produces 25,500 units.

XLS

**Instructions**

From the information given, compute the depreciation charge for 2015 under each of the following methods. (Round to the nearest dollar.)

- Straight-line.
- Units-of-output.
- Working hours.
- Sum-of-the-years'-digits.
- Declining-balance (use 20% as the annual rate).

- 2 3** **E11-5 (Depreciation Computations—Four Methods)** Robert Parish Corporation purchased a new machine for its assembly process on August 1, 2014. The cost of this machine was \$117,900. The company estimated that the machine would have a salvage value of \$12,900 at the end of its service life. Its life is estimated at 5 years, and its working hours are estimated at 21,000 hours. Year-end is December 31.

Instructions

Compute the depreciation expense under the following methods. Each of the following should be considered unrelated.

- Straight-line depreciation for 2014.
- Activity method for 2014, assuming that machine usage was 800 hours.
- Sum-of-the-years'-digits for 2015.
- Double-declining-balance for 2015.

- 2 3** **E11-6 (Depreciation Computations—Five Methods, Partial Periods)** Muggsy Bogues Company purchased equipment for \$212,000 on October 1, 2014. It is estimated that the equipment will have a useful life of 8 years and a salvage value of \$12,000. Estimated production is 40,000 units and estimated working hours are 20,000. During 2014, Bogues uses the equipment for 525 hours and the equipment produces 1,000 units.

Instructions

Compute depreciation expense under each of the following methods. Bogues is on a calendar-year basis ending December 31.

- Straight-line method for 2014.
- Activity method (units of output) for 2014.

- (c) Activity method (working hours) for 2014.
 (d) Sum-of-the-years'-digits method for 2016.
 (e) Double-declining-balance method for 2015.

2 3 E11-7 (Different Methods of Depreciation) Jackel Industries presents you with the following information.

Description	Date Purchased	Cost	Salvage Value	Life in Years	Depreciation Method	Accumulated Depreciation to 12/31/15	Depreciation for 2016
Machine A	2/12/14	\$142,500	\$16,000	10	(a)	\$33,350	(b)
Machine B	8/15/13	(c)	21,000	5	SL	29,000	(d)
Machine C	7/21/12	75,400	23,500	8	DDB	(e)	(f)
Machine D	10/12/(g)	219,000	69,000	5	SYD	70,000	(h)

Instructions

Complete the table for the year ended December 31, 2016. The company depreciates all assets using the half-year convention.

2 3 E11-8 (Depreciation Computation—Replacement, Nonmonetary Exchange) George Zidek Corporation bought a machine on June 1, 2012, for \$31,000, f.o.b. the place of manufacture. Freight to the point where it was set up was \$200, and \$500 was expended to install it. The machine's useful life was estimated at 10 years, with a salvage value of \$2,500. On June 1, 2013, an essential part of the machine is replaced, at a cost of \$1,980, with one designed to reduce the cost of operating the machine. The cost of the old part and related depreciation cannot be determined with any accuracy.

On June 1, 2016, the company buys a new machine of greater capacity for \$35,000, delivered, trading in the old machine which has a fair value and trade-in allowance of \$20,000. To prepare the old machine for removal from the plant cost \$75, and expenditures to install the new one were \$1,500. It is estimated that the new machine has a useful life of 10 years, with a salvage value of \$4,000 at the end of that time. (The exchange has commercial substance.)

Instructions

Assuming that depreciation is to be computed on the straight-line basis, compute the annual depreciation on the new equipment that should be provided for the fiscal year beginning June 1, 2016. (Round to the nearest dollar.)

4 E11-9 (Composite Depreciation) Presented below is information related to LeBron James Manufacturing Corporation.

Asset	Cost	Estimated Salvage	Estimated Life (in years)
A	\$40,500	\$5,500	10
B	33,600	4,800	9
C	36,000	3,600	9
D	19,000	1,500	7
E	23,500	2,500	6

Instructions

- (a) Compute the rate of depreciation per year to be applied to the plant assets under the composite method.
 (b) Prepare the adjusting entry necessary at the end of the year to record depreciation for the year.
 (c) Prepare the entry to record the sale of asset D for cash of \$4,800. It was used for 6 years, and depreciation was entered under the composite method.

2 3 E11-10 (Depreciation Computations, SYD) Five Satins Company purchased a piece of equipment at the beginning of 2011. The equipment cost \$430,000. It has an estimated service life of 8 years and an expected salvage value of \$70,000. The sum-of-the-years'-digits method of depreciation is being used. Someone has already correctly prepared a depreciation schedule for this asset. This schedule shows that \$60,000 will be depreciated for a particular calendar year.

Instructions

Show calculations to determine for what particular year the depreciation amount for this asset will be \$60,000.

2 3 E11-11 (Depreciation—Change in Estimate) Machinery purchased for \$60,000 by Tom Brady Co. in 2010 was originally estimated to have a life of 8 years with a salvage value of \$4,000 at the end of that time. Depreciation has been entered for 5 years on this basis. In 2015, it is determined that the total estimated life should be 10 years with a salvage value of \$4,500 at the end of that time. Assume straight-line depreciation.

Instructions

- (a) Prepare the entry to correct the prior years' depreciation, if necessary.
- (b) Prepare the entry to record depreciation for 2015.

- 2 3** **E11-12 (Depreciation Computation—Addition, Change in Estimate)** In 1987, Herman Moore Company completed the construction of a building at a cost of \$2,000,000 and first occupied it in January 1988. It was estimated that the building will have a useful life of 40 years and a salvage value of \$60,000 at the end of that time.

Early in 1998, an addition to the building was constructed at a cost of \$500,000. At that time, it was estimated that the remaining life of the building would be, as originally estimated, an additional 30 years, and that the addition would have a life of 30 years and a salvage value of \$20,000.

In 2016, it is determined that the probable life of the building and addition will extend to the end of 2047, or 20 years beyond the original estimate.

Instructions

- (a) Using the straight-line method, compute the annual depreciation that would have been charged from 1988 through 1997.
- (b) Compute the annual depreciation that would have been charged from 1998 through 2015.
- (c) Prepare the entry, if necessary, to adjust the account balances because of the revision of the estimated life in 2016.
- (d) Compute the annual depreciation to be charged, beginning with 2016.

- 2 3** **E11-13 (Depreciation—Replacement, Change in Estimate)** Greg Maddox Company constructed a building at a cost of \$2,200,000 and occupied it beginning in January 1995. It was estimated at that time that its life would be 40 years, with no salvage value.

In January 2015, a new roof was installed at a cost of \$300,000, and it was estimated then that the building would have a useful life of 25 years from that date. The cost of the old roof was \$160,000.

Instructions

- (a) What amount of depreciation should have been charged annually from the years 1995 to 2014? (Assume straight-line depreciation.)
- (b) What entry should be made in 2015 to record the replacement of the roof?
- (c) Prepare the entry in January 2015 to record the revision in the estimated life of the building, if necessary.
- (d) What amount of depreciation should be charged for the year 2015?

- 2 3** **E11-14 (Error Analysis and Depreciation, SL and SYD)** Mike Devereaux Company shows the following entries in its Equipment account for 2015. All amounts are based on historical cost.

Equipment			
2015			2015
Jan. 1	Balance	134,750	June 30
Aug. 10	Purchases	32,000	Cost of equipment sold
12	Freight on equipment purchased	700	(purchased prior to 2015)
25	Installation costs	2,700	23,000
Nov. 10	Repairs	500	

Instructions

- (a) Prepare any correcting entries necessary.
- (b) Assuming that depreciation is to be charged for a full year on the ending balance in the asset account, compute the proper depreciation charge for 2015 under each of the methods listed below. Assume an estimated life of 10 years, with no salvage value. The machinery included in the January 1, 2015, balance was purchased in 2013.
 - (1) Straight-line.
 - (2) Sum-of-the-years'-digits.

- 2 3** **E11-15 (Depreciation for Fractional Periods)** On March 10, 2016, Lost World Company sells equipment that it purchased for \$192,000 on August 20, 2009. It was originally estimated that the equipment would have a life of 12 years and a salvage value of \$16,800 at the end of that time, and depreciation has been computed on that basis. The company uses the straight-line method of depreciation.

Instructions

- (a) Compute the depreciation charge on this equipment for 2009, for 2016, and the total charge for the period from 2010 to 2015, inclusive, under each of the six following assumptions with respect to partial periods.

- (1) Depreciation is computed for the exact period of time during which the asset is owned. (Use 365 days for base.)
 - (2) Depreciation is computed for the full year on the January 1 balance in the asset account.
 - (3) Depreciation is computed for the full year on the December 31 balance in the asset account.
 - (4) Depreciation for one-half year is charged on plant assets acquired or disposed of during the year.
 - (5) Depreciation is computed on additions from the beginning of the month following acquisition and on disposals to the beginning of the month following disposal.
 - (6) Depreciation is computed for a full period on all assets in use for over one-half year, and no depreciation is charged on assets in use for less than one-half year. (Use 365 days for base.)
- (b) Briefly evaluate the methods above, considering them from the point of view of basic accounting theory as well as simplicity of application.

- 5 E11-16 (Impairment)** Presented below is information related to equipment owned by Suarez Company at December 31, 2014.

Cost	\$9,000,000
Accumulated depreciation to date	1,000,000
Expected future net cash flows	7,000,000
Fair value	4,800,000

Assume that Suarez will continue to use this asset in the future. As of December 31, 2014, the equipment has a remaining useful life of 4 years.

Instructions

- (a) Prepare the journal entry (if any) to record the impairment of the asset at December 31, 2014.
- (b) Prepare the journal entry to record depreciation expense for 2015.
- (c) The fair value of the equipment at December 31, 2015, is \$5,100,000. Prepare the journal entry (if any) necessary to record this increase in fair value.

- 5 E11-17 (Impairment)** Assume the same information as E11-16, except that Suarez intends to dispose of the equipment in the coming year. It is expected that the cost of disposal will be \$20,000.

Instructions

- (a) Prepare the journal entry (if any) to record the impairment of the asset at December 31, 2014.
- (b) Prepare the journal entry (if any) to record depreciation expense for 2015.
- (c) The asset was not sold by December 31, 2015. The fair value of the equipment on that date is \$5,300,000. Prepare the journal entry (if any) necessary to record this increase in fair value. It is expected that the cost of disposal is still \$20,000.

- 5 E11-18 (Impairment)** The management of Petro Garcia Inc. was discussing whether certain equipment should be written off as a charge to current operations because of obsolescence. This equipment has a cost of \$900,000 with depreciation to date of \$400,000 as of December 31, 2014. On December 31, 2014, management projected its future net cash flows from this equipment to be \$300,000 and its fair value to be \$230,000. The company intends to use this equipment in the future.

Instructions

- (a) Prepare the journal entry (if any) to record the impairment at December 31, 2014.
- (b) Where should the gain or loss (if any) on the write-down be reported in the income statement?
- (c) At December 31, 2015, the equipment's fair value increased to \$260,000. Prepare the journal entry (if any) to record this increase in fair value.
- (d) What accounting issues did management face in accounting for this impairment?

- 6 E11-19 (Depletion Computations—Timber)** Stanislaw Timber Company owns 9,000 acres of timberland purchased in 2003 at a cost of \$1,400 per acre. At the time of purchase, the land without the timber was valued at \$400 per acre. In 2004, Stanislaw built fire lanes and roads, with a life of 30 years, at a cost of \$84,000. Every year, Stanislaw sprays to prevent disease at a cost of \$3,000 per year and spends \$7,000 to maintain the fire lanes and roads. During 2005, Stanislaw selectively logged and sold 700,000 board feet of timber, of the estimated 3,500,000 board feet. In 2006, Stanislaw planted new seedlings to replace the trees cut at a cost of \$100,000.

Instructions

- (a) Determine the depreciation expense and the cost of timber sold related to depletion for 2005.
- (b) Stanislaw has not logged since 2005. If Stanislaw logged and sold 900,000 board feet of timber in 2016, when the timber cruise (appraiser) estimated 5,000,000 board feet, determine the cost of timber sold related to depletion for 2016.

- 6 E11-20 (Depletion Computations—Oil)** Diderot Drilling Company has leased property on which oil has been discovered. Wells on this property produced 18,000 barrels of oil during the past year that sold at an average sales price of \$55 per barrel. Total oil resources of this property are estimated to be 250,000 barrels.

The lease provided for an outright payment of \$500,000 to the lessor (owner) before drilling could be commenced and an annual rental of \$31,500. A premium of 5% of the sales price of every barrel of oil removed is to be paid annually to the lessor. In addition, Diderot (lessee) is to clean up all the waste and debris from drilling and to bear the costs of reconditioning the land for farming when the wells are abandoned. The estimated fair value, at the time of the lease, of this clean-up and reconditioning is \$30,000.

Instructions

From the provisions of the lease agreement, you are to compute the cost per barrel for the past year, exclusive of operating costs, to Diderot Drilling Company.

- 6 E11-21 (Depletion Computations—Timber)** Forda Lumber Company owns a 7,000-acre tract of timber purchased in 2000 at a cost of \$1,300 per acre. At the time of purchase, the land was estimated to have a value of \$300 per acre without the timber. Forda Lumber Company has not logged this tract since it was purchased. In 2014, Forda had the timber cruised. The cruise (appraiser) estimated that each acre contained 8,000 board feet of timber. In 2014, Forda built 10 miles of roads at a cost of \$7,840 per mile. After the roads were completed, Forda logged and sold 3,500 trees containing 850,000 board feet.

Instructions

- Determine the cost of timber sold related to depletion for 2014.
- If Forda depreciates the logging roads on the basis of timber cut, determine the depreciation expense for 2014.
- If Forda plants five seedlings at a cost of \$4 per seedling for each tree cut, how should Forda treat the reforestation?

- 6 E11-22 (Depletion Computations—Mining)** Alcide Mining Company purchased land on February 1, 2014, at a cost of \$1,190,000. It estimated that a total of 60,000 tons of mineral was available for mining. After it has removed all the natural resources, the company will be required to restore the property to its previous state because of strict environmental protection laws. It estimates the fair value of this restoration obligation at \$90,000. It believes it will be able to sell the property afterwards for \$100,000. It incurred developmental costs of \$200,000 before it was able to do any mining. In 2014, resources removed totaled 30,000 tons. The company sold 22,000 tons.

Instructions

Compute the following information for 2014.

- Per unit material cost.
- Total material cost of December 31, 2014, inventory.
- Total material cost in cost of goods sold at December 31, 2014.

- 6 E11-23 (Depletion Computations—Minerals)** At the beginning of 2014, Aristotle Company acquired a mine for \$970,000. Of this amount, \$100,000 was ascribed to the land value and the remaining portion to the minerals in the mine. Surveys conducted by geologists have indicated that approximately 12,000,000 units of the ore appear to be in the mine. Aristotle incurred \$170,000 of development costs associated with this mine prior to any extraction of minerals. It also determined that the fair value of its obligation to prepare the land for an alternative use when all of the mineral has been removed was \$40,000. During 2014, 2,500,000 units of ore were extracted and 2,100,000 of these units were sold.

Instructions

Compute the following.

- The total amount of depletion for 2014.
- The amount that is charged as an expense for 2014 for the cost of the minerals sold during 2014.

- 7 E11-24 (Ratio Analysis)** The 2011 Annual Report of **Tootsie Roll Industries** contains the following information.

(in millions)	December 31, 2011	December 31, 2010
Total assets	\$857.9	\$858.0
Total liabilities	191.9	190.6
Net sales	528.4	517.1
Net income	43.9	53.0

Instructions

Compute the following ratios for Tootsie Roll for 2011.

- Asset turnover.
- Return on assets.
- Profit margin on sales.
- How can the asset turnover be used to compute the return on assets?

- 8** *E11-25 (**Book vs. Tax (MACRS) Depreciation**) Futabatei Enterprises purchased a delivery truck on January 1, 2014, at a cost of \$27,000. The truck has a useful life of 7 years with an estimated salvage value of \$6,000. The straight-line method is used for book purposes. For tax purposes, the truck, having an MACRS class life of 7 years, is classified as 5-year property; the optional MACRS tax rate tables are used to compute depreciation. In addition, assume that for 2014 and 2015 the company has revenues of \$200,000 and operating expenses (excluding depreciation) of \$130,000.

Instructions

- Prepare income statements for 2014 and 2015. (The final amount reported on the income statement should be income before income taxes.)
- Compute taxable income for 2014 and 2015.
- Determine the total depreciation to be taken over the useful life of the delivery truck for both book and tax purposes.
- Explain why depreciation for book and tax purposes will generally be different over the useful life of a depreciable asset.

- 8** *E11-26 (**Book vs. Tax (MACRS) Depreciation**) Shimei Inc. purchased computer equipment on March 1, 2014, for \$31,000. The computer equipment has a useful life of 10 years and a salvage value of \$1,000. For tax purposes, the MACRS class life is 5 years.

Instructions

- Assuming that the company uses the straight-line method for book and tax purposes, what is the depreciation expense reported in (1) the financial statements for 2014 and (2) the tax return for 2014?
- Assuming that the company uses the double-declining-balance method for both book and tax purposes, what is the depreciation expense reported in (1) the financial statements for 2014 and (2) the tax return for 2014?
- Why is depreciation for tax purposes different from depreciation for book purposes even if the company uses the same depreciation method to compute them both?

EXERCISES SET B

See the book's companion website, at www.wiley.com/college/kieso, for an additional set of exercises.

PROBLEMS

- 2 3** P11-1 (**Depreciation for Partial Period—SL, SYD, and DDB**) Alladin Company purchased Machine #201 on May 1, 2014. The following information relating to Machine #201 was gathered at the end of May.

Price	\$85,000
Credit terms	2/10, n/30
Freight-in	\$ 800
Preparation and installation costs	\$ 3,800
Labor costs during regular production operations	\$10,500

It is expected that the machine could be used for 10 years, after which the salvage value would be zero. Alladin intends to use the machine for only 8 years, however, after which it expects to be able to sell it for \$1,500. The invoice for Machine #201 was paid May 5, 2014. Alladin uses the calendar year as the basis for the preparation of financial statements.

Instructions

- (a) Compute the depreciation expense for the years indicated using the following methods. (Round to the nearest dollar.)
- (1) Straight-line method for 2014.
 - (2) Sum-of-the-years'-digits method for 2015.
 - (3) Double-declining-balance method for 2014.
- (b) Suppose Kate Crow, the president of Alladin, tells you that because the company is a new organization, she expects it will be several years before production and sales reach optimum levels. She asks you to recommend a depreciation method that will allocate less of the company's depreciation expense to the early years and more to later years of the assets' lives. What method would you recommend?

- 2 3** **P11-2 (Depreciation for Partial Periods—SL, Act., SYD, and Declining-Balance)** The cost of equipment purchased by Charleston, Inc., on June 1, 2014, is \$89,000. It is estimated that the machine will have a \$5,000 salvage value at the end of its service life. Its service life is estimated at 7 years, its total working hours are estimated at 42,000, and its total production is estimated at 525,000 units. During 2014, the machine was operated 6,000 hours and produced 55,000 units. During 2015, the machine was operated 5,500 hours and produced 48,000 units.

Instructions

Compute depreciation expense on the machine for the year ending December 31, 2014, and the year ending December 31, 2015, using the following methods.

- (a) Straight-line.
- (b) Units-of-output.
- (c) Working hours.
- (d) Sum-of-the-years'-digits.
- (e) Declining-balance (twice the straight-line rate).

- 2 3** **P11-3 (Depreciation—SYD, Act., SL, and DDB)** The following data relate to the Machinery account of Eshkol, Inc. at December 31, 2014.

	Machinery			
	A	B	C	D
Original cost	\$46,000	\$51,000	\$80,000	\$80,000
Year purchased	2009	2010	2011	2013
Useful life	10 years	15,000 hours	15 years	10 years
Salvage value	\$ 3,100	\$ 3,000	\$ 5,000	\$ 5,000
Depreciation method	Sum-of-the-years'-digits	Activity	Straight-line	Double-declining-balance
Accum. depr. through 2014*	\$31,200	\$35,200	\$15,000	\$16,000

*In the year an asset is purchased, Eshkol, Inc. does not record any depreciation expense on the asset. In the year an asset is retired or traded in, Eshkol, Inc. takes a full year's depreciation on the asset.

The following transactions occurred during 2015.

- (a) On May 5, Machine A was sold for \$13,000 cash. The company's bookkeeper recorded this retirement in the following manner in the cash receipts journal.

Cash	13,000	
Machinery (Machine A)		13,000

- (b) On December 31, it was determined that Machine B had been used 2,100 hours during 2015.
- (c) On December 31, before computing depreciation expense on Machine C, the management of Eshkol, Inc. decided the useful life remaining from January 1, 2015, was 10 years.
- (d) On December 31, it was discovered that a machine purchased in 2014 had been expensed completely in that year. This machine cost \$28,000 and has a useful life of 10 years and no salvage value. Management has decided to use the double-declining-balance method for this machine, which can be referred to as "Machine E."

Instructions

Prepare the necessary correcting entries for the year 2015. Record the appropriate depreciation expense on the above-mentioned machines.

- 2 3** **P11-4 (Depreciation and Error Analysis)** A depreciation schedule for semi-trucks of Ichiro Manufacturing Company was requested by your auditor soon after December 31, 2015, showing the additions, retirements,

depreciation, and other data affecting the income of the company in the 4-year period 2012 to 2015, inclusive. The following data were ascertained.

Balance of Trucks account, Jan. 1, 2012		
Truck No. 1 purchased Jan. 1, 2009, cost		\$18,000
Truck No. 2 purchased July 1, 2009, cost		22,000
Truck No. 3 purchased Jan. 1, 2011, cost		30,000
Truck No. 4 purchased July 1, 2011, cost		<u>24,000</u>
Balance, Jan. 1, 2012		<u>\$94,000</u>

The Accumulated Depreciation—Trucks account previously adjusted to January 1, 2012, and entered in the ledger, had a balance on that date of \$30,200 (depreciation on the four trucks from the respective dates of purchase, based on a 5-year life, no salvage value). No charges had been made against the account before January 1, 2012.

Transactions between January 1, 2012, and December 31, 2015, which were recorded in the ledger, are as follows.

- July 1, 2012 Truck No. 3 was traded for a larger one (No. 5), the agreed purchase price of which was \$40,000. Ichiro Mfg. Co. paid the automobile dealer \$22,000 cash on the transaction. The entry was a debit to Trucks and a credit to Cash, \$22,000. The transaction has commercial substance.
- Jan. 1, 2013 Truck No. 1 was sold for \$3,500 cash; entry debited Cash and credited Trucks, \$3,500.
- July 1, 2014 A new truck (No. 6) was acquired for \$42,000 cash and was charged at that amount to the Trucks account. (Assume truck No. 2 was not retired.)
- July 1, 2014 Truck No. 4 was damaged in a wreck to such an extent that it was sold as junk for \$700 cash. Ichiro Mfg. Co. received \$2,500 from the insurance company. The entry made by the bookkeeper was a debit to Cash, \$3,200, and credits to Miscellaneous Income, \$700, and Trucks, \$2,500.

Entries for depreciation had been made at the close of each year as follows: 2012, \$21,000; 2013, \$22,500; 2014, \$25,050; and 2015, \$30,400.

Instructions

- For each of the 4 years, compute separately the increase or decrease in net income arising from the company's errors in determining or entering depreciation or in recording transactions affecting trucks, ignoring income tax considerations.
- Prepare one compound journal entry as of December 31, 2015, for adjustment of the Trucks account to reflect the correct balances as revealed by your schedule, assuming that the books have not been closed for 2015.

- 3 6 P11-5 (Depletion and Depreciation—Mining)** Khamsah Mining Company has purchased a tract of mineral land for \$900,000. It is estimated that this tract will yield 120,000 tons of ore with sufficient mineral content to make mining and processing profitable. It is further estimated that 6,000 tons of ore will be mined the first and last year and 12,000 tons every year in between. (Assume 11 years of mining operations.) The land will have a salvage value of \$30,000.

The company builds necessary structures and sheds on the site at a cost of \$36,000. It is estimated that these structures can serve 15 years but, because they must be dismantled if they are to be moved, they have no salvage value. The company does not intend to use the buildings elsewhere. Mining machinery installed at the mine was purchased secondhand at a cost of \$60,000. This machinery cost the former owner \$150,000 and was 50% depreciated when purchased. Khamsah Mining estimates that about half of this machinery will still be useful when the present mineral resources have been exhausted, but that dismantling and removal costs will just about offset its value at that time. The company does not intend to use the machinery elsewhere. The remaining machinery will last until about one-half the present estimated mineral ore has been removed and will then be worthless. Cost is to be allocated equally between these two classes of machinery.

Instructions

- As chief accountant for the company, you are to prepare a schedule showing estimated depletion and depreciation costs for each year of the expected life of the mine.
 - Also compute the depreciation and depletion for the first year assuming actual production of 5,000 tons. Nothing occurred during the year to cause the company engineers to change their estimates of either the mineral resources or the life of the structures and equipment.
- 6 P11-6 (Depletion, Timber, and Extraordinary Loss)** Conan O'Brien Logging and Lumber Company owns 3,000 acres of timberland on the north side of Mount Leno, which was purchased in 2002 at a cost of \$550 per acre. In 2014, O'Brien began selectively logging this timber tract. In May 2014, Mount Leno erupted, burying the timberland of O'Brien under a foot of ash. All of the timber on the O'Brien tract was downed. In addition, the logging roads, built at a cost of \$150,000, were destroyed, as well as the logging equipment, with a net book value of \$300,000.

At the time of the eruption, O'Brien had logged 20% of the estimated 500,000 board feet of timber. Prior to the eruption, O'Brien estimated the land to have a value of \$200 per acre after the timber was harvested. O'Brien includes the logging roads in the depletion base.

O'Brien estimates it will take 3 years to salvage the downed timber at a cost of \$700,000. The timber can be sold for pulp wood at an estimated price of \$3 per board foot. The value of the land is unknown, but must be considered nominal due to future uncertainties.

Instructions

- Determine the depletion cost per board foot for the timber harvested prior to the eruption of Mount Leno.
- Prepare the journal entry to record the depletion prior to the eruption.
- If this tract represents approximately half of the timber holdings of O'Brien, determine the amount of the extraordinary loss due to the eruption of Mount Leno for the year ended December 31, 2014.

6 P11-7 (Natural Resources—Timber) Bronson Paper Products purchased 10,000 acres of forested timberland in March 2014. The company paid \$1,700 per acre for this land, which was above the \$800 per acre most farmers were paying for cleared land. During April, May, June, and July 2014, Bronson cut enough timber to build roads using moveable equipment purchased on April 1, 2014. The cost of the roads was \$250,000, and the cost of the equipment was \$225,000; this equipment was expected to have a \$9,000 salvage value and would be used for the next 15 years. Bronson selected the straight-line method of depreciation for the moveable equipment. Bronson began actively harvesting timber in August and by December had harvested and sold 540,000 board feet of timber of the estimated 6,750,000 board feet available for cutting.

In March 2015, Bronson planted new seedlings in the area harvested during the winter. Cost of planting these seedlings was \$120,000. In addition, Bronson spent \$8,000 in road maintenance and \$6,000 for pest spraying during calendar-year 2015. The road maintenance and spraying are annual costs. During 2015, Bronson harvested and sold 774,000 board feet of timber of the estimated 6,450,000 board feet available for cutting.

In March 2016, Bronson again planted new seedlings at a cost of \$150,000, and also spent \$15,000 on road maintenance and pest spraying. During 2016, the company harvested and sold 650,000 board feet of timber of the estimated 6,500,000 board feet available for cutting.

Instructions

Compute the amount of depreciation and depletion expense for each of the 3 years (2014, 2015, and 2016). Assume that the roads are usable only for logging and therefore are included in the depletion base.

2 3

P11-8 (Comprehensive Fixed-Asset Problem) Darby Sporting Goods Inc. has been experiencing growth in the demand for its products over the last several years. The last two Olympic Games greatly increased the popularity of basketball around the world. As a result, a European sports retailing consortium entered into an agreement with Darby's Roundball Division to purchase basketballs and other accessories on an increasing basis over the next 5 years.

To be able to meet the quantity commitments of this agreement, Darby had to obtain additional manufacturing capacity. A real estate firm located an available factory in close proximity to Darby's Roundball manufacturing facility, and Darby agreed to purchase the factory and used machinery from Encino Athletic Equipment Company on October 1, 2013. Renovations were necessary to convert the factory for Darby's manufacturing use.

The terms of the agreement required Darby to pay Encino \$50,000 when renovations started on January 1, 2014, with the balance to be paid as renovations were completed. The overall purchase price for the factory and machinery was \$400,000. The building renovations were contracted to Malone Construction at \$100,000. The payments made, as renovations progressed during 2014, are shown below. The factory was placed in service on January 1, 2015.

	1/1	4/1	10/1	12/31
Encino	\$50,000	\$90,000	\$110,000	\$150,000
Malone		30,000	30,000	40,000

On January 1, 2014, Darby secured a \$500,000 line-of-credit with a 12% interest rate to finance the purchase cost of the factory and machinery, and the renovation costs. Darby drew down on the line-of-credit to meet the payment schedule shown above; this was Darby's only outstanding loan during 2014.

Bob Sprague, Darby's controller, will capitalize the maximum allowable interest costs for this project. Darby's policy regarding purchases of this nature is to use the appraisal value of the land for book purposes and prorate the balance of the purchase price over the remaining items. The building had originally cost Encino \$300,000 and had a net book value of \$50,000, while the machinery originally cost \$125,000 and had a net book value of \$40,000 on the date of sale. The land was recorded on Encino's books at \$40,000. An appraisal, conducted by independent appraisers at the time of acquisition, valued the land at \$290,000, the building at \$105,000, and the machinery at \$45,000.

Angie Justice, chief engineer, estimated that the renovated plant would be used for 15 years, with an estimated salvage value of \$30,000. Justice estimated that the productive machinery would have a remaining useful life of 5 years and a salvage value of \$3,000. Darby's depreciation policy specifies the 200% declining-balance method for machinery and the 150% declining-balance method for the plant. One-half year's depreciation is taken in the year the plant is placed in service, and one-half year is allowed when the property is disposed of or retired. Darby uses a 360-day year for calculating interest costs.

Instructions

- Determine the amounts to be recorded on the books of Darby Sporting Goods Inc. as of December 31, 2014, for each of the following properties acquired from Encino Athletic Equipment Company.
 - Land.
 - Buildings.
 - Machinery.
- Calculate Darby Sporting Goods Inc.'s 2015 depreciation expense, for book purposes, for each of the properties acquired from Encino Athletic Equipment Company.
- Discuss the arguments for and against the capitalization of interest costs.

(CMA adapted)

- 5 P11-9 (Impairment)** Roland Company uses special strapping equipment in its packaging business. The equipment was purchased in January 2013 for \$10,000,000 and had an estimated useful life of 8 years with no salvage value. At December 31, 2014, new technology was introduced that would accelerate the obsolescence of Roland's equipment. Roland's controller estimates that expected future net cash flows on the equipment will be \$6,300,000 and that the fair value of the equipment is \$5,600,000. Roland intends to continue using the equipment, but it is estimated that the remaining useful life is 4 years. Roland uses straight-line depreciation.

Instructions

- Prepare the journal entry (if any) to record the impairment at December 31, 2014.
- Prepare any journal entries for the equipment at December 31, 2015. The fair value of the equipment at December 31, 2015, is estimated to be \$5,900,000.
- Repeat the requirements for (a) and (b), assuming that Roland intends to dispose of the equipment and that it has not been disposed of as of December 31, 2015.

2 3 P11-10 (Comprehensive Depreciation Computations) Kohlbeck Corporation, a manufacturer of steel products, began operations on October 1, 2013. The accounting department of Kohlbeck has started the fixed-asset and depreciation schedule presented on page 632. You have been asked to assist in completing this schedule. In addition to ascertaining that the data already on the schedule are correct, you have obtained the following information from the company's records and personnel.

- Depreciation is computed from the first of the month of acquisition to the first of the month of disposition.
- Land A and Building A were acquired from a predecessor corporation. Kohlbeck paid \$800,000 for the land and building together. At the time of acquisition, the land had an appraised value of \$90,000, and the building had an appraised value of \$810,000.
- Land B was acquired on October 2, 2013, in exchange for 2,500 newly issued shares of Kohlbeck's common stock. At the date of acquisition, the stock had a par value of \$5 per share and a fair value of \$30 per share. During October 2013, Kohlbeck paid \$16,000 to demolish an existing building on this land so it could construct a new building.
- Construction of Building B on the newly acquired land began on October 1, 2014. By September 30, 2015, Kohlbeck had paid \$320,000 of the estimated total construction costs of \$450,000. It is estimated that the building will be completed and occupied by July 2016.
- Certain equipment was donated to the corporation by a local university. An independent appraisal of the equipment when donated placed the fair value at \$40,000 and the salvage value at \$3,000.
- Machinery A's total cost of \$182,900 includes installation expense of \$600 and normal repairs and maintenance of \$14,900. Salvage value is estimated at \$6,000. Machinery A was sold on February 1, 2015.
- On October 1, 2014, Machinery B was acquired with a down payment of \$5,740 and the remaining payments to be made in 11 annual installments of \$6,000 each beginning October 1, 2014. The prevailing interest rate was 8%. The following data were abstracted from present value tables (rounded).

Present value of \$1.00 at 8%		Present value of an ordinary annuity of \$1.00 at 8%	
10 years	.463	10 years	6.710
11 years	.429	11 years	7.139
15 years	.315	15 years	8.559

KOHLBECK CORPORATION							
Fixed-Asset and Depreciation Schedule							
For Fiscal Years Ended September 30, 2014, and September 30, 2015							
Assets	Acquisition Date	Cost	Salvage	Depreciation Method	Estimated Life in Years	Depreciation Expense	
						Year Ended September 30	2014
Land A	October 1, 2013	\$ (1)	N/A*	N/A	N/A	N/A	N/A
Building A	October 1, 2013	(2)	\$40,000	Straight-line	(3)	\$13,600	(4)
Land B	October 2, 2013	(5)	N/A	N/A	N/A	N/A	N/A
Building B	Under Construction	\$320,000 to date	—	Straight-line	30	—	(6)
Donated Equipment	October 2, 2013	(7)	3,000	150% declining-balance	10	(8)	(9)
Machinery A	October 2, 2013	(10)	6,000	Sum-of-the-years'-digits	8	(11)	(12)
Machinery B	October 1, 2014	(13)	—	Straight-line	20	—	(14)

*N/A—Not applicable

Instructions

For each numbered item on the schedule above, supply the correct amount. (Round each answer to the nearest dollar.)

- 2 3** **P11-11 (Depreciation for Partial Periods—SL, Act., SYD, and DDB)** On January 1, 2012, a machine was purchased for \$90,000. The machine has an estimated salvage value of \$6,000 and an estimated useful life of 5 years. The machine can operate for 100,000 hours before it needs to be replaced. The company closed its books on December 31 and operates the machine as follows: 2012, 20,000 hours; 2013, 25,000 hours; 2014, 15,000 hours; 2015, 30,000 hours; and 2016, 10,000 hours.

Instructions

- (a) Compute the annual depreciation charges over the machine's life assuming a December 31 year-end for each of the following depreciation methods.
- (1) Straight-line method. (2) Activity method. (3) Sum-of-the-years'-digits method. (4) Double-declining-balance method.
- (b) Assume a fiscal year-end of September 30. Compute the annual depreciation charges over the asset's life applying each of the following methods.
- (1) Straight-line method. (2) Sum-of-the-years'-digits method. (3) Double-declining-balance method.

- 2 3 8** ***P11-12 (Depreciation—SL, DDB, SYD, Act., and MACRS)** On January 1, 2013, Locke Company, a small machine-tool manufacturer, acquired for \$1,260,000 a piece of new industrial equipment. The new equipment had a useful life of 5 years, and the salvage value was estimated to be \$60,000. Locke estimates that the new equipment can produce 12,000 machine tools in its first year. It estimates that production will decline by 1,000 units per year over the remaining useful life of the equipment.

The following depreciation methods may be used: (1) straight-line, (2) double-declining-balance, (3) sum-of-the-years'-digits, and (4) units-of-output. For tax purposes, the class life is 7 years. Use the MACRS tables for computing depreciation.

Instructions

- (a) Which depreciation method would maximize net income for financial statement reporting for the 3-year period ending December 31, 2015? Prepare a schedule showing the amount of accumulated depreciation at December 31, 2015, under the method selected. Ignore present value, income tax, and deferred income tax considerations.
- (b) Which depreciation method (MACRS or optional straight-line) would minimize net income for income tax reporting for the 3-year period ending December 31, 2015? Determine the amount of accumulated depreciation at December 31, 2015. Ignore present value considerations.

(AICPA adapted)

PROBLEMS SET B

See the book's companion website, at www.wiley.com/college/kieso, for an additional set of problems.

CONCEPTS FOR ANALYSIS

CA11-1 (Depreciation Basic Concepts) Burnitz Manufacturing Company was organized on January 1, 2014. During 2014, it has used in its reports to management the straight-line method of depreciating its plant assets.

On November 8, you are having a conference with Burnitz's officers to discuss the depreciation method to be used for income tax and stockholder reporting. James Bryant, president of Burnitz, has suggested the use of a new method, which he feels is more suitable than the straight-line method for the needs of the company during the period of rapid expansion of production and capacity that he foresees. Following is an example in which the proposed method is applied to a fixed asset with an original cost of \$248,000, an estimated useful life of 5 years, and a salvage value of approximately \$8,000.

Year	Years of Life Used	Fraction Rate	Depreciation Expense	Accumulated Depreciation at End of Year	Book Value at End of Year
1	1	1/15	\$16,000	\$ 16,000	\$232,000
2	2	2/15	32,000	48,000	200,000
3	3	3/15	48,000	96,000	152,000
4	4	4/15	64,000	160,000	88,000
5	5	5/15	80,000	240,000	8,000

The president favors the new method because he has heard that:

1. It will increase the funds recovered during the years near the end of the assets' useful lives when maintenance and replacement disbursements are high.
2. It will result in increased write-offs in later years and thereby will reduce taxes.

Instructions

- (a) What is the purpose of accounting for depreciation?
- (b) Is the president's proposal within the scope of generally accepted accounting principles? In making your decision, discuss the circumstances, if any, under which use of the method would be reasonable and those, if any, under which it would not be reasonable.
- (c) The president wants your advice on the following issues.
 - (1) Do depreciation charges recover or create funds? Explain.
 - (2) Assume that the Internal Revenue Service accepts the proposed depreciation method in this case. If the proposed method were used for stockholder and tax reporting purposes, how would it affect the availability of cash flows generated by operations?

CA11-2 (Unit, Group, and Composite Depreciation) The certified public accountant is frequently called upon by management for advice regarding methods of computing depreciation. Of comparable importance, although it arises less frequently, is the question of whether the depreciation method should be based on consideration of the assets as units, as a group, or as having a composite life.

Instructions

- (a) Briefly describe the depreciation methods based on treating assets as (1) units and (2) a group or as having a composite life.
- (b) Present the arguments for and against the use of each of the two methods.
- (c) Describe how retirements are recorded under each of the two methods.

(AICPA adapted)

CA11-3 (Depreciation—Strike, Units-of-Production, Obsolescence) Presented on page 634 are three different and unrelated situations involving depreciation accounting. Answer the question(s) at the end of each situation.

Situation I: Recently, Broderick Company experienced a strike that affected a number of its operating plants. The controller of this company indicated that it was not appropriate to report depreciation expense during this period because the equipment did not depreciate and an improper matching of costs and revenues would result. She based her position on the following points.

1. It is inappropriate to charge the period with costs for which there are no related revenues arising from production.
2. The basic factor of depreciation in this instance is wear and tear. Because equipment was idle, no wear and tear occurred.

Instructions

Comment on the appropriateness of the controller's comments.

Situation II: Etheridge Company manufactures electrical appliances, most of which are used in homes. Company engineers have designed a new type of blender which, through the use of a few attachments, will perform more functions than any blender currently on the market. Demand for the new blender can be projected with reasonable probability. In order to make the blenders, Etheridge needs a specialized machine that is not available from outside sources. It has been decided to make such a machine in Etheridge's own plant.

Instructions

- (a) Discuss the effect of projected demand in units for the new blenders (which may be steady, decreasing, or increasing) on the determination of a depreciation method for the machine.
- (b) What other matters should be considered in determining the depreciation method? (Ignore income tax considerations.)

Situation III: Haley Paper Company operates a 300-ton-per-day kraft pulp mill and four sawmills in Wisconsin. The company is in the process of expanding its pulp mill facilities to a capacity of 1,000 tons per day and plans to replace three of its older, less efficient sawmills with an expanded facility. One of the mills to be replaced did not operate for most of 2014 (current year), and there are no plans to reopen it before the new sawmill facility becomes operational.

In reviewing the depreciation rates and in discussing the salvage values of the sawmills that were to be replaced, it was noted that if present depreciation rates were not adjusted, substantial amounts of plant costs on these three mills would not be depreciated by the time the new mill came on stream.

Instructions

What is the proper accounting for the four sawmills at the end of 2014?

CA11-4 (Depreciation Concepts) As a cost accountant for San Francisco Cannery, you have been approached by Phil Perriman, canning room supervisor, about the 2014 costs charged to his department. In particular, he is concerned about the line item "depreciation." Perriman is very proud of the excellent condition of his canning room equipment. He has always been vigilant about keeping all equipment serviced and well oiled. He is sure that the huge charge to depreciation is a mistake; it does not at all reflect the cost of minimal wear and tear that the machines have experienced over the last year. He believes that the charge should be considerably lower.

The machines being depreciated are six automatic canning machines. All were put into use on January 1, 2014. Each cost \$625,000, having a salvage value of \$55,000 and a useful life of 12 years. San Francisco depreciates this and similar assets using double-declining-balance depreciation. Perriman has also pointed out that if you used straight-line depreciation, the charge to his department would not be so great.

Instructions

Write a memo to Phil Perriman to clear up his misunderstanding of the term "depreciation." Also, calculate year-1 depreciation on all machines using both methods. Explain the theoretical justification for double-declining-balance and why, in the long run, the aggregate charge to depreciation will be the same under both methods.

CA11-5 (Depreciation Choice—Ethics) Jerry Prior, Beeler Corporation's controller, is concerned that net income may be lower this year. He is afraid upper-level management might recommend cost reductions by laying off accounting staff, including him.

Prior knows that depreciation is a major expense for Beeler. The company currently uses the double-declining-balance method for both financial reporting and tax purposes, and he's thinking of selling equipment that, given its age, is primarily used when there are periodic spikes in demand. The equipment has a carrying value of \$2,000,000 and a fair value of \$2,180,000. The gain on the sale would be reported in the income statement. He doesn't want to highlight this method of increasing income. He thinks, "Why don't I increase the estimated useful lives and the salvage values? That will decrease depreciation expense and

require less extensive disclosure, since the changes are accounted for prospectively. I may be able to save my job and those of my staff.”

Instructions

Answer the following questions.

- (a) Who are the stakeholders in this situation?
- (b) What are the ethical issues involved?
- (c) What should Prior do?

USING YOUR JUDGMENT

FINANCIAL REPORTING

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix 5B. The company’s complete annual report, including the notes to the financial statements, can be accessed at the book’s companion website, www.wiley.com/college/kieso.

Instructions

Refer to P&G’s financial statements and the accompanying notes to answer the following questions.

- (a) What descriptions are used by P&G in its balance sheet to classify its property, plant, and equipment?
- (b) What method or methods of depreciation does P&G use to depreciate its property, plant, and equipment?
- (c) Over what estimated useful lives does P&G depreciate its property, plant, and equipment?
- (d) What amounts for depreciation and amortization expense did P&G charge to its income statement in 2011, 2010, and 2009?
- (e) What were the capital expenditures for property, plant, and equipment made by P&G in 2011, 2010, and 2009?

Comparative Analysis Case

The Coca-Cola Company and PepsiCo., Inc.

Instructions

Go to the book’s companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- (a) What amount is reported in the balance sheets as property, plant, and equipment (net) of Coca-Cola at December 31, 2011, and of PepsiCo at December 31, 2011? What percentage of total assets is invested in property, plant, and equipment by each company?
- (b) What depreciation methods are used by Coca-Cola and PepsiCo for property, plant, and equipment? How much depreciation was reported by Coca-Cola and PepsiCo in 2011? In 2010?
- (c) Compute and compare the following ratios for Coca-Cola and PepsiCo for 2011.
 - (1) Asset turnover.
 - (2) Profit margin on sales.
 - (3) Return on assets.
- (d) What amount was spent in 2011 for capital expenditures by Coca-Cola and PepsiCo? What amount of interest was capitalized in 2011?

Financial Statement Analysis Case

McDonald’s Corporation

McDonald’s is the largest and best-known global food-service retailer, with more than 32,000 restaurants in 118 countries. On any day, McDonald’s serves approximately 1 percent of the world’s population. Presented on the next page is information related to McDonald’s property and equipment.

McDonald's Corporation

Summary of Significant Accounting Policies Section

Property and Equipment. Property and equipment are stated at cost, with depreciation and amortization provided using the straight-line method over the following estimated useful lives: buildings—up to 40 years; leasehold improvements—the lesser of useful lives of assets or lease terms, which generally include option periods; and equipment—three to 12 years.

[In the notes to the financial statements:]

Property and Equipment

Net property and equipment consisted of:

(In millions)	December 31	
	2011	2010
Land	\$ 5,328.3	\$ 5,200.5
Buildings and improvements on owned land	13,079.9	12,399.4
Buildings and improvements on leased land	12,021.8	11,732.0
Equipment, signs and seating	4,757.2	4,608.5
Other	550.4	542.0
	35,737.6	34,482.4
Accumulated depreciation and amortization	(12,903.1)	(12,421.8)
Net property and equipment	<u>\$22,834.5</u>	<u>\$22,060.6</u>

Depreciation and amortization expense was (in millions): 2011—\$1,329.6; 2010—\$1,200.4; 2009—\$1,160.8.

[In its 6-year summary, McDonald's provides the following information.]

Cash Provided by Operations

(dollars in millions)	2011	2010	2009
Cash provided by operations	\$7,150	\$6,342	\$5,751
Capital expenditures	\$2,730	\$2,135	\$1,952

Instructions

- What method of depreciation does McDonald's use?
- Does depreciation and amortization expense cause cash flow from operations to increase? Explain.
- What does the schedule of cash flow measures indicate?

Accounting, Analysis, and Principles

Electroboy Enterprises, Inc. operates several stores throughout the western United States. As part of an operational and financial reporting review in a response to a downturn in its markets, the company's management has decided to perform an impairment test on five stores (combined). The five stores' sales have declined due to aging facilities and competition from a rival that opened new stores in the same markets. Management has developed the following information concerning the five stores as of the end of fiscal 2013.

Original cost	\$36 million
Accumulated depreciation	\$10 million
Estimated remaining useful life	4 years
Estimated expected future annual cash flows (not discounted)	\$4.0 million per year
Appropriate discount rate	5 percent

Accounting

- Determine the amount of impairment loss, if any, that Electroboy should report for fiscal 2013 and the book value at which Electroboy should report the five stores on its fiscal year-end 2013 balance sheet. Assume that the cash flows occur at the end of each year.
- Repeat part (a), but instead assume that (1) the estimated remaining useful life is 10 years, (2) the estimated annual cash flows are \$2,720,000 per year, and (3) the appropriate discount rate is 6 percent.

Analysis

Assume that you are a financial analyst and you participate in a conference call with Electroboy management in early 2014 (before Electroboy closes the books on fiscal 2013). During the conference call, you learn that management is considering selling the five stores, but the sale won't likely be completed until the second quarter of fiscal 2014. Briefly discuss what implications this would have for Electroboy's 2013 financial statements. Assume the same facts as in part (b) above.

Principles

Electroboy management would like to know the accounting for the impaired asset in periods subsequent to the impairment. Can the assets be written back up? Briefly discuss the conceptual arguments for this accounting.

BRIDGE TO THE PROFESSION

Professional Research: FASB Codification

Matt Holmes recently joined Klax Company as a staff accountant in the controller's office. Klax Company provides warehousing services for companies in several midwestern cities.

The location in Dubuque, Iowa, has not been performing well due to increased competition and the loss of several customers that have recently gone out of business. Matt's department manager suspects that the plant and equipment may be impaired and wonders whether those assets should be written down. Given the company's prior success, this issue has never arisen in the past, and Matt has been asked to conduct some research on this issue.

Instructions

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascllogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

- What is the authoritative guidance for asset impairments? Briefly discuss the scope of the standard (i.e., explain the types of transactions to which the standard applies).
- Give several examples of events that would cause an asset to be tested for impairment. Does it appear that Klax should perform an impairment test? Explain.
- What is the best evidence of fair value? Describe alternate methods of estimating fair value.

Additional Professional Resources

See the book's companion website, at www.wiley.com/college/kieso, for professional simulations as well as other study resources.

IFRS

INSIGHTS

GAAP adheres to many of the same principles of IFRS in the accounting for property, plant, and equipment. Major differences relate to use of component depreciation, impairments, and revaluations.

RELEVANT FACTS

Following are the key similarities and differences between GAAP and IFRS related to property, plant, and equipment.

Similarities

- The definition of property, plant, and equipment is essentially the same under GAAP and IFRS.

9 LEARNING OBJECTIVE

Compare the accounting for property, plant, and equipment under GAAP and IFRS.

- Under both GAAP and IFRS, changes in depreciation method and changes in useful life are treated in the current and future periods. Prior periods are not affected.
- The accounting for plant asset disposals is the same under GAAP and IFRS.
- The accounting for the initial costs to acquire natural resources is similar under GAAP and IFRS.
- Under both GAAP and IFRS, interest costs incurred during construction must be capitalized. Recently, IFRS converged to GAAP.
- The accounting for exchanges of non-monetary assets is essentially the same between IFRS and GAAP. GAAP requires that gains on exchanges of non-monetary assets be recognized if the exchange has commercial substance. This is the same framework used in IFRS.
- GAAP and IFRS both view depreciation as allocation of cost over an asset's life. GAAP permits the same depreciation methods (straight-line, diminishing-balance, units-of-production) as IFRS.

Differences

- IFRS requires component depreciation. Under GAAP, component depreciation is permitted but is rarely used.
- Under IFRS, companies can use either the historical cost model or the revaluation model. GAAP does not permit revaluations of property, plant, and equipment or mineral resources.
- In testing for impairments of long-lived assets, GAAP uses a different model than IFRS to test for impairments (details of the IFRS impairment test is presented in the *About the Numbers* discussion). As long as future undiscounted cash flows exceed the carrying amount of the asset, no impairment is recorded. The IFRS impairment test is stricter. However, unlike GAAP, reversals of impairment losses are permitted.

ABOUT THE NUMBERS

Component Depreciation

Under IFRS, companies are required to use **component depreciation**. IFRS requires that each part of an item of property, plant, and equipment that is significant to the total cost of the asset must be depreciated separately. Companies therefore have to exercise judgment to determine the proper allocations to the components. As an example, when a company like **Nokia** purchases a building, it must determine how the various building components (e.g., the foundation, structure, roof, heating and cooling system, and elevators) should be segregated and depreciated.

To illustrate the accounting for component depreciation, assume that EuroAsia Airlines purchases an airplane for \$100,000,000 on January 1, 2014. The airplane has a useful life of 20 years and a residual value of \$0. EuroAsia uses the straight-line method of depreciation for all its airplanes. EuroAsia identifies the following components, amounts, and useful lives, as shown in Illustration IFRS11-1.

ILLUSTRATION
IFRS11-1
Airplane Components

Components	Component Amount	Component Useful Life
Airframe	\$60,000,000	20 years
Engine components	32,000,000	8 years
Other components	8,000,000	5 years

Illustration IFRS11-2 shows the computation of depreciation expense for EuroAsia for 2014.

Components	Component Amount	÷	Useful Life	=	Component Depreciation
Airframe	\$ 60,000,000		20		\$3,000,000
Engine components	32,000,000		8		4,000,000
Other components	8,000,000		5		1,600,000
Total	<u>\$100,000,000</u>				<u>\$8,600,000</u>

ILLUSTRATION IFRS11-2

Computation of Component Depreciation

As indicated, EuroAsia records depreciation expense of \$8,600,000 in 2014 as follows.

Depreciation Expense	8,600,000	
Accumulated Depreciation—Airplane		8,600,000

On the statement of financial position at the end of 2014, EuroAsia reports the airplane as a single amount. The presentation is shown in Illustration IFRS11-3.

Non-current assets	
Airplane	\$100,000,000
Less: Accumulated depreciation—airplane	8,600,000
	<u>\$ 91,400,000</u>

ILLUSTRATION IFRS11-3

Presentation of Carrying Amount of Airplane

In many situations, a company may not have a good understanding of the cost of the individual components purchased. In that case, the cost of individual components should be estimated based on reference to current market prices (if available), discussion with experts in valuation, or use of other reasonable approaches.

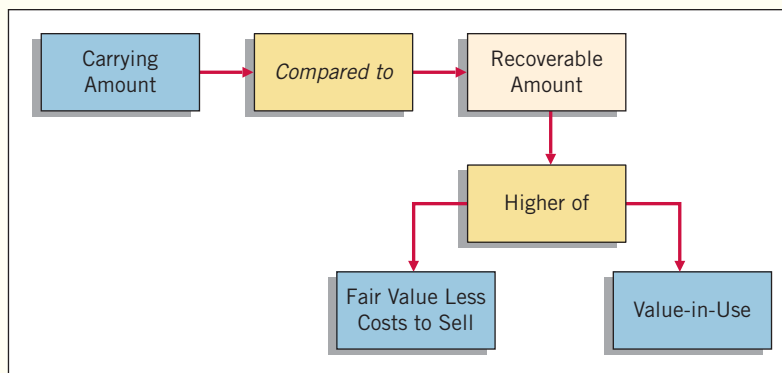

Recognizing Impairments

As discussed in the textbook, the credit crisis starting in late 2008 has affected many financial and non-financial institutions. As a result of this global slump, many companies are considering write-offs of some of their long-lived assets. These write-offs are referred to as **impairments**. The accounting for impairments is different under GAAP and IFRS.

A long-lived tangible asset is impaired when a company is not able to recover the asset's carrying amount either through using it or by selling it. To determine whether an asset is impaired, **on an annual basis, companies review the asset for indicators of impairments**—that is, a decline in the asset's cash-generating ability through use or sale. This review should consider internal sources (e.g., adverse changes in performance) and external sources (e.g., adverse changes in the business or regulatory environment) of information. **If impairment indicators are present, then an impairment test must be conducted.** This test compares the asset's recoverable amount with its carrying amount. If the carrying amount is higher than the recoverable amount, the difference is an impairment loss. If the recoverable amount is greater than the carrying amount, no impairment is recorded.

Recoverable amount is defined as the higher of fair value less costs to sell or value-in-use. **Fair value less costs to sell** means what the asset could be sold for after deducting costs of disposal. **Value-in-use** is the present value of cash flows expected from the future use and eventual sale of the asset at the end of its useful life. Illustration IFRS11-4 (page 640) highlights the nature of the impairment test.

ILLUSTRATION
IFRS11-4
 Impairment Test

If either the fair value less costs to sell or value-in-use is higher than the carrying amount, there is no impairment. If both the fair value less costs to sell and value-in-use are lower than the carrying amount, a loss on impairment occurs.

Example: No Impairment

Assume that Cruz Company performs an impairment test for its equipment. The carrying amount of Cruz’s equipment is \$200,000, its fair value less costs to sell is \$180,000, and its value-in-use is \$205,000. In this case, the value-in-use of Cruz’s equipment is higher than its carrying amount of \$200,000. As a result, there is no impairment. (If a company can more readily determine value-in-use (or fair value less costs to sell) and it determines that no impairment is needed, it is not required to compute the other measure.)

Example: Impairment

Assume the same information for Cruz Company above except that the value-in-use of Cruz’s equipment is \$175,000 rather than \$205,000. Cruz measures the impairment loss as the difference between the carrying amount of \$200,000 and the higher of fair value less costs to sell (\$180,000) or value-in-use (\$175,000). Cruz therefore uses the fair value less cost of disposal to record an impairment loss of \$20,000 (\$200,000 – \$180,000). Cruz makes the following entry to record the impairment loss.

Loss on Impairment	20,000	
Accumulated Depreciation—Equipment		20,000

Loss on Impairment is reported in the income statement in the “Other income and expense” section. The company then either credits Equipment or Accumulated Depreciation—Equipment to reduce the carrying amount of the equipment for the impairment. *For purposes of homework, credit accumulated depreciation when recording an impairment for a depreciable asset.*

Reversal of Impairment Loss

After recording the impairment loss, the recoverable amount becomes the basis of the impaired asset. What happens if a review in a future year indicates that the asset is no longer impaired because the recoverable amount of the asset is higher than the carrying amount? In that case, the impairment loss may be reversed.

To illustrate, assume that Tan Company purchases equipment on January 1, 2014, for \$300,000, with a useful life of three years, and no residual value. Its depreciation and related carrying amount over the three years is as follows.

Year	Depreciation Expense	Carrying Amount
2014	\$100,000 (\$300,000/3)	\$200,000
2015	\$100,000 (\$300,000/3)	\$100,000
2016	\$100,000 (\$300,000/3)	0

At December 31, 2014, Tan determines it has an impairment loss of \$20,000 and therefore makes the following entry.

Loss on Impairment	20,000	
Accumulated Depreciation—Equipment		20,000

Tan's depreciation expense and related carrying amount after the impairment is as indicated in Illustration IFRS11-5.

Year	Depreciation Expense	Carrying Amount
2015	\$90,000 (\$180,000/2)	\$90,000
2016	\$90,000 (\$180,000/2)	0

ILLUSTRATION IFRS11-5

Carrying Value of
Impaired Asset

At the end of 2015, Tan determines that the recoverable amount of the equipment is \$96,000, which is greater than its carrying amount of \$90,000. In this case, Tan reverses the previously recognized impairment loss with the following entry.

Accumulated Depreciation—Equipment	6,000	
Recovery of Loss from Impairment		6,000

The recovery of the impairment loss is reported in the "Other income and expense" section of the income statement. The carrying amount of Tan's equipment is now \$96,000 (\$90,000 + \$6,000) at December 31, 2015. The general rule related to reversals of impairments is as follows. The amount of the recovery of the loss is limited to the carrying amount that would result if the impairment had not occurred. For example, the carrying amount of Tan's equipment at the end of 2015 would be \$100,000, assuming no impairment. The \$6,000 recovery is therefore permitted because Tan's carrying amount on the equipment is now only \$96,000.

However, any recovery above \$10,000 is not permitted. The reason is that any recovery above \$10,000 results in Tan carrying the asset at a value above its historical cost.

Revaluations

Up to this point, we have assumed that companies use the historical cost principle to value long-lived tangible assets after acquisition. However, under IFRS companies have a choice. They may value these assets at cost or at fair value.

Recognizing Revaluations

Network Rail (a company in Great Britain) is an example of a company that elected to use fair values to account for its railroad network. Its use of fair value led to an increase of £4,289 million to its long-lived tangible assets. When companies choose to fair value their long-lived tangible assets subsequent to acquisition, they account for the change in the fair value by adjusting the appropriate asset account and establishing an unrealized gain on the revalued long-lived tangible asset. This unrealized gain is often referred to as **revaluation surplus**.

Revaluation—Land. To illustrate revaluation of land, assume that **Siemens Group** purchased land for \$1,000,000 on January 5, 2014. The company elects to use revaluation accounting for the land in subsequent periods. At December 31, 2014, the land's fair value is \$1,200,000. The entry to record the land at fair value is as follows.

Land	200,000	
Unrealized Gain on Revaluation (land)		200,000

The land is reported on the statement of financial position at \$1,200,000, and Unrealized Gain on Revaluation (land) increases other comprehensive income in the statement of

comprehensive income. In addition, if this is the only revaluation adjustment to date, the statement of financial position reports accumulated other comprehensive income of \$200,000.

Revaluation—Depreciable Assets. To illustrate the accounting for revaluations of depreciable assets, assume that **Lenovo Group** purchases equipment for \$500,000 on January 2, 2014. The equipment has a useful life of five years, is depreciated using the straight-line method of depreciation, and its residual value is zero. Lenovo chooses to revalue its equipment to fair value over the life of the equipment. Lenovo records depreciation expense of \$100,000 ($\$500,000 \div 5$) at December 31, 2014, as follows.

December 31, 2014

Depreciation Expense	100,000	
Accumulated Depreciation—Equipment		100,000
(To record depreciation expense in 2014)		

After this entry, Lenovo's equipment has a carrying amount of \$400,000 ($\$500,000 - \$100,000$). Lenovo receives an independent appraisal for the fair value of equipment at December 31, 2014, which is \$460,000. To report the equipment at fair value, Lenovo does the following.

1. Reduces the Accumulated Depreciation—Equipment account to zero.
2. Reduces the Equipment account by \$40,000—it then is reported at its fair value of \$460,000.
3. Records Unrealized Gain on Revaluation (equipment) for the difference between the fair value and carrying amount of the equipment, or \$60,000 ($\$460,000 - \$400,000$).

The entry to record this revaluation at December 31, 2014, is as follows.

December 31, 2014

Accumulated Depreciation—Equipment	100,000	
Equipment		40,000
Unrealized Gain on Revaluation (equipment)		60,000
(To adjust the equipment to fair value and record revaluation increase)		

The equipment is now reported at its fair value of \$460,000 ($\$500,000 - \$40,000$). As an alternative to the one shown here, companies restate on a proportionate basis the cost and accumulated depreciation of the asset, such that the carrying amount of the asset after revaluation equals its revalued amount.

The increase in the fair value of \$60,000 is reported on the statement of comprehensive income as other comprehensive income. In addition, the ending balance is reported in accumulated other comprehensive income on the statement of financial position in the equity section. Illustration IFRS11-6 shows the presentation of revaluation elements.

ILLUSTRATION
IFRS11-6
Financial Statement
Presentation—
Revaluations

On the statement of comprehensive income:	
Depreciation expense	\$100,000
<i>Other comprehensive income</i>	
Unrealized gain on revaluation (equipment)	\$ 60,000
On the statement of financial position:	
Non-current assets	
Equipment ($\$500,000 - \$40,000$)	\$460,000
Accumulated depreciation—equipment ($\$100,000 - \$100,000$)	-0-
Carrying amount	\$460,000
Equity	
Accumulated other comprehensive income	\$ 60,000

As indicated, at December 31, 2014, the carrying amount of the equipment is now \$460,000. Lenovo reports depreciation expense of \$100,000 in the income statement and Unrealized Gain on Revaluation (equipment) of \$60,000 in "Other comprehensive income." Assuming no change in the useful life of the equipment, depreciation in 2015 is \$115,000 ($\$460,000 \div 4$).

In summary, a revaluation increase generally goes to equity. A revaluation decrease is reported as an expense (as an impairment loss), unless it offsets previously recorded revaluation increases. If the revaluation increase offsets a revaluation decrease that went to expense, then the increase is reported in income. **Under no circumstances can the Accumulated Other Comprehensive Income account related to revaluations have a negative balance.**

ON THE HORIZON

With respect to revaluations, as part of the conceptual framework project, the Boards will examine the measurement bases used in accounting. It is too early to say whether a converged conceptual framework will recommend fair value measurement (and revaluation accounting) for property, plant, and equipment. However, this is likely to be one of the more contentious issues, given the long-standing use of historical cost as a measurement basis in GAAP.

IFRS SELF-TEST QUESTIONS

- Mandall Company constructed a warehouse for \$280,000 on January 2, 2014. Mandall estimates that the warehouse has a useful life of 20 years and no residual value. Construction records indicate that \$40,000 of the cost of the warehouse relates to its heating, ventilation, and air conditioning (HVAC) system, which has an estimated useful life of only 10 years. What is the first year of depreciation expense using straight-line component depreciation under IFRS?
 - \$28,000.
 - \$14,000.
 - \$16,000.
 - \$4,000.
- Francisco Corporation is constructing a new building at a total initial cost of \$10,000,000. The building is expected to have a useful life of 50 years with no residual value. The building's finished surfaces (e.g., roof cover and floor cover) are 5% of this cost and have a useful life of 20 years. Building services systems (e.g., electric, heating, and plumbing) are 20% of the cost and have a useful life of 25 years. The depreciation in the first year using component depreciation, assuming straight-line depreciation with no residual value, is:
 - \$200,000.
 - \$215,000.
 - \$255,000.
 - None of the above.
- Which of the following statements is **correct**?
 - Both IFRS and GAAP permit revaluation of property, plant, and equipment.
 - IFRS permits revaluation of property, plant, and equipment but not GAAP.
 - Both IFRS and GAAP do not permit revaluation of property, plant, and equipment.
 - GAAP permits revaluation of property, plant, and equipment but not IFRS.
- Hilo Company has land that cost \$350,000 but now has a fair value of \$500,000. Hilo Company decides to use the revaluation method specified in IFRS to account for the land. Which of the following statements is **correct**?
 - Hilo Company must continue to report the land at \$350,000.
 - Hilo Company would report a net income increase of \$150,000 due to an increase in the value of the land.
 - Hilo Company would debit Revaluation Surplus for \$150,000.
 - Hilo Company would credit Revaluation Surplus by \$150,000.
- Under IFRS, value-in-use is defined as:
 - net realizable value.
 - fair value.
 - future cash flows discounted to present value.
 - total future undiscounted cash flows.

IFRS CONCEPTS AND APPLICATION

IFRS11-1 Walkin Inc. is considering the write-down of its long-term plant because of a lack of profitability. Explain to the management of Walkin how to determine whether a write-down is permitted.

IFRS11-2 Last year, Wyeth Company recorded an impairment on an asset held for use. Recent appraisals indicate that the asset has increased in value. Should Wyeth record this recovery in value?

IFRS11-3 Toro Co. has equipment with a carrying amount of \$700,000. The value-in-use of the equipment is \$705,000, and its fair value less costs of disposal is \$590,000. The equipment is expected to be used in operations in the future. What amount (if any) should Toro report as an impairment to its equipment?

IFRS11-4 Explain how gains or losses on impaired assets should be reported in income.

IFRS11-5 Tanaka Company has land that cost \$15,000,000. Its fair value on December 31, 2014, is \$20,000,000. Tanaka chooses the revaluation model to report its land. Explain how the land and its related valuation should be reported.

IFRS11-6 Why might a company choose not to use revaluation accounting?

IFRS11-7 Ortiz purchased a piece of equipment that cost \$202,000 on January 1, 2014. The equipment has the following components.

Component	Cost	Residual Value	Estimated Useful Life
A	\$70,000	\$7,000	10 years
B	50,000	5,000	5 years
C	82,000	4,000	12 years

Compute the depreciation expense for this equipment at December 31, 2014.

IFRS11-8 Tan Chin Company purchases a building for \$11,300,000 on January 2, 2014. An engineer's report shows that of the total purchase price, \$11,000,000 should be allocated to the building (with a 40-year life), \$150,000 to 15-year property, and \$150,000 to 5-year property. No residual (salvage) value should be considered. Compute depreciation expense for 2014 using component depreciation.

IFRS11-9 Brazil Group purchases a vehicle at a cost of \$50,000 on January 2, 2014. Individual components of the vehicle and useful lives are as follows.

	Cost	Useful Lives
Tires	\$ 6,000	2 years
Transmission	10,000	5 years
Trucks	34,000	10 years

Instructions

(Assume no residual (salvage) value.)

- (a) Compute depreciation expense for 2014, assuming Brazil depreciates the vehicle as a single unit.
- (b) Compute depreciation expense for 2014, assuming Brazil uses component depreciation.
- (c) Why might a company want to use component depreciation to depreciate its assets?

IFRS11-10 Jurassic Company owns machinery that cost \$900,000 and has accumulated depreciation of \$380,000. The present value of expected future net cash flows from the use of the asset are expected to be \$500,000. The fair value less cost of disposal of the equipment is \$400,000. Prepare the journal entry, if any, to record the impairment loss.

IFRS11-11 Presented below is information related to equipment owned by Pujols Company at December 31, 2014.

Cost (residual value \$0)	\$9,000,000
Accumulated depreciation to date	1,000,000
Value-in-use	5,500,000
Fair value less cost of disposal	4,400,000

Assume that Pujols will continue to use this asset in the future. As of December 31, 2014, the equipment has a remaining useful life of 8 years. Pujols uses straight-line depreciation.

Instructions

- (a) Prepare the journal entry (if any) to record the impairment of the asset at December 31, 2014.
- (b) Prepare the journal entry to record depreciation expense for 2015.
- (c) The recoverable amount of the equipment at December 31, 2015, is \$6,050,000. Prepare the journal entry (if any) necessary to record this increase.

IFRS11-12 Assume the same information as in IFRS11-11, except that Pujols intends to dispose of the equipment in the coming year.

Instructions

- (a) Prepare the journal entry (if any) to record the impairment of the asset at December 31, 2014.
- (b) Prepare the journal entry (if any) to record depreciation expense for 2015.
- (c) The asset was not sold by December 31, 2015. The fair value of the equipment on that date is \$5,100,000. Prepare the journal entry (if any) necessary to record this increase. It is expected that the cost of disposal is \$20,000.

IFRS11-13 Falchetto Company acquired equipment on January 1, 2013, for \$12,000. Falchetto elects to value this class of equipment using revaluation accounting. This equipment is being depreciated on a straight-line basis over its 6-year useful life. There is no residual value at the end of the 6-year period. The appraised value of the equipment approximates the carrying amount at December 31, 2013 and 2015. On December 31, 2014, the fair value of the equipment is determined to be \$7,000.

Instructions

- (a) Prepare the journal entries for 2013 related to the equipment.
- (b) Prepare the journal entries for 2014 related to the equipment.
- (c) Determine the amount of depreciation expense that Falchetto will record on the equipment in 2015.

International Reporting Case

IFRS11-14 Companies following international accounting standards are permitted to revalue fixed assets above the assets' historical costs. Such revaluations are allowed under various countries' standards and the standards issued by the IASB. **Liberty International**, a real estate company headquartered in the United Kingdom (U.K.), follows U.K. standards. In a recent year, Liberty disclosed the following information on revaluations of its tangible fixed assets. The revaluation reserve measures the amount by which tangible fixed assets are recorded above historical cost and is reported in Liberty's stockholders' equity.

Liberty International**Completed Investment Properties**

Completed investment properties are professionally valued on a market value basis by external valuers at the balance sheet date. Surpluses and deficits arising during the year are reflected in the revaluation reserve.

Liberty reported the following additional data. Amounts for **Kimco Realty** (which follows GAAP) in the same year are provided for comparison.

	Liberty (pounds sterling, in thousands)	Kimco (dollars, in millions)
Total revenues	£ 741	\$ 517
Average total assets	5,577	4,696
Net income	125	297

Instructions

- (a) Compute the following ratios for Liberty and Kimco.
 - (1) Return on assets.
 - (2) Profit margin on sales.
 - (3) Asset turnover.
 How do these companies compare on these performance measures?
- (b) Liberty reports a revaluation surplus of £1,952. Assume that £1,550 of this amount arose from an increase in the net replacement value of investment properties during the year. Prepare the journal entry to record this increase.

- (c) Under U.K. (and IASB) standards, are Liberty's assets and equity overstated? If so, why? When comparing Liberty to U.S. companies, like Kimco, what adjustments would you need to make in order to have valid comparisons of ratios such as those computed in (a) above?

Professional Research

IFRS11-15 Matt Holmes recently joined Klax Company as a staff accountant in the controller's office. Klax Company provides warehousing services for companies in several European cities. The location in Koblenz, Germany, has not been performing well due to increased competition and the loss of several customers that have recently gone out of business. Matt's department manager suspects that the plant and equipment may be impaired and wonders whether those assets should be written down. Given the company's prior success, this issue has never arisen in the past, and Matt has been asked to conduct some research on this issue.

Instructions

Access the IFRS authoritative literature at the IASB website (<http://eifrs.iasb.org/>). (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- What is the authoritative guidance for asset impairments? Briefly discuss the scope of the standard (i.e., explain the types of transactions to which the standard applies).
- Give several examples of events that would cause an asset to be tested for impairment. Does it appear that Klax should perform an impairment test? Explain.
- What is the best evidence of fair value? Describe alternate methods of estimating fair value.

International Financial Reporting Problem Marks and Spencer plc

IFRS11-16 The financial statements of **Marks and Spencer plc (M&S)** are available at the book's companion website or can be accessed at http://annualreport.marksandspencer.com/_assets/downloads/Marks-and-Spencer-Annual-report-and-financial-statements-2012.pdf.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- What descriptions are used by M&S in its statement of financial position to classify its property, plant, and equipment?
- What method or methods of depreciation does M&S use to depreciate its property, plant, and equipment?
- Over what estimated useful lives does M&S depreciate its property, plant, and equipment?
- What amounts for depreciation and amortization expense did M&S charge to its income statement in 2012 and 2011?
- What were the capital expenditures for property, plant, and equipment made by M&S in 2012 and 2011?

ANSWERS TO IFRS SELF-TEST QUESTIONS

1. c 2. c 3. b 4. d 5. c

Remember to check the book's companion website to find additional resources for this chapter.

This page is intentionally left blank

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Describe the characteristics of intangible assets.
- 2 Identify the costs to include in the initial valuation of intangible assets.
- 3 Explain the procedure for amortizing intangible assets.
- 4 Describe the types of intangible assets.
- 5 Explain the accounting issues for recording goodwill.
- 6 Explain the accounting issues related to intangible-asset impairments.
- 7 Identify the conceptual issues related to research and development costs.
- 8 Describe the accounting for research and development and similar costs.
- 9 Indicate the presentation of intangible assets and related items.

Is This Sustainable?

Companies are increasing their focus on sustainability issues. Companies like **Southwest Airlines**, **Clorox**, and **Northrop Grumman** are executing strategic initiatives including fuel-spill control, use of recycled materials, and water conservation. Why the growing importance of responsible management of resource use? One reason is that market participants are now more interested in investing in companies that are pursuing sustainability strategies.

For example, as indicated in the following graph, sustainable investing by professional portfolio managers in the United States has increased from below \$500 billion in the mid-1990s to over \$2.5 trillion (or 12.5% of the total under management) in 2010.

Source: Social Investment Forum.

In light of investor focus on sustainability, it is not surprising that companies are increasing the amount of information reported to the market about their sustainability efforts. However, rather than adding a line item in the income statement or balance sheet, companies instead provide more useful information about the future cash flow consequences of sustainability strategies, which are intangible and usually “nonfinancial” in nature.

CONCEPTUAL FOCUS

- > See the **Underlying Concepts** on pages 651, 659, and 662.
- > Read the **Evolving Issue** on page 673 for a discussion of recognition of R&D and internally generated intangibles.

INTERNATIONAL FOCUS

- > See the **International Perspectives** on pages 652 and 666.
- > Read the **IFRS Insights** on pages 693–699 for a discussion of:
 - Development costs
 - Impairments of intangibles

Consider, for example, the disclosure of information about greenhouse gases. In 2010, the Securities and Exchange Commission clarified the circumstances in which public companies should disclose information related to climate change, as well as the impact on financial performance of their efforts to manage the consequences of greenhouse gas emissions. So here's the paradox: If nonfinancial data, such as greenhouse gas emissions per dollar of revenue, is included in a financial report for investors, how can it still be called nonfinancial?

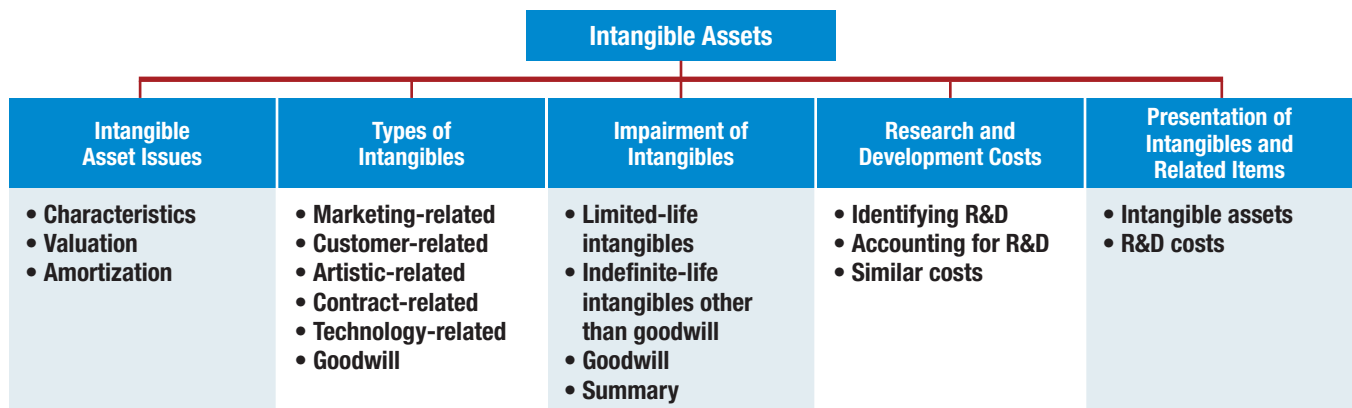

As with the reporting of research and development expenditures and other intangible assets—many of which do not show up on a balance sheet or income statement—companies are now exploring ways to combine the nonfinancial information with mandated disclosures in what is called an **integrated report**. In such a report, a company might disclose data on any of dozens of metrics beyond conventional balance sheet accounting, whether they are “integrated” or released separately. Practitioners collectively refer sustainability reporting as **ESG** for the three major categories of data—environmental, social, and corporate governance.

While 228 U.S. companies issued a sustainability report in 2011, there was significant variation in the content and format. Only a handful, like those prepared by **Clorox**, **Northrop Grumman**, **SAS**, **Genentech**, and **Polymer Group Inc.**, integrated a sustainability report with the financial statements. As with accounting reports prepared under GAAP, perhaps sustainability reporting is in need of standards?

Sources: S. Lopresti and P. Lilak, “Do Investors Care About Sustainability?” *PwC* (March 2012); and E. Rostin, “Non-Financial Data Are Material: The Sustainability Paradox,” *www.bloombergnews.com* (April 13, 2012).

PREVIEW OF CHAPTER 12

As our opening story indicates, sustainability strategies are taking on increased importance for companies like **Southwest Airlines** and **Clorox**. Reporting challenges for effective sustainability investments are similar to those for intangible assets. In this chapter, we explain the basic conceptual and reporting issues related to intangible assets. The content and organization of the chapter are as follows.

INTANGIBLE ASSET ISSUES

Characteristics

LEARNING OBJECTIVE 1

Describe the characteristics of intangible assets.

See the FASB Codification section (page 676).

Gap Inc.'s most important asset is its brand image, not its store fixtures. **The Coca-Cola Company**'s success comes from its secret formula for making Coca-Cola, not its plant facilities. **America Online**'s subscriber base, not its Internet connection equipment, provides its most important asset. The U.S. economy is dominated by information and service providers. For these companies, their major assets are often intangible in nature.

What exactly are intangible assets? **Intangible assets** have two main characteristics. [1]

1. **They lack physical existence.** Tangible assets such as property, plant, and equipment have physical form. Intangible assets, in contrast, derive their value from the rights and privileges granted to the company using them.
2. **They are not financial instruments.** Assets such as bank deposits, accounts receivable, and long-term investments in bonds and stocks also lack physical substance. However, financial instruments derive their value from the right (claim) to receive cash or cash equivalents in the future. Financial instruments are not classified as intangibles.

In most cases, intangible assets provide benefits over a period of years. Therefore, companies normally classify them as long-term assets.

Following a discussion of the general valuation and accounting provisions for intangible assets, we present a more extensive discussion of the types of intangible assets and their accounting.

Valuation

Purchased Intangibles

LEARNING OBJECTIVE 2

Identify the costs to include in the initial valuation of intangible assets.

Companies **record at cost** intangibles purchased from another party. Cost includes all acquisition costs plus expenditures to make the intangible asset ready for its intended use. Typical costs include purchase price, legal fees, and other incidental expenses.

Sometimes companies acquire intangibles in exchange for stock or other assets. In such cases, **the cost of the intangible is the fair value of the consideration given or the fair value of the intangible received, whichever is more clearly evident.** What if a company buys several intangibles, or a combination of intangibles and tangibles? In such a "basket purchase," the company should allocate the cost on the basis of fair values. Essentially, the accounting treatment for purchased intangibles closely parallels that for purchased tangible assets.¹

Internally Created Intangibles

Sometimes a company may incur substantial research and development (R&D) costs to create an intangible. For example, **Google** expensed the R&D costs incurred to develop its valuable search engine. Costs incurred internally to create intangibles are generally expensed.

¹The accounting in this section relates to the acquisition of a single asset or group of assets. The accounting for intangible assets acquired in a **business combination** (transaction in which the purchaser obtains control of one or more businesses) is discussed later in this chapter.

How do companies justify this approach? Some argue that the costs incurred internally to create intangibles bear no relationship to their real value. Therefore, they reason, expensing these costs is appropriate. Others note that it is difficult to associate internal costs with a specific intangible. Still others contend that due to the underlying subjectivity related to intangibles, companies should follow a conservative approach—that is, expense as incurred. As a result, **companies capitalize only direct costs** incurred in developing the intangible, such as legal costs, and expense the rest.

Underlying Concepts

The controversy surrounding the accounting for R&D expenditures reflects a debate about whether such expenditures meet the definition of an asset. If so, then an “expense all R&D costs” policy results in overstated expenses and understated assets.

Amortization of Intangibles

The allocation of the cost of intangible assets in a systematic way is called **amortization**. Intangibles have either a **limited (finite) useful life** or an **indefinite useful life**. For example, a company like **Walt Disney Company** has both types of intangibles. Disney **amortizes** its **limited-life** intangible assets (e.g., copyrights on its movies and licenses related to its branded products). It **does not amortize indefinite-life** intangible assets (e.g., the Disney trade name or its Internet domain name).

LEARNING OBJECTIVE

Explain the procedure for amortizing intangible assets.

Limited-Life Intangibles

Companies amortize their limited-life intangibles by systematic charges to expense over their useful life. The useful life should reflect the periods over which these assets will contribute to cash flows. Disney, for example, considers these factors in determining useful life:

1. The expected use of the asset by the company.
2. The expected useful life of another asset or a group of assets to which the useful life of the intangible asset may relate (such as lease rights to a studio lot).
3. Any legal, regulatory, or contractual provisions that may limit the useful life.
4. Any provisions (legal, regulatory, or contractual) that enable renewal or extension of the asset’s legal or contractual life without substantial cost. This factor assumes that there is evidence to support renewal or extension. Disney also must be able to accomplish renewal or extension without material modifications of the existing terms and conditions.
5. The effects of obsolescence, demand, competition, and other economic factors. Examples include the stability of the industry, known technological advances, legislative action that results in an uncertain or changing regulatory environment, and expected changes in distribution channels.
6. The level of maintenance expenditure required to obtain the expected future cash flows from the asset. For example, a material level of required maintenance in relation to the carrying amount of the asset may suggest a very limited useful life. [2]

The amount of amortization expense for a limited-life intangible asset should reflect the pattern in which the company consumes or uses up the asset, if the company can reliably determine that pattern. For example, assume that Second Wave, Inc. purchases a license to provide a specified quantity of a gene product called Mega. Second Wave should amortize the cost of the license following the pattern of use of Mega. If Second Wave’s license calls for it to provide 30 percent of the total the first year, 20 percent the second year, and 10 percent per year until the license expires, it would amortize the license cost using that pattern. If it cannot determine the pattern of production

or consumption, Second Wave should use the straight-line method of amortization. (For homework problems, assume the use of the straight-line method unless stated otherwise.) **When Second Wave amortizes these licenses, it should show the charges as expenses. It should credit either the appropriate asset accounts or separate accumulated amortization accounts.**

The amount of an intangible asset to be amortized should be its cost less residual value. The residual value is assumed to be zero unless at the end of its useful life the intangible asset has value to another company. For example, if Hardy Co. commits to purchasing an intangible asset from U2D Co. at the end of the asset’s useful life, U2D Co. should reduce the cost of its intangible asset by the residual value. Similarly, U2D Co. should consider fair values, if reliably determined, for residual values.

What happens if the life of a limited-life intangible asset changes? In that case, the remaining carrying amount should be amortized over the revised remaining useful life. Companies should, on a regular basis, evaluate the limited-life intangibles for **impairment**. Similar to the accounting for property, plant, and equipment, an impairment loss should be recognized if the carrying amount of the intangible is not recoverable and its carrying amount exceeds its fair value. (We will cover impairment of intangibles in more detail later in the chapter.)

Indefinite-Life Intangibles

If no factors (legal, regulatory, contractual, competitive, or other) limit the useful life of an intangible asset, a company considers its useful life indefinite. An **indefinite life** means that there is no foreseeable limit on the period of time over which the intangible asset is expected to provide cash flows. A company **does not amortize** an intangible asset with an indefinite life. To illustrate, assume that Double Klik Inc. acquired a trademark that it uses to distinguish a leading consumer product. It renews the trademark every 10 years. All evidence indicates that this trademarked product will generate cash flows for an indefinite period of time. In this case, the trademark has an indefinite life; Double Klik does not record any amortization.

Companies should test indefinite-life intangibles for **impairment** at least annually. As we will discuss in more detail later in the chapter, the **impairment test** for indefinite-life intangibles differs from the one for limited-life intangibles. Only the fair value test is performed for indefinite-life intangibles; there is no recoverability test for these intangibles. The reason? Indefinite-life intangible assets might never fail the undiscounted cash flows recoverability test because cash flows could extend indefinitely into the future.

Illustration 12-1 summarizes the accounting treatment for intangible assets.

International Perspective

IFRS requires capitalization of some development costs.

ILLUSTRATION 12-1
Accounting Treatment for Intangibles

Type of Intangible	Manner Acquired		Amortization	Impairment Test
	Purchased	Internally Created		
Limited-life intangibles	Capitalize	Expense*	Over useful life	Recoverability test and then fair value test
Indefinite-life intangibles	Capitalize	Expense*	Do not amortize	Fair value test only

*Except for direct costs, such as legal costs.

What do the numbers mean? DEFINITELY INDEFINITE

The importance of intangible asset classification as either limited-life or indefinite-life is illustrated in the experience of **Outdoor Channel Holdings**. Here's what happened. Outdoor Channel recorded an intangible asset related to the value of an important distributor relationship, purchased from another company. At that time, it classified the relationship as indefinite-life. Thus, in the first two years of the asset's life, Outdoor Channel recorded no amortization expense on this asset. In the third year, investors were surprised to find that Outdoor Channel changed the classification of the distributor relationship

to limited-life, with an expected life of 21.33 years (a fairly definite useful life) and, shortly thereafter, wrote off this intangible completely.

Apparently, the company was overly optimistic about the expected future cash flows arising from the distributor relationship. As a result of that optimism, income in the second year was overstated by \$9.5 million, or 14 percent, and the impairment recorded in the third year amounted to 7 percent of assets. From indefinite-life to limited-life to worthless in two short years—investors were surely hurt by Outdoor's aggressive intangible asset classification.

TYPES OF INTANGIBLE ASSETS

As indicated, the accounting for intangible assets depends on whether the intangible has a limited or an indefinite life. There are many different types of intangibles, often classified into the following six major categories. [3]

1. Marketing-related intangible assets.
2. Customer-related intangible assets.
3. Artistic-related intangible assets.
4. Contract-related intangible assets.
5. Technology-related intangible assets.
6. Goodwill.

4 LEARNING OBJECTIVE

Describe the types of intangible assets.

Marketing-Related Intangible Assets

Companies primarily use **marketing-related intangible assets** in the marketing or promotion of products or services. Examples are trademarks or trade names, newspaper mastheads, Internet domain names, and noncompetition agreements.

A **trademark** or **trade name** is a word, phrase, or symbol that distinguishes or identifies a particular company or product. Trade names like Kleenex, Pepsi-Cola, Buick, Excedrin, Wheaties, and Sunkist create immediate product identification in our minds, thereby enhancing marketability. Under common law, the right to use a trademark or trade name, whether registered or not, rests exclusively with the original user as long as the original user continues to use it. Registration with the U.S. Patent and Trademark Office provides legal protection for an **indefinite number of renewals for periods of 10 years each**. Therefore, a company that uses an established trademark or trade name may properly consider it to have an indefinite life and does not amortize its cost.

If a company buys a trademark or trade name, it capitalizes the cost at the purchase price. If a company develops a trademark or trade name, it capitalizes costs related to securing it, such as attorney fees, registration fees, design costs, consulting fees, and successful legal defense costs. However, it excludes research and development costs. When the total cost of a trademark or trade name is insignificant, a company simply expenses it.

The value of a marketing-related intangible can be substantial. Consider Internet **domain names**. The name **Drugs.com** at one time sold for \$800,000. The bidding for the name **Loans.com** approached \$500,000. An expansion of domain names will allow industries to use terms like .cars or even Internet slang like lol. This expansion has led to a new wave of domain name activity. For a fee of \$185,000, companies can register their own domain names. Applications received include company names (such as **Microsoft**, which would have the name .microsoft) and for city-based domains (such as .nyc and .berlin).

Company names also identify qualities and characteristics that companies work hard and spend much to develop. In a recent year, an estimated 1,230 companies took on new names in an attempt to forge new identities and paid over \$250 million to corporate-identity consultants. Among these were **Primerica** (formerly American Can), **Navistar** (formerly International Harvester), and **Nissan** (formerly Datsun).

What do the numbers mean?

KEEP YOUR HANDS OFF MY INTANGIBLE!

Companies go to great extremes to protect their valuable intangible assets. Consider how the creators of the highly successful game *Trivial Pursuit* protected their creation. First, they copyrighted the 6,000 questions that are at the heart of the game. Then they shielded the *Trivial Pursuit* name by applying for a registered trademark. As a third mode of protection, they obtained a design patent on the playing board's design as a unique graphic creation.

Another example is the iPhone trade name. **Cisco Systems** sued **Apple** for using the iPhone trade name when Apple

introduced its hot new phone in 2007. Not so fast, said Cisco, which had held the iPhone trade name since 2000 and was using it on its own Voice over Internet Protocol (VoIP) products. The two companies came to an agreement for joint use of the name. It was not disclosed what Apple paid for this arrangement, but it is not surprising why Apple would want to settle—to avoid a costly delay to the launch of its highly anticipated iPhone.

Source: Nick Wingfield, "Apple, Cisco Reach Accord Over iPhone," *Wall Street Journal Online* (February 22, 2007).

Customer-Related Intangible Assets

Customer-related intangible assets result from interactions with outside parties. Examples include customer lists, order or production backlogs, and both contractual and noncontractual customer relationships.

To illustrate, assume that Green Market Inc. acquires the customer list of a large newspaper for \$6,000,000 on January 1, 2014. This customer database includes names, contact information, order history, and demographic information. Green Market expects to benefit from the information evenly over a three-year period. In this case, the customer list is a limited-life intangible that Green Market should amortize on a straight-line basis.

Green Market records the purchase of the customer list and the amortization of the customer list at the end of each year as follows.

January 1, 2014		
Customer List	6,000,000	
Cash		6,000,000
(To record purchase of customer list)		
December 31, 2014, 2015, 2016		
Amortization Expense	2,000,000	
Customer List (or Accumulated Customer List Amortization)		2,000,000
(To record amortization expense)		

The preceding example assumed no residual value for the customer list. But what if Green Market determines that it can sell the list for \$60,000 to another company at the

end of three years? In that case, Green Market should subtract this residual value from the cost in order to determine the amortization expense for each year. Amortization expense would be \$1,980,000, as shown in Illustration 12-2.

Cost	\$6,000,000
Less: Residual value	<u>60,000</u>
Amortization base	<u>\$5,940,000</u>
Amortization expense per period: \$1,980,000	(\$5,940,000 ÷ 3)

ILLUSTRATION 12-2

Calculation of Amortization Expense with Residual Value

Companies should assume a zero residual value unless the asset's useful life is less than the economic life and reliable evidence is available concerning the residual value. [4]

Artistic-Related Intangible Assets

Artistic-related intangible assets involve ownership rights to plays, literary works, musical works, pictures, photographs, and video and audiovisual material. Copyrights protect these ownership rights.

A **copyright** is a federally granted right that all authors, painters, musicians, sculptors, and other artists have in their creations and expressions. A copyright is granted for the **life of the creator plus 70 years**. It gives the owner or heirs the exclusive right to reproduce and sell an artistic or published work. Copyrights are not renewable.

Copyrights can be valuable. In the late 1990s, **Walt Disney Company** faced the loss of its copyright on Mickey Mouse, which could have affected sales of billions of dollars of Mickey-related goods and services (including theme parks). This copyright was so important that Disney and many other big entertainment companies fought all the way to the Supreme Court—and won an extension of copyright lives from 50 to 70 years.

As another example, **Really Useful Group** owns copyrights on the musicals of Andrew Lloyd Webber—*Cats*, *Phantom of the Opera*, *Jesus Christ Superstar*, and others. The company has little in the way of tangible assets, yet analysts value it at over \$300 million.

Companies capitalize the costs of acquiring and defending a copyright. They amortize any capitalized costs over the useful life of the copyright if less than its legal life (life of the creator plus 70 years). For example, Really Useful Group should allocate the costs of its copyrights to the years in which it expects to receive the benefits. The difficulty of determining the number of years over which it will receive benefits typically encourages a company like Really Useful Group to write off these costs over a fairly short period of time. Companies must expense the research and development costs that lead to a copyright as those costs are incurred.

Contract-Related Intangible Assets

Contract-related intangible assets represent the value of rights that arise from contractual arrangements. Examples are franchise and licensing agreements, construction permits, broadcast rights, and service or supply contracts.

A **franchise** is a contractual arrangement under which the franchisor grants the franchisee the right to sell certain products or services, to use certain trademarks or trade names, or to perform certain functions, usually within a designated geographical area. When you purchase a Prius from a **Toyota** dealer, fill up your tank at the corner **Shell** station, eat lunch at **Subway**, or make reservations at a **Marriott** hotel, you are dealing with franchises.

The franchisor, having developed a unique concept or product, protects its concept or product through a patent, copyright, or trademark or trade name. The franchisee acquires the right to exploit the franchisor's idea or product by signing a franchise agreement.

Another type of franchise, granted by a governmental body, permits the business to use public property in performing its services. Examples are the use of city streets for a bus line or taxi service; the use of public land for telephone, electric, and cable television lines; and the use of airwaves for radio or TV broadcasting. Such operating rights are referred to as **licenses** or **permits**. For example, **Fox**, **CBS**, and **NBC** recently agreed to pay \$27.9 billion for the right to broadcast **NFL** football games over an eight-year period.

Franchises and licenses may be for a definite period of time, for an indefinite period of time, or perpetual. The company securing the franchise or license carries an intangible asset account (entitled Franchises or Licenses) on its books, only when it can identify costs with the acquisition of the operating right. (Such costs might be legal fees or an advance lump-sum payment, for example.) **A company should amortize the cost of a franchise (or license) with a limited life as an operating expense over the life of the franchise.** It should not amortize a franchise with an indefinite life nor a perpetual franchise; the company should instead carry such franchises at cost.

Annual payments made under a franchise agreement should be entered as operating expenses in the period in which they are incurred. These payments do not represent an asset since they do not relate to *future rights* to use the property.

Technology-Related Intangible Assets

Technology-related intangible assets relate to innovations or technological advances. Examples are patented technology and trade secrets granted by the U.S. Patent and Trademark Office.

A **patent** gives the holder exclusive right to use, manufacture, and sell a product or process **for a period of 20 years** without interference or infringement by others. Companies such as **Merck**, **Polaroid**, and **Xerox** were founded on patents and built on the exclusive rights thus granted.² The two principal kinds of patents are **product patents**, which cover actual physical products, and **process patents**, which govern the process of making products.

If a company like **Qualcomm** purchases a patent from an inventor, the purchase price represents its cost. Qualcomm can capitalize other costs incurred in connection with securing a patent, as well as attorneys' fees and other unrecovered costs of a successful legal suit to protect the patent, as part of the patent cost. However, **it must expense as incurred** any research and development costs related to the **development** of the product, process, or idea that it subsequently patents. (We discuss accounting for research and development costs in more detail on pages 665–667.)

Companies should amortize the cost of a patent over its legal life or its useful life (the period in which benefits are received), **whichever is shorter**. If Qualcomm owns a patent from the date it is granted and expects the patent to be useful during its entire legal life, the company should amortize it over 20 years. If it appears that the patent will be useful for a shorter period of time, say for five years, it should amortize its cost over five years.

²Consider the opposite result. Sir Alexander Fleming, who discovered penicillin, decided not to use a patent to protect his discovery. He hoped that foregoing a patent would help companies produce the medication more quickly. Companies, however, refused to develop it because they did not have the patent shield and, therefore, were afraid to make the investment.

Changing demand, new inventions superseding old ones, inadequacy, and other factors often limit the useful life of a patent to less than the legal life. For example, the useful life of pharmaceutical patents is frequently less than the legal life because of the testing and approval period that follows their issuance. A typical drug patent has several years knocked off its 20-year legal life. Why? Because a drug-maker spends one to four years on animal tests, four to six years on human tests, and two to three years for the Food and Drug Administration to review the tests. All this time occurs *after* issuing the patent but *before* the product goes on pharmacists' shelves.

What do the numbers mean? PATENT BATTLES

From online retailing to cell phone features, global competition is bringing to the boiling point battles over patents. For example, to protect its patented "one-click" shopping technology that saves your shipping and credit card information when you shop online, **Amazon.com** filed a complaint against **Barnesandnoble.com**, its rival in the e-tailing wars.

The smartphone industry is another patent battleground. For example, **Nokia** filed patent lawsuits against **Apple**

(and Apple countersued) over cell phone features such as swiping gestures on touch screens and the "app store" for downloading software. Apple also targeted **HTC** for infringing on Apple's patented feature that allows screens to detect more than one finger touch at a time. This facilitates the popular zoom-in and zoom-out capability. HTC, in turn, sued Apple for infringing on patented technology that helps extend battery life.

Sources: Adapted from L. Rohde, "Amazon, Barnes and Noble Settle Patent Dispute," *CNN.com* (March 8, 2002); and J. Mintz, "Smart Phone Makers in Legal Fights over Patents," *Wisconsin State Journal* (December 19, 2010), p. F4.

As mentioned earlier, companies capitalize the costs of defending copyrights. The accounting treatment for a patent defense is similar. **A company charges all unrecovered legal fees and other costs incurred in successfully defending a patent suit to Patents**, an asset account. Such costs should be amortized along with acquisition cost over the remaining useful life of the patent.

Amortization expense should reflect the pattern, if reliably determined, in which a company uses up the patent.³ A company may credit amortization of patents directly to the Patents account or to an Accumulated Patent Amortization account. To illustrate, assume that Harcott Co. incurs \$180,000 in legal costs on January 1, 2014, to successfully defend a patent. The patent's useful life after defense is 12 years, amortized on a straight-line basis. Harcott records the legal fees and the amortization at the end of 2014 as follows.

January 1, 2014		
Patents	180,000	
Cash		180,000
(To record legal fees related to patent)		
December 31, 2014		
Amortization Expense (\$180,000 ÷ 12)	15,000	
Patents (or Accumulated Patent Amortization)		15,000
(To record amortization of patent)		

We've indicated that a patent's useful life should not extend beyond its legal life of 20 years. However, companies often make small modifications or additions that lead to a new patent. For example, **Astra Zeneca plc** filed for additional patents on minor modifications to its heartburn drug Prilosec. The effect may be to extend the life of the old

³Companies may compute amortization on a units-of-production basis in a manner similar to that described for depreciation on property, plant, and equipment.

patent. If the new patent provides essentially the same benefits, Astra Zeneca can apply the unamortized costs of the old patent to the new patent.⁴

Alternatively, if a patent becomes impaired because demand drops for the product, the asset should be written down or written off immediately to expense.

What do the numbers mean?

THE VALUE OF A SECRET FORMULA

After several espionage cases were uncovered, the secrets contained within the Los Alamos nuclear lab seemed easier to check out than a library book. But **The Coca-Cola Company** has managed to keep the recipe for the world's best-selling soft drink under wraps for more than 100 years. The company offers almost no information about its lifeblood, and the only written copy of the formula resides in a bank vault in Atlanta. This handwritten sheet is available to no one except by vote of Coca-Cola's board of directors.

Can't science offer some clues? Coke purportedly contains 17 to 18 ingredients. That includes the usual caramel

color and corn syrup, as well as a blend of oils known as 7X (rumored to be a mix of orange, lemon, cinnamon, and others). Distilling natural products like these is complicated since they are made of thousands of compounds. One ingredient you will not find, by the way, is cocaine. Although the original formula did contain trace amounts, today's Coke doesn't. When was it removed? That too is a secret.

Some experts indicate that the power of the Coca-Cola formula and related brand image account for almost \$72 billion, or roughly 6 percent, of Coke's \$1,128 billion stock value.

Sources: Adapted from Reed Tucker, "How Has Coke's Formula Stayed a Secret?" *Fortune* (July 24, 2000), p. 42; and "Best Global Brands 2011," *www.interbrand.com* (accessed July 5, 2012).

Goodwill

LEARNING OBJECTIVE 5

Explain the accounting issues for recording goodwill.

Although companies may capitalize certain costs incurred in developing specifically identifiable assets such as patents and copyrights, the amounts capitalized are generally insignificant. But companies do record material amounts of intangible assets when purchasing them, particularly in situations involving a business combination (the purchase of another business).

To illustrate, assume that Portofino Company decides to purchase Aquinas Company. In this situation, Portofino measures the assets acquired and the liabilities assumed at fair value. In measuring these assets and liabilities, Portofino must identify all the assets and liabilities of Aquinas. As a result, Portofino may recognize some assets or liabilities not previously recognized by Aquinas. For example, Portofino may recognize intangible assets such as a brand name, patent, or customer list that were not recorded by Aquinas. In this case, Aquinas may not have recognized these assets because they were developed internally and charged to expense.

In many business combinations, the purchasing company records goodwill. **Goodwill** is measured as the excess of the cost of the purchase over the fair value of the identifiable net assets (assets less liabilities) purchased. For example, if Portofino paid \$2,000,000 to purchase Aquinas's identifiable net assets (with a fair value of \$1,500,000), Portofino records goodwill of \$500,000. Goodwill is therefore measured as a residual rather than measured directly. That is why goodwill is sometimes referred to as a **plug**, a **gap filler**, or a **master valuation account**.⁵

⁴Another classic example is **Eli Lilly's** drug Prozac (prescribed to treat depression). In 1998, this product accounted for 43 percent of Eli Lilly's sales. The patent on Prozac expired in 2001, and the company was unable to extend its protection with a second-use patent for the use of Prozac to treat appetite disorders. Sales of the product slipped substantially as generic equivalents entered the market.

⁵GAAP [5] provides detailed guidance regarding the recognition of identifiable intangible assets in a business combination. With this guidance, companies should recognize more identifiable intangible assets, and less goodwill, in the financial statements as a result of business combinations.

Conceptually, goodwill represents the future economic benefits arising from the other assets acquired in a business combination that are not individually identified and separately recognized. It is often called “the most intangible of the intangible assets” because it is identified only with the business as a whole. The only way to sell goodwill is to sell the business.

Recording Goodwill

Internally Created Goodwill. Goodwill generated internally should not be capitalized in the accounts. The reason? Measuring the components of goodwill is simply too complex, and associating any costs with future benefits is too difficult. The future benefits of goodwill may have no relationship to the costs incurred in the development of that goodwill. To add to the mystery, goodwill may even exist in the absence of specific costs to develop it. Finally, because no objective transaction with outside parties takes place, a great deal of subjectivity—even misrepresentation—may occur.

Purchased Goodwill. As indicated earlier, goodwill is recorded only when an entire business is purchased. To record goodwill, a company compares the fair value of the net tangible and identifiable intangible assets with the purchase price of the acquired business. The difference is considered goodwill. **Goodwill is the residual—the excess of cost over fair value of the identifiable net assets acquired.**

To illustrate, Multi-Diversified, Inc. decides that it needs a parts division to supplement its existing tractor distributorship. The president of Multi-Diversified is interested in buying Tractorling Company, a small concern in Chicago. Illustration 12-3 presents the balance sheet of Tractorling Company.

Underlying Concepts

Capitalizing goodwill only when it is purchased in an arm’s-length transaction, and not capitalizing any goodwill generated internally, is another example of faithful representation winning out over relevance.

TRACTORLING CO. BALANCE SHEET AS OF DECEMBER 31, 2014			
Assets		Liabilities and Equity	
Cash	\$ 25,000	Current liabilities	\$ 55,000
Accounts receivable	35,000	Capital stock	100,000
Inventory	42,000	Retained earnings	100,000
Property, plant, and equipment, net	153,000		
Total assets	\$255,000	Total liabilities and equity	\$255,000

ILLUSTRATION 12-3
Tractorling Co. Balance Sheet

After considerable negotiation, Tractorling Company decides to accept Multi-Diversified’s offer of \$400,000. What, then, is the value of the goodwill, if any?

The answer is not obvious. Tractorling’s historical cost-based balance sheet does not disclose the fair values of its identifiable assets. Suppose, though, that as the negotiations progress, Multi-Diversified investigates Tractorling’s underlying assets to determine their fair values. Such an investigation may be accomplished either through a purchase audit undertaken by Multi-Diversified or by an independent appraisal from some other source. The investigation determines the valuations shown in Illustration 12-4 (page 660).

Normally, differences between current fair value and book value are more common among long-term assets than among current assets. Cash obviously poses no problems as to value. Receivables normally are fairly close to current valuation although they may at times need certain adjustments due to inadequate bad debt provisions. Liabilities usually are stated at book value. However, if interest rates have changed since the company incurred the liabilities, a different valuation (such as present value based on

Gateway to the Profession

*Expanded Discussion—
Valuing Goodwill*

ILLUSTRATION 12-4
Fair Value of Tractorling's
Net Assets

Fair Values	
Cash	\$ 25,000
Accounts receivable	35,000
Inventory	122,000
Property, plant, and equipment, net	205,000
Patents	18,000
Liabilities	(55,000)
Fair value of net assets	<u><u>\$350,000</u></u>

expected cash flows) is appropriate. Careful analysis must be made to determine that no unrecorded liabilities are present.

The \$80,000 difference in Tractorling's inventories (\$122,000 – \$42,000) could result from a number of factors. The most likely is that the company uses LIFO. Recall that during periods of inflation, LIFO better matches expenses against revenues. However, it also creates a balance sheet distortion. Ending inventory consists of older layers costed at lower valuations.

In many cases, the values of long-term assets such as property, plant, and equipment, and intangibles may have increased substantially over the years. This difference could be due to inaccurate estimates of useful lives, continual expensing of small expenditures (say, less than \$300), inaccurate estimates of residual values, and the discovery of some unrecorded assets. (For example, in Tractorling's case, analysis determines Patents have a fair value of \$18,000.) Or, fair values may have substantially increased.

Since the investigation now determines the fair value of net assets to be \$350,000, why would Multi-Diversified pay \$400,000? Undoubtedly, Tractorling points to its established reputation, good credit rating, top management team, well-trained employees, and so on. These factors make the value of the business greater than \$350,000. Multi-Diversified places a premium on the future earning power of these attributes as well as on the basic asset structure of the company today.

Multi-Diversified labels the difference between the purchase price of \$400,000 and the fair value of net assets of \$350,000 as goodwill. Goodwill is viewed as one or a group of unidentifiable values (intangible assets), the cost of which "is measured by the difference between the cost of the group of assets or enterprise acquired and the sum of the assigned costs of individual tangible and identifiable intangible assets acquired less liabilities assumed."⁶ This procedure for valuation is called a **master valuation approach**. It assumes goodwill covers all the values that cannot be specifically identified with any identifiable tangible or intangible asset. Illustration 12-5 shows this approach.

ILLUSTRATION 12-5
Determination of
Goodwill—Master
Valuation Approach

	Cash	\$ 25,000
	Accounts receivable	35,000
	Inventory	122,000
	Property, plant, and equipment, net	205,000
	Patents	18,000
	Liabilities	<u>(55,000)</u>
	Fair value of net identifiable assets	\$350,000
	Purchase price	<u>400,000</u>
Assigned to purchase price of \$400,000	Value assigned to goodwill	<u><u>\$ 50,000</u></u>

⁶The FASB expressed concern about measuring goodwill as a residual but noted that there is no real measurement alternative since goodwill is not separable from the company as a whole. [6]

Multi-Diversified records this transaction as follows.

Cash	25,000	
Accounts Receivable	35,000	
Inventory	122,000	
Property, Plant, and Equipment	205,000	
Patents	18,000	
Goodwill	50,000	
Liabilities		55,000
Cash		400,000

Companies often identify goodwill on the balance sheet as the **excess of cost over the fair value** of the net assets acquired.

Goodwill Write-Off

Companies that recognize goodwill in a business combination **consider it to have an indefinite life and therefore should not amortize it**. Although goodwill may decrease in value over time, predicting the actual life of goodwill and an appropriate pattern of amortization is extremely difficult. In addition, investors find the amortization charge of little use in evaluating financial performance.

Furthermore, the investment community wants to know the amount invested in goodwill, which often is the largest intangible asset on a company's balance sheet. Therefore, **companies adjust its carrying value only when goodwill is impaired**. This approach significantly impacts the income statements of some companies.

Some believe that goodwill's value eventually disappears. Therefore, they argue, companies should charge goodwill to expense over the periods affected, to better match expense with revenues. Others note that the accounting treatment for purchased goodwill and goodwill created internally should be consistent. They point out that companies immediately expense goodwill created internally and should follow the same treatment for purchased goodwill. Though these arguments may have some merit, nonamortization of goodwill combined with an adequate impairment test should provide the most useful financial information to the investment community. We discuss the accounting for goodwill impairments later in the chapter.

Bargain Purchase

In a few cases, the purchaser in a business combination pays *less than* the fair value of the identifiable net assets. Such a situation is referred to as a **bargain purchase**. A bargain purchase results from a market imperfection. That is, the seller would have been better off to sell the assets individually than in total. However, situations do occur (e.g., a forced liquidation or distressed sale due to the death of a company founder) in which the purchase price is less than the value of the net identifiable assets. **This excess amount is recorded as a gain by the purchaser.**

The FASB notes that an economic gain is inherent in a bargain purchase. The purchaser is better off by the amount by which the fair value of what is acquired exceeds the amount paid. Some expressed concern that some companies may attempt inappropriate gain recognition by making an intentional error in measurement of the assets or liabilities. As a result, the FASB requires companies to disclose the nature of this gain transaction. Such disclosure will help users to better evaluate the quality of the earnings reported.⁷

⁷This gain is not reported as an extraordinary item, [7] which is consistent with convergence in international accounting standards. IFRS does not permit extraordinary item reporting.

IMPAIRMENT OF INTANGIBLE ASSETS

LEARNING OBJECTIVE 6

Explain the accounting issues related to intangible-asset impairments.

In some cases, the carrying amount of a long-lived asset (property, plant, and equipment, or intangible assets) is not recoverable. Therefore, a company needs to record a write-off. As discussed in Chapter 11, this write-off is referred to as an **impairment**.

Impairment of Limited-Life Intangibles

The rules that apply to **impairments of property, plant, and equipment also apply to limited-life intangibles**. As discussed in Chapter 11, a company should review property, plant, and equipment for impairment at certain points—whenever events or changes in circumstances indicate that the carrying amount of the asset may not be recoverable. In performing this **recoverability test**, the company estimates the future cash flows expected from use of the asset and its eventual disposal. If the sum of the expected future net cash flows (undiscounted) is less than the carrying amount of the asset, the company would measure and recognize an impairment loss. [8]

The company then uses the **fair value test**. This test measures the impairment loss by comparing the asset's fair value with its carrying amount. The impairment loss is the carrying amount of the asset less the fair value of the impaired asset. As with other impairments, the loss on the limited-life intangible is reported as part of income from continuing operations. The entry generally appears in the "Other expenses and losses" section.

To illustrate, assume that Lerch, Inc. has a patent on how to extract oil from shale rock. Unfortunately, several recent non-shale oil discoveries adversely affected the demand for shale-oil technology. Thus, the patent has provided little income to date. As a result, Lerch performs a recoverability test. It finds that the expected future net cash flows from this patent are \$35 million. Lerch's patent has a carrying amount of \$60 million. Because the expected future net cash flows of \$35 million are less than the carrying amount of \$60 million, Lerch must determine an impairment loss.

Discounting the expected future net cash flows at its market rate of interest, Lerch determines the fair value of its patent to be \$20 million. Illustration 12-6 shows the impairment loss computation (based on fair value).

ILLUSTRATION 12-6

Computation of Loss on Impairment of Patent

Carrying amount of patent	\$60,000,000
Less: Fair value (based on present value computation)	<u>20,000,000</u>
Loss on impairment	<u>\$40,000,000</u>

Lerch records this loss as follows.

Loss on Impairment	40,000,000	
Patents		40,000,000

After recognizing the impairment, the reduced carrying amount of the patents is its new cost basis. Lerch should amortize the patent's new cost over its remaining useful life or legal life, whichever is shorter. Even if shale-oil prices increase in subsequent periods and the value of the patent increases, Lerch **may not recognize restoration of the previously recognized impairment loss**.

Underlying Concepts

The basic attributes of intangibles, their uncertainty as to future benefits, and their uniqueness have discouraged valuation in excess of cost.

Impairment of Indefinite-Life Intangibles Other Than Goodwill

Companies should test indefinite-life intangibles other than goodwill for impairment at least annually. The impairment test for an indefinite-life asset other than goodwill is a **fair value test**. This test compares the fair value of the intangible asset with the asset's

carrying amount. If the fair value is less than the carrying amount, the company recognizes an impairment. Companies use this one-step test because many indefinite-life assets easily meet the recoverability test (because cash flows may extend many years into the future). **Thus, companies do not use the recoverability test.**

To illustrate, assume that Arcon Radio purchased a broadcast license for \$2,000,000. The license is renewable every 10 years if the company provides appropriate service and does not violate Federal Communications Commission (FCC) rules. Arcon Radio has renewed the license with the FCC twice, at a minimal cost. Because it expects cash flows to last indefinitely, Arcon reports the license as an indefinite-life intangible asset. Recently, the FCC decided to auction significantly more of these licenses. As a result, Arcon Radio expects reduced cash flows for the remaining two years of its existing license. It performs an impairment test and determines that the fair value of the intangible asset is \$1,500,000. Arcon therefore reports an impairment loss of \$500,000, computed as follows.

Carrying amount of broadcast license	\$2,000,000
Less: Fair value of broadcast license	<u>1,500,000</u>
Loss on impairment	<u>\$ 500,000</u>

ILLUSTRATION 12-7
Computation of Loss on
Impairment of Broadcast
License

Arcon Radio now reports the license at \$1,500,000, its fair value. Even if the value of the license increases in the remaining two years, Arcon may not restore the previously recognized impairment loss.

Companies have the option to perform a qualitative assessment to determine whether it is more likely than not (i.e., a likelihood of more than 50 percent) that an indefinite-life intangible asset is impaired. [9] If the qualitative assessment indicates that the fair value of the reporting unit is more likely than not to be greater than the carrying value (i.e., the asset is not impaired), **the company need not continue with the fair value test.** As a result, use of the qualitative assessment option should reduce both the cost and complexity of performing the impairment test.⁸

Impairment of Goodwill

Goodwill must be tested for impairment at least annually. **The impairment rule for goodwill is a two-step process.** First, a company compares the fair value of the reporting unit to its carrying amount, including goodwill. If the fair value of the reporting unit exceeds the carrying amount, goodwill is not impaired. The company does not have to do anything else. Similar to other indefinite-life intangibles, companies may instead perform an optional qualitative assessment to determine whether it is more likely than not that goodwill is impaired. If the qualitative assessment indicates that the fair value of the reporting unit is more likely than not to be greater than the carrying value, the company need not continue with the two-step impairment test.⁹

To illustrate, assume that Kohlbuy Corporation has three divisions. It purchased one division, Pritt Products, four years ago for \$2 million. Unfortunately, Pritt experienced operating losses over the last three quarters. Kohlbuy management is now reviewing the

⁸ Examples of events and circumstances to be evaluated include but are not limited to (1) deterioration in general economic conditions; (2) an increased competitive environment, a decline in market-dependent multiples or metrics, a change in the market for a company's products or services, or a regulatory or political development; (3) cost factors such as increases in raw materials, labor, or other costs that have a negative effect on earnings; and (4) overall financial performance such as negative or declining cash flows or a decline in actual or planned revenue or earnings.

⁹ The qualitative assessment examines similar factors as those used in the optional qualitative test for other indefinite-life intangibles but are based on events and circumstances related to the reporting unit. [10]

division for purposes of recognizing an impairment. Illustration 12-8 lists the Pritt Division’s net assets, including the associated goodwill of \$900,000 from the purchase.

ILLUSTRATION 12-8

Net Assets of Pritt Division, Including Goodwill

Cash	\$ 200,000
Accounts receivable	300,000
Inventory	700,000
Property, plant, and equipment (net)	800,000
Goodwill	900,000
Accounts and notes payable	<u>(500,000)</u>
Net assets	<u>\$2,400,000</u>

Kohlbuy determines that the fair value of Pritt Division is \$2,800,000. **Because the fair value of the division exceeds the carrying amount of the net assets, Kohlbuy does not recognize any impairment.**

However, if the fair value of Pritt Division were less than the carrying amount of the net assets, then Kohlbuy would perform a second step to determine possible impairment. In the second step, Kohlbuy determines the fair value of the goodwill (implied value of goodwill) and compares it to its carrying amount. To illustrate, assume that the fair value of the Pritt Division is \$1,900,000 instead of \$2,800,000. Illustration 12-9 computes the implied value of the goodwill in this case.¹⁰

ILLUSTRATION 12-9

Determination of Implied Value of Goodwill

Fair value of Pritt Division	\$1,900,000
Less: Net identifiable assets (excluding goodwill) (\$2,400,000 – \$900,000)	<u>1,500,000</u>
Implied value of goodwill	<u>\$ 400,000</u>

Kohlbuy then compares the implied value of the goodwill to the recorded goodwill to measure the impairment, as shown in Illustration 12-10.

ILLUSTRATION 12-10

Measurement of Goodwill Impairment

Carrying amount of goodwill	\$900,000
Less: Implied value of goodwill	<u>400,000</u>
Loss on impairment	<u>\$500,000</u>

Impairment Summary

Illustration 12-11 summarizes the impairment tests for various intangible assets.

ILLUSTRATION 12-11

Summary of Intangible Asset Impairment Tests

Type of Intangible Asset	Impairment Test
Limited life	Recoverability test, then fair value test
Indefinite life other than goodwill	Fair value test*
Goodwill	Fair value test on reporting unit, then fair value test on implied goodwill*
	*An optional qualitative assessment may be performed to determine whether the fair value test needs to be performed.

¹⁰ Illustration 12-9 assumes that the carrying amount equals the fair value of net identifiable assets (excluding goodwill). If different, companies use the fair value of the net identifiable assets (excluding goodwill) to determine the implied goodwill.

What do the numbers mean? IMPAIRMENT RISK

As shown in the chart below, goodwill impairments spiked in 2008 and 2009, coinciding with the stock market downturn in the wake of the financial crisis.

A spike in impairments when the market declines is understandable because declines in stock price are indicators that the fair values of acquired assets have declined below the carrying value. And while there is a declining trend in impairments in 2009 and 2010, notable goodwill impairments are being reported. For example, **Microsoft** posted a goodwill impairment charge of \$6.3 billion in 2012. Some are expecting more goodwill impairments for other companies

with book values well above market value of equity (\$1.8 trillion for about 10 percent of companies in the S&P 500 at the end of 2001). As one analyst noted, “Anybody looking at a decline in market price could see the company was placing a much higher value on its assets than the market thought they were worth.”

Investors need to keep watch. Such asset write-downs—for brand names, franchise rights, and other intangible assets (including goodwill)—are important because they tell investors that management have concluded their companies’ future cash flows will not achieve previous estimates.

RESEARCH AND DEVELOPMENT COSTS

Research and development (R&D) costs are not in themselves intangible assets. However, we present the accounting for R&D costs here because R&D activities frequently result in the development of patents or copyrights (such as a new product, process, idea, formula, composition, or literary work) that may provide future value.

Many companies spend considerable sums on research and development. Illustration 12-12 (page 666) shows the outlays for R&D made by selected global companies.

Two difficulties arise in accounting for R&D expenditures: (1) identifying the costs associated with particular activities, projects, or achievements, and (2) determining the

7 LEARNING OBJECTIVE

Identify the conceptual issues related to research and development costs.

ILLUSTRATION 12-12

R&D Outlays, as a Percentage of Sales

Company	Sales (millions)	R&D/Sales
Canon	\$3,557,433	8.65%
Daimler	€106,540	3.92%
GlaxoSmithKline	£27,387	14.64%
Johnson & Johnson	\$65,030	11.61%
Nokia	€38,659	14.52%
Roche	CHF42,531	19.58%
Procter & Gamble	\$82,559	2.42%
Samsung	₩ 165,002	6.05%

International Perspective

IFRS requires the capitalization of appropriate development expenditures. This conflicts with GAAP.

magnitude of the future benefits and length of time over which such benefits may be realized. Because of these latter uncertainties, the FASB has simplified the accounting practice in this area. **Companies must expense all research and development costs when incurred. [11]**

Identifying R&D Activities

Illustration 12-13 shows the definitions for **research activities** and **development activities**. These definitions differentiate research and development costs from other similar costs. [12]

ILLUSTRATION 12-13

Research Activities versus Development Activities

Research Activities	Development Activities
 <p>Planned search or critical investigation aimed at discovery of new knowledge.</p>	 <p>Translation of research findings or other knowledge into a plan or design for a new product or process or for a significant improvement to an existing product or process whether intended for sale or use.</p>
<p>Examples</p> <p>Laboratory research aimed at discovery of new knowledge; searching for applications of new research findings.</p>	<p>Examples</p> <p>Conceptual formulation and design of possible product or process alternatives; construction of prototypes and operation of pilot plants.</p>

R&D activities do not include routine or periodic alterations to existing products, production lines, manufacturing processes, and other ongoing operations, even though these alterations may represent improvements. For example, routine ongoing efforts to refine, enrich, or improve the qualities of an existing product are not considered R&D activities.

Accounting for R&D Activities

The costs associated with R&D activities and the accounting treatments accorded them are as follows.

8 LEARNING OBJECTIVE

Describe the accounting for research and development and similar costs.

1. **Materials, equipment, and facilities.** Expense the entire costs, **unless the items have alternative future uses** (in other R&D projects or otherwise). If there are alternative future uses, carry the items as inventory and allocate as consumed, or capitalize and depreciate as used.
2. **Personnel.** Expense as incurred salaries, wages, and other related costs of personnel engaged in R&D.
3. **Purchased intangibles.** Recognize and measure at fair value. After initial recognition, account for in accordance with their nature (as either limited-life or indefinite-life intangibles).¹¹
4. **Contract services.** Expense the costs of services performed by others in connection with the R&D as incurred.
5. **Indirect costs.** Include a reasonable allocation of indirect costs in R&D costs, except for general and administrative cost, which must be clearly related in order to be included in R&D. [14]

Consistent with item 1 above, if a company owns a research facility that conducts R&D activities and that has alternative future uses (in other R&D projects or otherwise), it should capitalize the facility as an operational asset. The company accounts for depreciation and other costs related to such research facilities as R&D expenses.¹²

To illustrate, assume that Next Century Incorporated develops, produces, and markets laser machines for medical, industrial, and defense uses.¹³ Illustration 12-14 (on the next page) lists the types of expenditures related to its laser-machine activities, along with the recommended accounting treatment.

Costs Similar to R&D Costs

Many costs have characteristics similar to research and development costs. Examples are:

1. Start-up costs for a new operation.
2. Initial operating losses.
3. Advertising costs.
4. Computer software costs.

¹¹If R&D-related intangibles (often referred to as **in-process R&D**) are also acquired in a business combination, they are also recognized and measured at fair value. After initial recognition, these intangible assets are accounted for in accordance with their nature (as either limited-life or indefinite-life intangibles). [13]

¹²Companies in **the extractive industries** can use the following accounting treatment for the unique costs of research, exploration, and development activities and for those costs that are similar to but not classified as R&D costs: (1) expense as incurred, (2) capitalize and either depreciate or amortize over an appropriate period of time, or (3) accumulate as part of inventoriable costs. Choice of the appropriate accounting treatment for such costs is based on the degree of certainty of future benefits and the principle of matching revenues and expenses.

¹³Sometimes companies conduct R&D activities for other companies under a contractual arrangement. In this case, the contract usually specifies that the company performing the R&D work be reimbursed for all direct costs and certain specific indirect costs, plus a profit element. Because reimbursement is expected, the company doing the R&D work records the R&D costs as a receivable. The company for whom the work has been performed reports these costs as R&D and expenses them as incurred. For a more complete discussion of how an enterprise should account for funding of its R&D by others, see [15].

NEXT CENTURY INCORPORATED		
Type of Expenditure	Accounting Treatment	Rationale
1. Construction of long-range research facility for use in current and future projects (three-story, 400,000-square-foot building).	Capitalize and depreciate as R&D expense.	Has alternative future use.
2. Acquisition of R&D equipment for use on current project only.	Expense immediately as R&D.	Research cost.
3. Acquisition of machinery for use on current and future R&D projects.	Capitalize and depreciate as R&D expense.	Has alternative future use.
4. Purchase of materials for use on current and future R&D projects.	Inventory and allocate to R&D projects; expense as consumed.	Has alternative future use.
5. Salaries of research staff designing new laser bone scanner.	Expense immediately as R&D.	Research cost.
6. Research costs incurred under contract with New Horizon, Inc., and billable monthly.	Record as a receivable.	Not R&D cost (reimbursable expense).
7. Material, labor, and overhead costs of prototype laser scanner.	Expense immediately as R&D.	Development cost.
8. Costs of testing prototype and design modifications.	Expense immediately as R&D.	Development cost.
9. Legal fees to obtain patent on new laser scanner.	Capitalize as patent and amortize to overhead as part of cost of goods manufactured.	Direct cost of patent.
10. Executive salaries.	Expense as operating expense.	Not R&D cost (general and administrative expense).
11. Cost of marketing research to promote new laser scanner.	Expense as operating expense.	Not R&D cost (selling expense).
12. Engineering costs incurred to advance the laser scanner to full production stage.	Expense immediately as R&D.	Development cost.
13. Costs of successfully defending patent on laser scanner.	Capitalize as patent and amortize to overhead as part of cost of goods manufactured.	Direct cost of patent.
14. Commissions to sales staff marketing new laser scanner.	Expense as operating expense.	Not R&D cost (selling expense).

ILLUSTRATION 12-14

Sample R&D Expenditures and Their Accounting Treatment

For the most part, these costs are expensed as incurred, similar to the accounting for R&D costs. We briefly explain these costs in the following sections.

Start-Up Costs

Start-up costs are incurred for one-time activities to start a new operation. Examples include opening a new plant, introducing a new product or service, or conducting business in a new territory. Start-up costs include **organizational costs**, such as legal and state fees incurred to organize a new business entity.

The accounting for start-up costs is straightforward: **Expense start-up costs as incurred.** The profession recognizes that companies incur start-up costs with the expectation of future revenues or increased efficiencies. However, to determine the amount and timing of future benefits is so difficult that a conservative approach—expensing these costs as incurred—is required. [16]

To illustrate examples of start-up costs, assume that U.S.-based Hilo Beverage Company decides to construct a new plant in Brazil. This represents Hilo's first entry into the Brazilian market. Hilo plans to introduce the company's major U.S. brands into Brazil on a locally produced basis. The following costs might be involved:

1. Travel-related costs; costs related to employee salaries; and costs related to feasibility studies, accounting, tax, and government affairs.

2. Training of local employees related to product, maintenance, computer systems, finance, and operations.
3. Recruiting, organizing, and training related to establishing a distribution network.

Hilo Beverage should expense all these start-up costs as incurred.

Start-up activities commonly occur at the same time as activities involving the acquisition of assets. For example, as it is incurring start-up costs for the new plant, Hilo probably is also buying or building property, plant, equipment, and inventory. Hilo should not immediately expense the costs of these tangible assets. Instead, it should report them on the balance sheet using appropriate GAAP reporting guidelines.

Initial Operating Losses

Some contend that companies should be allowed to capitalize initial operating losses incurred in the start-up of a business. They argue that such operating losses are an unavoidable cost of starting a business.

For example, assume that Hilo lost money in its first year of operations and wishes to capitalize this loss. Hilo's CEO argues that as the company becomes profitable, it will offset these losses in future periods. What do you think? We believe that this approach is unsound since losses have no future service potential and therefore cannot be considered an asset.

GAAP requires that operating losses during the early years **should not be capitalized**. In short, **the accounting and reporting standards should be no different for an enterprise trying to establish a new business than they are for other enterprises.** [17]¹⁴

Advertising Costs

Over the years, **PepsiCo** has hired various pop stars, such as Elton John and Beyoncé, to advertise its products. How should it report such advertising costs related to its star spokespeople? Pepsi could expense the costs in various ways:

1. When the pop stars have completed their singing assignments.
2. The first time the advertising runs.
3. Over the estimated useful life of the advertising.
4. In an appropriate fashion to each of the three periods identified above.
5. Over the period revenues are expected to result.

For the most part, Pepsi must expense advertising costs as incurred or the first time the advertising takes place. Whichever of these two approaches is followed, the results are essentially the same. On the other hand, companies record as assets any tangible assets used in advertising, such as billboards or blimps. The rationale is that such assets do have alternative future uses. Again the profession has taken a conservative approach to recording advertising costs because defining and measuring the future benefits can be so difficult. [18]¹⁵

Computer Software Costs

A special problem arises in distinguishing R&D costs from selling and administrative activities. The FASB's intent was that companies exclude from the definition of R&D activities the acquisition, development, or improvement of a product or process **for use in their selling or administrative activities**. For example, the costs of software incurred by an airline

**Gateway to
the Profession**

*Expanded Discussion—
Software Development Costs*

¹⁴A company is considered to be in the developing stages when it is directing its efforts toward establishing a new business and either the company has not started the principal operations or it has earned no significant revenue.

¹⁵There are some exceptions for immediate expensing of advertising costs when they relate to direct-response advertising, but that subject is beyond the scope of this book.

in improving its computerized reservation system or the costs incurred in developing a company's management information system **are not** research and development costs.

What do the numbers mean? **BRANDED**

For many companies, developing a strong brand image is as important as developing the products they sell. Now more than ever, companies see the power of a strong brand, enhanced by significant and effective advertising investments.

As the following chart indicates, the value of brand investments is substantial. **Coca-Cola** heads the list with an estimated brand value of about \$72 billion.

1	Coca-Cola	\$71.9
2	IBM	69.9
3	Microsoft	59.0
4	Google	55.3
5	GE	42.8
6	McDonald's	35.6
7	Intel	35.2
8	Apple	33.5
9	Disney	29.0
10	HP	28.9

Source: 2011 data, from Interbrand Corp.

Occasionally you may find the value of a brand included in a company's financial statements under goodwill. But generally you will not find the estimated values of brands recorded in companies' balance sheets. The reason? The subjectivity that goes into estimating a brand's value. In some cases, analysts base an estimate of brand value on opinion polls or on some multiple of ad spending. For example, in estimating the brand values shown to the left, **Interbrand Corp.** estimates the percentage of the overall future revenues the brand will generate and then discounts the net cash flows, to arrive at a present value.

Some analysts believe that information on brand values is relevant. Others voice valid concerns about the reliability of brand value estimates due to subjectivity in the estimates for revenues, costs, and the risk component of the discount rate. For example, another brand valuation firm, **Millward Brown**, ranks **Apple** as number one with an estimated brand value of \$183 billion (or about one-third of Apple's market value). These data support the highly subjective nature of brand valuation estimates.

PRESENTATION OF INTANGIBLES AND RELATED ITEMS

Presentation of Intangible Assets

LEARNING OBJECTIVE 9

Indicate the presentation of intangible assets and related items.

The reporting of intangible assets is similar to the reporting of property, plant, and equipment. However, contra accounts are not normally shown for intangibles on the balance sheet. As Illustration 12-15 shows, on the balance sheet companies should report as a separate item all intangible assets other than goodwill. If goodwill is present, companies should report it separately. The FASB concluded that since goodwill and other intangible assets differ significantly from other types of assets, such disclosure benefits users of the balance sheet.

On the income statement, companies should present amortization expense and impairment losses for intangible assets other than goodwill separately and as part of continuing operations. Again, see Illustration 12-15. Goodwill impairment losses should also be presented as a separate line item in the continuing operations section, unless the goodwill impairment is associated with a discontinued operation.

The notes to the financial statements should include information about acquired intangible assets, including the aggregate amortization expense for each of the succeeding five years. If separate accumulated amortization accounts are not used, accumulated amortization should be disclosed in the notes. The notes should include information about changes in the carrying amount of goodwill during the period.

Note D: Goodwill			
The changes in the carrying amount of goodwill for the year ended December 31, 2014, are as follows.			
	Technology Segment	Communications Segment	Total
(\$000s)			
Balance as of			
January 1, 2014	\$1,413	\$904	\$2,317
Goodwill acquired			
during year	189	115	304
Impairment losses	—	(46)	(46)
Balance as of			
December 31, 2014	<u>\$1,602</u>	<u>\$973</u>	<u>\$2,575</u>
<p>The Communications segment is tested for impairment in the third quarter, after the annual forecasting process. Due to an increase in competition in the Texas and Louisiana cable industry, operating profits and cash flows were lower than expected in the fourth quarter of 2013 and the first and second quarters of 2014. Based on that trend, the earnings forecast for the next 5 years was revised. In September 2014, a goodwill impairment loss of \$46 was recognized in the Communications reporting unit. The fair value of that reporting unit was estimated using the expected present value of future cash flows.</p>

Presentation of Research and Development Costs

Companies should disclose in the financial statements (generally in the notes) the total R&D costs charged to expense each period for which they present an income statement. **Merck & Co., Inc.**, a global research pharmaceutical company, reported both internal and acquired research and development in its recent income statement, as shown in Illustration 12-16.

ILLUSTRATION 12-16
Income Statement
Disclosure of R&D Costs

		Years Ended December 31		
		2011	2010	2009
Sales		\$48,047	\$45,987	\$27,428.3
Costs, expenses and other				
Materials and production		16,871	18,396	9,018.9
Marketing and administrative		13,733	13,125	8,543.2
Research and development		8,467	11,111	5,845.0
Restructuring costs		1,306	985	1,633.9
Equity income from affiliates		(610)	(587)	(2,235.0)
Other (income) expense, net		946	1,304	(10,669.5)
		<u>\$40,713</u>	<u>\$44,334</u>	<u>\$12,136.5</u>

In addition, Merck provides a discussion about R&D expenditures in its annual report, as shown in Illustration 12-17.

ILLUSTRATION 12-17
Merck's R&D Disclosure

You will want to read the **IFRS INSIGHTS** on pages 693–699 for discussion of IFRS related to intangible assets.

Evolving Issue RECOGNITION OF R&D AND INTERNALLY GENERATED INTANGIBLES

The requirement that companies expense immediately all R&D costs (as well as start-up costs) incurred internally is a practical solution. It ensures consistency in practice and uniformity among companies. But the practice of immediately writing off expenditures made in the expectation of benefiting future periods is conceptually incorrect.

Proponents of immediate expensing contend that from an income statement standpoint, long-run application of this standard frequently makes little difference. They argue that because of the ongoing nature of most companies' R&D activities, the amount of R&D cost charged to expense each accounting period is about the same, whether there is immediate expensing or capitalization and subsequent amortization.

Others criticize this practice. They believe that the balance sheet should report an intangible asset related to expenditures that have future benefit. To preclude capitalization of all R&D expenditures removes from the balance sheet what may be a company's most valuable asset.

Indeed, research findings indicate that capitalizing R&D costs may be helpful to investors. For example, one study

showed a significant relationship between R&D outlays and subsequent benefits in the form of increased productivity, earnings, and shareholder value for R&D-intensive companies. Another study found that there was a significant decline in earnings usefulness for companies that were forced to switch from capitalizing to expensing R&D costs, and that the decline appears to persist over time.

The current accounting for R&D and other internally generated intangible assets represents one of the many trade-offs made among relevance, faithful representation, and cost-benefit considerations. The FASB and IASB have completed some limited-scope projects on the accounting for intangible assets, and the Boards have contemplated a joint project on the accounting for identifiable intangible assets (i.e., excluding goodwill). Such a project would address concerns that the current accounting requirements lead to inconsistent treatments for some types of intangible assets depending on how they arise. (See <http://www.ifrs.org/Current+Projects/IASB+Projects/Intangible+Assets/Intangible+Assets.htm>.)

Sources for research studies: Baruch Lev and Theodore Sougiannis, "The Capitalization, Amortization, and Value-Relevance of R&D," *Journal of Accounting and Economics* (February 1996); and Martha L. Loudder and Bruce K. Behn, "Alternative Income Determination Rules and Earnings Usefulness: The Case of R&D Costs," *Contemporary Accounting Research* (Fall 1995).

SUMMARY OF LEARNING OBJECTIVES

1 Describe the characteristics of intangible assets. Intangible assets have two main characteristics: (1) They lack physical existence, and (2) they are not financial instruments. In most cases, intangible assets provide services over a period of years and so are normally classified as long-term assets.

2 Identify the costs to include in the initial valuation of intangible assets. Intangibles are recorded at cost. Cost includes all acquisition costs and expenditures needed to make the intangible asset ready for its intended use. If intangibles are acquired in exchange for stock or other assets, the cost of the intangible is the fair value of the consideration given or the fair value of the intangible received, whichever is more clearly evident. When a company makes a "basket purchase" of several intangibles or a combination of intangibles and tangibles, it should allocate the cost on the basis of fair values.

3 Explain the procedure for amortizing intangible assets. Intangibles have either a limited useful life or an indefinite useful life. Companies amortize limited-life intangibles. They do not amortize indefinite-life intangibles. Limited-life intangibles should be amortized by systematic charges to expense over their useful life. The useful life should reflect the period over which these assets will contribute to cash flows. The

KEY TERMS

 trademark, trade
 name, 653

amount to report for amortization expense should reflect the pattern in which a company consumes or uses up the asset, if it can reliably determine that pattern. Otherwise, use a straight-line approach.

4 Describe the types of intangible assets. Major types of intangibles are (1) *marketing-related intangibles*, used in the marketing or promotion of products or services; (2) *customer-related intangibles*, resulting from interactions with outside parties; (3) *artistic-related intangibles*, giving ownership rights to such items as plays and literary works; (4) *contract-related intangibles*, representing the value of rights that arise from contractual arrangements; (5) *technology-related intangibles*, relating to innovations or technological advances; and (6) *goodwill*, arising from business combinations.

5 Explain the accounting issues for recording goodwill. Unlike receivables, inventories, and patents that a company can sell or exchange individually in the marketplace, goodwill can be identified only with the company as a whole. Goodwill is a “going concern” valuation and is recorded only when an entire business is purchased. A company should not capitalize goodwill generated internally. The future benefits of goodwill may have no relationship to the costs incurred in the development of that goodwill. Goodwill may exist even in the absence of specific costs to develop it.

To record goodwill, a company compares the fair value of the net tangible and identifiable intangible assets with the purchase price of the acquired business. The difference is considered goodwill. Goodwill is the residual. Goodwill is often identified on the balance sheet as the excess of cost over the fair value of the net assets acquired.

6 Explain the accounting issues related to intangible-asset impairments. Impairment occurs when the carrying amount of the intangible asset is not recoverable. Companies use a recoverability test and a fair value test to determine impairments for limited-life intangibles. They use only a fair value test for indefinite-life intangibles. Goodwill impairments require a two-step process. First, test the fair value of the reporting unit, then do the fair value test on implied goodwill.

7 Identify the conceptual issues related to research and development costs. R&D costs are not in themselves intangible assets, but R&D activities frequently result in the development of something a company patents or copyrights. The difficulties in accounting for R&D expenditures are (1) identifying the costs associated with particular activities, projects, or achievements, and (2) determining the magnitude of the future benefits and length of time over which a company may realize such benefits. Because of these latter uncertainties, companies are required to expense all research and development costs when incurred.

8 Describe the accounting for research and development and similar costs. Illustration 12-14 (page 668) shows typical costs associated with R&D activities and the accounting treatment accorded them. Many costs have characteristics similar to R&D costs. Examples are start-up costs, initial operating losses, and advertising costs. For the most part, these costs are expensed as incurred, similar to the accounting for R&D costs.

9 Indicate the presentation of intangible assets and related items. On the balance sheet, companies should report all intangible assets other than goodwill as a separate item. Contra accounts are not normally shown. If goodwill is present, it too should be reported as a separate item. On the income statement, companies should report amortization expense and impairment losses in continuing operations. The notes to the financial statements have additional detailed information. Financial statements must disclose the total R&D costs charged to expense each period for which an income statement is presented.

DEMONSTRATION PROBLEM

Sky Co., organized in 2014, provided you with the following information.

1. Purchased a license for \$20,000 on July 1, 2014. The license gives Sky exclusive rights to sell its services in the tri-state region and will expire on July 1, 2022.
2. Purchased a patent on January 2, 2015, for \$40,000. It is estimated to have a 5-year life.
3. Costs incurred to develop an exclusive Internet connection process as of June 1, 2015, were \$45,000. The process has an indefinite life.
4. On April 1, 2015, Sky Co. purchased a small circuit board manufacturer for \$350,000. Goodwill recorded in the transaction was \$90,000.
5. On July 1, 2015, legal fees for successful defense of the patent purchased on January 2, 2015, were \$11,400.
6. Research and development costs incurred as of September 1, 2015, were \$75,000.

Instructions

- (a) Prepare the journal entries to record all the entries related to the patent during 2015.
- (b) At December 31, 2015, an impairment test is performed on the license purchased in 2014. It is estimated that the net cash flows to be received from the license will be \$13,000, and its fair value is \$7,000. Compute the amount of impairment, if any, to be recorded on December 31, 2015.
- (c) What is the amount to be reported for intangible assets on the balance sheet at December 31, 2014? At December 31, 2015?

Solution

(a)		January 2, 2015	
	Patents	40,000	
	Cash		40,000
		July 1, 2015	
	Patents	11,400	
	Cash		11,400
		December 31, 2015	
	Patent Amortization Expense	9,267	
	Patents		9,267

Computation of patent expense:

$\$40,000 \times 12/60 =$	<u>\$8,000</u>
$\$11,400 \times 6/54 =$	<u>1,267</u>
Total	<u><u>\$9,267</u></u>

(b) Computation of impairment loss:

Cost	\$20,000
Less: Accumulated amortization ($\$20,000 \times 18/96$)	<u>3,750</u>
Book value	<u><u>\$16,250</u></u>

Book value of \$16,250 is greater than net cash flows of \$13,000. Therefore, the license is impaired. The impairment loss is computed as follows.

Book value	\$16,250
Fair value	<u>7,000</u>
Loss on impairment	<u><u>\$ 9,250</u></u>

(c) Intangible assets as of December 31, 2014:

License	\$18,750*
*Cost	\$20,000
Less: Accumulated amortization ($\$20,000 \times 6/96$)	1,250
Total	<u>\$18,750</u>

Intangible assets as of December 31, 2015:

License	\$ 7,000
Patents ($\$40,000 + \$11,400 - \$9,267$)	\$42,133
Goodwill	\$90,000

All the costs to develop the Internet connection process and the research and development costs are expensed as incurred.

Exercises

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/asclogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

CE12-1 Access the Codification glossary (“Master Glossary”) to answer the following.

- What is the definition provided for an intangible asset?
- What is the definition of goodwill?
- What is the definition of research and development (R&D)?
- What is a development stage entity?

CE12-2 Your friend Harry does not understand the concept of an indefinite-life intangible asset. He wonders, “Does this mean the life is infinite?” What does the authoritative literature say about indefinite-life intangible assets?

CE12-3 What guidance does the Codification provide concerning the disclosure of research and development (R&D) costs?

CE12-4 What is the nature of the authoritative guidance for advertising costs for entertainment companies?

An additional Codification case can be found in the Using Your Judgment section, on page 692.

Be sure to check the book’s companion website for a Review and Analysis Exercise, with solution.

WileyPLUS

Brief Exercises, Exercises, Problems, and many more learning and assessment tools and resources are available for practice in WileyPLUS.

QUESTIONS

- What are the two main characteristics of intangible assets?
- If intangibles are acquired for stock, how is the cost of the intangible determined?
- Intangibles have either a limited useful life or an indefinite useful life. How should these two different types of intangibles be amortized?
- Why does the accounting profession make a distinction between internally created intangibles and purchased intangibles?
- In 2014, Ghostbusters Corp. spent \$420,000 for “goodwill” visits by sales personnel to key customers. The purpose of these visits was to build a solid, friendly relationship for the future and to gain insight into the problems and needs of the companies served. How should this expenditure be reported?
- What are factors to be considered in estimating the useful life of an intangible asset?
- What should be the pattern of amortization for a limited-life intangible?
- Columbia Sportswear Company** acquired a trademark that is helpful in distinguishing one of its new products. The trademark is renewable every 10 years at minimal cost. All evidence indicates that this trademarked product will generate cash flows for an indefinite period of time. How should this trademark be amortized?
- McNabb Company spent \$190,000 developing a new process, \$45,000 in legal fees to obtain a patent, and \$91,000 to market the process that was patented, all in the year 2014. How should these costs be accounted for in 2014?

10. Izzy Inc. purchased a patent for \$350,000 which has an estimated useful life of 10 years. Its pattern of use or consumption cannot be reliably determined. Prepare the entry to record the amortization of the patent in its first year of use.
11. Explain the difference between artistic-related intangible assets and contract-related intangible assets.
12. What is goodwill? What is a bargain purchase?
13. Under what circumstances is it appropriate to record goodwill in the accounts? How should goodwill, properly recorded on the books, be written off in order to conform with generally accepted accounting principles?
14. In examining financial statements, financial analysts often write off goodwill immediately. Comment on this procedure.
15. Braxton Inc. is considering the write-off of a limited-life intangible because of its lack of profitability. Explain to the management of Braxton how to determine whether a write-off is permitted.
16. Last year, Zeno Company recorded an impairment on an intangible asset held for use. Recent appraisals indicate that the asset has increased in value. Should Zeno record this recovery in value?
17. Explain how losses on impaired intangible assets should be reported in income.
18. Simon Company determines that its goodwill is impaired. It finds that its implied goodwill is \$360,000 and its recorded goodwill is \$400,000. The fair value of its identifiable assets is \$1,450,000. What is the amount of goodwill impaired?
19. What is the nature of research and development costs?
20. Research and development activities may include (a) personnel costs, (b) materials and equipment costs, and (c) indirect costs. What is the recommended accounting treatment for these three types of R&D costs?
21. Which of the following activities should be expensed currently as R&D costs?
 - (a) Testing in search for or evaluation of product or process alternatives.
 - (b) Engineering follow-through in an early phase of commercial production.
 - (c) Legal work in connection with patent applications or litigation, and the sale or licensing of patents.
22. Indicate the proper accounting for the following items.
 - (a) Organization costs.
 - (b) Advertising costs.
 - (c) Operating losses.
23. In 2013, Austin Powers Corporation developed a new product that will be marketed in 2014. In connection with the development of this product, the following costs were incurred in 2013: research and development costs \$400,000; materials and supplies consumed \$60,000; and compensation paid to research consultants \$125,000. It is anticipated that these costs will be recovered in 2016. What is the amount of research and development costs that Austin Powers should record in 2013 as a charge to expense?
24. Recently, a group of university students decided to incorporate for the purposes of selling a process to recycle the waste product from manufacturing cheese. Some of the initial costs involved were legal fees and office expenses incurred in starting the business, state incorporation fees, and stamp taxes. One student wishes to charge these costs against revenue in the current period. Another wishes to defer these costs and amortize them in the future. Which student is correct?
25. An intangible asset with an estimated useful life of 30 years was acquired on January 1, 2004, for \$540,000. On January 1, 2014, a review was made of intangible assets and their expected service lives, and it was determined that this asset had an estimated useful life of 30 more years from the date of the review. What is the amount of amortization for this intangible in 2014?

BRIEF EXERCISES

- 2** **3** **BE12-1** Celine Dion Corporation purchases a patent from Salmon Company on January 1, 2014, for \$54,000. The patent has a remaining legal life of 16 years. Celine Dion feels the patent will be useful for 10 years. Prepare Celine Dion's journal entries to record the purchase of the patent and 2014 amortization.
- 2** **3** **BE12-2** Use the information provided in BE12-1. Assume that at January 1, 2016, the carrying amount of the patent on Celine Dion's books is \$43,200. In January, Celine Dion spends \$24,000 successfully defending a patent suit. Celine Dion still feels the patent will be useful until the end of 2023. Prepare the journal entries to record the \$24,000 expenditure and 2016 amortization.
- 2** **3** **BE12-3** Larry Byrd, Inc., spent \$68,000 in attorney fees while developing the trade name of its new product, the Mean Bean Machine. Prepare the journal entries to record the \$68,000 expenditure and the first year's amortization, using an 8-year life.

- 2 3** **BE12-4** Gershwin Corporation obtained a franchise from Sonic Hedgehog Inc. for a cash payment of \$120,000 on April 1, 2014. The franchise grants Gershwin the right to sell certain products and services for a period of 8 years. Prepare Gershwin's April 1 journal entry and December 31 adjusting entry.
- 5** **BE12-5** On September 1, 2014, Winans Corporation acquired Aumont Enterprises for a cash payment of \$700,000. At the time of purchase, Aumont's balance sheet showed assets of \$620,000, liabilities of \$200,000, and owners' equity of \$420,000. The fair value of Aumont's assets is estimated to be \$800,000. Compute the amount of goodwill acquired by Winans.
- 6** **BE12-6** Kenoly Corporation owns a patent that has a carrying amount of \$300,000. Kenoly expects future net cash flows from this patent to total \$210,000. The fair value of the patent is \$110,000. Prepare Kenoly's journal entry, if necessary, to record the loss on impairment.
- 6** **BE12-7** Waters Corporation purchased Johnson Company 3 years ago and at that time recorded goodwill of \$400,000. The Johnson Division's net assets, including the goodwill, have a carrying amount of \$800,000. The fair value of the division is estimated to be \$1,000,000. Prepare Waters' journal entry, if necessary, to record impairment of the goodwill.
- 6** **BE12-8** Use the information provided in BE12-7. Assume that the fair value of the division is estimated to be \$750,000 and the implied goodwill is \$350,000. Prepare Waters' journal entry, if necessary, to record impairment of the goodwill.
- 8** **BE12-9** Capriati Corporation commenced operations in early 2014. The corporation incurred \$60,000 of costs such as fees to underwriters, legal fees, state fees, and promotional expenditures during its formation. Prepare journal entries to record the \$60,000 expenditure and 2014 amortization, if any.
- 8** **BE12-10** Treasure Land Corporation incurred the following costs in 2014.

Cost of laboratory research aimed at discovery of new knowledge	\$120,000
Cost of testing in search for product alternatives	100,000
Cost of engineering activity required to advance the design of a product to the manufacturing stage	<u>210,000</u>
	<u>\$430,000</u>

Prepare the necessary 2014 journal entry or entries for Treasure Land.

- 8** **BE12-11** Indicate whether the following items are capitalized or expensed in the current year.
- (a) Purchase cost of a patent from a competitor. (c) Organizational costs.
 (b) Research and development costs. (d) Costs incurred internally to create goodwill.
- 3 9** **BE12-12** Nieland Industries had one patent recorded on its books as of January 1, 2014. This patent had a book value of \$288,000 and a remaining useful life of 8 years. During 2014, Nieland incurred research and development costs of \$96,000 and brought a patent infringement suit against a competitor. On December 1, 2014, Nieland received the good news that its patent was valid and that its competitor could not use the process Nieland had patented. The company incurred \$85,000 to defend this patent. At what amount should patent(s) be reported on the December 31, 2014, balance sheet, assuming monthly amortization of patents?
- 3 9** **BE12-13** Sinise Industries acquired two copyrights during 2014. One copyright related to a textbook that was developed internally at a cost of \$9,900. This textbook is estimated to have a useful life of 3 years from September 1, 2014, the date it was published. The second copyright (a history research textbook) was purchased from University Press on December 1, 2014, for \$24,000. This textbook has an indefinite useful life. How should these two copyrights be reported on Sinise's balance sheet as of December 31, 2014?

EXERCISES

- 1 4** **E12-1 (Classification Issues—Intangibles)** Presented below is a list of items that could be included in the intangible assets section of the balance sheet.
- Investment in a subsidiary company.
 - Timberland.
 - Cost of engineering activity required to advance the design of a product to the manufacturing stage.

4. Lease prepayment (6 months' rent paid in advance).
5. Cost of equipment obtained.
6. Cost of searching for applications of new research findings.
7. Costs incurred in the formation of a corporation.
8. Operating losses incurred in the start-up of a business.
9. Training costs incurred in start-up of new operation.
10. Purchase cost of a franchise.
11. Goodwill generated internally.
12. Cost of testing in search for product alternatives.
13. Goodwill acquired in the purchase of a business.
14. Cost of developing a patent.
15. Cost of purchasing a patent from an inventor.
16. Legal costs incurred in securing a patent.
17. Unrecovered costs of a successful legal suit to protect the patent.
18. Cost of conceptual formulation of possible product alternatives.
19. Cost of purchasing a copyright.
20. Research and development costs.
21. Long-term receivables.
22. Cost of developing a trademark.
23. Cost of purchasing a trademark.

Instructions

- (a) Indicate which items on the list above would generally be reported as intangible assets in the balance sheet.
- (b) Indicate how, if at all, the items not reportable as intangible assets would be reported in the financial statements.

1 4 E12-2 (Classification Issues—Intangibles) Presented below is selected information related to Martin Burke Inc. at year-end. All these accounts have debit balances.

Cable television franchises	Film contract rights
Music copyrights	Customer lists
Research and development costs	Prepaid expenses
Goodwill	Covenants not to compete
Cash	Brand names
Discount on notes payable	Notes receivable
Accounts receivable	Investments in affiliated companies
Property, plant, and equipment	Organization costs
Internet domain name	Land

Instructions

Identify which items should be classified as an intangible asset. For those items not classified as an intangible asset, indicate where they would be reported in the financial statements.

1 4 E12-3 (Classification Issues—Intangible Assets) Joni Hyde Inc. has the following amounts reported in its general ledger at the end of the current year.

Organization costs	\$24,000
Trademarks	15,000
Discount on bonds payable	35,000
Deposits with advertising agency for ads to promote goodwill of company	10,000
Excess of cost over fair value of net identifiable assets of acquired subsidiary	75,000
Cost of equipment acquired for research and development projects; the equipment has an alternative future use	90,000
Costs of developing a secret formula for a product that is expected to be marketed for at least 20 years	80,000

Instructions

- (a) On the basis of the information above, compute the total amount to be reported by Hyde for intangible assets on its balance sheet at year-end.
- (b) If an item is not to be included in intangible assets, explain its proper treatment for reporting purposes.

3 8 E12-4 (Intangible Amortization) Presented below is selected information for Alatorre Company.

- Alatorre purchased a patent from Vania Co. for \$1,000,000 on January 1, 2012. The patent is being amortized over its remaining legal life of 10 years, expiring on January 1, 2022. During 2014, Alatorre determined that the economic benefits of the patent would not last longer than 6 years from the date of acquisition. What amount should be reported in the balance sheet for the patent, net of accumulated amortization, at December 31, 2014?
- Alatorre bought a franchise from Alexander Co. on January 1, 2013, for \$400,000. The carrying amount of the franchise on Alexander's books on January 1, 2013, was \$500,000. The franchise agreement had an estimated useful life of 30 years. Because Alatorre must enter a competitive bidding at the end of 2015, it is unlikely that the franchise will be retained beyond 2022. What amount should be amortized for the year ended December 31, 2014?
- On January 1, 2014, Alatorre incurred organization costs of \$275,000. What amount of organization expense should be reported in 2014?
- Alatorre purchased the license for distribution of a popular consumer product on January 1, 2014, for \$150,000. It is expected that this product will generate cash flows for an indefinite period of time. The license has an initial term of 5 years but by paying a nominal fee, Alatorre can renew the license indefinitely for successive 5-year terms. What amount should be amortized for the year ended December 31, 2014?

Instructions

Answer the questions asked about each of the factual situations.

2 3 7 E12-5 (Correct Intangible Assets Account) As the recently appointed auditor for William J. Bryan Corporation, you have been asked to examine selected accounts before the 6-month financial statements of June 30, 2014, are prepared. The controller for William J. Bryan Corporation mentions that only one account is kept for intangible assets. The account is shown below.

		Intangible Assets		
		Debit	Credit	Balance
Jan. 4	Research and development costs	940,000		940,000
Jan. 5	Legal costs to obtain patent	75,000		1,015,000
Jan. 31	Payment of 7 months' rent on property leased by Bryan	91,000		1,106,000
Feb. 11	Premium on common stock		250,000	856,000
March 31	Unamortized bond discount on bonds due March 31, 2034	84,000		940,000
April 30	Promotional expenses related to start-up of business	207,000		1,147,000
June 30	Operating losses for first 6 months	241,000		1,388,000

Instructions

Prepare the entry or entries necessary to correct this account. Assume that the patent has a useful life of 10 years.

3 8 E12-6 (Recording and Amortization of Intangibles) Rolanda Marshall Company, organized in 2013, has set up a single account for all intangible assets. The following summary discloses the debit entries that have been recorded during 2014.

1/2/14	Purchased patent (8-year life)	\$ 350,000
4/1/14	Purchase goodwill (indefinite life)	360,000
7/1/14	Purchased franchise with 10-year life; expiration date 7/1/24	450,000
8/1/14	Payment of copyright (5-year life)	156,000
9/1/14	Research and development costs	215,000
		\$1,531,000

Instructions

Prepare the necessary entries to clear the Intangible Assets account and to set up separate accounts for distinct types of intangibles. Make the entries as of December 31, 2014, recording any necessary amortization and reflecting all balances accurately as of that date. (Use straight-line amortization.)

- 2 3** **E12-7 (Accounting for Trade Name)** In early January 2013, Outkast Corporation applied for a trade name, incurring legal costs of \$16,000. In January 2014, Outkast incurred \$7,800 of legal fees in a successful defense of its trade name.

Instructions

- Compute 2013 amortization, 12/31/13 book value, 2014 amortization, and 12/31/14 book value if the company amortizes the trade name over 10 years.
- Compute the 2014 amortization and the 12/31/14 book value, assuming that at the beginning of 2014, Outkast determines that the trade name will provide no future benefits beyond December 31, 2017.
- Ignoring the response for part (b), compute the 2015 amortization and the 12/31/15 book value, assuming that at the beginning of 2015, based on new market research, Outkast determines that the fair value of the trade name is \$15,000. Estimated total future cash flows from the trade name is \$16,000 on January 3, 2015.

- 8** **E12-8 (Accounting for Organization Costs)** Horace Greeley Corporation was organized in 2013 and began operations at the beginning of 2014. The company is involved in interior design consulting services. The following costs were incurred prior to the start of operations.

Attorney's fees in connection with organization of the company	\$15,000
Purchase of drafting and design equipment	10,000
Costs of meetings of incorporators to discuss organizational activities	7,000
State filing fees to incorporate	1,000
	<u>\$33,000</u>

Instructions

- Compute the total amount of organization costs incurred by Greeley.
- Prepare the journal entry to record organization costs for 2014.

- 2 3** **E12-9 (Accounting for Patents, Franchises, and R&D)** Jimmy Carter Company has provided information on intangible assets as follows.

7

A patent was purchased from Gerald Ford Company for \$2,000,000 on January 1, 2013. Carter estimated the remaining useful life of the patent to be 10 years. The patent was carried in Ford's accounting records at a net book value of \$2,000,000 when Ford sold it to Carter.

During 2014, a franchise was purchased from Ronald Reagan Company for \$480,000. In addition, 5% of revenue from the franchise must be paid to Reagan. Revenue from the franchise for 2014 was \$2,500,000. Carter estimates the useful life of the franchise to be 10 years and takes a full year's amortization in the year of purchase.

Carter incurred research and development costs in 2014 as follows.

Materials and equipment	\$142,000
Personnel	189,000
Indirect costs	102,000
	<u>\$433,000</u>

Carter estimates that these costs will be recouped by December 31, 2017. The materials and equipment purchased have no alternative uses.

On January 1, 2014, because of recent events in the field, Carter estimates that the remaining life of the patent purchased on January 1, 2013, is only 5 years from January 1, 2014.

Instructions

- Prepare a schedule showing the intangibles section of Carter's balance sheet at December 31, 2014. Show supporting computations in good form.
- Prepare a schedule showing the income statement effect (related to expenses) for the year ended December 31, 2014, as a result of the facts above. Show supporting computations in good form.
(AICPA adapted)

- 2 3** **E12-10 (Accounting for Patents)** During 2010, George Winston Corporation spent \$170,000 in research and development costs. As a result, a new product called the New Age Piano was patented. The patent was obtained on October 1, 2010, and had a legal life of 20 years and a useful life of 10 years. Legal costs of \$18,000 related to the patent were incurred as of October 1, 2010.

Instructions

- Prepare all journal entries required in 2010 and 2011 as a result of the transactions above.
- On June 1, 2012, Winston spent \$9,480 to successfully prosecute a patent infringement suit. As a result, the estimate of useful life was extended to 12 years from June 1, 2012. Prepare all journal entries required in 2012 and 2013.
- In 2014, Winston determined that a competitor's product would make the New Age Piano obsolete and the patent worthless by December 31, 2015. Prepare all journal entries required in 2014 and 2015.

- 2 3** **E12-11 (Accounting for Patents)** Tones Industries has the following patents on its December 31, 2013, balance sheet.

Patent Item	Initial Cost	Date Acquired	Useful Life at Date Acquired
Patent A	\$30,600	3/1/10	17 years
Patent B	\$15,000	7/1/11	10 years
Patent C	\$14,400	9/1/12	4 years

The following events occurred during the year ended December 31, 2014.

- Research and development costs of \$245,700 were incurred during the year.
- Patent D was purchased on July 1 for \$36,480. This patent has a useful life of 9½ years.
- As a result of reduced demands for certain products protected by Patent B, a possible impairment of Patent B's value may have occurred at December 31, 2014. The controller for Tones estimates the expected future cash flows from Patent B will be as follows.

Year	Expected Future Cash Flows
2015	\$2,000
2016	2,000
2017	2,000

The proper discount rate to be used for these flows is 8%. (Assume that the cash flows occur at the end of the year.)

Instructions

- Compute the total carrying amount of Tones' patents on its December 31, 2013, balance sheet.
- Compute the total carrying amount of Tones' patents on its December 31, 2014, balance sheet.

- 5** **E12-12 (Accounting for Goodwill)** Fred Moss, owner of Moss Interiors, is negotiating for the purchase of Zweifel Galleries. The balance sheet of Zweifel is given in an abbreviated form below.

ZWEIFEL GALLERIES			
BALANCE SHEET			
AS OF DECEMBER 31, 2014			
Assets		Liabilities and Stockholders' Equity	
Cash	\$100,000	Accounts payable	\$ 50,000
Land	70,000	Notes payable (long-term)	300,000
Buildings (net)	200,000	Total liabilities	350,000
Equipment (net)	175,000	Common stock	\$200,000
Copyrights (net)	30,000	Retained earnings	25,000
Total assets	<u>\$575,000</u>	Total liabilities and stockholders' equity	<u>\$575,000</u>

Moss and Zweifel agree that:

- Land is undervalued by \$30,000.
- Equipment is overvalued by \$5,000.

Zweifel agrees to sell the gallery to Moss for \$350,000.

Instructions

Prepare the entry to record the purchase of Zweifel Galleries on Moss's books.

- 3 5 E12-13 (Accounting for Goodwill)** On July 1, 2014, Brigham Corporation purchased Young Company by paying \$250,000 cash and issuing a \$100,000 note payable to Steve Young. At July 1, 2014, the balance sheet of Young Company was as follows.

Cash	\$ 50,000	Accounts payable	\$200,000
Accounts receivable	90,000	Stockholders' equity	235,000
Inventory	100,000		<u>\$435,000</u>
Land	40,000		
Buildings (net)	75,000		
Equipment (net)	70,000		
Trademarks	10,000		
	<u>\$435,000</u>		

The recorded amounts all approximate current values except for land (fair value of \$60,000), inventory (fair value of \$125,000), and trademarks (fair value of \$15,000).

Instructions

- Prepare the July 1 entry for Brigham Corporation to record the purchase.
 - Prepare the December 31 entry for Brigham Corporation to record amortization of intangibles. The trademark has an estimated useful life of 4 years with a residual value of \$3,000.
- 6 E12-14 (Copyright Impairment)** Presented below is information related to copyrights owned by Walter de la Mare Company at December 31, 2014.

Cost	\$8,600,000
Carrying amount	4,300,000
Expected future net cash flows	4,000,000
Fair value	3,200,000

Assume that Walter de la Mare Company will continue to use this copyright in the future. As of December 31, 2014, the copyright is estimated to have a remaining useful life of 10 years.

Instructions

- Prepare the journal entry (if any) to record the impairment of the asset at December 31, 2014. The company does not use accumulated amortization accounts.
 - Prepare the journal entry to record amortization expense for 2015 related to the copyrights.
 - The fair value of the copyright at December 31, 2015, is \$3,400,000. Prepare the journal entry (if any) necessary to record the increase in fair value.
- 5 6 E12-15 (Goodwill Impairment)** Presented below is net asset information related to the Carlos Division of Santana, Inc.

CARLOS DIVISION
NET ASSETS
AS OF DECEMBER 31, 2014
(IN MILLIONS)

Cash	\$ 50
Accounts receivable	200
Property, plant, and equipment (net)	2,600
Goodwill	200
Less: Notes payable	<u>(2,700)</u>
Net assets	<u>\$ 350</u>

The purpose of the Carlos Division is to develop a nuclear-powered aircraft. If successful, traveling delays associated with refueling could be substantially reduced. Many other benefits would also occur. To date, management has not had much success and is deciding whether a write-down at this time is appropriate. Management estimated its future net cash flows from the project to be \$400 million. Management has also received an offer to purchase the division for \$335 million. All identifiable assets' and liabilities' book and fair value amounts are the same.

Instructions

- Prepare the journal entry (if any) to record the impairment at December 31, 2014.
- At December 31, 2015, it is estimated that the division's fair value increased to \$345 million. Prepare the journal entry (if any) to record this increase in fair value.

- 8 E12-16 (Accounting for R&D Costs)** Leontyne Price Company from time to time embarks on a research program when a special project seems to offer possibilities. In 2013, the company expends \$325,000 on a research project, but by the end of 2013 it is impossible to determine whether any benefit will be derived from it.

Instructions

- What account should be charged for the \$325,000, and how should it be shown in the financial statements?
 - The project is completed in 2014, and a successful patent is obtained. The R&D costs to complete the project are \$110,000. The administrative and legal expenses incurred in obtaining patent number 472-1001-84 in 2014 total \$16,000. The patent has an expected useful life of 5 years. Record these costs in journal entry form. Also, record patent amortization (full year) in 2014.
 - In 2015, the company successfully defends the patent in extended litigation at a cost of \$47,200, thereby extending the patent life to December 31, 2022. What is the proper way to account for this cost? Also, record patent amortization (full year) in 2015.
 - Additional engineering and consulting costs incurred in 2015 required to advance the design of a product to the manufacturing stage total \$60,000. These costs enhance the design of the product considerably. Discuss the proper accounting treatment for this cost.
- 8 E12-17 (Accounting for R&D Costs)** Thomas More Company incurred the following costs during the current year in connection with its research and development activities.

Cost of equipment acquired that will have alternative uses in future R&D projects over the next 5 years (uses straight-line depreciation)	\$280,000
Materials consumed in R&D projects	59,000
Consulting fees paid to outsiders for R&D projects	100,000
Personnel costs of persons involved in R&D projects	128,000
Indirect costs reasonably allocable to R&D projects	50,000
Materials purchased for future R&D projects	34,000

Instructions

Compute the amount to be reported as research and development expense by More on its current year income statement. Assume equipment is purchased at the beginning of the year.

EXERCISES SET B

See the book's companion website, at www.wiley.com/college/kieso, for an additional set of exercises.

PROBLEMS

- 2 3 P12-1 (Correct Intangible Assets Account)** Reichenbach Co., organized in 2013, has set up a single account for all intangible assets. The following summary discloses the debit entries that have been recorded during 2014 and 2015.

Intangible Assets		
7/1/14	8-year franchise; expiration date 6/30/22	\$ 48,000
10/1/14	Advance payment on laboratory space (2-year lease)	24,000
12/31/14	Net loss for 2013 including state incorporation fee, \$1,000, and related legal fees of organizing, \$5,000 (all fees incurred in 2013)	16,000
1/2/15	Patent purchased (10-year life)	84,000
3/1/15	Cost of developing a secret formula (indefinite life)	75,000
4/1/15	Goodwill purchased (indefinite life)	278,400
6/1/15	Legal fee for successful defense of patent purchased above	12,650
9/1/15	Research and development costs	160,000

Instructions

Prepare the necessary entries to clear the Intangible Assets account and to set up separate accounts for distinct types of intangibles. Make the entries as of December 31, 2015, recording any necessary amortization and reflecting all balances accurately as of that date. (Ignore income tax effects.)

- 2 3 P12-2 (Accounting for Patents)** Fields Laboratories holds a valuable patent (No. 758-6002-1A) on a precipitator that prevents certain types of air pollution. Fields does not manufacture or sell the products and processes it develops. Instead, it conducts research and develops products and processes which it patents, and then assigns the patents to manufacturers on a royalty basis. Occasionally it sells a patent. The history of Fields patent number 758-6002-1A is as follows.

Date	Activity	Cost
2005–2006	Research conducted to develop precipitator	\$384,000
Jan. 2007	Design and construction of a prototype	87,600
March 2007	Testing of models	42,000
Jan. 2008	Fees paid engineers and lawyers to prepare patent application; patent granted June 30, 2008	59,500
Nov. 2009	Engineering activity necessary to advance the design of the precipitator to the manufacturing stage	81,500
Dec. 2010	Legal fees paid to successfully defend precipitator patent	42,000
April 2011	Research aimed at modifying the design of the patented precipitator	43,000
July 2015	Legal fees paid in unsuccessful patent infringement suit against a competitor	34,000

Fields assumed a useful life of 17 years when it received the initial precipitator patent. On January 1, 2013, it revised its useful life estimate downward to 5 remaining years. Amortization is computed for a full year if the cost is incurred prior to July 1, and no amortization for the year if the cost is incurred after June 30. The company's year ends December 31.

Instructions

Compute the carrying value of patent No. 758-6002-1A on each of the following dates:

- December 31, 2008.
- December 31, 2012.
- December 31, 2015.

- 2 3 P12-3 (Accounting for Franchise, Patents, and Trademark)** Information concerning Sandro Corporation's intangible assets is as follows.

- On January 1, 2014, Sandro signed an agreement to operate as a franchisee of Hsian Copy Service, Inc. for an initial franchise fee of \$75,000. Of this amount, \$15,000 was paid when the agreement was signed, and the balance is payable in 4 annual payments of \$15,000 each, beginning January 1, 2015. The agreement provides that the down payment is not refundable and no future services are required of the franchisor. The present value at January 1, 2014, of the 4 annual payments discounted at 14% (the implicit rate for a loan of this type) is \$43,700. The agreement also provides that 5% of the revenue from the franchise must be paid to the franchisor annually. Sandro's revenue from the franchise for 2014 was \$900,000. Sandro estimates the useful life of the franchise to be 10 years. (*Hint:* You may want to refer to Chapter 18 to determine the proper accounting treatment for the franchise fee and payments.)
- Sandro incurred \$65,000 of experimental and development costs in its laboratory to develop a patent that was granted on January 2, 2014. Legal fees and other costs associated with registration of the patent totaled \$17,600. Sandro estimates that the useful life of the patent will be 8 years.
- A trademark was purchased from Shanghai Company for \$36,000 on July 1, 2011. Expenditures for successful litigation in defense of the trademark totaling \$10,200 were paid on July 1, 2014. Sandro estimates that the useful life of the trademark will be 20 years from the date of acquisition.

Instructions

- Prepare a schedule showing the intangible assets section of Sandro's balance sheet at December 31, 2014. Show supporting computations in good form.
- Prepare a schedule showing all expenses resulting from the transactions that would appear on Sandro's income statement for the year ended December 31, 2014. Show supporting computations in good form.

(AICPA adapted)

- 8 9 P12-4 (Accounting for R&D Costs)** During 2012, Robin Wright Tool Company purchased a building site for its proposed research and development laboratory at a cost of \$60,000. Construction of the building was started in 2012. The building was completed on December 31, 2013, at a cost of \$320,000 and was placed in service on January 2, 2014. The estimated useful life of the building for depreciation

purposes was 20 years. The straight-line method of depreciation was to be employed, and there was no estimated residual value.

Management estimates that about 50% of the projects of the research and development group will result in long-term benefits (i.e., at least 10 years) to the corporation. The remaining projects either benefit the current period or are abandoned before completion. A summary of the number of projects and the direct costs incurred in conjunction with the research and development activities for 2014 appears below.

	Number of Projects	Salaries and Employee Benefits	Other Expenses (excluding Building Depreciation Charges)
Completed projects with long-term benefits	15	\$ 90,000	\$50,000
Abandoned projects or projects that benefit the current period	10	65,000	15,000
Projects in process—results indeterminate	5	40,000	12,000
Total	<u>30</u>	<u>\$195,000</u>	<u>\$77,000</u>

Upon recommendation of the research and development group, Robin Wright Tool Company acquired a patent for manufacturing rights at a cost of \$88,000. The patent was acquired on April 1, 2013, and has an economic life of 10 years.

Instructions

If generally accepted accounting principles were followed, how would the items above relating to research and development activities be reported on the following financial statements?

- The company's income statement for 2014.
- The company's balance sheet as of December 31, 2014.

Be sure to give account titles and amounts, and briefly justify your presentation.

(CMA adapted)

5 6

P12-5 (Goodwill, Impairment) On July 31, 2014, Mexico Company paid \$3,000,000 to acquire all of the common stock of Conchita Incorporated, which became a division of Mexico. Conchita reported the following balance sheet at the time of the acquisition.

Current assets	\$ 800,000	Current liabilities	\$ 600,000
Noncurrent assets	<u>2,700,000</u>	Long-term liabilities	500,000
Total assets	<u>\$3,500,000</u>	Stockholders' equity	<u>2,400,000</u>
		Total liabilities and stockholders' equity	<u>\$3,500,000</u>

It was determined at the date of the purchase that the fair value of the identifiable net assets of Conchita was \$2,750,000. Over the next 6 months of operations, the newly purchased division experienced operating losses. In addition, it now appears that it will generate substantial losses for the foreseeable future. At December 31, 2014, Conchita reports the following balance sheet information.

Current assets	\$ 450,000
Noncurrent assets (including goodwill recognized in purchase)	2,400,000
Current liabilities	(700,000)
Long-term liabilities	<u>(500,000)</u>
Net assets	<u>\$1,650,000</u>

It is determined that the fair value of the Conchita Division is \$1,850,000. The recorded amount for Conchita's net assets (excluding goodwill) is the same as fair value, except for property, plant, and equipment, which has a fair value \$150,000 above the carrying value.

Instructions

- Compute the amount of goodwill recognized, if any, on July 31, 2014.
- Determine the impairment loss, if any, to be recorded on December 31, 2014.
- Assume that fair value of the Conchita Division is \$1,600,000 instead of \$1,850,000. Determine the impairment loss, if any, to be recorded on December 31, 2014.
- Prepare the journal entry to record the impairment loss, if any, and indicate where the loss would be reported in the income statement.

- 2 3** **P12-6 (Comprehensive Intangible Assets)** Montana Matt's Golf Inc. was formed on July 1, 2013, when Matt Magilke purchased the Old Master Golf Company. Old Master provides video golf instruction at kiosks in shopping malls. Magilke plans to integrate the instructional business into his golf equipment and accessory stores. Magilke paid \$770,000 cash for Old Master. At the time, Old Master's balance sheet reported assets of \$650,000 and liabilities of \$200,000 (thus owners' equity was \$450,000). The fair value of Old Master's assets is estimated to be \$800,000. Included in the assets is the Old Master trade name with a fair value of \$10,000 and a copyright on some instructional books with a fair value of \$24,000. The trade name has a remaining life of 5 years and can be renewed at nominal cost indefinitely. The copyright has a remaining life of 40 years.

Instructions

- Prepare the intangible assets section of Montana Matt's Golf Inc. at December 31, 2013. How much amortization expense is included in Montana Matt's income for the year ended December 31, 2013? Show all supporting computations.
- Prepare the journal entry to record amortization expense for 2014. Prepare the intangible assets section of Montana Matt's Golf Inc. at December 31, 2014. (No impairments are required to be recorded in 2014.)
- At the end of 2015, Magilke is evaluating the results of the instructional business. Due to fierce competition from online and television (e.g., the Golf Channel), the Old Master reporting unit has been losing money. Its book value is now \$500,000. The fair value of the Old Master reporting unit is \$420,000. The implied value of goodwill is \$90,000. Magilke has collected the following information related to the company's intangible assets.

Intangible Asset	Expected Cash Flows (undiscounted)	Fair Values
Trade names	\$ 9,000	\$ 3,000
Copyrights	30,000	25,000

Prepare the journal entries required, if any, to record impairments on Montana Matt's intangible assets. (Assume that any amortization for 2015 has been recorded.) Show supporting computations.

PROBLEMS SET B

See the book's companion website, at www.wiley.com/college/kieso, for an additional set of problems.

CONCEPTS FOR ANALYSIS

CA12-1 (Accounting for Pre-Opening Costs) After securing lease commitments from several major stores, Auer Shopping Center, Inc. was organized and built a shopping center in a growing suburb.

The shopping center would have opened on schedule on January 1, 2014, if it had not been struck by a severe tornado in December. Instead, it opened for business on October 1, 2014. All of the additional construction costs that were incurred as a result of the tornado were covered by insurance.

In July 2013, in anticipation of the scheduled January opening, a permanent staff had been hired to promote the shopping center, obtain tenants for the uncommitted space, and manage the property.

A summary of some of the costs incurred in 2013 and the first nine months of 2014 follows.

	2013	January 1, 2014 through September 30, 2014
Interest on mortgage bonds	\$720,000	\$540,000
Cost of obtaining tenants	300,000	360,000
Promotional advertising	540,000	557,000

The promotional advertising campaign was designed to familiarize shoppers with the center. Had it been known in time that the center would not open until October 2014, the 2013 expenditure for promotional advertising would not have been made. The advertising had to be repeated in 2014.

All of the tenants who had leased space in the shopping center at the time of the tornado accepted the October occupancy date on condition that the monthly rental charges for the first 9 months of 2014 be canceled.

Instructions

Explain how each of the costs for 2013 and the first 9 months of 2014 should be treated in the accounts of the shopping center corporation. Give the reasons for each treatment.

(AICPA adapted)

CA12-2 (Accounting for Patents) On June 30, 2014, your client, Ferry Company, was granted two patents covering plastic cartons that it had been producing and marketing profitably for the past 3 years. One patent covers the manufacturing process, and the other covers the related products.

Ferry executives tell you that these patents represent the most significant breakthrough in the industry in the past 30 years. The products have been marketed under the registered trademarks Evertight, Duratainer, and Sealrite. Licenses under the patents have already been granted by your client to other manufacturers in the United States and abroad, and are producing substantial royalties.

On July 1, Ferry commenced patent infringement actions against several companies whose names you recognize as those of substantial and prominent competitors. Ferry's management is optimistic that these suits will result in a permanent injunction against the manufacture and sale of the infringing products as well as collection of damages for loss of profits caused by the alleged infringement.

The financial vice president has suggested that the patents be recorded at the discounted value of expected net royalty receipts.

Instructions

- What is the meaning of "discounted value of expected net receipts"? Explain.
- How would such a value be calculated for net royalty receipts?
- What basis of valuation for Ferry's patents would be generally accepted in accounting? Give supporting reasons for this basis.
- Assuming no practical problems of implementation, and ignoring generally accepted accounting principles, what is the preferable basis of valuation for patents? Explain.
- What would be the preferable theoretical basis of amortization? Explain.
- What recognition, if any, should be made of the infringement litigation in the financial statements for the year ending September 30, 2014? Discuss.

(AICPA adapted)

CA12-3 (Accounting for Research and Development Costs) Cuevas Co. is in the process of developing a revolutionary new product. A new division of the company was formed to develop, manufacture, and market this new product. As of year-end (December 31, 2014), the new product has not been manufactured for resale. However, a prototype unit was built and is in operation.

Throughout 2014, the new division incurred certain costs. These costs include design and engineering studies, prototype manufacturing costs, administrative expenses (including salaries of administrative personnel), and market research costs. In addition, approximately \$900,000 in equipment (with an estimated useful life of 10 years) was purchased for use in developing and manufacturing the new product. Approximately \$315,000 of this equipment was built specifically for the design development of the new product. The remaining \$585,000 of equipment was used to manufacture the pre-production prototype and will be used to manufacture the new product once it is in commercial production.

Instructions

- How are "research" and "development" defined in the authoritative literature (GAAP)?
- Briefly indicate the practical and conceptual reasons for the conclusion reached by the Financial Accounting Standards Board on accounting and reporting practices for research and development costs.
- In accordance with GAAP, how should the various costs of Cuevas described above be recorded on the financial statements for the year ended December 31, 2014?

(AICPA adapted)

CA12-4 (Accounting for Research and Development Costs) Czeslaw Corporation's research and development department has an idea for a project it believes will culminate in a new product that would be very profitable for the company. Because the project will be very expensive, the department requests approval from the company's controller, Jeff Reid.

Reid recognizes that corporate profits have been down lately and is hesitant to approve a project that will incur significant expenses that cannot be capitalized due to the requirements of the authoritative literature. He knows that if they hire an outside firm that does the work and obtains a patent for the process, Czeslaw Corporation can purchase the patent from the outside firm and record the expenditure as an asset. Reid knows that the company's own R&D department is first-rate, and he is confident they can do the work well.

Instructions

Answer the following questions.

- Who are the stakeholders in this situation?
- What are the ethical issues involved?
- What should Reid do?

USING YOUR JUDGMENT

FINANCIAL REPORTING

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix 5B. The company's complete annual report, including the notes to the financial statements, can be accessed at the book's companion website, www.wiley.com/college/kieso.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- (a) Does P&G report any intangible assets, especially goodwill, in its 2011 financial statements and accompanying notes?
- (b) How much research and development (R&D) cost was expensed by P&G in 2010 and 2011? What percentage of sales revenue and net income did P&G spend on R&D in 2010 and 2011?

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

Instructions

Go to the book's companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- (a) (1) What amounts for intangible assets were reported in their respective balance sheets by Coca-Cola and PepsiCo?
 - (2) What percentage of total assets is each of these reported amounts?
 - (3) What was the change in the amount of intangibles from 2010 to 2011 for Coca-Cola and PepsiCo?
- (b) (1) On what basis and over what periods of time did Coca-Cola and PepsiCo amortize their intangible assets?
 - (2) What were the amounts of accumulated amortization reported by Coca-Cola and PepsiCo at the end of 2011 and 2010?
 - (3) What was the composition of the identifiable and unidentifiable intangible assets reported by Coca-Cola and PepsiCo at the end of 2011?

Financial Statement Analysis Cases

Case 1: Merck and Johnson & Johnson

Merck & Co., Inc. and **Johnson & Johnson** are two leading producers of health-care products. Each has considerable assets, and each expends considerable funds each year toward the development of new products. The development of a new health-care product is often very expensive, and risky. New products frequently must undergo considerable testing before approval for distribution to the public. For example, it took Johnson & Johnson 4 years and \$200 million to develop its 1-DAY ACUVUE contact lenses. Below are some basic data compiled from the financial statements of these two companies.

(all dollars in millions)	Johnson & Johnson	Merck
Total assets	\$53,317	\$42,573
Total revenue	47,348	22,939
Net income	8,509	5,813
Research and development expense	5,203	4,010
Intangible assets	11,842	2,765

Instructions

- What kinds of intangible assets might a health-care products company have? Does the composition of these intangibles matter to investors—that is, would it be perceived differently if all of Merck’s intangibles were goodwill than if all of its intangibles were patents?
- Suppose the president of Merck has come to you for advice. He has noted that by eliminating research and development expenditures the company could have reported \$4 billion more in net income. He is frustrated because much of the research never results in a product, or the products take years to develop. He says shareholders are eager for higher returns, so he is considering eliminating research and development expenditures for at least a couple of years. What would you advise?
- The notes to Merck’s financial statements note that Merck has goodwill of \$1.1 billion. Where does recorded goodwill come from? Is it necessarily a good thing to have a lot of goodwill on a company’s books?

Case 2: Analysis of Goodwill

As a new intern for the local branch office of a national brokerage firm, you are excited to get an assignment that allows you to use your accounting expertise. Your supervisor provides you the spreadsheet below, which contains data for the most recent quarter for three companies that the firm has been recommending to its clients as “buys.” Each of the companies’ returns on assets has outperformed their industry cohorts in the past. But, given recent challenges in their markets, there is concern that the companies may experience operating challenges and lower earnings. (All numbers in millions, except return on assets.)

	A	B	C	D	E
1	Company	Fair Value of Company	Book Value (Net Assets)	Carrying Value of Goodwill	Return on Assets
2	Sprint Nextel	\$36,361	\$51,271	\$30,718	3.5%
3	Washington Mutual	11,742	23,941	9,062	2.4%
4	E* Trade Financial	1,639	4,104	2,035	5.6%
5					

Instructions

- The fair value for each of these companies is lower than the corresponding book value. What implications does this have for each company’s future prospects?
- To date, none of these companies has recorded goodwill impairments. Your supervisor suspects that they will need to record impairments in the near future, but he is unsure about the goodwill impairment rules. Is it likely that these companies will recognize impairments? Explain.
- Estimate the amount of goodwill impairment for each company and prepare the journal entry to record the impairment. For each company, you may assume that the book value less the carrying value of the goodwill approximates the fair value of the companies’ net assets.
- Discuss the effects of your entries in part (c) on your evaluation of these companies based on the return on assets ratio.

Accounting, Analysis, and Principles

On January 2, 2014, Raconteur Corp. reported the following intangible assets: (1) copyright with a carrying value of \$15,000, and (2) a trade name with a carrying value of \$8,500. The trade name has a remaining life of 5 years and can be renewed at nominal cost indefinitely. The copyright has a remaining life of 10 years.

At December 31, 2014, Raconteur assessed the intangible assets for possible impairment and developed the following information.

	Estimated Undiscounted Expected Future Cash Flows	Estimated Fair Value
Copyright	\$20,000	\$16,000
Trade name	10,000	5,000

Accounting

Prepare any journal entries required for Raconteur's intangible assets at December 31, 2014.

Analysis

Many stock analysts indicate a preference for less-volatile operating income measures. Such measures make it easier to predict future income and cash flows, using reported income measures. How does the accounting for impairments of intangible assets affect the volatility of operating income?

Principles

Many accounting issues involve a trade-off between the primary characteristics of relevant and representationally faithful information. How does the accounting for intangible asset impairments reflect this trade-off?

BRIDGE TO THE PROFESSION

Professional Research: FASB Codification

King Company is contemplating the purchase of a smaller company, which is a distributor of King's products. Top management of King is convinced that the acquisition will result in significant synergies in its selling and distribution functions. The financial management group (of which you are a part) has been asked to prepare some analysis of the effects of the acquisition on the combined company's financial statements. This is the first acquisition for King, and some of the senior staff insist that based on their recollection of goodwill accounting, any goodwill recorded on the acquisition will result in a "drag" on future earnings for goodwill amortization. Other younger members on the staff argue that goodwill accounting has changed. Your supervisor asks you to research this issue.

Instructions

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/asclogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

- Identify the accounting literature that addresses goodwill and other intangible assets.
- Define goodwill.
- Is goodwill subject to amortization? Explain.
- When goodwill is recognized by a subsidiary, should it be tested for impairment at the consolidated level or the subsidiary level? Discuss.

Additional Professional Resources

See the book's companion website, at www.wiley.com/college/kieso, for professional simulations as well as other study resources.

There are some significant differences between IFRS and GAAP in the accounting for both intangible assets and impairments. IFRS related to intangible assets is presented in *IAS 38* (“Intangible Assets”). IFRS related to impairments is found in *IAS 36* (“Impairment of Assets”).

10 LEARNING OBJECTIVE

Compare the accounting for intangible assets under GAAP and IFRS.

RELEVANT FACTS

Following are the key similarities and differences between GAAP and IFRS related to intangible assets.

Similarities

- Like GAAP, under IFRS intangible assets (1) lack physical substance and (2) are not financial instruments. In addition, under IFRS an intangible asset is identifiable. To be identifiable, an intangible asset must either be separable from the company (can be sold or transferred) or it arises from a contractual or legal right from which economic benefits will flow to the company. Fair value is used as the measurement basis for intangible assets under IFRS, if it is more clearly evident.
- With issuance of a recent converged statement on business combinations (*IFRS 3* and *SEAS No. 141—Revised*), IFRS and GAAP are very similar for intangibles acquired in a business combination. That is, companies recognize an intangible asset separately from goodwill if the intangible represents contractual or legal rights or is capable of being separated or divided and sold, transferred, licensed, rented, or exchanged. In addition, under both GAAP and IFRS, companies recognize acquired in-process research and development (IPR&D) as a separate intangible asset if it meets the definition of an intangible asset and its fair value can be measured reliably.
- As in GAAP, under IFRS the costs associated with research and development are segregated into the two components. Costs in the research phase are always expensed under both IFRS and GAAP.

Differences

- IFRS permits revaluation on limited-life intangible assets. Revaluations are not permitted for goodwill and other indefinite-life intangible assets.
- IFRS permits some capitalization of internally generated intangible assets (e.g., brand value) if it is probable there will be a future benefit and the amount can be reliably measured. GAAP requires expensing of all costs associated with internally generated intangibles.
- IFRS requires an impairment test at each reporting date for long-lived assets and intangibles, and records an impairment if the asset’s carrying amount exceeds its recoverable amount. The recoverable amount is the higher of the asset’s fair value less costs to sell and its value-in-use. **Value-in-use** is the future cash flows to be derived from the particular assets, discounted to present value. Under GAAP, impairment loss is measured as the excess of the carrying amount over the asset’s fair value.
- IFRS allows reversal of impairment losses when there has been a change in economic conditions or in the expected use of limited-life intangibles. Under GAAP, impairment losses cannot be reversed for assets to be held and used; the impairment loss

results in a new cost basis for the asset. IFRS and GAAP are similar in the accounting for impairments of assets held for disposal.

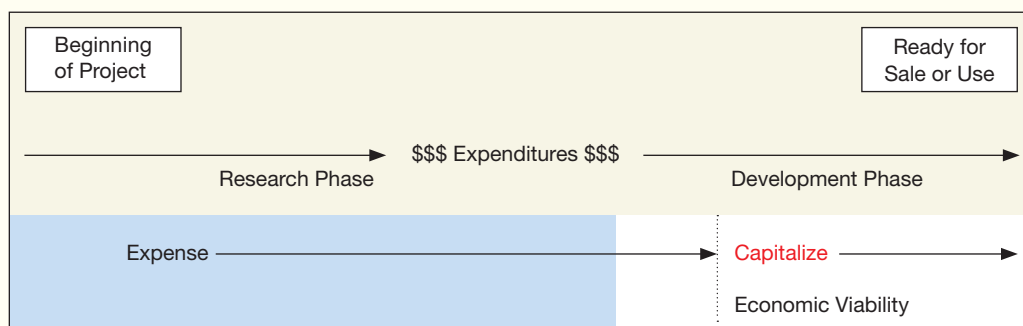

- Under IFRS, costs in the development phase of a research and development project are capitalized once technological feasibility (referred to as **economic viability**) is achieved.

ABOUT THE NUMBERS

Development Costs

Businesses frequently incur costs on a variety of intangible resources, such as scientific or technological knowledge, market research, intellectual property, and brand names. These costs are commonly referred to as research and development (R&D) costs. Intangible assets that might arise from these expenditures include patents, computer software, copyrights, and trademarks. For example, **Nokia** incurred R&D costs to develop its cell phones, resulting in patents related to its technology. In determining the accounting for these costs, Nokia must determine whether its R&D project is at a sufficiently advanced stage to be considered economically viable. To perform this assessment, Nokia evaluates costs incurred during the research phase and the development phase. Illustration IFRS12-1 indicates the two stages of research and development activities, along with the accounting treatment for costs incurred during these phases.

ILLUSTRATION
IFRS12-1
Research and
Development Stages

As indicated, all costs incurred in the research phase are expensed as incurred. Once a project moves to the development phase, certain development costs are capitalized. Specifically, development costs are capitalized when certain criteria are met, indicating that an economically viable intangible asset will result from the R&D project. In essence, economic viability indicates that the project is far enough along in the process such that the economic benefits of the R&D project will flow to the company. Therefore, development costs incurred from that point forward meet the recognition criteria and should be recorded as an intangible asset.

In summary, companies expense all research phase costs and some development phase costs. Certain development costs are capitalized once economic viability criteria are met.

Impairment of Intangible Assets

An intangible asset is **impaired** when a company is not able to recover the asset's carrying amount either through using it or by selling it. As discussed in Chapter 11, to determine whether a long-lived asset (property, plant, and equipment, or intangible asset) is impaired, a review is made of the asset's cash-generating ability through use or sale. If the carrying amount is higher than the recoverable amount, the difference is an impairment loss. If the recoverable amount is greater than the carrying amount, no impairment is recorded. The specific procedures for recording impairments depend on the type of intangible asset—limited-life or indefinite-life (including goodwill).

Impairment of Limited-Life Intangibles

The rules that apply to **impairments of property, plant, and equipment also apply to limited-life intangibles**. At each statement of financial position date, a company should review limited-life intangibles for impairment. Information indicating that an impairment test should be performed might be internal (e.g., physical damage or adverse changes in performance) or external (e.g., adverse changes in the business or regulatory environment, or technological or competitive developments). If there is an indication that an intangible asset is impaired, the company performs an impairment test: compare the carrying value of the intangible asset to the recoverable amount.

Recall that **recoverable amount** is defined as the higher of fair value less costs to sell or value-in-use. Fair value less costs to sell means what the asset could be sold for after deducting costs of disposal. Value-in-use is the present value of cash flows expected from the future use and eventual sale of the asset at the end of its useful life. The **impairment loss** is the carrying amount of the asset less the recoverable amount of the impaired asset. As with other impairments, the loss is reported in profit or loss.

Companies generally report the loss in the “Other income and expense” section. To illustrate, assume that Lerch, Inc. has a patent on how to extract oil from shale rock, with a carrying value of \$5,000,000 at the end of 2014. Unfortunately, several recent non-shale-oil discoveries adversely affected the demand for shale-oil technology, indicating that the patent is impaired. Lerch determines the recoverable amount for the patent, based on value-in-use (because there is no active market for the patent). Lerch estimates the patent’s value-in-use at \$2,000,000, based on the discounted expected future net cash flows at its market rate of interest. Illustration IFRS12-2 shows the impairment loss computation (based on value-in-use).

Carrying value of patent	\$5,000,000
Recoverable amount (based on value-in-use)	<u>(2,000,000)</u>
Loss on impairment	<u>\$3,000,000</u>

ILLUSTRATION IFRS12-2

Computation of Loss on Impairment of Patent

Lerch records this loss as follows.

Loss on Impairment	3,000,000	
Patents		3,000,000

After recognizing the impairment, the recoverable amount of \$2,000,000 is the new cost basis of the patent. Lerch should amortize the patent’s recoverable amount (new carrying amount) over its remaining useful life or legal life, whichever is shorter.

Reversal of Impairment Loss

What happens if a review in a future year indicates that an intangible asset is no longer impaired because the recoverable amount of the asset is higher than the carrying amount? In that case, the impairment loss may be reversed. To illustrate, continuing the Lerch patent example, assume that the remaining life of the patent is five years with zero residual value. Recall the carrying value of the patent after impairment is \$2,000,000 (\$5,000,000 – \$3,000,000). Thus, Lerch’s amortization is \$400,000 ($\$2,000,000 \div 5$) over the remaining five years of the patent’s life. The amortization expense and related carrying amount after the impairment is shown in Illustration IFRS12-3.

Early in 2016, based on improving conditions in the market for shale-oil technology, Lerch remeasures the recoverable amount of the patent to be \$1,750,000. In this case, Lerch reverses a portion of the recognized impairment loss with the following entry.

Patents (\$1,750,000 – \$1,600,000)	150,000	
Recovery of Loss on Impairment		150,000

ILLUSTRATION
IFRS12-3Post-Impairment
Carrying Value of Patent

Year	Amortization Expense	Carrying Amount	
2015	\$400,000	\$1,600,000	(\$2,000,000 – \$400,000)
2016	400,000	1,200,000	(\$1,600,000 – \$400,000)
2017	400,000	800,000	(\$1,200,000 – \$400,000)
2018	400,000	400,000	(\$800,000 – \$400,000)
2019	400,000	0	(\$400,000 – \$400,000)

The recovery of the impairment loss is reported in the “Other income and expense” section of the income statement. The carrying amount of the patent is now \$1,750,000 (\$1,600,000 + \$150,000). Assuming the remaining life of the patent is four years, Lerch records \$437,500 ($\$1,750,000 \div 4$) amortization expense in 2016.

Impairment of Indefinite-Life Intangibles Other Than Goodwill

Companies test indefinite-life intangibles (including goodwill) for impairment annually. To illustrate, assume that Arcon Radio purchased a broadcast license for \$2,000,000. The license is renewable every 10 years if the company provides appropriate service and does not violate Government Communications Commission (GCC) rules. Arcon Radio has renewed the license with the GCC twice, at a minimal cost. Because it expects cash flows to last indefinitely, Arcon reports the license as an indefinite-life intangible asset. Recently, the GCC decided to issue significantly more of these licenses, which will reduce the value of Arcon’s license. Based on recent auctions of similar licenses, Arcon Radio estimates the fair value less costs to sell (the recoverable amount) of its license to be \$1,500,000. Arcon therefore reports an impairment loss of \$500,000, computed as follows.

ILLUSTRATION
IFRS12-4Computation of Loss on
Impairment of Broadcast
License

Carrying value of broadcast license	\$ 2,000,000
Recoverable amount (based on fair value less costs to sell)	(1,500,000)
Loss on impairment	\$ 500,000

Impairment of Goodwill

The timing of the impairment test for goodwill is the same as that for other indefinite-life intangibles. That is, companies must test goodwill at least annually. However, because goodwill generates cash flows only in combination with other assets, the impairment test is conducted based on the cash-generating unit to which the goodwill is assigned. Recall from our discussion in Chapter 11 that companies identify a **cash-generating unit** based on the smallest identifiable group of assets that generate cash flows independently of the cash flows from other assets. Under IFRS, when a company records goodwill in a business combination, it must assign the goodwill to the cash-generating unit that is expected to benefit from the synergies and other benefits arising from the business combination.

To illustrate, assume that Kohlbuy Corporation has three divisions. It purchased one division, Pritt Products, four years ago for \$2 million. Unfortunately, Pritt experienced operating losses over the last three quarters. Kohlbuy management is now reviewing the division (the cash-generating unit), for purposes of its annual impairment testing. Illustration IFRS12-5 lists the Pritt Division’s net assets, including the associated goodwill of \$900,000 from the purchase.

ILLUSTRATION
IFRS12-5Net Assets of Pritt
Division, Including
Goodwill

Property, plant, and equipment (net)	\$ 800,000
Goodwill	900,000
Inventory	700,000
Receivables	300,000
Cash	200,000
Accounts and notes payable	(500,000)
Net assets	<u>\$2,400,000</u>

Kohlbuy determines the recoverable amount for the Pritt Division to be \$2,800,000, based on a value-in-use estimate. **Because the recoverable amount of the division exceeds the carrying amount of the net assets, Kohlbuy does not recognize any impairment.** However, if the recoverable amount for the Pritt Division were less than the carrying amount of the net assets, then Kohlbuy must record an impairment. To illustrate, assume that the recoverable amount for the Pritt Division is \$1,900,000 instead of \$2,800,000. Illustration IFRS12-6 computes the amount of the impairment loss to be recorded.

Recoverable amount of Pritt Division	\$ 1,900,000
Net identifiable assets	<u>(2,400,000)</u>
Loss on impairment	<u>\$ 500,000</u>

ILLUSTRATION IFRS12-6

Determination of
Impairment for the Pritt
Division

Kohlbuy makes the following entry to record the impairment.

Loss on Impairment	500,000	
Goodwill		500,000

Following this entry, the carrying value of the goodwill is \$400,000 (\$900,000 – \$500,000). If conditions change in subsequent periods, such that the recoverable amount of the Pritt Division's assets other than goodwill exceeds their carrying value, Kohlbuy may reverse an impairment loss on the Pritt Division assets other than goodwill. **Goodwill impairment loss reversals are not permitted.**

ON THE HORIZON

The IASB and FASB have identified a project, in a very preliminary stage, which would consider expanded recognition of internally generated intangible assets. As indicated, IFRS permits more recognition of intangibles compared to GAAP. Thus, it will be challenging to develop converged standards for intangible assets, given the long-standing prohibition on capitalizing internally generated intangible assets and research and development in GAAP. Learn more about the timeline for the intangible asset project at the IASB website http://www.iasb.org/current_Projects/IASB_Projects/IASB_Work_Plan.htm.

IFRS SELF-TEST QUESTIONS

- All of the following are key similarities between GAAP and IFRS with respect to accounting for intangible assets **except**:
 - for accounting purposes, costs associated with research and development activities are segregated into the two components.
 - the accounting for intangibles acquired in a business combination.
 - recovery of impairments on intangibles other than goodwill.
 - the accounting for impairments of assets held for disposal.
- Research and development costs are:
 - expensed under GAAP.
 - expensed under IFRS.
 - expensed under both GAAP and IFRS.
 - None of the above.
- Which of the following statements is **correct**?
 - Both IFRS and GAAP permit revaluation of property, plant, and equipment, and intangible assets (except for goodwill).
 - GAAP permits capitalization of development costs.
 - IFRS requires capitalization of research and development costs once economic viability is met.
 - IFRS requires capitalization of development costs once economic viability is met.

4. A loss on impairment of an intangible asset under IFRS is the asset's:
 - (a) carrying amount less the expected future net cash flows.
 - (b) carrying amount less its recoverable amount.
 - (c) recoverable amount less the expected future net cash flows.
 - (d) book value less its fair value.
5. Recovery of impairment is recognized under IFRS for all the following **except**:
 - (a) patent held for sale.
 - (b) patent held for use.
 - (c) trademark.
 - (d) goodwill.

IFRS CONCEPTS AND APPLICATION

IFRS12-1 Where can authoritative IFRS guidance related to intangible assets be found?

IFRS12-2 Briefly describe some of the similarities and differences between GAAP and IFRS with respect to the accounting for intangible assets.

IFRS12-3 Briefly discuss the convergence efforts that are underway in the area of intangible assets.

IFRS12-4 Treasure Land Corporation incurred the following costs in 2014.

Cost of laboratory research aimed at discovery of new knowledge	\$120,000
Cost of testing in search for product alternatives	100,000
Cost of engineering activity required to advance the design of a product to the manufacturing stage	210,000
Prototype testing subsequent to meeting economic viability	<u>75,000</u>
	<u><u>\$505,000</u></u>

Prepare the necessary 2014 journal entry(ies) for Treasure Land.

IFRS12-5 Indicate whether the following items are capitalized or expensed in the current year.

- (a) Purchase cost of a patent from a competitor.
- (b) Research costs.
- (c) Development costs (after achieving economic viability).
- (d) Organizational costs.
- (e) Costs incurred internally to create goodwill.

IFRS12-6 Kenoly Corporation owns a patent that has a carrying amount of \$300,000. Kenoly expects future net cash flows from this patent to total \$210,000 over its remaining life of 10 years. The recoverable amount of the patent is \$110,000. Prepare Kenoly's journal entry, if necessary, to record the loss on impairment.

IFRS12-7 Use the information in IFRS12-6. Assume that at the end of the year following the impairment (after recording amortization expense), the estimated recoverable amount for the patent is \$130,000. Prepare Kenoly's journal entry, if needed.

IFRS12-8 Waters Corporation purchased Johnson Company 3 years ago and at that time recorded goodwill of \$400,000. The Johnson Division's net assets, including the goodwill, have a carrying amount of \$800,000. The recoverable amount of the division is estimated to be \$1,000,000. Prepare Waters' journal entry, if necessary, to record impairment of the goodwill.

IFRS12-9 Use the information provided in IFRS12-8. Assume that the recoverable amount of the division is estimated to be \$750,000. Prepare Waters' journal entry, if necessary, to record impairment of the goodwill.

IFRS12-10 Margaret Avery Company from time to time embarks on a research program when a special project seems to offer possibilities. In 2012, the company expends \$325,000 on a research project, but by the end of 2012, it is impossible to determine whether any benefit will be derived from it.

- (a) What account should be charged for the \$325,000, and how should it be shown in the financial statements?
- (b) The project is completed in 2013, and a successful patent is obtained. The R&D costs to complete the project are \$130,000 (\$36,000 of these costs were incurred after achieving economic viability). The

administrative and legal expenses incurred in obtaining patent number 472-1001-84 in 2013 total \$24,000. The patent has an expected useful life of 5 years. Record these costs in journal entry form. Also, record patent amortization (full year) in 2013.

- (c) In 2014, the company successfully defends the patent in extended litigation at a cost of \$47,200, thereby extending the patent life to December 31, 2021. What is the proper way to account for this cost? Also, record patent amortization (full year) in 2014.
- (d) Additional engineering and consulting costs incurred in 2014 required to advance the design of a new version of the product to the manufacturing stage total \$60,000. These costs enhance the design of the product considerably, but it is highly uncertain if there will be a market for the new version of the product. Discuss the proper accounting treatment for this cost.

Professional Research

IFRS12-11 King Company is contemplating the purchase of a smaller company, which is a distributor of King's products. Top management of King is convinced that the acquisition will result in significant synergies in its selling and distribution functions. The financial management group (of which you are a part) has been asked to analyze the effects of the acquisition on the combined company's financial statements. This is the first acquisition for King, and some of the senior staff insist that based on their recollection of goodwill accounting, any goodwill recorded on the acquisition will result in a "drag" on future earnings for goodwill amortization. Other younger members on the staff argue that goodwill accounting has changed. Your supervisor asks you to research this issue.

Instructions

Access the IFRS authoritative literature at the IASB website (<http://eifrs.iasb.org/>). (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) Identify the accounting literature that addresses goodwill and other intangible assets.
- (b) Define goodwill.
- (c) Is goodwill subject to amortization? Explain.
- (d) When goodwill is recognized by a subsidiary, should it be tested for impairment at the consolidated level or the subsidiary level? Discuss.

International Financial Reporting Problem Marks and Spencer plc

IFRS12-12 The financial statements of **Marks and Spencer plc (M&S)** are available at the book's companion website or can be accessed at http://corporate.marksandspencer.com/documents/publications/2012/Annual_Report_2012.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) Does M&S report any intangible assets and goodwill in its financial statements and accompanying notes? Briefly explain.
- (b) How much selling and marketing expenses does M&S report in 2011 and 2012? Briefly discuss the significance of these expenses to M&S's operating results.

ANSWERS TO IFRS SELF-TEST QUESTIONS

1. c 2. a 3. d 4. b 5. d

Remember to check the book's companion website to find additional resources for this chapter.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Describe the nature, type, and valuation of current liabilities.
- 2 Explain the classification issues of short-term debt expected to be refinanced.
- 3 Identify types of employee-related liabilities.
- 4 Identify the criteria used to account for and disclose gain and loss contingencies.
- 5 Explain the accounting for different types of loss contingencies.
- 6 Indicate how to present and analyze liabilities and contingencies.

Now You See It, Now You Don't

A look at the liabilities side of the balance sheet of the company **Beru AG Corporation**, dated March 31, 2003, shows how international standards have changed regarding the reporting of financial information. Here is how one liability was shown on this date:

Anticipated losses arising from pending transactions	3,285,000 euros
--	-----------------

Do you believe a liability should be reported for such transactions? *Anticipated losses* means the losses have not yet occurred. *Pending transactions* means that the condition that might cause the loss has also not occurred. So where is the liability? To whom does the company owe something? Where is the obligation?

German accounting rules in 2003 were permissive. They allowed companies to report liabilities for possible future events. In essence, the establishment of this general-purpose "liability" provides a buffer for Beru if losses do materialize. If you take a more skeptical view, you might say the accounting rules let Beru smooth its income by charging expenses in good years and reducing expenses in bad years.

The story has a happy ending: European companies switched to International Financial Reporting Standards (IFRS) in 2005. Under IFRS, liabilities like "Anticipated losses arising from pending transactions" disappear. So when we look at Beru's 2005 financial statements, we find a note stating that the company has reported as liabilities only obligations arising from past transactions that can be reasonably estimated.

Standard-setters continue to work on the financial reporting of certain "contingent" liabilities, such as those related to pending lawsuits and other possible losses for which a company might be liable. As you will learn in this chapter, standard-setters have provided much more transparency in reporting liability-type transactions. However, much still needs to be done. For example, the IASB is considering major changes in how to recognize and measure contingent liabilities. The task will not be easy. Consider a simple illustration involving a company that sells hamburgers:

- The hamburgers are sold in a jurisdiction where the law states that the seller must pay \$100,000 to each customer that purchases a contaminated hamburger;
- At the end of the reporting period, the company has sold one hamburger; and
- Past experience indicates there is a one in a million chance that a hamburger sold by the entity is contaminated. No other information is available.

CONCEPTUAL FOCUS

- > See the **Underlying Concepts** on pages 702, 707, 712, 721, and 725.
- > Read the **Evolving Issue** on page 730 for a discussion of how to account for greenhouse gases.

INTERNATIONAL FOCUS

- > See the **International Perspectives** on pages 706, 727, and 729.
- > Read the **IFRS Insights** on pages 753–761 for a discussion of:
 - Refinancing criteria
 - Provisions
 - Contingencies

Does the company have a liability? What is the conceptual justification, if any, to record a liability or for that matter, not to record a liability? And if you conclude that the sale of the hamburger results in a liability, how do you measure it? Another way to ask the question is whether the hamburger issue is a recognition issue or a measurement issue. This example illustrates some of the difficult questions that the IASB faces in this area.

The FASB recently proposed expanded disclosure about the nature of contingencies, more quantitative and qualitative background on contingencies, and, maybe most welcome of all, required tabular presentation of the changes in contingencies, including explanation of the changes. Note that these disclosures are similar to those required in IFRS. What's not to like about these enhanced disclosures? Well quite a bit, according to early responses by some companies and the legal profession. These parties are concerned that the information in these enhanced disclosures could be used against them in a lawsuit, and they are voicing strong opposition to the proposed rules. We do not know the end of this liability story. However, the controversy over the proposed rules illustrates the challenges of developing accounting rules for liabilities that meet the needs of investors while avoiding harm to the companies reporting the information.

PREVIEW OF CHAPTER

13

As our opening story indicates, the convergence of GAAP and IFRS should lead to improved reporting of liabilities. In this chapter, we explain the basic issues related to accounting and reporting for current and contingent liabilities. The content and organization of the chapter are as follows.

CURRENT LIABILITIES

LEARNING OBJECTIVE 1

Describe the nature, type, and valuation of current liabilities.

The question, “What is a liability?” is not easy to answer. For example, is preferred stock a liability or an ownership claim? The first reaction is to say that preferred stock is in fact an ownership claim, and companies should report it as part of stockholders’ equity. In fact, preferred stock has many elements of debt as well.¹

The issuer (and in some cases the holder) often has the right to call the stock within a specific period of time—making it similar to a repayment of principal. The dividend on the preferred stock is in many cases almost guaranteed (the cumulative provision)—making it look like interest. As a result, preferred stock is but one of many financial instruments that are difficult to classify.²

To help resolve some of these controversies, the FASB, as part of its conceptual framework, defined **liabilities** as “probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events.”³ In other words, a liability has three essential characteristics:

1. It is a present obligation that entails settlement by probable future transfer or use of cash, goods, or services.
2. It is an unavoidable obligation.
3. The transaction or other event creating the obligation has already occurred.

Because liabilities involve future disbursements of assets or services, one of their most important features is the date on which they are payable. A company must satisfy currently maturing obligations in the ordinary course of business to continue operating. Liabilities with a more distant due date do not, as a rule, represent a claim on the company’s current resources. They are therefore in a slightly different category. This feature gives rise to the basic division of liabilities into (1) current liabilities and (2) long-term debt.

Recall that current assets are cash or other assets that companies reasonably expect to convert into cash, sell, or consume in operations within a single operating cycle or within a year (if completing more than one cycle each year). **Current liabilities** are “obligations whose liquidation is reasonably expected to require use of existing resources properly classified as current assets, or the creation of other current liabilities.” [2] This definition has gained wide acceptance because it recognizes operating cycles of varying lengths in different industries. This definition also considers the important relationship between current assets and current liabilities. [3]

The **operating cycle** is the period of time elapsing between the acquisition of goods and services involved in the manufacturing process and the final cash realization resulting from sales and subsequent collections. Industries that manufacture products requiring an aging process, and certain capital-intensive industries, have an operating cycle of considerably more than one year. On the other hand, most retail and service establishments have several operating cycles within a year.

¹This illustration is not just a theoretical exercise. In practice, a number of preferred stock issues have all the characteristics of a debt instrument, except that they are called and legally classified as preferred stock. In some cases, the IRS has even permitted companies to treat the dividend payments as interest expense for tax purposes.

²The FASB has issued a standard to address the accounting for some of these securities [1] and is working with the IASB on a broader project to address the accounting for securities with debt and equity features.

³“Elements of Financial Statements of Business Enterprises,” *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, 1980).

Underlying Concepts

To determine the appropriate classification of specific financial instruments, companies need proper definitions of assets, liabilities, and equities. They often use the conceptual framework definitions as the basis for resolving controversial classification issues.

See the FASB
Codification section
(page 733).

Here are some typical current liabilities:

1. Accounts payable.
2. Notes payable.
3. Current maturities of long-term debt.
4. Short-term obligations expected to be refinanced.
5. Dividends payable.
6. Customer advances and deposits.
7. Unearned revenues.
8. Sales taxes payable.
9. Income taxes payable.
10. Employee-related liabilities.

Accounts Payable

Accounts payable, or **trade accounts payable**, are balances owed to others for goods, supplies, or services purchased on open account. Accounts payable arise because of the time lag between the receipt of services or acquisition of title to assets and the payment for them. The terms of the sale (e.g., 2/10, n/30 or 1/10, E.O.M.) usually state this period of extended credit, commonly 30 to 60 days.

Most companies record liabilities for purchases of goods upon receipt of the goods. If title has passed to the purchaser before receipt of the goods, the company should record the transaction at the time of title passage. A company must pay special attention to transactions occurring near the end of one accounting period and at the beginning of the next. It needs to ascertain that the record of goods received (the inventory) agrees with the liability (accounts payable), and that it records both in the proper period.

Measuring the amount of an account payable poses no particular difficulty. The invoice received from the creditor specifies the due date and the exact outlay in money that is necessary to settle the account. The only calculation that may be necessary concerns the amount of cash discount. See Chapter 8 for illustrations of entries related to accounts payable and purchase discounts.

Notes Payable

Notes payable are written promises to pay a certain sum of money on a specified future date. They may arise from purchases, financing, or other transactions. Some industries require notes (often referred to as **trade notes payable**) as part of the sales/purchases transaction in lieu of the normal extension of open account credit. Notes payable to banks or loan companies generally arise from cash loans. Companies classify notes as short-term or long-term, depending on the payment due date. Notes may also be interest-bearing or zero-interest-bearing.

Interest-Bearing Note Issued

Assume that Castle National Bank agrees to lend \$100,000 on March 1, 2014, to Landscape Co. if Landscape signs a \$100,000, 6 percent, four-month note. Landscape records the cash received on March 1 as follows.

March 1	
Cash	100,000
Notes Payable	100,000
(To record issuance of 6%, 4-month note to Castle National Bank)	

If Landscape prepares financial statements semiannually, it makes the adjusting entry (shown at the top of page 704) to recognize interest expense and interest payable of \$2,000 ($\$100,000 \times 6\% \times 4/12$) at June 30.

June 30		
Interest Expense	2,000	
Interest Payable		2,000
(To accrue interest for 4 months on Castle National Bank note)		

If Landscape prepares financial statements monthly, its adjusting entry at the end of each month is \$500 ($\$100,000 \times 6\% \times 1/12$).

At maturity (July 1), Landscape must pay the face value of the note (\$100,000) plus \$2,000 interest ($\$100,000 \times 6\% \times 4/12$). Landscape records payment of the note and accrued interest as follows.

July 1		
Notes Payable	100,000	
Interest Payable	2,000	
Cash		102,000
(To record payment of Castle National Bank interest-bearing note and accrued interest at maturity)		

Zero-Interest-Bearing Note Issued

A company may issue a zero-interest-bearing note instead of an interest-bearing note. A zero-interest-bearing note does not explicitly state an interest rate on the face of the note. **Interest is still charged**, however. At maturity, the borrower must pay back an amount greater than the cash received at the issuance date. In other words, the borrower receives in cash the present value of the note. The present value equals the face value of the note at maturity minus the interest or discount charged by the lender for the term of the note. In essence, the bank takes its fee “up front” rather than on the date the note matures.

To illustrate, assume that Landscape issues a \$102,000, four-month, zero-interest-bearing note to Castle National Bank. The present value of the note is \$100,000.⁴ Landscape records this transaction as follows.

March 1		
Cash	100,000	
Discount on Notes Payable	2,000	
Notes Payable		102,000
(To record issuance of 4-month, zero-interest-bearing note to Castle National Bank)		

Landscape credits the Notes Payable account for the face value of the note, which is \$2,000 more than the actual cash received. It debits the difference between the cash received and the face value of the note to Discount on Notes Payable. **Discount on Notes Payable is a contra account to Notes Payable, and therefore is subtracted from Notes Payable on the balance sheet.** Illustration 13-1 shows the balance sheet presentation on March 1.

ILLUSTRATION 13-1
Balance Sheet
Presentation of Discount

Current liabilities		
Notes payable	\$102,000	
Less: Discount on notes payable	2,000	\$100,000

The amount of the discount, \$2,000 in this case, represents the cost of borrowing \$100,000 for 4 months. Accordingly, Landscape charges the discount to interest expense over the life of the note. That is, the Discount on Notes Payable balance **represents interest expense chargeable to future periods**. Thus, Landscape should not debit

⁴The bank discount rate used in this example to find the present value is 5.96 percent.

Interest Expense for \$2,000 at the time of obtaining the loan. We discuss additional accounting issues related to notes payable in Chapter 14.

Current Maturities of Long-Term Debt

PepsiCo reports as part of its current liabilities the portion of bonds, mortgage notes, and other long-term indebtedness that matures within the next fiscal year. It categorizes this amount as **current maturities of long-term debt**. Companies, like PepsiCo, exclude long-term debts maturing currently as current liabilities if they are to be:

1. Retired by assets accumulated for this purpose that properly have not been shown as current assets,
2. Refinanced, or retired from the proceeds of a new debt issue, or
3. Converted into capital stock.

In these situations, the use of current assets or the creation of other current liabilities does not occur. Therefore, classification as a current liability is inappropriate. A company should disclose the plan for liquidation of such a debt either parenthetically or by a note to the financial statements. When only a part of a long-term debt is to be paid within the next 12 months, as in the case of serial bonds that it retires through a series of annual installments, **the company reports the maturing portion of long-term debt as a current liability**, and the remaining portion as a long-term debt.

However, a company should classify as current any liability that is **due on demand** (callable by the creditor) or will be due on demand within a year (or operating cycle, if longer). Liabilities often become callable by the creditor when there is a violation of the debt agreement. For example, most debt agreements specify a given level of equity to debt be maintained, or specify that working capital be of a minimum amount. If the company violates an agreement, it must classify the debt as current because it is a reasonable expectation that existing working capital will be used to satisfy the debt. Only if a company can show that it is **probable** that it will cure (satisfy) the violation within the grace period specified in the agreements can it classify the debt as noncurrent. [4]

Short-Term Obligations Expected to Be Refinanced

Short-term obligations are debts scheduled to mature within one year after the date of a company's balance sheet or within its operating cycle, whichever is longer. Some **short-term obligations** are **expected to be refinanced** on a long-term basis. These short-term obligations will not require the use of working capital during the next year (or operating cycle).⁵

At one time, the accounting profession generally supported the exclusion of short-term obligations from current liabilities if they were "expected to be refinanced." But the profession provided no specific guidelines, so companies determined whether a short-term obligation was "expected to be refinanced" based solely on management's **intent** to refinance on a long-term basis. Classification was not clear-cut. For example, a company might obtain a five-year bank loan but handle the actual financing with 90-day notes, which it must keep turning over (renewing). In this case, is the loan a long-term debt or a current liability? Another example was the **Penn Central Railroad** before it went bankrupt. The railroad was deep into short-term debt but classified it as long-term debt. Why? Because the railroad believed it had commitments from lenders to keep

2 LEARNING OBJECTIVE

Explain the classification issues of short-term debt expected to be refinanced.

⁵Refinancing a short-term obligation on a long-term basis means either replacing it with a long-term obligation or equity securities, or renewing, extending, or replacing it with short-term obligations for an uninterrupted period extending beyond one year (or the operating cycle, if longer) from the date of the enterprise's balance sheet.

refinancing the short-term debt. When those commitments suddenly disappeared, it was “good-bye Pennsy.” As the Greek philosopher Epictetus once said, “Some things in this world are not and yet appear to be.”

Refinancing Criteria

To resolve these classification problems, the accounting profession has developed criteria for determining the circumstances under which short-term obligations may be properly excluded from current liabilities. A company is required to exclude a short-term obligation from current liabilities if **both** of the following conditions are met:

1. It must **intend to refinance** the obligation on a long-term basis.
2. It must **demonstrate an ability** to consummate the refinancing. [5]

Intention to refinance on a long-term basis means that the company intends to refinance the short-term obligation so that it will not require the use of working capital during the ensuing fiscal year (or operating cycle, if longer).

The company demonstrates the **ability** to consummate the refinancing by:

- (a) **Actually refinancing** the short-term obligation by issuing a long-term obligation or equity securities after the date of the balance sheet but before it is issued; or
- (b) Entering into a **financing agreement** that clearly permits the company to refinance the debt on a long-term basis on terms that are readily determinable.

If an actual refinancing occurs, the portion of the short-term obligation to be excluded from current liabilities may not exceed the proceeds from the new obligation or equity securities used to retire the short-term obligation. For example, **Montavon Winery** had \$3,000,000 of short-term debt. Subsequent to the balance sheet date, but before issuing the balance sheet, the company issued 100,000 shares of common stock, intending to use the proceeds to liquidate the short-term debt at its maturity. If Montavon’s net proceeds from the sale of the 100,000 shares total \$2,000,000, it can exclude from current liabilities only \$2,000,000 of the short-term debt.

An additional question is whether a company should exclude from current liabilities a short-term obligation if it is paid off after the balance sheet date and replaced by long-term debt before the balance sheet is issued. To illustrate, Marquardt Company pays off short-term debt of \$40,000 on January 17, 2015, and issues long-term debt of \$100,000 on February 3, 2015. Marquardt’s financial statements, dated December 31, 2014, are to be issued March 1, 2015. Should Marquardt exclude the \$40,000 short-term debt from current liabilities? No—here’s why: Repayment of the short-term obligation required the use of **existing** current assets **before** the company obtained funds through long-term financing. Therefore, Marquardt must include the short-term obligations in current liabilities at the balance sheet date (as shown in Illustration 13-2).

International Perspective

IFRS requires that the current portion of long-term debt be classified as current unless an agreement to refinance on a long-term basis is completed before the date of the financial statements.

ILLUSTRATION 13-2
Short-Term Debt Paid Off after Balance Sheet Date and Later Replaced by Long-Term Debt

What do the numbers mean? WHAT ABOUT THAT SHORT-TERM DEBT?

The evaluation of credit quality involves more than simply assessing a company's ability to repay loans. Credit analysts also evaluate debt management strategies. Analysts and investors will reward what they view as prudent management decisions with lower debt service costs and a higher stock price. The wrong decisions can bring higher debt costs and lower stock prices.

General Electric Capital Corp., a subsidiary of **General Electric**, experienced the negative effects of market scrutiny of its debt management policies. Analysts complained that GE had been slow to refinance its mountains of short-term debt. GE had issued these current obligations, with maturities of 270 days or less, when interest rates were low. However, in light of expectations that the Fed would raise interest rates,

analysts began to worry about the higher interest costs GE would pay when it refinanced these loans. Some analysts recommended that it was time to reduce dependence on short-term credit. The reasoning goes that a shift to more dependable long-term debt, thereby locking in slightly higher rates for the long-term, is the better way to go.

Thus, scrutiny of GE debt strategies led to analysts' concerns about GE's earnings prospects. Investors took the analysis to heart, and GE experienced a two-day 6 percent drop in its stock price. Recently, GE and other companies, such as **UPS**, have responded to these criticisms and have been increasing issuance of long-term debt to lock-in continuing low interest rates.

Sources: Adapted from Steven Vames, "Credit Quality, Stock Investing Seem to Go Hand in Hand," *Wall Street Journal* (April 1, 2002), p. R4; and V. Monga, "Companies Feast on Cheap Money Market for 30-Year Bonds, Priced at Stark Lows, Brings Out GE, UPS and Other Once-Shy Issuers," *Wall Street Journal* (October 8, 2012).

Dividends Payable

A **cash dividend payable** is an amount owed by a corporation to its stockholders as a result of board of directors' authorization. At the date of declaration, the corporation assumes a liability that places the stockholders in the position of creditors in the amount of dividends declared. Because companies always pay cash dividends within one year of declaration (generally within three months), they classify them as current liabilities.

On the other hand, companies do not recognize accumulated but undeclared dividends on cumulative preferred stock as a liability. Why? Because **preferred dividends in arrears** are not an obligation until the board of directors authorizes the payment. Nevertheless, companies should disclose the amount of cumulative dividends unpaid in a note, or show it parenthetically in the capital stock section.

Dividends payable in the form of additional shares of stock are not recognized as a liability. Such **stock dividends** (as we discuss in Chapter 15) do not require future outlays of assets or services. Companies generally report such undistributed stock dividends in the stockholders' equity section because they represent retained earnings in the process of transfer to paid-in capital.

Underlying Concepts

Preferred dividends in arrears do represent a probable future economic sacrifice, but the expected sacrifice does not result from a past transaction or past event. The sacrifice will result from a future event (declaration by the board of directors). Note disclosure improves the predictive value of the financial statements.

Customer Advances and Deposits

Current liabilities may include **returnable cash deposits** received from customers and employees. Companies may receive deposits from customers to guarantee performance of a contract or service or as guarantees to cover payment of expected future obligations. For example, a company like **Alltel Corp.** often requires a deposit on equipment that customers use to connect to the Internet or to access its other services. Alltel also may receive deposits from customers as guarantees for possible damage to property. Additionally, some companies require their employees to make deposits for the return of keys or other company property.

The classification of these items as current or noncurrent liabilities depends on the time between the date of the deposit and the termination of the relationship that required the deposit.

Unearned Revenues

A magazine publisher, such as **Golf Digest**, receives payment when a customer subscribes to its magazines. An airline company, such as **American Airlines**, sells tickets for future flights. And software companies, like **Microsoft**, issue coupons that allow customers to upgrade to the next version of their software. How do these companies account for **unearned revenues** that they receive before delivering goods or rendering services?

1. When a company receives an advance payment, it debits Cash, and credits a current liability account identifying the source of the unearned revenue.
2. When a company recognizes revenue, it debits the unearned revenue account, and credits a revenue account.

To illustrate, assume that Allstate University sells 10,000 season football tickets at \$50 each for its five-game home schedule. Allstate University records the sales of season tickets as follows.

August 6		
Cash	500,000	
Unearned Sales Revenue		500,000
(To record sale of 10,000 season tickets)		

As each game is completed, Allstate University makes the following entry.

September 7		
Unearned Sales Revenue	100,000	
Sales Revenue		100,000
(To record football ticket revenue)		

The account Unearned Sales Revenue represents unearned revenue. Allstate University reports it as a current liability in the balance sheet as the school has a performance obligation. As the school recognizes revenue, it reclassifies the amount from Unearned Sales Revenue to Sales Revenue. Unearned revenue is material for some companies. In the airline industry, for example, tickets sold for future flights represent almost 50 percent of total current liabilities.

Illustration 13-3 shows specific unearned revenue and revenue accounts used in elected types of businesses.

ILLUSTRATION 13-3 Unearned Revenue and Revenue Accounts

Type of Business	Account Title	
	Unearned Revenue	Revenue
Airline	Unearned Ticket Revenue	Passenger Revenue
Magazine publisher	Unearned Subscription Revenue	Subscription Revenue
Hotel	Unearned Rent Revenue	Rent Revenue
Auto dealer	Unearned Warranty Revenue	Warranty Revenue
Retailers	Unearned Gift Card Revenue	Sales Revenue

The balance sheet reports obligations for any commitments that are redeemable in goods and services. The income statement reports revenues related to performance obligations satisfied during the period.

What do the numbers mean?

MICROSOFT'S LIABILITIES—GOOD OR BAD?

Users of financial statements generally examine current liabilities to assess a company's liquidity and overall financial flexibility. Companies must pay many current liabilities, such as

accounts payable, wages payable, and taxes payable, sooner rather than later. A substantial increase in these liabilities should raise a red flag about a company's financial position.

This is not the case for all current liabilities. For example, **Microsoft** has a current liability entitled “Short-term unearned revenue” of \$18,653 million in 2012 that has increased year after year. Unearned revenue is a liability that arises from sales of Microsoft products such as *Internet Explorer* and *Windows*. Microsoft also has provided coupons for upgrades to its programs to bolster sales of its Xbox consoles. At the time of a sale, customers pay not only for the current version of the software but also for future upgrades. Microsoft recognizes sales revenue from the current version of the software and records as a liability (unearned revenue) the value of future upgrades to the software that it “owes” to customers.

Market analysts read such an increase in unearned revenue as a positive signal about Microsoft’s sales and profitability. When Microsoft’s sales are growing, its unearned revenue account increases. Thus, an *increase* in a liability is good news about Microsoft sales. At the same time, a decline in unearned revenue is bad news. As one analyst noted, a slowdown or reversal of the growth in Microsoft’s unearned revenues indicates slowing sales, which is bad news for investors. Thus, increases in current liabilities can sometimes be viewed as good signs instead of bad.

Sources: Adapted from David Bank, “Some Fans Cool to Microsoft, Citing Drop in Old Indicator,” *Wall Street Journal* (October 28, 1999); and Bloomberg News, “Microsoft Profit Hit by Deferred Sales; Forecast Raised,” *The Globe and Mail* (January 26, 2007), p. B8.

Sales Taxes Payable

Retailers like **Wal-Mart**, **Best Buy**, and **Gap Inc.** must collect sales taxes from customers on transfers of tangible personal property and on certain services and then must remit these taxes to the proper governmental authority. Gap, for example, sets up a liability to provide for taxes collected from customers but not yet remitted to the tax authority. The Sales Taxes Payable account should reflect the liability for sales taxes due various governments.

The entry below illustrates use of the Sales Taxes Payable account on a sale of \$3,000 when a 4 percent sales tax is in effect.

Cash	3,120	
Sales Revenue		3,000
Sales Taxes Payable		120

Sometimes the sales tax collections credited to the liability account are not equal to the liability as computed by the governmental formula. In such a case, Gap makes an adjustment of the liability account by recognizing a gain or a loss on sales tax collections.

Many companies do not segregate the sales tax and the amount of the sale at the time of sale. Instead, the company credits both amounts in total in the Sales Revenue account. Then, to reflect correctly the actual amount of sales and the liability for sales taxes, the company would debit the Sales Revenue account for the amount of the sales taxes due the government on these sales, and would credit the Sales Taxes Payable account for the same amount.

To illustrate, assume that the Sales Revenue account balance of \$150,000 includes sales taxes of 4 percent. Thus, the amount recorded in the Sales Revenue account is comprised of the sales amount plus sales tax of 4 percent of the sales amount. Sales therefore are \$144,230.77 ($\$150,000 \div 1.04$) and the sales tax liability is \$5,769.23 ($\$144,230.77 \times 0.04$; or $\$150,000 - \$144,230.77$). The following entry would record the amount due the taxing unit.

Sales Revenue	5,769.23	
Sales Taxes Payable		5,769.23

Income Taxes Payable

Any federal or state income tax varies in proportion to the amount of annual income. Using the best information and advice available, a business must prepare an income tax return and compute the income taxes payable resulting from the operations of the

Gateway to
the Profession

Expanded Discussion
of Property Taxes
Payable

current period. Corporations should classify as a current liability the taxes payable on net income, as computed per the tax return.⁶ Unlike a corporation, proprietorships and partnerships are not taxable entities. Because the individual proprietor and the members of a partnership are subject to personal income taxes on their share of the business's taxable income, income tax liabilities do not appear on the financial statements of proprietorships and partnerships.

Most corporations must make periodic tax payments throughout the year in an authorized bank depository or a Federal Reserve Bank. These payments are based upon estimates of the total annual tax liability. As the estimated total tax liability changes, the periodic contributions also change. If in a later year the taxing authority assesses an additional tax on the income of an earlier year, the company should credit Income Taxes Payable and charge the related debit to current operations.

Differences between taxable income under the tax laws and accounting income under generally accepted accounting principles sometimes occur. Because of these differences, the amount of income taxes payable to the government in any given year may differ substantially from income tax expense as reported on the financial statements. Chapter 19 is devoted solely to income tax matters and presents an extensive discussion of this complex topic.

Employee-Related Liabilities

LEARNING OBJECTIVE 3

Identify types of employee-related liabilities.

Companies also report as a current liability amounts owed to employees for salaries or wages at the end of an accounting period. In addition, they often also report as current liabilities the following items related to employee compensation.

1. Payroll deductions.
2. Compensated absences.
3. Bonuses.

Payroll Deductions

The most common types of payroll deductions are taxes, insurance premiums, employee savings, and union dues. **To the extent that a company has not remitted the amounts deducted to the proper authority at the end of the accounting period, it should recognize them as current liabilities.**

Social Security Taxes. Since January 1, 1937, Social Security legislation has provided federal **Old Age, Survivor, and Disability Insurance (OASDI)** benefits for certain individuals and their families. Funds for these payments come from taxes levied on both the employer and the employee. Employers collect the employee's share of this tax by deducting it from the employee's gross pay, and remit it to the government along with their share. The government taxes both the employer and the employee at the same rate, currently 6.2 percent based on the employee's gross pay up to a \$113,700 annual limit. The OASDI tax is usually referred to as **FICA** (the Federal Insurance Contribution Act).

In 1965, Congress passed the first federal health insurance program for the aged—popularly known as **Medicare**. This two-part program alleviates the high cost of medical care for those over age 65. A separate Hospital Insurance tax, paid by both the employee and the employer at the rate of 1.45 percent on the employee's total compensation,

⁶Corporate taxes are based on a progressive tax rate structure. Companies with taxable income of \$50,000 or less are taxed at a 15 percent rate. Higher levels of income are taxed at much higher rates.

finances the Basic Plan, which provides hospital and other institutional services.⁷ The Voluntary Plan covers the major part of doctors' bills and other medical and health services. Monthly payments from all who enroll, plus matching funds from the federal government, finance this plan.

The combination of the OASDI tax (FICA) and the federal Hospital Insurance Tax is commonly referred to as the **Social Security tax**. The combined rate for these taxes, 7.65 percent on an employee's wages to \$113,700 and 1.45 percent in excess of \$113,700, changes intermittently by acts of Congress. **Companies should report the amount of unremitted employee and employer Social Security tax on gross wages paid as a current liability.**

Unemployment Taxes. Another payroll tax levied by the federal government in cooperation with state governments provides a system of unemployment insurance. All employers who meet the following criteria are subject to the **Federal Unemployment Tax Act (FUTA)**: (1) those who paid wages of \$1,500 or more during any calendar quarter in the year or preceding year, or (2) those who employed at least one individual on at least one day in each of 20 weeks during the current or preceding calendar year.

Only employers pay the unemployment tax. The rate of this tax is 6.2 percent on the first \$7,000 of compensation paid to each employee during the calendar year. The employer receives a tax credit not to exceed 5.4 percent for contributions paid to a state plan for unemployment compensation. Thus, if an employer is subject to a state unemployment tax of 5.4 percent or more, it pays only 0.8 percent tax to the federal government.

State unemployment compensation laws differ both from the federal law and among various states. Therefore, employers must refer to the unemployment tax laws in each state in which they pay wages and salaries. The normal state tax may range from 3 percent to 7 percent or higher. However, all states provide for some form of **merit rating**, which reduces the state contribution rate. Employers who display by their benefit and contribution experience that they provide steady employment may receive this reduction—if the size of the state fund is adequate. In order not to penalize an employer who has earned a reduction in the state contribution rate, federal law allows a credit of 5.4 percent, even when the effective state contribution rate is less than 5.4 percent.

To illustrate, Appliance Repair Co. has a taxable payroll of \$100,000. It is subject to a federal rate of 6.2 percent and a state contribution rate of 5.7 percent. However, its stable employment experience reduces the company's state rate to 1 percent. Appliance Repair computes its federal and state unemployment taxes as shown in Illustration 13-4.

State unemployment tax payment (1% × \$100,000)	\$1,000
Federal unemployment tax [(6.2% – 5.4%) × \$100,000]	800
Total federal and state unemployment tax	<u>\$1,800</u>

ILLUSTRATION 13-4
Computation of
Unemployment Taxes

Companies pay federal unemployment tax quarterly, and file a tax form annually. Companies also generally pay state contributions quarterly as well. Because both the federal and the state unemployment taxes accrue on earned compensation, companies should record the amount of accrued but unpaid employer contributions **as an operating expense and as a current liability when preparing financial statements at year-end.**

Income Tax Withholding. Federal and some state income tax laws require employers to withhold from each employee's pay the applicable income tax due on those wages. The

⁷As a result of the new health-care law, the Affordable Care Act, the actual rate for Medicare is higher for married couples, generally with incomes in excess of \$250,000.

employer computes the amount of income tax to withhold according to a government-prescribed formula or withholding tax table. That amount depends on the length of the pay period and each employee's taxable wages, marital status, and claimed dependents. If the income tax withheld plus the employee and the employer Social Security taxes exceeds specified amounts per month, the employer must make remittances to the government during the month. Illustration 13-5 summarizes payroll deductions and liabilities.

ILLUSTRATION 13-5
Summary of Payroll
Liabilities

Item	Who Pays	
Income tax withholding	Employee	} Employer reports these amounts as liabilities until remitted.
FICA taxes—employee share		
Union dues		

FICA taxes—employer share	Employer	
Federal unemployment		
State unemployment		

Payroll Deductions Example. Assume a weekly payroll of \$10,000 entirely subject to FICA and Medicare (7.65%), federal (0.8%) and state (4%) unemployment taxes, with income tax withholding of \$1,320 and union dues of \$88 deducted. The company records the salaries and wages paid and the **employee payroll deductions** as follows.

Salaries and Wages Expense	10,000	
Withholding Taxes Payable		1,320
FICA Taxes Payable		765
Union Dues Payable		88
Cash		7,827

It records the **employer payroll taxes** as follows.

Payroll Tax Expense	1,245	
FICA Taxes Payable		765
FUTA Taxes Payable		80
SUTA Taxes Payable		400

The employer must remit to the government its share of FICA tax along with the amount of FICA tax deducted from each employee's gross compensation. It records all unremitted employer FICA taxes as payroll tax expense and payroll tax payable.⁸

Underlying Concepts

When these four conditions exist, all elements in the definition of a liability exist. In addition, the expense recognition principle requires that the company report the expense for the services in the period consumed.

Compensated Absences

Compensated absences are paid absences from employment—such as vacation, illness, and holidays.⁹ Companies should accrue a liability for the cost of compensation for future absences if **all of the following conditions** exist. [6]

- The employer's obligation relating to employees' rights to receive compensation for future absences is attributable to employees' services **already rendered**.
- The obligation relates to the rights that **vest or accumulate**.
- Payment of the compensation is **probable**.
- The amount can be **reasonably estimated**. [7]

⁸A manufacturing company allocates all of the payroll costs (wages, payroll taxes, and fringe benefits) to appropriate cost accounts such as Direct Labor, Indirect Labor, Sales Salaries, Administrative Salaries, and the like. This abbreviated and somewhat simplified discussion of payroll costs and deductions is not indicative of the volume of records and clerical work that may be involved in maintaining a sound and accurate payroll system.

⁹In addition, companies provide **postemployment benefits** to past or inactive employees **after employment but prior to retirement**. Examples include salary continuation, supplemental unemployment benefits, severance pay, job training, and continuation of health and life insurance coverage.

Illustration 13-6 shows an example of an accrual for compensated absences, in an excerpt from the balance sheet of **Clarcor Inc.**

Clarcor Inc.

Current liabilities	
Accounts payable	\$ 6,308
Accrued salaries, wages and commissions	2,278
Compensated absences	2,271
Accrued pension liabilities	1,023
Other accrued liabilities	4,572
	<u>\$16,452</u>

ILLUSTRATION 13-6

Balance Sheet
Presentation of Accrual
for Compensated
Absences

If an employer meets conditions (a), (b), and (c) but does not accrue a liability because of a failure to meet condition (d), it should disclose that fact. Illustration 13-7 shows an example of such a disclosure, in a note from the financial statements of **Gotham Utility Company**.

Gotham Utility Company

Employees of the Company are entitled to paid vacation, personal, and sick days off, depending on job status, length of service, and other factors. Due to numerous differing union contracts and other agreements with nonunion employees, it is impractical to estimate the amount of compensation for future absences, and, accordingly, no liability has been reported in the accompanying financial statements. The Company's policy is to recognize the cost of compensated absences when actually paid to employees; compensated absence payments to employees totaled \$2,786,000.

ILLUSTRATION 13-7

Disclosure of Policy for
Compensated Absences

The following considerations are relevant to the accounting for compensated absences.

Vested rights exist when an employer has an obligation to make payment to an employee even after terminating his or her employment. Thus, vested rights are not contingent on an employee's future service. **Accumulated rights** are those that employees can carry forward to future periods if not used in the period in which earned. For example, assume that you earn four days of vacation pay as of December 31, the end of your employer's fiscal year. Company policy is that you will be paid for this vacation time even if you terminate employment. In this situation, your four days of vacation pay are vested, and your employer must accrue the amount.

Now assume that your vacation days are not vested but that you can carry the four days over into later periods. Although the rights are not vested, they are accumulated rights for which the employer must make an accrual. However, the amount of the accrual is adjusted to allow for estimated forfeitures due to turnover.

A modification of the general rules relates to the issue of **sick pay**. If sick pay benefits vest, a company must accrue them. If sick pay benefits accumulate but do not vest, a company may choose whether to accrue them. Why this distinction? Companies may administer compensation designated as sick pay in one of two ways. In some companies, employees receive sick pay only if illness causes their absence. Therefore, these companies may or may not accrue a liability because its payment depends on future employee illness. Other companies allow employees to accumulate unused sick pay and take compensated time off from work even when not ill. For this type of sick pay, a company must accrue a liability because the company will pay it, regardless of whether employees become ill.

Companies should recognize the expense and related liability for compensated absences in the year earned by employees. For example, if new employees receive rights to two weeks' paid vacation at the beginning of their second year of employment, a company considers the vacation pay to be earned during the first year of employment.

What rate should a company use to accrue the compensated absence cost—the current rate or an estimated future rate? GAAP is silent on this subject. Therefore, companies will likely use the current rather than future rate. The future rate is less certain and raises time value of money issues. To illustrate, assume that Amutron Inc. began operations on January 1, 2014. The company employs 10 individuals and pays each \$480 per week. Employees earned 20 unused vacation weeks in 2014. In 2015, the employees used the vacation weeks, but now they each earn \$540 per week. Amutron accrues the accumulated vacation pay on December 31, 2014, as follows.

Salaries and Wages Expense	9,600	
Salaries and Wages Payable ($\$480 \times 20$)		9,600

At December 31, 2014, the company reports on its balance sheet a liability of \$9,600. In 2015, it records the payment of vacation pay as follows.

Salaries and Wages Payable	9,600	
Salaries and Wages Expense	1,200	
Cash ($\$540 \times 20$)		10,800

In 2015, the use of the vacation weeks extinguishes the liability. Note that Amutron records the difference between the amount of cash paid and the reduction in the liability account as an adjustment to Salaries and Wages Expense in the period when paid. This difference arises because it accrues the liability account at the rates of pay in effect during the period when employees **earned** the compensated time. The cash paid, however, depends on the rates in effect during the period when employees **used** the compensated time. If Amutron used the future rates of pay to compute the accrual in 2014, then the cash paid in 2015 would equal the liability.¹⁰

Expanded Discussion
of Bonus
Computations

Bonus Agreements

Many companies give a **bonus** to certain or all employees in addition to their regular salaries or wages. Frequently the bonus amount depends on the company's yearly profit. For example, employees at **Ford Motor Company** share in the success of the company's operations on the basis of a complicated formula using net income as its primary basis for computation. A company may consider **bonus payments to employees** as additional wages and should include them as a deduction in determining the net income for the year.

To illustrate the entries for an employee bonus, assume that Palmer Inc. shows income for the year 2014 of \$100,000. It will pay out bonuses of \$10,700 in January 2015. Palmer makes an adjusting entry dated December 31, 2014, to record the bonuses as follows.

Salaries and Wages Expense	10,700	
Salaries and Wages Payable		10,700

In January 2015, when Palmer pays the bonus, it makes this journal entry:

Salaries and Wages Payable	10,700	
Cash		10,700

¹⁰Some companies also have obligations for benefits paid to employees after they retire. The accounting and reporting standards for postretirement benefit payments are complex. These standards relate to two different types of **postretirement benefits**: (1) pensions, and (2) postretirement health-care and life insurance benefits. We discuss these issues extensively in Chapter 20.

Palmer should show the expense account in the income statement as an operating expense. **The liability, Salaries and Wages Payable, is usually payable within a short period of time. Companies should include it as a current liability in the balance sheet.** Similar to bonus agreements are contractual agreements for **conditional expenses**. Examples would be agreements covering rents or royalty payments conditional on the amount of revenues recognized or the quantity of product produced or extracted. Conditional expenses based on revenues or units produced are usually less difficult to compute than bonus arrangements.

For example, assume that a lease calls for a fixed rent payment of \$500 per month and 1 percent of all sales over \$300,000 per year. The company's annual rent obligation would amount to \$6,000 plus \$0.01 of each dollar of revenue over \$300,000. Or, a royalty agreement may give to a patent owner \$1 for every ton of product resulting from the patented process, or give to a mineral rights owner \$0.50 on every barrel of oil extracted. As the company produces or extracts each additional unit of product, it creates an additional obligation, usually a current liability.

CONTINGENCIES

Companies often are involved in situations where uncertainty exists about whether an obligation to transfer cash or other assets has arisen and/or the amount that will be required to settle the obligation. For example:

- **Merck** may be a defendant in a lawsuit, and any payment is contingent upon the outcome of a settlement or an administrative or court proceeding.
- **Ford Motor Company** provides a warranty for a car it sells, and any payments are contingent on the number of cars that qualify for benefits under the warranty.
- **Briggs & Stratton** acts as a guarantor on a loan for another entity, and any payment is contingent on whether the other entity defaults.

Broadly, these situations are called contingencies. A **contingency** is “an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (**gain contingency**) or loss (**loss contingency**) to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur.” [8]¹¹

Gain Contingencies

Gain contingencies are claims or rights to receive assets (or have a liability reduced) whose existence is uncertain but which may become valid eventually. The typical gain contingencies are:

1. Possible receipts of monies from gifts, donations, asset sales, and so on.
2. Possible refunds from the government in tax disputes.
3. Pending court cases with a probable favorable outcome.
4. Tax loss carryforwards (discussed in Chapter 19).

Companies follow a conservative policy in this area; they do not record gain contingencies. A company discloses gain contingencies in the notes only when a high probability exists for realizing them. As a result, it is unusual to find information about

4 LEARNING OBJECTIVE

Identify the criteria used to account for and disclose gain and loss contingencies.

¹¹According to *Accounting Trends and Techniques—2012*, the most common gain contingencies are related to operating loss carryforwards and other tax credits and to tax credit carryforwards.

contingent gains in the financial statements and the accompanying notes. Illustration 13-8 presents an example of a gain contingency disclosure.

ILLUSTRATION 13-8

Disclosure of Gain Contingency

BMC Industries, Inc.

Note 13: Legal Matters. In the first quarter, a U.S. District Court in Miami, Florida, awarded the Company a \$5.1 million judgment against Barth Industries (Barth) of Cleveland, Ohio and its parent, Nesco Holdings, Inc. (Nesco). The judgment relates to an agreement under which Barth and Nesco were to help automate the plastic lens production plant in Fort Lauderdale, Florida. The Company has not recorded any income relating to this judgment because Barth and Nesco have filed an appeal.

Loss Contingencies

LEARNING OBJECTIVE 5

Explain the accounting for different types of loss contingencies.

Loss contingencies involve possible losses. A liability incurred as a result of a loss contingency is by definition a contingent liability. **Contingent liabilities** depend on the occurrence of one or more future events to confirm either the amount payable, the payee, the date payable, or its existence. That is, these factors depend on a contingency.

International Perspective

IFRS uses the term *provisions* to refer to estimated liabilities.

Likelihood of Loss

When a loss contingency exists, the likelihood that the future event or events will confirm the incurrence of a liability can range from probable to remote. The FASB uses the terms **probable**, **reasonably possible**, and **remote** to identify three areas within that range and assigns the following meanings.

Probable. The future event or events are likely to occur.

Reasonably possible. The chance of the future event or events occurring is more than remote but less than likely.

Remote. The chance of the future event or events occurring is slight.

Companies should accrue an estimated loss from a loss contingency by a charge to expense and a liability recorded only if **both** of the following conditions are met.¹²

1. Information available prior to the issuance of the financial statements indicates that it is **probable that a liability has been incurred** at the date of the financial statements.
2. The amount of the loss can be **reasonably estimated**.

To record a liability, a company does not need to know the exact payee nor the exact date payable. **What a company must know is whether it is probable that it incurred a liability.**

To meet the second criterion, a company needs to be able to reasonably determine an amount for the liability. To determine a reasonable estimate of the liability, a company may use its own experience, experience of other companies in the industry, engineering or research studies, legal advice, or educated guesses by qualified personnel. Illustration 13-9 shows disclosure of an accrual recorded for a loss contingency, from the annual report of **Quaker State Oil Refining Company**.

¹²We discuss loss contingencies that result in the incurrence of a liability in this chapter. We discuss loss contingencies that result in the impairment of an asset (e.g., collectibility of receivables or threat of expropriation of assets) in other sections of this textbook.

Quaker State Oil Refining Company

Note 5: Contingencies. During the period from November 13 to December 23, a change in an additive component purchased from one of its suppliers caused certain oil refined and shipped to fail to meet the Company's low-temperature performance requirements. The Company has recalled this product and has arranged for reimbursement to its customers and the ultimate consumers of all costs associated with the product. Estimated cost of the recall program, net of estimated third party reimbursement, in the amount of \$3,500,000 has been charged to current operations.

ILLUSTRATION 13-9 Disclosure of Accrual for Loss Contingency

Use of the terms probable, reasonably possible, and remote to classify contingencies involves judgment and subjectivity. Illustration 13-10 lists examples of loss contingencies and the general accounting treatment accorded them.

Usually Accrued

Loss Related to:

1. Collectibility of receivables
2. Obligations related to product warranties and product defects
3. Premiums offered to customers

Not Accrued

Loss Related to:

4. Risk of loss or damage of enterprise property by fire, explosion, or other hazards
5. General or unspecified business risks
6. Risk of loss from catastrophes assumed by property and casualty insurance companies, including reinsurance companies

May Be Accrued*

Loss Related to:

7. Threat of expropriation of assets
8. Pending or threatened litigation
9. Actual or possible claims and assessments**
10. Guarantees of indebtedness of others
11. Obligations of commercial banks under "standby letters of credit"
12. Agreements to repurchase receivables (or the related property) that have been sold

*Should be accrued when both criteria—probable and reasonably estimable—are met.

**Estimated amounts of losses incurred prior to the balance sheet date but settled subsequently should be accrued as of the balance sheet date.

ILLUSTRATION 13-10 Accounting Treatment of Loss Contingencies

Practicing accountants express concern over the diversity that now exists in the interpretation of "probable," "reasonably possible," and "remote." Current practice relies heavily on the exact language used in responses received from lawyers (such language is necessarily biased and protective rather than predictive). As a result, accruals and disclosures of contingencies vary considerably in practice. Some of the more common loss contingencies are:¹³

1. Litigation, claims, and assessments.
2. Guarantee and warranty costs.
3. Premiums and coupons.
4. Environmental liabilities.

¹³*Accounting Trends and Techniques—2012* indicates that 500 companies report loss contingencies for the following: litigation, 355; environmental, 195; possible tax assessments, 124; insurance, 154; governmental investigation, 101; and others, 71.

As discussed in the opening story, companies do not record or report in the notes to the financial statements general risk contingencies inherent in business operations (e.g., the possibility of war, strike, uninsurable catastrophes, or a business recession).

Litigation, Claims, and Assessments

Companies must consider the following factors, among others, in determining whether to record a liability with respect to **pending or threatened litigation** and actual or possible **claims** and **assessments**.

1. The **time period** in which the underlying cause of action occurred.
2. The **probability** of an unfavorable outcome.
3. The ability to make a **reasonable estimate** of the amount of loss.

To report a loss and a liability in the financial statements, **the cause for litigation must have occurred on or before the date of the financial statements**. It does not matter that the company became aware of the existence or possibility of the lawsuit or claims after the date of the financial statements but before issuing them. To evaluate the probability of an unfavorable outcome, a company considers the following: the nature of the litigation, the progress of the case, the opinion of legal counsel, its own and others' experience in similar cases, and any management response to the lawsuit.

Companies can seldom predict the outcome of pending litigation, however, with any assurance. And, even if evidence available at the balance sheet date does not favor the company, it is hardly reasonable to expect the company to publish in its financial statements a dollar estimate of the probable negative outcome. Such specific disclosures might weaken the company's position in the dispute and encourage the plaintiff to intensify its efforts. A typical example of the wording of such a disclosure is the note to the financial statements of **Apple Inc.**, relating to its litigation concerning repetitive stress injuries, as shown in Illustration 13-11.

ILLUSTRATION 13-11
Disclosure of Litigation

Apple Inc.

“Repetitive Stress Injury” Litigation. The Company is named in numerous lawsuits (fewer than 100) alleging that the plaintiff incurred so-called “repetitive stress injury” to the upper extremities as a result of using keyboards and/or mouse input devices sold by the Company. In a trial of one of these cases (*Dorsey v. Apple*) in the United States District Court for the Eastern District of New York, the jury rendered a verdict in favor of the Company, and final judgment in favor of the Company has been entered. The other cases are in various stages of pretrial activity. These suits are similar to those filed against other major suppliers of personal computers. Ultimate resolution of the litigation against the Company may depend on progress in resolving this type of litigation in the industry overall.

With respect to **unfiled suits** and **unasserted claims and assessments**, a company must determine (1) the degree of **probability** that a suit may be filed or a claim or assessment may be asserted, and (2) the **probability** of an unfavorable outcome. For example, assume that the Federal Trade Commission investigates the Nawtee Company for restraint of trade, and institutes enforcement proceedings. Private claims of triple damages for redress often follow such proceedings. In this case, Nawtee must determine the probability of the claims being asserted **and** the probability of triple damages being awarded. If both are probable, if the loss is reasonably estimable, and if the cause for

action is dated on or before the date of the financial statements, then Nawtee should accrue the liability.¹⁴

Guarantee and Warranty Costs

A **warranty (product guarantee)** is a promise made by a seller to a buyer to make good on a deficiency of quantity, quality, or performance in a product. Manufacturers commonly use it as a sales promotion technique. Automakers, for instance, “hyped” their sales by extending their new-car warranty to seven years or 100,000 miles. For a specified period of time following the date of sale to the consumer, the manufacturer may promise to bear all or part of the cost of replacing defective parts, to perform any necessary repairs or servicing without charge, to refund the purchase price, or even to “double your money back.”

Warranties and guarantees entail future costs. These additional costs, sometimes called “after costs” or “post-sale costs,” frequently are significant. Although the future cost is indefinite as to amount, due date, and even customer, a liability is probable in most cases. Companies should recognize this liability in the accounts if they can reasonably estimate it. The estimated amount of the liability includes all the costs that the company will incur after sale and delivery and that are incident to the correction of defects or deficiencies required under the warranty provisions. Warranty costs are a classic example of a loss contingency.

Companies use two basic methods of accounting for warranty costs: (1) the cash-basis method and (2) the accrual method.

Cash Basis. Under the **cash-basis method**, companies expense warranty costs as incurred. In other words, a **seller or manufacturer charges warranty costs to the period in which it complies with the warranty**. The company does not record a liability for future costs arising from warranties, nor does it charge the period of sale. Companies frequently justify use of this method, the only one recognized for income tax purposes, on the basis of expediency when warranty costs are immaterial or when the warranty period is relatively short. A company uses the cash-basis method when it does not accrue a warranty liability in the year of sale either because:

1. It is not probable that a liability has been incurred, or
2. It cannot reasonably estimate the amount of the liability.

Accrual Basis. If it is probable that customers will make warranty claims and a company can reasonably estimate the costs involved, the company must use the accrual method. Under the **accrual method**, companies charge warranty costs to operating expense **in the year of sale**. The accrual method is the generally accepted method. Companies should use it whenever the warranty is an integral and inseparable part of the sale and is viewed as a loss contingency. We refer to this approach as the **expense warranty approach**.

Example of expense warranty approach. To illustrate the expense warranty method, assume that Denson Machinery Company begins production on a new machine in July 2014,

¹⁴Companies need not disclose contingencies involving an unasserted claim or assessment when no claimant has come forward unless (1) it is considered probable that a claim will be asserted, and (2) there is a reasonable possibility that the outcome will be unfavorable. The FASB recently had a project to develop disclosures that are sufficient to enable users of financial statements to assess the likelihood, timing, and amount of future cash flows associated with loss contingencies. As indicated in the opening story, this project and its proposed recommendations were extremely controversial. Although the SEC continues to focus on these disclosures, the FASB has now removed the project from its active agenda (see <http://www.cooley.com/66716>).

and sells 100 units at \$5,000 each by its year-end, December 31, 2014. Each machine is under warranty for one year. Denson estimates, based on past experience with a similar machine, that the warranty cost will average \$200 per unit. Further, as a result of parts replacements and services rendered in compliance with machinery warranties, it incurs \$4,000 in warranty costs in 2014 and \$16,000 in 2015.

1. Sale of 100 machines at \$5,000 each, July through December 2014:

Cash or Accounts Receivable	500,000	
Sales Revenue		500,000
(To record sales revenue)		

2. Recognition of warranty expense, July through December 2014:

Warranty Expense	4,000	
Cash, Inventory, Accrued Payroll		4,000
(Warranty costs incurred)		
Warranty Expense	16,000	
Warranty Liability		16,000
(To accrue estimated warranty costs)		

The December 31, 2014, balance sheet reports “Warranty liability” as a current liability of \$16,000, and the income statement for 2014 reports “Warranty expense” of \$20,000.

3. Recognition of warranty costs incurred in 2015 (on 2014 machinery sales):

Warranty Liability	16,000	
Cash, Inventory, Accrued Payroll		16,000
(Warranty costs incurred)		

If Denson Machinery applies the cash-basis method, it reports \$4,000 as warranty expense in 2014 and \$16,000 as warranty expense in 2015. It records all of the sale price as revenue in 2014. In many instances, application of the cash-basis method fails to record the warranty costs relating to the products sold during a given period with the revenues derived from such products. As such, **it violates the expense recognition principle**. However, where ongoing warranty policies exist year after year, the differences between the cash and the expense warranty bases probably would not be so great.

Sales warranty approach. A warranty is sometimes **sold separately from the product**. For example, when you purchase a television set or Blu-ray player, you are entitled to the manufacturer’s warranty. You also will undoubtedly be offered an extended warranty on the product at an additional cost.¹⁵

In this case, the seller should recognize separately the sale of the television or Blu-ray player, with the manufacturer’s warranty and the sale of the extended warranty. [9] This approach is referred to as the **sales warranty approach**. **Companies defer revenue on the sale of the extended warranty** and generally recognize it on a straight-line basis over the life of the contract. The seller of the warranty defers revenue because it has an obligation to perform services over the life of the contract. The seller should only defer and amortize costs that vary with, and are directly related to, the sale of the contracts (mainly commissions). It expenses those costs, such as employees’ salaries, advertising, and general and administrative expenses, that it would have incurred even if it did not sell a contract.

To illustrate, assume you purchase a new automobile from Hanlin Auto for \$20,000. In addition to the regular warranty on the auto (the manufacturer will pay for all repairs

¹⁵A company separately prices a contract if the customer has the option to purchase the services provided under the contract for an expressly stated amount separate from the price of the product. An extended warranty or product maintenance contract usually meets these conditions.

for the first 36,000 miles or three years, whichever comes first), you purchase at a cost of \$600 an extended warranty that protects you for an additional three years or 36,000 miles. Hanlin Auto records the sale of the automobile (with the regular warranty) and the sale of the extended warranty on January 2, 2014, as follows.

Cash	20,600	
Sales Revenue		20,000
Unearned Warranty Revenue		600

It recognizes revenue at the end of the fourth year (using straight-line amortization) as follows.

Unearned Warranty Revenue	200	
Warranty Revenue		200

Because the extended warranty contract only starts after the regular warranty expires, Hanlin Auto defers revenue recognition until the fourth year. If it incurs the costs of performing services under the extended warranty contract on other than a straight-line basis (as historical evidence might indicate), Hanlin Auto should recognize revenue over the contract period as it performs services under the contract. [10]¹⁶

Premiums and Coupons

Numerous companies offer premiums (either on a limited or continuing basis) to customers in return for boxtops, certificates, coupons, labels, or wrappers. The **premium** may be silverware, dishes, a small appliance, a toy, or free transportation. Also, **printed coupons** that can be redeemed for a cash discount on items purchased are extremely popular. A more recent marketing innovation is the **cash rebate**, which the buyer can obtain by returning the store receipt, a rebate coupon, and Universal Product Code (UPC label) or “bar code” to the manufacturer.¹⁷

Companies offer premiums, coupon offers, and rebates to stimulate sales. Thus companies should charge the **costs of premiums and coupons to expense in the period of the sale** that benefits from the plan. The period that benefits is not necessarily the period in which the company offered the premium. At the end of the accounting period, many premium offers may be outstanding and must be redeemed when presented in subsequent periods. In order to reflect the existing current liability and to match costs with revenues, the company estimates the number of outstanding premium offers that customers will present for redemption. The company then charges the cost of premium offers to Premium Expense. It credits the outstanding performance obligation to an account titled Premium Liability.

The following example illustrates the accounting treatment for a premium offer. Fluffy Cakemix Company offered its customers a large, nonbreakable mixing bowl in exchange for 25 cents and 10 boxtops. The mixing bowl costs Fluffy Cakemix Company 75 cents, and the company estimates that customers will redeem 60 percent of the boxtops. The premium offer began in June 2014 and resulted in the transactions journalized

Underlying Concepts

Warranties and coupons are loss contingencies that satisfy the conditions necessary for a liability. Regarding the income statement, the *expense recognition principle* requires that companies report the related expense in the period in which the sale occurs.

¹⁶The FASB requires additional disclosure requirements for warranties. A company must disclose its accounting policy and the method used to determine its warranty liability, and must present a tabular reconciliation of the changes in the product warranty liability. [11]

¹⁷Nearly 40 percent of cash rebates never get redeemed, and some customers complain about how difficult the rebate process is. See B. Grow, “The Great Rebate Runaround,” *BusinessWeek* (December 5, 2005), pp. 34–37. Approximately 4 percent of coupons are redeemed. Redeemed coupons eventually make their way to the corporate headquarters of the stores that accept them. From there they are shipped to clearinghouses operated by **A. C. Nielsen Company** (of TV-rating fame) that count them and report back to the manufacturers who, in turn, reimburse the stores.

below. Fluffy Cakemix Company records purchase of 20,000 mixing bowls at 75 cents as follows.

Inventory of Premiums	15,000	
Cash		15,000

The entry to record sales of 300,000 boxes of cake mix at 80 cents would be:

Cash	240,000	
Sales Revenue		240,000

Fluffy records the actual redemption of 60,000 boxtops, the receipt of 25 cents per 10 boxtops, and the delivery of the mixing bowls as follows.

Cash $[(60,000 \div 10) \times \$0.25]$	1,500	
Premium Expense	3,000	
Inventory of Premiums		4,500
Computation: $(60,000 \div 10) \times \$0.75 = \$4,500$		

Finally, Fluffy makes an end-of-period adjusting entry for estimated liability for outstanding premium offers (boxtops) as follows.

Premium Expense	6,000	
Premium Liability		6,000

Computation:

Total boxtops sold in 2014	300,000
Total estimated redemptions (60%)	180,000
Boxtops redeemed in 2014	60,000
Estimated future redemptions	120,000
Cost of estimated claims outstanding	
$(120,000 \div 10) \times (\$0.75 - \$0.25) = \$6,000$	

The December 31, 2014, balance sheet of Fluffy Cakemix Company reports an "Inventory of premiums" of \$10,500 for the premium mixing bowls as a current asset and "Premium liability" of \$6,000 as a current liability. The 2014 income statement reports a \$9,000 "Premium expense" among the selling expenses.

What do the numbers mean?

FREQUENT FLYERS

Numerous companies offer premiums to customers in the form of a promise of future goods or services as an incentive for purchases today. Premium plans that have widespread adoption are the frequent-flyer programs used by all major airlines. On the basis of mileage accumulated, frequent-flyer members receive discounted or free airline tickets. Airline customers can earn miles toward free travel by making long-distance phone calls, staying in hotels, and charging gasoline and groceries on a credit card. Those free tickets represent an enormous potential liability because people using them may displace paying passengers.

When airlines first started offering frequent-flyer bonuses, everyone assumed that they could accommodate the free-ticket holders with otherwise-empty seats. That made the additional cost of the program so minimal that airlines didn't accrue it or report the small liability. But, as more and more paying passengers have been crowded off flights by frequent-flyer awardees, the loss of revenues has grown enormously. For example, **Delta Air Lines** reported liabilities of over \$4.5 billion for frequent-flyer tickets.

Environmental Liabilities

Estimates to clean up existing toxic waste sites total upward of \$752 billion over a 30-year period. In addition, cost estimates of cleaning up our air and preventing future deterioration of the environment run even higher. These costs are likely to only grow, considering "Superfund legislation." This federal legislation provides the Environmental

Protection Agency (EPA) with the power to clean up waste sites and charge the clean-up costs to parties the EPA deems responsible for contaminating the site. These potentially responsible parties can have a significant liability.

In many industries, the construction and operation of long-lived assets involves obligations for the retirement of those assets. When a mining company opens up a strip mine, it may also commit to restore the land once it completes mining. Similarly, when an oil company erects an offshore drilling platform, it may be legally obligated to dismantle and remove the platform at the end of its useful life.

Accounting Recognition of Asset Retirement Obligations. A company must recognize an **asset retirement obligation (ARO)** when it has an existing legal obligation associated with the retirement of a long-lived asset and when it can reasonably estimate the amount of the liability. Companies should record the ARO at fair value. [12]

Obligating events. Examples of existing legal obligations, which require recognition of a liability include, but are not limited to:

- Decommissioning nuclear facilities;
- Dismantling, restoring, and reclamation of oil and gas properties;
- Certain closure, reclamation, and removal costs of mining facilities; and
- Closure and post-closure costs of landfills.

In order to capture the benefits of these long-lived assets, **the company is generally legally obligated for the costs associated with retirement of the asset, whether the company hires another party to perform the retirement activities or performs the activities with its own workforce and equipment.** AROs give rise to various recognition patterns. For example, the obligation may arise at the outset of the asset's use (e.g., erection of an oil-rig), or it may build over time (e.g., a landfill that expands over time).

Measurement. A company initially measures an ARO at fair value, which is defined as the amount that the company would pay in an active market to settle the ARO. While active markets do not exist for many AROs, companies should estimate fair value based on the best information available. Such information could include market prices of similar liabilities, if available. Alternatively, companies may use present value techniques to estimate fair value.

Recognition and allocation. To record an ARO in the financial statements, a company includes the cost associated with the ARO in the carrying amount of the related long-lived asset, and records a liability for the same amount. It records an asset retirement cost as part of the related asset because these costs are directly related to operating the asset and are necessary to prepare the asset for its intended use. Therefore, the specific asset (e.g., mine, drilling platform, nuclear power plant) should be increased because the future economic benefit comes from the use of this productive asset. **Companies should not record the capitalized asset retirement costs in a separate account because there is no future economic benefit that can be associated with these costs alone.**

In subsequent periods, companies allocate the cost of the ARO to expense over the period of the related asset's useful life. Companies may use the straight-line method for this allocation, as well as other systematic and rational allocations.

Example of ARO accounting provisions. To illustrate the accounting for AROs, assume that on January 1, 2014, Wildcat Oil Company erected an oil platform in the Gulf of

Mexico. Wildcat is legally required to dismantle and remove the platform at the end of its useful life, estimated to be five years. Wildcat estimates that dismantling and removal will cost \$1,000,000. Based on a 10 percent discount rate, the fair value of the asset retirement obligation is estimated to be \$620,920 ($\$1,000,000 \times .62092$). Wildcat records this ARO as follows.

January 1, 2014		
Drilling Platform	620,920	
Asset Retirement Obligation		620,920

During the life of the asset, Wildcat allocates the asset retirement cost to expense. Using the straight-line method, Wildcat makes the following entries to record this expense.

December 31, 2014, 2015, 2016, 2017, 2018		
Depreciation Expense ($\$620,920 \div 5$)	124,184	
Accumulated Depreciation—Plant Assets		124,184

In addition, Wildcat must accrue interest expense each period. Wildcat records interest expense and the related increase in the asset retirement obligation on December 31, 2014, as follows.

December 31, 2014		
Interest Expense ($\$620,920 \times 10\%$)	62,092	
Asset Retirement Obligation		62,092

On January 10, 2019, Wildcat contracts with Rig Reclaimers, Inc. to dismantle the platform at a contract price of \$995,000. Wildcat makes the following journal entry to record settlement of the ARO.

January 10, 2019		
Asset Retirement Obligation	1,000,000	
Gain on Settlement of ARO		5,000
Cash		995,000

Companies provide extensive disclosure regarding environmental liabilities. In addition, some believe that companies should record more of these liabilities. The SEC recommends that companies not delay recognition of a liability due to significant uncertainty. The SEC argues that if the liability is within a range, and no amount within the range is the best estimate, then management should recognize the minimum amount of the range. That treatment is in accordance with GAAP. The SEC also believes that companies should report environmental liabilities in the balance sheet independent of recoveries from third parties. Thus, companies may not net possible insurance recoveries against liabilities but must show them separately. Because there is much litigation regarding recovery of insurance proceeds, these “assets” appear to be gain contingencies. Therefore, companies should not report these on the balance sheet.¹⁸

¹⁸As we indicated earlier, the FASB requires that, when some amount within the range appears at the time to be a better estimate than any other amount within the range, a company accrues that amount. When no amount within the range is a better estimate than any other amount, the company accrues the dollar amount at the low end of the range and discloses the dollar amount at the high end of the range. Unfortunately, in many cases, zero may arguably be the low point of the range, resulting in no liability being recognized. [13], [14]

Self-Insurance

As discussed earlier, contingencies are not recorded for general risks (e.g., losses that might arise due to poor expected economic conditions). Similarly, companies do not record contingencies for more specific future risks such as allowances for repairs. The reason: These items do not meet the definition of a liability because they do not arise from a past transaction but instead relate to future events.

Some companies take out insurance policies against the potential losses from fire, flood, storm, and accident. Other companies do not. The reasons: Some risks are not insurable, the insurance rates are prohibitive (e.g., earthquakes and riots), or they make a business decision to self-insure. Self-insurance is another item that is not recognized as a contingency.

Despite its name, **self-insurance** is **not insurance but risk assumption**. Any company that assumes its own risks puts itself in the position of incurring expenses or losses as they happen. There is little theoretical justification for the establishment of a liability based on a hypothetical charge to insurance expense. This is “as if” accounting. The conditions for accrual stated in GAAP are not satisfied prior to the occurrence of the event. Until that time there is no diminution in the value of the property. And unlike an insurance company, which has contractual obligations to reimburse policyholders for losses, a company can have no such obligation to itself and, hence, no liability either before or after the occurrence of damage. [15]¹⁹

The note shown in Illustration 13-12 from the annual report of **Molson Coors Brewing Company** is typical of the self-insurance disclosure.

Underlying Concepts

Even if companies can estimate the amount of losses with a high degree of certainty, the losses are not liabilities because they result from a future event and not from a past event.

Molson Coors Brewing Company

Notes to Financial Statements (in part)

Note 21: Insurance. We are self-insured for certain insurable risks consisting primarily of employee health insurance programs, as well as workers' compensation, general liability, automobile liability, and property insurance deductibles or retentions . . . we fully insured future risks for long-term disability, and, in most states, workers' compensation, but maintained a self-insured position for workers' compensation for certain self-insured states and for claims incurred prior to the inception of the insurance coverage in Colorado in 1997.

ILLUSTRATION 13-12
Disclosure of Self-Insurance

Exposure to **risks of loss resulting from uninsured past injury to others**, however, is an existing condition involving uncertainty about the amount and timing of losses that may develop. In such a case, a contingency exists. A company with a fleet of vehicles for example, would have to accrue uninsured losses resulting from injury to others or damage to the property of others that took place prior to the date of the financial statements (if the experience of the company or other information enables it to make a reasonable estimate of the liability). However, it should not establish a liability for **expected future injury** to others or damage to the property of others, even if it can reasonably estimate the amount of losses.

¹⁹A commentary in *Forbes* (June 15, 1974, p. 42) stated its position on this matter quite succinctly: “The simple and unquestionable fact of life is this: Business is cyclical and full of unexpected surprises. Is it the role of accounting to disguise this unpleasant fact and create a fairyland of smoothly rising earnings? Or, should accounting reflect reality, warts and all—floods, expropriations and all manner of rude shocks?”

What do the numbers mean?

MORE DISCLOSURE, PLEASE

On November 19, 2001, **Enron** filed its third-quarter financial statements and reported on its balance sheet debt of approximately \$13 billion. Yet on the same day, at a meeting to discuss its liquidity crisis, Enron informed its bankers that its debt was approximately \$38 billion. Company officers described the difference of \$25 billion as being either off-balance-sheet or on the balance sheet other than debt.

As a result of the Enron bankruptcy and other financial reporting scandals, Congress passed the Sarbanes-Oxley Act of 2002. One of its provisions mandates that the Securities

and Exchange Commission conduct a study to determine the extent of off-balance-sheet transactions occurring in U.S. businesses.

Table 1 below indicates the extent of disclosure and recognition of contingent liabilities. The study classified contingent liabilities into three categories: (1) litigation contingent liabilities, (2) environmental liabilities, and (3) guarantees. The statistics provided relate to reports filed by 10,100 companies listed on the U.S. stock exchanges in 2005.

Type of Contingency	Companies Disclosing	Companies Recording
Litigation contingent liabilities	46.3%	5.1%
Environmental contingent liabilities	10.2%	5.1%
Guarantees	35.4%	10.2%

As Table 1 indicates, approximately 46 percent of companies disclosed litigation contingent liabilities, but only 5.1 percent recorded any liability related to these contingencies. On the other hand, 35 percent of the companies disclosed

guarantees but a third of these companies (10.2 percent) recorded a liability for these contingencies.

Table 2 below shows the dollar amounts of the contingent liabilities companies disclosed and recorded.

Type of Contingency	Companies Disclosing (\$ millions)	Companies Recording (\$ millions)
Litigation contingent liabilities	\$52,354	\$11,814
Environmental contingent liabilities	\$23,414	\$18,723
Guarantees	\$46,535,399	\$123,949

Table 2 indicates that companies disclosed litigation contingent liabilities of approximately \$52 billion, but recorded only \$11.8 billion as liabilities. Incredibly, companies disclosed more than \$46 trillion of guarantees, a small fraction of which (just \$124 billion) they recorded as liabilities.

The results of this study suggest that the FASB must continue to address the issue of contingencies to ensure that companies provide relevant and representationally faithful information for these types of financial events.

PRESENTATION AND ANALYSIS

Presentation of Current Liabilities

LEARNING OBJECTIVE 6

Indicate how to present and analyze liabilities and contingencies.

In practice, current liabilities are usually recorded and reported in financial statements at their full maturity value. Because of the short time periods involved, frequently less than one year, the difference between the present value of a current liability and the maturity value is usually not large. The profession accepts as immaterial any slight overstatement of liabilities that results from carrying current liabilities at maturity value. [16]²⁰

²⁰GAAP specifically exempts from present value measurements those payables arising from transactions with suppliers in the normal course of business that do not exceed approximately one year.

The current liabilities accounts are commonly presented as the first classification in the liabilities and stockholders' equity section of the balance sheet. Within the current liabilities section, companies may list the accounts in order of maturity, in descending order of amount, or in order of liquidation preference. Illustration 13-13 presents an excerpt of **Best Buy Co.**'s financial statements that is representative of the reports of large corporations.

Best Buy Co.

(dollars in thousands)

Total current liabilities	\$ 8,855	\$ 8,663

ILLUSTRATION 13-13

Balance Sheet
Presentation of Current
Liabilities

Detail and supplemental information concerning current liabilities should be sufficient to meet the requirement of full disclosure. Companies should clearly identify secured liabilities, as well as indicate the related assets pledged as collateral. If the due date of any liability can be extended, a company should disclose the details. Companies should not offset current liabilities against assets that it will apply to their liquidation. Finally, current maturities of long-term debt are classified as current liabilities.

A major exception exists when a company will pay a currently maturing obligation from assets classified as long-term. For example, if a company will retire a bond payable using a bond sinking fund that is classified as a long-term asset, it should report the bonds payable in the long-term liabilities section. Presentation of this debt in the current liabilities section would distort the working capital position of the company.

If a company excludes a short-term obligation from current liabilities because of refinancing, it should include the following in the note to the financial statements:

1. A general description of the financing agreement.
2. The terms of any new obligation incurred or to be incurred.
3. The terms of any equity security issued or to be issued.

When a company expects to refinance on a long-term basis by issuing equity securities, it is not appropriate to include the short-term obligation in stockholders' equity. At the date of the balance sheet, the obligation is a liability and not stockholders' equity. Illustration 13-14 (on page 728) shows the disclosure requirements for an actual refinancing situation.

International Perspective

Companies reporting under IFRS often report noncurrent liabilities before current liabilities.

ILLUSTRATION 13-14Actual Refinancing of
Short-Term Debt

	December 31, 2014
Current liabilities	
Accounts payable	\$ 3,600,000
Accrued payables	2,500,000
Income taxes payable	1,100,000
Current portion of long-term debt	1,000,000
Total current liabilities	<u>\$ 8,200,000</u>
Long-term debt	
Notes payable refinanced in January 2015 (Note 1)	\$ 2,000,000
11% bonds due serially through 2025	15,000,000
Total long-term debt	<u>\$17,000,000</u>

Note 1: On January 19, 2015, the Company issued 50,000 shares of common stock and received proceeds totaling \$2,385,000, of which \$2,000,000 was used to liquidate notes payable that matured on February 1, 2015. Accordingly, such notes payable have been classified as long-term debt at December 31, 2014.

Presentation of Contingencies

A company records a loss contingency and a liability if the loss is both probable and estimable. But, if the loss is **either probable or estimable but not both**, and if there is at least a **reasonable possibility** that a company may have incurred a liability, it must disclose the following in the notes.

1. The nature of the contingency.
2. An estimate of the possible loss or range of loss or a statement that an estimate cannot be made.

Illustration 13-15 presents an extensive litigation disclosure note from the financial statements of **Raymark Corporation**. The note indicates that Raymark charged actual losses to operations and that a further liability may exist, but that the company cannot currently estimate this liability.

ILLUSTRATION 13-15Disclosure of Loss
Contingency through
Litigation**Raymark Corporation**

Note 1: Litigation. Raymark is a defendant or co-defendant in a substantial number of lawsuits alleging wrongful injury and/or death from exposure to asbestos fibers in the air. The following table summarizes the activity in these lawsuits:

Claims	
Pending at beginning of year	8,719
Received during year	4,494
Settled or otherwise disposed of	<u>(1,445)</u>
Pending at end of year	11,768
Average indemnification cost	\$3,364
Average cost per case, including defense costs	\$6,499
Trial activity	
Verdicts for the Company	23
Total trials	36

The following table presents the cost of defending asbestos litigation, together with related insurance and workers' compensation expenses.

Included in operating profit	\$ 1,872,000
Nonoperating expense	9,077,000
Total	<u>\$10,949,000</u>

The Company is seeking to reasonably determine its liability. However, it is not possible to predict which theory of insurance will apply, the number of lawsuits still to be filed, the cost of settling and defending the existing and unfiled cases, or the ultimate impact of these lawsuits on the Company's consolidated financial statements.

Companies should disclose certain other contingent liabilities, even though the possibility of loss may be remote, as follows.

1. Guarantees of indebtedness of others.
2. Obligations of commercial banks under “stand-by letters of credit.”
3. Guarantees to repurchase receivables (or any related property) that have been sold or assigned.

Disclosure should include the nature and amount of the guarantee and, if estimable, the amount that the company can recover from outside parties.²¹ **Cities Service Company** disclosed its guarantees of others’ indebtedness in the following note.

International Perspective

GAAP provides more guidance on the content of disclosures about contingencies than does IFRS.

Cities Service Company

Note 10: Contingent Liabilities. The Company and certain subsidiaries have guaranteed debt obligations of approximately \$62 million of companies in which substantial stock investments are held. Also, under long-term agreements with certain pipeline companies in which stock interests are held, the Company and its subsidiaries have agreed to provide minimum revenue for product shipments. The Company has guaranteed mortgage debt (\$80 million) incurred by a 50 percent owned tanker affiliate for construction of tankers which are under long-term charter contracts to the Company and others. It is not anticipated that any loss will result from any of the above described agreements.

ILLUSTRATION 13-16

Disclosure of Guarantees of Indebtedness

Analysis of Current Liabilities

The distinction between current liabilities and long-term debt is important. It provides information about the liquidity of the company. Liquidity regarding a liability is the expected time to elapse before its payment. In other words, a liability soon to be paid is a current liability. A liquid company is better able to withstand a financial downturn. Also, it has a better chance of taking advantage of investment opportunities that develop.

Analysts use certain basic ratios such as net cash flow provided by operating activities to current liabilities, and the turnover ratios for receivables and inventory, to assess liquidity. Two other ratios used to examine liquidity are the current ratio and the acid-test ratio.

Current Ratio

The **current ratio** is the ratio of total current assets to total current liabilities. Illustration 13-17 shows its formula.

$$\text{Current ratio} = \frac{\text{Current assets}}{\text{Current liabilities}}$$

ILLUSTRATION 13-17

Formula for Current Ratio

The ratio is frequently expressed as a coverage of so many times. Sometimes it is called the **working capital ratio** because working capital is the excess of current assets over current liabilities.

²¹As discussed earlier (footnote 16), the FASB has issued additional disclosure and recognition requirements for guarantees. The interpretation responds to confusion about the reporting of guarantees used in certain transactions. The new rules expand existing disclosure requirements for most guarantees, including loan guarantees such as standby letters of credit. It also will result in companies recognizing more liabilities at fair value for the obligations assumed under a guarantee. [17]

A satisfactory current ratio does not disclose that a portion of the current assets may be tied up in slow-moving inventories. With inventories, especially raw materials and work in process, there is a question of how long it will take to transform them into the finished product and what ultimately will be realized in the sale of the merchandise. Eliminating the inventories, along with any prepaid expenses, from the amount of current assets might provide better information for short-term creditors. Therefore, some analysts use the acid-test ratio in place of the current ratio.

Acid-Test Ratio

Many analysts favor an **acid-test** or **quick ratio** that relates total current liabilities to cash, marketable securities, and receivables. Illustration 13-18 shows the formula for this ratio. As you can see, the acid-test ratio does not include inventories.

ILLUSTRATION 13-18

Formula for Acid-Test Ratio

$$\text{Acid-test ratio} = \frac{\text{Cash} + \text{Short-term investments} + \text{Net receivables}}{\text{Current liabilities}}$$

To illustrate the computation of these two ratios, we use the information for **Best Buy Co.** in Illustration 13-13 (on page 727). Illustration 13-19 shows the computation of the current and acid-test ratios for Best Buy.

ILLUSTRATION 13-19

Computation of Current and Acid-Test Ratios for Best Buy Co.

$$\begin{aligned} \text{Current ratio} &= \frac{\text{Current assets}}{\text{Current liabilities}} = \frac{\$10,297}{\$8,855} = 1.16 \text{ times} \\ \text{Acid-test ratio} &= \frac{\text{Cash} + \text{Short-term investments} + \text{Net receivables}}{\text{Current liabilities}} = \frac{\$3,487}{\$8,855} = 0.39 \text{ times} \end{aligned}$$

From this information, it appears that Best Buy's current position is adequate. However, the acid-test ratio is well below 1. A comparison to another retailer, **RadioShack**, whose current ratio is 2.73 and whose acid-test ratio is 1.44, indicates that Best Buy is less liquid and carrying more inventory than its industry counterparts.

You will want to read the

IFRS INSIGHTS
on pages 753–761

for discussion of IFRS related to current liabilities and contingencies.

Evolving Issue

GREENHOUSE GASES: LET'S BE STANDARD-SETTERS

Ok, here is your chance to determine what to do about a very fundamental issue—how to account for greenhouse gases (GHG), often referred to as carbon emissions. Many governments are trying a market-based system, in which companies pay for an excessive amount of carbon emissions put into the atmosphere. In this market-based system, companies are granted carbon allowance permits. Each permit allows them to discharge, as an example, one metric ton of carbon dioxide (CO₂). In some cases, companies may receive a number of these permits free—in other situations, they must pay for them. Other approaches require companies only to pay when they exceed a certain amount. The question is, how to account for these permits and related liabilities? For example, what happens when the permits issued by the government are free? Should an asset and revenue be reported? And if an

asset is recorded, should the debit be to an intangible asset or inventory? Also, should the company recognize a liability related to its pollution? And how do we account for companies that have to purchase permits because they have exceeded their allowance?

Two views seem to have emerged. The first is referred to as the **net liability approach**. In this approach, a company does not recognize an asset or liability. A company only recognizes a liability once GHG exceed the permits granted. To illustrate, Holton Refinery receives permits on January 1, 2014, representing the right to emit 10,000 tons of GHG for the year 2014. Other data:

- The market price of each permit at date of issuance is \$10 per ton.

- During the year, Holton emits 12,000 tons.
- The market price for a permit is now \$16 per ton at December 31, 2014.

Under the net liability approach, Holton records only a liability of \$32,000 for the additional amount that it must pay for the 2,000 permits it must purchase at \$16 per ton.

Another approach is referred to as the **government grant approach**. In this approach, permits granted by the government

are recorded at their fair value based on the initial price of \$10 per ton. The asset recorded is an intangible asset. At the same time, an Unearned Revenue account is credited, which is subsequently recognized in income over the 2014 year. During 2014, a liability and a related emission expense of \$132,000 is recognized (10,000 tons × \$10 + 2,000 tons × \$16). The chart below compares the results of each approach on the financial statements.

	Net Liability Approach	Government Grant Approach
	Income Statement	
Revenues	\$ 0	\$100,000
Emission expenses	<u>32,000</u>	<u>132,000</u>
Net loss	<u>\$32,000</u>	<u>\$ 32,000</u>
	Balance Sheet	
Assets	\$ 0	\$100,000
Liabilities	32,000	132,000

So what do you think—net liability or government grant approach? As indicated, companies presently can report this information either way, plus some other variants which were

not mentioned here. Please feel free to contact the FASB regarding your views.

SUMMARY OF LEARNING OBJECTIVES

1 Describe the nature, type, and valuation of current liabilities. Current liabilities are obligations whose liquidation a company reasonably expects to require the use of current assets or the creation of other current liabilities. Theoretically, liabilities should be measured by the present value of the future outlay of cash required to liquidate them. In practice, companies usually record and report current liabilities at their full maturity value.

There are several types of current liabilities, such as (1) accounts payable, (2) notes payable, (3) current maturities of long-term debt, (4) dividends payable, (5) customer advances and deposits, (6) unearned revenues, (7) taxes payable, and (8) employee-related liabilities.

2 Explain the classification issues of short-term debt expected to be refinanced. A short-term obligation is excluded from current liabilities if both of the following conditions are met. (1) The company must intend to refinance the obligation on a long-term basis, *and* (2) it must demonstrate an ability to consummate the refinancing.

3 Identify types of employee-related liabilities. The employee-related liabilities are (1) payroll deductions, (2) compensated absences, and (3) bonus agreements.

4 Identify the criteria used to account for and disclose gain and loss contingencies. Gain contingencies are not recorded. Instead, they are disclosed in the notes only when the probabilities are high that a gain contingency will occur. A company should accrue an estimated loss from a loss contingency by charging expense and recording a liability only if *both* of the following conditions are met. (1) Information available prior to the issuance of the financial statements indicates that it is probable

that a liability has been incurred at the date of the financial statements, and (2) the amount of the loss can be reasonably estimated.

5 Explain the accounting for different types of loss contingencies. The following factors must be considered in determining whether to record a liability with respect to pending or threatened litigation and actual or possible claims and assessments: (1) the time period in which the underlying cause for action occurred, (2) the probability of an unfavorable outcome, and (3) the ability to reasonably estimate the amount of loss.

If it is probable that customers will make claims under warranties relating to goods or services that have been sold and it can reasonably estimate the costs involved, the company uses the accrual method. It charges warranty costs under the accrual basis to operating expense in the year of sale.

Premiums, coupon offers, and rebates are made to stimulate sales. Companies should charge their costs to expense in the period of the sale that benefits from the premium plan.

A company must recognize asset retirement obligations when it has an existing legal obligation related to the retirement of a long-lived asset and it can reasonably estimate the amount.

6 Indicate how to present and analyze liabilities and contingencies. The current liability accounts are usually presented as the first classification in the liabilities and stockholders' equity section of the balance sheet. Within the current liabilities section, companies may list the accounts in order of maturity, in descending order of amount, or in order of liquidation preference. Detail and supplemental information concerning current liabilities should be sufficient to meet the requirement of full disclosure. If the loss is either probable or estimable but not both, and if there is at least a reasonable possibility that a company may have incurred a liability, it should disclose in the notes both the nature of the contingency and an estimate of the possible loss. Two ratios used to analyze liquidity are the current and acid-test ratios.

DEMONSTRATION PROBLEM

Listed below are selected transactions of Baileys' Department Store for the current year ending December 31.

- On December 5, the store received \$500 from the Jackson Players as a deposit to be returned after certain furniture to be used in stage production was returned on January 15.
- During December, cash sales totaled \$798,000, which includes the 5% sales tax that must be remitted to the state by the fifteenth day of the following month.
- On December 10, the store purchased for cash three delivery trucks for \$120,000. The trucks were purchased in a state that applies a 5% sales tax.
- The store determined it will cost \$100,000 to restore the area (considered a land improvement) surrounding one of its store parking lots, when the store is closed in 2 years. Baileys' estimates the fair value of the obligation at December 31 is \$84,000.
- As a result of uninsured accidents during the year, personal injury suits for \$350,000 and \$60,000 have been filed against the company. It is the judgment of Baileys' legal counsel that an unfavorable outcome is unlikely in the \$60,000 case but that an unfavorable verdict approximating \$250,000 (reliably estimated) will probably result in the \$350,000 case.
- Baileys' Midwest store division consisting of 12 stores in "Tornado Alley" is uninsurable because of the special risk of injury to customers, employees, and losses due to severe weather and subpar construction standards in older malls. The year 2014 is considered one of the safest (luckiest) in the division's history because no loss due to injury or casualty was suffered. Having suffered an average of three casualties a year during the rest of the past decade (ranging from \$60,000 to \$700,000), management is certain that next year the company will probably not be so fortunate.

Instructions

- (a) Prepare all the journal entries necessary to record the transactions noted above as they occurred and any adjusting journal entries relative to the transactions that would be required to present fair financial statements at December 31. Date each entry. For simplicity, assume that adjusting entries are recorded only once a year on December 31.
- (b) For items 5 and 6, indicate what should be reported relative to each situation in the financial statements and accompanying notes. Explain why.

Solution

(a)	1. Dec. 5	Cash	500	
		Due to Customer		500
	2. Dec. 1–31	Cash	798,000	
		Sales Revenue ($\$798,000 \div 1.05$)		760,000
		Sales Taxes Payable ($\$760,000 \times .05$)		38,000
	3. Dec. 10	Trucks ($\$120,000 \times 1.05$)	126,000	
		Cash		126,000
	4. Dec. 31	Land Improvements	84,000	
		Asset Retirement Obligation		84,000
	5.	Lawsuit Loss	250,000	
		Lawsuit Liability		250,000

6. No entry required.
- (b) 5. A loss and a liability have been recorded in the first case because (i) information is available prior to the issuance of the financial statements that indicates it is probable that a liability had been incurred at the date of the financial statements and (ii) the amount is reasonably estimable. That is, the occurrence of the uninsured accidents during the year plus the outstanding injury suits and the attorney's estimate of probable loss required recognition of a loss contingency.
6. Even though Baileys' Midwest store division is uninsurable due to high risk and has sustained repeated losses in the past, as of the balance sheet date no assets have been impaired or liabilities incurred, nor is an amount reasonably estimable. Therefore, this situation does not satisfy the criteria for recognition of a loss contingency. Also, unless a casualty has occurred or there is some other evidence to indicate impairment of an asset prior to the issuance of the financial statements, there is no disclosure required relative to a loss contingency. Disclosure is required when one or both of the criteria for a loss contingency are not satisfied and there is a reasonable possibility that a liability may have been incurred or an asset impaired, or it is probable that a claim will be asserted and there is a reasonable possibility of an unfavorable outcome.

Exercises

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/asclgin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

CE13-1 Access the glossary ("Master Glossary") to answer the following.

- What is an asset retirement obligation?
- What is the definition of "current liabilities"?
- What does it mean if something is "reasonably possible"?
- What is a warranty?

CE13-2 What must an entity disclose about its asset retirement obligations?

CE13-3 What are three examples of estimates that are used in accounting that are not contingencies? Can you explain why they are not considered contingencies?

CE13-4 Under what conditions must an employer accrue a liability for employees' compensation for future absences?

An additional Codification case can be found in the Using Your Judgment section, on page 753.

Be sure to check the book's companion website for a Review and Analysis Exercise, with solution.

WileyPLUS

Brief Exercises, Exercises, Problems, and many more learning and assessment tools and resources are available for practice in WileyPLUS.

QUESTIONS

- Distinguish between a current liability and a long-term debt.
- Assume that your friend Will Morris, who is a music major, asks you to define and discuss the nature of a liability. Assist him by preparing a definition of a liability and by explaining to him what you believe are the elements or factors inherent in the concept of a liability.
- Why is the liabilities section of the balance sheet of primary significance to bankers?

4. How are current liabilities related by definition to current assets? How are current liabilities related to a company's operating cycle?
5. Leon Wight, a newly hired loan analyst, is examining the current liabilities of a corporate loan applicant. He observes that unearned revenues have declined in the current year compared to the prior year. Is this a positive indicator about the client's liquidity? Explain.
6. How is present value related to the concept of a liability?
7. What is the nature of a "discount" on notes payable?
8. How should a debt callable by the creditor be reported in the debtor's financial statements?
9. Under what conditions should a short-term obligation be excluded from current liabilities?
10. What evidence is necessary to demonstrate the ability to consummate the refinancing of short-term debt?
11. Discuss the accounting treatment or disclosure that should be accorded a declared but unpaid cash dividend, an accumulated but undeclared dividend on cumulative preferred stock, and a stock dividend distributable.
12. How does unearned revenue arise? Why can it be classified properly as a current liability? Give several examples of business activities that result in unearned revenues.
13. What are compensated absences?
14. Under what conditions must an employer accrue a liability for the cost of compensated absences?
15. Under what conditions is an employer required to accrue a liability for sick pay? Under what conditions is an employer permitted but not required to accrue a liability for sick pay?
16. Faith Battle operates a health food store, and she has been the only employee. Her business is growing, and she is considering hiring some additional staff to help her in the store. Explain to her the various payroll deductions that she will have to account for, including their potential impact on her financial statements, if she hires additional staff.
17. Define (a) a contingency and (b) a contingent liability.
18. Under what conditions should a contingent liability be recorded?
19. Distinguish between a determinable current liability and a contingent liability. Give two examples of each type.
20. How are the terms "probable," "reasonably possible," and "remote" related to contingent liabilities?
21. Contrast the cash-basis method and the accrual method of accounting for warranty costs.
22. Grant Company has had a record-breaking year in terms of growth in sales and profitability. However, market research indicates that it will experience operating losses in two of its major businesses next year. The controller has proposed that the company record a provision for these future losses this year, since it can afford to take the charge and still show good results. Advise the controller on the appropriateness of this charge.
23. How does the expense warranty approach differ from the sales warranty approach?
24. Southeast Airlines Inc. awards members of its Flightline program a second ticket at half price, valid for 2 years anywhere on its flight system, when a full-price ticket is purchased. How would you account for the full-fare and half-fare tickets?
25. Pacific Airlines Co. awards members of its Frequent Fliers Club one free round-trip ticket, anywhere on its flight system, for every 50,000 miles flown on its planes. How would you account for the free ticket award?
26. When must a company recognize an asset retirement obligation?
27. Should a liability be recorded for risk of loss due to lack of insurance coverage? Discuss.
28. What factors must be considered in determining whether or not to record a liability for pending litigation? For threatened litigation?
29. Within the current liabilities section, how do you believe the accounts should be listed? Defend your position.
30. How does the acid-test ratio differ from the current ratio? How are they similar?
31. When should liabilities for each of the following items be recorded on the books of an ordinary business corporation?
 - (a) Acquisition of goods by purchase on credit.
 - (b) Officers' salaries.
 - (c) Special bonus to employees.
 - (d) Dividends.
 - (e) Purchase commitments.

BRIEF EXERCISES

- 1** **BE13-1** Roley Corporation uses a periodic inventory system and the gross method of accounting for purchase discounts. On July 1, Roley purchased \$60,000 of inventory, terms 2/10, n/30, FOB shipping point. Roley paid freight costs of \$1,200. On July 3, Roley returned damaged goods and received credit of \$6,000. On July 10, Roley paid for the goods. Prepare all necessary journal entries for Roley.

- 1** **BE13-2** Upland Company borrowed \$40,000 on November 1, 2014, by signing a \$40,000, 9%, 3-month note. Prepare Upland's November 1, 2014, entry; the December 31, 2014, annual adjusting entry; and the February 1, 2015, entry.
- 1** **BE13-3** Takemoto Corporation borrowed \$60,000 on November 1, 2014, by signing a \$61,350, 3-month, zero-interest-bearing note. Prepare Takemoto's November 1, 2014, entry; the December 31, 2014, annual adjusting entry; and the February 1, 2015, entry.
- 1** **2** **BE13-4** At December 31, 2014, Burr Corporation owes \$500,000 on a note payable due February 15, 2015. (a) If Burr refinances the obligation by issuing a long-term note on February 14 and using the proceeds to pay off the note due February 15, how much of the \$500,000 should be reported as a current liability at December 31, 2014? (b) If Burr pays off the note on February 15, 2015, and then borrows \$1,000,000 on a long-term basis on March 1, how much of the \$500,000 should be reported as a current liability at December 31, 2014, the end of the fiscal year?
- 1** **BE13-5** Sport Pro Magazine sold 12,000 annual subscriptions on August 1, 2014, for \$18 each. Prepare Sport Pro's August 1, 2014, journal entry and the December 31, 2014, annual adjusting entry, assuming the magazines are published and delivered monthly.
- 1** **BE13-6** Dillons Corporation made credit sales of \$30,000 which are subject to 6% sales tax. The corporation also made cash sales which totaled \$20,670 including the 6% sales tax. (a) Prepare the entry to record Dillons' credit sales. (b) Prepare the entry to record Dillons' cash sales.
- 3** **BE13-7** Lexington Corporation's weekly payroll of \$24,000 included FICA taxes withheld of \$1,836, federal taxes withheld of \$2,990, state taxes withheld of \$920, and insurance premiums withheld of \$250. Prepare the journal entry to record Lexington's payroll.
- 3** **BE13-8** Kasten Inc. provides paid vacations to its employees. At December 31, 2014, 30 employees have each earned 2 weeks of vacation time. The employees' average salary is \$500 per week. Prepare Kasten's December 31, 2014, adjusting entry.
- 3** **BE13-9** Mayaguez Corporation provides its officers with bonuses based on net income. For 2014, the bonuses total \$350,000 and are paid on February 15, 2015. Prepare Mayaguez's December 31, 2014, adjusting entry and the February 15, 2015, entry.
- 4** **5** **BE13-10** Scorcese Inc. is involved in a lawsuit at December 31, 2014. (a) Prepare the December 31 entry assuming it is probable that Scorcese will be liable for \$900,000 as a result of this suit. (b) Prepare the December 31 entry, if any, assuming it is *not* probable that Scorcese will be liable for any payment as a result of this suit.
- 4** **5** **BE13-11** Buchanan Company recently was sued by a competitor for patent infringement. Attorneys have determined that it is probable that Buchanan will lose the case and that a reasonable estimate of damages to be paid by Buchanan is \$300,000. In light of this case, Buchanan is considering establishing a \$100,000 self-insurance allowance. What entry(ies), if any, should Buchanan record to recognize this loss contingency?
- 4** **5** **BE13-12** Calaf's Drillers erects and places into service an off-shore oil platform on January 1, 2015, at a cost of \$10,000,000. Calaf is legally required to dismantle and remove the platform at the end of its useful life in 10 years. Calaf estimates it will cost \$1,000,000 to dismantle and remove the platform at the end of its useful life in 10 years. (The fair value at January 1, 2015, of the dismantle and removal costs is \$450,000.) Prepare the entry to record the asset retirement obligation.
- 4** **5** **BE13-13** Streep Factory provides a 2-year warranty with one of its products which was first sold in 2014. In that year, Streep spent \$70,000 servicing warranty claims. At year-end, Streep estimates that an additional \$400,000 will be spent in the future to service warranty claims related to 2014 sales. Prepare Streep's journal entry to record the \$70,000 expenditure and the December 31 adjusting entry, assuming the expenditures are inventory costs.
- 4** **5** **BE13-14** Leppard Corporation sells DVD players. The corporation also offers its customers a 2-year warranty contract. During 2014, Leppard sold 20,000 warranty contracts at \$99 each. The corporation spent \$180,000 servicing warranties during 2014, and it estimates that an additional \$900,000 will be spent in the future to service the warranties. Prepare Leppard's journal entries for (a) the sale of contracts, (b) the cost of servicing the warranties, and (c) the recognition of warranty revenue. Assume the service costs are inventory costs.
- 4** **5** **BE13-15** Wynn Company offers a set of building blocks to customers who send in 3 UPC codes from Wynn cereal, along with 50¢. The block sets cost Wynn \$1.10 each to purchase and 60¢ each to mail to customers. During 2014, Wynn sold 1,200,000 boxes of cereal. The company expects 30% of the UPC codes to be sent in. During 2014, 120,000 UPC codes were redeemed. Prepare Wynn's December 31, 2014, adjusting entry.

EXERCISES

- 1 E13-1 (Balance Sheet Classification of Various Liabilities)** How would each of the following items be reported on the balance sheet?

- | | |
|--|--|

|--|--|

- 1 E13-2 (Accounts and Notes Payable)** The following are selected 2014 transactions of Sean Astin Corporation.

- Sept. 1 Purchased inventory from Encino Company on account for \$50,000. Astin records purchases gross and uses a periodic inventory system.
- Oct. 1 Issued a \$50,000, 12-month, 8% note to Encino in payment of account.
- Oct. 1 Borrowed \$50,000 from the Shore Bank by signing a 12-month, zero-interest-bearing \$54,000 note.

Instructions

- (a) Prepare journal entries for the selected transactions above.
- (b) Prepare adjusting entries at December 31.
- (c) Compute the total net liability to be reported on the December 31 balance sheet for:
- (1) The interest-bearing note.
 - (2) The zero-interest-bearing note.

- 2 E13-3 (Refinancing of Short-Term Debt)** On December 31, 2014, Hattie McDaniel Company had \$1,200,000 of short-term debt in the form of notes payable due February 2, 2015. On January 21, 2015, the company issued 25,000 shares of its common stock for \$38 per share, receiving \$950,000 proceeds after brokerage fees and other costs of issuance. On February 2, 2015, the proceeds from the stock sale, supplemented by an additional \$250,000 cash, are used to liquidate the \$1,200,000 debt. The December 31, 2014, balance sheet is issued on February 23, 2015.

Instructions

Show how the \$1,200,000 of short-term debt should be presented on the December 31, 2014, balance sheet, including note disclosure.

- 2 E13-4 (Refinancing of Short-Term Debt)** On December 31, 2014, Kate Holmes Company has \$7,000,000 of short-term debt in the form of notes payable to Gotham State Bank due in 2015. On January 28, 2015, Holmes enters into a refinancing agreement with Gotham that will permit it to borrow up to 60% of the gross amount of its accounts receivable. Receivables are expected to range between a low of \$6,000,000 in May to a high of \$8,000,000 in October during the year 2015. The interest cost of the maturing short-term debt is 15%, and the new agreement calls for a fluctuating interest at 1% above the prime rate on notes due in 2019. Holmes's December 31, 2014, balance sheet is issued on February 15, 2015.

Instructions

Prepare a partial balance sheet for Holmes at December 31, 2014, showing how its \$7,000,000 of short-term debt should be presented, including footnote disclosure.

- 3 E13-5 (Compensated Absences)** Matt Broderick Company began operations on January 2, 2013. It employs 9 individuals who work 8-hour days and are paid hourly. Each employee earns 10 paid vacation days and 6 paid sick days annually. Vacation days may be taken after January 15 of the year following the year in which they are earned. Sick days may be taken as soon as they are earned; unused sick days accumulate. Additional information is as follows.

Actual Hourly Wage Rate		Vacation Days Used by Each Employee		Sick Days Used by Each Employee	
2013	2014	2013	2014	2013	2014
\$10	\$11	0	9	4	5

Matt Broderick Company has chosen to accrue the cost of compensated absences at rates of pay in effect during the period when earned and to accrue sick pay when earned.

Instructions

- (a) Prepare journal entries to record transactions related to compensated absences during 2013 and 2014.
- (b) Compute the amounts of any liability for compensated absences that should be reported on the balance sheet at December 31, 2013 and 2014.

- 3** E13-6 (Compensated Absences) Assume the facts in E13-5 except that Matt Broderick Company has chosen not to accrue paid sick leave until used, and has chosen to accrue vacation time at expected future rates of pay without discounting. The company used the following projected rates to accrue vacation time.

XLS

Year in Which Vacation Time Was Earned	Projected Future Pay Rates Used to Accrue Vacation Pay
2013	\$10.75
2014	11.60

Instructions

- (a) Prepare journal entries to record transactions related to compensated absences during 2013 and 2014.
- (b) Compute the amounts of any liability for compensated absences that should be reported on the balance sheet at December 31, 2013, and 2014.

- 1** E13-7 (Adjusting Entry for Sales Tax) During the month of June, Rowling Boutique had cash sales of \$233,200 and credit sales of \$153,700, both of which include the 6% sales tax that must be remitted to the state by July 15.

Instructions

Prepare the adjusting entry that should be recorded to fairly present the June 30 financial statements.

- 3** E13-8 (Payroll Tax Entries) The payroll of YellowCard Company for September 2013 is as follows.

Total payroll was \$480,000, of which \$110,000 is exempt from Social Security tax because it represented amounts paid in excess of \$113,700 to certain employees. The amount paid to employees in excess of \$7,000 was \$400,000. Income taxes in the amount of \$80,000 were withheld, as was \$9,000 in union dues. The state unemployment tax is 3.5%, but YellowCard Company is allowed a credit of 2.3% by the state for its unemployment experience. Also, assume that the current FICA tax is 7.65% on an employee's wages to \$113,700 and 1.45% in excess of \$113,700. No employee for YellowCard makes more than \$125,000. The federal unemployment tax rate is 0.8% after state credit.

Instructions

Prepare the necessary journal entries if the wages and salaries paid and the employer payroll taxes are recorded separately.

- 3** E13-9 (Payroll Tax Entries) Green Day Hardware Company's payroll for November 2014 is summarized below.

Payroll	Wages Due	Amount Subject to Payroll Taxes		
		FICA	Unemployment Tax	
			Federal	State
Factory	\$120,000	\$120,000	\$40,000	\$40,000
Sales	32,000	32,000	4,000	4,000
Administrative	36,000	36,000	—	—
Total	<u>\$188,000</u>	<u>\$188,000</u>	<u>\$44,000</u>	<u>\$44,000</u>

At this point in the year, some employees have already received wages in excess of those to which payroll taxes apply. Assume that the state unemployment tax is 2.5%. The FICA rate is 7.65% on an employee's wages to \$113,700 and 1.45% in excess of \$113,700. Of the \$188,000 wages subject to FICA tax, \$20,000 of the sales wages is in excess of \$113,700. Federal unemployment tax rate is 0.8% after credits. Income tax withheld amounts to \$16,000 for factory, \$7,000 for sales, and \$6,000 for administrative.

Instructions

- (a) Prepare a schedule showing the employer's total cost of wages for November by function. (Round all computations to nearest dollar.)
- (b) Prepare the journal entries to record the factory, sales, and administrative payrolls including the employer's payroll taxes.

- 5** E13-10 (Warranties) Soundgarden Company sold 200 color laser copiers in 2014 for \$4,000 apiece, together with a one-year warranty. Maintenance on each copier during the warranty period averages \$330.

Instructions

- (a) Prepare entries to record the sale of the copiers and the related warranty costs, assuming that the accrual method is used. Actual warranty costs incurred in 2014 were \$17,000.
- (b) On the basis of the data above, prepare the appropriate entries, assuming that the cash-basis method is used.

- 5** **E13-11 (Warranties)** Sheryl Crow Equipment Company sold 500 Rollomatics during 2014 at \$6,000 each. During 2014, Crow spent \$20,000 servicing the 2-year warranties that accompany the Rollomatic. All applicable transactions are on a cash basis.

Instructions

- (a) Prepare 2014 entries for Crow using the expense warranty approach. Assume that Crow estimates the total cost of servicing the warranties will be \$120,000 for 2 years.
- (b) Prepare 2014 entries for Crow assuming that the warranties are not an integral part of the sale. Assume that of the sales total, \$150,000 relates to sales of warranty contracts. Crow estimates the total cost of servicing the warranties will be \$120,000 for 2 years. Estimate revenues to be recognized on the basis of costs incurred and estimated costs.

- 5** **E13-12 (Premium Entries)** No Doubt Company includes 1 coupon in each box of soap powder that it packs, and 10 coupons are redeemable for a premium (a kitchen utensil). In 2014, No Doubt Company purchased 8,800 premiums at 80 cents each and sold 110,000 boxes of soap powder at \$3.30 per box; 44,000 coupons were presented for redemption in 2014. It is estimated that 60% of the coupons will eventually be presented for redemption.

Instructions

Prepare all the entries that would be made relative to sales of soap powder and to the premium plan in 2014.

- 4** **5** **E13-13 (Contingencies)** Presented below are three independent situations. Answer the question at the end of each situation.

1. During 2014, Salt-n-Pepa Inc. became involved in a tax dispute with the IRS. Salt-n-Pepa's attorneys have indicated that they believe it is probable that Salt-n-Pepa will lose this dispute. They also believe that Salt-n-Pepa will have to pay the IRS between \$900,000 and \$1,400,000. After the 2014 financial statements were issued, the case was settled with the IRS for \$1,200,000. What amount, if any, should be reported as a liability for this contingency as of December 31, 2014?
2. On October 1, 2014, Alan Jackson Chemical was identified as a potentially responsible party by the Environmental Protection Agency. Jackson's management along with its counsel have concluded that it is probable that Jackson will be responsible for damages, and a reasonable estimate of these damages is \$5,000,000. Jackson's insurance policy of \$9,000,000 has a deductible clause of \$500,000. How should Alan Jackson Chemical report this information in its financial statements at December 31, 2014?
3. Melissa Etheridge Inc. had a manufacturing plant in Sudan, which was destroyed in the civil war. It is not certain who will compensate Etheridge for this destruction, but Etheridge has been assured by governmental officials that it will receive a definite amount for this plant. The amount of the compensation will be less than the fair value of the plant, but more than its book value. How should the contingency be reported in the financial statements of Etheridge Inc.?

- 5** **E13-14 (Asset Retirement Obligation)** Oil Products Company purchases an oil tanker depot on January 1, 2014, at a cost of \$600,000. Oil Products expects to operate the depot for 10 years, at which time it is legally required to dismantle the depot and remove the underground storage tanks. It is estimated that it will cost \$75,000 to dismantle the depot and remove the tanks at the end of the depot's useful life.

Instructions

- (a) Prepare the journal entries to record the depot and the asset retirement obligation for the depot on January 1, 2014. Based on an effective-interest rate of 6%, the present value of the asset retirement obligation on January 1, 2014, is \$41,879.
- (b) Prepare any journal entries required for the depot and the asset retirement obligation at December 31, 2014. Oil Products uses straight-line depreciation; the estimated salvage value for the depot is zero.
- (c) On December 31, 2023, Oil Products pays a demolition firm to dismantle the depot and remove the tanks at a price of \$80,000. Prepare the journal entry for the settlement of the asset retirement obligation.

- 5** **E13-15 (Premiums)** Presented below and on page 740 are three independent situations.

1. Hairston Stamp Company records stamp service revenue and provides for the cost of redemptions in the year stamps are sold to licensees. Hairston's past experience indicates that only 80% of the

stamps sold to licensees will be redeemed. Hairston’s liability for stamp redemptions was \$13,000,000 at December 31, 2013. Additional information for 2014 is as follows.

Stamp service revenue from stamps sold to licensees	\$9,500,000
Cost of redemptions (stamps sold prior to 1/1/14)	6,000,000

If all the stamps sold in 2014 were presented for redemption in 2015, the redemption cost would be \$5,200,000. What amount should Hairston report as a liability for stamp redemptions at December 31, 2014?

- In packages of its products, Burnitz Inc. includes coupons that may be presented at retail stores to obtain discounts on other Burnitz products. Retailers are reimbursed for the face amount of coupons redeemed plus 10% of that amount for handling costs. Burnitz honors requests for coupon redemption by retailers up to 3 months after the consumer expiration date. Burnitz estimates that 60% of all coupons issued will ultimately be redeemed. Information relating to coupons issued by Burnitz during 2014 is as follows.

Consumer expiration date	12/31/14
Total face amount of coupons issued	\$800,000
Total payments to retailers as of 12/31/14	330,000

What amount should Burnitz report as a liability for unredeemed coupons at December 31, 2014?

- Roland Company sold 700,000 boxes of pie mix under a new sales promotional program. Each box contains one coupon, which submitted with \$4.00, entitles the customer to a baking pan. Roland pays \$6.00 per pan and \$0.50 for handling and shipping. Roland estimates that 70% of the coupons will be redeemed, even though only 250,000 coupons had been processed during 2014. What amount should Roland report as a liability for unredeemed coupons at December 31, 2014?

(AICPA adapted)

6 E13-16 (Financial Statement Impact of Liability Transactions) Presented below is a list of possible transactions.

- Purchased inventory for \$80,000 on account (assume perpetual system is used).
- Issued an \$80,000 note payable in payment on account (see item 1 above).
- Recorded accrued interest on the note from item 2 above.
- Borrowed \$100,000 from the bank by signing a 6-month, \$112,000, zero-interest-bearing note.
- Recognized 4 months’ interest expense on the note from item 4 above.
- Recorded cash sales of \$75,260, which includes 6% sales tax.
- Recorded wage expense of \$35,000. The cash paid was \$25,000; the difference was due to various amounts withheld.
- Recorded employer’s payroll taxes.
- Accrued accumulated vacation pay.
- Recorded an asset retirement obligation.
- Recorded bonuses due to employees.
- Recorded a contingent loss on a lawsuit that the company will probably lose.
- Accrued warranty expense (assume expense warranty approach).
- Paid warranty costs that were accrued in item 13 above.
- Recorded sales of product and related warranties (assume sales warranty approach).
- Paid warranty costs under contracts from item 15 above.
- Recognized warranty revenue (see item 15 above).
- Recorded estimated liability for premium claims outstanding.

Instructions

Set up a table using the format shown below and analyze the effect of the 18 transactions on the financial statement categories indicated.

#	Assets	Liabilities	Owners’ Equity	Net Income
1				

Use the following code:

I: Increase D: Decrease NE: No net effect

6 E13-17 (Ratio Computations and Discussion) Sprague Company has been operating for several years, and on December 31, 2014, presented the following balance sheet.

- 6** E13-19 (Ratio Computations and Effect of Transactions) Presented below is information related to Carver Inc.

CARVER INC.				
BALANCE SHEET				
DECEMBER 31, 2014				
Cash		\$ 45,000	Notes payable (short-term)	\$ 50,000
Receivables	\$110,000		Accounts payable	32,000
Less: Allowance	<u>15,000</u>	95,000	Accrued liabilities	5,000
Inventory		170,000	Common stock (par \$5)	260,000
Prepaid insurance		8,000	Retained earnings	141,000
Land		20,000		
Equipment (net)		<u>150,000</u>		
		<u>\$488,000</u>		<u>\$488,000</u>

CARVER INC.			
INCOME STATEMENT			
FOR THE YEAR ENDED DECEMBER 31, 2014			
Sales revenue			\$1,400,000
Cost of goods sold			
Inventory, Jan. 1, 2014	\$200,000		
Purchases	<u>790,000</u>		
Cost of goods available for sale	990,000		
Inventory, Dec. 31, 2014	<u>(170,000)</u>		
Cost of goods sold			<u>820,000</u>
Gross profit on sales			580,000
Operating expenses			<u>170,000</u>
Net income			<u>\$ 410,000</u>

Instructions

- (a) Compute the following ratios or relationships of Carver Inc. Assume that the ending account balances are representative unless the information provided indicates differently.
- (1) Current ratio.
 - (2) Inventory turnover.
 - (3) Accounts receivable turnover.
 - (4) Earnings per share.
 - (5) Profit margin on sales.
 - (6) Return on assets on December 31, 2014.
- (b) Indicate for each of the following transactions whether the transaction would improve, weaken, or have no effect on the current ratio of Carver Inc. at December 31, 2014.
- (1) Write off an uncollectible account receivable, \$2,200.
 - (2) Purchase additional capital stock for cash.
 - (3) Pay \$40,000 on notes payable (short-term).
 - (4) Collect \$23,000 on accounts receivable.
 - (5) Buy equipment on account.
 - (6) Give an existing creditor a short-term note in settlement of account.

EXERCISES SET B

See the book's companion website, at www.wiley.com/college/kieso, for an additional set of exercises.

PROBLEMS

1 **P13-1 (Current Liability Entries and Adjustments)** Described below are certain transactions of Edwardson Corporation. The company uses the periodic inventory system.

1. On February 2, the corporation purchased goods from Martin Company for \$70,000 subject to cash discount terms of 2/10, n/30. Purchases and accounts payable are recorded by the corporation at net amounts after cash discounts. The invoice was paid on February 26.
2. On April 1, the corporation bought a truck for \$50,000 from General Motors Company, paying \$4,000 in cash and signing a one-year, 12% note for the balance of the purchase price.
3. On May 1, the corporation borrowed \$83,000 from Chicago National Bank by signing a \$92,000 zero-interest-bearing note due one year from May 1.
4. On August 1, the board of directors declared a \$300,000 cash dividend that was payable on September 10 to stockholders of record on August 31.

Instructions

- (a) Make all the journal entries necessary to record the transactions above using appropriate dates.
- (b) Edwardson Corporation's year-end is December 31. Assuming that no adjusting entries relative to the transactions above have been recorded, prepare any adjusting journal entries concerning interest that are necessary to present fair financial statements at December 31. Assume straight-line amortization of discounts.

1 **5**

P13-2 (Liability Entries and Adjustments) Listed below are selected transactions of Schultz Department Store for the current year ending December 31.

1. On December 5, the store received \$500 from the Selig Players as a deposit to be returned after certain furniture to be used in stage production was returned on January 15.
2. During December, cash sales totaled \$798,000, which includes the 5% sales tax that must be remitted to the state by the fifteenth day of the following month.
3. On December 10, the store purchased for cash three delivery trucks for \$120,000. The trucks were purchased in a state that applies a 5% sales tax.
4. The store determined it will cost \$100,000 to restore the area (considered a land improvement) surrounding one of its store parking lots, when the store is closed in 2 years. Schultz estimates the fair value of the obligation at December 31 is \$84,000.

Instructions

Prepare all the journal entries necessary to record the transactions noted above as they occurred and any adjusting journal entries relative to the transactions that would be required to present fair financial statements at December 31. Date each entry. For simplicity, assume that adjusting entries are recorded only once a year on December 31.

3 **P13-3 (Payroll Tax Entries)** Cedarville Company pays its office employee payroll weekly. Below is a partial list of employees and their payroll data for August. Because August is their vacation period, vacation pay is also listed.

Employee	Earnings to July 31	Weekly Pay	Vacation Pay to Be Received in August
Mark Hamill	\$4,200	\$200	—
Karen Robbins	3,500	150	\$300
Brent Kirk	2,700	110	220
Alec Guinness	7,400	250	—
Ken Sprouse	8,000	330	660

Assume that the federal income tax withheld is 10% of wages. Union dues withheld are 2% of wages. Vacations are taken the second and third weeks of August by Robbins, Kirk, and Sprouse. The state unemployment tax rate is 2.5% and the federal is 0.8%, both on a \$7,000 maximum. The FICA rate is 7.65% on employee and employer on a maximum of \$113,700 per employee. In addition, a 1.45% rate is charged both employer and employee for an employee's wages in excess of \$113,700.

Instructions

Make the journal entries necessary for each of the four August payrolls. The entries for the payroll and for the company's liability are made separately. Also make the entry to record the monthly payment of accrued payroll liabilities.

- 3 P13-4 (Payroll Tax Entries)** Below is a payroll sheet for Otis Import Company for the month of September 2014. The company is allowed a 1% unemployment compensation rate by the state; the federal unemployment tax rate is 0.8% and the maximum for both is \$7,000. Assume a 10% federal income tax rate for all employees and a 7.65% FICA tax on employee and employer on a maximum of \$113,700. In addition, 1.45% is charged both employer and employee for an employee's wages in excess of \$113,700 per employee.

Name	Earnings to Aug. 31	September Earnings	Income Tax Withholding	FICA	Unemployment Tax	
					State	Federal
B.D. Williams	\$ 6,800	\$ 800				
D. Raye	6,500	700				
K. Baker	7,600	1,100				
F. Lopez	13,600	1,900				
A. Daniels	107,000	13,000				
B. Kingston	112,000	16,000				

Instructions

- Complete the payroll sheet and make the necessary entry to record the payment of the payroll.
- Make the entry to record the payroll tax expenses of Otis Import Company.
- Make the entry to record the payment of the payroll liabilities created. Assume that the company pays all payroll liabilities at the end of each month.

- 5 P13-5 (Warranties, Accrual, and Cash Basis)** Brooks Corporation sells computers under a 2-year warranty contract that requires the corporation to replace defective parts and to provide the necessary repair labor. During 2014, the corporation sells for cash 400 computers at a unit price of \$2,500. On the basis of past experience, the 2-year warranty costs are estimated to be \$155 for parts and \$185 for labor per unit. (For simplicity, assume that all sales occurred on December 31, 2014.) The warranty is not sold separately from the computer.

Instructions

- Record any necessary journal entries in 2014, applying the cash-basis method.
- Record any necessary journal entries in 2014, applying the expense warranty accrual method.
- What liability relative to these transactions would appear on the December 31, 2014, balance sheet and how would it be classified if the cash-basis method is applied?
- What liability relative to these transactions would appear on the December 31, 2014, balance sheet and how would it be classified if the expense warranty accrual method is applied?

In 2015, the actual warranty costs to Brooks Corporation were \$21,400 for parts and \$39,900 for labor.

- Record any necessary journal entries in 2015, applying the cash-basis method.
- Record any necessary journal entries in 2015, applying the expense warranty accrual method.

- 5 P13-6 (Extended Warranties)** Dos Passos Company sells televisions at an average price of \$900 and also offers to each customer a separate 3-year warranty contract for \$90 that requires the company to perform periodic services and to replace defective parts. During 2014, the company sold 300 televisions and 270 warranty contracts for cash. It estimates the 3-year warranty costs as \$20 for parts and \$40 for labor, and accounts for warranties separately. Assume sales occurred on December 31, 2014, and straight-line recognition of warranty revenues occurs.

Instructions

- Record any necessary journal entries in 2014.
- What liability relative to these transactions would appear on the December 31, 2014, balance sheet and how would it be classified?

In 2015, Dos Passos Company incurred actual costs relative to 2014 television warranty sales of \$2,000 for parts and \$4,000 for labor.

- Record any necessary journal entries in 2015 relative to 2014 television warranties.
- What amounts relative to the 2014 television warranties would appear on the December 31, 2015, balance sheet and how would they be classified?

- 4 5 P13-7 (Warranties, Accrual, and Cash Basis)** Alvarado Company sells a machine for \$7,400 with a 12-month warranty agreement that requires the company to replace all defective parts and to provide the repair labor at no cost to the customers. With sales being made evenly throughout the year, the company sells 600 machines in 2014 (warranty expense is incurred half in 2014 and half in 2015). As a result of product testing, the company estimates that the warranty cost is \$390 per machine (\$170 parts and \$220 labor).

Instructions

Assuming that actual warranty costs are incurred exactly as estimated, what journal entries would be made relative to the following facts?

- (a) Under application of the expense warranty accrual method for:
 - (1) Sale of machinery in 2014.
 - (2) Warranty costs incurred in 2014.
 - (3) Warranty expense charged against 2014 revenues.
 - (4) Warranty costs incurred in 2015.
- (b) Under application of the cash-basis method for:
 - (1) Sale of machinery in 2014.
 - (2) Warranty costs incurred in 2014.
 - (3) Warranty expense charged against 2014 revenues.
 - (4) Warranty costs incurred in 2015.
- (c) What amount, if any, is disclosed in the balance sheet as a liability for future warranty costs as of December 31, 2014, under each method?
- (d) Which method best reflects the income in 2014 and 2015 of Alvarado Company? Why?

- 5** **P13-8 (Premium Entries)** To stimulate the sales of its Alladin breakfast cereal, Loptien Company places 1 coupon in each box. Five coupons are redeemable for a premium consisting of a children's hand puppet. In 2015, the company purchases 40,000 puppets at \$1.50 each and sells 480,000 boxes of Alladin at \$3.75 a box. From its experience with other similar premium offers, the company estimates that 40% of the coupons issued will be mailed back for redemption. During 2015, 115,000 coupons are presented for redemption.

Instructions

Prepare the journal entries that should be recorded in 2015 relative to the premium plan.

- 5** **6** **P13-9 (Premium Entries and Financial Statement Presentation)** Sycamore Candy Company offers an MP3 download (seven-single medley) as a premium for every five candy bar wrappers presented by customers together with \$2.50. The candy bars are sold by the company to distributors for 30 cents each. The purchase price of each download code to the company is \$2.25. In addition, it costs 50 cents to distribute each code. The results of the premium plan for the years 2014 and 2015 are as follows. (All purchases and sales are for cash.)

	2014	2015
MP3 codes purchased	250,000	330,000
Candy bars sold	2,895,400	2,743,600
Wrappers redeemed	1,200,000	1,500,000
2014 wrappers expected to be redeemed in 2015	290,000	
2015 wrappers expected to be redeemed in 2016		350,000

Instructions

- (a) Prepare the journal entries that should be made in 2014 and 2015 to record the transactions related to the premium plan of the Sycamore Candy Company.
- (b) Indicate the account names, amounts, and classifications of the items related to the premium plan that would appear on the balance sheet and the income statement at the end of 2014 and 2015.

- 4** **5** **P13-10 (Loss Contingencies: Entries and Essay)** On November 24, 2014, 26 passengers on Windsor Airlines Flight No. 901 were injured upon landing when the plane skidded off the runway. Personal injury suits for damages totaling \$9,000,000 were filed on January 11, 2015, against the airline by 18 injured passengers. The airline carries no insurance. Legal counsel has studied each suit and advised Windsor that it can reasonably expect to pay 60% of the damages claimed. The financial statements for the year ended December 31, 2014, were issued February 27, 2015.

Instructions

- (a) Prepare any disclosures and journal entries required by the airline in preparation of the December 31, 2014, financial statements.
- (b) Ignoring the November 24, 2014, accident, what liability due to the risk of loss from lack of insurance coverage should Windsor Airlines record or disclose? During the past decade, the company has experienced at least one accident per year and incurred average damages of \$3,200,000. Discuss fully.

- 4** **5** **P13-11 (Loss Contingencies: Entries and Essays)** Polska Corporation, in preparation of its December 31, 2014, financial statements, is attempting to determine the proper accounting treatment for each of the following situations.

- As a result of uninsured accidents during the year, personal injury suits for \$350,000 and \$60,000 have been filed against the company. It is the judgment of Polska's legal counsel that an unfavorable outcome is unlikely in the \$60,000 case but that an unfavorable verdict approximating \$250,000 will probably result in the \$350,000 case.
- Polska Corporation owns a subsidiary in a foreign country that has a book value of \$5,725,000 and an estimated fair value of \$9,500,000. The foreign government has communicated to Polska its intention to expropriate the assets and business of all foreign investors. On the basis of settlements other firms have received from this same country, Polska expects to receive 40% of the fair value of its properties as final settlement.
- Polska's chemical product division consisting of five plants is uninsurable because of the special risk of injury to employees and losses due to fire and explosion. The year 2014 is considered one of the safest (luckiest) in the division's history because no loss due to injury or casualty was suffered. Having suffered an average of three casualties a year during the rest of the past decade (ranging from \$60,000 to \$700,000), management is certain that next year the company will probably not be so fortunate.

Instructions

- Prepare the journal entries that should be recorded as of December 31, 2014, to recognize each of the situations above.
- Indicate what should be reported relative to each situation in the financial statements and accompanying notes. Explain why.

- 5 P13-12 (Warranties and Premiums)** Garison Music Emporium carries a wide variety of musical instruments, sound reproduction equipment, recorded music, and sheet music. Garison uses two sales promotion techniques—warranties and premiums—to attract customers.

Musical instruments and sound equipment are sold with a one-year warranty for replacement of parts and labor. The estimated warranty cost, based on past experience, is 2% of sales.

The premium is offered on the recorded and sheet music. Customers receive a coupon for each dollar spent on recorded music or sheet music. Customers may exchange 200 coupons and \$20 for a digital MP3 player. Garison pays \$32 for each player and estimates that 60% of the coupons given to customers will be redeemed.

Garison's total sales for 2014 were \$7,200,000—\$5,700,000 from musical instruments and sound reproduction equipment and \$1,500,000 from recorded music and sheet music. Replacement parts and labor for warranty work totaled \$164,000 during 2014. A total of 6,500 players used in the premium program were purchased during the year and there were 1,200,000 coupons redeemed in 2014.

The accrual method is used by Garison to account for the warranty and premium costs for financial reporting purposes. The balances in the accounts related to warranties and premiums on January 1, 2014, were as shown below.

Inventory of Premiums	\$ 37,600
Premium Liability	44,800
Warranty Liability	136,000

Instructions

Garison Music Emporium is preparing its financial statements for the year ended December 31, 2014. Determine the amounts that will be shown on the 2014 financial statements for the following.

- Warranty Expense.
- Warranty Liability.
- Premium Expense.
- Inventory of Premiums.
- Premium Liability.

(CMA adapted)

4 5

P13-13 (Liability Errors) You are the independent auditor engaged to audit Millay Corporation's December 31, 2014, financial statements. Millay manufactures household appliances. During the course of your audit, you discovered the following contingent liabilities.

- Millay began production of a new dishwasher in June 2014 and, by December 31, 2014, sold 120,000 to various retailers for \$500 each. Each dishwasher is under a one-year warranty. The company estimates that its warranty expense per dishwasher will amount to \$25. At year-end, the company had already paid out \$1,000,000 in warranty expenses. Millay's income statement shows warranty expenses of \$1,000,000 for 2014. Millay accounts for warranty costs on the accrual basis.
- In response to your attorney's letter, Morgan Sondgeroth, Esq., has informed you that Millay has been cited for dumping toxic waste into the Kishwaukee River. Clean-up costs and fines amount to \$2,750,000. Although the case is still being contested, Sondgeroth is certain that Millay will most probably have to pay the fine and clean-up costs. No disclosure of this situation was found in the financial statements.

3. Millay is the defendant in a patent infringement lawsuit by Megan Drabek over Millay's use of a hydraulic compressor in several of its products. Sondgeroth claims that, if the suit goes against Millay, the loss may be as much as \$5,000,000. However, Sondgeroth believes the loss of this suit to be only reasonably possible. Again, no mention of this suit is made in the financial statements.

As presented, these contingencies are not reported in accordance with GAAP, which may create problems in issuing a favorable audit report. You feel the need to note these problems in the work papers.

Instructions

Heading each page with the name of the company, balance sheet date, and a brief description of the problem, write a brief narrative for each of the above issues in the form of a **memorandum** to be incorporated in the audit work papers. Explain what led to the discovery of each problem, what the problem really is, and what you advised your client to do (along with any appropriate journal entries) in order to bring these contingencies in accordance with GAAP.

- 5 P13-14 (Warranty and Coupon Computation)** Schmitt Company must make computations and adjusting entries for the following independent situations at December 31, 2015.

1. Its line of amplifiers carries a 3-year warranty against defects. On the basis of past experience the estimated warranty costs related to dollar sales are first year after sale—2% of sales revenue; second year after sale—3% of sales revenue; and third year after sale—5% of sales revenue. Sales and actual warranty expenditures for the first 3 years of business were:

	Sales Revenue	Warranty Expenditures
2013	\$ 800,000	\$ 6,500
2014	1,100,000	17,200
2015	1,200,000	62,000

Instructions

Compute the amount that Schmitt Company should report as a liability in its December 31, 2015, balance sheet. Assume that all sales are made evenly throughout each year with warranty expenses also evenly spaced relative to the rates above.

2. With some of its products, Schmitt Company includes coupons that are redeemable in merchandise. The coupons have no expiration date and, in the company's experience, 40% of them are redeemed. The liability for unredeemed coupons at December 31, 2014, was \$9,000. During 2015, coupons worth \$30,000 were issued, and merchandise worth \$8,000 was distributed in exchange for coupons redeemed.

Instructions

Compute the amount of the liability that should appear on the December 31, 2015, balance sheet.

(AICPA adapted)

PROBLEMS SET B

See the book's companion website, at www.wiley.com/college/kieso, for an additional set of problems.

CONCEPTS FOR ANALYSIS

CA13-1 (Nature of Liabilities) Presented below is the current liabilities section of Micro Corporation.

	(\$000)	
	2015	2014
Current liabilities		
Notes payable	\$ 68,713	\$ 7,700
Accounts payable	179,496	101,379
Compensation to employees	60,312	31,649
Accrued liabilities	158,198	77,621
Income taxes payable	10,486	26,491
Current maturities of long-term debt	16,592	6,649
Total current liabilities	\$493,797	\$251,489

Instructions

Answer the following questions.

- What are the essential characteristics that make an item a liability?
- How does one distinguish between a current liability and a long-term liability?
- What are accrued liabilities? Give three examples of accrued liabilities that Micro might have.
- What is the theoretically correct way to value liabilities? How are current liabilities usually valued?
- Why are notes payable reported first in the current liabilities section?
- What might be the items that comprise Micro's liability for "Compensation to employees"?

CA13-2 (Current versus Noncurrent Classification) Rodriguez Corporation includes the following items in its liabilities at December 31, 2014.

- Notes payable, \$25,000,000, due June 30, 2015.
- Deposits from customers on equipment ordered by them from Rodriguez, \$6,250,000.
- Salaries and wages payable, \$3,750,000, due January 14, 2015.

Instructions

Indicate in what circumstances, if any, each of the three liabilities above would be excluded from current liabilities.

CA13-3 (Refinancing of Short-Term Debt) Dumars Corporation reports in the current liability section of its balance sheet at December 31, 2014 (its year-end), short-term obligations of \$15,000,000, which includes the current portion of 12% long-term debt in the amount of \$10,000,000 (matures in March 2015). Management has stated its intention to refinance the 12% debt whereby no portion of it will mature during 2015. The date of issuance of the financial statements is March 25, 2015.

Instructions

- Is management's intent enough to support long-term classification of the obligation in this situation?
- Assume that Dumars Corporation issues \$13,000,000 of 10-year debentures to the public in January 2015 and that management intends to use the proceeds to liquidate the \$10,000,000 debt maturing in March 2015. Furthermore, assume that the debt maturing in March 2015 is paid from these proceeds prior to the issuance of the financial statements. Will this have any impact on the balance sheet classification at December 31, 2014? Explain your answer.
- Assume that Dumars Corporation issues common stock to the public in January and that management intends to entirely liquidate the \$10,000,000 debt maturing in March 2015 with the proceeds of this equity securities issue. In light of these events, should the \$10,000,000 debt maturing in March 2015 be included in current liabilities at December 31, 2014?
- Assume that Dumars Corporation, on February 15, 2015, entered into a financing agreement with a commercial bank that permits Dumars Corporation to borrow at any time through 2016 up to \$15,000,000 at the bank's prime rate of interest. Borrowings under the financing agreement mature three years after the date of the loan. The agreement is not cancelable except for violation of a provision with which compliance is objectively determinable. No violation of any provision exists at the date of issuance of the financial statements. Assume further that the current portion of long-term debt does not mature until August 2015. In addition, management intends to refinance the \$10,000,000 obligation under the terms of the financial agreement with the bank, which is expected to be financially capable of honoring the agreement.
 - Given these facts, should the \$10,000,000 be classified as current on the balance sheet at December 31, 2014?
 - Is disclosure of the refinancing method required?

CA13-4 (Loss Contingencies) On February 1, 2015, one of the huge storage tanks of Viking Manufacturing Company exploded. Windows in houses and other buildings within a one-mile radius of the explosion were severely damaged, and a number of people were injured. As of February 15, 2015 (when the December 31, 2014, financial statements were completed and sent to the publisher for printing and public distribution), no suits had been filed or claims asserted against the company as a consequence of the explosion. The company fully anticipates that suits will be filed and claims asserted for injuries and damages. Because the casualty was uninsured and the company considered at fault, Viking Manufacturing will have to cover the damages from its own resources.

Instructions

Discuss fully the accounting treatment and disclosures that should be accorded the casualty and related contingent losses in the financial statements dated December 31, 2014.

CA13-5 (Loss Contingency) Presented below is a note disclosure for Matsui Corporation.

Litigation and Environmental: The Company has been notified, or is a named or a potentially responsible party in a number of governmental (federal, state and local) and private actions associated with environmental matters, such as those relating to hazardous wastes, including certain sites which are on the United States EPA National Priorities List (“Superfund”). These actions seek clean-up costs, penalties and/or damages for personal injury or to property or natural resources.

In 2014, the Company recorded a pre-tax charge of \$56,229,000, included in the “Other expense (income)—net” caption of the Company’s consolidated income statements, as an additional provision for environmental matters. These expenditures are expected to take place over the next several years and are indicative of the Company’s commitment to improve and maintain the environment in which it operates. At December 31, 2014, environmental accruals amounted to \$69,931,000, of which \$61,535,000 are considered noncurrent and are included in the “Deferred credits and other liabilities” caption of the Company’s consolidated balance sheets.

While it is impossible at this time to determine with certainty the ultimate outcome of environmental matters, it is management’s opinion, based in part on the advice of independent counsel (after taking into account accruals and insurance coverage applicable to such actions) that when the costs are finally determined they will not have a material adverse effect on the financial position of the Company.

Instructions

Answer the following questions.

- What conditions must exist before a loss contingency can be recorded in the accounts?
- Suppose that Matsui Corporation could not reasonably estimate the amount of the loss, although it could establish with a high degree of probability the minimum and maximum loss possible. How should this information be reported in the financial statements?
- If the amount of the loss is uncertain, how would the loss contingency be reported in the financial statements?

CA13-6 (Warranties and Loss Contingencies) The following two independent situations involve loss contingencies.

Part 1: Benson Company sells two products, Grey and Yellow. Each carries a one-year warranty.

- Product Grey—Product warranty costs, based on past experience, will normally be 1% of sales.
- Product Yellow—Product warranty costs cannot be reasonably estimated because this is a new product line. However, the chief engineer believes that product warranty costs are likely to be incurred.

Instructions

How should Benson report the estimated product warranty costs for each of the two types of merchandise above? Discuss the rationale for your answer. Do not discuss disclosures that should be made in Benson’s financial statements or notes.

Part 2: Constantine Company is being sued for \$4,000,000 for an injury caused to a child as a result of alleged negligence while the child was visiting the Constantine Company plant in March 2014. The suit was filed in July 2014. Constantine’s lawyer states that it is probable that Constantine will lose the suit and be found liable for a judgment costing anywhere from \$400,000 to \$2,000,000. However, the lawyer states that the most probable judgment is \$1,000,000.

Instructions

How should Constantine report the suit in its 2014 financial statements? Discuss the rationale for your answer. Include in your answer disclosures, if any, that should be made in Constantine’s financial statements or notes.

(AICPA adapted)

CA13-7 (Warranties) The Dotson Company, owner of Bleacher Mall, charges Rich Clothing Store a rental fee of \$600 per month plus 5% of yearly profits over \$500,000. Matt Rich, the owner of the store, directs his accountant, Ron Hamilton, to increase the estimate of bad debt expense and warranty costs in order to keep profits at \$475,000.

Instructions

Answer the following questions.

- Should Hamilton follow his boss’s directive?
- Who is harmed if the estimates are increased?
- Is Matt Rich’s directive ethical?

USING YOUR JUDGMENT

FINANCIAL REPORTING

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of P&G are presented in Appendix 5B. The company's complete annual report, including the notes to the financial statements, can be accessed at the book's companion website, www.wiley.com/college/kieso.

Instructions

Refer to these financial statements and the accompanying notes to answer the following questions.

- What was P&G's 2011 short-term debt and related weighted-average interest rate on this debt?
- What was P&G's 2011 working capital, acid-test ratio, and current ratio? Comment on P&G's liquidity.
- What types of commitments and contingencies has P&G's reported in its financial statements? What is management's reaction to these contingencies?

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

Instructions

Go to the book's companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- How much working capital do each of these companies have at the end of 2011?
- Compute each company's (a) current cash debt coverage, (b) cash debt coverage, (c) current ratio, (d) acid-test ratio, (e) accounts receivable turnover, and (f) inventory turnover for 2011. Comment on each company's overall liquidity.
- In PepsiCo's financial statements, it reports in the long-term debt section "short-term borrowings, reclassified." How can short-term borrowings be classified as long-term debt?
- What types of loss or gain contingencies do these two companies have at the end of 2011?

Financial Statement Analysis Cases

Case 1 Northland Cranberries

Despite being a publicly traded company only since 1987, **Northland Cranberries** of Wisconsin Rapids, Wisconsin, is one of the world's largest cranberry growers. During its short life as a publicly traded corporation, it has engaged in an aggressive growth strategy. As a consequence, the company has taken on significant amounts of both short-term and long-term debt. The following information is taken from recent annual reports of the company.

Northland Cranberries

	Current Year	Prior Year
Current assets	\$ 6,745,759	\$ 5,598,054
Total assets	107,744,751	83,074,339
Current liabilities	10,168,685	4,484,687
Total liabilities	73,118,204	49,948,787
Shareholders' equity	34,626,547	33,125,552
Net sales	21,783,966	18,051,355
Cost of goods sold	13,057,275	8,751,220
Interest expense	3,654,006	2,393,792
Income tax expense	1,051,000	1,917,000
Net income	1,581,707	2,942,954

Instructions

- (a) Evaluate the company's liquidity by calculating and analyzing working capital and the current ratio.
- (b) The discussion of the company's liquidity, shown below, was provided by the company in the Management Discussion and Analysis section of the company's annual report. Comment on whether you agree with management's statements, and what might be done to remedy the situation.

The lower comparative current ratio in the current year was due to \$3 million of short-term borrowing then outstanding which was incurred to fund the Yellow River Marsh acquisitions last year. As a result of the extreme seasonality of its business, the company does not believe that its current ratio or its underlying stated working capital at the current, fiscal year-end is a meaningful indication of the Company's liquidity. As of March 31 of each fiscal year, the Company has historically carried no significant amounts of inventories and by such date all of the Company's accounts receivable from its crop sold for processing under the supply agreements have been paid in cash, with the resulting cash received from such payments used to reduce indebtedness. The Company utilizes its revolving bank credit facility, together with cash generated from operations, to fund its working capital requirements throughout its growing season.

Case 2 Mohican Company

Presented below is the current liabilities section and related note of Mohican Company.

	(dollars in thousands)	
	Current Year	Prior Year
Current liabilities		
Current portion of long-term debt	\$ 15,000	\$ 10,000
Short-term debt	2,668	405
Accounts payable	29,495	42,427
Accrued warranty	16,843	16,741
Accrued marketing programs	17,512	16,585
Other accrued liabilities	35,653	33,290
Accrued and deferred income taxes	16,206	17,348
Total current liabilities	\$133,377	\$136,796

Notes to Consolidated Financial Statements

Note 1 (in part): Summary of Significant Accounting Policies and Related Data

Accrued Warranty The company provides an accrual for future warranty costs based upon the relationship of prior years' sales to actual warranty costs.

Instructions

Answer the following questions.

- (a) What is the difference between the cash basis and the accrual basis of accounting for warranty costs?
- (b) Under what circumstance, if any, would it be appropriate for Mohican Company to recognize deferred revenue on warranty contracts?
- (c) If Mohican Company recognized deferred revenue on warranty contracts, how would it recognize this revenue in subsequent periods?

Case 3 BOP Clothing Co.

As discussed in the chapter, an important consideration in evaluating current liabilities is a company's operating cycle. The operating cycle is the average time required to go from cash to cash in generating revenue. To determine the length of the operating cycle, analysts use two measures: the average days to sell inventory (*inventory days*) and the average days to collect receivables (*receivable days*). The inventory-days computation measures the average number of days it takes to move an item from raw materials or purchase to final sale (from the day it comes in the company's door to the point it is converted to cash or an account receivable). The receivable-days computation measures the average number of days it takes to collect an account.

Most businesses must then determine how to finance the period of time when the liquid assets are tied up in inventory and accounts receivable. To determine how much to finance, companies first determine accounts payable days—how long it takes to pay creditors. Accounts payable days measures the number of days it takes to pay a supplier invoice. Consider the following operating cycle worksheet for BOP Clothing Co.

	2013	2014
Cash	\$ 45,000	\$ 30,000
Accounts receivable	250,000	325,000
Inventory	830,000	800,000
Accounts payable	720,000	775,000
Purchases	1,100,000	1,425,000
Cost of goods sold	1,145,000	1,455,000
Sales	1,750,000	1,950,000
Operating Cycle		
Inventory days ¹	264.6	200.7
Receivable days ²	52.1	60.8
Operating cycle	316.7	261.5
Less: Accounts payable days ³	238.9	198.5
Days to be financed	77.8	63.0
Working capital	\$ 405,000	\$ 380,000
Current ratio	1.56	1.49
Acid-test ratio	0.41	0.46
¹ Inventory days = (Inventory × 365) ÷ Cost of goods sold ² Receivable days = (Accounts receivable × 365) ÷ Sales ³ Accounts payable days = (Accounts payable × 365) ÷ Purchases Purchases = Cost of goods sold + Ending inventory – Beginning inventory. The ratios above assume that other current assets and liabilities are negligible.		

These data indicate that BOP has reduced its overall operating cycle (to 261.5 days) as well as the number of days to be financed with sources of funds other than accounts payable (from 78 to 63 days). Most businesses cannot finance the operating cycle with accounts payable financing alone, so working capital financing, usually short-term interest-bearing loans, is needed to cover the shortfall. In this case, BOP would need to borrow less money to finance its operating cycle in 2014 than in 2013.

Instructions

- Use the BOP analysis to briefly discuss how the operating cycle data relate to the amount of working capital and the current and acid-test ratios.
- Select two other real companies that are in the same industry and complete the operating cycle worksheet, along with the working capital and ratio analysis. Briefly summarize and interpret the results. To simplify the analysis, you may use ending balances to compute turnover ratios.

[Adapted from Operating Cycle Worksheet at www.entrepreneur.com]

Accounting, Analysis, and Principles

(Note: For any part of this problem requiring an interest or discount rate, use 10%.)

YellowCard Company manufactures accessories for iPods. It had the following selected transactions during 2014.

- YellowCard provides a 2-year warranty on its docking stations, which it began selling in 2014. During 2014, YellowCard spent \$6,000 servicing warranty claims. At year-end, YellowCard estimates that an additional \$45,000 will be spent in the future to service warranties related to 2014 sales.
- YellowCard has a \$200,000 loan outstanding from First Trust Corp. The loan is set to mature on February 28, 2015. For several years, First Trust has agreed to extend the loan, as long as YellowCard makes all its quarterly interest payments (interest is due on the last days of each February, May, August, and November) and maintains an acid-test ratio (also called “quick ratio”) of at least 1.25. First Trust has provided YellowCard a “commitment letter” indicating that First Trust will extend the loan another 12 months, providing YellowCard makes the interest payment due on March 31.
- During 2013, YellowCard constructed a small manufacturing facility specifically to manufacture one particular accessory. YellowCard paid the construction contractor \$5,000,000 cash (which was the total contract price) and placed the facility into service on January 1, 2014. Because of technological change, YellowCard anticipates that the manufacturing facility will be useful for no more than 10 years. The local government where the facility is located required that, at the end of the 10-year period, YellowCard remediate the facility so that it can be used as a community center. YellowCard estimates the cost of remediation to be \$500,000.

Accounting

Prepare all 2014 journal entries relating to (a) YellowCard's warranties, (b) YellowCard's loan from First Trust Corp., and (c) the new manufacturing facility YellowCard opened on January 1, 2014.

Analysis

Describe how the transactions above affect ratios that might be used to assess YellowCard's liquidity. How important is the commitment letter that YellowCard has from First Trust Corp. to these ratios?

Principles

YellowCard is contemplating offering an extended warranty. If customers pay an additional \$50 at the time of product purchase, YellowCard would extend the warranty an additional two years. Would the extended warranty meet the definition of a liability under current generally accepted accounting principles? Briefly explain.

BRIDGE TO THE PROFESSION

Professional Research: FASB Codification

Pleasant Co. manufactures specialty bike accessories. The company is known for product quality, and it has offered one of the best warranties in the industry on its higher-priced products—a lifetime guarantee, performing all the warranty work in its own shops. The warranty on these products is included in the sales price.

Due to the recent introduction and growth in sales of some products targeted to the low-price market, Pleasant is considering partnering with another company to do the warranty work on this line of products, if customers purchase a service contract at the time of original product purchase. Pleasant has called you to advise the company on the accounting for this new warranty arrangement.

Instructions

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/asclogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

- Identify the accounting literature that addresses the accounting for the type of separately priced warranty that Pleasant is considering.
- When are warranty contracts considered separately priced?
- What are incremental direct acquisition costs and how should they be treated?

Additional Professional Resources

See the book's companion website, at www.wiley.com/college/kieso, for professional simulations as well as other study resources.

IFRS

INSIGHTS

IFRS and GAAP have similar definitions for liabilities. IFRS related to reporting and recognition of liabilities is found in *IAS 1* ("Presentation of Financial Statements") and *IAS 37* ("Provisions, Contingent Liabilities, and Contingent Assets").

7 LEARNING OBJECTIVE

Compare the accounting procedures for current liabilities and contingencies under GAAP and IFRS.

RELEVANT FACTS

Following are the key similarities and differences between GAAP and IFRS related to current liabilities and contingencies.

Similarities

- Similar to U.S. practice, IFRS requires that companies present current and non-current liabilities on the face of the statement of financial position (balance sheet), with current liabilities generally presented in order of liquidity. However, many companies using IFRS present non-current liabilities before current liabilities on the statement of financial position.
- The basic definition of a liability under GAAP and IFRS is very similar. In a more technical way, liabilities are defined by the IASB as a present obligation of the entity arising from past events, the settlement of which is expected to result in an outflow from the entity of resources embodying economic benefits. Liabilities may be legally enforceable via a contract or law but need not be. That is, they can arise due to normal business practices or customs.
- IFRS requires that companies classify liabilities as current or non-current on the face of the statement of financial position (balance sheet), except in industries where a presentation based on liquidity would be considered to provide more useful information (such as financial institutions).

Differences

- Under IFRS, the measurement of a provision related to a contingency is based on the best estimate of the expenditure required to settle the obligation. If a range of estimates is predicted and no amount in the range is more likely than any other amount in the range, the “midpoint” of the range is used to measure the liability. In GAAP, the minimum amount in a range is used.
- Both IFRS and GAAP prohibit the recognition of liabilities for future losses. However, IFRS permits recognition of a restructuring liability, once a company has committed to a restructuring plan. GAAP has additional criteria (i.e., related to communicating the plan to employees) before a restructuring liability can be established.
- IFRS and GAAP are similar in the treatment of asset retirement obligations (AROs). However, the recognition criteria for an ARO are more stringent under GAAP: The ARO is not recognized unless there is a present legal obligation and the fair value of the obligation can be reasonably estimated.
- Under IFRS, short-term obligations expected to be refinanced can be classified as non-current if the refinancing is completed by the financial statement date. GAAP uses the date the financial statements are issued.
- IFRS uses the term *provisions* to refer to estimated liabilities. Under IFRS, contingencies are not recorded but are often disclosed. The accounting for provisions under IFRS and estimated liabilities under GAAP are very similar.
- GAAP uses the term *contingency* in a different way than IFRS. Contingent liabilities are not recognized in the financial statements under IFRS, whereas under GAAP, a contingent liability is sometimes recognized.

ABOUT THE NUMBERS

Refinancing Criteria

The IASB has developed criteria for determining the circumstances under which short-term obligations may be properly excluded from current liabilities. Specifically, a company can exclude a short-term obligation from current liabilities if both of the following conditions are met:

1. It must intend to refinance the obligation on a long-term basis; and
2. It must have an unconditional right to defer settlement of the liability for at least 12 months after the reporting date.

Intention to refinance on a long-term basis means that the company intends to refinance the short-term obligation so that it will not require the use of working capital during the ensuing fiscal year (or operating cycle, if longer). Entering into a financing arrangement that clearly permits the company to refinance the debt on a long-term basis on terms that are readily determinable before the next reporting date is one way to satisfy the second condition. In addition, the fact that a company has the right to refinance at any time and intends to do so permits the company to classify the liability as non-current.

To illustrate, assume that Haddad Company provides the following information related to its note payable.

- Issued note payable of \$3,000,000 on November 30, 2013, due on February 28, 2014. Haddad's reporting date is December 31, 2013.
- Haddad intends to extend the maturity date of the loan (refinance the loan) to June 30, 2015.
- Its December 31, 2013, financial statements are authorized for issue on March 15, 2014.
- The necessary paperwork to refinance the loan is completed on January 15, 2014. Haddad did not have an unconditional right to defer settlement of the obligation at December 31, 2013.

A graphical representation of the refinancing events is provided in Illustration IFRS13-1.

ILLUSTRATION
IFRS13-1
Refinancing Events

In this case, Haddad must classify its note payable as a current liability because the refinancing was not completed by December 31, 2013, the financial reporting date. Only if the refinancing was completed before December 31, 2013, can Haddad classify the note obligation as non-current. The rationale: Refinancing a liability after the statement of financial position date does not affect the liquidity or solvency at the date of the statement of financial position, the reporting of which should reflect contractual agreements in force on that date.

What happens if Haddad has both the intention and the discretion (within the loan agreement) to refinance or roll over its \$3,000,000 note payable to June 30, 2015? In this case, Haddad should classify the note payable as non-current because it has the ability to defer the payment to June 30, 2015.

Provisions

As indicated in the *Relevant Facts* section, a **provision** is a liability of uncertain timing or amount (sometimes referred to as an *estimated liability*). Provisions are very common and may be reported either as current or non-current depending on the date of expected payment. Common types of provisions are obligations related to litigation, warranties or product guarantees, business restructurings, and environmental damage.

The difference between a provision and other liabilities (such as accounts or notes payable, salaries payable, and dividends payable) is that a **provision has greater uncertainty about the timing or amount of the future expenditure required to settle the obligation**. For example, when **Siemens AG** reports an accounts payable, there is an invoice or formal agreement as to the existence and the amount of the liability. Similarly, when Siemens accrues interest payable, the timing and the amount are known.²²

²²The distinction is important because provisions are subject to disclosure requirements that do not apply to other types of payables.

Recognition of a Provision

Companies accrue an expense and related liability for a provision only if the following three conditions are met:

1. A company has a present obligation (legal or constructive) as a result of a past event;
2. It is probable that an outflow of resources embodying economic benefits will be required to settle the obligation; and
3. A reliable estimate can be made of the amount of the obligation.

If any of these three conditions are not met, no provision is recognized.

In applying the first condition, the past event (often referred to as the *past obligatory event*) must have occurred. In applying the second condition, the term **probable** is defined as “more likely than not to occur.” This phrase is interpreted to mean the probability of occurrence is greater than 50 percent. If the probability is 50 percent or less, the provision is not recognized.

Measurement of Provisions

How does a company like **Toyota**, for example, determine the amount to report for its warranty cost on its automobiles? How does a company like **Carrefour** determine its liability for customer refunds? Or, how does **Novartis** determine the amount to report for a lawsuit that it probably will lose? And, how does a company like **Total S.A.** determine the amount to report as a provision for its remediation costs related to environmental clean-up?

IFRS provides an answer: The amount recognized should be the **best estimate of the expenditure required to settle the present obligation**. Best estimate represents the amount that a company would pay to settle the obligation at the statement of financial position date.

Measurement Examples. In determining the best estimate, the management of a company must use judgment, based on past or similar transactions, discussions with experts, and any other pertinent information. Here is how this judgment might be used in three different types of situations to arrive at best estimate:

- **Toyota warranties.** Toyota sells many cars and must make an estimate of the number of warranty repairs and related costs it will incur. Because it is dealing with a large population of automobiles, it is often best to weight all possible outcomes by associated probabilities. For example, it might determine that 80 percent of its cars will not have any warranty cost, 12 percent will have substantial costs, and 8 percent will have a much smaller cost. In this case, by weighting all the possible outcomes by their associated probabilities, Toyota **arrives at an expected value** for its warranty liability.
- **Carrefour refunds.** Carrefour sells many items at varying selling prices. Refunds to customers for products sold may be viewed as a continuous range of refunds, with each point in the range having the same probability of occurrence. In this case, the **midpoint in the range** can be used as the basis for measuring the amount of the refunds.
- **Novartis lawsuit.** Large companies like Novartis are involved in numerous litigation issues related to their products. Where a single obligation such as a lawsuit is being measured, **the most likely outcome** of the lawsuit may be the best estimate of the liability.

Common Types of Provisions

Here are some common areas for which provisions may be recognized in the financial statements:

- | | |
|---|--|
| <ol style="list-style-type: none"> 1. Lawsuits 2. Warranties 3. Premiums | <ol style="list-style-type: none"> 4. Environmental 5. Onerous contracts 6. Restructuring |
|---|--|

IFRS accounting guidance is similar to GAAP for these items. Although companies generally report only one current and one non-current amount for provisions in the statement of financial position, IFRS also requires extensive disclosure related to provisions in the notes to the financial statements. Companies do not record or report in the notes to the financial statements general risk contingencies inherent in business operations (e.g., the possibility of war, strike, uninsurable catastrophes, or a business recession).

Onerous Contract Provisions

Sometimes, companies have what are referred to as **onerous contracts**. These contracts are ones in which “the unavoidable costs of meeting the obligations exceed the economic benefits expected to be received.” An example of an onerous contract is a loss recognized on unfavorable non-cancelable purchase commitments related to inventory items.

To illustrate another situation, assume that Sumart Sports operates profitably in a factory that it has leased and on which it pays monthly rentals. Sumart decides to relocate its operations to another facility. However, the lease on the old facility continues for the next three years. Unfortunately, Sumart cannot cancel the lease nor will it be able to sublet the factory to another party. The expected costs to satisfy this onerous contract are \$200,000. In this case, Sumart makes the following entry.

Loss on Lease Contract	200,000	
Lease Contract Liability		200,000

The expected costs should reflect the least net cost of exiting from the contract, which is the lower of (1) the cost of fulfilling the contract, or (2) the compensation or penalties arising from failure to fulfill the contract.

Contingencies

In a general sense, all provisions are contingent because they are uncertain in timing or amount. However, IFRS uses the term “contingent” for liabilities and assets that are not recognized in the financial statements.

Contingent Liabilities

Contingent liabilities are not recognized in the financial statements because they are (1) a possible obligation (not yet confirmed as a present obligation), (2) a present obligation for which it is not probable that payment will be made, or (3) a present obligation for which a reliable estimate of the obligation cannot be made. Examples of contingent liabilities are:

- A lawsuit in which it is only possible that the company might lose.
- A guarantee related to collectability of a receivable.

Illustration IFRS13-2 presents the general guidelines for the accounting and reporting of contingent liabilities.

Outcome	Probability*	Accounting Treatment
Virtually certain	At least 90%	Report as liability (provision).
Probable (more likely than not)	51–89% probable	Report as liability (provision).
Possible but not probable	5–50%	Disclosure required.
Remote	Less than 5%	No disclosure required.
*In practice, the percentages for virtually certain and remote may deviate from those presented here.		

ILLUSTRATION
IFRS13-2
Contingent Liability
Guidelines

Unless the possibility of any outflow in settlement is remote, companies should disclose the contingent liability at the end of the reporting period, providing a brief description of the nature of the contingent liability and, where practicable:

1. An estimate of its financial effect;
2. An indication of the uncertainties relating to the amount or timing of any outflow; and
3. The possibility of any reimbursement.

Contingent Assets

A **contingent asset** is a possible asset that arises from past events and whose existence will be confirmed by the occurrence or non-occurrence of uncertain future events not wholly within the control of the company. Typical contingent assets are:

1. Possible receipts of monies from gifts, donations, bonuses.
2. Possible refunds from the government in tax disputes.
3. Pending court cases with a probable favorable outcome.

Contingent assets are not recognized on the statement of financial position. If realization of the contingent asset is virtually certain, it is no longer considered a contingent asset and is recognized as an asset. **Virtually certain** is generally interpreted to be at least a probability of 90 percent or more.

The general rules related to contingent assets are presented in Illustration IFRS13-3.

ILLUSTRATION IFRS13-3

Contingent Asset Guidelines

Outcome	Probability*	Accounting Treatment
Virtually certain	At least 90% probable	Report as asset (no longer contingent).
Probable (more likely than not)	51–90% probable	Disclose.
Possible but not probable	5–50%	No disclosure required.
Remote	Less than 5%	No disclosure required.

*In practice, the percentages for virtually certain and remote may deviate from those presented here.

Contingent assets are disclosed when an inflow of economic benefits is considered more likely than not to occur (greater than 50 percent). However, it is important that disclosures for contingent assets avoid giving misleading indications of the likelihood of income arising. As a result, it is not surprising that the thresholds for allowing recognition of contingent assets are more stringent relative to those for liabilities.

What might be an example of a contingent asset that becomes an asset to be recorded? To illustrate, assume that Marcus Realty leases a property to **Marks and Spencer plc (M&S)**. The contract is non-cancelable for five years. On December 1, 2013, before the end of the contract, M&S withdraws from the contract and is required to pay £245,000 as a penalty. At the time M&S cancels the contract, a receivable and related income should be reported by Marcus. The disclosure includes the nature and, where practicable, the estimated financial effects of the asset.

IFRS SELF-TEST QUESTIONS

1. The presentation of current and non-current liabilities in the statement of financial position (balance sheet):
 - (a) is shown only on GAAP financial statements.
 - (b) is shown on both a GAAP and an IFRS statement of financial position.

- (c) is always shown with current liabilities reported first in an IFRS statement of financial position.
 (d) includes contingent liabilities under IFRS.
2. In accounting for short-term debt expected to be refinanced to long-term debt:
- (a) GAAP uses the authorization date to determine classification of short-term debt to be refinanced.
 (b) IFRS uses the authorization date to determine classification of short-term debt to be refinanced.
 (c) IFRS uses the financial statement date to determine classification of short-term debt to be refinanced.
 (d) GAAP uses the date of issue, but only for secured debt, to determine classification of short-term debt to be refinanced.
3. Under IFRS, a provision is the same as:
- (a) a contingent liability. (c) a contingent gain.
 (b) an estimated liability. (d) None of the above.
4. A typical provision is:
- (a) bonds payable. (c) a warranty liability.
 (b) cash. (d) accounts payable.
5. In determining the amount of a provision, a company using IFRS should generally measure:
- (a) using the midpoint of the range between the lowest possible loss and the highest possible loss.
 (b) using the minimum amount of the loss in the range.
 (c) using the best estimate of the amount of the loss expected to occur.
 (d) using the maximum amount of the loss in the range.

IFRS CONCEPTS AND APPLICATION

IFRS13-1 Under what conditions should a short-term obligation be excluded from current liabilities?

IFRS13-2 What evidence is necessary to demonstrate the ability to defer settlement of short-term debt?

IFRS13-3 Define a provision, and give three examples of a provision.

IFRS13-4 Under what conditions should a provision be recorded?

IFRS13-5 Distinguish between a current liability, such as accounts payable, and a provision.

IFRS13-6 What is an onerous contract? Give two examples of an onerous contract.

IFRS13-7 On December 31, 2014, Alexander Company had \$1,200,000 of short-term debt in the form of notes payable due February 2, 2015. On January 21, 2015, the company issued 25,000 ordinary shares for \$36 per share, receiving \$900,000 proceeds after brokerage fees and other costs of issuance. On February 2, 2015, the proceeds from the share sale, supplemented by an additional \$300,000 cash, are used to liquidate the \$1,200,000 debt. The December 31, 2014, statement of financial position is authorized for issue on February 23, 2015.

Instructions

Show how the \$1,200,000 of short-term debt should be presented on the December 31, 2014, statement of financial position.

IFRS13-8 Presented below are two different situations related to Mckee Corporation's debt obligations. Mckee's next financial reporting date is December 31, 2014. The financial statements are authorized for issuance on March 1, 2015.

- Mckee has a long-term obligation of \$400,000, which is maturing over 4 years in the amount of \$100,000 per year. The obligation is dated November 1, 2014, and the first maturity date is November 1, 2015.
- Mckee has a short-term obligation due February 15, 2015. Its lender agrees to extend the maturity date of this loan to February 15, 2017. The agreement for extension is signed on January 15, 2015.

Instructions

Indicate how each of these debt obligations is reported on Mckee's statement of financial position on December 31, 2014.

IFRS13-9 The following situations relate to Bolivia Company.

- Bolivia provides a warranty with all its products it sells. It estimates that it will sell 1,000,000 units of its product for the year ended December 31, 2014, and that its total revenue for the

product will be \$100,000,000. It also estimates that 60% of the product will have no defects, 30% will have major defects, and 10% will have minor defects. The cost of a minor defect is estimated to be \$5 for each product sold, and the cost for a major defect cost is \$15. The company also estimates that the minimum amount of warranty expense will be \$2,000,000 and the maximum will be \$10,000,000.

2. Bolivia is involved in a tax dispute with the tax authorities. The most likely outcome of this dispute is that Bolivia will lose and have to pay \$400,000. The minimum it will lose is \$20,000 and the maximum is \$2,500,000.

Instructions

Prepare the journal entry to record provisions, if any, for Bolivia at December 31, 2014.

IFRS13-10 Kobayashi Corporation reports in the current liability section of its statement of financial position at December 31, 2014 (its year-end), short-term obligations of \$15,000,000, which includes the current portion of 12% long-term debt in the amount of \$10,000,000 (matures in March 2015). Management has stated its intention to refinance the 12% debt whereby no portion of it will mature during 2015. The date of issuance of the financial statements is March 25, 2015.

Instructions

- (a) Is management's intent enough to support long-term classification of the obligation in this situation?
- (b) Assume that Kobayashi Corporation issues \$13,000,000 of 10-year debentures to the public in January 2015 and that management intends to use the proceeds to liquidate the \$10,000,000 debt maturing in March 2015. Furthermore, assume that the debt maturing in March 2015 is paid from these proceeds prior to the authorization to issue the financial statements. Will this have any impact on the statement of financial position classification at December 31, 2014? Explain your answer.
- (c) Assume that Kobayashi Corporation issues ordinary shares to the public in January and that management intends to entirely liquidate the \$10,000,000 debt maturing in March 2015 with the proceeds of this equity securities issue. In light of these events, should the \$10,000,000 debt maturing in March 2015 be included in current liabilities at December 31, 2014?

Professional Research

IFRS13-11 Hincapie Co. manufactures specialty bike accessories. The company is most well known for its product quality, and it has offered one of the best warranties in the industry on its higher-priced products—a lifetime guarantee. The warranty on these products is included in the sales price. Hincapie has a contract with a service company, which performs all warranty work on Hincapie products. Under the contract, Hincapie guarantees the service company at least \$200,000 of warranty work for each year of the 3-year contract.

The recent economic recession has been hard on Hincapie's business, and sales for its higher-end products have been especially adversely impacted. As a result, Hincapie is planning to restructure its high-quality lines by moving manufacturing for those products into one of its other factories, shutting down assembly lines, and terminating workers. In order to keep some workers on-board, Hincapie plans to bring all warranty work in-house. It can terminate the current warranty contract by making a one-time termination payment of \$75,000.

The restructuring plans have been discussed by management during November 2013; they plan to get approval from the board of directors at the December board meeting and execute the restructuring in early 2014. Given the company's past success, the accounting for restructuring activities has never come up. Hincapie would like you to do some research on how it should account for this restructuring according to IFRS.

Instructions

Access the IFRS authoritative literature at the IASB website (<http://eifrs.iasb.org/>). (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) Identify the accounting literature that addresses the accounting for the various costs that will be incurred in the restructuring.
- (b) Advise Hincapie on the restructuring costs. When should Hincapie recognize liabilities arising from the restructuring? What costs can be included? What costs are excluded?
- (c) Does Hincapie have a liability related to the service contract? Explain. If Hincapie has a liability, at what amount should it be recorded?

International Financial Reporting Problem

Marks and Spencer plc

IFRS13-12 The financial statements of **Marks and Spencer plc (M&S)** are available at the book's companion website or can be accessed at http://annualreport.marksandspencer.com/_assets/downloads/Marks-and-Spencer-Annual-report-and-financial-statements-2012.pdf.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) What was M&S's 2012 short-term debt and related weighted-average interest rate on this debt?
- (b) What was M&S's 2012 working capital, acid-test ratio, and current ratio? Comment on M&S's liquidity.
- (c) What types of commitments and contingencies has M&S reported in its financial statements?

ANSWERS TO IFRS SELF-TEST QUESTIONS

1. b 2. c 3. b 4. c 5. c

Remember to check the book's companion website to find additional resources for this chapter.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Describe the formal procedures associated with issuing long-term debt.
- 2 Identify various types of bond issues.
- 3 Describe the accounting valuation for bonds at date of issuance.
- 4 Apply the methods of bond discount and premium amortization.
- 5 Describe the accounting for the extinguishment of debt.
- 6 Explain the accounting for long-term notes payable.
- 7 Describe the accounting for the fair value option.
- 8 Explain the reporting of off-balance-sheet financing arrangements.
- 9 Indicate how to present and analyze long-term debt.

Going Long

The clock is ticking. Every second, it seems, someone in the world takes on more debt. The idea of a debt clock for an individual nation is familiar to anyone who has been to Times Square in New York, where the American public shortfall is revealed. The global debt clock shown below (accessed in October 2012) indicates the global figure for almost all government debts in dollar terms.

Does it matter? After all, world governments owe the money to their own citizens, not to the Martians. But the rising total is important for two reasons. First, when government debt rises faster than economic output (as it has been doing in recent years), this implies more state interference in the economy and higher taxes in the future. Second, debt must be rolled over at regular intervals. This creates a recurring popularity test for individual governments, much like reality-TV contestants facing a public phone vote every week. Fail that vote, as various euro-zone governments have done, and the country (and its neighbors) can be plunged into crisis.

In addition to government debt, companies are issuing corporate debt at a record pace. Why this trend? For one thing, low interest rates and rising inflows into fixed-income funds have triggered record bond issuances as banks cut back lending. In addition, for some high-rated companies, it can be riskier to borrow from a bank than the bond markets. The reason: High-rated companies tend to rely on short-term commercial paper, backed up by undrawn loans, to fund working capital but are left stranded when these markets freeze up. Some are now financing themselves with longer-term bonds instead.

In fact, nonfinancial companies are issuing 30-year bonds at a record pace, as they look to increase long-term borrowings, lock in low interest rates, and take advantage of investor demand. The charts on the next page show the substantial increase in bonds issues as interest rates have fallen.

Companies, like **Phillip Morris**, **Medtronic**, **Plains All American Pipeline**, and **Simon Property Group**, have all sold 30-year bonds recently. Increases in the issuance of these bonds suggest confidence in the economy as investors appear comfortable holding such long-term investments. In addition, companies have a strong appetite for issuing these bonds

CONCEPTUAL FOCUS

 - Extinguishments with modifications of terms

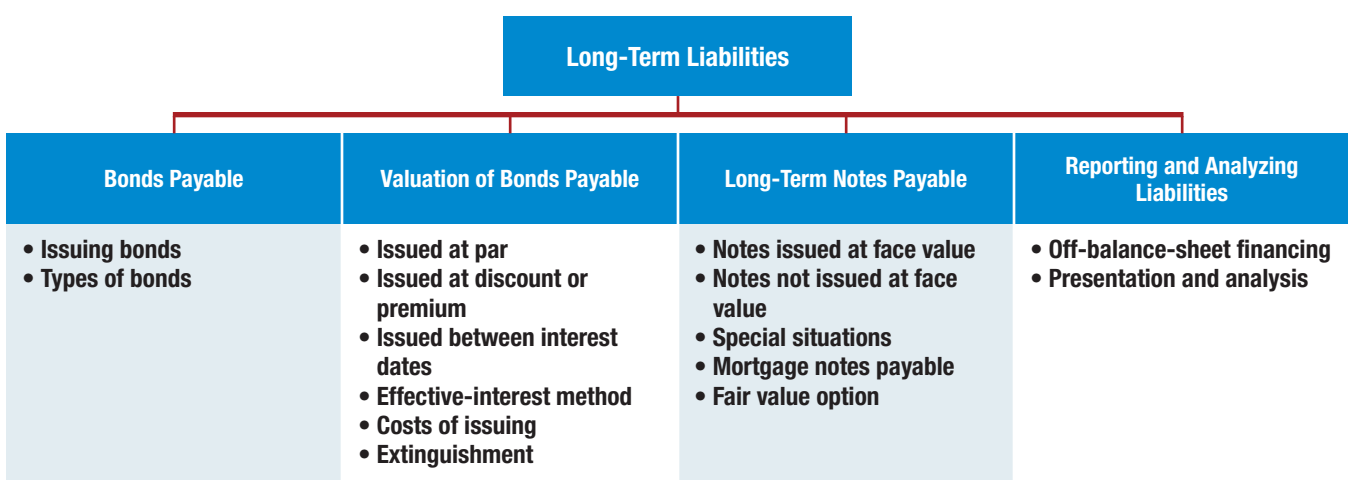

because they provide a substantial cash infusion at a relatively low interest rate. Hopefully, it will work out for both the investor and the company in the long run.

Monga, “Companies Feast on Cheap Money Market for 30-Year Bonds, Priced at Stark Lows, Brings Out GE, UPS and Other Once-Shy Issuers,” *Wall Street Journal* (October 8, 2012).

PREVIEW OF CHAPTER 14

As our opening story indicates, companies may rely on different forms of long-term borrowing, depending on market conditions and the features of various noncurrent liabilities. In this chapter, we explain the accounting issues related to long-term liabilities. The content and organization of the chapter are as follows.

BONDS PAYABLE

LEARNING OBJECTIVE 1

Describe the formal procedures associated with issuing long-term debt.

Long-term debt consists of probable future sacrifices of economic benefits arising from present obligations that are not payable within a year or the operating cycle of the company, whichever is longer. Bonds payable, long-term notes payable, mortgages payable, pension liabilities, and lease liabilities are examples of long-term liabilities.

A corporation, per its bylaws, usually requires approval by the board of directors and the stockholders before bonds or notes can be issued. The same holds true for other types of long-term debt arrangements.

Generally, long-term debt has various **covenants** or **restrictions** that protect both lenders and borrowers. The indenture or agreement often includes the amounts authorized to be issued, interest rate, due date(s), call provisions, property pledged as security, sinking fund requirements, working capital and dividend restrictions, and limitations concerning the assumption of additional debt. Companies should describe these features in the body of the financial statements or the notes if important for a complete understanding of the financial position and the results of operations.

Although it would seem that these covenants provide adequate protection to the long-term debtholder, many bondholders suffer considerable losses when companies add more debt to the capital structure. Consider what can happen to bondholders in leveraged buyouts (LBOs), which are usually led by management. In an LBO of **RJR Nabisco**, for example, solidly rated $9\frac{3}{8}$ percent bonds due in 2016 plunged 20 percent in value when management announced the leveraged buyout. Such a loss in value occurs because the additional debt added to the capital structure increases the likelihood of default. Although covenants protect bondholders, they can still suffer losses when debt levels get too high.

Issuing Bonds

A bond arises from a contract known as a **bond indenture**. A bond represents a promise to pay (1) a sum of money at a designated maturity date, plus (2) periodic interest at a specified rate on the maturity amount (face value). Individual bonds are evidenced by a paper certificate and typically have a \$1,000 face value. Companies usually make bond interest payments semiannually, although the interest rate is generally expressed as an annual rate. The main purpose of bonds is to borrow for the long term when the amount of capital needed is too large for one lender to supply. By issuing bonds in \$100, \$1,000, or \$10,000 denominations, a company can divide a large amount of long-term indebtedness into many small investing units, thus enabling more than one lender to participate in the loan.

A company may sell an entire bond issue to an investment bank, which acts as a selling agent in the process of marketing the bonds. In such arrangements, investment banks may either underwrite the entire issue by guaranteeing a certain sum to the company, thus taking the risk of selling the bonds for whatever price they can get (firm underwriting). Or they may sell the bond issue for a commission on the proceeds of the sale (best-efforts underwriting). Alternatively, the issuing company may sell the bonds directly to a large institution, financial or otherwise, without the aid of an underwriter (private placement).

Types of Bonds

LEARNING OBJECTIVE 2

Identify various types of bond issues.

Presented on the next page, we define some of the more common types of bonds found in practice.

TYPES OF BONDS

SECURED AND UNSECURED BONDS. **Secured bonds** are backed by a pledge of some sort of collateral. Mortgage bonds are secured by a claim on real estate. Collateral trust bonds are secured by stocks and bonds of other corporations. Bonds not backed by collateral are **unsecured**. A **debenture bond** is unsecured. A “junk bond” is unsecured and also very risky, and therefore pays a high interest rate. Companies often use these bonds to finance leveraged buyouts.

TERM, SERIAL BONDS, AND CALLABLE BONDS. Bond issues that mature on a single date are called **term bonds**. Issues that mature in installments are called **serial bonds**. Serially maturing bonds are frequently used by school or sanitary districts, municipalities, or other local taxing bodies that receive money through a special levy. **Callable bonds** give the issuer the right to call and redeem the bonds prior to maturity.

CONVERTIBLE, COMMODITY-BACKED, AND DEEP-DISCOUNT BONDS. If bonds are convertible into other securities of the corporation for a specified time after issuance, they are **convertible bonds**.

Two types of bonds have been developed in an attempt to attract capital in a tight money market—commodity-backed bonds and deep-discount bonds. **Commodity-backed bonds** (also called **asset-linked bonds**) are redeemable in measures of a commodity, such as barrels of oil, tons of coal, or ounces of rare metal. To illustrate, **Sunshine Mining**, a silver-mining company, sold two issues of bonds redeemable with either \$1,000 in cash or 50 ounces of silver, whichever is greater at maturity, and that have a stated interest rate of 8½ percent. The accounting problem is one of projecting the maturity value, especially since silver has fluctuated between \$4 and \$40 an ounce since issuance.

JCPenney Company sold the first publicly marketed long-term debt securities in the United States that do not bear interest. These **deep-discount bonds**, also referred to as **zero-interest debenture bonds**, are sold at a discount that provides the buyer's total interest payoff at maturity.

REGISTERED AND BEARER (COUPON) BONDS. Bonds issued in the name of the owner are **registered bonds** and require surrender of the certificate and issuance of a new certificate to complete a sale. A **bearer** or **coupon bond**, however, is not recorded in the name of the owner and may be transferred from one owner to another by mere delivery.

INCOME AND REVENUE BONDS. **Income bonds** pay no interest unless the issuing company is profitable. **Revenue bonds**, so called because the interest on them is paid from specified revenue sources, are most frequently issued by airports, school districts, counties, toll-road authorities, and governmental bodies.

What do the numbers mean? ALL ABOUT BONDS

How do investors monitor their bond investments? One way is to review the bond listings found in the newspaper or online. Corporate bond listings show the coupon (interest) rate, maturity date, and last price. However, because corpo-

rate bonds are more actively held by large institutional investors, the listings also indicate the current yield and the volume traded. Corporate bond listings would look like those below.

Issuer	Maturity	Amount (\$ millions)	Price	Coupon	Yield
Wal-Mart Stores, Inc.	08/15/2037	3,000	145.4	6.50	3.69
General Electric	12/06/2017	4,000	118.2	5.25	1.58

The companies issuing the bonds are listed in the first column, in this case, **Wal-Mart Stores, Inc.** and **General Electric**. Immediately after the names is a column with the maturity date, followed by the amount and price of the bonds. As indicated, Wal-Mart pays a coupon rate of 6.5 percent and yields 3.69 percent. General Electric pays a coupon rate of 5.25 percent and yields 1.58 percent. The lower yield for General Electric arises because the time to maturity is much shorter than Wal-Mart's.

Also, interest rates and the bond's term to maturity have a real effect on bond prices. For example, an increase in interest rates will lead to a decline in bond values. Similarly, a decrease in interest rates will lead to a rise in bond values. The data reported in the table to the right, based on three different bond funds, demonstrate these relationships between interest rate changes and bond values.

Bond Price Changes in Response to Interest Rate Changes	1% Interest Rate Increase	1% Interest Rate Decrease
Short-term fund (2–5 years)	–2.5%	+2.5%
Intermediate-term fund (5 years)	–5%	+5%
Long-term fund (10 years)	–10%	+10%

Data source: The Vanguard Group.

Another factor that affects bond prices is the call feature, which decreases the value of the bond. Investors must be rewarded for the risk that the issuer will call the bond if interest rates decline, which would force the investor to reinvest at lower rates.

VALUATION OF BONDS PAYABLE—DISCOUNT AND PREMIUM

LEARNING OBJECTIVE 3
Describe the accounting valuation for bonds at date of issuance.

The issuance and marketing of bonds to the public does not happen overnight. It usually takes weeks or even months. First, the issuing company must arrange for underwriters that will help market and sell the bonds. Then, it must obtain the Securities and Exchange Commission's approval of the bond issue, undergo audits, and issue a prospectus (a document which describes the features of the bond and related financial information). Finally, the company must generally have the bond certificates printed. Frequently, the issuing company establishes the terms of a bond indenture well in advance of the sale of the bonds. Between the time the company sets these terms and the time it issues the bonds, the market conditions and the financial position of the issuing corporation may change significantly. Such changes affect the marketability of the bonds and thus their selling price.

The selling price of a bond issue is set by the supply and demand of buyers and sellers, relative risk, market conditions, and the state of the economy. The investment community values a bond at the **present value of its expected future cash flows**, which consist of (1) interest and (2) principal. The rate used to compute the present value of these cash flows is the interest rate that provides an acceptable return on an investment commensurate with the issuer's risk characteristics.

The interest rate written in the terms of the bond indenture (and often printed on the bond certificate) is known as the **stated, coupon, or nominal rate**. The issuer of the bonds sets this rate. The stated rate is expressed as a percentage of the **face value** of the bonds (also called the **par value, principal amount, or maturity value**).

If the rate employed by the investment community (buyers) differs from the stated rate, the present value of the bonds computed by the buyers (and the current purchase price) will differ from the face value of the bonds. The difference between the face value and the present value of the bonds determines the actual price that buyers pay for the bonds. This difference is either a discount or premium.¹

¹It is generally the case that the stated rate of interest on bonds is set in rather precise decimals (such as 6.875%). Companies usually attempt to align the stated rate as closely as possible with the market or effective rate at the time of issue.

- If the bonds sell for less than face value, they sell at a **discount**.
- If the bonds sell for more than face value, they sell at a **premium**.

The rate of interest actually earned by the bondholders is called the **effective yield** or **market rate**. If bonds sell at a discount, the effective yield exceeds the stated rate. Conversely, if bonds sell at a premium, the effective yield is lower than the stated rate. Several variables affect the bond's price while it is outstanding, most notably the market rate of interest. There is an inverse relationship between the market interest rate and the price of the bond.

Here we consider an example to illustrate the computation of the **present value of a bond issue**. Assume that ServiceMaster issues \$100,000 in bonds, due in five years with 9 percent interest payable annually at year-end. At the time of issue, the market rate for such bonds is 11 percent. The time diagram in Illustration 14-1 depicts both the interest and the principal cash flows.

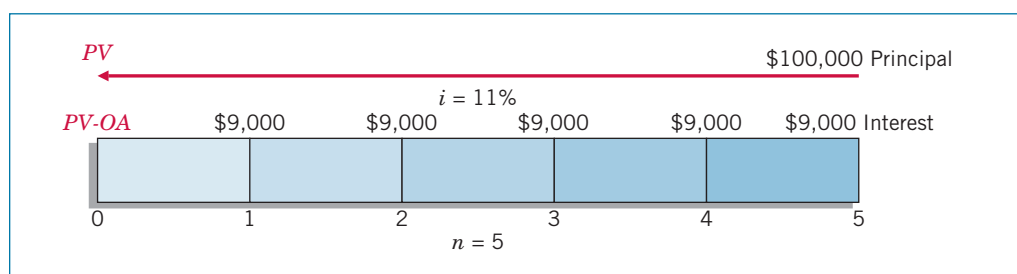

ILLUSTRATION 14-1
Time Diagram for Bond
Cash Flows

The actual principal and interest cash flows are discounted at an 11 percent rate for five periods, as shown in Illustration 14-2.

Present value of the principal:	
\$100,000 × .59345 (Table 6-2)	\$59,345.00
Present value of the interest payments:	
\$9,000 × 3.69590 (Table 6-4)	<u>33,263.10</u>
Present value (selling price) of the bonds	<u>\$92,608.10</u>

ILLUSTRATION 14-2
Present Value
Computation of Bond
Selling at a Discount

By paying \$92,608.10 at the date of issue, investors earn an effective rate or yield of 11 percent over the five-year term of the bonds. These bonds would sell at a discount of \$7,391.90 (\$100,000 – \$92,608.10). The price at which the bonds sell is typically stated as a **percentage** of the face or par value of the bonds. For example, the ServiceMaster bonds sold for 92.6 (92.6% of par). If ServiceMaster had received \$102,000, then the bonds sold for 102 (102% of par).

When bonds sell at less than face value, it means that investors demand a rate of interest **higher** than the stated rate. Usually this occurs because the investors can earn a greater rate on alternative investments of equal risk. They cannot change the stated rate, so they refuse to pay face value for the bonds. Thus, by changing the amount invested, they alter the effective rate of return. The investors receive interest at the stated rate computed on the face value, but they actually earn at **an effective rate that exceeds the stated rate because they paid less than face value for the bonds**. (Later in the chapter, in Illustrations 14-6 and 14-7 (pages 772–773), we show an illustration for a bond that sells at a premium.)

What do the numbers mean?

HOW'S MY RATING?

Two major publication companies, **Moody's Investors Service** and **Standard & Poor's Corporation**, issue quality ratings on every public debt issue. The following table summarizes the ratings issued by Standard & Poor's, along with historical default rates on bonds with different ratings.

Original rating	AAA	AA	A	BBB	BB	B	CCC
Default rate	0.52%	1.31	2.32	6.64	19.52	35.76	54.38

Data source: Standard & Poor's Corp.

As expected, bonds receiving the highest quality rating of AAA have the lowest historical default rates. Bonds rated below BBB, which are considered below investment grade ("junk bonds"), experience default rates ranging from 20 to 50 percent.

Debt ratings reflect credit quality. The market closely monitors these ratings when determining the required yield and pricing of bonds at issuance and in periods after issuance, especially if a bond's rating is upgraded or downgraded. Unfortunately, the median rating of companies assessed by Standard & Poor's has fallen from A in 1981 to BBB today, as shown in the chart to the right.

The BBB rating is the lowest possible "investment grade" or, to put it another way, is just one notch above "junk" bond status. It should be noted that investors who seek triple-A debt are running out of options. Standard & Poor's recently gave its top rating to just four U.S. industrial companies: **Automatic Data Processing, ExxonMobil, Johnson & Johnson, and Microsoft.**

Timmons, "The Credit Raters: How They Work and How They Might Work Better," *BusinessWeek* (April 8, 2002), pp. 38–40; Standard and Poor's, *Global Fixed Income Research*, "Fallen Angel Activity" (February 6, 2007); and "Betting the Balance Sheet," *The Economist* (June 24, 2010).

Bonds Issued at Par on Interest Date

When a company issues bonds on an interest payment date at par (face value), it accrues no interest. No premium or discount exists. The company simply records the cash proceeds and the face value of the bonds. To illustrate, if Buchanan Company issues at par 10-year term bonds with a par value of \$800,000, dated January 1, 2014, and bearing interest at an annual rate of 10 percent payable semiannually on January 1 and July 1, it records the following entry.

Cash	800,000	
Bonds Payable		800,000

Buchanan records the first semiannual interest payment of \$40,000 ($\$800,000 \times .10 \times 1/2$) on July 1, 2014, as follows.

Interest Expense	40,000	
Cash		40,000

It records accrued interest expense at December 31, 2014 (year-end), as follows.

Interest Expense	40,000	
Interest Payable		40,000

LEARNING OBJECTIVE 4

Apply the methods of bond discount and premium amortization.

Bonds Issued at Discount or Premium on Interest Date

If Buchanan Company issues the \$800,000 of bonds on January 1, 2014, at 97 (meaning 97% of par), it records the issuance as shown on the top of the next page.

Cash ($\$800,000 \times .97$)	776,000	
Discount on Bonds Payable	24,000	
Bonds Payable		800,000

Recall from our earlier discussion that because of its relation to interest, **companies amortize the discount and charge it to interest expense over the period of time that the bonds are outstanding.**

The **straight-line method** amortizes a constant amount each interest period (in this case 20 interest periods).² For example, using the bond discount of \$24,000, Buchanan amortizes \$1,200 to interest expense each period for 20 periods ($\$24,000 \div 20$).

Buchanan records the first semiannual interest payment of \$40,000 ($\$800,000 \times 10\% \times \frac{1}{2}$) and the bond discount on July 1, 2014, as follows.

Interest Expense	41,200	
Discount on Bonds Payable		1,200
Cash		40,000

At December 31, 2014, Buchanan makes the following adjusting entry.

Interest Expense	41,200	
Discount on Bonds Payable		1,200
Interest Payable		40,000

At the end of the first year, 2014, the balance in the Discount on Bonds Payable account is \$21,600 ($\$24,000 - \$1,200 - \$1,200$). Over the term of the bonds, the balance in Discount on Bonds Payable will decrease by the same amount until it has zero balance at the maturity date of the bonds.

If instead of issuing the bonds on January 1, 2014, Buchanan dates and sells the bonds on October 1, 2014, and if the fiscal year of the corporation ends on December 31, the discount amortized during 2014 would be only 3/12 of 1/10 of \$24,000, or \$600. Buchanan must also record three months of accrued interest on December 31.

Premium on Bonds Payable is accounted for in a manner similar to that for Discount on Bonds Payable. If Buchanan dates and sells 10-year bonds with a par value of \$800,000 on January 1, 2014, at 103, it records the issuance as follows.

Cash ($\$800,000 \times 1.03$)	824,000	
Premium on Bonds Payable		24,000
Bonds Payable		800,000

With the bond premium of \$24,000, Buchanan amortizes \$1,200 to interest expense each period for 20 periods ($\$24,000 \div 20$).

Buchanan records the first semiannual interest payment of \$40,000 ($\$800,000 \times 10\% \times \frac{1}{2}$) and the bond premium on July 1, 2014, as follows.

Interest Expense	38,800	
Premium on Bonds Payable	1,200	
Cash		40,000

At December 31, 2014, Buchanan makes the following adjusting entry.

Interest Expense	38,800	
Premium on Bonds Payable	1,200	
Interest Payable		40,000

Amortization of a discount increases interest expense. Amortization of a premium decreases interest expense. Later in the chapter, we discuss amortization of a discount or premium under the effective-interest method.

²The effective-interest method is preferred for amortization of discount or premium. To keep these initial illustrations simple, we have chosen to use the straight-line method.

The issuer may call some bonds at a stated price after a certain date. This call feature gives the issuing corporation the opportunity to reduce its bonded indebtedness or take advantage of lower interest rates. **Whether callable or not, a company must amortize any premium or discount over the bond's life to maturity because early redemption (call of the bond) is not a certainty.**

Bonds Issued Between Interest Dates

Companies usually make bond interest payments semiannually, on dates specified in the bond indenture. When companies issue bonds on other than the interest payment dates, **buyers of the bonds will pay the seller the interest accrued from the last interest payment date to the date of issue.** The purchasers of the bonds, in effect, pay the bond issuer in advance for that portion of the full six-months' interest payment to which they are not entitled because they have not held the bonds for that period. **Then, on the next semiannual interest payment date, purchasers will receive the full six-months' interest payment.**

To illustrate, assume that on March 1, 2014, Taft Corporation issues 10-year bonds, dated January 1, 2014, with a par value of \$800,000. These bonds have an annual interest rate of 6 percent, payable semiannually on January 1 and July 1. Because Taft issues the bonds between interest dates, it records the bond issuance at **par plus accrued interest** as follows.

Cash	808,000	
Bonds Payable		800,000
Interest Expense ($\$800,000 \times .06 \times 2/12$)		8,000
(Interest Payable might be credited instead)		

The purchaser advances two months' interest. On July 1, 2014, four months after the date of purchase, Taft pays the purchaser six months' interest. Taft makes the following entry on July 1, 2014.

Interest Expense	24,000	
Cash		24,000

The Interest Expense account now contains a debit balance of \$16,000, which represents the proper amount of interest expense—four months at 6 percent on \$800,000.

The illustration above was simplified by having the January 1, 2014, bonds issued on March 1, 2014, **at par**. If, however, Taft issued the 6 percent bonds at 102, its March 1 entry would be:

Cash [$(\$800,000 \times 1.02) + (\$800,000 \times .06 \times 2/12)$]	824,000	
Bonds Payable		800,000
Premium on Bonds Payable ($\$800,000 \times .02$)		16,000
Interest Expense		8,000

Taft would amortize the premium **from the date of sale** (March 1, 2014), not from the date of the bonds (January 1, 2014).

International Perspective

IFRS requires the use of the effective-interest method. GAAP permits the use of the straight-line method if not materially different than the effective-interest method.

Effective-Interest Method

The preferred procedure for amortization of a discount or premium is the **effective-interest method** (also called **present value amortization**). Under the effective-interest method, companies:

1. Compute bond interest expense first by multiplying the **carrying value** (book value) of the bonds at the beginning of the period by the effective-interest rate.³

³The carrying value is the face amount minus any unamortized discount or plus any unamortized premium. The term *carrying value* is synonymous with *book value*.

2. Determine the bond discount or premium amortization next by comparing the bond interest expense with the interest (cash) to be paid.

Illustration 14-3 depicts graphically the computation of the amortization.

ILLUSTRATION 14-3
Bond Discount and
Premium Amortization
Computation

The effective-interest method produces a periodic interest expense equal to a **constant percentage of the carrying value of the bonds**. Since the percentage is the effective rate of interest incurred by the borrower at the time of issuance, the effective-interest method matches expenses with revenues better than the straight-line method.

Both the effective-interest and straight-line methods result in the **same total amount of interest expense over the term of the bonds**. However, when the annual amounts are materially different, generally accepted accounting principles require use of the effective-interest method. [1]

See the FASB
Codification section
(page 798).

Bonds Issued at a Discount

To illustrate amortization of a discount under the effective-interest method, Evermaster Corporation issued \$100,000 of 8 percent term bonds on January 1, 2014, due on January 1, 2019, with interest payable each July 1 and January 1. Because the investors required an effective-interest rate of 10 percent, they paid \$92,278 for the \$100,000 of bonds, creating a \$7,722 discount. Evermaster computes the \$7,722 discount as follows.⁴

Maturity value of bonds payable	\$100,000
Present value of \$100,000 due in 5 years at 10%, interest payable semiannually (Table 6-2); $FV(PVF_{10,5\%})$; $(\$100,000 \times .61391)$	\$61,391
Present value of \$4,000 interest payable semiannually for 5 years at 10% annually (Table 6-4); $R(PVF-OA_{10,5\%})$; $(\$4,000 \times 7.72173)$	<u>30,887</u>
Less: Proceeds from sale of bonds	<u>92,278</u>
Discount on bonds payable	<u>\$ 7,722</u>

ILLUSTRATION 14-4
Computation of Discount
on Bonds Payable

The five-year amortization schedule appears in Illustration 14-5 (page 772).

Evermaster records the issuance of its bonds at a discount on January 1, 2014, as follows.

Cash	92,278	
Discount on Bonds Payable	7,722	
Bonds Payable		100,000

It records the first interest payment on July 1, 2014, and amortization of the discount as follows.

Interest Expense	4,614	
Discount on Bonds Payable	614	
Cash		4,000

⁴Because companies pay interest semiannually, the interest rate used is 5% ($10\% \times \frac{1}{2}$). The number of periods is 10 (5 years \times 2).

	<u>\$40,000</u>	<u>\$47,722</u>	<u>\$7,722</u>	

^a\$4,000 = \$100,000 × .08 × 6/12 ^c\$614 = \$4,614 - \$4,000
^b\$4,614 = \$92,278 × .10 × 6/12 ^d\$92,892 = \$92,278 + \$614

Evermaster records the interest expense accrued at December 31, 2014 (year-end), and amortization of the discount as follows.

Interest Expense	4,645	
Interest Payable		4,000
Discount on Bonds Payable		645

Bonds Issued at a Premium

Now assume that for the bond issue by Evermaster Corporation (page 771), investors are willing to accept an effective-interest rate of 6 percent. In that case, they would pay \$108,530 or a premium of \$8,530, computed as follows.

ILLUSTRATION 14-6
Computation of Premium
on Bonds Payable

Maturity value of bonds payable	\$100,000
Present value of \$100,000 due in 5 years at 6%, interest payable semiannually (Table 6-2); $FV(PVF_{10,3\%})$; $(\$100,000 \times .74409)$	74,409
Present value of \$4,000 interest payable semiannually for 5 years at 6% annually (Table 6-4); $R(PVF-OA_{10,3\%})$; $(\$4,000 \times 8.53020)$	<u>34,121</u>
Less: Proceeds from sale of bonds	<u>108,530</u>
Premium on bonds payable	\$ 8,530

The five-year amortization schedule appears in Illustration 14-7.

Evermaster records the issuance of its bonds at a premium on January 1, 2014, as follows.

Cash	108,530	
Premium on Bonds Payable		8,530
Bonds Payable		100,000

Evermaster records the first interest payment on July 1, 2014, and amortization of the premium as follows.

Interest Expense	3,256	
Premium on Bonds Payable	744	
Cash		4,000

SCHEDULE OF BOND PREMIUM AMORTIZATION				
EFFECTIVE-INTEREST METHOD—SEMIANNUAL INTEREST PAYMENTS				
5-YEAR, 8% BONDS SOLD TO YIELD 6%				
Date	Cash Paid	Interest Expense	Premium Amortized	Carrying Amount of Bonds
1/1/14				\$108,530
7/1/14	\$ 4,000 ^a	\$ 3,256 ^b	\$ 744 ^c	107,786 ^d

^a\$4,000 = \$100,000 × .08 × 6/12 ^c\$744 = \$4,000 – \$3,256
^b\$3,256 = \$108,530 × .06 × 6/12 ^d\$107,786 = \$108,530 – \$744

ILLUSTRATION 14-7

Bond Premium Amortization Schedule

Calculator Solution for Present Value of Bonds:		
	Inputs	Answer
N	10	
I/YR	3	
PV	?	108,530
PMT	-4,000	
FV	-100,000	

Evermaster should amortize the discount or premium as an adjustment to interest expense over the life of the bond in such a way as to result in a **constant rate of interest** when applied to the carrying amount of debt outstanding at the beginning of any given period.

Accruing Interest

In our previous examples, the interest payment dates and the date the financial statements were issued were essentially the same. For example, when Evermaster sold bonds at a premium, the two interest payment dates coincided with the financial reporting dates. However, what happens if Evermaster wishes to report financial statements at the end of February 2014? In this case, the company **prorates** the premium by the appropriate number of months, to arrive at the proper interest expense, as follows.

Interest accrual (\$4,000 × %)	\$1,333.33
Premium amortized (\$744 × %)	(248.00)
Interest expense (Jan.–Feb.)	<u>\$1,085.33</u>

ILLUSTRATION 14-8

Computation of Interest Expense

Evermaster records this accrual as follows.

Interest Expense	1,085.33	
Premium on Bonds Payable	248.00	
Interest Payable		1,333.33

If the company prepares financial statements six months later, it follows the same procedure. That is, the premium amortized would be as follows.

Premium amortized (March–June) (\$744 × %)	\$496.00
Premium amortized (July–August) (\$766 × %)	<u>255.33</u>
Premium amortized (March–August)	<u>\$751.33</u>

ILLUSTRATION 14-9

Computation of Premium Amortization

The interest-accrual computation is much simpler if the company uses the straight-line method. For example, the total premium is \$8,530, which Evermaster allocates evenly over the five-year period. Thus, premium amortization per month is \$142.17 (\$8,530 ÷ 60 months).

Classification of Discount and Premium

Discount on bonds payable is **not an asset**. It does not provide any future economic benefit. In return for the use of borrowed funds, a company must pay interest. A bond discount means that the company borrowed less than the face or maturity value of the bond. It therefore faces an actual (effective) interest rate higher than the stated (nominal) rate. Conceptually, discount on bonds payable is a liability valuation account. That is, it reduces the face or maturity amount of the related liability.⁵ This account is referred to as a **contra account**.

Similarly, premium on bonds payable has no existence apart from the related debt. The lower interest cost results because the proceeds of borrowing exceed the face or maturity amount of the debt. Conceptually, premium on bonds payable is a *liability* valuation account. It adds to the face or maturity amount of the related liability.⁶ This account is referred to as an **adjunct account**. As a result, **companies report bond discounts and bond premiums as a direct deduction from or addition to the face amount of the bond.**

Costs of Issuing Bonds

Underlying Concepts

Because bond issue costs do not meet the definition of an asset, some argue they should be expensed at issuance.

The issuance of bonds involves engraving and printing costs, legal and accounting fees, commissions, promotion costs, and other similar charges. Companies are required to charge these costs to an asset account (usually long-term), often referred to as Unamortized Bond Issue Costs. Companies then allocate Unamortized Bond Issue Costs to expense over the life of the debt, in a manner similar to that used for discount on bonds. [2]

We disagree with this approach. Unamortized bond issue cost in our view is an expense (or a reduction of the related liability).

Apparently the FASB also disagrees with the current GAAP treatment and notes in *Concepts Statement No. 6* that debt issue cost is not considered an asset because it provides no future economic benefit. The cost of issuing bonds, in effect, reduces the proceeds of the bonds issued and increases the effective-interest rate. Companies may thus account for it the same as the unamortized discount.

There is an obvious difference between GAAP and *Concepts Statement No. 6's* view of debt issue costs. However, until an issued standard supersedes existing GAAP, **unamortized bond issue costs are treated as a deferred charge and amortized over the life of the debt.**

To illustrate the accounting for costs of issuing bonds, assume that Microchip Corporation sold \$20,000,000 of 10-year debenture bonds for \$20,795,000 on January 1, 2014 (also the date of the bonds). Costs of issuing the bonds were \$245,000. Microchip records the issuance of the bonds and amortization of the bond issue costs as follows.

January 1, 2014		
Cash	20,550,000	
Unamortized Bond Issue Costs	245,000	
Premium on Bonds Payable		795,000
Bonds Payable		20,000,000
(To record issuance of bonds)		
December 31, 2014		
Bond Issue Expense	24,500	
Unamortized Bond Issue Costs		24,500
(To amortize one year of bond issue costs—straight-line method)		

⁵"Elements of Financial Statements of Business Enterprises," *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, 1980).

⁶*Ibid.*, par. 238.

Microchip continues to amortize the bond issue costs in the same way over the life of the bonds. Although the effective-interest method is preferred, in practice companies may use the straight-line method to amortize bond issue costs because it is easier and the results are not materially different.

International Perspective

IFRS requires that issue costs reduce the carrying amount of the bond, which increases the effective-interest rate.

Extinguishment of Debt

How do companies record the payment of debt—often referred to as **extinguishment of debt**? If a company holds the bonds (or any other form of debt security) to maturity, the answer is straightforward: The company does not compute any gains or losses. It will have fully amortized any premium or discount and any issue costs at the date the bonds mature. As a result, the carrying amount will equal the maturity (face) value of the bond. As the maturity or face value will also equal the bond's fair value at that time, no gain or loss exists.

In some cases, a company extinguishes debt before its maturity date.⁷ The amount paid on extinguishment or redemption before maturity, including any call premium and expense of reacquisition, is called the **reacquisition price**. On any specified date, the **net carrying amount** of the bonds is the amount payable at maturity, adjusted for unamortized premium or discount, and cost of issuance. Any excess of the net carrying amount over the reacquisition price is a **gain from extinguishment**. The excess of the reacquisition price over the net carrying amount is a **loss from extinguishment**. At the time of reacquisition, **the unamortized premium or discount, and any costs of issue applicable to the bonds, must be amortized up to the reacquisition date.**

To illustrate, assume that on January 1, 2007, General Bell Corp. issued at 97 bonds with a par value of \$800,000, due in 20 years. It incurred bond issue costs totaling \$16,000. Eight years after the issue date, General Bell calls the entire issue at 101 and cancels it.⁸ At that time, the unamortized discount balance is \$14,400, and the unamortized issue cost balance is \$9,600. Illustration 14-10 indicates how General Bell computes the loss on redemption (extinguishment).

5 LEARNING OBJECTIVE

Describe the accounting for the extinguishment of debt.

Reacquisition price ($\$800,000 \times 1.01$)		\$808,000
Net carrying amount of bonds redeemed:		
Face value	\$800,000	
Unamortized discount ($\$24,000^* \times 12/20$)	(14,400)	
Unamortized issue costs ($\$16,000 \times 12/20$) (both amortized using straight-line basis)	(9,600)	(776,000)
Loss on redemption		\$ 32,000
* $[\$800,000 \times (1 - .97)]$		

ILLUSTRATION 14-10
Computation of Loss on Redemption of Bonds

⁷Some companies have attempted to extinguish debt through an in-substance defeasance.

In-substance defeasance is an arrangement whereby a company provides for the future repayment of a long-term debt issue by placing purchased securities in an irrevocable trust. The company pledges the principal and interest of the securities in the trust to pay off the principal and interest of its own debt securities as they mature. However, it is not legally released from its primary obligation for the debt that is still outstanding. In some cases, debtholders are not even aware of the transaction and continue to look to the company for repayment. This practice is not considered an extinguishment of debt, and therefore the company does not record a gain or loss.

⁸The issuer of callable bonds must generally exercise the call on an interest date. Therefore, the amortization of any discount or premium will be up to date, and there will be no accrued interest. However, early extinguishments through purchases of bonds in the open market are more likely to be on other than an interest date. If the purchase is not made on an interest date, the discount or premium must be amortized, and the interest payable must be accrued from the last interest date to the date of purchase.

General Bell records the reacquisition and cancellation of the bonds as follows.

Bonds Payable	800,000	
Loss on Redemption of Bonds	32,000	
Discount on Bonds Payable		14,400
Unamortized Bond Issue Costs		9,600
Cash		808,000

Note that it is often advantageous for the issuer to acquire the **entire** outstanding bond issue and replace it with a new bond issue bearing a lower rate of interest. The replacement of an existing issuance with a new one is called **refunding**. Whether the early redemption or other extinguishment of outstanding bonds is a nonrefunding or a refunding situation, a company should recognize the difference (gain or loss) between the reacquisition price and the net carrying amount of the redeemed bonds in income of the period of redemption.⁹

What do the numbers mean?

YOUR DEBT IS KILLING MY EQUITY

Traditionally, investors in the equity and bond markets operate in their own separate worlds. However, in recent volatile markets, even quiet murmurs in the bond market have been amplified into movements (usually negative) in share prices. At one extreme, these gyrations heralded the demise of a company well before the investors could sniff out the problem.

The swift decline of **Enron** in late 2001 provided the ultimate lesson: A company with no credit is no company at all. As one analyst remarked, “You can no longer have an opinion on a company’s shares without having an appreciation for its credit rating.” Indeed, other energy companies also felt the effect of Enron’s troubles as lenders tightened or closed down the credit supply and raised interest rates on already-high levels of debt. The result? Stock prices took a hit.

Other industries are not immune from the negative shareholder effects of credit problems. For example, analysts at **TheStreet.com** compiled a list of companies with a focus on

debt levels. Companies like **Copel CIA** (an energy distribution company) were rewarded with improved stock ratings, based on their manageable debt levels. In contrast, other companies with high debt levels and low ability to cover interest costs were not viewed very favorably. Among them is **Goodyear Tire and Rubber**, which reported debt six times greater than its equity.

Goodyear is a classic example of how swift and crippling a heavy debt-load can be. Not too long ago, Goodyear had a good credit rating and was paying a good dividend. But, with mounting operating losses, Goodyear’s debt became a huge burden, its debt rating fell to junk status, the company cut its dividend, and its stock price dropped 80 percent. Only recently has Goodyear been able to dig out of its debt ditch. This was yet another example of stock prices taking a hit due to concerns about credit quality. Thus, even if your investment tastes are in equity, keep an eye on the liabilities.

R4; Herb Greenberg, “The Hidden Dangers of Debt,” *Fortune* (July 21, 2003), p. 153; and Christine Richard, “Holders of Corporate Bonds Seek Protection from Risk,” *Wall Street Journal* (December 17–18, 2005), p. B4.

LONG-TERM NOTES PAYABLE

LEARNING OBJECTIVE 6

Explain the accounting for long-term notes payable.

The difference between current notes payable and **long-term notes payable** is the maturity date. As discussed in Chapter 13, short-term notes payable are those that companies expect to pay within a year or the operating cycle, whichever is longer. Long-term notes are similar in substance to bonds in that both have fixed maturity dates and carry either a stated or implicit interest rate. However, notes do not trade as readily as bonds in the organized public securities markets. Noncorporate and small corporate enterprises issue notes as their long-term instruments. Larger corporations issue both long-term notes and bonds.

⁹At one time, companies were required to report gains and losses on extinguishment of debt as extraordinary items. In response to increasing debt extinguishments as part of normal risk management, the FASB concluded that such gains or losses are neither unusual nor infrequent. As a result, the FASB eliminated the requirement for extraordinary item treatment for extinguishment of debt. [3]

Accounting for notes and bonds is quite similar. Like a bond, a note is valued at the present value of its future interest and principal cash flows. The company amortizes any discount or premium over the life of the note, just as it would the discount or premium on a bond.¹⁰ Companies compute the present value of an interest-bearing note, record its issuance, and amortize any discount or premium and accrual of interest in the same way that they do for bonds (as shown on pages 768–773 of this chapter).

As you might expect, accounting for long-term notes payable parallels accounting for long-term notes receivable as was presented in Chapter 7.

Notes Issued at Face Value

In Chapter 7, we discussed the recognition of a \$10,000, three-year note Scandinavian Imports issued at face value to Bigelow Corp. In this transaction, the stated rate and the effective rate were both 10 percent. The time diagram and present value computation on page 360 of Chapter 7 (see Illustration 7-9) for Bigelow Corp. are the same for the issuer of the note, Scandinavian Imports, in recognizing a note payable. Because the present value of the note and its face value are the same, \$10,000, Scandinavian recognizes no premium or discount. It records the issuance of the note as follows.

Cash	10,000	
Notes Payable		10,000

Scandinavian Imports recognizes the interest incurred each year as follows.

Interest Expense	1,000	
Cash		1,000

Notes Not Issued at Face Value

Zero-Interest-Bearing Notes

If a company issues a zero-interest-bearing (non-interest-bearing) note¹¹ solely for cash, it measures the note’s present value by the cash received. The implicit interest rate is the **rate that equates the cash received with the amounts to be paid in the future**. The issuing company records the difference between the face amount and the present value (cash received) as a **discount and amortizes that amount to interest expense over the life of the note**.

An example of such a transaction is Beneficial Corporation’s offering of \$150 million of zero-coupon notes (deep-discount bonds) having an eight-year life. With a face value of \$1,000 each, these notes sold for \$327—a deep discount of \$673 each. The present value of each note is the cash proceeds of \$327. We can calculate the interest rate by determining the rate that equates the amount the investor currently pays with the amount to be received in the future. Thus, Beneficial amortizes the discount over the eight-year life of the notes using an effective-interest rate of 15 percent.¹²

¹⁰All payables that represent commitments to pay money at a determinable future date are subject to present value measurement techniques, except for the following specifically excluded types:

1. Normal accounts payable due within one year.
2. Security deposits, retainages, advances, or progress payments.
3. Transactions between parent and subsidiary.
4. Obligations payable at some indeterminable future date. [4]

¹¹Although we use the term “note” throughout this discussion, the basic principles and methodology apply equally to other long-term debt instruments.

¹² $\$327 = \$1,000(PVF_{8,i})$

$$PVF_{8,i} = \frac{\$327}{\$1,000} = .327$$

.327 = 15% (in Table 6-2 locate .32690).

FV	1,000	

To illustrate the entries and the amortization schedule for a long-term note payable, assume that Turtle Cove Company issued the three-year, \$10,000, zero-interest-bearing note to Jeremiah Company illustrated on page 361 of Chapter 7 (notes receivable). The implicit rate that equated the total cash to be paid (\$10,000 at maturity) to the present value of the future cash flows (\$7,721.80 cash proceeds at date of issuance) was 9 percent. (The present value of \$1 for 3 periods at 9% is \$0.77218.) Illustration 14-11 shows the time diagram for the single cash flow.

ILLUSTRATION 14-11
Time Diagram for Zero-Interest-Bearing Note

Turtle Cove records issuance of the note as follows.

Cash	7,721.80
Discount on Notes Payable	2,278.20
Notes Payable	10,000.00

Turtle Cove amortizes the discount and recognizes interest expense annually using the **effective-interest method**. Illustration 14-12 shows the three-year discount amortization and interest expense schedule. (This schedule is similar to the note receivable schedule of Jeremiah Company in Illustration 7-12.)

ILLUSTRATION 14-12
Schedule of Note Discount Amortization

SCHEDULE OF NOTE DISCOUNT AMORTIZATION				
EFFECTIVE-INTEREST METHOD				
0% NOTE DISCOUNTED AT 9%				
	Cash Paid	Interest Expense	Discount Amortized	Carrying Amount of Note
Date of issue				\$ 7,721.80
End of year 1	\$-0-	\$ 694.96 ^a	\$ 694.96 ^b	8,416.76 ^c
End of year 2	-0-	757.51	757.51	9,174.27
End of year 3	-0-	825.73 ^d	825.73	10,000.00
	<u>\$-0-</u>	<u>\$2,278.20</u>	<u>\$2,278.20</u>	
^a \$7,721.80 × .09 = \$694.96		^c \$7,721.80 + \$694.96 = \$8,416.76		
^b \$694.96 - 0 = \$694.96		^d 5¢ adjustment to compensate for rounding.		

Turtle Cove records interest expense at the end of the first year using the effective-interest method as follows.

Interest Expense (\$7,721.80 × 9%)	694.96
Discount on Notes Payable	694.96

The total amount of the discount, \$2,278.20 in this case, represents the expense that Turtle Cove Company will incur on the note over the three years.

Interest-Bearing Notes

The zero-interest-bearing note above is an example of the extreme difference between the stated rate and the effective rate. In many cases, the difference between these rates is not so great.

Consider the example from Chapter 7 where Marie Co. issued for cash a \$10,000, three-year note bearing interest at 10 percent to Morgan Corp. The market rate of interest for a note of similar risk is 12 percent. Illustration 7-13 (page 362) shows the time diagram depicting the cash flows and the computation of the present value of this note. In this case, because the effective rate of interest (12%) is greater than the stated rate (10%), the present value of the note is less than the face value. That is, the note is exchanged at a **discount**. Marie Co. records the issuance of the note as follows.

Cash	9,520
Discount on Notes Payable	480
Notes Payable	10,000

Marie Co. then amortizes the discount and recognizes interest expense annually using the **effective-interest method**. Illustration 14-13 shows the three-year discount amortization and interest expense schedule.

ILLUSTRATION 14-13
Schedule of Note
Discount Amortization

SCHEDULE OF NOTE DISCOUNT AMORTIZATION				
EFFECTIVE-INTEREST METHOD				
10% NOTE DISCOUNTED AT 12%				
	Cash Paid	Interest Expense	Discount Amortized	Carrying Amount of Note
Date of issue				\$ 9,520
End of year 1	\$1,000 ^a	\$1,142 ^b	\$142 ^c	9,662 ^d
End of year 2	1,000	1,159	159	9,821
End of year 3	1,000	1,179	179	10,000
	<u>\$3,000</u>	<u>\$3,480</u>	<u>\$480</u>	
^a \$10,000 × 10% = \$1,000 ^c \$1,142 – \$1,000 = \$142 ^b \$9,520 × 12% = \$1,142 ^d \$9,520 + \$142 = \$9,662				

Marie Co. records payment of the annual interest and amortization of the discount for the first year as follows (amounts per amortization schedule).

Interest Expense	1,142
Discount on Notes Payable	142
Cash	1,000

When the present value exceeds the face value, Marie Co. exchanges the note at a premium. It does so by recording the premium as a credit and amortizing it using the effective-interest method over the life of the note as annual reductions in the amount of interest expense recognized.

Special Notes Payable Situations

Notes Issued for Property, Goods, or Services

Sometimes, companies may receive property, goods, or services in exchange for a note payable. When exchanging the debt instrument for property, goods, or services in a bargained transaction entered into at arm’s length, the stated interest rate is presumed to be fair unless:

1. No interest rate is stated, or
2. The stated interest rate is unreasonable, or
3. The stated face amount of the debt instrument is materially different from the current cash sales price for the same or similar items or from the current fair value of the debt instrument.

In these circumstances, the company measures the present value of the debt instrument by the fair value of the property, goods, or services or by an amount that reasonably approximates the fair value of the note. **[5]** If there is **no stated rate of interest, the amount of interest is the difference between the face amount of the note and the fair value of the property.**

For example, assume that Scenic Development Company sells land having a cash sale price of \$200,000 to Health Spa, Inc. In exchange for the land, Health Spa gives a five-year, \$293,866, zero-interest-bearing note. The \$200,000 cash sale price represents the present value of the \$293,866 note discounted at 8 percent for five years. Should both parties record the transaction on the sale date at the face amount of the note, which is \$293,866? No—if they did, Health Spa’s Land account and Scenic’s sales would be overstated by \$93,866 (the interest for five years at an effective rate of 8%). Similarly, interest revenue to Scenic and interest expense to Health Spa for the five-year period would be understated by \$93,866.

Because the difference between the cash sale price of \$200,000 and the \$293,866 face amount of the note represents interest at an effective rate of 8 percent, the companies’ transaction is recorded at the exchange date as shown in Illustration 14-14.

ILLUSTRATION 14-14
Entries for Noncash Note
Transactions

Health Spa, Inc. (Buyer)		Scenic Development Company (Seller)	
Land	200,000	Notes Receivable	293,866
Discount on Notes Payable	93,866	Discount on Notes Rec.	93,866
Notes Payable	293,866	Sales Revenue	200,000

During the five-year life of the note, Health Spa amortizes annually a portion of the discount of \$93,866 as a charge to interest expense. Scenic Development records interest revenue totaling \$93,866 over the five-year period by also amortizing the discount. The effective-interest method is required, unless the results obtained from using another method are not materially different from those that result from the effective-interest method.

Choice of Interest Rate

In note transactions, the effective or market interest rate is either evident or determinable by other factors involved in the exchange, such as the fair value of what is given or received. But, if a company cannot determine the fair value of the property, goods, services, or other rights, and if the note has no ready market, the problem of determining the present value of the note is more difficult. To estimate the present value of a note under such circumstances, a company must approximate an applicable interest rate that may differ from the stated interest rate. This process of interest-rate approximation is called **imputation**, and the resulting interest rate is called an **imputed interest rate**.

The prevailing rates for similar instruments of issuers with similar credit ratings affect the choice of a rate. Other factors such as restrictive covenants, collateral, payment schedule, and the existing prime interest rate also play a part. Companies determine the imputed interest rate when they issue a note; any subsequent changes in prevailing interest rates are ignored.

To illustrate, assume that on December 31, 2014, Wunderlich Company issued a promissory note to Brown Interiors Company for architectural services. The note has a face value of \$550,000, a due date of December 31, 2019, and bears a stated interest rate of 2 percent, payable at the end of each year. Interest paid each period is therefore \$11,000 ($\$550,000 \times 2\%$). Wunderlich cannot readily determine the fair value of the architectural services, nor is the note readily marketable. On the basis of Wunderlich’s credit rating, the absence of collateral, the prime interest rate at that date, and the prevailing interest on Wunderlich’s other

outstanding debt, the company imputes an 8 percent interest rate as appropriate in this circumstance. Illustration 14-15 shows the time diagram depicting both cash flows.

ILLUSTRATION 14-15
Time Diagram for Interest-Bearing Note

The present value of the note and the imputed fair value of the architectural services are determined as follows.

Face value of the note	\$550,000
Present value of \$550,000 due in 5 years at 8% interest payable annually (Table 6-2); $FV(PVF_{5,8\%})$; $(\$550,000 \times .68058)$	\$374,319
Present value of \$11,000 interest payable annually for 5 years at 8%; $R(PVF-OA_{5,8\%})$; $(\$11,000 \times 3.99271)$	<u>43,920</u>
Present value of the note	<u>(418,239)</u>
Discount on notes payable	<u>\$131,761</u>

ILLUSTRATION 14-16
Computation of Imputed Fair Value and Note Discount

Wunderlich records issuance of the note in payment for the architectural services as follows.

December 31, 2014		
Buildings (or Construction in Process)	418,239	
Discount on Notes Payable	131,761	
Notes Payable		550,000

The five-year amortization schedule appears below.

SCHEDULE OF NOTE DISCOUNT AMORTIZATION				
EFFECTIVE-INTEREST METHOD				
2% NOTE DISCOUNTED AT 8% (IMPUTED)				
Date	Cash Paid (2%)	Interest Expense (8%)	Discount Amortized	Carrying Amount of Note
12/31/14				\$418,239
12/31/15	\$11,000 ^a	\$ 33,459 ^b	\$ 22,459 ^c	440,698 ^d
12/31/16	11,000	35,256	24,256	464,954
12/31/17	11,000	37,196	26,196	491,150
12/31/18	11,000	39,292	28,292	519,442
12/31/19	11,000	41,558 ^e	30,558	550,000
	<u>\$55,000</u>	<u>\$186,761</u>	<u>\$131,761</u>	

^a $\$550,000 \times 2\% = \$11,000$ ^d $\$418,239 + \$22,459 = \$440,698$

^b $\$418,239 \times 8\% = \$33,459$ ^e $\$3$ adjustment to compensate for rounding.

^c $\$33,459 - \$11,000 = \$22,459$

December 31, 2015		
Interest Expense	33,459	
Discount on Notes Payable		22,459
Cash		11,000

Mortgage Notes Payable

The most common form of long-term notes payable is a mortgage note payable. A **mortgage note payable** is a promissory note secured by a document called a mortgage that pledges title to property as security for the loan. Individuals, proprietorships, and partnerships use mortgage notes payable more frequently than do corporations. (As noted in the opening story, corporations usually find that bond issues offer advantages in obtaining large loans.)

The borrower usually receives cash for the face amount of the mortgage note. In that case, the face amount of the note is the true liability, and no discount or premium is involved. When the lender assesses “points,” however, the total amount received by the borrower is less than the face amount of the note.¹³ Points raise the effective-interest rate above the rate specified in the note. A **point** is 1 percent of the face of the note.

For example, assume that Harrick Co. borrows \$1,000,000, signing a 20-year mortgage note with a stated interest rate of 10.75 percent as part of the financing for a new plant. If Associated Savings demands 4 points to close the financing, Harrick will receive 4 percent less than \$1,000,000—or \$960,000—but it will be obligated to repay the entire \$1,000,000 at the rate of \$10,150 per month. Because Harrick received only \$960,000, and must repay \$1,000,000, its effective-interest rate is increased to approximately 11.3 percent on the money actually borrowed.

On the balance sheet, Harrick should report the mortgage note payable as a liability using a title such as “Mortgage Payable” or “Notes Payable—Secured,” with a brief disclosure of the property pledged in notes to the financial statements.

Mortgages may be payable in full at maturity or in installments over the life of the loan. If payable at maturity, Harrick classifies its mortgage payable as a long-term liability on the balance sheet until such time as the approaching maturity date warrants showing it as a current liability. If it is payable in installments, Harrick shows the current installments due as current liabilities, with the remainder as a long-term liability.

Lenders have partially replaced the traditional **fixed-rate mortgage** with alternative mortgage arrangements. Most lenders offer **variable-rate mortgages** (also called *floating-rate* or *adjustable-rate* mortgages) featuring interest rates tied to changes in the fluctuating market rate. Generally, the variable-rate lenders adjust the interest rate at either one- or three-year intervals, pegging the adjustments to changes in the prime rate or the U.S. Treasury bond rate.

Fair Value Option

LEARNING OBJECTIVE 7
Describe the accounting for the fair value option.

As indicated earlier, noncurrent liabilities, such as bonds and notes payable, are generally measured at amortized cost (face value of the payable, adjusted for any payments and amortization of any premium or discount). However, companies have the option to record fair value in their accounts for most financial assets and liabilities, including bonds and notes payable. [6] As discussed in Chapter 7 (page 365), the FASB believes that fair value measurement for financial instruments, including financial liabilities, provides more relevant and understandable information than amortized cost. It considers fair value to be more relevant because it reflects the current cash equivalent value of financial instruments.

Fair Value Measurement

If companies choose the **fair value option**, noncurrent liabilities, such as bonds and notes payable, are recorded at fair value, with unrealized holding gains or losses reported as part of net income. An **unrealized holding gain or loss** is the net change in the

¹³Points, in mortgage financing, are analogous to the original issue discount of bonds.

fair value of the liability from one period to another, exclusive of interest expense recognized but not recorded. As a result, the company reports the liability at fair value each reporting date. In addition, it reports the change in value as part of net income.

To illustrate, Edmonds Company has issued \$500,000 of 6 percent bonds at face value on May 1, 2014. Edmonds chooses the fair value option for these bonds. At December 31, 2014, the value of the bonds is now \$480,000 because interest rates in the market have increased to 8 percent. The value of the debt securities falls because the bond is paying less than market rate for similar securities. Under the fair value option, Edmonds makes the following entry.

Bonds Payable	20,000	
Unrealized Holding Gain or Loss—Income		20,000

As the journal entry indicates, the value of the bonds declined. This decline leads to a reduction in the bond liability and a resulting unrealized holding gain, which is reported as part of net income. The value of Edmonds' debt declined because interest rates increased. It should be emphasized that Edmonds must continue to value the bonds payable at fair value in all subsequent periods.

Fair Value Controversy

With the Edmonds bonds, we assumed that the decline in value of the bonds was due to an interest rate increase. In other situations, the decline may occur because the bonds become more likely to default. That is, **if the creditworthiness of Edmonds Company declines, the value of its debt also declines.** If its creditworthiness declines, its bond investors are receiving a lower rate relative to investors with similar-risk investments. If Edmonds is using the fair value option, changes in the fair value of the bonds payable for a decline in creditworthiness are included as part of income. Some question how Edmonds can record a gain when its creditworthiness is becoming worse. As one writer noted, "It seems counterintuitive." However, the FASB notes that the debtholders' loss is the shareholders' gain. That is, the shareholders' claims on the assets of the company increase when the value of the debtholders' claims declines. In addition, the worsening credit position may indicate that the assets of the company are declining in value as well. Thus, the company may be reporting losses on the asset side, which will be offsetting gains on the liability side.¹⁴

REPORTING AND ANALYZING LIABILITIES

Reporting liabilities and long-term debt is one of the most controversial areas in financial reporting. Because long-term debt has a significant impact on the cash flows of the company, reporting requirements must be substantive and informative. One problem is that the definition of a liability established in *Concepts Statement No. 6* and the recognition criteria established in *Concepts Statement No. 5* are sufficiently imprecise that some continue to argue that certain obligations need not be reported as debt.

8 LEARNING OBJECTIVE

Explain the reporting of off-balance-sheet financing arrangements.

Off-Balance-Sheet Financing

What do **Krispy Kreme**, **Cisco**, **Enron**, and **Adelphia Communications** have in common? They all have been accused of using off-balance-sheet financing to minimize the reporting of debt on their balance sheets. **Off-balance-sheet financing** is an attempt to borrow monies in such a way to prevent recording the obligations. It has become an issue of

¹⁴This issue is discussed further in the "Evolving Issue" box on page 788.

extreme importance. Many allege that Enron, in one of the largest corporate failures on record, hid a considerable amount of its debt off the balance sheet. As a result, any company that uses off-balance-sheet financing today risks investors dumping the company's stock. Consequently, the company's share price will suffer. Nevertheless, a considerable amount of off-balance-sheet financing continues to exist. As one writer noted, "The basic drives of humans are few: to get enough food, to find shelter, and to keep debt off the balance sheet."

Different Forms

Off-balance-sheet financing can take many different forms:

1. **Non-consolidated subsidiary.** Under GAAP, a parent company does not have to consolidate a subsidiary company that is less than 50 percent owned. In such cases, the parent therefore does not report the assets and liabilities of the subsidiary. All the parent reports on its balance sheet is the investment in the subsidiary. As a result, users of the financial statements may not understand that the subsidiary has considerable debt for which the parent may ultimately be liable if the subsidiary runs into financial difficulty.
2. **Special-purpose entity (SPE).** A company creates a **special-purpose entity (SPE)** to perform a special project. To illustrate, assume that Clarke Company decides to build a new factory. However, management does not want to report the plant or the borrowing used to fund the construction on its balance sheet. It therefore creates an SPE, the purpose of which is to build the plant. (This arrangement is called a **project financing arrangement**.) The SPE finances and builds the plant. In return, Clarke guarantees that it or some outside party will purchase all the products produced by the plant. (Some refer to this as a **take-or-pay contract**.) As a result, Clarke might not report the asset or liability on its books. The accounting rules in this area are complex. We discuss the accounting for SPEs in Appendix 17B.
3. **Operating leases.** Another way that companies keep debt off the balance sheet is by leasing. Instead of owning the assets, companies lease them. Again, by meeting certain conditions, the company has to report only rent expense each period and to provide note disclosure of the transaction. Note that SPEs often use leases to accomplish off-balance-sheet treatment. We discuss accounting for lease transactions extensively in Chapter 21.

Rationale

Why do companies engage in off-balance-sheet financing? A major reason is that many believe that **removing debt enhances the quality of the balance sheet** and permits credit to be obtained more readily and at less cost.

Second, loan covenants often limit the amount of debt a company may have. As a result, the company uses off-balance-sheet financing because **these types of commitments might not be considered in computing the debt limitation**.

Third, some argue that the asset side of the balance sheet is severely understated. For example, companies that use LIFO costing for inventories and depreciate assets on an accelerated basis will often have carrying amounts for inventories and property, plant, and equipment that are much lower than their fair values. As an offset to these lower values, some believe that part of the debt does not have to be reported. In other words, **if companies report assets at fair values**, less pressure would undoubtedly exist for off-balance-sheet financing arrangements.

Whether the arguments above have merit is debatable. The general idea of "out of sight, out of mind" may not be true in accounting. Many users of financial statements indicate that they factor these off-balance-sheet financing arrangements into their computations when assessing debt-to-equity relationships. Similarly, many loan covenants also attempt to account for these complex arrangements. Nevertheless, many companies still believe that benefits will accrue if they omit certain obligations from the balance sheet.

As a response to off-balance-sheet financing arrangements, the FASB has increased disclosure (note) requirements. This response is consistent with an “efficient markets” philosophy: The important question is not whether the presentation is off-balance-sheet or not, but whether the items are disclosed at all. In addition, the SEC, in response to the Sarbanes-Oxley Act of 2002, now requires companies to provide related information in their management discussion and analysis sections. Specifically, companies must disclose (1) all contractual obligations in a tabular format and (2) contingent liabilities and commitments in either a textual or tabular format.¹⁵

We believe that recording more obligations on the balance sheet will enhance financial reporting. Given the problems with companies such as **Enron**, **Dynegy**, **Williams Company**, **Chesapeake Energy**, and **Calpine**, and the Sarbanes-Oxley requirements, we expect that less off-balance-sheet financing will occur in the future.

International Perspective

There is no comparable institution to the SEC in international securities markets. As a result, many international companies (those not registered with the SEC) are not required to provide disclosures such as those related to contractual obligations.

What do the numbers mean? OBLIGATED

The off-balance-sheet world is slowly but surely becoming more on-balance-sheet. New interpretations on guarantees (discussed in Chapter 13) and variable-interest entities (discussed in Appendix 17B) are doing their part to increase the amount of debt reported on corporate balance sheets.

In addition, the SEC has rules that require companies to disclose off-balance-sheet arrangements and contractual

obligations that currently have, or are reasonably likely to have, a material future effect on the companies’ financial condition. Companies now must include a tabular disclosure (following a prescribed format) in the management discussion and analysis section of the annual report. Presented below is **Best Buy Co.**’s tabular disclosure of its contractual obligations.

Best Buy Co.					
Contractual Obligations					
The following table presents information regarding our contractual obligations by fiscal year (\$ in millions):					
Contractual Obligations	Total	Payments due by period			
		Less than 1 year	1–3 years	3–5 years	More than 5 years
Short-term debt obligations	\$ 480	\$ 480	—	—	—
Long-term debt obligations	1,498	—	\$ 500	\$ 349	\$ 649
Capital lease obligations	81	18	35	11	17
Financing lease obligations	149	22	47	40	40
Interest payments	500	101	142	105	152
Operating lease obligations	7,517	1,216	2,217	1,732	2,352
Purchase obligations	3,548	1,771	1,499	278	—
	<u>\$13,773</u>	<u>\$3,608</u>	<u>\$4,440</u>	<u>\$2,515</u>	<u>\$3,210</u>
Other					
Unrecognized tax benefits	\$ 387	—	—	—	—
Deferred compensation	62	—	—	—	—

Note: For additional information refer to Note 8, Debt; Note 11, Leases; Note 13, Income Taxes and Note 15, Contingencies and Commitments, in the Notes to Consolidated Financial Statements, included in Item 8, Financial Statements and Supplementary Data, of this Annual Report on Form 10-K.

Enron’s abuse of off-balance-sheet financing to hide debt was shocking and inappropriate. One silver lining in the Enron debacle, however, is that the standard-setting bodies in the accounting profession are now providing increased

guidance on companies’ reporting of contractual obligations. We believe the new SEC rule, which requires companies to report their obligations over a period of time, will be extremely useful to the investment community.

¹⁵It is unlikely that the FASB will be able to stop all types of off-balance-sheet transactions. Financial engineering is the “Holy Grail” of Wall Street. Developing new financial instruments and arrangements to sell and market to customers is not only profitable but also adds to the prestige of the investment firms that create them. Thus, new financial products will continue to appear that will test the ability of the FASB to develop appropriate accounting standards for them.

Presentation and Analysis of Long-Term Debt

Presentation of Long-Term Debt

LEARNING OBJECTIVE 9

Indicate how to present and analyze long-term debt.

Companies that have large amounts and numerous issues of long-term debt frequently report only one amount in the balance sheet, supported with comments and schedules in the accompanying notes. Long-term debt that **matures within one year** should be reported as a current liability, unless using noncurrent assets to accomplish redemption. If the company plans to refinance debt, convert it into stock, or retire it from a bond retirement fund, it should continue to report the debt as noncurrent. However, the company should disclose the method it will use in its liquidation. [7], [8]

Note disclosures generally indicate the nature of the liabilities, maturity dates, interest rates, call provisions, conversion privileges, restrictions imposed by the creditors, and assets designated or pledged as security. Companies should show any assets pledged as security for the debt in the assets section of the balance sheet. The fair value of the long-term debt should also be disclosed if it is practical to estimate fair value. Finally, companies must disclose future payments for sinking fund requirements and maturity amounts of long-term debt during each of the next five years. These disclosures aid financial statement users in evaluating the amounts and timing of future cash flows. Illustration 14-18 shows an example of the type of information provided for **Target Corporation**. Note that if the company has any off-balance-sheet financing, it must provide extensive note disclosure. [9]

ILLUSTRATION 14-18

Long-Term Debt Disclosure

Target Corporation

(dollars in millions)

	January 28, 2012	January 29, 2011
Total current assets	\$16,449	\$17,213
Current liabilities		
Accounts payable	\$ 6,857	\$ 6,625
Accrued and other current liabilities	3,644	3,326
Unsecured debt and other borrowings	3,036	119
Nonrecourse debt collateralized by credit card receivables	750	—
Total current liabilities	14,287	10,070
Total noncurrent liabilities	16,522	18,148

19. Notes Payable and Long-Term Debt (in part)

At January 28, 2012, the carrying value and maturities of our debt portfolio were as follows:

Debt Maturities (millions)	January 28, 2012	
	Rate (a)	Balance
Due fiscal 2012–2016	2.8%	\$ 6,281
Due fiscal 2017–2021	4.8	4,604
Due fiscal 2022–2026	8.7	64
Due fiscal 2027–2031	6.8	680
Due fiscal 2032–2036	6.3	551
Due fiscal 2037	6.8	3,500
Total notes and debentures	4.6	15,680
Swap valuation adjustments		114
Capital lease obligations		1,689
Less:		
Amounts due within one year		(3,786)
Long-term debt		<u>\$13,697</u>

(a) Reflects the weighted-average stated interest rate as of year-end.

Required principal payments on notes and debentures over the next five years are as follows:

Required Principal Payments (millions)	2012	2013	2014	2015	2016
Unsecured	\$3,001	\$501	\$1,001	\$27	\$751
Nonrecourse	750	250	—	—	—
Total required principal payments	<u>\$3,751</u>	<u>\$751</u>	<u>\$1,001</u>	<u>\$27</u>	<u>\$751</u>

ILLUSTRATION 14-18
(continued)

Analysis of Long-Term Debt

Long-term creditors and stockholders are interested in a company’s long-run solvency, particularly its ability to pay interest as it comes due and to repay the face value of the debt at maturity. Debt to assets and times interest earned are two ratios that provide information about debt-paying ability and long-run solvency.

Debt to Assets. The **debt to assets ratio** measures the percentage of the total assets provided by creditors. To compute it, divide total debt (both current and long-term liabilities) by total assets, as Illustration 14-19 shows.

$$\text{Debt to assets} = \frac{\text{Total liabilities}}{\text{Total assets}}$$

ILLUSTRATION 14-19
Computation of Debt to Assets Ratio

The higher the percentage of total liabilities to total assets, the greater the risk that the company may be unable to meet its maturing obligations.

Times Interest Earned. The **times interest earned** ratio indicates the company’s ability to meet interest payments as they come due. As shown in Illustration 14-20, it is computed by dividing income before interest expense and income taxes by interest expense.

$$\text{Times interest earned} = \frac{\text{Income before income taxes and interest expense}}{\text{Interest expense}}$$

ILLUSTRATION 14-20
Computation of Times Interest Earned

To illustrate these ratios, we use data from **Target’s** 2011 annual report. Target has total liabilities of \$30,809 million, total assets of \$46,630 million, interest expense of \$869 million, income taxes of \$1,527 million, and net income of \$2,929 million. We compute Target’s debt to assets and times interest earned ratios as shown in Illustration 14-21.

Even though Target has a relatively high debt to assets percentage of 66.1 percent, its interest coverage of 6.12 times indicates it can easily meet its interest payments as they come due.

$$\begin{aligned} \text{Debt to assets} &= \frac{\$30,809}{\$46,630} = 66.1\% \\ \text{Times interest earned} &= \frac{(\$2,929 + \$869 + \$1,527)}{\$869} = 6.12 \text{ times} \end{aligned}$$

You will want to read the **IFRS INSIGHTS** on pages 815–819 for discussion of IFRS related to long-term liabilities.

ILLUSTRATION 14-21
Computation of Long-Term Debt Ratios for Target

**Evolving Issue****FAIR VALUE OF LIABILITIES: PICK A NUMBER, ANY NUMBER**

In 2011, **Citigroup's** third-quarter earnings rose 68 percent from a year earlier, partly due to an accounting adjustment. The accounting adjustment was a \$1.9 billion gain related to a change in the valuation of its debt obligations. A similar situation resulted in the third quarter of 2011 for **JPMorgan**. Its results were enhanced by decreasing the value of its debt, also by \$1.9 billion. How does a company recognize a gain on its debt when it has not sold it?

Here is how it works. Say a company records a \$100 million liability for bonds it issues. Subsequently, the bond's credit rating drops from AA to BB. As a result, the price of the bond trading in the market drops to \$90 million. As we discussed earlier, if the fair value option is used to value debt, the company makes the following entry.

Bonds Payable	10,000,000	
Unrealized Holding Gain or Loss—Income		10,000,000

Presto! The company's net income increases even though its credit rating drops. This result seems counterintuitive—how does a company that is actually doing worse have its income increase?

The FASB has struggled with this issue for years. It defends the present position by indicating that the valuation

of a liability is related to its credit standing. Therefore, if a company's credit standing drops, the liability value drops as well. And if the value of a company's liability is less, the company is better off and should record a gain. It should be noted that it can work the other way as well. That is, if a company's credit standing increases, the value of the liability increases and therefore the company records a loss.

Another major argument in favor of the present approach is that by forcing companies to highlight their credit weakness, it raises a question about the asset side of the balance sheet. In other words, if you see a credit weakness, you should ask, "Where is the impaired asset?" If a company's credit is bad, it may mean there are losses on the asset side that are not being recognized or disclosed.

The FASB (and IASB) are debating this issue in the financial instruments project. Some have suggested that the gain or loss be part of other comprehensive income. Others disagree and believe it should be part of net income. Still others believe that changes in the value of the liability should not be reported in income until the liability is extinguished. As one expert noted, "At its worse, bank accounting can seem like the mirrors in a fun house. Reality is reflected, but the distortions can be very large."

SUMMARY OF LEARNING OBJECTIVES

- 1 Describe the formal procedures associated with issuing long-term debt.** Incurring long-term debt is often a formal procedure. The bylaws of corporations usually require approval by the board of directors and the stockholders before corporations can issue bonds or can make other long-term debt arrangements. Generally, long-term debt has various covenants or restrictions. The covenants and other terms of the agreement between the borrower and the lender are stated in the bond indenture or note agreement.
- 2 Identify various types of bond issues.** Various types of bond issues are (1) secured and unsecured bonds; (2) term, serial, and callable bonds; (3) convertible, commodity-backed, and deep-discount bonds; (4) registered and bearer (coupon) bonds; and (5) income and revenue bonds. The variety in the types of bonds results from attempts to attract capital from different investors and risk-takers and to satisfy the cash flow needs of the issuers.
- 3 Describe the accounting valuation for bonds at date of issuance.** The investment community values a bond at the present value of its future cash flows, which consist of interest and principal. The rate used to compute the present value of these cash flows is the interest rate that provides an acceptable return on an investment commensurate with the issuer's risk characteristics. The interest rate written in the terms of the bond indenture and ordinarily appearing on the bond certificate is the stated, coupon, or nominal rate. The issuer of the bonds sets the rate and expresses it as a percentage of

the face value (also called the par value, principal amount, or maturity value) of the bonds. If the rate employed by the buyers differs from the stated rate, the present value of the bonds computed by the buyers will differ from the face value of the bonds. The difference between the face value and the present value of the bonds is either a discount or premium.

4 Apply the methods of bond discount and premium amortization. The discount (premium) is amortized and charged (credited) to interest expense over the life of the bonds. Amortization of a discount increases bond interest expense, and amortization of a premium decreases bond interest expense. The profession's preferred procedure for amortization of a discount or premium is the effective-interest method. Under the effective-interest method, (1) bond interest expense is computed by multiplying the carrying value of the bonds at the beginning of the period by the effective-interest rate; then, (2) the bond discount or premium amortization is determined by comparing the bond interest expense with the interest to be paid.

5 Describe the accounting for the extinguishment of debt. At the time of extinguishment (reacquisition, redemption, or refunding) of long-term debt, the unamortized premium or discount and any costs of issue applicable to the debt must be amortized up to the reacquisition date. The reacquisition price is the amount paid on extinguishment or redemption before maturity, including any call premium and expense of reacquisition. On any specified date, the net carrying amount of the debt is the amount payable at maturity, adjusted for unamortized premium or discount and issue costs. Any excess of the net carrying amount over the reacquisition price is a gain from extinguishment. The excess of the reacquisition price over the net carrying amount is a loss from extinguishment. Gains and losses on extinguishments are recognized currently in income.

6 Explain the accounting for long-term notes payable. Accounting procedures for notes and bonds are similar. Like a bond, a note is valued at the present value of its expected future interest and principal cash flows, with any discount or premium being similarly amortized over the life of the note. Whenever the face amount of the note does not reasonably represent the present value of the consideration in the exchange, a company must evaluate the entire arrangement in order to properly record the exchange and the subsequent interest.

7 Describe the accounting for the fair value option. Companies have the option to record fair value in their accounts for most financial assets and liabilities, including noncurrent liabilities. Fair value measurement for financial instruments, including financial liabilities, provides more relevant and understandable information than amortized cost. If companies choose the fair value option, noncurrent liabilities, such as bonds and notes payable, are recorded at fair value, with unrealized holding gains or losses reported as part of net income. An unrealized holding gain or loss is the net change in the fair value of the liability from one period to another, exclusive of interest expense recognized but not recorded.

8 Explain the reporting of off-balance-sheet financing arrangements. Off-balance-sheet financing is an attempt to borrow funds in such a way to prevent recording obligations. Examples of off-balance-sheet arrangements are (1) non-consolidated subsidiaries, (2) special-purpose entities, and (3) operating leases.

9 Indicate how to present and analyze long-term debt. Companies that have large amounts and numerous issues of long-term debt frequently report only one amount in the balance sheet and support this with comments and schedules in the accompanying notes. Any assets pledged as security for the debt should be shown in the assets section of the balance sheet. Long-term debt that matures within one year should be reported as a current liability, unless redemption is to be accomplished with other than current assets. If a company plans to refinance the debt, convert it into stock, or retire it from a bond retirement fund, it should continue to report it as noncurrent, accompanied

with a note explaining the method it will use in the debt's liquidation. Disclosure is required of future payments for sinking fund requirements and maturity amounts of long-term debt during each of the next five years. Debt to assets and times interest earned are two ratios that provide information about debt-paying ability and long-run solvency.

APPENDIX 14A

TROUBLED-DEBT RESTRUCTURINGS

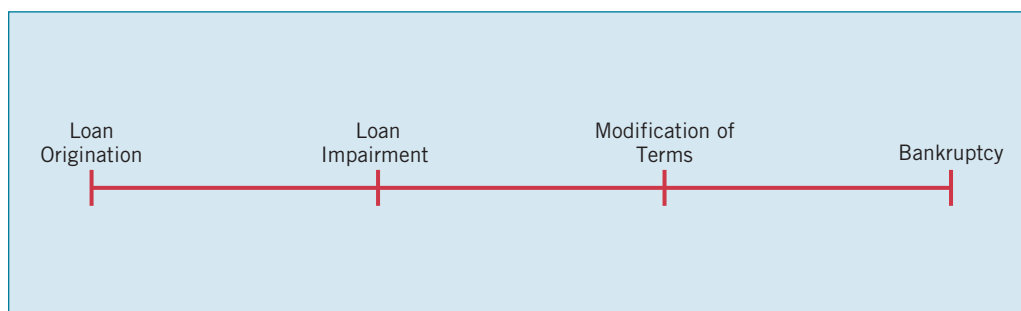

LEARNING OBJECTIVE 10

Describe the accounting for a debt restructuring.

Practically every day, the *Wall Street Journal* runs a story about some company in financial difficulty. In most troubled-debt situations, the creditor usually first recognizes a loss on impairment. Subsequently, the creditor either modifies the terms of the loan or the debtor settles the loan on terms unfavorable to the creditor. In unusual cases, the creditor forces the debtor into bankruptcy in order to ensure the highest possible collection on the loan. Illustration 14A-1 shows this continuum.

ILLUSTRATION 14A-1

Usual Progression in Troubled-Debt Situations

To illustrate, consider the case of **Huffy Corp.**, a name that adorned the first bicycle of many American children. Before its bankruptcy, Huffy's creditors likely recognized a loss on impairment. Subsequently, the creditors either modified the terms of the loan or settled it on terms unfavorable to the creditor. Finally, the creditors forced Huffy into bankruptcy, and the suppliers received a 30 percent equity stake in Huffy. These terms helped ensure the highest possible collection on the Huffy loan.

We discussed the accounting for loan impairments in Appendix 7B. The purpose of this appendix is to explain how creditors and debtors report information in financial statements related to troubled-debt restructurings.

International Perspective

IFRS generally assumes that all restructurings be accounted for as extinguishments of debt.

A **troubled-debt restructuring** occurs when a creditor “for economic or legal reasons related to the debtor’s financial difficulties grants a concession to the debtor that it would not otherwise consider.” [10] Thus, a troubled-debt restructuring does not apply to modifications of a debt obligation that reflect general economic conditions leading to a reduced interest rate. Nor does it apply to the refunding of an old debt with new debt having an effective-interest rate approximately equal to that of similar debt issued by nontroubled debtors.

A troubled-debt restructuring involves one of two basic types of transactions:¹⁶

1. Settlement of debt at less than its carrying amount.
2. Continuation of debt with a modification of terms.

¹⁶ Recently, the FASB issued Accounting Standards Update 2011-02, *Receivables (Topic 310): A Creditor’s Determination of Whether a Restructuring Is a Troubled Debt Restructuring*, to help determine when a troubled-debt restructuring (TDR) occurs. The new rule provides additional guidance for determining whether a TDR has occurred by clarifying when the creditor has granted a concession and whether the debtor is experiencing financial difficulty. As a result of this rule, creditors will likely determine that more restructurings are troubled-debt restructurings, which will lead to more losses on receivables being reported.

SETTLEMENT OF DEBT

In addition to using cash, settling a debt obligation can involve either a transfer of noncash assets (real estate, receivables, or other assets) or the issuance of the debtor's stock. In these situations, **the creditor should account for the noncash assets or equity interest received at their fair value.**

The debtor must determine the excess of the carrying amount of the payable over the fair value of the assets or equity transferred (gain). Likewise, the creditor must determine the excess of the receivable over the fair value of those same assets or equity interests transferred (loss). The debtor recognizes a gain equal to the amount of the excess. The creditor normally charges the excess (loss) against Allowance for Doubtful Accounts. In addition, the debtor recognizes a gain or loss on disposition of assets to the extent that the fair value of those assets differs from their carrying amount (book value).

Transfer of Assets

Assume that American City Bank loaned \$20,000,000 to Union Mortgage Company. Union Mortgage, in turn, invested these monies in residential apartment buildings. However, because of low occupancy rates, it cannot meet its loan obligations. American City Bank agrees to accept from Union Mortgage real estate with a fair value of \$16,000,000 in full settlement of the \$20,000,000 loan obligation. The real estate has a carrying value of \$21,000,000 on the books of Union Mortgage. American City Bank (creditor) records this transaction as follows.

Land	16,000,000	
Allowance for Doubtful Accounts	4,000,000	
Notes Receivable (from Union Mortgage)		20,000,000

The bank records the real estate at fair value. Further, it makes a charge to Allowance for Doubtful Accounts to reflect the bad debt write-off.

Union Mortgage (debtor) records this transaction as follows.

Notes Payable (to American City Bank)	20,000,000	
Loss on Disposal of Land	5,000,000	
Land		21,000,000
Gain on Restructuring of Debt		4,000,000

Union Mortgage has a loss on the disposition of real estate in the amount of \$5,000,000 (the difference between the \$21,000,000 book value and the \$16,000,000 fair value). It should show this as an ordinary loss on the income statement. In addition, it has a gain on restructuring of debt of \$4,000,000 (the difference between the \$20,000,000 carrying amount of the note payable and the \$16,000,000 fair value of the real estate).

Granting of Equity Interest

Assume that American City Bank agrees to accept from Union Mortgage 320,000 shares of common stock (\$10 par) that has a fair value of \$16,000,000, in full settlement of the \$20,000,000 loan obligation. American City Bank (creditor) records this transaction as follows.

Equity Investments	16,000,000	
Allowance for Doubtful Accounts	4,000,000	
Notes Receivable (from Union Mortgage)		20,000,000

It records the stock as an investment at the fair value at the date of restructure.

Union Mortgage (debtor) records this transaction as follows.

Notes Payable (to American City Bank)	20,000,000	
Common Stock		3,200,000
Paid-in Capital in Excess of Par—Common Stock		12,800,000
Gain on Restructuring of Debt		4,000,000

It records the stock issued in the normal manner. It records the difference between the par value and the fair value of the stock as additional paid-in capital.

MODIFICATION OF TERMS

In some cases, a debtor's serious short-run cash flow problems will lead it to request one or a combination of the following modifications:

1. Reduction of the stated interest rate.
2. Extension of the maturity date of the face amount of the debt.
3. Reduction of the face amount of the debt.
4. Reduction or deferral of any accrued interest.

The creditor's loss is based on expected cash flows discounted at the historical effective rate of the loan. [11] The debtor calculates its gain based on **undiscounted amounts**. As a consequence, **the gain recorded by the debtor will not equal the loss recorded by the creditor under many circumstances.**¹⁷

Two examples demonstrate the accounting for a troubled-debt restructuring by debtors and creditors:

1. The debtor does not record a gain.
2. The debtor does record a gain.

In both instances the creditor has a loss.

Example 1—No Gain for Debtor

This example demonstrates a restructuring in which the debtor records no gain.¹⁸ On December 31, 2013, Morgan National Bank enters into a debt restructuring agreement with Resorts Development Company, which is experiencing financial difficulties. The bank restructures a \$10,500,000 loan receivable issued at par (interest paid to date) by:

1. Reducing the principal obligation from \$10,500,000 to \$9,000,000;
2. Extending the maturity date from December 31, 2013, to December 31, 2017; and
3. Reducing the interest rate from 12% to 8%.

¹⁷In response to concerns expressed about this nonsymmetric treatment, the FASB stated that it did not address debtor accounting because expansion of the scope of the statement would delay its issuance. By basing the debtor calculation on undiscounted amounts, the amount of gain (if any) recognized by the debtor is reduced at the time the modification of terms occurs. If fair value were used, the gain recognized would be greater. The result of this approach is to spread the unrecognized gain over the life of the new agreement. We believe that this accounting is inappropriate and hopefully will change as more fair value measurements are introduced into the financial statements.

¹⁸Note that the examples given for restructuring assume the creditor made no previous entries for impairment. In actuality, it is likely that the creditor would have already made an entry when the loan initially became impaired. Restructuring would, therefore, simply require an adjustment of the initial estimated bad debt by the creditor. Recall, however, that the debtor makes no entry upon impairment.

Debtor Calculations

The total future cash flow, after restructuring of \$11,880,000 (\$9,000,000 of principal plus \$2,880,000 of interest payments¹⁹), exceeds the total pre-restructuring carrying amount of the debt of \$10,500,000. Consequently, **the debtor records no gain nor makes any adjustment** to the carrying amount of the payable. As a result, Resorts Development (debtor) makes no entry at the date of restructuring.

The debtor must compute a new effective-interest rate in order to record interest expense in future periods. The new effective-interest rate equates the present value of the future cash flows specified by the new terms with the pre-restructuring carrying amount of the debt. In this case, Resorts Development computes the new rate by relating the pre-restructure carrying amount (\$10,500,000) to the total future cash flow (\$11,880,000). The rate necessary to discount the total future cash flow (\$11,880,000), to a present value equal to the remaining balance (\$10,500,000), is 3.46613 percent.²⁰

On the basis of the effective rate of 3.46613 percent, the debtor prepares the schedule shown in Illustration 14A-2.

RESORTS DEVELOPMENT CO. (DEBTOR)				
Date	Cash Paid (8%)	Interest Expense (3.46613%)	Reduction of Carrying Amount	Carrying Amount of Note
12/31/13				\$10,500,000
12/31/14	\$ 720,000 ^a	\$ 363,944 ^b	\$ 356,056 ^c	10,143,944
12/31/15	720,000	351,602	368,398	9,775,546
12/31/16	720,000	338,833	381,167	9,394,379
12/31/17	720,000	325,621	394,379	9,000,000
	<u>\$2,880,000</u>	<u>\$1,380,000</u>	<u>\$1,500,000</u>	

^a\$720,000 = \$9,000,000 × .08
^b\$363,944 = \$10,500,000 × 3.46613%
^c\$356,056 = \$720,000 – \$363,944

ILLUSTRATION 14A-2
 Schedule Showing Reduction of Carrying Amount of Note

Calculator Solution for Interest Rate

	Inputs	Answer
N	4	
I/YR	?	3.466
PV	10,500,000	
PMT	-720,000	
FV	-9,000,000	

Thus, on December 31, 2014 (date of first interest payment after restructure), the debtor makes the following entry.

December 31, 2014		
Notes Payable	356,056	
Interest Expense	363,944	
Cash		720,000

The debtor makes a similar entry (except for different amounts for debits to Notes Payable and Interest Expense) each year until maturity. At maturity, Resorts Development makes the following entry.

December 31, 2017		
Notes Payable	9,000,000	
Cash		9,000,000

¹⁹Total interest payments are \$9,000,000 × .08 × 4 years = \$2,880,000.

²⁰An accurate interest rate *i* can be found by using the formulas given at the tops of Tables 6-2 and 6-4 to set up the following equation.

$$\$10,500,000 = \frac{1}{(1+i)^4} \times \$9,000,000 + \frac{1 - \frac{1}{(1+i)^4}}{i} \times \$720,000$$

(from Table 6-2) (from Table 6-4)

Solving algebraically for *i*, we find that *i* = 3.46613%.

Creditor Calculations

Morgan National Bank (creditor) must calculate its loss based on the expected future cash flows discounted at the historical effective rate of the loan. It calculates this loss as shown in Illustration 14A-3.

ILLUSTRATION 14A-3

Computation of Loss to Creditor on Restructuring

Pre-restructure carrying amount		\$10,500,000
Present value of restructured cash flows:		
Present value of \$9,000,000 due in 4 years at 12%, interest payable annually (Table 6-2); $FV(PVF_{4,12\%})$; $(\$9,000,000 \times .63552)$	\$5,719,680	
Present value of \$720,000 interest payable annually for 4 years at 12% (Table 6-4); $R(PVF-OA_{4,12\%})$; $(\$720,000 \times 3.03735)$	<u>2,186,892</u>	
Present value of restructured cash flows		(7,906,572)
Loss on restructuring		<u>\$ 2,593,428</u>

As a result, Morgan National Bank records bad debt expense as follows (assuming no establishment of an allowance balance from recognition of an impairment).

Bad Debt Expense	2,593,428	
Allowance for Doubtful Accounts		2,593,428

In subsequent periods, Morgan National Bank reports interest revenue based on the historical effective rate. Illustration 14A-4 provides the following interest and amortization information.

ILLUSTRATION 14A-4

Schedule of Interest and Amortization after Debt Restructuring

MORGAN NATIONAL BANK (CREDITOR)				
Date	Cash Received (8%)	Interest Revenue (12%)	Increase of Carrying Amount	Carrying Amount of Note
12/31/13				\$7,906,572
12/31/14	\$ 720,000 ^a	\$ 948,789 ^b	\$ 228,789 ^c	8,135,361
12/31/15	720,000	976,243	256,243	8,391,604
12/31/16	720,000	1,006,992	286,992	8,678,596
12/31/17	<u>720,000</u>	<u>1,041,404^d</u>	<u>321,404^d</u>	9,000,000
Total	<u>\$2,880,000</u>	<u>\$3,973,428</u>	<u>\$1,093,428</u>	

^a\$720,000 = \$9,000,000 × .08
^b\$948,789 = \$7,906,572 × .12
^c\$228,789 = \$948,789 - \$720,000
^d\$28 adjustment to compensate for rounding.

On December 31, 2014, Morgan National Bank makes the following entry.

December 31, 2014

Cash	720,000	
Allowance for Doubtful Accounts	228,789	
Interest Revenue		948,789

Morgan National Bank makes a similar entry (except for different amounts debited to Allowance for Doubtful Accounts and credited to Interest Revenue) each year until maturity. At maturity, the company makes the following entry.

December 31, 2017

Cash	9,000,000	
Allowance for Doubtful Accounts	1,500,000	
Notes Receivable		10,500,000

Example 2—Gain for Debtor

If the pre-restructure carrying amount exceeds the total future cash flows as a result of a modification of the terms, the debtor records a gain. To illustrate, assume the facts in the previous example except that Morgan National Bank reduces the principal to \$7,000,000 (and extends the maturity date to December 31, 2017, and reduces the interest from 12% to 8%). The total future cash flow is now \$9,240,000 (\$7,000,000 of principal plus \$2,240,000 of interest²¹), which is \$1,260,000 (\$10,500,000 – \$9,240,000) less than the pre-restructure carrying amount of \$10,500,000.

Under these circumstances, Resorts Development (debtor) reduces the carrying amount of its payable \$1,260,000 and records a gain of \$1,260,000. On the other hand, Morgan National Bank (creditor) debits its Bad Debt Expense for \$4,350,444. Illustration 14A-5 shows this computation.

Pre-restructure carrying amount		\$10,500,000
Present value of restructured cash flows:		
Present value of \$7,000,000 due in 4 years at 12%, interest payable annually (Table 6-2); $FV(PVF_{4,12\%})$; $(\$7,000,000 \times .63552)$	\$4,448,640	
Present value of \$560,000 interest payable annually for 4 years at 12% (Table 6-4); $R(PVF-OA_{4,12\%})$; $(\$560,000 \times 3.03735)$	<u>1,700,916</u>	<u>(6,149,556)</u>
Creditor's loss on restructuring		<u>\$ 4,350,444</u>

ILLUSTRATION 14A-5
Computation of Loss to Creditor on Restructuring

Illustration 14A-6 shows the entries to record the gain and loss on the debtor's and creditor's books at the date of restructure, December 31, 2013.

December 31, 2013 (date of restructure)			
Resorts Development Co. (Debtor)		Morgan National Bank (Creditor)	
Notes Payable	1,260,000	Bad Debt Expense	4,350,444
Gain on Restructuring of Debt	1,260,000	Allowance for Doubtful Accounts	4,350,444

ILLUSTRATION 14A-6
Debtor and Creditor Entries to Record Gain and Loss on Note

For Resorts Development (debtor), because the new carrying value of the note ($\$10,500,000 - \$1,260,000 = \$9,240,000$) equals the sum of the undiscounted cash flows (\$9,240,000), the imputed interest rate is 0 percent. Consequently, all of the future cash flows reduce the principal balance, and the company recognizes no interest expense.

Morgan National reports the interest revenue in the same fashion as the previous example—that is, using the historical effective-interest rate applied toward the newly discounted value of the note. Illustration 14A-7 (on page 796) shows interest computations.

²¹Total interest payments are $\$7,000,000 \times .08 \times 4 \text{ years} = \$2,240,000$.

ILLUSTRATION 14A-7

Schedule of Interest and Amortization after Debt Restructuring

MORGAN NATIONAL BANK (CREDITOR)				
Date	Cash Received (8%)	Interest Revenue (12%)	Increase in Carrying Amount	Carrying Amount of Note
12/31/13				\$6,149,556
12/31/14	\$ 560,000 ^a	\$ 737,947 ^b	\$177,947 ^c	6,327,503
12/31/15	560,000	759,300	199,300	6,526,803
12/31/16	560,000	783,216	223,216	6,750,019
12/31/17	560,000	809,981 ^d	249,981 ^d	7,000,000
Total	\$2,240,000	\$3,090,444	\$850,444	

^a\$560,000 = \$7,000,000 × .08
^b\$737,947 = \$6,149,556 × .12
^c\$177,947 = \$737,947 – \$560,000
^d\$21 adjustment to compensate for rounding.

The journal entries in Illustration 14A-8 demonstrate the accounting by debtor and creditor for periodic interest payments and final principal payment.

Resorts Development Co. (Debtor)		Morgan National Bank (Creditor)	
December 31, 2014 (date of first interest payment following restructure)			
Notes Payable	560,000	Cash	560,000
Cash	560,000	Allowance for Doubtful Accounts	177,947
		Interest Revenue	737,947
December 31, 2015, 2016, and 2017 (dates of 2nd, 3rd, and last interest payments)			
(Debit and credit same accounts as 12/31/14 using applicable amounts from appropriate amortization schedules.)			
December 31, 2017 (date of principal payment)			
Notes Payable	7,000,000	Cash	7,000,000
Cash	7,000,000	Allowance for Doubtful Accounts	3,500,000
		Notes Receivable	10,500,000

ILLUSTRATION 14A-8

Debtor and Creditor Entries to Record Periodic Interest and Final Principal Payments

CONCLUDING REMARKS

The accounting for troubled debt is complex because the accounting standards allow for use of different measurement standards to determine the loss or gain reported. In addition, the assets and liabilities reported are sometimes not stated at historical cost or fair value, but at amounts adjusted for certain events but not others. This cumbersome accounting demonstrates the need for adoption of a comprehensive fair-value model for financial instruments that is consistent with finance concepts for pricing these financial instruments.

KEY TERM

troubled-debt restructuring, 790

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 14A

10 Describe the accounting for a debt restructuring. There are two types of debt settlements: (1) transfer of noncash assets, and (2) granting of equity interest. Creditors and debtors record losses and gains on settlements based on fair values. For accounting purposes, there are also two types of restructurings with continuation of

debt with modified terms: (1) the carrying amount of debt is less than the future cash flows, and (2) the carrying amount of debt exceeds the total future cash flows. Creditors record losses on these restructurings based on the expected future cash flows discounted at the historical effective-interest rate. The debtor determines its gain based on undiscounted cash flows.

DEMONSTRATION PROBLEM

Consider the following independent situations:

- (a) On March 1, 2014, Heide Co. issued at 103 plus accrued interest \$3,000,000, 9% bonds. The bonds are dated January 1, 2010, and pay interest semiannually on July 1 and January 1. In addition, Heide Co. incurred \$27,000 of bond issuance costs. Compute the net amount of cash received by Heide Co. as a result of the issuance of these bonds.
- (b) On January 1, 2014, Reymont Co. issued 9% bonds with a face value of \$500,000 for \$469,280 to yield 10%. The bonds are dated January 1, 2014, and pay interest annually. What amount is reported as bond discount on the issue date? Prepare the journal entry to record interest expense on December 31, 2014.
- (c) Czeslaw Building Co. has a number of long-term bonds outstanding at December 31, 2014. These long-term bonds have the following sinking fund requirements and maturities for the next 6 years.

	<u>Sinking Fund</u>	<u>Maturities</u>
2015	\$300,000	\$100,000
2016	100,000	250,000
2017	100,000	100,000
2018	200,000	—
2019	200,000	150,000
2020	200,000	100,000

Indicate how this information should be reported in the financial statements at December 31, 2014.

Instructions

Prepare responses for each item above.

Solution

- (a) Heide Co.

Selling price of the bonds ($\$3,000,000 \times 103\%$)	\$3,090,000
Accrued interest from January 1 to February 28, 2014 ($\$3,000,000 \times 9\% \times 2/12$)	45,000
Total cash received from issuance of the bonds	3,135,000
Less: Bond issuance costs	27,000
Net amount of cash received	\$3,108,000

- (b) Reymont Co.

Face value of bonds	\$500,000
Issue price	(469,280)
Bond discount on issue date	\$ 30,720

December 31, 2014

Interest Expense ($\$469,280 \times 10\%$)	46,928	
Discount on Bonds Payable ($\$46,928 - \$45,000$)		1,928
Interest Payable ($\$500,000 \times 9\%$)		45,000

- (c) Czeslaw Building Co.

Maturities and sinking fund requirements on long-term debt for the next five year are as follows.

2015	\$400,000	2018	\$200,000
2016	350,000	2019	350,000
2017	200,000

Exercises

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

CE14-1 Access the glossary (Master Glossary) to answer the following.

- (a) What does the term “callable obligation” mean?
- (b) What is an imputed interest rate?
- (c) What is a long-term obligation?
- (d) What is the definition of “effective-interest rate”?

CE14-2 What guidance does the Codification provide on the disclosure of long-term obligations?

CE14-3 Describe how a company would classify debt that includes covenants. What conditions must exist in order to depart from the normal rule?

CE14-4 A company proposes to include in its SEC registration statement a balance sheet showing its subordinate debt as a portion of stockholders’ equity. Will the SEC allow this? Why or why not?

An additional Codification case can be found in the Using Your Judgment section, on page 814.

Be sure to check the book’s companion website for a Review and Analysis Exercise, with solution.

WileyPLUS

Brief Exercises, Exercises, Problems, and many more learning and assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

(Unless instructed otherwise, round all answers to the nearest dollar.)

QUESTIONS

1. (a) From what sources might a corporation obtain funds through long-term debt? (b) What is a bond indenture? What does it contain? (c) What is a mortgage?
2. **Potlatch Corporation** has issued various types of bonds such as term bonds, income bonds, and debentures. Differentiate between term bonds, mortgage bonds, debenture bonds, income bonds, callable bonds, registered bonds, bearer or coupon bonds, convertible bonds, commodity-backed bonds, and deep discount bonds.
3. Distinguish between the following interest rates for bonds payable:

(a) Yield rate.	(d) Market rate.
(b) Nominal rate.	(e) Effective rate.
(c) Stated rate.	
4. Distinguish between the following values relative to bonds payable:

(a) Maturity value.	(c) Market (fair) value.
(b) Face value.	(d) Par value.
5. Under what conditions of bond issuance does a discount on bonds payable arise? Under what conditions of bond issuance does a premium on bonds payable arise?
6. How should discount on bonds payable be reported on the financial statements? Premium on bonds payable?
7. What are the two methods of amortizing discount and premium on bonds payable? Explain each.
8. Zopf Company sells its bonds at a premium and applies the effective-interest method in amortizing the premium. Will the annual interest expense increase or decrease over the life of the bonds? Explain.
9. **Briggs and Stratton** reported unamortized debt issue costs of \$5.1 million. How should the costs of issuing these bonds be accounted for and classified in the financial statements?
10. Will the amortization of Discount on Bonds Payable increase or decrease Bond Interest Expense? Explain.
11. What is the “call” feature of a bond issue? How does the call feature affect the amortization of bond premium or discount?
12. Why would a company wish to reduce its bond indebtedness before its bonds reach maturity? Indicate how this can be done and the correct accounting treatment for such a transaction.
13. How are gains and losses from extinguishment of a debt classified in the income statement? What disclosures are required of such transactions?
14. What is done to record properly a transaction involving the issuance of a non-interest-bearing long-term note in exchange for property?
15. How is the present value of a non-interest-bearing note computed?
16. When is the stated interest rate of a debt instrument presumed to be fair?
17. What are the considerations in imputing an appropriate interest rate?
18. Differentiate between a fixed-rate mortgage and a variable-rate mortgage.
19. What is the fair value option? Briefly describe the controversy of applying the fair value option to financial liabilities.
20. Pierre Company has a 12% note payable with a carrying value of \$20,000. Pierre applies the fair value option to this note. Given an increase in market interest rates, the fair value of the note is \$22,600. Prepare the entry to record the fair value option for this note.
21. What disclosures are required relative to long-term debt and sinking fund requirements?
22. What is off-balance-sheet financing? Why might a company be interested in using off-balance-sheet financing?
23. What are some forms of off-balance-sheet financing?
24. Explain how a non-consolidated subsidiary can be a form of off-balance-sheet financing.
- *25. What are the types of situations that result in troubled debt?
- *26. What are the general rules for measuring gain or loss by both creditor and debtor in a troubled-debt restructuring involving a settlement?
- *27. (a) In a troubled-debt situation, why might the creditor grant concessions to the debtor?
(b) What type of concessions might a creditor grant the debtor in a troubled-debt situation?
- *28. What are the general rules for measuring and recognizing gain or loss by both the debtor and the creditor in a troubled-debt restructuring involving a modification of terms?
- *29. What is meant by “accounting symmetry” between the entries recorded by the debtor and creditor in a troubled-debt restructuring involving a modification of terms? In what ways is the accounting for troubled-debt restructurings non-symmetrical?
- *30. Under what circumstances would a transaction be recorded as a troubled-debt restructuring by only one of the two parties to the transaction?

BRIEF EXERCISES

- 3** **BE14-1** Whiteside Corporation issues \$500,000 of 9% bonds, due in 10 years, with interest payable semiannually. At the time of issue, the market rate for such bonds is 10%. Compute the issue price of the bonds.
- 3** **4** **BE14-2** The Colson Company issued \$300,000 of 10% bonds on January 1, 2014. The bonds are due January 1, 2020, with interest payable each July 1 and January 1. The bonds are issued at face value. Prepare Colson's journal entries for (a) the January issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry.
- 3** **4** **BE14-3** Assume the bonds in BE14-2 were issued at 98. Prepare the journal entries for (a) January 1, (b) July 1, and (c) December 31. Assume The Colson Company records straight-line amortization semiannually.
- 3** **4** **BE14-4** Assume the bonds in BE14-2 were issued at 103. Prepare the journal entries for (a) January 1, (b) July 1, and (c) December 31. Assume The Colson Company records straight-line amortization semiannually.
- 3** **4** **BE14-5** Devers Corporation issued \$400,000 of 6% bonds on May 1, 2014. The bonds were dated January 1, 2014, and mature January 1, 2017, with interest payable July 1 and January 1. The bonds were issued at face value plus accrued interest. Prepare Devers's journal entries for (a) the May 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry.
- 3** **4** **BE14-6** On January 1, 2014, JWS Corporation issued \$600,000 of 7% bonds, due in 10 years. The bonds were issued for \$559,224, and pay interest each July 1 and January 1. JWS uses the effective-interest method. Prepare the company's journal entries for (a) the January 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry. Assume an effective-interest rate of 8%.
- 3** **4** **BE14-7** Assume the bonds in BE14-6 were issued for \$644,636 and the effective-interest rate is 6%. Prepare the company's journal entries for (a) the January 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry.
- 3** **4** **BE14-8** Teton Corporation issued \$600,000 of 7% bonds on November 1, 2014, for \$644,636. The bonds were dated November 1, 2014, and mature in 10 years, with interest payable each May 1 and November 1. Teton uses the effective-interest method with an effective rate of 6%. Prepare Teton's December 31, 2014, adjusting entry.
- 9** **BE14-9** At December 31, 2014, Hyasaki Corporation has the following account balances:

Bonds payable, due January 1, 2023	\$2,000,000
Discount on bonds payable	88,000
Interest payable	80,000

Show how the above accounts should be presented on the December 31, 2014, balance sheet, including the proper classifications.

- 4** **BE14-10** Wasserman Corporation issued 10-year bonds on January 1, 2014. Costs associated with the bond issuance were \$160,000. Wasserman uses the straight-line method to amortize bond issue costs. Prepare the December 31, 2014, entry to record 2014 bond issue cost amortization.
- 5** **BE14-11** On January 1, 2014, Henderson Corporation redeemed \$500,000 of bonds at 99. At the time of redemption, the unamortized premium was \$15,000 and unamortized bond issue costs were \$5,250. Prepare the corporation's journal entry to record the reacquisition of the bonds.
- 6** **BE14-12** Coldwell, Inc. issued a \$100,000, 4-year, 10% note at face value to Flint Hills Bank on January 1, 2014, and received \$100,000 cash. The note requires annual interest payments each December 31. Prepare Coldwell's journal entries to record (a) the issuance of the note and (b) the December 31 interest payment.
- 6** **BE14-13** Samson Corporation issued a 4-year, \$75,000, zero-interest-bearing note to Brown Company on January 1, 2014, and received cash of \$47,664. The implicit interest rate is 12%. Prepare Samson's journal entries for (a) the January 1 issuance and (b) the December 31 recognition of interest.
- 6** **BE14-14** McCormick Corporation issued a 4-year, \$40,000, 5% note to Greenbush Company on January 1, 2014, and received a computer that normally sells for \$31,495. The note requires annual interest payments each December 31. The market rate of interest for a note of similar risk is 12%. Prepare McCormick's journal entries for (a) the January 1 issuance and (b) the December 31 interest.
- 6** **BE14-15** Shlee Corporation issued a 4-year, \$60,000, zero-interest-bearing note to Garcia Company on January 1, 2014, and received cash of \$60,000. In addition, Shlee agreed to sell merchandise to Garcia at an amount less than regular selling price over the 4-year period. The market rate of interest for similar notes is 12%. Prepare Shlee Corporation's January 1 journal entry.

- 7 BE14-16** Shonen Knife Corporation has elected to use the fair value option for one of its notes payable. The note was issued at an effective rate of 11% and has a carrying value of \$16,000. At year-end, Shonen Knife's borrowing rate has declined; the fair value of the note payable is now \$17,500. (a) Determine the unrealized holding gain or loss on the note. (b) Prepare the entry to record any unrealized holding gain or loss.

EXERCISES

- 2 E14-1 (Classification of Liabilities)** Presented below are various account balances of K.D. Lang Inc.
- (a) Unamortized premium on bonds payable, of which \$3,000 will be amortized during the next year.
 - (b) Bank loans payable of a winery, due March 10, 2018. (The product requires aging for 5 years before sale.)
 - (c) Serial bonds payable, \$1,000,000, of which \$200,000 are due each July 31.
 - (d) Amounts withheld from employees' wages for income taxes.
 - (e) Notes payable due January 15, 2017.
 - (f) Credit balances in customers' accounts arising from returns and allowances after collection in full of account.
 - (g) Bonds payable of \$2,000,000 maturing June 30, 2016.
 - (h) Overdraft of \$1,000 in a bank account. (No other balances are carried at this bank.)
 - (i) Deposits made by customers who have ordered goods.

Instructions

Indicate whether each of the items above should be classified on December 31, 2014, as a current liability, a long-term liability, or under some other classification. Consider each one independently from all others; that is, do not assume that all of them relate to one particular business. If the classification of some of the items is doubtful, explain why in each case.

- 2 E14-2 (Classification)** The following items are found in the financial statements.

- (a) Discount on bonds payable.
- (b) Interest expense (credit balance).
- (c) Unamortized bond issue costs.
- (d) Gain on repurchase of debt.
- (e) Mortgage payable (payable in equal amounts over next 3 years).
- (f) Debenture bonds payable (maturing in 5 years).
- (g) Notes payable (due in 4 years).
- (h) Premium on bonds payable.
- (i) Treasury bonds.
- (j) Bonds payable (due in 3 years).

Instructions

Indicate how each of these items should be classified in the financial statements.

- 3 4 E14-3 (Entries for Bond Transactions)** Presented below are two independent situations.

1. On January 1, 2014, Simon Company issued \$200,000 of 9%, 10-year bonds at par. Interest is payable quarterly on April 1, July 1, October 1, and January 1.
2. On June 1, 2014, Garfunkel Company issued \$100,000 of 12%, 10-year bonds dated January 1 at par plus accrued interest. Interest is payable semiannually on July 1 and January 1.

Instructions

For each of these two independent situations, prepare journal entries to record the following.

- (a) The issuance of the bonds.
- (b) The payment of interest on July 1.
- (c) The accrual of interest on December 31.

- 3 4 E14-4 (Entries for Bond Transactions—Straight-Line)** Celine Dion Company issued \$600,000 of 10%, 20-year bonds on January 1, 2014, at 102. Interest is payable semiannually on July 1 and January 1. Dion Company uses the straight-line method of amortization for bond premium or discount.

Instructions

Prepare the journal entries to record the following.

- (a) The issuance of the bonds.

XLS

- (b) The payment of interest and the related amortization on July 1, 2014.
- (c) The accrual of interest and the related amortization on December 31, 2014.

3 4 **E14-5 (Entries for Bond Transactions—Effective-Interest)** Assume the same information as in E14-4, except that Celine Dion Company uses the effective-interest method of amortization for bond premium or discount. Assume an effective yield of 9.7705%.

XLS

Instructions

Prepare the journal entries to record the following. (Round to the nearest dollar.)

- (a) The issuance of the bonds.
- (b) The payment of interest and related amortization on July 1, 2014.
- (c) The accrual of interest and the related amortization on December 31, 2014.

3 4 **E14-6 (Amortization Schedule—Straight-Line)** Devon Harris Company sells 10% bonds having a maturity value of \$2,000,000 for \$1,855,816. The bonds are dated January 1, 2014, and mature January 1, 2019. Interest is payable annually on January 1.

Instructions

Set up a schedule of interest expense and discount amortization under the straight-line method. (Round answers to the nearest cent.)

3 4 **E14-7 (Amortization Schedule—Effective-Interest)** Assume the same information as E14-6.

Instructions

Set up a schedule of interest expense and discount amortization under the effective-interest method. (*Hint:* The effective-interest rate must be computed.)

3 4 **E14-8 (Determine Proper Amounts in Account Balances)** Presented below are three independent situations.

- (a) CeCe Winans Corporation incurred the following costs in connection with the issuance of bonds: (1) printing and engraving costs, \$12,000; (2) legal fees, \$49,000; and (3) commissions paid to underwriter, \$60,000. What amount should be reported as Unamortized Bond Issue Costs, and where should this amount be reported on the balance sheet?
- (b) George Gershwin Co. sold \$2,000,000 of 10%, 10-year bonds at 104 on January 1, 2014. The bonds were dated January 1, 2014, and pay interest on July 1 and January 1. If Gershwin uses the straight-line method to amortize bond premium or discount, determine the amount of interest expense to be reported on July 1, 2014, and December 31, 2014.
- (c) Ron Kenoly Inc. issued \$600,000 of 9%, 10-year bonds on June 30, 2014, for \$562,500. This price provided a yield of 10% on the bonds. Interest is payable semiannually on December 31 and June 30. If Kenoly uses the effective-interest method, determine the amount of interest expense to record if financial statements are issued on October 31, 2014.

3 4 **E14-9 (Entries and Questions for Bond Transactions)** On June 30, 2014, Mischa Auer Company issued \$4,000,000 face value of 13%, 20-year bonds at \$4,300,920, a yield of 12%. Auer uses the effective-interest method to amortize bond premium or discount. The bonds pay semiannual interest on June 30 and December 31.

Instructions

(Round answers to the nearest cent.)

- (a) Prepare the journal entries to record the following transactions.
 - (1) The issuance of the bonds on June 30, 2014.
 - (2) The payment of interest and the amortization of the premium on December 31, 2014.
 - (3) The payment of interest and the amortization of the premium on June 30, 2015.
 - (4) The payment of interest and the amortization of the premium on December 31, 2015.
- (b) Show the proper balance sheet presentation for the liability for bonds payable on the December 31, 2015, balance sheet.
- (c) Provide the answers to the following questions.
 - (1) What amount of interest expense is reported for 2015?
 - (2) Will the bond interest expense reported in 2015 be the same as, greater than, or less than the amount that would be reported if the straight-line method of amortization were used?
 - (3) Determine the total cost of borrowing over the life of the bond.
 - (4) Will the total bond interest expense for the life of the bond be greater than, the same as, or less than the total interest expense if the straight-line method of amortization were used?

3 4 **E14-10 (Entries for Bond Transactions)** On January 1, 2014, Aumont Company sold 12% bonds having a maturity value of \$500,000 for \$537,907.37, which provides the bondholders with a 10% yield. The bonds

are dated January 1, 2014, and mature January 1, 2019, with interest payable December 31 of each year. Aumont Company allocates interest and unamortized discount or premium on the effective-interest basis.

Instructions

(Round answers to the nearest cent.)

- Prepare the journal entry at the date of the bond issuance.
- Prepare a schedule of interest expense and bond amortization for 2014–2016.
- Prepare the journal entry to record the interest payment and the amortization for 2014.
- Prepare the journal entry to record the interest payment and the amortization for 2016.

3 **E14-11 (Information Related to Various Bond Issues)** Karen Austin Inc. has issued three types of debt on January 1, 2014, the start of the company's fiscal year.

- \$10 million, 10-year, 15% unsecured bonds, interest payable quarterly. Bonds were priced to yield 12%.
- \$25 million par of 10-year, zero-coupon bonds at a price to yield 12% per year.
- \$20 million, 10-year, 10% mortgage bonds, interest payable annually to yield 12%.

Instructions

Prepare a schedule that identifies the following items for each bond: (1) maturity value, (2) number of interest periods over life of bond, (3) stated rate per each interest period, (4) effective-interest rate per each interest period, (5) payment amount per period, and (6) present value of bonds at date of issue.

3 **4** **E14-12 (Entry for Redemption of Bond; Bond Issue Costs)** On January 2, 2009, Banno Corporation issued \$1,500,000 of 10% bonds at 97 due December 31, 2018. Legal and other costs of \$24,000 were incurred in connection with the issue. Interest on the bonds is payable annually each December 31. The \$24,000 issue costs are being deferred and amortized on a straight-line basis over the 10-year term of the bonds. The discount on the bonds is also being amortized on a straight-line basis over the 10 years. (Straight-line is not materially different in effect from the preferable "interest method.")

The bonds are callable at 101 (i.e., at 101% of face amount), and on January 2, 2014, Banno called \$900,000 face amount of the bonds and redeemed them.

Instructions

Ignoring income taxes, compute the amount of loss, if any, to be recognized by Banno as a result of retiring the \$900,000 of bonds in 2014 and prepare the journal entry to record the redemption.

(AICPA adapted)

3 **4** **E14-13 (Entries for Redemption and Issuance of Bonds)** Matt Perry, Inc. had outstanding \$6,000,000 of 11% bonds (interest payable July 31 and January 31) due in 10 years. On July 1, it issued \$9,000,000 of 10%, 15-year bonds (interest payable July 1 and January 1) at 98. A portion of the proceeds was used to call the 11% bonds at 102 on August 1. Unamortized bond discount and issue cost applicable to the 11% bonds were \$120,000 and \$30,000, respectively.

Instructions

Prepare the journal entries necessary to record issue of the new bonds and the refunding of the bonds.

3 **4** **E14-14 (Entries for Redemption and Issuance of Bonds)** On June 30, 2006, County Company issued 12% bonds with a par value of \$800,000 due in 20 years. They were issued at 98 and were callable at 104 at any date after June 30, 2014. Because of lower interest rates and a significant change in the company's credit rating, it was decided to call the entire issue on June 30, 2015, and to issue new bonds. New 10% bonds were sold in the amount of \$1,000,000 at 102; they mature in 20 years. County Company uses straight-line amortization. Interest payment dates are December 31 and June 30.

Instructions

- Prepare journal entries to record the redemption of the old issue and the sale of the new issue on June 30, 2015.
- Prepare the entry required on December 31, 2015, to record the payment of the first 6 months' interest and the amortization of premium on the bonds.

3 **4** **E14-15 (Entries for Redemption and Issuance of Bonds)** Linda Day George Company had bonds outstanding with a maturity value of \$300,000. On April 30, 2014, when these bonds had an unamortized discount of \$10,000, they were called in at 104. To pay for these bonds, George had issued other bonds a month earlier bearing a lower interest rate. The newly issued bonds had a life of 10 years. The new bonds were issued at 103 (face value \$300,000). Issue costs related to the new bonds were \$3,000.

Instructions

Ignoring interest, compute the gain or loss and record this refunding transaction.

(AICPA adapted)

6 E14-16 (Entries for Zero-Interest-Bearing Notes) On January 1, 2014, Ellen Greene Company makes the two following acquisitions.

1. Purchases land having a fair value of \$200,000 by issuing a 5-year, zero-interest-bearing promissory note in the face amount of \$337,012.
2. Purchases equipment by issuing a 6%, 8-year promissory note having a maturity value of \$250,000 (interest payable annually).

The company has to pay 11% interest for funds from its bank.

Instructions

(Round answers to the nearest cent.)

- (a) Record the two journal entries that should be recorded by Ellen Greene Company for the two purchases on January 1, 2014.
- (b) Record the interest at the end of the first year on both notes using the effective-interest method.

6 E14-17 (Imputation of Interest) Presented below are two independent situations.

- (a) On January 1, 2014, Robin Wright Inc. purchased land that had an assessed value of \$350,000 at the time of purchase. A \$550,000, zero-interest-bearing note due January 1, 2017, was given in exchange. There was no established exchange price for the land, nor a ready fair value for the note. The interest rate charged on a note of this type is 12%. Determine at what amount the land should be recorded at January 1, 2014, and the interest expense to be reported in 2014 related to this transaction.
- (b) On January 1, 2014, Field Furniture Co. borrowed \$5,000,000 (face value) from Gary Sinise Co., a major customer, through a zero-interest-bearing note due in 4 years. Because the note was zero-interest-bearing, Field Furniture agreed to sell furniture to this customer at lower than market price. A 10% rate of interest is normally charged on this type of loan. Prepare the journal entry to record this transaction and determine the amount of interest expense to report for 2014.

6 E14-18 (Imputation of Interest with Right) On January 1, 2014, Margaret Avery Co. borrowed and received \$400,000 from a major customer evidenced by a zero-interest-bearing note due in 3 years. As consideration for the zero-interest-bearing feature, Avery agrees to supply the customer's inventory needs for the loan period at lower than the market price. The appropriate rate at which to impute interest is 8%.

Instructions

- (a) Prepare the journal entry to record the initial transaction on January 1, 2014. (Round all computations to the nearest dollar.)
- (b) Prepare the journal entry to record any adjusting entries needed at December 31, 2014. Assume that the sales of Avery's product to this customer occur evenly over the 3-year period.

7 E14-19 (Fair Value Option) Fallen Company commonly issues long-term notes payable to its various lenders. Fallen has had a pretty good credit rating such that its effective borrowing rate is quite low (less than 8% on an annual basis). Fallen has elected to use the fair value option for the long-term notes issued to Barclay's Bank and has the following data related to the carrying and fair value for these notes.

	<u>Carrying Value</u>	<u>Fair Value</u>
December 31, 2014	\$54,000	\$54,000
December 31, 2015	44,000	42,500
December 31, 2016	36,000	38,000

Instructions

- (a) Prepare the journal entry at December 31 (Fallen's year-end) for 2014, 2015, and 2016, to record the fair value option for these notes.
- (b) At what amount will the note be reported on Fallen's 2015 balance sheet?
- (c) What is the effect of recording the fair value option on these notes on Fallen's 2016 income?
- (d) Assuming that general market interest rates have been stable over the period, does the fair value data for the notes indicate that Fallen's creditworthiness has improved or declined in 2016? Explain.

9 E14-20 (Long-Term Debt Disclosure) At December 31, 2014, Redmond Company has outstanding three long-term debt issues. The first is a \$2,000,000 note payable which matures June 30, 2017. The second is a \$6,000,000 bond issue which matures September 30, 2018. The third is a \$12,500,000 sinking fund debenture with annual sinking fund payments of \$2,500,000 in each of the years 2016 through 2020.

Instructions

Prepare the required note disclosure for the long-term debt at December 31, 2014.

- 10** *E14-21 (**Settlement of Debt**) Strickland Company owes \$200,000 plus \$18,000 of accrued interest to Moran State Bank. The debt is a 10-year, 10% note. During 2014, Strickland's business deteriorated due to a faltering regional economy. On December 31, 2014, Moran State Bank agrees to accept an old machine and cancel the entire debt. The machine has a cost of \$390,000, accumulated depreciation of \$221,000, and a fair value of \$180,000.

Instructions

- Prepare journal entries for Strickland Company and Moran State Bank to record this debt settlement.
- How should Strickland report the gain or loss on the disposition of machine and on restructuring of debt in its 2014 income statement?
- Assume that, instead of transferring the machine, Strickland decides to grant 15,000 shares of its common stock (\$10 par) which has a fair value of \$180,000 in full settlement of the loan obligation. If Moran State Bank treats Strickland's stock as a trading investment, prepare the entries to record the transaction for both parties.

- 10** *E14-22 (**Term Modification without Gain—Debtor's Entries**) On December 31, 2014, the American Bank enters into a debt restructuring agreement with Barkley Company, which is now experiencing financial trouble. The bank agrees to restructure a 12%, issued at par, \$3,000,000 note receivable by the following modifications:

- Reducing the principal obligation from \$3,000,000 to \$2,400,000.
- Extending the maturity date from December 31, 2014, to January 1, 2018.
- Reducing the interest rate from 12% to 10%.

Barkley pays interest at the end of each year. On January 1, 2018, Barkley Company pays \$2,400,000 in cash to Firststar Bank.

Instructions

- Will the gain recorded by Barkley be equal to the loss recorded by American Bank under the debt restructuring?
- Can Barkley Company record a gain under the term modification mentioned above? Explain.
- Assuming that the interest rate Barkley should use to compute interest expense in future periods is 1.4276%, prepare the interest payment schedule of the note for Barkley Company after the debt restructuring.
- Prepare the interest payment entry for Barkley Company on December 31, 2016.
- What entry should Barkley make on January 1, 2018?

- 10** *E14-23 (**Term Modification without Gain—Creditor's Entries**) Using the same information as in E14-22, answer the following questions related to American Bank (creditor).

Instructions

- What interest rate should American Bank use to calculate the loss on the debt restructuring?
- Compute the loss that American Bank will suffer from the debt restructuring. Prepare the journal entry to record the loss.
- Prepare the interest receipt schedule for American Bank after the debt restructuring.
- Prepare the interest receipt entry for American Bank on December 31, 2016.
- What entry should American Bank make on January 1, 2018?

- 10** *E14-24 (**Term Modification with Gain—Debtor's Entries**) Use the same information as in E14-22 above except that American Bank reduced the principal to \$1,900,000 rather than \$2,400,000. On January 1, 2018, Barkley pays \$1,900,000 in cash to American Bank for the principal.

Instructions

- Can Barkley Company record a gain under this term modification? If yes, compute the gain for Barkley Company.
- Prepare the journal entries to record the gain on Barkley's books.
- What interest rate should Barkley use to compute its interest expense in future periods? Will your answer be the same as in E14-22 above? Why or why not?
- Prepare the interest payment schedule of the note for Barkley Company after the debt restructuring.
- Prepare the interest payment entries for Barkley Company on December 31, of 2015, 2016, and 2017.
- What entry should Barkley make on January 1, 2018?

- 10** *E14-25 (**Term Modification with Gain—Creditor's Entries**) Using the same information as in E14-22 and E14-24, answer the following questions related to American Bank (creditor).

Instructions

- Compute the loss American Bank will suffer under this new term modification. Prepare the journal entry to record the loss on American's books.
- Prepare the interest receipt schedule for American Bank after the debt restructuring.
- Prepare the interest receipt entry for American Bank on December 31, 2015, 2016, and 2017.
- What entry should American Bank make on January 1, 2018?

- 10** *E14-26 (Debtor/Creditor Entries for Settlement of Troubled Debt) Gottlieb Co. owes \$199,800 to Ceballos Inc. The debt is a 10-year, 11% note. Because Gottlieb Co. is in financial trouble, Ceballos Inc. agrees to accept some property and cancel the entire debt. The property has a book value of \$90,000 and a fair value of \$140,000.

Instructions

- Prepare the journal entry on Gottlieb's books for debt restructure.
- Prepare the journal entry on Ceballos's books for debt restructure.

- 10** *E14-27 (Debtor/Creditor Entries for Modification of Troubled Debt) Vargo Corp. owes \$270,000 to First Trust. The debt is a 10-year, 12% note due December 31, 2014. Because Vargo Corp. is in financial trouble, First Trust agrees to extend the maturity date to December 31, 2016, reduce the principal to \$220,000, and reduce the interest rate to 5%, payable annually on December 31.

Instructions

- Prepare the journal entries on Vargo's books on December 31, 2014, 2015, 2016.
- Prepare the journal entries on First Trust's books on December 31, 2014, 2015, 2016.

EXERCISES SET B

See the book's companion website, at www.wiley.com/college/kieso, for an additional set of exercises.

PROBLEMS

- 3** **4** P14-1 (Analysis of Amortization Schedule and Interest Entries) The following amortization and interest schedule reflects the issuance of 10-year bonds by Capulet Corporation on January 1, 2008, and the subsequent interest payments and charges. The company's year-end is December 31, and financial statements are prepared once yearly.

Amortization Schedule				
Year	Cash	Interest	Amount Unamortized	Carrying Value
1/1/2008			\$5,651	\$ 94,349
2008	\$11,000	\$11,322	5,329	94,671
2009	11,000	11,361	4,968	95,032
2010	11,000	11,404	4,564	95,436
2011	11,000	11,452	4,112	95,888
2012	11,000	11,507	3,605	96,395
2013	11,000	11,567	3,038	96,962
2014	11,000	11,635	2,403	97,597
2015	11,000	11,712	1,691	98,309
2016	11,000	11,797	894	99,106
2017	11,000	11,894		100,000

Instructions

- Indicate whether the bonds were issued at a premium or a discount and how you can determine this fact from the schedule.
- Indicate whether the amortization schedule is based on the straight-line method or the effective-interest method, and how you can determine which method is used.
- Determine the stated interest rate and the effective-interest rate.

- (d) On the basis of the schedule above, prepare the journal entry to record the issuance of the bonds on January 1, 2008.
- (e) On the basis of the schedule above, prepare the journal entry or entries to reflect the bond transactions and accruals for 2008. (Interest is paid January 1.)
- (f) On the basis of the schedule above, prepare the journal entry or entries to reflect the bond transactions and accruals for 2015. Capulet Corporation does not use reversing entries.

- 3 4 5** **P14-2 (Issuance and Redemption of Bonds)** Venezuela Co. is building a new hockey arena at a cost of \$2,500,000. It received a downpayment of \$500,000 from local businesses to support the project, and now needs to borrow \$2,000,000 to complete the project. It therefore decides to issue \$2,000,000 of 10.5%, 10-year bonds. These bonds were issued on January 1, 2013, and pay interest annually on each January 1. The bonds yield 10%. Venezuela paid \$50,000 in bond issue costs related to the bond sale.

Instructions

- (a) Prepare the journal entry to record the issuance of the bonds and the related bond issue costs incurred on January 1, 2013.
- (b) Prepare a bond amortization schedule up to and including January 1, 2017, using the effective-interest method.
- (c) Assume that on July 1, 2016, Venezuela Co. redeems half of the bonds at a cost of \$1,065,000 plus accrued interest. Prepare the journal entry to record this redemption.

- 3 4 6** **P14-3 (Negative Amortization)** Good-Deal Inc. developed a new sales gimmick to help sell its inventory of new automobiles. Because many new car buyers need financing, Good-Deal offered a low downpayment and low car payments for the first year after purchase. It believes that this promotion will bring in some new buyers.

On January 1, 2014, a customer purchased a new \$33,000 automobile, making a downpayment of \$1,000. The customer signed a note indicating that the annual rate of interest would be 8% and that quarterly payments would be made over 3 years. For the first year, Good-Deal required a \$400 quarterly payment to be made on April 1, July 1, October 1, and January 1, 2015. After this one-year period, the customer was required to make regular quarterly payments that would pay off the loan as of January 1, 2017.

Instructions

- (a) Prepare a note amortization schedule for the first year.
- (b) Indicate the amount the customer owes on the contract at the end of the first year.
- (c) Compute the amount of the new quarterly payments.
- (d) Prepare a note amortization schedule for these new payments for the next 2 years.
- (e) What do you think of the new sales promotion used by Good-Deal?

- 3 4 5 9** **P14-4 (Issuance and Redemption of Bonds; Income Statement Presentation)** Holiday Company issued its 9%, 25-year mortgage bonds in the principal amount of \$3,000,000 on January 2, 2000, at a discount of \$150,000, which it proceeded to amortize by charges to expense over the life of the issue on a straight-line basis. The indenture securing the issue provided that the bonds could be called for redemption in total but not in part at any time before maturity at 104% of the principal amount, but it did not provide for any sinking fund.

On December 18, 2014, the company issued its 11%, 20-year debenture bonds in the principal amount of \$4,000,000 at 102, and the proceeds were used to redeem the 9%, 25-year mortgage bonds on January 2, 2015. The indenture securing the new issue did not provide for any sinking fund or for redemption before maturity.

Instructions

- (a) Prepare journal entries to record the issuance of the 11% bonds and the redemption of the 9% bonds.
- (b) Indicate the income statement treatment of the gain or loss from redemption and the note disclosure required.

- 3 4 5** **P14-5 (Comprehensive Bond Problem)** In each of the following independent cases the company closes its books on December 31.

- Sanford Co. sells \$500,000 of 10% bonds on March 1, 2014. The bonds pay interest on September 1 and March 1. The due date of the bonds is September 1, 2017. The bonds yield 12%. Give entries through December 31, 2015.
- Titania Co. sells \$400,000 of 12% bonds on June 1, 2014. The bonds pay interest on December 1 and June 1. The due date of the bonds is June 1, 2018. The bonds yield 10%. On October 1, 2015, Titania buys back \$120,000 worth of bonds for \$126,000 (includes accrued interest). Give entries through December 1, 2016.

Instructions

For the two cases prepare all of the relevant journal entries from the time of sale until the date indicated. Use the effective-interest method for discount and premium amortization (construct amortization tables where applicable). Amortize premium or discount on interest dates and at year-end. (Assume that no reversing entries were made.)

- 3 4 5** **P14-6 (Issuance of Bonds between Interest Dates, Straight-Line, Redemption)** Presented below are selected transactions on the books of Simonson Corporation.

- May 1, 2014 Bonds payable with a par value of \$900,000, which are dated January 1, 2014, are sold at 106 plus accrued interest. They are coupon bonds, bear interest at 12% (payable annually at January 1), and mature January 1, 2024. (Use interest expense account for accrued interest.)
- Dec. 31 Adjusting entries are made to record the accrued interest on the bonds, and the amortization of the proper amount of premium. (Use straight-line amortization.)
- Jan. 1, 2015 Interest on the bonds is paid.
- April 1 Bonds with par value of \$360,000 are called at 102 plus accrued interest, and redeemed. (Bond premium is to be amortized only at the end of each year.)
- Dec. 31 Adjusting entries are made to record the accrued interest on the bonds, and the proper amount of premium amortized.

Instructions

(Round to two decimal places.)

Prepare journal entries for the transactions above.

- 3 4 5** **P14-7 (Entries for Life Cycle of Bonds)** On April 1, 2014, Seminole Company sold 15,000 of its 11%, 15-year, \$1,000 face value bonds at 97. Interest payment dates are April 1 and October 1, and the company uses the straight-line method of bond discount amortization. On March 1, 2015, Seminole took advantage of favorable prices of its stock to extinguish 6,000 of the bonds by issuing 200,000 shares of its \$10 par value common stock. At this time, the accrued interest was paid in cash. The company's stock was selling for \$31 per share on March 1, 2015.

Instructions

Prepare the journal entries needed on the books of Seminole Company to record the following.

- April 1, 2014: issuance of the bonds.
 - October 1, 2014: payment of semiannual interest.
 - December 31, 2014: accrual of interest expense.
 - March 1, 2015: extinguishment of 6,000 bonds. (No reversing entries made.)
- 6** **P14-8 (Entries for Zero-Interest-Bearing Note)** On December 31, 2014, Faisal Company acquired a computer from Plato Corporation by issuing a \$600,000 zero-interest-bearing note, payable in full on December 31, 2018. Faisal Company's credit rating permits it to borrow funds from its several lines of credit at 10%. The computer is expected to have a 5-year life and a \$70,000 salvage value.

Instructions

(Round answers to the nearest cent.)

- Prepare the journal entry for the purchase on December 31, 2014.
 - Prepare any necessary adjusting entries relative to depreciation (use straight-line) and amortization (use effective-interest method) on December 31, 2015.
 - Prepare any necessary adjusting entries relative to depreciation and amortization on December 31, 2016.
- 6** **P14-9 (Entries for Zero-Interest-Bearing Note; Payable in Installments)** Sabonis Cosmetics Co. purchased machinery on December 31, 2013, paying \$50,000 down and agreeing to pay the balance in four equal installments of \$40,000 payable each December 31. An assumed interest of 8% is implicit in the purchase price.

Instructions

Prepare the journal entries that would be recorded for the purchase and for the payments and interest on the following dates. (Round answers to the nearest cent.)

- December 31, 2013.
- December 31, 2014.
- December 31, 2015.
- December 31, 2016.
- December 31, 2017.

- 3 4 5 9** **P14-10 (Comprehensive Problem: Issuance, Classification, Reporting)** Presented on the next page are four independent situations.

- (a) On March 1, 2015, Wilke Co. issued at 103 plus accrued interest \$4,000,000, 9% bonds. The bonds are dated January 1, 2015, and pay interest semiannually on July 1 and January 1. In addition, Wilke Co. incurred \$27,000 of bond issuance costs. Compute the net amount of cash received by Wilke Co. as a result of the issuance of these bonds.
- (b) On January 1, 2014, Langley Co. issued 9% bonds with a face value of \$700,000 for \$656,992 to yield 10%. The bonds are dated January 1, 2014, and pay interest annually. What amount is reported for interest expense in 2014 related to these bonds, assuming that Langley used the effective-interest method for amortizing bond premium and discount?
- (c) Tweedie Building Co. has a number of long-term bonds outstanding at December 31, 2014. These long-term bonds have the following sinking fund requirements and maturities for the next 6 years.

	Sinking Fund	Maturities
2015	\$300,000	\$100,000
2016	100,000	250,000
2017	100,000	100,000
2018	200,000	—
2019	200,000	150,000
2020	200,000	100,000

Indicate how this information should be reported in the financial statements at December 31, 2014.

- (d) In the long-term debt structure of Beckford Inc., the following three bonds were reported: mortgage bonds payable \$10,000,000; collateral trust bonds \$5,000,000; bonds maturing in installments, secured by plant equipment \$4,000,000. Determine the total amount, if any, of debenture bonds outstanding.

4 **P14-11 (Effective-Interest Method)** Samantha Cordelia, an intermediate accounting student, is having difficulty amortizing bond premiums and discounts using the effective-interest method. Furthermore, she cannot understand why GAAP requires that this method be used instead of the straight-line method. She has come to you with the following problem, looking for help.

On June 30, 2014, Hobart Company issued \$2,000,000 face value of 11%, 20-year bonds at \$2,171,600, a yield of 10%. Hobart Company uses the effective-interest method to amortize bond premiums or discounts. The bonds pay semiannual interest on June 30 and December 31. Prepare an amortization schedule for four periods.

Instructions

Using the data above for illustrative purposes, write a short memo (1–1.5 pages double-spaced) to Samantha, explaining what the effective-interest method is, why it is preferable, and how it is computed. (Do not forget to include an amortization schedule, referring to it whenever necessary.)

10 ***P14-12 (Debtor/Creditor Entries for Continuation of Troubled Debt)** Daniel Perkins is the sole shareholder of Perkins Inc., which is currently under protection of the U.S. bankruptcy court. As a “debtor in possession,” he has negotiated the following revised loan agreement with United Bank. Perkins Inc.’s \$600,000, 12%, 10-year note was refinanced with a \$600,000, 5%, 10-year note.

Instructions

- (a) What is the accounting nature of this transaction?
- (b) Prepare the journal entry to record this refinancing:
- (1) On the books of Perkins Inc.
 - (2) On the books of United Bank.
- (c) Discuss whether generally accepted accounting principles provide the proper information useful to managers and investors in this situation.

10 ***P14-13 (Restructure of Note under Different Circumstances)** Halvor Corporation is having financial difficulty and therefore has asked Frontenac National Bank to restructure its \$5 million note outstanding. The present note has 3 years remaining and pays a current rate of interest of 10%. The present market rate for a loan of this nature is 12%. The note was issued at its face value.

Instructions

Presented below and on the next page are four independent situations. Prepare the journal entry that Halvor and Frontenac National Bank would make for each of these restructurings.

- (a) Frontenac National Bank agrees to take an equity interest in Halvor by accepting common stock valued at \$3,700,000 in exchange for relinquishing its claim on this note. The common stock has a par value of \$1,700,000.
- (b) Frontenac National Bank agrees to accept land in exchange for relinquishing its claim on this note. The land has a book value of \$3,250,000 and a fair value of \$4,000,000.
- (c) Frontenac National Bank agrees to modify the terms of the note, indicating that Halvor does not have to pay any interest on the note over the 3-year period.

(d) Frontenac National Bank agrees to reduce the principal balance due to \$4,166,667 and require interest only in the second and third year at a rate of 10%.

10 *P14-14 (Debtor/Creditor Entries for Continuation of Troubled Debt with New Effective Interest)

Crocker Corp. owes D. Yaeger Corp. a 10-year, 10% note in the amount of \$330,000 plus \$33,000 of accrued interest. The note is due today, December 31, 2014. Because Crocker Corp. is in financial trouble, D. Yaeger Corp. agrees to forgive the accrued interest, \$30,000 of the principal, and to extend the maturity date to December 31, 2017. Interest at 10% of revised principal will continue to be due on 12/31 each year.

Assume the following present value factors for 3 periods.

	$2\frac{1}{4}\%$	$2\frac{3}{8}\%$	$2\frac{1}{2}\%$	$2\frac{5}{8}\%$	$2\frac{3}{4}\%$	3%
Single sum	.93543	.93201	.92859	.92521	.92184	.91514
Ordinary annuity of 1	2.86989	2.86295	2.85602	2.84913	2.84226	2.82861

Instructions

- Compute the new effective-interest rate for Crocker Corp. following restructure. (*Hint:* Find the interest rate that establishes approximately \$363,000 as the present value of the total future cash flows.)
- Prepare a schedule of debt reduction and interest expense for the years 2014 through 2017.
- Compute the gain or loss for D. Yaeger Corp. and prepare a schedule of receivable reduction and interest revenue for the years 2014 through 2017.
- Prepare all the necessary journal entries on the books of Crocker Corp. for the years 2014, 2015, and 2016.
- Prepare all the necessary journal entries on the books of D. Yaeger Corp. for the years 2014, 2015, and 2016.

PROBLEMS SET B

See the book's companion website, at www.wiley.com/college/kieso, for an additional set of problems.

CONCEPTS FOR ANALYSIS

CA14-1 (Bond Theory: Balance Sheet Presentations, Interest Rate, Premium) On January 1, 2014, Nichols Company issued for \$1,085,800 its 20-year, 11% bonds that have a maturity value of \$1,000,000 and pay interest semiannually on January 1 and July 1. Bond issue costs were not material in amount. Below are three presentations of the long-term liability section of the balance sheet that might be used for these bonds at the issue date.

1. Bonds payable (maturing January 1, 2034)	\$1,000,000
Unamortized premium on bonds payable	85,800
Total bond liability	\$1,085,800
2. Bonds payable—principal (face value \$1,000,000 maturing January 1, 2034)	\$ 142,050 ^a
Bonds payable—interest (semiannual payment \$55,000)	943,750 ^b
Total bond liability	\$1,085,800
3. Bonds payable—principal (maturing January 1, 2034)	\$1,000,000
Bonds payable—interest (\$55,000 per period for 40 periods)	2,200,000
Total bond liability	\$3,200,000

^aThe present value of \$1,000,000 due at the end of 40 (6-month) periods at the yield rate of 5% per period.

^bThe present value of \$55,000 per period for 40 (6-month) periods at the yield rate of 5% per period.

Instructions

- Discuss the conceptual merit(s) of each of the date-of-issue balance sheet presentations shown above for these bonds.
- Explain why investors would pay \$1,085,800 for bonds that have a maturity value of only \$1,000,000.

- (c) Assuming that a discount rate is needed to compute the carrying value of the obligations arising from a bond issue at any date during the life of the bonds, discuss the conceptual merit(s) of using for this purpose:
- (1) The coupon or nominal rate.
 - (2) The effective or yield rate at date of issue.
- (d) If the obligations arising from these bonds are to be carried at their present value computed by means of the current market rate of interest, how would the bond valuation at dates subsequent to the date of issue be affected by an increase or a decrease in the market rate of interest?

(AICPA adapted)

CA14-2 (Bond Theory: Price, Presentation, and Redemption) On March 1, 2014, Sealy Company sold its 5-year, \$1,000 face value, 9% bonds dated March 1, 2014, at an effective annual interest rate (yield) of 11%. Interest is payable semiannually, and the first interest payment date is September 1, 2014. Sealy uses the effective-interest method of amortization. Bond issue costs were incurred in preparing and selling the bond issue. The bonds can be called by Sealy at 101 at any time on or after March 1, 2015.

Instructions

- (a) (1) How would the selling price of the bond be determined?
(2) Specify how all items related to the bonds would be presented in a balance sheet prepared immediately after the bond issue was sold.
- (b) What items related to the bond issue would be included in Sealy's 2014 income statement, and how would each be determined?
- (c) Would the amount of bond discount amortization using the effective-interest method of amortization be lower in the second or third year of the life of the bond issue? Why?
- (d) Assuming that the bonds were called in and redeemed on March 1, 2015, how should Sealy report the redemption of the bonds on the 2015 income statement?

(AICPA adapted)

**CA14-3 (Bond Theory: Amortization and Gain or Loss Recognition)**

Part I: The appropriate method of amortizing a premium or discount on issuance of bonds is the effective-interest method.

Instructions

- (a) What is the effective-interest method of amortization and how is it different from and similar to the straight-line method of amortization?
- (b) How is amortization computed using the effective-interest method, and why and how do amounts obtained using the effective-interest method differ from amounts computed under the straight-line method?

Part II: Gains or losses from the early extinguishment of debt that is refunded can theoretically be accounted for in three ways:

1. Amortized over remaining life of old debt.
2. Amortized over the life of the new debt issue.
3. Recognized in the period of extinguishment.

Instructions

- (a) Develop supporting arguments for each of the three theoretical methods of accounting for gains and losses from the early extinguishment of debt.
- (b) Which of the methods above is generally accepted and how should the appropriate amount of gain or loss be shown in a company's financial statements?

(AICPA adapted)

CA14-4 (Off-Balance-Sheet Financing) Matt Ryan Corporation is interested in building its own soda can manufacturing plant adjacent to its existing plant in Partyville, Kansas. The objective would be to ensure a steady supply of cans at a stable price and to minimize transportation costs. However, the company has been experiencing some financial problems and has been reluctant to borrow any additional cash to fund the project. The company is not concerned with the cash flow problems of making payments, but rather with the impact of adding additional long-term debt to its balance sheet.

The president of Ryan, Andy Newlin, approached the president of the Aluminum Can Company (ACC), its major supplier, to see if some agreement could be reached. ACC was anxious to work out an arrangement, since it seemed inevitable that Ryan would begin its own can production. The Aluminum Can Company could not afford to lose the account.

After some discussion, a two-part plan was worked out. First, ACC was to construct the plant on Ryan's land adjacent to the existing plant. Second, Ryan would sign a 20-year purchase agreement. Under

the purchase agreement, Ryan would express its intention to buy all of its cans from ACC, paying a unit price which at normal capacity would cover labor and material, an operating management fee, and the debt service requirements on the plant. The expected unit price, if transportation costs are taken into consideration, is lower than current market. If Ryan did not take enough production in any one year and if the excess cans could not be sold at a high enough price on the open market, Ryan agrees to make up any cash shortfall so that ACC could make the payments on its debt. The bank will be willing to make a 20-year loan for the plant, taking the plant and the purchase agreement as collateral. At the end of 20 years, the plant is to become the property of Ryan.

Instructions

- (a) What are project financing arrangements using special-purpose entities?
- (b) What are take-or-pay contracts?
- (c) Should Ryan record the plant as an asset together with the related obligation?
- (d) If not, should Ryan record an asset relating to the future commitment?
- (e) What is meant by off-balance-sheet financing?

CA14-5 (Bond Issue) Donald Lennon is the president, founder, and majority owner of Wichita Medical Corporation, an emerging medical technology products company. Wichita is in dire need of additional capital to keep operating and to bring several promising products to final development, testing, and production. Donald, as owner of 51% of the outstanding stock, manages the company's operations. He places heavy emphasis on research and development and long-term growth. The other principal stockholder is Nina Friendly who, as a nonemployee investor, owns 40% of the stock. Nina would like to deemphasize the R & D functions and emphasize the marketing function to maximize short-run sales and profits from existing products. She believes this strategy would raise the market price of Wichita's stock.

All of Donald's personal capital and borrowing power is tied up in his 51% stock ownership. He knows that any offering of additional shares of stock will dilute his controlling interest because he won't be able to participate in such an issuance. But, Nina has money and would likely buy enough shares to gain control of Wichita. She then would dictate the company's future direction, even if it meant replacing Donald as president and CEO.

The company already has considerable debt. Raising additional debt will be costly, will adversely affect Wichita's credit rating, and will increase the company's reported losses due to the growth in interest expense. Nina and the other minority stockholders express opposition to the assumption of additional debt, fearing the company will be pushed to the brink of bankruptcy. Wanting to maintain his control and to preserve the direction of "his" company, Donald is doing everything to avoid a stock issuance and is contemplating a large issuance of bonds, even if it means the bonds are issued with a high effective-interest rate.

Instructions

- (a) Who are the stakeholders in this situation?
- (b) What are the ethical issues in this case?
- (c) What would you do if you were Donald?

USING YOUR JUDGMENT

FINANCIAL REPORTING

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of P&G are presented in Appendix 5B. The company's complete annual report, including the notes to the financial statements, can be accessed at the book's companion website, www.wiley.com/college/kieso.

Instructions

Refer to P&G's 2011 financial statements and the accompanying notes to answer the following questions.

- (a) What cash outflow obligations related to the repayment of long-term debt does P&G have over the next 5 years?
- (b) P&G indicates that it believes that it has the ability to meet business requirements in the foreseeable future. Prepare an assessment of its liquidity, solvency, and financial flexibility using ratio analysis.

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

Instructions

Go to the book's companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- Compute the debt to assets and the times interest earned ratios for these two companies. Comment on the quality of these two ratios for both Coca-Cola and PepsiCo.
- What is the difference between the fair value and the historical cost (carrying amount) of each company's debt at year-end 2011? Why might a difference exist in these two amounts?
- Both companies have debt issued in foreign countries. Speculate as to why these companies may use foreign debt to finance their operations. What risks are involved in this strategy, and how might they adjust for this risk?

Financial Statement Analysis Case

Commonwealth Edison Co.

The following article appeared in the *Wall Street Journal*.

Bond Markets

Giant Commonwealth Edison Issue Hits Resale Market With \$70 Million Left Over

NEW YORK—Commonwealth Edison Co.'s slow-selling new 9¼% bonds were tossed onto the resale market at a reduced price with about \$70 million still available from the \$200 million offered Thursday, dealers said.

The Chicago utility's bonds, rated double-A by Moody's and double-A-minus by Standard & Poor's, originally had been priced at 99.803, to yield 9.3% in 5 years. They were marked down yesterday the equivalent of about \$5.50 for each \$1,000 face amount, to about 99.25, where their yield jumped to 9.45%.

Instructions

- How will the development above affect the accounting for **Commonwealth Edison's** bond issue?
- Provide several possible explanations for the markdown and the slow sale of Commonwealth Edison's bonds.

Accounting, Analysis, and Principles

The following information is taken from the 2014 annual report of Bugant, Inc. Bugant's fiscal year ends December 31 of each year. Bugant's December 31, 2014, balance sheet is as follows.

Bugant, Inc.	
Balance Sheet	
December 31, 2014	
<i>Assets</i>	
Cash	\$ 450
Inventory	1,800
Total current assets	2,250
Plant and equipment	2,000
Accumulated depreciation	(160)
Total assets	<u>\$4,090</u>
<i>Liabilities</i>	
Bonds payable (net of discount)	\$1,426
<i>Stockholders' equity</i>	
Common stock	1,500
Retained earnings	1,164
Total liabilities and stockholders' equity	<u>\$4,090</u>
Note X: Long Term Debt:	
On January 1, 2015, Bugant issued bonds with face value of \$1,500 and a coupon rate equal to 10%. The bonds were issued to yield 12% and mature on January 1, 2020.	

Additional information concerning 2015 is as follows.

1. Sales were \$3,500, all for cash.
2. Purchases were \$2,000, all paid in cash.
3. Salaries were \$700, all paid in cash.
4. Property, plant, and equipment was originally purchased for \$2,000 and is depreciated straight-line over a 25-year life with no salvage value.
5. Ending inventory was \$1,900.
6. Cash dividends of \$100 were declared and paid by Bugant.
7. Ignore taxes.
8. The market rate of interest on bonds of similar risk was 12% during all of 2015.
9. Interest on the bonds is paid semiannually each June 30 and December 31.

Accounting

Prepare a balance sheet for Bugant, Inc. at December 31, 2015, and an income statement for the year ending December 31, 2015. Assume semiannual compounding of the bond interest.

Analysis

Use common ratios for analysis of long-term debt to assess Bugant's long-run solvency. Has Bugant's solvency changed much from 2014 to 2015? Bugant's net income in 2014 was \$550 and interest expense was \$169.

Principles

Recently, the FASB and the IASB allowed companies the option of recognizing in their financial statements the fair values of their long-term debt. That is, companies have the option to change the balance sheet value of their long-term debt to the debt's fair value and report the change in balance sheet value as a gain or loss in income. In terms of the qualitative characteristics of accounting information (Chapter 2), briefly describe the potential trade-off(s) involved in reporting long-term debt at its fair value.

BRIDGE TO THE PROFESSION

Professional Research: FASB Codification

Wie Company has been operating for just 2 years, producing specialty golf equipment for women golfers. To date, the company has been able to finance its successful operations with investments from its principal owner, Michelle Wie, and cash flows from operations. However, current expansion plans will require some borrowing to expand the company's production line.

As part of the expansion plan, Wie will acquire some used equipment by signing a zero-interest-bearing note. The note has a maturity value of \$50,000 and matures in 5 years. A reliable fair value measure for the equipment is not available, given the age and specialty nature of the equipment. As a result, Wie's accounting staff is unable to determine an established exchange price for recording the equipment (nor the interest rate to be used to record interest expense on the long-term note). They have asked you to conduct some accounting research on this topic.

Instructions

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

- (a) Identify the authoritative literature that provides guidance on the zero-interest-bearing note. Use some of the examples to explain how the standard applies in this setting.
- (b) How is present value determined when an established exchange price is not determinable and a note has no ready market? What is the resulting interest rate often called?
- (c) Where should a discount or premium appear in the financial statements? What about issue costs?

Additional Professional Resources

See the book's companion website, at www.wiley.com/college/kieso, for professional simulations as well as other study resources.

As indicated in Chapter 13, IFRS and GAAP have similar definitions of liabilities.

11 LEARNING OBJECTIVE

Compare the accounting procedures for long-term liabilities under GAAP and IFRS.

RELEVANT FACTS

Following are the key similarities and differences between GAAP and IFRS related to long-term liabilities.

Similarities

- As indicated in our earlier discussions, GAAP and IFRS have similar liability definitions, and liabilities are classified as current and non-current.
- Much of the accounting for bonds and long-term notes is the same for GAAP and IFRS.

Differences

- Under GAAP, companies are permitted to use the straight-line method of amortization for bond discount or premium, provided that the amount recorded is not materially different than that resulting from effective-interest amortization. However, the effective-interest method is preferred and is generally used. Under IFRS, companies must use the effective-interest method.
- Under IFRS, companies do not use premium or discount accounts but instead show the bond at its net amount. For example, if a \$100,000 bond was issued at 97, under IFRS a company would record:

Cash	97,000	
Bonds Payable		97,000

- Under GAAP, bond issue costs are recorded as an asset. Under IFRS, bond issue costs are netted against the carrying amount of the bonds.
- GAAP uses the term *troubled-debt restructurings* and has developed specific guidelines related to that category of loans. IFRS generally assumes that all restructurings will be accounted for as extinguishments of debt.
- IFRS requires a liability and related expense or cost be recognized when a contract is onerous. Under GAAP, losses on onerous contracts are generally not recognized under GAAP unless addressed by industry or transaction-specific requirements.

ABOUT THE NUMBERS

Effective-Interest Method

As discussed earlier, by paying more or less at issuance, investors earn a rate different than the coupon rate on the bond. Recall that the issuing company pays the contractual interest rate over the term of the bonds but also must pay the face value at maturity. If the bond is issued at a discount, the amount paid at maturity is more than the issue amount. If issued at a premium, the company pays less at maturity relative to the issue price.

The company records this adjustment to the cost as **bond interest expense** over the life of the bonds through a process called **amortization**. **Amortization of a discount increases bond interest expense. Amortization of a premium decreases bond interest expense.**

Under IFRS, the required procedure for amortization of a discount or premium is the **effective-interest method** (also called **present value amortization**). Under the effective-interest method, companies:

1. Compute bond interest expense first by multiplying the **carrying value** (book value) of the bonds at the beginning of the period by the effective-interest rate.
2. Determine the bond discount or premium amortization next by comparing the bond interest expense with the interest (cash) to be paid.

Illustration IFRS14-1 depicts graphically the computation of the amortization.

ILLUSTRATION IFRS14-1
Bond Discount and Premium Amortization Computation

The effective-interest method produces a periodic interest expense equal to a **constant percentage of the carrying value of the bonds**. The issuance of bonds involves engraving and printing costs, legal and accounting fees, commissions, promotion costs, and other similar charges. These costs should be recorded as a reduction to the issue amount of the bond payable and then amortized into expense over the life of the bond, through an adjustment to the effective-interest rate. For example, if the face value of the bond is \$100,000 and issue costs are \$1,000, then the bond payable (net of the bond issue costs) is recorded at \$99,000. Thus, the effective-interest rate will be higher, based on the reduced carrying value.

Bonds Issued at a Discount

To illustrate amortization of a discount under the effective-interest method, Evermaster Corporation issued \$100,000 of 8 percent term bonds on January 1, 2014, due on January 1, 2019, with interest payable each July 1 and January 1. Because the investors required an effective-interest rate of 10 percent, they paid \$92,278 for the \$100,000 of bonds, creating a \$7,722 discount. Evermaster computes the \$7,722 discount as follows.

ILLUSTRATION IFRS14-2
Computation of Discount on Bonds Payable

Maturity value of bonds payable		\$100,000
Present value of \$100,000 due in 5 years at 10%, interest payable semiannually (Table 6-2); $FV(PVF_{10.5\%})$; $(\$100,000 \times .61391)$	\$61,391	
Present value of \$4,000 interest payable semiannually for 5 years at 10% annually (Table 6-4); $R(PVF-OA_{10.5\%})$; $(\$4,000 \times 7.72173)$	<u>30,887</u>	
Proceeds from sale of bonds		<u>(92,278)</u>
Discount on bonds payable		<u>\$ 7,722</u>

The five-year amortization schedule appears in Illustration IFRS14-3.

Evermaster records the issuance of its bonds at a discount on January 1, 2014, as follows.

Cash	92,278	
Bonds Payable		92,278

It records the first interest payment on July 1, 2014, and amortization of the discount as follows.

Interest Expense	4,614	
Bonds Payable		614
Cash		4,000

**ILLUSTRATION
IFRS14-3**Bond Discount
Amortization Schedule

SCHEDULE OF BOND DISCOUNT AMORTIZATION EFFECTIVE-INTEREST METHOD—SEMIANNUAL INTEREST PAYMENTS 5-YEAR, 8% BONDS SOLD TO YIELD 10%				
Date	Cash Paid	Interest Expense	Discount Amortized	Carrying Amount of Bonds
1/1/14				\$ 92,278
7/1/14	\$ 4,000 ^a	\$ 4,614 ^b	\$ 614 ^c	92,892 ^d
1/1/15	4,000	4,645	645	93,537
7/1/15	4,000	4,677	677	94,214
1/1/16	4,000	4,711	711	94,925
7/1/16	4,000	4,746	746	95,671
1/1/17	4,000	4,783	783	96,454
7/1/17	4,000	4,823	823	97,277
1/1/18	4,000	4,864	864	98,141
7/1/18	4,000	4,907	907	99,048
1/1/19	4,000	4,952	952	100,000
	<u>\$40,000</u>	<u>\$47,722</u>	<u>\$7,722</u>	

^a\$4,000 = \$100,000 × .08 × 6/12
^b\$4,614 = \$92,278 × .10 × 6/12
^c\$614 = \$4,614 – \$4,000
^d\$92,892 = \$92,278 + \$614

Evermaster records the interest expense accrued at December 31, 2014 (year-end), and amortization of the discount as follows.

Interest Expense	4,645	
Interest Payable		4,000
Bonds Payable		645

Extinguishment with Modification of Terms

Practically every day, the *Wall Street Journal* or the *Financial Times* runs a story about some company in financial difficulty. Notable recent examples are **Nakheel**, **Parmalat**, and **General Motors**. In many of these situations, the creditor may grant a borrower concessions with respect to settlement. The creditor offers these concessions to ensure the highest possible collection on the loan. For example, a creditor may offer one or a combination of the following modifications:

1. Reduction of the stated interest rate.
2. Extension of the maturity date of the face amount of the debt.
3. Reduction of the face amount of the debt.
4. Reduction or deferral of any accrued interest.

As with other extinguishments, when a creditor grants favorable concessions on the terms of a loan, the debtor has an economic gain. Thus, the accounting for debt modifications is similar to that for other extinguishments. That is, the original obligation is extinguished, the new payable is recorded at fair value, and a gain is recognized for the difference in the fair value of the new obligation and the carrying value of the old obligation. Thus, under IFRS, debt modifications are similar to troubled-debt restructurings in GAAP. In general, IFRS treats debt modifications as debt extinguishments.

An exception to the general rule is when the modification of terms is not substantial. A substantial modification is defined as one in which the discounted cash flows under the terms of the new debt (using the historical effective-interest rate) differ by at least 10 percent of the carrying value of the original debt. If a modification is not substantial, the difference (gain) is deferred and amortized over the remaining life of the debt at the historical effective-interest rate. In the case of a non-substantial modification, in essence, the new loan is a continuation of the old loan. Therefore, the debtor should record interest at the historical effective-interest rate.

ON THE HORIZON

The FASB and IASB are currently involved in two projects, each of which has implications for the accounting for liabilities. One project is investigating approaches to differentiate between debt and equity instruments. The other project, the elements phase of the conceptual framework project, will evaluate the definitions of the fundamental building blocks of accounting. The results of these projects could change the classification of many debt and equity securities.

IFRS SELF-TEST QUESTIONS

- Under IFRS, bond issuance costs, including the printing costs and legal fees associated with the issuance, should be:
 - expensed in the period when the debt is issued.
 - recorded as a reduction in the carrying value of bonds payable.
 - accumulated in a deferred charge account and amortized over the life of the bonds.
 - reported as an expense in the period the bonds mature or are redeemed.
- Which of the following is stated correctly?
 - Current liabilities follow non-current liabilities on the statement of financial position under GAAP but non-current liabilities follow current liabilities under IFRS.
 - IFRS does not treat debt modifications as extinguishments of debt.
 - Bond issuance costs are recorded as a reduction of the carrying value of the debt under GAAP but are recorded as an asset and amortized to expense over the term of the debt under IFRS.
 - Under GAAP, bonds payable is recorded at the face amount and any premium or discount is recorded in a separate account. Under IFRS, bonds payable is recorded at the carrying value so no separate premium or discount accounts are used.
- All of the following are differences between IFRS and GAAP in accounting for liabilities **except**:
 - When a bond is issued at a discount, GAAP records the discount in a separate contra liability account. IFRS records the bond net of the discount.
 - Under IFRS, bond issuance costs reduce the carrying value of the debt. Under GAAP, these costs are recorded as an asset and amortized to expense over the terms of the bond.
 - GAAP, but not IFRS, uses the term “troubled-debt restructurings.”
 - GAAP, but not IFRS, uses the term “provisions” for contingent liabilities which are accrued.
- On January 1, Patterson Inc. issued \$5,000,000, 9% bonds for \$4,695,000. The market rate of interest for these bonds is 10%. Interest is payable annually on December 31. Patterson uses the effective-interest method of amortizing bond discount. At the end of the first year, Patterson should report bonds payable of:

(a) \$4,725,500.	(c) \$258,050.
(b) \$4,714,500.	(d) \$4,745,000.
- On January 1, Martinez Inc. issued \$3,000,000, 11% bonds for \$3,195,000. The market rate of interest for these bonds is 10%. Interest is payable annually on December 31. Martinez uses the effective-interest method of amortizing bond premium. At the end of the first year, Martinez should report bonds payable of:

(a) \$3,185,130.	(c) \$3,173,550.
(b) \$3,184,500.	(d) \$3,165,000.

IFRS CONCEPTS AND APPLICATION

IFRS14-1 What is the required method of amortizing discount and premium on bonds payable? Explain the procedures.

IFRS14-2 What are the general rules for measuring and recognizing gain or loss by a debt extinguishment with modification?

IFRS14-3 On January 1, 2014, JWS Corporation issued \$600,000 of 7% bonds, due in 10 years. The bonds were issued for \$559,224, and pay interest each July 1 and January 1. Prepare the company’s journal entries for (a) the January 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry. Assume an effective-interest rate of 8%.

IFRS14-4 Assume the bonds in IFRS14-3 were issued for \$644,636 and the effective-interest rate is 6%. Prepare the company's journal entries for (a) the January 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry. (Round to the nearest dollar.)

IFRS14-5 Foreman Company issued \$800,000 of 10%, 20-year bonds on January 1, 2014, at 119.792 to yield 8%. Interest is payable semiannually on July 1 and January 1. Prepare the journal entries to record (a) the issuance of the bonds, (b) the payment of interest and the related amortization on July 1, 2014, and (c) the accrual of interest and the related amortization on December 31, 2014. (Round to the nearest dollar.)

IFRS14-6 Assume the same information as in IFRS14-5, except that the bonds were issued at 84.95 to yield 12%. Prepare the journal entries to record (a) the issuance of the bonds, (b) the payment of interest and related amortization on July 1, 2014, and (c) the accrual of interest and the related amortization on December 31, 2014. (Round to the nearest dollar.)

Professional Research

IFRS14-7 Wie Company has been operating for just 2 years, producing specialty golf equipment for women golfers. To date, the company has been able to finance its successful operations with investments from its principal owner, Michelle Wie, and cash flows from operations. However, current expansion plans will require some borrowing to expand the company's production line.

As part of the expansion plan, Wie is contemplating a borrowing on a note payable or issuance of bonds. In the past, the company has had little need for external borrowing so the management team has a number of questions concerning the accounting for these new non-current liabilities. They have asked you to conduct some research on this topic.

Instructions

Access the IFRS authoritative literature at the IASB website (<http://eifrs.iasb.org/>). (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) With respect to a decision of issuing notes or bonds, management is aware of certain costs (e.g., printing, marketing, selling) associated with a bond issue. How will these costs affect Wie's reported earnings in the year of issue and while the bonds are outstanding?
- (b) If all goes well with the plant expansion, the financial performance of Wie Company could dramatically improve. As a result, Wie's market rate of interest (which is currently around 12%) could decline. This raises the possibility of retiring or exchanging the debt, in order to get a lower borrowing rate. How would such a debt extinguishment be accounted for?

International Financial Reporting Problem

Marks and Spencer plc

IFRS14-8 The financial statements of **Marks and Spencer plc (M&S)** are available at the book's companion website or can be accessed at http://annualreport.marksandspencer.com/_assets/downloads/Marks-and-Spencer-Annual-report-and-financial-statements-2012.pdf.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) What cash outflow obligations related to the repayment of long-term debt does M&S have over the next 5 years?
- (b) M&S indicates that it believes that it has the ability to meet business requirements in the foreseeable future. Prepare an assessment of its liquidity, solvency, and financial flexibility using ratio analysis.

ANSWERS TO IFRS SELF-TEST QUESTIONS

1. b 2. d 3. d 4. b 5. b

Remember to check the book's companion website to find additional resources for this chapter.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Discuss the characteristics of the corporate form of organization.
- 2 Identify the key components of stockholders' equity.
- 3 Explain the accounting procedures for issuing shares of stock.
- 4 Describe the accounting for treasury stock.
- 5 Explain the accounting for and reporting of preferred stock.
- 6 Describe the policies used in distributing dividends.
- 7 Identify the various forms of dividend distributions.
- 8 Explain the accounting for small and large stock dividends, and for stock splits.
- 9 Indicate how to present and analyze stockholders' equity.

It's a Global Market

As mentioned in prior chapters, we are moving rapidly toward one set of global financial reporting standards and one "common language" for financial information. This change will probably lead to more consolidation of our capital markets. To understand how quickly the global financial world is changing, let's examine a few trends occurring on stock exchanges around the world.

In 2007, the New York Stock Exchange (NYSE) merged with Paris-based Euronext, creating the world's first transatlantic stock exchange. **NYSE Euronext** is the world's largest exchange group, now with 8,000 listed issuers representing over 40 percent of global equity trading in 2010. Similarly, NASDAQ, the world's largest electronic stock market, merged with OMX, the Nordic stock market operator. This electronic exchange operates in 29 countries, on six continents, and has over 4,000 listed issuers, with a market value of approximately \$5.5 trillion. (Further exchange consolidation may be in the offing, with **IntercontinentalExchange** and international exchanges in Asia exploring mergers with NYSE Euronext.)

Another reason behind the movement to international financial reporting standards can be found in recent initial public offerings (IPOs). The emerging markets are driving the global IPO market. As shown in the following table, Greater China is at the top in IPO volume, with Poland, Korea, and India also in the top 10.

2011 Global IPOs by Domicile Country—Top 10 by Number of Deals		
Country	Number of Deals	% of Global Total
Greater China*	388	31.70%
Poland	137	11.20
United States	108	8.80
Australia	98	8.00
South Korea	69	5.60
Canada	64	5.20
India	40	3.30
Japan	37	3.00
United Kingdom	28	2.30
Indonesia	26	2.10
Rest of world** (52 countries)	230	18.80
Total	1,225	100.00%

Source: Based on the listed company domicile.
 *Includes Mainland China, Hong Kong, and Taiwan.
 **Includes countries with 1% or less of IPO activity by number of deals or capital raised.

Finally, globalization has also been an enormous boon for some of the biggest names in corporate America, along with investors who own the stocks in those companies. As shown in the following table, these 10 large U.S. companies—often called “multinationals” for good reason—have increasingly followed globalization of markets.

Company	Total Revenues	% of Revenues Overseas
Intel	\$ 44	85
Dow	54	67
McDonald's	24	66
IBM	100	64
General Electric	149	54
Ford	129	51
Nike	21	50
Wal-Mart	420	45
ExxonMobil	342	45
Amazon.com	34	45

stock index are now coming in from overseas sales. Foreign exposure allows U.S.-based companies to capitalize on rapid growth in emerging markets like China, India, and Latin America, and earn much stronger profits than if they were totally dependent on the struggling U.S. economy. As one analyst noted, “[Returns for companies] . . . in the S&P 500 continue to outgrow the U.S. economy. Earnings power is decoupled from U.S. GDP.”

Sources: Ernst and Young, *Growth During Economic Uncertainty: Global IPO Trends Report* (2012); www.euronext.com; and R. Newman, “Why U.S. Companies Aren’t So American Anymore,” <http://money.usnews.com> (June 30, 2011).

CONCEPTUAL FOCUS

> See the **Underlying Concepts** on pages 830 and 842.

INTERNATIONAL FOCUS

> See the **International Perspectives** on pages 823 and 824.

> Read the **IFRS Insights** on pages 874–880 for a discussion of:

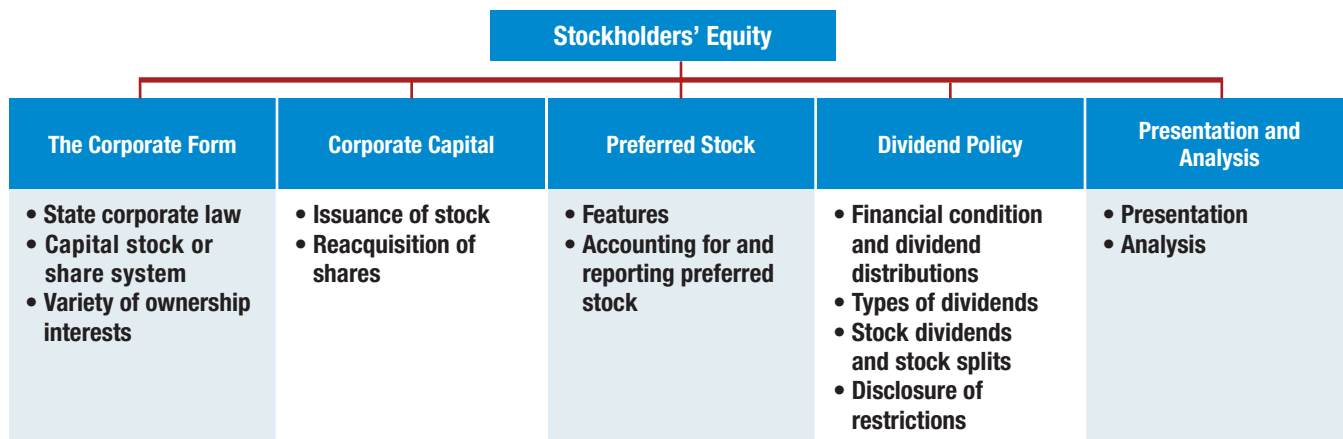

- Equity
- Accounting for preference shares
- Presentation of equity

As indicated, **Intel** has 85 percent of its sales overseas, **McDonald's** in a recent year sold more hamburgers overseas than in the United States, and **Ford Motor Company's** sales would be much less except for success in the European market. Overall, about 40 percent of profit for firms listed in the S&P 500

PREVIEW OF CHAPTER

15

As our opening story indicates, the growth of global equity capital markets indicates that investors around the world need useful information. In this chapter, we explain the accounting issues related to the stockholders' equity of a corporation. The content and organization of the chapter are as follows.

THE CORPORATE FORM OF ORGANIZATION

LEARNING OBJECTIVE 1

Discuss the characteristics of the corporate form of organization.

Of the three **primary forms of business organization**—the proprietorship, the partnership, and the corporation—the corporate form dominates. The corporation is by far the leader in terms of the aggregate amount of resources controlled, goods and services produced, and people employed. All of the “Fortune 500” largest industrial firms are corporations. Although the corporate form has a number of advantages (as well as disadvantages) over the other two forms, its principal advantage is its facility for attracting and accumulating large amounts of capital.

The special characteristics of the corporate form that affect accounting include:

1. Influence of state corporate law.
2. Use of the capital stock or share system.
3. Development of a variety of ownership interests.

State Corporate Law

Anyone who wishes to establish a corporation must submit **articles of incorporation** to the state in which incorporation is desired. After fulfilling requirements, the state issues a corporation charter, thereby recognizing the company as a legal entity subject to state law. Regardless of the number of states in which a corporation has operating divisions, it is incorporated in only one state.

It is to the company's advantage to incorporate in a state whose laws favor the corporate form of business organization. For example, consider that nearly half of all public corporations in the United States are incorporated in Delaware. Why Delaware? The state has a favorable tax and regulatory environment, resulting in Delaware being home to more corporations—public and private—than people.¹

Each state has its own business incorporation act. The accounting for stockholders' equity follows the provisions of these acts. In many cases, states have adopted the principles contained in the Model Business Corporate Act prepared by the American Bar Association. State laws are complex and vary both in their provisions and in their definitions of certain terms. Some laws fail to define technical terms. As a result, terms often mean one thing in one state and another thing in a different state. These problems may be further compounded because legal authorities often interpret the effects and restrictions of the laws differently.

What do the numbers mean?

1209 NORTH ORANGE STREET

Nothing about 1209 North Orange Street hints at the secrets inside. It's a humdrum office building, a low-slung affair with a faded awning and a view of a parking garage. Hardly worth a second glance, if even a first one. But behind its doors is one of the most remarkable corporate collections in the world: 1209 North Orange, you see, is the legal address of no fewer than 285,000 separate businesses.

Its occupants, on paper, include giants like **American Airlines, Apple, Bank of America, Berkshire Hathaway, Cargill, Coca-Cola, Ford, General Electric, Google, JPMorgan Chase, and Wal-Mart**. These companies do business across the nation and around the world. Here at 1209 North Orange, they simply have a dropbox.

What brings these marquee names to 1209 North Orange, and to other Delaware addresses, also attracts less-upstanding corporate citizens. For instance, 1209 North Orange was, until recently, a business address of Timothy S. Durham, known as “the Midwest Madoff.” On June 20, Durham was found guilty of bilking 5,000 mostly middle-class and elderly investors out of \$207 million. It was also an address of Stanko Subotic, a Serbian businessman and convicted smuggler—just one of many Eastern Europeans drawn to the state.

Big corporations, small-time businesses, rogues, scoundrels, and worse—all have turned up at Delaware addresses in hopes of minimizing taxes, skirting regulations, plying friendly courts, or, when needed, covering their tracks.

¹L. Wayne, “How Delaware Thrives as a Corporate Tax Haven,” *The New York Times* (June 30, 2012).

Federal authorities worry that, in addition to the legitimate businesses flocking here, drug-traffickers, embezzlers, and money-launderers are increasingly heading to Delaware, too. It's easy to set up shell companies here, no questions asked.

Of course, business—the legal kind—has been the mainstay of Delaware since 1792, when the state established its Court of Chancery to handle business affairs. By the early 20th century, the state was writing friendly corporate and tax laws to lure companies from New York, New Jersey, and

elsewhere. Today, Delaware regularly tops lists of domestic and foreign tax havens because it allows companies to lower their taxes in another state—for instance, the state in which they actually do business or have their headquarters—by shifting royalties and similar revenues to holding companies in Delaware, where they are not taxed. In tax circles, the arrangement is known as “the Delaware loophole.” Over the last decade, the Delaware loophole has enabled corporations to reduce the taxes paid to other states by an estimated \$9.5 billion.

Source: L. Wayne, “How Delaware Thrives as a Corporate Tax Haven,” *The New York Times* (June 30, 2012).

Capital Stock or Share System

Stockholders' equity in a corporation generally consists of a large number of units or shares. Within a given class of stock, each share exactly equals every other share. The number of shares possessed determines each owner's interest. If a company has one class of stock divided into 1,000 shares, a person who owns 500 shares controls one-half of the ownership interest. One holding 10 shares has a one-hundredth interest.

Each share of stock has certain rights and privileges. Only by special contract can a company restrict these rights and privileges at the time it issues the shares. Owners must examine the articles of incorporation, stock certificates, and the provisions of the state law to ascertain such restrictions on or variations from the standard rights and privileges. In the absence of restrictive provisions, each share carries the following rights:

1. To share proportionately in profits and losses.
2. To share proportionately in management (the right to vote for directors).
3. To share proportionately in corporate assets upon liquidation.
4. To share proportionately in any new issues of stock of the same class—called the **preemptive right**.²

The first three rights are self-explanatory. The last right is used to protect each stockholder's proportional interest in the company. **The preemptive right protects an existing stockholder from involuntary dilution of ownership interest.** Without this right, stockholders might find their interest reduced by the issuance of additional stock without their knowledge and at prices unfavorable to them. However, many corporations have eliminated the preemptive right. Why? Because this right makes it inconvenient for corporations to issue large amounts of additional stock, as they frequently do in acquiring other companies.

The share system easily allows one individual to transfer an interest in a company to another investor. For example, individuals owning shares in **Google may sell them to others at any time and at any price without obtaining the consent of the company or other stockholders.** Each share is personal property of the owner, who may dispose of it at will. Google simply maintains a list or subsidiary ledger of stockholders as a guide to dividend payments, issuance of stock rights, voting proxies, and the like. Because owners freely and frequently transfer shares, Google must revise the subsidiary

International Perspective

In the United States, stockholders are treated equally as far as access to financial information. That is not always the case in other countries. For example, in Mexico, foreign investors as well as minority investors often have difficulty obtaining financial data. These restrictions are rooted in the habits of companies that, for many years, were tightly controlled by a few stockholders and managers.

²This privilege is referred to as a **stock right** or **warrant**. The warrants issued in these situations are of short duration, unlike the warrants issued with other securities.

ledger of stockholders periodically, generally in advance of every dividend payment or stockholders' meeting.

In addition, the major stock exchanges require ownership controls that the typical corporation finds uneconomic to provide. Thus, corporations often use **registrars and transfer agents** who specialize in providing services for recording and transferring stock. The Uniform Stock Transfer Act and the Uniform Commercial Code govern the negotiability of stock certificates.

Variety of Ownership Interests

In every corporation, one class of stock must represent the basic ownership interest. That class is called common stock. **Common stock** is the residual corporate interest that bears the ultimate risks of loss and receives the benefits of success. Common stockholders are not guaranteed dividends or assets upon dissolution. But common stockholders generally control the management of the corporation and tend to profit most if the company is successful. In the event that a corporation has only one authorized issue of capital stock, that issue is by definition common stock, whether so designated in the charter or not.

In an effort to broaden investor appeal, corporations may offer two or more classes of stock, each with different rights or privileges. As indicated in the preceding section, each share of stock of a given issue has the same four inherent rights as other shares of the same issue. By special stock contracts between the corporation and its stockholders, however, the stockholder may sacrifice certain of these rights in return for other special rights or privileges. Thus, special classes of stock, usually called **preferred stock**, are created. In return for any special preference, the preferred stockholder always sacrifices some of the inherent rights of common stock ownership.

A common type of preference is to give the preferred stockholders a prior claim on earnings. The corporation thus assures them a dividend, usually at a stated rate, before it distributes any amount to the common stockholders. In return for this preference, the preferred stockholders may sacrifice their right to a voice in management or their right to share in profits beyond the stated rate.

International Perspective

The U.S. and British systems of corporate governance and finance depend to a large extent on equity financing and the widely dispersed ownership of shares traded in highly liquid markets. The German and Japanese systems have relied more on debt financing, interlocking stock ownership, and banker/director and worker/shareholder rights.

CORPORATE CAPITAL

LEARNING OBJECTIVE 2

Identify the key components of stockholders' equity.

Owners' equity in a corporation is defined as stockholders' equity, shareholders' equity, or corporate capital. The following three categories normally appear as part of stockholders' equity:

1. Capital stock.
2. Additional paid-in capital.
3. Retained earnings.

The first two categories, capital stock and additional paid-in capital, constitute contributed (paid-in) capital. **Retained earnings** represents the earned capital of the company. **Contributed (paid-in) capital** is the total amount paid in on capital stock—the amount provided by stockholders to the corporation for use in the business. Contributed capital includes items such as the par value of all outstanding stock and premiums less discounts on issuance. **Earned capital** is the capital that develops from profitable operations. It consists of all undistributed income that remains invested in the company.

Stockholders' equity is the difference between the assets and the liabilities of the company. That is, the owners' or stockholders' interest in a company like **The Walt Disney Company**

is a **residual interest**.³ **Stockholders' (owners') equity** represents the cumulative net contributions by stockholders plus retained earnings. As a residual interest, stockholders' equity has no existence apart from the assets and liabilities of Disney—stockholders' equity equals net assets. Stockholders' equity is not a claim to specific assets but a claim against a portion of the total assets. Its amount is not specified or fixed; it depends on Disney's profitability. Stockholders' equity grows if the company is profitable. It shrinks, or may disappear entirely, if Disney loses money.

Issuance of Stock

In issuing stock, companies follow these procedures. First, the state must authorize the stock, generally in a certificate of incorporation or charter. Next, the corporation offers shares for sale, entering into contracts to sell stock. Then, after receiving amounts for the stock, the corporation issues shares. The corporation generally makes no entry in the general ledger accounts when it receives its stock authorization from the state of incorporation.

We discuss the accounting problems involved in the issuance of stock under the following topics.

1. Accounting for par value stock.
2. Accounting for no-par stock.
3. Accounting for stock issued in combination with other securities (lump-sum sales).
4. Accounting for stock issued in noncash transactions.
5. Accounting for costs of issuing stock.

Par Value Stock

The par value of a stock has no relationship to its fair value. At present, the par value associated with most capital stock issuances is very low. For example, **PepsiCo's** par value is $1\frac{2}{3}\text{¢}$, **Kellogg's** is \$0.25, and **Hershey's** is \$1. Such values contrast dramatically with the situation in the early 1900s, when practically all stock issued had a par value of \$100. Low par values help companies avoid the contingent liability associated with stock sold below par.⁴

To show the required information for issuance of par value stock, corporations maintain accounts for each class of stock as follows.

1. **Preferred Stock or Common Stock.** Together, these two stock accounts reflect the par value of the corporation's issued shares. The company credits these accounts when it originally issues the shares. It makes no additional entries in these accounts unless it issues additional shares or retires them.
2. **Paid-in Capital in Excess of Par (also called *Additional Paid-in Capital*).** The **Paid-in Capital in Excess of Par** account indicates any excess over par value paid in by stockholders in return for the shares issued to them. Once paid in, the excess over par becomes a part of the corporation's additional paid-in capital. The individual stockholder has no greater claim on the excess paid in than all other holders of the same class of shares.

³"Elements of Financial Statements," *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, 1985), par. 60.

⁴Companies rarely, if ever, issue stock at a value below par value. If issuing stock below par, the company records the discount as a debit to Additional Paid-in Capital. In addition, the corporation may call on the original purchaser or the current holder of the shares issued below par to pay in the amount of the discount to prevent creditors from sustaining a loss upon liquidation of the corporation.

3 LEARNING OBJECTIVE

Explain the accounting procedures for issuing shares of stock.

No-Par Stock

Many states permit the issuance of capital stock without par value, called **no-par stock**. The reasons for issuance of no-par stock are twofold. First, issuance of no-par stock **avoids the contingent liability** (see footnote 4) that might occur if the corporation issued par value stock at a discount. Second, some confusion exists over the relationship (or rather the absence of a relationship) between the par value and fair value. If shares have no-par value, **the questionable treatment of using par value as a basis for fair value never arises**. This is particularly advantageous whenever issuing stock for property items such as intangible or tangible fixed assets.

A major disadvantage of no-par stock is that some states levy a high tax on these issues. In addition, in some states the total issue price for no-par stock may be considered legal capital, which could reduce the flexibility in paying dividends.

Corporations sell no-par shares, like par value shares, for whatever price they will bring. However, unlike par value shares, corporations issue them without a premium or a discount. The exact amount received represents the credit to common or preferred stock. For example, Video Electronics Corporation is organized with authorized common stock of 10,000 shares without par value. Video Electronics makes only a memorandum entry for the authorization, inasmuch as no amount is involved. If Video Electronics then issues 500 shares for cash at \$10 per share, it makes the following entry.

Cash	5,000	
Common Stock (no-par value)		5,000

If it issues another 500 shares for \$11 per share, Video Electronics makes this entry:

Cash	5,500	
Common Stock (no-par value)		5,500

True no-par stock should be carried in the accounts at issue price without any additional paid-in capital or discount reported. But some states require that no-par stock have a **stated value**. The stated value is a minimum value below which a company cannot issue it. Thus, instead of being no-par stock, such stated-value stock becomes, in effect, stock with a very low par value. It thus is open to all the criticism and abuses that first encouraged the development of no-par stock.⁵

If no-par stock has a stated value of \$5 per share but sells for \$11, all such amounts in excess of \$5 are recorded as additional paid-in capital, which in many states is fully or partially available for dividends. Thus, no-par value stock with a low stated value permits a new corporation to commence its operations with additional paid-in capital that may exceed its stated capital. For example, if a company issued 1,000 of the shares with a \$5 stated value at \$15 per share for cash, it makes the following entry.

Cash	15,000	
Common Stock		5,000
Paid-in Capital in Excess of Stated Value—Common Stock		10,000

Most corporations account for no-par stock with a stated value as if it were par value stock with par equal to the stated value.

Stock Issued with Other Securities (Lump-Sum Sales)

Generally, corporations sell classes of stock separately from one another. The reason to do so is to track the proceeds relative to each class, as well as relative to each lot. Occasionally, a corporation issues two or more classes of securities for a single payment

⁵*Accounting Trends and Techniques—2012* indicates that its 500 surveyed companies reported 461 issues of outstanding common stock, 453 par value issues, and 40 no-par issues; 3 of the no-par issues were shown at their stated (assigned) values.

or lump sum (e.g., in the acquisition of another company). The accounting problem in such **lump-sum sales** is how to allocate the proceeds among the several classes of securities. Companies use one of two methods of allocation: (1) the proportional method and (2) the incremental method.

Proportional Method. If the fair value or other sound basis for determining relative value is available for each class of security, **the company allocates the lump sum received among the classes of securities on a proportional basis.** For instance, assume a company issues 1,000 shares of \$10 stated value common stock having a market price of \$20 a share, and 1,000 shares of \$10 par value preferred stock having a market price of \$12 a share, for a lump sum of \$30,000. Illustration 15-1 shows how the company allocates the \$30,000 to the two classes of stock.

Fair value of common (1,000 × \$20) =	\$20,000
Fair value of preferred (1,000 × \$12) =	12,000
Aggregate fair value	<u>\$32,000</u>
Allocated to common:	$\frac{\$20,000}{\$32,000} \times \$30,000 = \$18,750$
Allocated to preferred:	$\frac{\$12,000}{\$32,000} \times \$30,000 = \$11,250$
Total allocation	<u>\$30,000</u>

ILLUSTRATION 15-1
Allocation in Lump-Sum Securities Issuance—Proportional Method

Incremental Method. In instances where a company cannot determine the fair value of all classes of securities, it may use the incremental method. It uses the fair value of the securities as a basis for those classes that it knows, and allocates the remainder of the lump sum to the class for which it does not know the fair value. For instance, if a company issues 1,000 shares of \$10 stated value common stock having a fair value of \$20, and 1,000 shares of \$10 par value preferred stock having no established fair value, for a lump sum of \$30,000, it allocates the \$30,000 to the two classes as shown in Illustration 15-2.

Lump-sum receipt	\$30,000
Allocated to common (1,000 × \$20)	(20,000)
Balance allocated to preferred	<u>\$10,000</u>

ILLUSTRATION 15-2
Allocation in Lump-Sum Securities Issuance—Incremental Method

If a company cannot determine fair value for any of the classes of stock involved in a lump-sum exchange, it may need to use other approaches. It may rely on an expert's appraisal. Or, if the company knows that one or more of the classes of securities issued will have a determinable fair value in the near future, it may use a best estimate basis with the intent to adjust later, upon establishment of the future fair value.

Stock Issued in Noncash Transactions

Accounting for the issuance of shares of stock for property or services involves an issue of valuation. **The general rule is: Companies should record stock issued for services or property other than cash at either the fair value of the stock issued or the fair value of the noncash consideration received, whichever is more clearly determinable.**

If a company can readily determine both, and the transaction results from an arm's-length exchange, there will probably be little difference in their fair values. In such cases, the basis for valuing the exchange should not matter.

If a company cannot readily determine either the fair value of the stock it issues or the property or services it receives, it should employ an appropriate valuation technique.

Depending on available data, the valuation may be based on market transactions involving comparable assets or the use of discounted expected future cash flows. Companies should avoid the use of the book, par, or stated values as a basis of valuation for these transactions.

A company may exchange unissued stock or treasury stock (issued shares that it has reacquired but not retired) for property or services. If it uses treasury shares, the cost of the treasury shares **should not** be considered the decisive factor in establishing the fair value of the property or services. Instead, it should use the fair value of the treasury stock, if known, to value the property or services. Otherwise, if it does not know the fair value of the treasury stock, it should use the fair value of the property or services received, if determinable.

The following series of transactions illustrates the procedure for recording the issuance of 10,000 shares of \$10 par value common stock for a patent for Marlowe Company, in various circumstances.

1. Marlowe cannot readily determine the fair value of the patent, but it knows the fair value of the stock is \$140,000.

Patents	140,000	
Common Stock (10,000 shares × \$10 per share)		100,000
Paid-in Capital in Excess of Par—Common Stock		40,000

2. Marlowe cannot readily determine the fair value of the stock, but it determines the fair value of the patent is \$150,000.

Patents	150,000	
Common Stock (10,000 shares × \$10 per share)		100,000
Paid-in Capital in Excess of Par—Common Stock		50,000

3. Marlowe cannot readily determine the fair value of the stock nor the fair value of the patent. An independent consultant values the patent at \$125,000 based on discounted expected cash flows.

Patents	125,000	
Common Stock (10,000 shares × \$10 share)		100,000
Paid-in Capital in Excess of Par—Common Stock		25,000

In corporate law, the board of directors has the power to set the value of noncash transactions. However, boards sometimes abuse this power. The issuance of stock for property or services has resulted in cases of overstated corporate capital through intentional overvaluation of the property or services received. The overvaluation of the stockholders' equity resulting from inflated asset values creates **watered stock**. The corporation should eliminate the "water" by simply writing down the overvalued assets.

If, as a result of the issuance of stock for property or services, a corporation undervalues the recorded assets, it creates **secret reserves**. An understated corporate structure (secret reserve) may also result from other methods: excessive depreciation or amortization charges, expensing capital expenditures, excessive write-downs of inventories or receivables, or any other understatement of assets or overstatement of liabilities. An example of a liability overstatement is an excessive provision for estimated product warranties that ultimately results in an understatement of owners' equity, thereby creating a secret reserve.

Costs of Issuing Stock

When a company like **Walgreens** issues common stock, it should report direct costs incurred to sell stock, such as underwriting costs, accounting and legal fees, printing costs, and taxes, as a reduction of the amounts paid in. Walgreens therefore debits issue costs to Paid-in Capital in Excess of Par—Common Stock because they are unrelated to corporate operations. In effect, **issue costs are a cost of financing**. As such, issue costs should reduce the proceeds received from the sale of the stock.

Walgreens should expense management salaries and other indirect costs related to the stock issue because it is difficult to establish a relationship between these costs and the sale proceeds. In addition, Walgreens expenses recurring costs, primarily registrar and transfer agents' fees, as incurred.

What do the numbers mean? THE CASE OF THE DISAPPEARING RECEIVABLE

Sometimes companies issue stock but may not receive cash in return. As a result, a company records a receivable.

Controversy existed regarding the presentation of this receivable on the balance sheet. Some argued that the company should report the receivable as an asset similar to other receivables. Others argued that the company should report the receivable as a deduction from stockholders' equity (similar to the treatment of treasury stock). The SEC settled this issue: It requires companies to use the contra equity approach because the risk of collection in this type of transaction is often very high.

This accounting issue surfaced in **Enron's** accounting. Starting in early 2000, Enron issued shares of its common stock to four "special-purpose entities" in exchange for

which it received a note receivable. Enron then increased its assets (by recording a receivable) and stockholders' equity, a move the company now calls an accounting error. As a result of this accounting treatment, Enron overstated assets and stockholders' equity by \$172 million in its 2000 audited financial statements and by \$828 million in its unaudited 2001 statements. This \$1 billion overstatement was 8.5 percent of Enron's previously reported stockholders' equity at that time.

As Lynn Turner, former chief accountant of the SEC, noted, "It is a basic accounting principle that you don't record equity until you get cash, and a note doesn't count as cash." Situations like this led investors, creditors, and suppliers to lose faith in the credibility of Enron, which eventually caused its bankruptcy.

Source: Adapted from Jonathan Weil, "Basic Accounting Tripped Up Enron—Financial Statements Didn't Add Up—Auditors Overlook a Simple Rule," *Wall Street Journal* (November 11, 2001), p. C1.

Reacquisition of Shares

Companies often buy back their own shares. In fact, share buybacks now exceed dividends as a form of distribution to stockholders. For example, oil producer **ConocoPhillips**, healthcare-products giant **Johnson & Johnson**, and discount retailer **Wal-Mart Stores** have ambitious buyback plans. As shown in Illustration 15-3, companies in the S&P 500 are on track to buy back more than \$429 billion of their own shares in 2012.⁶

4 LEARNING OBJECTIVE

Describe the accounting for treasury stock.

ILLUSTRATION 15-3

Share Buybacks in 2012

Corporations purchase their outstanding stock for several reasons:

1. **To provide tax-efficient distributions of excess cash to shareholders.** Capital gain rates on sales of stock to the company by the stockholders have been approximately half the ordinary tax rate for many investors. This advantage has been somewhat diminished by recent changes in the tax law related to dividends.

⁶T. Lauricella, "Post-Rally Risks in U.S. Stocks," *Wall Street Journal* (October 1, 2012), p. C11.

2. *To increase earnings per share and return on equity.* Reducing both shares outstanding and stockholders' equity often enhances certain performance ratios. However, strategies to hype performance measures might increase performance in the short-run, but these tactics add no real long-term value.
3. *To provide stock for employee stock compensation contracts or to meet potential merger needs.* **Honeywell Inc.** reported that it would use part of its purchase of one million common shares for employee stock option contracts. Other companies acquire shares to have them available for business acquisitions.
4. *To thwart takeover attempts or to reduce the number of stockholders.* By reducing the number of shares held by the public, existing owners and managements bar "outsiders" from gaining control or significant influence. When Ted Turner attempted to acquire **CBS**, CBS started a substantial buyback of its stock. Companies may also use stock purchases to eliminate dissident stockholders.
5. *To make a market in the stock.* As one company executive noted, "Our company is trying to establish a floor for the stock." Purchasing stock in the marketplace creates a demand. This may stabilize the stock price or, in fact, increase it.

Some publicly held corporations have chosen to "go private," that is, to eliminate public (outside) ownership entirely by purchasing all of their outstanding stock. Companies often accomplish such a procedure through a **leveraged buyout (LBO)**, in which the company borrows money to finance the stock repurchases.

Underlying Concepts

As we indicated in Chapter 2, an asset should have probable future economic benefits. Treasury stock simply reduces common stock outstanding.

After reacquiring shares, a company may either retire them or hold them in the treasury for reissue. If not retired, such shares are referred to as **treasury stock (treasury shares)**. Technically, treasury stock is a corporation's own stock, reacquired after having been issued and fully paid.

Treasury stock is not an asset. When a company purchases treasury stock, a reduction occurs in both assets and stockholders' equity. It is inappropriate to imply that a corporation can own a part of itself. A corporation may sell treasury stock to obtain funds, but that does not make treasury stock a balance sheet asset. When a corporation buys back some of its own outstanding stock, it has not acquired an asset; it reduces net assets.

The possession of treasury stock does not give the corporation the right to vote, to exercise preemptive rights as a stockholder, to receive cash dividends, or to receive assets upon corporate liquidation. **Treasury stock is essentially the same as unissued capital stock.** No one advocates classifying unissued capital stock as an asset in the balance sheet.⁷

What do the numbers mean?

BUYBACKS—GOOD OR BAD?

As indicated in Illustration 15-3, companies have ramped up repurchases of their own stock. Notable buyback companies are **ExxonMobil**, which recently bought back \$5 billion of its stock during that period, and **ConocoPhillips**, which repurchased \$3.1 billion of its shares. The surge in repurchases

came as the prices of shares in the S&P 500 dropped 3.3 percent, meaning that companies bought more shares during a period when the market was falling. That is a far cry from some previous surges in buybacks, such as the one in the fourth quarter of 2007, when companies repurchased a record

⁷The possible justification for classifying these shares as assets is that the company will use them to liquidate a specific liability that appears on the balance sheet. *Accounting Trends and Techniques—2012* reported that out of 500 companies surveyed, 341 disclosed treasury stock, but none classified it as an asset.

dollar amount of shares even as the stock market was peaking.

Is this good or bad news for investors? Maybe neither. While it might appear that companies are getting better at timing their purchases (when prices are falling), they also buy shares for reasons that go beyond giving a boost to shareholders—everything from mergers and acquisitions to eliminating the impact of equity compensation. And unlike dividend payments, buybacks haven't been shown to make investors better off in the long run. For example, from 2004, when companies first were required to disclose monthly share repurchases, through the end of 2011, 31 percent of S&P 500 companies have seen the value of those shares fall and just 36 percent have returned more than 7 percent. As one analyst notes, "It's important to look at what a company is paying relative to what its shares are worth. If they overpay, wealth is being transferred to the sellers."

The conventional wisdom is that companies which buy back shares believe their shares are undervalued. Thus, analysts view the buyback announcement as an important piece of inside information about future company prospects. On the other hand, buybacks can actually hurt businesses and

their shareholders over the long run. For example, drug-makers **Merck**, **Pfizer**, and **Amgen** spent heavily on stock repurchases, possibly at the expense of research and development. And whether the buyback is a good thing appears to depend a lot on why the company did the buyback and what the repurchased shares were used for.

One study found that companies often increased their buybacks when earnings growth slowed. This allowed the companies to prop up earnings per share (based on fewer shares outstanding). Furthermore, many buybacks do not actually result in a net reduction in shares outstanding. For example, companies such as **Microsoft** and **Broadcom** bought back shares to meet share demands for stock option exercises, resulting in higher net shares outstanding when they reissued the repurchased shares to the option holders upon exercise. In this case, the buyback actually indicated a further dilution in the share ownership in the buyback company.

This does not mean you should never trust a buyback signal. But if the buyback is intended to manage the company's earnings or if the buyback results in dilution, take a closer look.

Sources: Adapted from W. Lazonick, "The Buyback Boondoggle," *BusinessWeek* (August 24, 2009); and B. Levisohn, "Beware All Those Buybacks," *Wall Street Journal* (September 29–30, 2012), p. B9.

Purchase of Treasury Stock

Companies use two general methods of handling treasury stock in the accounts: the cost method and the par value method. Both methods are generally acceptable. The cost method enjoys more widespread use.⁸

- The **cost method** results in debiting the Treasury Stock account for the reacquisition cost and in reporting this account as a deduction from the total paid-in capital and retained earnings on the balance sheet.
- The **par (stated) value method** records all transactions in treasury shares at their par value and reports the treasury stock as a deduction from capital stock only.

No matter which method a company uses, most states consider the cost of the treasury shares acquired as a restriction on retained earnings.

Companies generally use the cost method to account for treasury stock. This method derives its name from the fact that a company maintains the Treasury Stock account at the cost of the shares purchased.⁹ Under the cost method, the company debits the Treasury Stock account for the cost of the shares acquired. Upon reissuance of the shares, it credits the account for this same cost. The original price received for the stock does not affect the entries to record the acquisition and reissuance of the treasury stock.

To illustrate, assume that Pacific Company issued 100,000 shares of \$1 par value common stock at a price of \$10 per share. In addition, it has retained earnings of \$300,000.

Gateway to the Profession

*Discussion of Using Par or
Stated Value for Treasury
Stock Transactions*

⁸*Accounting Trends and Techniques—2012* indicates that of its selected list of 500 companies, of the 341 companies with treasury stock, all carried common stock in treasury at cost. Only one company carried preferred stock in treasury.

⁹If making numerous acquisitions of blocks of treasury shares at different prices, a company may use inventory costing methods—such as specific identification, average-cost, or FIFO—to identify the cost at date of reissuance.

Illustration 15-4 shows the stockholders' equity section on December 31, 2013, before purchase of treasury stock.

ILLUSTRATION 15-4
Stockholders' Equity
with No Treasury Stock

Stockholders' equity	
Paid-in capital	
Common stock, \$1 par value, 100,000 shares issued and outstanding	\$ 100,000
Additional paid-in capital	900,000
Total paid-in capital	1,000,000
Retained earnings	300,000
Total stockholders' equity	<u>\$1,300,000</u>

On January 20, 2014, Pacific acquires 10,000 shares of its stock at \$11 per share. Pacific records the reacquisition as follows.

January 20, 2014	
Treasury Stock	110,000
Cash	110,000

Note that Pacific debited Treasury Stock for the cost of the shares purchased. The original paid-in capital account, Common Stock, is not affected because the number of issued shares does not change. The same is true for the Paid-in Capital in Excess of Par—Common Stock account. Pacific deducts treasury stock from total paid-in capital and retained earnings in the stockholders' equity section.

Illustration 15-5 shows the stockholders' equity section for Pacific after purchase of the treasury stock.

ILLUSTRATION 15-5
Stockholders' Equity
with Treasury Stock

Stockholders' equity	
Paid-in capital	
Common stock, \$1 par value, 100,000 shares issued and 90,000 outstanding	\$ 100,000
Additional paid-in capital	900,000
Total paid-in capital	1,000,000
Retained earnings	300,000
Total paid-in capital and retained earnings	1,300,000
Less: Cost of treasury stock (10,000 shares)	110,000
Total stockholders' equity	<u>\$1,190,000</u>

Pacific subtracts the cost of the treasury stock from the total of common stock, additional paid-in capital, and retained earnings. It therefore reduces stockholders' equity. Many states require a corporation to restrict retained earnings for the cost of treasury stock purchased. The restriction keeps intact the corporation's legal capital that it temporarily holds as treasury stock. When the corporation sells the treasury stock, it lifts the restriction.

Pacific discloses both the number of shares issued (100,000) and the number in the treasury (10,000). The difference is the number of shares of stock outstanding (90,000). The term **outstanding stock** means the number of shares of issued stock that stockholders own.

Sale of Treasury Stock

Companies usually reissue or retire treasury stock. When selling treasury shares, the accounting for the sale depends on the price. If the selling price of the treasury stock equals its cost, the company records the sale of the shares by debiting Cash and crediting

Treasury Stock. In cases where the selling price of the treasury stock is not equal to cost, then accounting for treasury stock sold **above cost** differs from the accounting for treasury stock sold **below cost**. However, the sale of treasury stock either above or below cost increases both total assets and stockholders' equity.

Sale of Treasury Stock above Cost. When the selling price of shares of treasury stock exceeds its cost, a company credits the difference to Paid-in Capital from Treasury Stock. To illustrate, assume that Pacific acquired 10,000 shares of its treasury stock at \$11 per share. It now sells 1,000 shares at \$15 per share on March 10. Pacific records the entry as follows.

March 10, 2014			
Cash		15,000	
	Treasury Stock		11,000
	Paid-in Capital from Treasury Stock		4,000

There are two reasons why Pacific does not credit \$4,000 to Gain on Sale of Treasury Stock. (1) Gains on sales occur when selling **assets**; treasury stock is not an asset. (2) A gain or loss should not be recognized from stock transactions with its own stockholders. Thus, Pacific should not include paid-in capital arising from the sale of treasury stock in the measurement of net income. Instead, it lists paid-in capital from treasury stock separately on the balance sheet, as a part of paid-in capital.

Sale of Treasury Stock below Cost. When a corporation sells treasury stock below its cost, it usually debits the excess of the cost over selling price to Paid-in Capital from Treasury Stock. Thus, if Pacific sells an additional 1,000 shares of treasury stock on March 21 at \$8 per share, it records the sale as follows.

March 21, 2014			
Cash		8,000	
	Paid-in Capital from Treasury Stock	3,000	
	Treasury Stock		11,000

We can make several observations based on the two sale entries (sale above cost and sale below cost). (1) Pacific credits Treasury Stock at cost in each entry. (2) Pacific uses Paid-in Capital from Treasury Stock for the difference between the cost and the resale price of the shares. (3) Neither entry affects the original paid-in capital account, Common Stock.

After eliminating the credit balance in Paid-in Capital from Treasury Stock, the corporation debits any additional excess of cost over selling price to Retained Earnings. To illustrate, assume that Pacific sells an additional 1,000 shares at \$8 per share on April 10. Illustration 15-6 shows the balance in the Paid-in Capital from Treasury Stock account (before the April 10 purchase).

Paid-in Capital from Treasury Stock			
Mar. 21	3,000	Mar. 10	4,000
		Balance	1,000

ILLUSTRATION 15-6

Treasury Stock
Transactions in Paid-in
Capital Account

In this case, Pacific debits \$1,000 of the excess to Paid-in Capital from Treasury Stock. It debits the remainder to Retained Earnings. The entry is:

April 10, 2014			
Cash		8,000	
	Paid-in Capital from Treasury Stock	1,000	
	Retained Earnings	2,000	
	Treasury Stock		11,000

Retiring Treasury Stock

The board of directors may approve the retirement of treasury shares. This decision results in cancellation of the treasury stock and a reduction in the number of shares of issued stock. Retired treasury shares have the status of authorized and unissued shares. The accounting effects are similar to the sale of treasury stock except that corporations debit the **paid-in capital accounts applicable to the retired shares** instead of cash. For example, if a corporation originally sells the shares at par, it debits Common Stock for the par value per share. If it originally sells the shares at \$3 above par value, it also debits Paid-in Capital in Excess of Par—Common Stock for \$3 per share at retirement.

PREFERRED STOCK

LEARNING OBJECTIVE 5

Explain the accounting for and reporting of preferred stock.

As noted earlier, **preferred stock** is a special class of shares that possesses certain preferences or features not possessed by the common stock.¹⁰ The following features are those most often associated with preferred stock issues.

1. Preference as to dividends.
2. Preference as to assets in the event of liquidation.
3. Convertible into common stock.
4. Callable at the option of the corporation.
5. Nonvoting.

The features that distinguish preferred from common stock may be of a more restrictive and negative nature than preferences. For example, the preferred stock may be nonvoting, noncumulative, and nonparticipating.

Companies usually issue preferred stock with a par value, expressing the dividend preference as a **percentage of the par value**. Thus, holders of 8 percent preferred stock with a \$100 par value are entitled to an annual dividend of \$8 per share. This stock is commonly referred to as 8 percent preferred stock. In the case of no-par preferred stock, a corporation expresses a dividend preference as a **specific dollar amount** per share, for example, \$7 per share. This stock is commonly referred to as \$7 preferred stock.

A preference as to dividends does not assure the payment of dividends. It merely assures that **the corporation must pay the stated dividend rate or amount applicable to the preferred stock before paying any dividends on the common stock**.

A company often issues preferred stock (instead of debt) because of a high debt-to-equity ratio. In other instances, it issues preferred stock through private placements with other corporations at a lower-than-market dividend rate because the acquiring corporation receives largely tax-free dividends (owing to the IRS's 70 percent or 80 percent dividends received deduction).

Features of Preferred Stock

A corporation may attach whatever preferences or restrictions, in whatever combination it desires, to a preferred stock issue, as long as it does not specifically violate its state incorporation law. Also, it may issue more than one class of preferred stock. We discuss the most common features attributed to preferred stock on the next page.

¹⁰*Accounting Trends and Techniques*—2012 reports that of its 500 surveyed companies, 35 had preferred stock outstanding.

Cumulative Preferred Stock

Cumulative preferred stock requires that if a corporation fails to pay a dividend in any year, it must make it up in a later year before paying any dividends to common stockholders. If the directors fail to declare a dividend at the normal date for dividend action, the dividend is said to have been “passed.” Any passed dividend on cumulative preferred stock constitutes a **dividend in arrears**. Because no liability exists until the board of directors declares a dividend, a corporation does not record a dividend in arrears as a liability but discloses it in a note to the financial statements. A corporation seldom issues noncumulative preferred stock because a passed dividend is lost forever to the preferred stockholder. As a result, this stock issue would be less marketable.

Participating Preferred Stock

Holder of **participating preferred stock** share ratably with the common stockholders in any profit distributions beyond the prescribed rate. That is, 5 percent preferred stock, if fully participating, will receive not only its 5 percent return, but also dividends at the same rates as those paid to common stockholders if paying amounts in excess of 5 percent of par or stated value to common stockholders. Note that participating preferred stock may be only partially participating. Although seldom used, examples of companies that have issued participating preferred stock are **LTV Corporation**, **Southern California Edison**, and **Allied Products Corporation**.

Convertible Preferred Stock

Convertible preferred stock allows stockholders, at their option, to exchange preferred shares for common stock at a predetermined ratio. The convertible preferred stockholder not only enjoys a preferred claim on dividends but also has the option of converting into a common stockholder with unlimited participation in earnings.

Callable Preferred Stock

Callable preferred stock permits the corporation at its option to call or redeem the outstanding preferred shares at specified future dates and at stipulated prices. Many preferred issues are callable. The corporation usually sets the call or redemption price slightly above the original issuance price and commonly states it in terms related to the par value. The callable feature permits the corporation to use the capital obtained through the issuance of such stock until the need has passed or it is no longer advantageous.

The existence of a call price or prices tends to set a ceiling on the market price of the preferred shares unless they are convertible into common stock. When a corporation redeems preferred stock, it must pay any dividends in arrears.

Redeemable Preferred Stock

Recently, more and more issuances of preferred stock have features that make the security more like debt (legal obligation to pay) than an equity instrument. For example, **redeemable preferred stock** has a mandatory redemption period or a redemption feature that the issuer cannot control.

Previously, public companies were not permitted to report these debt-like preferred stock issues in equity, but they were not required to report them as a liability either. There were concerns about classification of these debt-like securities, which may have been reported as equity or in the “mezzanine” section of balance sheets between debt and equity. There also was diversity in practice as to how dividends on these securities were reported. The FASB now requires debt-like securities, such as redeemable preferred stock, to be classified as liabilities and be measured and accounted for similar to liabilities. [1]

See the FASB
Codification section
(page 856).

What do the numbers mean? A CLASS (B) ACT

Some companies grant preferences to different shareholders by issuing different classes of common stock. Recent stock bids put the spotlight on dual-class stock structures. For example, ownership of **Dow Jones & Co.** was controlled by family members who owned Class B shares, which carry super voting

powers. The same is true for the Ford family's control of **Ford Motor Co.** Class B shares are often criticized for protecting owners' interest at the expense of shareholder return. These shares often can determine if a takeover deal gets done, or not. Here are some notable companies with two-tiered shares.

Company	Votes Controlled by Class B Shareholders	Company	Votes Controlled by Class B Shareholders
Ford	40%	Estée Lauder	88%
New York Times	70%	Polo Ralph Lauren	88%
Meredith	71%	Martha Stewart Living	91%
Cablevision Systems	73%	1-800-Flowers	93%
Google	78%		

Data: Bloomberg Financial Markets, BusinessWeek, company documents.

For most retail investors, voting rights are not that important. Indeed, in 2011, 20 companies (including **Zynga**, **Groupon**, and **LinkedIn**) went public in the United States with two or more classes of stock. For family-controlled companies, issuing newer classes of lower or nonvoting stock effectively creates currency for acquisitions, increases liquidity, or puts a public value on the company without diluting the family's

voting control. This was one of the main reasons **Facebook** gave when it created a dual-class share structure in 2009. In that IPO, Facebook founder Mark Zuckerberg owns only a quarter of the stock but still holds 57 percent of Facebook's voting rights. Thus, investors must carefully compare the apparent bargain prices for some classes of stock—they may end up as second-class citizens with no voting rights.

B5; and MoneyWatch, "Facebook's IPO by the Important Numbers," www.cbsnews.com (May 17, 2012).

Accounting for and Reporting Preferred Stock

The accounting for preferred stock at issuance is similar to that for common stock. A corporation allocates proceeds between the par value of the preferred stock and additional paid-in capital. To illustrate, assume that Bishop Co. issues 10,000 shares of \$10 par value preferred stock for \$12 cash per share. Bishop records the issuance as follows.

Cash	120,000	
Preferred Stock		100,000
Paid-in Capital in Excess of Par—Preferred Stock		20,000

Thus, Bishop maintains separate accounts for these different classes of shares.

In contrast to convertible bonds (recorded as a liability on the date of issue), corporations consider convertible preferred stock as a part of stockholders' equity. In addition, when exercising convertible preferred stock, there is no theoretical justification for recognition of a gain or loss. A company recognizes no gain or loss when dealing with stockholders in their capacity as business owners. Instead, the company **employs the book value method**: debit Preferred Stock, along with any related Paid-in Capital in Excess of Par—Preferred Stock, and credit Common Stock and Paid-in Capital in Excess of Par—Common Stock (if an excess exists).

Preferred stock generally has no maturity date. Therefore, no legal obligation exists to pay the preferred stockholder. As a result, companies classify preferred stock as part of stockholders' equity. Companies generally report preferred stock at par value as the first item in the stockholders' equity section. They report any excess over par value as part of additional paid-in capital. They also consider dividends on preferred stock as a distribution of income and not an expense. Companies must disclose the pertinent rights of the preferred stock outstanding. [2]

DIVIDEND POLICY

Dividend payouts can be important signals to the market. The practice of paying dividends declined sharply in the 1980s and 1990s as companies focused on growth and plowed profits back into the business. A resurgence in dividend payouts is due in large part to the dividend tax cut of 2003, which reduced the rate of tax on dividends to 15 percent (quite a bit lower than the ordinary income rate charged in the past). In addition, investors who were burned by accounting scandals in recent years began demanding higher payouts in the form of dividends. Why? A dividend check provides proof that at least some portion of a company's profits is genuine.¹¹ As one analyst noted, "Companies with the ability to grow dividends over time tend to be durable businesses with strong cash flow and relatively predictable earnings. . . . So you're more likely to get a return on your investment year in and year out."

Determining the proper amount of dividends to pay is a difficult financial management decision. Companies paying dividends are extremely reluctant to reduce or eliminate their dividend. They fear that the securities market might negatively view this action. As a consequence, dividend-paying companies will make every effort to continue to do so. In addition, the type of shareholder the company has (taxable or nontaxable, retail investor or institutional investor) plays a large role in determining dividend policy.

Very few companies pay dividends in amounts equal to their legally available retained earnings. The major reasons are as follows.

1. To maintain agreements (bond covenants) with specific creditors, to retain all or a portion of the earnings, in the form of assets, to build up additional protection against possible loss.
2. To meet state corporation requirements, that earnings equivalent to the cost of treasury shares purchased be restricted against dividend declarations.
3. To retain assets that would otherwise be paid out as dividends, to finance growth or expansion. This is sometimes called internal financing, reinvesting earnings, or "plowing" the profits back into the business.
4. To smooth out dividend payments from year to year by accumulating earnings in good years and using such accumulated earnings as a basis for dividends in bad years.
5. To build up a cushion or buffer against possible losses or errors in the calculation of profits.

The reasons above are self-explanatory except for the second. The laws of some states require that the corporation restrict its legal capital from distribution to stockholders, to protect against loss for creditors.¹² The applicable state law determines the legality of a dividend.

Financial Condition and Dividend Distributions

Effective management of a company requires attention to more than the legality of dividend distributions. Management must also consider economic conditions, most importantly, liquidity. Assume an extreme situation as shown in Illustration 15-7 (page 838).

6 LEARNING OBJECTIVE

Describe the policies used in distributing dividends.

¹¹"Dividend Stocks: Yield, Growth, and Possible Tax Hikes," *T. Rowe Price Report* (Fall 2011). From 1926 to 2011, dividends have contributed 42% of the total return of the S&P 500 Index. See "Dividend Growth Stocks May Be Timely as the Economy Sputters," *T. Rowe Price Report* (Fall 2011).

¹²If the corporation buys its own outstanding stock, it reduces its legal capital and distributes assets to stockholders. If permitted, the corporation could, by purchasing treasury stock at any price desired, return to the stockholders their investments and leave creditors with little or no protection against loss.

ILLUSTRATION 15-7

Balance Sheet, Showing a Lack of Liquidity

BALANCE SHEET			
Plant assets	\$500,000	Capital stock	\$400,000
	<u>\$500,000</u>	Retained earnings	<u>100,000</u>
			<u>\$500,000</u>

The depicted company has a retained earnings credit balance. Unless restricted, it can declare a dividend of \$100,000. But because all its assets are plant assets used in operations, payment of a cash dividend of \$100,000 would require the sale of plant assets or borrowing.

Even if a balance sheet shows current assets, as in Illustration 15-8, the question remains as to whether the company needs its cash for other purposes.

ILLUSTRATION 15-8

Balance Sheet, Showing Cash but Minimal Working Capital

BALANCE SHEET			
Cash	\$100,000	Current liabilities	\$ 60,000
Plant assets	<u>460,000</u>	Capital stock	\$400,000
	<u>\$560,000</u>	Retained earnings	<u>100,000</u>
			<u>\$560,000</u>

The existence of current liabilities strongly implies that the company needs some of the cash to meet current debts as they mature. In addition, day-to-day cash requirements for payrolls and other expenditures not included in current liabilities also require cash.

Thus, before declaring a dividend, management must consider **availability of funds to pay the dividend**. A company should not pay a dividend unless both the present and future financial position warrant the distribution.

The SEC encourages companies to disclose their dividend policy in their annual report, especially those that (1) have earnings but fail to pay dividends, or (2) do not expect to pay dividends in the foreseeable future. In addition, the SEC encourages companies that consistently pay dividends to indicate whether they intend to continue this practice in the future.

Types of Dividends

LEARNING OBJECTIVE 7

Identify the various forms of dividend distributions.

Companies generally base dividend distributions either on accumulated profits (that is, retained earnings) or on some other capital item such as additional paid-in capital. Dividends are of the following types.

1. Cash dividends.
2. Property dividends.
3. Liquidating dividends.

Although commonly paid in cash, companies occasionally pay dividends in stock or some other asset.¹³ **All dividends, except for stock dividends, reduce the total stockholders' equity in the corporation.** When declaring a stock dividend, the corporation does not pay out assets or incur a liability. It issues additional shares of stock to each stockholder and nothing more.

¹³*Accounting Trends and Techniques—2012* reported that of its 500 surveyed companies, 343 paid a cash dividend on common stock, 33 paid a cash dividend on preferred stock, 2 issued stock dividends, and 1 issued or paid dividends in kind. Some companies declare more than one type of dividend in a given year.

The natural expectation of any stockholder who receives a dividend is that the corporation has operated successfully. As a result, he or she is receiving a share of its profits. A company should disclose a **liquidating dividend**—that is, a dividend not based on retained earnings—to the stockholders so that they will not misunderstand its source.

Cash Dividends

The board of directors votes on the declaration of **cash dividends**. Upon approval of the resolution, the board declares a dividend. Before paying it, however, the company must prepare a current list of stockholders. For this reason, there is usually a time lag between declaration and payment. For example, the board of directors might approve a resolution at the January 10 (**date of declaration**) meeting and declare it payable February 5 (**date of payment**) to all stockholders of record January 25 (**date of record**).¹⁴ In this example, the period from January 10 to January 25 gives time for the company to complete and register any transfers in process. The time from January 25 to February 5 provides an opportunity for the transfer agent or accounting department, depending on who does this work, to prepare a list of stockholders as of January 25 and to prepare and mail dividend checks.

A declared cash dividend is a liability. Because payment is generally required very soon, it is usually a current liability. Companies record the following entries to record the declaration and payment of a cash dividend. To illustrate, Roadway Freight Corp. on June 10 declared a cash dividend of 50 cents a share on 1.8 million shares payable July 16 to all stockholders of record June 24.

At date of declaration (June 10)		
Retained Earnings (Cash Dividends Declared)	900,000	
Dividends Payable		900,000
At date of record (June 24)		
No entry		
At date of payment (July 16)		
Dividends Payable	900,000	
Cash		900,000

To set up a ledger account that shows the amount of dividends declared during the year, Roadway Freight might debit Cash Dividends Declared instead of Retained Earnings at the time of declaration. It then closes this account to Retained Earnings at year-end.

A company may declare dividends either as a certain percent of par, such as a 6 percent dividend on preferred stock, or as an amount per share, such as 60 cents per share on no-par common stock. In the first case, the rate multiplied by the par value of outstanding shares equals the total dividend. In the second, the dividend equals the amount per share multiplied by the number of shares outstanding. **Companies do not declare or pay cash dividends on treasury stock.**

Dividend policies vary among corporations. Some companies, such as **JP Morgan Chase, Clorox Co.**, and **Tootsie Roll Industries**, take pride in a long, unbroken string of quarterly dividend payments. They would lower or pass the dividend only if forced to do so by a sustained decline in earnings or a critical shortage of cash.

¹⁴Theoretically, the ex-dividend date is the day after the date of record. However, to allow time for transfer of the shares, the stock exchanges generally advance the ex-dividend date two to four days. Therefore, the party who owns the stock on the day prior to the expressed ex-dividend date receives the dividends. The party who buys the stock on and after the ex-dividend date does not receive the dividend. Between the declaration date and the ex-dividend date, the market price of the stock includes the dividend.

"Growth" companies, on the other hand, pay little or no cash dividends because their policy is to expand as rapidly as internal and external financing permit. For example, **Questcor Pharmaceuticals Inc.** has never paid cash dividends to its common stockholders. These investors hope that the price of their shares will appreciate in value. The investors will then realize a profit when they sell their shares. Many companies focus more on increasing share price, stock repurchase programs, and corporate earnings than on dividend payout.

Property Dividends

Dividends payable in assets of the corporation other than cash are called **property dividends** or **dividends in kind**. Property dividends may be merchandise, real estate, or investments, or whatever form the board of directors designates. **Ranchers Exploration and Development Corp.** reported one year that it would pay a fourth-quarter dividend in gold bars instead of cash. Because of the obvious difficulties of divisibility of units and delivery to stockholders, the usual property dividend is in the form of securities of other companies that the distributing corporation holds as an investment.

For example, after ruling that **DuPont's** 23 percent stock interest in **General Motors** (GM) violated antitrust laws, the Supreme Court ordered DuPont to divest itself of the GM stock within 10 years. The stock represented 63 million shares of GM's 281 million shares then outstanding. DuPont could not sell the shares in one block of 63 million. Further, it could not sell 6 million shares annually for the next 10 years without severely depressing the value of the GM stock. DuPont solved its problem by declaring a property dividend and distributing the GM shares as a dividend to its own stockholders.

When declaring a property dividend, the corporation should **restate at fair value the property it will distribute, recognizing any gain or loss** as the difference between the property's fair value and carrying value at date of declaration. The corporation may then record the declared dividend as a debit to Retained Earnings (or Property Dividends Declared) and a credit to Property Dividends Payable, at an amount equal to the fair value of the distributed property. Upon distribution of the dividend, the corporation debits Property Dividends Payable and credits the account containing the distributed asset (restated at fair value).

For example, Trendler, Inc. transferred to stockholders some of its equity investments costing \$1,250,000 by declaring a property dividend on December 28, 2013, to be distributed on January 30, 2014, to stockholders of record on January 15, 2014. At the date of declaration, the securities have a fair value of \$2,000,000. Trendler makes the following entries.

At date of declaration (December 28, 2013)		
Equity Investments	750,000	
Unrealized Holding Gain or Loss—Income		750,000
Retained Earnings (Property Dividends Declared)	2,000,000	
Property Dividends Payable		2,000,000
At date of distribution (January 30, 2014)		
Property Dividends Payable	2,000,000	
Equity Investments		2,000,000

Liquidating Dividends

Some corporations use paid-in capital as a basis for dividends. Without proper disclosure of this fact, stockholders may erroneously believe the corporation has been operating at a profit. To avoid this type of deception, intentional or unintentional, a clear statement of the source of every dividend should accompany the dividend check.

Dividends based on other than retained earnings are sometimes described as **liquidating dividends**. This term implies that such dividends are a return of the stockholder's investment rather than of profits. In other words, **any dividend not based on earnings reduces corporate paid-in capital and to that extent, it is a liquidating dividend**. Companies in the extractive industries may pay dividends equal to the total of accumulated income and depletion. The portion of these dividends in excess of accumulated income represents a return of part of the stockholder's investment.

For example, McChesney Mines Inc. issued a "dividend" to its common stockholders of \$1,200,000. The cash dividend announcement noted that stockholders should consider \$900,000 as income and the remainder a return of capital. McChesney Mines records the dividend as follows.

At date of declaration		
Retained Earnings	900,000	
Paid-in Capital in Excess of Par—Common Stock	300,000	
Dividends Payable		1,200,000
At date of payment		
Dividends Payable	1,200,000	
Cash		1,200,000

In some cases, management simply decides to cease business and declares a liquidating dividend. In these cases, liquidation may take place over a number of years to ensure an orderly and fair sale of assets. For example, when **Overseas National Airways** dissolved, it agreed to pay a liquidating dividend to its stockholders over a period of years equivalent to \$8.60 per share. Each liquidating dividend payment in such cases reduces paid-in capital.

Stock Dividends and Stock Splits

Stock Dividends

If management wishes to "capitalize" part of the earnings (i.e., reclassify amounts from earned to contributed capital) and thus retain earnings in the business on a permanent basis, it may issue a stock dividend. In this case, **the company distributes no assets**. Each stockholder maintains exactly the same proportionate interest in the corporation and the same total book value after the company issues the stock dividend. Of course, the book value per share is lower because each stockholder holds more shares.

A **stock dividend** therefore is the issuance by a corporation of its own stock to its stockholders on a pro rata basis, without receiving any consideration. In recording a stock dividend, some believe that the company should transfer the **par value of the stock issued** as a dividend from retained earnings to capital stock. Others believe that it should transfer the **fair value of the stock issued**—its market value at the declaration date—from retained earnings to capital stock and additional paid-in capital.

The fair value position was adopted, at least in part, in order to influence the stock dividend policies of corporations. Evidently in 1941, both the New York Stock Exchange and many in the accounting profession regarded periodic stock dividends as objectionable. They believed that the term dividend when used with a distribution of additional stock was misleading because investors' net assets did not increase as a result of this "dividend." As a result, these groups decided to make it more difficult for corporations to sustain a series of such stock dividends out of their accumulated

8 LEARNING OBJECTIVE

Explain the accounting for small and large stock dividends, and for stock splits.

**Underlying Concepts**

By requiring fair value, the intent was to punish companies that used stock dividends. This approach violates the neutrality concept (that is, that standards-setting should be even-handed).

earnings, by requiring the use of fair value when it substantially exceeded book value.¹⁵

When the stock dividend is less than 20–25 percent of the common shares outstanding at the time of the dividend declaration, the company is therefore required to transfer the **fair value** of the stock issued from retained earnings. Stock dividends of less than 20–25 percent are often referred to as **small (ordinary) stock dividends**. This method of handling stock dividends is justified on the grounds that “many recipients of stock dividends look upon them as distributions of corporate earnings and usually in an amount equivalent to the fair value of the additional shares received.” [3] We consider this argument unconvincing. It is generally agreed that stock dividends are not income to the recipients. Therefore, sound accounting should not recommend procedures simply because some recipients think they are income.¹⁶

To illustrate a small stock dividend, assume that Vine Corporation has outstanding 1,000 shares of \$100 par value common stock and retained earnings of \$50,000. If Vine declares a 10 percent stock dividend, it issues 100 additional shares to current stockholders. If the fair value of the stock at the time of the stock dividend is \$130 per share, the entry is:

At date of declaration

Retained Earnings	13,000	
Common Stock Dividend Distributable		10,000
Paid-in Capital in Excess of Par—Common Stock		3,000

Note that the stock dividend does not affect any asset or liability. **The entry merely reflects a reclassification of stockholders' equity.** If Vine prepares a balance sheet between the dates of declaration and distribution, it should show the common stock dividend distributable in the stockholders' equity section as an addition to common stock (whereas it shows cash or property dividends payable as current liabilities).

When issuing the stock, the entry is:

At date of distribution

Common Stock Dividend Distributable	10,000	
Common Stock		10,000

No matter what the fair value is at the time of the stock dividend, each stockholder retains the same proportionate interest in the corporation.

Some state statutes specifically prohibit the issuance of stock dividends on treasury stock. In those states that permit treasury shares to participate in the distribution accompanying a stock dividend or stock split, the planned use of the treasury shares influences corporate practice. For example, if a corporation issues treasury shares in connection with employee stock options, the treasury shares may participate in the distribution because the corporation usually adjusts the number of shares under option for any stock dividends or splits. But no useful purpose is served by issuing additional shares to the treasury stock without a specific purpose, since they are essentially equivalent to authorized but unissued shares.

¹⁵This was perhaps the earliest instance of “economic consequences” affecting an accounting pronouncement. The Committee on Accounting Procedure described its action as required by “proper accounting and corporate policy.” See Stephen A. Zeff, “The Rise of ‘Economic Consequences,’” *The Journal of Accountancy* (December 1978), pp. 53–66.

¹⁶One study concluded that *small* stock dividends do not always produce significant amounts of extra value on the date after issuance (ex date) and that *large* stock dividends almost always fail to generate extra value on the ex-dividend date. Taylor W. Foster III and Don Vickrey, “The Information Content of Stock Dividend Announcements,” *The Accounting Review*, Vol. LIII, No. 2 (April 1978), pp. 360–370.

To continue with our example of the effect of the small stock dividend, note in Illustration 15-9 that the stock dividend does not change the total stockholders' equity. Also, it does not change the proportion of the total shares outstanding held by each stockholder.

Before dividend	
Common stock, 1,000 shares at \$100 par	\$100,000
Retained earnings	50,000
Total stockholders' equity	<u>\$150,000</u>
Stockholders' interests:	
A. 400 shares, 40% interest, book value	\$ 60,000
B. 500 shares, 50% interest, book value	75,000
C. 100 shares, 10% interest, book value	15,000
	<u>\$150,000</u>
After declaration but before distribution of 10% stock dividend	
If fair value (\$130) is used as basis for entry:	
Common stock, 1,000 shares at \$100 par	\$100,000
Common stock distributable, 100 shares at \$100 par	10,000
Paid-in capital in excess of par—common stock	3,000
Retained earnings (\$50,000 – \$13,000)	37,000
Total stockholders' equity	<u>\$150,000</u>
After declaration and distribution of 10% stock dividend	
If fair value (\$130) is used as basis for entry:	
Common stock, 1,100 shares at \$100 par	\$110,000
Paid-in capital in excess of par—common stock	3,000
Retained earnings (\$50,000 – \$13,000)	37,000
Total stockholders' equity	<u>\$150,000</u>
Stockholders' interest:	
A. 440 shares, 40% interest, book value	\$ 60,000
B. 550 shares, 50% interest, book value	75,000
C. 110 shares, 10% interest, book value	15,000
	<u>\$150,000</u>

ILLUSTRATION 15-9
Effects of a Small (10%)
Stock Dividend

Stock Splits

If a company has undistributed earnings over several years and accumulates a sizable balance in retained earnings, the market value of its outstanding shares likely increases. Stock issued at prices less than \$50 a share can easily attain a market price in excess of \$200 a share. The higher the market price of a stock, however, the less readily some investors can purchase it.

The managements of many corporations believe that better public relations depend on wider ownership of the corporation stock. They therefore target a market price sufficiently low to be within range of the majority of potential investors. To reduce the market price of shares, they use the common device of a **stock split**. For example, after its stock price increased by 25-fold, **Qualcomm Inc.** split its stock 4-for-1. Qualcomm's stock had risen above \$500 per share, raising concerns that Qualcomm could not meet an analyst target of \$1,000 per share. The split reduced the analysts' target to \$250, which it could better meet with wider distribution of shares at lower trading prices.¹⁷

From an accounting standpoint, Qualcomm **records no entry for a stock split**. However, it enters a memorandum note to indicate the changed par value of the shares

¹⁷Another classic case is **Coca-Cola**. Coca-Cola recently split its stock for the 11th time. If it had not done all of these splits, one of Coke's original shares would be worth \$10.3 million. See S. Jakab, "Coca-Cola's Currency Is Its Resilience," *Wall Street Journal* (July 16, 2012).

and the increased number of shares. Illustration 15-10 shows the lack of change in stockholders' equity for a 2-for-1 stock split on 1,000 shares of \$100 par value stock with the par being halved upon issuance of the additional shares.

ILLUSTRATION 15-10
Effects of a Stock Split

Stockholders' Equity before 2-for-1 Split		Stockholders' Equity after 2-for-1 Split	
Common stock, 1,000 shares at \$100 par	\$100,000	Common stock, 2,000 shares at \$50 par	\$100,000
Retained earnings	50,000	Retained earnings	50,000
	<u>\$150,000</u>		<u>\$150,000</u>

What do the numbers mean?

SPLITSVILLE

Stock splits were all the rage in the booming stock market of the 1990s. Of major companies on the **New York Stock Exchange**, fewer than 80 companies split shares in 1990. By 1998, with stock prices soaring, over 200 companies split shares. Although the split does not increase a stockholder's proportionate ownership of the company, studies show that split shares usually outperform those that don't split, as well as the market as a whole, for several years after the split. In addition, the splits help the company keep the shares in more attractive price ranges.

What about when the market "turns south"? A number of companies who split their shares in the boom markets of the 1990s have since seen their share prices decline to a point considered too low. For example, **Lucent** traded at less than \$5 a share following a 4-for-1 split. For some investors, these low-priced stocks are unattractive because some brokerage commissions rely on the number of shares

traded, not the dollar amount. Others are concerned that low-priced shares are easier for would-be scammers to manipulate. And if a company's per share price falls below \$1 for 30 consecutive days, it is a violation of stock exchange listing requirements.

Some companies are considering reverse stock splits in which, say, 5 shares are consolidated into one. Thus, a stock previously trading at \$5 per share would be part of an unsplit share trading at \$25. Unsplitting might thus avoid some of the negative consequences of a low trading price. The downside to this strategy is that analysts might view reverse splits as additional bad news about the direction of the stock price. For example, **Webvan**, a failed Internet grocer, did a 1-for-25 reverse split just before it entered bankruptcy. And struggling **Tenet Healthcare** executed a 1-for-4 reverse split in combination with a debt restructuring, in order to get its stock price into a more favorable trading range.

Sources: Adapted from David Henry, "Stocks: The Case for Unsplitting," *BusinessWeek Online* (April 1, 2002); and M. Murphy, "Tenet CFO Says Reverse Split Could Help Land New Business," *Wall Street Journal* (October 2, 2012).

Stock Split and Stock Dividend Differentiated

From a legal standpoint, a stock split differs from a stock dividend. How? A stock split increases the number of shares outstanding and decreases the par or stated value per share. **A stock dividend, although it increases the number of shares outstanding, does not decrease the par value; thus, it increases the total par value of outstanding shares.**

The reasons for issuing a stock dividend are numerous and varied. Stock dividends can be primarily a publicity gesture **because many consider stock dividends as dividends**. Another reason is that the corporation may simply wish to retain profits in the business by capitalizing a part of retained earnings. In such a situation, it makes a transfer on declaration of a stock dividend from earned capital to contributed capital.

A corporation may also use a stock dividend, like a stock split, to increase the marketability of the stock, although marketability is often a secondary consideration. If the stock dividend is large, it has the same effect on market price as a stock split. **Whenever corporations issue additional shares for the purpose of reducing the unit market price, then the distribution more closely resembles a stock split than a stock dividend. This effect usually results only if the number of shares issued is more than 20–25 percent of the number of shares previously outstanding.** [4] A stock dividend of more than 20–25 percent of the number of shares previously outstanding is called a

large stock dividend.¹⁸ Such a distribution should not be called a stock dividend but instead “a split-up effected in the form of a dividend” or “stock split.”

Also, since a split-up effected in the form of a dividend does not alter the par value per share, companies generally are required to transfer the par value amount from retained earnings. In other words, companies transfer from retained earnings to capital stock **the par value of the stock issued**, as opposed to a transfer of the market price of the shares issued as in the case of a small stock dividend.¹⁹ For example, **Brown Group, Inc.** at one time authorized a 2-for-1 split, effected in the form of a stock dividend. As a result of this authorization, it distributed approximately 10.5 million shares, and transferred more than \$39 million representing the par value of the shares issued from Retained Earnings to the Common Stock account.

To illustrate a large stock dividend (stock split-up effected in the form of a dividend), Rockland Steel, Inc. declared a 30 percent stock dividend on November 20, payable December 29 to stockholders of record December 12. At the date of declaration, 1,000,000 shares, par value \$10, are outstanding and with a fair value of \$200 per share. The entries are:

At date of declaration (November 20)											
Retained Earnings	3,000,000										
Common Stock Dividend Distributable		3,000,000									
<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 40%;">Computation: 1,000,000 shares</td> <td style="width: 20%; text-align: right;">300,000 Additional shares</td> <td></td> </tr> <tr> <td style="text-align: center;">× 30%</td> <td style="text-align: center;">× \$10 Par value</td> <td></td> </tr> <tr> <td style="text-align: center; border-top: 1px solid black;">300,000</td> <td style="text-align: center; border-top: 1px solid black;">\$3,000,000</td> <td></td> </tr> </table>			Computation: 1,000,000 shares	300,000 Additional shares		× 30%	× \$10 Par value		300,000	\$3,000,000	
Computation: 1,000,000 shares	300,000 Additional shares										
× 30%	× \$10 Par value

ILLUSTRATION 15-11

Effects of Dividends and Stock Splits on Financial Statement Elements

¹⁸The SEC has added more precision to the 20–25 percent rule. Specifically, the SEC indicates that companies should consider distributions of 25 percent or more as a “split-up effected in the form of a dividend.” Companies should account for distributions of less than 25 percent as a stock dividend. The SEC more precisely defined GAAP here. As a result, public companies follow the SEC rule.

¹⁹Often, a company records a split-up effected in the form of a dividend as a debit to Paid-in Capital instead of Retained Earnings to indicate that this transaction should affect only paid-in capital accounts. No reduction of retained earnings is required except as indicated by legal requirements. For homework purposes, assume that the debit is to Retained Earnings. See, for example, Taylor W. Foster III and Edmund Scribner, “Accounting for Stock Dividends and Stock Splits: Corrections to Textbook Coverage,” *Issues in Accounting Education* (February 1998).

What do the numbers mean?

DIVIDENDS UP, DIVIDENDS DOWN

As the economy recovered from the financial crisis, a number of U.S. companies increased their dividend payout in a sign of growing confidence and rising cash balances. For example, early in 2011 a number of companies increased dividends, including **CVS/Caremark Corp.**, **Family Dollar Stores Inc.**, and **Schlumberger Ltd.** The number was up from the prior year amid concerns that dividend payouts would level off if the economy slows.

In such a slow growth environment, with interest rates persistently low and the tax treatment of dividends still

favorable, an investment strategy focusing on stocks with the potential of *increasing* dividends may be particularly timely. Said one market watcher, "Investors too often overlook the importance of dividends, particularly the contribution to total return from reinvested dividends. . . . Dividends also can provide a good hedge against inflation in the form of a growing stream of income."

A look at the returns for "dividend growers" compared to "dividend cutters" in the following chart supports the advice to keep an eye on dividend growth.

As indicated, from 1979 through the end of 2011, stocks in the Russell 1000 Index that were growing their dividends outperformed dividend-paying stocks, the index itself, non-dividend-paying stocks, and stocks that cut their dividends. During that time, an investment of \$100 in dividend growers would have risen to \$4,018 compared with \$3,134 based on the index return. Dividend payers outperformed non-dividend payers during down and flat markets, and offered lower volatility of returns in all market environments.

Furthermore, the best performers are stocks with the combination of a relatively high yield—though not always

the very highest—and a high dividend growth rate. This is because high yields sometimes are a function of beaten-down stock prices due to poor corporate earnings prospects or other issues. Indeed, in such cases, dividend cuts could be in the offing. By contrast, stocks that have performed best historically have been those in which the company's true growth potential has been undervalued by investors. Thus, companies with growing dividends are signaling confidence about their future earnings and most likely to perform well throughout market cycles, which make them good candidates for long-term growth.

Source: "Dividend Growth Stocks May Be Timely as the Economy Sputters," *T. Rowe Price Report* (Fall 2011).

Disclosure of Restrictions on Retained Earnings

Many corporations restrict retained earnings or dividends, without any formal journal entries. Such restrictions are **best disclosed by note**. Parenthetical notations are sometimes used, but restrictions imposed by bond indentures and loan agreements commonly require an extended explanation. Notes provide a medium for more complete explanations and free the financial statements from abbreviated notations. The note disclosure should reveal the source of the restriction, pertinent provisions, and the amount of retained earnings subject to restriction, or the amount not restricted.

Restrictions may be based on the retention of a certain retained earnings balance, the ability to maintain certain working capital requirements, additional borrowing, and

other considerations. The example from the annual report of **Alberto-Culver Company** in Illustration 15-12 shows a note disclosing potential restrictions on retained earnings and dividends.

Alberto-Culver Company

Note 3 (in part): The \$200 million revolving credit facility, the term note, and the receivables agreement impose restrictions on such items as total debt, working capital, dividend payments, treasury stock purchases, and interest expense. At year-end, the company was in compliance with these arrangements, and \$220 million of consolidated retained earnings was not restricted as to the payment of dividends.

PRESENTATION AND ANALYSIS OF STOCKHOLDERS' EQUITY

Presentation

Balance Sheet

Illustration 15-13 shows a comprehensive stockholders' equity section from the balance sheet of Frost Company that includes most of the equity items we discussed in this chapter.

9 LEARNING OBJECTIVE
Indicate how to present and analyze stockholders' equity.

FROST COMPANY STOCKHOLDERS' EQUITY DECEMBER 31, 2014		
<u>Capital stock</u>		
Preferred stock, \$100 par value, 7% cumulative, 100,000 shares authorized, 30,000 shares issued and outstanding		\$ 3,000,000
Common stock, no-par, stated value \$10 per share, 500,000 shares authorized, 400,000 shares issued		4,000,000
Common stock dividend distributable, 20,000 shares		<u>200,000</u>
Total capital stock		7,200,000
<u>Additional paid-in capital²⁰</u>		
Excess over par—preferred	\$150,000	
Excess over stated value—common	<u>840,000</u>	<u>990,000</u>
Total paid-in capital		8,190,000
<u>Retained earnings</u>		
Total paid-in capital and retained earnings		12,550,000
Less: Cost of treasury stock (2,000 shares, common)		190,000
Accumulated other comprehensive loss ²¹		<u>360,000</u>
Total stockholders' equity		<u>\$12,000,000</u>

ILLUSTRATION 15-13
Comprehensive Stockholders' Equity Presentation

²⁰Accounting Trends and Techniques—2012 reports that of its 500 surveyed companies, 465 had additional paid-in capital.

²¹Companies may include a number of items in the "Accumulated other comprehensive income (loss)." Accounting Trends and Techniques—2012 reports that of its 500 surveyed companies, 407 reported cumulative translation adjustments, 386 reported defined benefit postretirement plan adjustments (discussed in Chapter 20), 286 reported changes in the fair value of derivatives (discussed in Appendix 17A), and 218 reported unrealized losses/gains on certain investments (discussed in Chapter 17). A number of companies had more than one item.

Frost should disclose the pertinent rights and privileges of the various securities outstanding. For example, companies must disclose all of the following: dividend and liquidation preferences, participation rights, call prices and dates, conversion or exercise prices and pertinent dates, sinking fund requirements, unusual voting rights, and significant terms of contracts to issue additional shares. Liquidation preferences should be disclosed in the equity section of the balance sheet, rather than in the notes to the financial statements, to emphasize the possible effect of this restriction on future cash flows. [5]

Statement of Stockholders' Equity

The **statement of stockholders' equity** is frequently presented in the following basic format.

1. Balance at the beginning of the period.
2. Additions.
3. Deductions.
4. Balance at the end of the period.

Companies must disclose changes in the separate accounts comprising stockholders' equity, to make the financial statements sufficiently informative. Such changes may be disclosed in separate statements or in the basic financial statements or notes thereto.²²

A **columnar format** for the presentation of changes in stockholders' equity items in published annual reports is gaining in popularity. An example is **ConAgra Foods'** statement of common stockholders' equity, shown in Illustration 15-14.

ConAgra Foods, Inc. and Subsidiaries

For the Fiscal Year Ended May 2012

(Dollars in millions except per share amounts)	Common Shares	Common Stock	Additional		Accumulated Other		Noncontrolling Interests	Total Equity
			Paid-in Capital	Retained Earnings	Comprehensive Income (Loss)	Treasury Stock		
Balance of May 29, 2011	567.9	\$2,839.7	\$899.1	\$4,690.3	\$ (91.2)	\$(3,668.2)	\$ 7.0	\$4,676.7
Stock option and incentive plans			3.9	(1.3)		252.9		255.5
Currency translation adjustment, net of reclassification adjustment					(52.0)		(4.4)	(56.4)
Repurchase of common shares						(352.4)		(352.4)
Unrealized loss on securities					(0.1)			(0.1)
Derivative adjustment, net of reclassification adjustment					(89.1)			(89.1)
Acquisition of majority interest in ATFL							92.6	92.6
Activities of noncontrolling interests			(1.5)				1.3	(0.2)
Pension and postretirement healthcare benefits					(66.7)			(66.7)
Dividends declared on common stock; \$0.95 per share				(391.8)				(391.8)
Net income attributable to ConAgra Foods, Inc.				467.9				467.9
Balance at May 27, 2012	567.9	\$2,839.7	\$901.5	\$4,765.1	\$(299.1)	\$(3,767.7)	\$96.5	\$4,536.0

ILLUSTRATION 15-14

Columnar Format for Statement of Common Stockholders' Equity

²²*Accounting Trends and Techniques—2012* reports that of the 500 companies surveyed, 486 presented statements of stockholders' equity, 4 presented separate statements of retained earnings only, 1 presented combined statements of income and retained earnings, and 9 presented changes in equity items in the notes only.

For example, assume that Troy Co. has cash dividends of \$100,000 and net income of \$500,000, and no preferred stock outstanding. Illustration 15-16 shows the payout ratio computation.

ILLUSTRATION 15-16

Computation of Payout Ratio

$$\begin{aligned} \text{Payout Ratio} &= \frac{\text{Cash Dividends}}{\text{Net Income}} \\ &= \frac{\$100,000}{\$500,000} \\ &= 20\% \end{aligned}$$

Recently, the payout ratio has plummeted. In 1982, more than half of earnings were converted to dividends. In the fourth quarter of 2011, just 36 percent of the earnings of the S&P 500 was distributed via dividends.²³

You will want to read the

IFRS INSIGHTS
on pages 874–880

for discussion of IFRS related to stockholders' equity.

Book Value per Share

A much-used basis for evaluating net worth is found in the book value or equity value per share of stock. **Book value per share** of stock is the amount each share would receive if the company were liquidated **on the basis of amounts reported on the balance sheet**. However, the figure loses much of its relevance if the valuations on the balance sheet fail to approximate fair value of the assets. Book value per share equals common stockholders' equity divided by outstanding common shares. Assume that Chen Corporation's common stockholders' equity is \$1,000,000 and it has 100,000 shares of common stock outstanding. Illustration 15-17 shows its book value per share computation.

ILLUSTRATION 15-17

Computation of Book Value per Share

$$\begin{aligned} \text{Book Value per Share} &= \frac{\text{Common Stockholders' Equity}}{\text{Outstanding Shares}} \\ &= \frac{\$1,000,000}{100,000} \\ &= \$10 \text{ per share} \end{aligned}$$

SUMMARY OF LEARNING OBJECTIVES

- 1 Discuss the characteristics of the corporate form of organization.** Among the specific characteristics of the corporate form that affect accounting are the (1) influence of state corporate law, (2) use of the capital stock or share system, and (3) development of a variety of ownership interests. In the absence of restrictive provisions, each share of stock carries the right to share proportionately in (1) profits and losses, (2) management (the right to vote for directors), (3) corporate assets upon liquidation, and (4) any new issues of stock of the same class (called the preemptive right).
- 2 Identify the key components of stockholders' equity.** Stockholders' or owners' equity is classified into two categories: contributed capital and earned capital. Contributed capital (paid-in capital) describes the total amount paid in on capital stock. Put another way, it is the amount that stockholders invested in the corporation for use in the business. Contributed capital includes items such as the par value of all outstanding capital stock and premiums less any discounts on issuance. Earned capital is the

²³R. Shaw, "S&P 500 Dividend Payout Ratio Still Giving Off Caution Signals," <http://seekingalpha.com> (January 16, 2012).

capital that develops if the business operates profitably; it consists of all undistributed income that remains invested in the company.

3 Explain the accounting procedures for issuing shares of stock. Accounts are kept for the following different types of stock. *Par value stock*: (a) preferred stock or common stock, (b) paid-in capital in excess of par or additional paid-in capital, and (c) discount on stock. *No-par stock*: common stock or common stock and additional paid-in capital, if stated value used. *Stock issued in combination with other securities (lump-sum sales)*: The two methods of allocation available are (a) the proportional method and (b) the incremental method. *Stock issued in noncash transactions*: When issuing stock for services or property other than cash, the company should record the property or services at either the fair value of the stock issued, or the fair value of the noncash consideration received, whichever is more clearly determinable.

4 Describe the accounting for treasury stock. The cost method is generally used in accounting for treasury stock. This method derives its name from the fact that a company maintains the Treasury Stock account at the cost of the shares purchased. Under the cost method, a company debits the Treasury Stock account for the cost of the shares acquired and credits it for this same cost upon reissuance. The price received for the stock when originally issued does not affect the entries to record the acquisition and reissuance of the treasury stock.

5 Explain the accounting for and reporting of preferred stock. Preferred stock is a special class of shares that possesses certain preferences or features not possessed by the common stock. The features that are most often associated with preferred stock issues are (1) preference as to dividends, (2) preference as to assets in the event of liquidation, (3) convertible into common stock, (4) callable at the option of the corporation, and (5) nonvoting. At issuance, the accounting for preferred stock is similar to that for common stock. When convertible preferred stock is converted, a company uses the book value method. It debits Preferred Stock, along with any related Paid-in Capital in Excess of Par—Preferred Stock and credits Common Stock and Paid-in Capital in Excess of Par—Common Stock (if an excess exists).

6 Describe the policies used in distributing dividends. The state incorporation laws normally provide information concerning the legal restrictions related to the payment of dividends. Corporations rarely pay dividends in an amount equal to the legal limit. This is due, in part, to the fact that companies use assets represented by undistributed earnings to finance future operations of the business. If a company is considering declaring a dividend, it must ask two preliminary questions. (1) Is the condition of the corporation such that the dividend is **legally permissible**? (2) Is the condition of the corporation such that a dividend is **economically sound**?

7 Identify the various forms of dividend distributions. Dividends are of the following types: (1) cash dividends, (2) property dividends, (3) liquidating dividends (dividends based on other than retained earnings), and (4) stock dividends (the issuance by a corporation of its own stock to its stockholders on a pro rata basis, but without receiving consideration).

8 Explain the accounting for small and large stock dividends, and for stock splits. Generally accepted accounting principles require that the accounting for small stock dividends (less than 20–25 percent) rely on the fair value of the stock issued. When declaring a common stock dividend, a company debits Retained Earnings at the fair value of the stock it distributes. The entry includes a credit to Common Stock Dividend Distributable at par value times the number of shares, with any excess credited to Paid-in Capital in Excess of Par—Common Stock. If the number of shares issued exceeds 20–25 percent of the shares outstanding (large stock dividend), it debits Retained Earnings at par value and credits Common Stock Distributable—there is no additional paid-in capital.

A stock dividend is a capitalization of retained earnings that reduces retained earnings and increases certain contributed capital accounts. The par value per share and total

Expanded Discussion of
Quasi-Reorganization

stockholders' equity remain unchanged with a stock dividend, and all stockholders retain their same proportionate share of ownership. A stock split results in an increase or decrease in the number of shares outstanding, with a corresponding decrease or increase in the par or stated value per share. No accounting entry is required for a stock split.

9 **Indicate how to present and analyze stockholders' equity.** The stockholders' equity section of a balance sheet includes capital stock, additional paid-in capital, and retained earnings. A company might also present additional items such as treasury stock and accumulated other comprehensive income. Companies often provide a statement of stockholders' equity. Common ratios that use stockholders' equity amounts are return on common stock equity, payout ratio, and book value per share.

APPENDIX 15A

DIVIDEND PREFERENCES AND BOOK VALUE PER SHARE

DIVIDEND PREFERENCES

LEARNING OBJECTIVE 10

Explain the different types of preferred stock dividends and their effect on book value per share.

Illustrations 15A-1 to 15A-4 indicate the **effects** of various **dividend preferences** on dividend distributions to common and preferred stockholders. Assume that in 2014, Mason Company is to distribute \$50,000 as cash dividends, its outstanding common stock has a par value of \$400,000, and its 6 percent preferred stock has a par value of \$100,000. Mason would distribute dividends to each class, employing the assumptions given, as follows.

1. If the preferred stock is noncumulative and nonparticipating:

ILLUSTRATION 15A-1

Dividend Distribution, Noncumulative and Nonparticipating Preferred

	Preferred	Common	Total
6% of \$100,000	\$6,000		\$ 6,000
The remainder to common		\$44,000	44,000
Totals	<u>\$6,000</u>	<u>\$44,000</u>	<u>\$50,000</u>

2. If the preferred stock is cumulative and nonparticipating, and Mason Company did not pay dividends on the preferred stock in the preceding two years:

ILLUSTRATION 15A-2

Dividend Distribution, Cumulative and Nonparticipating Preferred, with Dividends in Arrears

	Preferred	Common	Total
Dividends in arrears, 6% of \$100,000 for 2 years	\$12,000		\$12,000
Current year's dividend, 6% of \$100,000	6,000		6,000
The remainder to common		\$32,000	32,000
Totals	<u>\$18,000</u>	<u>\$32,000</u>	<u>\$50,000</u>

3. If the preferred stock is noncumulative and is fully participating:²⁴

²⁴When preferred stock is participating, there may be different agreements as to how the participation feature is to be executed. However, in the absence of any specific agreement the following procedure is recommended:

- a. After the preferred stock is assigned its current year's dividend, the common stock will receive a "like" percentage of par value outstanding. In example (3) in Illustration 15A-3, this amounts to 6 percent of \$400,000.
- b. In example (3), shown in Illustration 15A-3, the remainder of the declared dividend is \$20,000. We divide this amount by total par value (\$500,000) to find the rate of participation to be applied to each class of stock. In this case, the rate of participation is 4 percent ($\$20,000 \div \$500,000$), which we then multiply by the par value of each class of stock to determine the amount of participation.

	Preferred	Common	Total
Current year's dividend, 6%	\$ 6,000	\$24,000	\$30,000
Participating dividend of 4%	4,000	16,000	20,000
Totals	<u>\$10,000</u>	<u>\$40,000</u>	<u>\$50,000</u>

The participating dividend was determined as follows.

Current year's dividend:			
Preferred, 6% of \$100,000 =	\$ 6,000		
Common, 6% of \$400,000 =	24,000	\$ 30,000	
Amount available for participation (\$50,000 – \$30,000)		\$ 20,000	
Par value of stock that is to participate (\$100,000 + \$400,000)		\$500,000	
Rate of participation (\$20,000 ÷ \$500,000)		4%	
Participating dividend:			
Preferred, 4% of \$100,000	\$ 4,000		
Common, 4% of \$400,000		16,000	
		<u>\$ 20,000</u>	

ILLUSTRATION 15A-3
Dividend Distribution,
Noncumulative and
Fully Participating
Preferred

4. If the preferred stock is cumulative and is fully participating, and Mason Company did not pay dividends on the preferred stock in the preceding two years:

	Preferred	Common	Total
Dividends in arrears, 6% of \$100,000 for 2 years	\$12,000		\$12,000
Current year's dividend, 6%	6,000	\$24,000	30,000
Participating dividend, 1.6% (\$8,000 ÷ \$500,000)	1,600	6,400	8,000
Totals	<u>\$19,600</u>	<u>\$30,400</u>	<u>\$50,000</u>

ILLUSTRATION 15A-4
Dividend Distribution,
Cumulative and Fully
Participating Preferred,
with Dividends in
Arrears

BOOK VALUE PER SHARE

Book value per share in its simplest form is computed as net assets divided by outstanding common shares at the end of the year. The computation of book value per share becomes more complicated if a company has preferred stock in its capital structure. For example, if preferred dividends are in arrears, if the preferred stock is participating, or if preferred stock has a redemption or liquidating value higher than its carrying amount, the company must allocate retained earnings between the preferred and common stockholders in computing book value.

To illustrate, assume that the following situation exists.

Stockholders' equity	Preferred	Common
Preferred stock, 5%	\$300,000	
Common stock		\$400,000
Excess of issue price over par of common stock		37,500
Retained earnings		162,582
Totals	<u>\$300,000</u>	<u>\$600,082</u>
Common shares outstanding		4,000
Book value per share		\$150.02

ILLUSTRATION 15A-5
Computation of Book
Value per Share—No
Dividends in Arrears

The situation in Illustration 15A-5 assumes that no preferred dividends are in arrears and that the preferred is not participating. Now assume that the same facts exist except that the 5 percent preferred is cumulative, participating up to 8 percent, and that dividends for three years before the current year are in arrears. Illustration 15A-6 (page 854)

shows how to compute the book value of the common stock, assuming that no action has yet been taken concerning dividends for the current year.

ILLUSTRATION 15A-6

Computation of Book Value per Share—with Dividends in Arrears

Stockholders' equity	Preferred	Common
Preferred stock, 5%	\$300,000	
Common stock		\$400,000
Excess of issue price over par of common stock		37,500
Retained earnings:		
Dividends in arrears (3 years at 5% a year)	45,000	
Current year requirement at 5%	15,000	20,000
Participating—additional 3%	9,000	12,000
Remainder to common		61,582
Totals	\$369,000	\$531,082
Shares outstanding		4,000
Book value per share		\$132.77

In connection with the book value computation, the analyst must know how to handle the following items: the number of authorized and unissued shares; the number of treasury shares on hand; any commitments with respect to the issuance of unissued shares or the reissuance of treasury shares; and the relative rights and privileges of the various types of stock authorized. As an example, if the liquidating value of the preferred stock is higher than its carrying amount, the liquidating amount should be used in the book value computation.

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 15A

10 Explain the different types of preferred stock dividends and their effect on book value per share. The dividend preferences of preferred stock affect the dividends paid to stockholders. Preferred stock can be (1) cumulative or noncumulative, and (2) fully participating, partially participating, or nonparticipating. If preferred dividends are in arrears, if the preferred stock is participating, or if preferred stock has a redemption or liquidation value higher than its carrying amount, allocate retained earnings between preferred and common stockholders in computing book value per share.

DEMONSTRATION PROBLEM

D'Ouille Company was formed on July 1, 2011. It was authorized to issue 500,000 shares of \$10 par value common stock and 100,000 shares of 8%, \$25 par value, cumulative and nonparticipating preferred stock. D'Ouille Company has a July 1–June 30 fiscal year. The following information relates to the stockholders' equity accounts of D'Ouille Company.

Common Stock: Prior to the 2013–2014 fiscal year, D'Ouille Company had 110,000 shares of outstanding common stock issued as follows.

1. 95,000 shares were issued for cash on July 1, 2011, at \$31 per share.
2. On July 24, 2011, 5,000 shares were exchanged for a plot of land which cost the seller \$70,000 in 2005 and had an estimated fair value of \$220,000 on July 24, 2011.
3. 10,000 shares were issued on March 1, 2013, for \$42 per share.

During the 2013–2014 fiscal year, the following transactions regarding common stock took place.

November 30, 2013 D'Ouille purchased 2,000 shares of its own stock on the open market at \$39 per share. D'Ouille uses the cost method for treasury stock.

December 15, 2013 D'Ouille declared a 5% stock dividend for stockholders of record on January 15, 2014, to be issued on January 31, 2014. D'Ouille was having a liquidity problem and could not afford a cash dividend at the time. D'Ouille's common stock was selling at \$52 per share on December 15, 2013.

June 20, 2014 D'Ouille sold 500 shares of its own common stock that it had purchased on November 30, 2013, for \$21,000.

Preferred Stock: D'Ouille issued 100,000 shares of preferred stock at \$44 per share on July 1, 2012.

Cash Dividends: D'Ouille has followed a schedule of declaring cash dividends in December and June, with payment being made to stockholders of record in the following month. The cash dividends which have been declared since inception of the company through June 30, 2014, are shown below.

Declaration Date	Common Stock	Preferred Stock
12/15/12	\$0.30 per share	\$0.50 per share
6/15/13	\$0.30 per share	\$0.50 per share
12/15/13	—	\$0.50 per share

No cash dividends were declared during June 2014 due to the company's liquidity problems.

Retained Earnings: As of June 30, 2013, D'Ouille retained earnings account had a balance of \$550,000. For the fiscal year ending June 30, 2014, D'Ouille reported net income of \$120,000.

Instructions

Prepare the stockholders' equity section of the balance sheet, including appropriate notes, for D'Ouille Company as of June 30, 2014, as it should appear in its annual report to the shareholders.

Solution

**D'OUVILLE COMPANY
STOCKHOLDERS' EQUITY
JUNE 30, 2014**

Capital stock		
4% preferred stock, \$25 par value, cumulative and nonparticipating, 100,000 shares authorized, 100,000 shares issued and outstanding—Note A		\$2,500,000
Common stock, \$10 par value, 500,000 shares authorized, 115,400 shares issued, with 1,500 shares held in the treasury		1,154,000
Additional paid-in capital		
On preferred stock	\$1,900,000	
On common stock	2,711,800*	
On treasury stock	1,500	4,613,300
Total paid-in capital		8,267,300
Retained earnings		339,200**
Total paid-in capital and retained earnings		8,606,500
Less: Treasury stock, 1,500 shares at cost		58,500
Total stockholders' equity		<u>\$8,548,000</u>

Note A: D'Ouille Company is in arrears on the preferred stock in the amount of \$100,000.

*Premium on Common Stock:

Issue of 95,000 shares × (\$31 – \$10)	\$1,995,000
Issue of 5,000 shares for plot of land (\$220,000 – \$50,000)	170,000
10,000 shares issued (3/1/13) [10,000 × (\$42 – \$10)]	320,000
5,400 shares as dividend [5,400 × (\$52 – \$10)]	226,800
	<u>\$2,711,800</u>

**Retained Earnings:

Beginning balance	+	Income	–	Stock dividend	–	Preferred dividend	=	Ret. earnings, ending balance
\$550,000		\$120,000		\$280,800		\$50,000		\$339,200

Exercises

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

CE15-1 Access the glossary ("Master Glossary") to answer the following.

- (a) What is a "convertible security"?
- (b) What is a "stock dividend"?
- (c) What is a "stock split"?
- (d) What are "participation rights"?

CE15-2 At what percentage point can the issuance of additional shares still qualify as a stock dividend, as opposed to a stock split?

CE15-3 A company plans to issue shares and wants to know the SEC's stance on the accounting treatment for the costs of issuing stock. Can these costs be deferred, or must they be expensed immediately?

CE15-4 If a company chooses to purchase its own shares and then either (1) retires the repurchased shares and issues additional shares, or (2) resells the repurchased shares, can a gain or loss be recognized by the company? Why or why not?

An additional Codification case can be found in the Using Your Judgment section, on page 873.

Be sure to check the book's companion website for a Review and Analysis Exercise, with solution.

WileyPLUS

Brief Exercises, Exercises, Problems, and many more learning and assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

QUESTIONS

1. In the absence of restrictive provisions, what are the basic rights of stockholders of a corporation?
2. Why is a preemptive right important?
3. Distinguish between common and preferred stock.
4. Why is the distinction between paid-in capital and retained earnings important?
5. Explain each of the following terms: authorized capital stock, unissued capital stock, issued capital stock, outstanding capital stock, and treasury stock.
6. What is meant by par value, and what is its significance to stockholders?

7. Describe the accounting for the issuance for cash of no-par value common stock at a price in excess of the stated value of the common stock.
8. Explain the difference between the proportional method and the incremental method of allocating the proceeds of lump-sum sales of capital stock.
9. What are the different bases for stock valuation when assets other than cash are received for issued shares of stock?
10. Explain how underwriting costs and accounting and legal fees associated with the issuance of stock should be recorded.
11. For what reasons might a corporation purchase its own stock?
12. Discuss the propriety of showing:
 - (a) Treasury stock as an asset.
 - (b) "Gain" or "loss" on sale of treasury stock as additions to or deductions from income.
 - (c) Dividends received on treasury stock as income.
13. What features or rights may alter the character of preferred stock?
14. Dagwood Inc. recently noted that its 4% preferred stock and 4% participating preferred stock, which are both cumulative, have priority as to dividends up to 4% of their par value. Its participating preferred stock participates equally with the common stock in any dividends in excess of 4%. What is meant by the term participating? Cumulative?
15. Where in the financial statements is preferred stock normally reported?
16. List possible sources of additional paid-in capital.
17. Satchel Inc. purchases 10,000 shares of its own previously issued \$10 par common stock for \$290,000. Assuming the shares are held in the treasury with intent to reissue, what effect does this transaction have on (a) net income, (b) total assets, (c) total paid-in capital, and (d) total stockholders' equity?
18. Indicate how each of the following accounts should be classified in the stockholders' equity section.
 - (a) Common Stock.
 - (b) Retained Earnings.
 - (c) Paid-in Capital in Excess of Par—Common Stock.
 - (d) Treasury Stock.
 - (e) Paid-in Capital from Treasury Stock.
 - (f) Paid-in Capital in Excess of Stated Value—Common Stock.
 - (g) Preferred Stock.
19. What factors influence the dividend policy of a company?
20. What are the principal considerations of a board of directors in making decisions involving dividend declarations? Discuss briefly.
21. Dividends are sometimes said to have been paid "out of retained earnings." What is the error, if any, in that statement?
22. Distinguish among: cash dividends, property dividends, liquidating dividends, and stock dividends.
23. Describe the accounting entry for a stock dividend, if any. Describe the accounting entry for a stock split, if any.
24. Stock splits and stock dividends may be used by a corporation to change the number of shares of its stock outstanding.
 - (a) What is meant by a stock split effected in the form of a dividend?
 - (b) From an accounting viewpoint, explain how the stock split effected in the form of a dividend differs from an ordinary stock dividend.
 - (c) How should a stock dividend that has been declared but not yet issued be classified in a balance sheet? Why?
25. The following comment appeared in the notes of Colorado Corporation's annual report: "Such distributions, representing proceeds from the sale of Sarazan, Inc., were paid in the form of partial liquidating dividends and were in lieu of a portion of the Company's ordinary cash dividends." How would a partial liquidating dividend be accounted for in the financial records?
26. This comment appeared in the annual report of MacCloud Inc.: "The Company could pay cash or property dividends on the Class A common stock without paying cash or property dividends on the Class B common stock. But if the Company pays any cash or property dividends on the Class B common stock, it would be required to pay at least the same dividend on the Class A common stock." How is a property dividend accounted for in the financial records?
27. For what reasons might a company restrict a portion of its retained earnings?
28. How are restrictions of retained earnings reported?
- *29. McNabb Corp. had \$100,000 of 7%, \$20 par value preferred stock and 12,000 shares of \$25 par value common stock outstanding throughout 2014.
 - (a) Assuming that total dividends declared in 2014 were \$64,000, and that the preferred stock is not cumulative but is fully participating, common stockholders should receive 2014 dividends of what amount?
 - (b) Assuming that total dividends declared in 2014 were \$64,000, and that the preferred stock is fully participating and cumulative with preferred dividends in arrears for 2013, preferred stockholders should receive 2014 dividends totaling what amount?
 - (c) Assuming that total dividends declared in 2014 were \$30,000, that the preferred stock is cumulative, non-participating, and was issued on January 1, 2013, and that \$5,000 of preferred dividends were declared and paid in 2013, the common stockholders should receive 2014 dividends totaling what amount?

BRIEF EXERCISES

- 3** **BE15-1** Buttercup Corporation issued 300 shares of \$10 par value common stock for \$4,500. Prepare Buttercup's journal entry.
- 3** **BE15-2** Swarten Corporation issued 600 shares of no-par common stock for \$8,200. Prepare Swarten's journal entry if (a) the stock has no stated value, and (b) the stock has a stated value of \$2 per share.

- 4** **9** **BE15-3** Wilco Corporation has the following account balances at December 31, 2014.

Common stock, \$5 par value	\$ 510,000
Treasury stock	90,000
Retained earnings	2,340,000
Paid-in capital in excess of par—common stock	1,320,000

Prepare Wilco's December 31, 2014, stockholders' equity section.

- 3** **BE15-4** Ravonette Corporation issued 300 shares of \$10 par value common stock and 100 shares of \$50 par value preferred stock for a lump sum of \$13,500. The common stock has a market price of \$20 per share, and the preferred stock has a market price of \$90 per share. Prepare the journal entry to record the issuance.
- 3** **BE15-5** On February 1, 2014, Buffalo Corporation issued 3,000 shares of its \$5 par value common stock for land worth \$31,000. Prepare the February 1, 2014, journal entry.
- 3** **BE15-6** Moonwalker Corporation issued 2,000 shares of its \$10 par value common stock for \$60,000. Moonwalker also incurred \$1,500 of costs associated with issuing the stock. Prepare Moonwalker's journal entry to record the issuance of the company's stock.
- 4** **BE15-7** Sprinkle Inc. has outstanding 10,000 shares of \$10 par value common stock. On July 1, 2014, Sprinkle reacquired 100 shares at \$87 per share. On September 1, Sprinkle reissued 60 shares at \$90 per share. On November 1, Sprinkle reissued 40 shares at \$83 per share. Prepare Sprinkle's journal entries to record these transactions using the cost method.
- 4** **BE15-8** Arantxa Corporation has outstanding 20,000 shares of \$5 par value common stock. On August 1, 2014, Arantxa reacquired 200 shares at \$80 per share. On November 1, Arantxa reissued the 200 shares at \$70 per share. Arantxa had no previous treasury stock transactions. Prepare Arantxa's journal entries to record these transactions using the cost method.
- 5** **BE15-9** Hinges Corporation issued 500 shares of \$100 par value preferred stock for \$61,500. Prepare Hinges's journal entry.
- 6** **7** **BE15-10** Woolford Inc. declared a cash dividend of \$1.00 per share on its 2 million outstanding shares. The dividend was declared on August 1, payable on September 9 to all stockholders of record on August 15. Prepare all journal entries necessary on those three dates.
- 6** **7** **BE15-11** Cole Inc. owns shares of Marlin Corporation stock classified as an available-for-sale investment. At December 31, 2014, the available-for-sale securities were carried in Cole's accounting records at their cost of \$875,000, which equals their fair value. On September 21, 2015, when the fair value of the securities was \$1,200,000, Cole declared a property dividend whereby the Marlin securities are to be distributed on October 23, 2015 to stockholders of record on October 8, 2015. Prepare all journal entries necessary on those three dates.
- 6** **7** **BE15-12** Graves Mining Company declared, on April 20, a dividend of \$500,000 payable on June 1. Of this amount, \$125,000 is a return of capital. Prepare the April 20 and June 1 entries for Graves.
- 8** **BE15-13** Green Day Corporation has outstanding 400,000 shares of \$10 par value common stock. The corporation declares a 5% stock dividend when the fair value of the stock is \$65 per share. Prepare the journal entries for Green Day Corporation for both the date of declaration and the date of distribution.
- 8** **BE15-14** Use the information from BE15-13, but assume Green Day Corporation declared a 100% stock dividend rather than a 5% stock dividend. Prepare the journal entries for both the date of declaration and the date of distribution.
- 10** ***BE15-15** Nottebart Corporation has outstanding 10,000 shares of \$100 par value, 6% preferred stock and 60,000 shares of \$10 par value common stock. The preferred stock was issued in January 2014, and no dividends were declared in 2014 or 2015. In 2016, Nottebart declares a cash dividend of \$300,000. How will the dividend be shared by common and preferred stockholders if the preferred is (a) noncumulative and (b) cumulative?

EXERCISES

- 3** **E15-1 (Recording the Issuances of Common Stock)** During its first year of operations, Collin Raye Corporation had the following transactions pertaining to its common stock.

Jan. 10 Issued 80,000 shares for cash at \$6 per share.
 Mar. 1 Issued 5,000 shares to attorneys in payment of a bill for \$35,000 for services rendered in helping the company to incorporate.
 July 1 Issued 30,000 shares for cash at \$8 per share.
 Sept. 1 Issued 60,000 shares for cash at \$10 per share.

Instructions

- (a) Prepare the journal entries for these transactions, assuming that the common stock has a par value of \$5 per share.
 (b) Prepare the journal entries for these transactions, assuming that the common stock is no-par with a stated value of \$3 per share.

- 3** **E15-2 (Recording the Issuance of Common and Preferred Stock)** Kathleen Battle Corporation was organized on January 1, 2014. It is authorized to issue 10,000 shares of 8%, \$100 par value preferred stock, and 500,000 shares of no-par common stock with a stated value of \$1 per share. The following stock transactions were completed during the first year.

Jan. 10 Issued 80,000 shares of common stock for cash at \$5 per share.
 Mar. 1 Issued 5,000 shares of preferred stock for cash at \$108 per share.
 Apr. 1 Issued 24,000 shares of common stock for land. The asking price of the land was \$90,000; the fair value of the land was \$80,000.
 May 1 Issued 80,000 shares of common stock for cash at \$7 per share.
 Aug. 1 Issued 10,000 shares of common stock to attorneys in payment of their bill of \$50,000 for services rendered in helping the company organize.
 Sept. 1 Issued 10,000 shares of common stock for cash at \$9 per share.
 Nov. 1 Issued 1,000 shares of preferred stock for cash at \$112 per share.

Instructions

Prepare the journal entries to record the above transactions.

- 3** **E15-3 (Stock Issued for Land)** Twenty-five thousand shares reacquired by Elixir Corporation for \$53 per share were exchanged for undeveloped land that has an appraised value of \$1,700,000. At the time of the exchange, the common stock was trading at \$62 per share on an organized exchange.

Instructions

- (a) Prepare the journal entry to record the acquisition of land assuming that the purchase of the stock was originally recorded using the cost method.
 (b) Briefly identify the possible alternatives (including those that are totally unacceptable) for quantifying the cost of the land and briefly support your choice.

- 3** **E15-4 (Lump-Sum Sale of Stock with Bonds)** Faith Evans Corporation is a regional company which is an SEC registrant. The corporation's securities are thinly traded on NASDAQ. Faith Evans Corp. has issued 10,000 units. Each unit consists of a \$500 par, 12% subordinated debenture and 10 shares of \$5 par common stock. The investment banker has retained 400 units as the underwriting fee. The other 9,600 units were sold to outside investors for cash at \$880 per unit. Prior to this sale, the 2-week ask price of common stock was \$40 per share. Twelve percent is a reasonable market yield for the debentures, and therefore the par value of the bonds is equal to the fair value.

Instructions

- (a) Prepare the journal entry to record Evans' transaction, under the following conditions.
 (1) Employing the incremental method.
 (2) Employing the proportional method, assuming the recent price quote on the common stock reflects fair value.
 (b) Briefly explain which method is, in your opinion, the better method.

- 3** **5** **E15-5 (Lump-Sum Sales of Stock with Preferred Stock)** Dave Matthew Inc. issues 500 shares of \$10 par value common stock and 100 shares of \$100 par value preferred stock for a lump sum of \$100,000.

Instructions

- (a) Prepare the journal entry for the issuance when the market price of the common shares is \$165 each and market price of the preferred is \$230 each. (Round to nearest dollar.)

(b) Prepare the journal entry for the issuance when only the market price of the common stock is known and it is \$170 per share.

3 4 E15-6 (Stock Issuances and Repurchase) Lindsey Hunter Corporation is authorized to issue 50,000 shares of \$5 par value common stock. During 2014, Lindsey Hunter took part in the following selected transactions.

1. Issued 5,000 shares of stock at \$45 per share, less costs related to the issuance of the stock totaling \$7,000.
2. Issued 1,000 shares of stock for land appraised at \$50,000. The stock was actively traded on a national stock exchange at approximately \$46 per share on the date of issuance.
3. Purchased 500 shares of treasury stock at \$43 per share. The treasury shares purchased were issued in 2010 at \$40 per share.

Instructions

- (a) Prepare the journal entry to record item 1.
- (b) Prepare the journal entry to record item 2.
- (c) Prepare the journal entry to record item 3 using the cost method.

4 E15-7 (Effect of Treasury Stock Transactions on Financials) Joe Dumars Company has outstanding 40,000 shares of \$5 par common stock which had been issued at \$30 per share. Joe Dumars then entered into the following transactions.

1. Purchased 5,000 treasury shares at \$45 per share.
2. Resold 2,000 of the treasury shares at \$49 per share.
3. Resold 500 of the treasury shares at \$40 per share.

Instructions

Use the following code to indicate the effect each of the three transactions has on the financial statement categories listed in the table below, assuming Joe Dumars Company uses the cost method (I = Increase; D = Decrease; NE = No effect).

#	Assets	Liabilities	Stockholders' Equity	Paid-in Capital	Retained Earnings	Net Income
1						
2						
3						

3 E15-8 (Preferred Stock Entries and Dividends) Otis Thorpe Corporation has 10,000 shares of \$100 par value, 8%, preferred stock and 50,000 shares of \$10 par value common stock outstanding at December 31, 2014.

Instructions

Answer the questions in each of the following independent situations.

- (a) If the preferred stock is cumulative and dividends were last paid on the preferred stock on December 31, 2011, what are the dividends in arrears that should be reported on the December 31, 2014, balance sheet? How should these dividends be reported?
- (b) If the preferred stock is convertible into seven shares of \$10 par value common stock and 4,000 shares are converted, what entry is required for the conversion assuming the preferred stock was issued at par value?
- (c) If the preferred stock was issued at \$107 per share, how should the preferred stock be reported in the stockholders' equity section?

3 4 E15-9 (Correcting Entries for Equity Transactions) Pistons Inc. recently hired a new accountant with extensive experience in accounting for partnerships. Because of the pressure of the new job, the accountant was unable to review what he had learned earlier about corporation accounting. During the first month, he made the following entries for the corporation's capital stock.

May 2	Cash		192,000
	Capital Stock		192,000
		(Issued 12,000 shares of \$5 par value common stock at \$16 per share)	
10	Cash		600,000
	Capital Stock		600,000
		(Issued 10,000 shares of \$30 par value preferred stock at \$60 per share)	

- 7** **E15-12 (Cash Dividend and Liquidating Dividend)** Lotoya Davis Corporation has 10 million shares of common stock issued and outstanding. On June 1, the board of directors voted an 80 cents per share cash dividend to stockholders of record as of June 14, payable June 30.

Instructions

- (a) Prepare the journal entry for each of the dates above assuming the dividend represents a distribution of earnings.
 (b) How would the entry differ if the dividend were a liquidating dividend?

- 8** **E15-13 (Stock Split and Stock Dividend)** The common stock of Alexander Hamilton Inc. is currently selling at \$120 per share. The directors wish to reduce the share price and increase share volume prior to a new issue. The per share par value is \$10; book value is \$70 per share. Nine million shares are issued and outstanding.

Instructions

Prepare the necessary journal entries assuming the following.

- (a) The board votes a 2-for-1 stock split.
 (b) The board votes a 100% stock dividend.
 (c) Briefly discuss the accounting and securities market differences between these two methods of increasing the number of shares outstanding.

- 8** **E15-14 (Entries for Stock Dividends and Stock Splits)** The stockholders' equity accounts of G.K. Chesterton Company have the following balances on December 31, 2014.

Common stock, \$10 par, 300,000 shares issued and outstanding	\$3,000,000
Paid-in capital in excess of par—common stock	1,200,000
Retained earnings	5,600,000

Shares of G.K. Chesterton Company stock are currently selling on the Midwest Stock Exchange at \$37.

Instructions

Prepare the appropriate journal entries for each of the following cases.

- (a) A stock dividend of 5% is declared and issued.
 (b) A stock dividend of 100% is declared and issued.
 (c) A 2-for-1 stock split is declared and issued.

- 7** **8** **E15-15 (Dividend Entries)** The following data were taken from the balance sheet accounts of Masefield Corporation on December 31, 2013.

Current assets	\$540,000
Debt investments	624,000
Common stock (par value \$10)	500,000
Paid-in capital in excess of par	150,000
Retained earnings	840,000

Instructions

Prepare the required journal entries for the following unrelated items.

- (a) A 5% stock dividend is declared and distributed at a time when the market price per share is \$39.
 (b) The par value of the common stock is reduced to \$2 with a 5-for-1 stock split.
 (c) A dividend is declared January 5, 2014, and paid January 25, 2014, in bonds held as an investment. The bonds have a book value of \$100,000 and a fair value of \$135,000.

- 6** **7** **E15-16 (Computation of Retained Earnings)** The following information has been taken from the ledger accounts of Isaac Stern Corporation.

Total income since incorporation	\$317,000
Total cash dividends paid	60,000
Total value of stock dividends distributed	30,000
Gains on treasury stock transactions	18,000
Unamortized discount on bonds payable	32,000

Instructions

Determine the current balance of retained earnings.

- 9** **E15-17 (Stockholders' Equity Section)** Bruno Corporation's post-closing trial balance at December 31, 2014, is shown on the next page.

BRUNO CORPORATION		
POST-CLOSING TRIAL BALANCE		
DECEMBER 31, 2014		
	Dr.	Cr.
Accounts payable		\$ 310,000
Accounts receivable	\$ 480,000	
Accumulated depreciation—buildings		185,000
Additional paid-in capital in excess of par—common		1,300,000
From treasury stock		160,000
Allowance for doubtful accounts		30,000
Bonds payable		300,000
Buildings	1,450,000	
Cash	190,000	
Common stock (\$1 par)		200,000
Dividends payable (preferred stock—cash)		4,000
Inventory	560,000	
Land	400,000	
Preferred stock (\$50 par)		500,000
Prepaid expenses	40,000	
Retained earnings		301,000
Treasury stock (common at cost)	170,000	
Totals	\$3,290,000	\$3,290,000

At December 31, 2014, Bruno had the following number of common and preferred shares.

	Common	Preferred
Authorized	600,000	60,000
Issued	200,000	10,000
Outstanding	190,000	10,000

The dividends on preferred stock are \$4 cumulative. In addition, the preferred stock has a preference in liquidation of \$50 per share.

Instructions

Prepare the stockholders' equity section of Bruno's balance sheet at December 31, 2014.

(AICPA adapted)

4 7 **E15-18 (Dividends and Stockholders' Equity Section)** Anne Cleves Company reported the following amounts in the stockholders' equity section of its December 31, 2013, balance sheet.

Preferred stock, 10%, \$100 par (10,000 shares authorized, 2,000 shares issued)	\$200,000
Common stock, \$5 par (100,000 shares authorized, 20,000 shares issued)	100,000
Additional paid-in capital	125,000
Retained earnings	450,000
Total	\$875,000

During 2014, Cleves took part in the following transactions concerning stockholders' equity.

1. Paid the annual 2013 \$10 per share dividend on preferred stock and a \$2 per share dividend on common stock. These dividends had been declared on December 31, 2013.
2. Purchased 1,700 shares of its own outstanding common stock for \$40 per share. Cleves uses the cost method.
3. Reissued 700 treasury shares for land valued at \$30,000.
4. Issued 500 shares of preferred stock at \$105 per share.
5. Declared a 10% stock dividend on the outstanding common stock when the stock is selling for \$45 per share.
6. Issued the stock dividend.
7. Declared the annual 2014 \$10 per share dividend on preferred stock and the \$2 per share dividend on common stock. These dividends are payable in 2015.

Instructions

- (a) Prepare journal entries to record the transactions described above.
 (b) Prepare the December 31, 2014, stockholders' equity section. Assume 2014 net income was \$330,000.

- 9 E15-19 (Comparison of Alternative Forms of Financing)** Shown below is the liabilities and stockholders' equity section of the balance sheet for Jana Kingston Company and Mary Ann Benson Company. Each has assets totaling \$4,200,000.

Jana Kingston Co.		Mary Ann Benson Co.	
Current liabilities	\$ 300,000	Current liabilities	\$ 600,000
Long-term debt, 10%	1,200,000	Common stock (\$20 par)	2,900,000
Common stock (\$20 par)	2,000,000	Retained earnings (Cash	
Retained earnings (Cash		dividends, \$328,000)	700,000
dividends, \$220,000)	700,000		
	<u>\$4,200,000</u>		<u>\$4,200,000</u>

For the year, each company has earned the same income before interest and taxes.

	Jana Kingston Co.	Mary Ann Benson Co.
Income before interest and taxes	\$1,200,000	\$1,200,000
Interest expense	120,000	-0-
	1,080,000	1,200,000
Income taxes (45%)	486,000	540,000
Net income	<u>\$ 594,000</u>	<u>\$ 660,000</u>

At year end, the market price of Kingston's stock was \$101 per share, and Benson's was \$63.50.

Instructions

- (a) Which company is more profitable in terms of return on total assets?
 (b) Which company is more profitable in terms of return on common stock equity?
 (c) Which company has the greater net income per share of stock? Neither company issued or reacquired shares during the year.
 (d) From the point of view of net income, is it advantageous to the stockholders of Jana Kingston Co. to have the long-term debt outstanding? Why?
 (e) What is the book value per share for each company?

- 9 E15-20 (Trading on the Equity Analysis)** Presented below is information from the annual report of Emporia Plastics, Inc.

Operating income	\$ 532,150
Bond interest expense	135,000
	<u>397,150</u>
Income taxes	183,432
Net income	<u>\$ 213,718</u>
Bonds payable	\$1,000,000
Common stock	875,000
Retained earnings	375,000

Instructions

- (a) Compute the return on common stock equity and the rate of interest paid on bonds. (Assume balances for debt and equity accounts approximate averages for the year.)
 (b) Is Emporia Plastics Inc. trading on the equity successfully? Explain.

- 10 *E15-21 (Preferred Dividends)** The outstanding capital stock of Edna Millay Corporation consists of 2,000 shares of \$100 par value, 8% preferred, and 5,000 shares of \$50 par value common.

Instructions

Assuming that the company has retained earnings of \$90,000, all of which is to be paid out in dividends, and that preferred dividends were not paid during the 2 years preceding the current year, state how much each class of stock should receive under each of the following conditions.

- (a) The preferred stock is noncumulative and nonparticipating.
 (b) The preferred stock is cumulative and nonparticipating.

(c) The preferred stock is cumulative and participating. (Round dividend rate percentages to four decimal places.)

- 10** *E15-22 (Preferred Dividends) Matt Schmidt Company's ledger shows the following balances on December 31, 2014.

7% Preferred stock—\$10 par value, outstanding 20,000 shares	\$ 200,000
Common stock—\$100 par value, outstanding 30,000 shares	3,000,000
Retained earnings	630,000

Instructions

Assuming that the directors decide to declare total dividends in the amount of \$366,000, determine how much each class of stock should receive under each of the conditions stated below. One year's dividends are in arrears on the preferred stock.

- The preferred stock is cumulative and fully participating.
- The preferred stock is noncumulative and nonparticipating.
- The preferred stock is noncumulative and is participating in distributions in excess of a 10% dividend rate on the common stock.

- 10** *E15-23 (Preferred Stock Dividends) Cajun Company has outstanding 2,500 shares of \$100 par, 6% preferred stock and 15,000 shares of \$10 par value common. The following schedule shows the amount of dividends paid out over the last 4 years.

Instructions

Allocate the dividends to each type of stock under assumptions (a) and (b). Express your answers in per-share amounts using the format shown below.

Year	Paid-out	Assumptions			
		(a)		(b)	
		Preferred, noncumulative, and nonparticipating		Preferred, cumulative, and fully participating	
		Preferred	Common	Preferred	Common
2012	\$13,000				
2013	\$26,000				
2014	\$57,000				
2015	\$76,000				

- 10** *E15-24 (Computation of Book Value per Share) Morgan Sondgeroth Inc. began operations in January 2012 and reported the following results for each of its 3 years of operations.

2012	\$260,000 net loss	2013	\$40,000 net loss	2014	\$800,000 net income
------	--------------------	------	-------------------	------	----------------------

At December 31, 2014, Morgan Sondgeroth Inc. capital accounts were as follows.

8% cumulative preferred stock, par value \$100; authorized, issued, and outstanding 5,000 shares	\$500,000
Common stock, par value \$1.00; authorized 1,000,000 shares; issued and outstanding 750,000 shares	\$750,000

Morgan Sondgeroth Inc. has never paid a cash or stock dividend. There has been no change in the capital accounts since Sondgeroth began operations. The state law permits dividends only from retained earnings.

Instructions

- Compute the book value of the common stock at December 31, 2014.
- Compute the book value of the common stock at December 31, 2014, assuming that the preferred stock has a liquidating value of \$106 per share.

EXERCISES SET B

See the book's companion website, at www.wiley.com/college/kieso, for an additional set of exercises.

PROBLEMS

- 3 4** **P15-1 (Equity Transactions and Statement Preparation)** On January 5, 2014, Phelps Corporation received a charter granting the right to issue 5,000 shares of \$100 par value, 8% cumulative and nonparticipating preferred stock, and 50,000 shares of \$10 par value common stock. It then completed these transactions.

9

- Jan. 11 Issued 20,000 shares of common stock at \$16 per share.
 Feb. 1 Issued to Sanchez Corp. 4,000 shares of preferred stock for the following assets: equipment with a fair value of \$50,000; a factory building with a fair value of \$160,000; and land with an appraised value of \$270,000.
 July 29 Purchased 1,800 shares of common stock at \$17 per share. (Use cost method.)
 Aug. 10 Sold the 1,800 treasury shares at \$14 per share.
 Dec. 31 Declared a \$0.25 per share cash dividend on the common stock and declared the preferred dividend.
 Dec. 31 Closed the Income Summary account. There was a \$175,700 net income.

XLS

Instructions

- (a) Record the journal entries for the transactions listed above.
- (b) Prepare the stockholders' equity section of Phelps Corporation's balance sheet as of December 31, 2014.

- 4 9** **P15-2 (Treasury Stock Transactions and Presentation)** Clemson Company had the following stockholders' equity as of January 1, 2014.

Common stock, \$5 par value, 20,000 shares issued	\$100,000
Paid-in capital in excess of par—common stock	300,000
Retained earnings	320,000
Total stockholders' equity	\$720,000

During 2014, the following transactions occurred.

- Feb. 1 Clemson repurchased 2,000 shares of treasury stock at a price of \$19 per share.
 Mar. 1 800 shares of treasury stock repurchased above were reissued at \$17 per share.
 Mar. 18 500 shares of treasury stock repurchased above were reissued at \$14 per share.
 Apr. 22 600 shares of treasury stock repurchased above were reissued at \$20 per share.

Instructions

- (a) Prepare the journal entries to record the treasury stock transactions in 2014, assuming Clemson uses the cost method.
- (b) Prepare the stockholders' equity section as of April 30, 2014. Net income for the first 4 months of 2014 was \$130,000.

- 3 4** **P15-3 (Equity Transactions and Statement Preparation)** Hatch Company has two classes of capital stock outstanding: 8%, \$20 par preferred and \$5 par common. At December 31, 2014, the following accounts were included in stockholders' equity.

7 8

Preferred Stock, 150,000 shares	\$ 3,000,000
Common Stock, 2,000,000 shares	10,000,000
Paid-in Capital in Excess of Par—Preferred Stock	200,000
Paid-in Capital in Excess of Par—Common Stock	27,000,000
Retained Earnings	4,500,000

The following transactions affected stockholders' equity during 2015.

- Jan. 1 30,000 shares of preferred stock issued at \$22 per share.
 Feb. 1 50,000 shares of common stock issued at \$20 per share.
 June 1 2-for-1 stock split (par value reduced to \$2.50).
 July 1 30,000 shares of common treasury stock purchased at \$10 per share. Hatch uses the cost method.
 Sept. 15 10,000 shares of treasury stock reissued at \$11 per share.
 Dec. 31 The preferred dividend is declared, and a common dividend of 50¢ per share is declared.
 Dec. 31 Net income is \$2,100,000.

Instructions

Prepare the stockholders' equity section for Hatch Company at December 31, 2015. Show all supporting computations.

3 5 P15-4 (Stock Transactions—Lump Sum) Seles Corporation's charter authorized issuance of 100,000 shares of \$10 par value common stock and 50,000 shares of \$50 preferred stock. The following transactions involving the issuance of shares of stock were completed. Each transaction is independent of the others.

1. Issued a \$10,000, 9% bond payable at par and gave as a bonus one share of preferred stock, which at that time was selling for \$106 a share.
2. Issued 500 shares of common stock for equipment. The equipment had been appraised at \$7,100; the seller's book value was \$6,200. The most recent market price of the common stock is \$16 a share.
3. Issued 375 shares of common and 100 shares of preferred for a lump sum amounting to \$10,800. The common had been selling at \$14 and the preferred at \$65.
4. Issued 200 shares of common and 50 shares of preferred for equipment. The common had a fair value of \$16 per share; the equipment has a fair value of \$6,500.

Instructions

Record the transactions listed above in journal entry form.

4 P15-5 (Treasury Stock—Cost Method) Before Gordon Corporation engages in the treasury stock transactions listed below, its general ledger reflects, among others, the following account balances (par value of its stock is \$30 per share).

<u>Paid-in Capital in Excess of Par—Common Stock</u>	<u>Common Stock</u>	<u>Retained Earnings</u>
\$99,000	\$270,000	\$80,000

Instructions

Record the treasury stock transactions (given below) under the cost method of handling treasury stock; use the FIFO method for purchase-sale purposes.

- (a) Bought 380 shares of treasury stock at \$40 per share.
- (b) Bought 300 shares of treasury stock at \$45 per share.
- (c) Sold 350 shares of treasury stock at \$42 per share.
- (d) Sold 110 shares of treasury stock at \$38 per share.

4 7 9 P15-6 (Treasury Stock—Cost Method—Equity Section Preparation) Washington Company has the following stockholders' equity accounts at December 31, 2014.

Common Stock (\$100 par value, authorized 8,000 shares)	\$480,000
Retained Earnings	294,000

Instructions

- (a) Prepare entries in journal form to record the following transactions, which took place during 2015.
 - (1) 280 shares of outstanding stock were purchased at \$97 per share. (These are to be accounted for using the cost method.)
 - (2) A \$20 per share cash dividend was declared.
 - (3) The dividend declared in (2) above was paid.
 - (4) The treasury shares purchased in (1) above were resold at \$102 per share.
 - (5) 500 shares of outstanding stock were purchased at \$105 per share.
 - (6) 350 of the shares purchased in (5) above were resold at \$96 per share.
- (b) Prepare the stockholders' equity section of Washington Company's balance sheet after giving effect to these transactions, assuming that the net income for 2015 was \$94,000. State law requires restriction of retained earnings for the amount of treasury stock.

4 7 P15-7 (Cash Dividend Entries) The books of Conchita Corporation carried the following account balances as of December 31, 2014.

Cash	\$ 195,000
Preferred Stock (6% cumulative, nonparticipating, \$50 par)	300,000
Common Stock (no-par value, 300,000 shares issued)	1,500,000
Paid-in Capital in Excess of Par—Preferred Stock	150,000
Treasury Stock (common 2,800 shares at cost)	33,600
Retained Earnings	105,000

The company decided not to pay any dividends in 2014.

The board of directors, at their annual meeting on December 21, 2015, declared the following: "The current year dividends shall be 6% on the preferred and \$.30 per share on the common. The dividends in arrears shall be paid by issuing 1,500 shares of treasury stock." At the date of declaration, the preferred is selling at \$80 per share, and the common at \$12 per share. Net income for 2015 is estimated at \$77,000.

Instructions

- Prepare the journal entries required for the dividend declaration and payment, assuming that they occur simultaneously.
- Could Conchita Corporation give the preferred stockholders 2 years' dividends and common stockholders a 30 cents per share dividend, all in cash?

7 8

P15-8 (Dividends and Splits) Myers Company provides you with the following condensed balance sheet information.

Assets		Liabilities and Stockholders' Equity		
Current assets	\$ 40,000	Current and long-term liabilities		\$100,000
Equity investments (trading)	60,000	Stockholders' equity		
Equipment (net)	250,000	Common stock (\$5 par)	\$ 20,000	
Intangibles	60,000	Paid-in capital in excess of par	110,000	
Total assets	<u>\$410,000</u>	Retained earnings	<u>180,000</u>	<u>310,000</u>
		Total liabilities and stockholders' equity		<u>\$410,000</u>

Instructions

For each transaction below, indicate the dollar impact (if any) on the following five items: (1) total assets, (2) common stock, (3) paid-in capital in excess of par, (4) retained earnings, and (5) stockholders' equity. (Each situation is independent.)

- Myers declares and pays a \$0.50 per share cash dividend.
- Myers declares and issues a 10% stock dividend when the market price of the stock is \$14 per share.
- Myers declares and issues a 30% stock dividend when the market price of the stock is \$15 per share.
- Myers declares and distributes a property dividend. Myers gives one share of its equity investment (ABC stock) for every two shares of Myers Company stock held. Myers owns 10,000 shares of ABC. ABC is selling for \$10 per share on the date the property dividend is declared.
- Myers declares a 2-for-1 stock split and issues new shares.

3 4
7 9

P15-9 (Stockholders' Equity Section of Balance Sheet) The following is a summary of all relevant transactions of Vicario Corporation since it was organized in 2014.

In 2014, 15,000 shares were authorized and 7,000 shares of common stock (\$50 par value) were issued at a price of \$57. In 2015, 1,000 shares were issued as a stock dividend when the stock was selling for \$60. Three hundred shares of common stock were bought in 2016 at a cost of \$64 per share. These 300 shares are still in the company treasury.

In 2015, 10,000 preferred shares were authorized and the company issued 5,000 of them (\$100 par value) at \$113. Some of the preferred stock was reacquired by the company and later reissued for \$4,700 more than it cost the company.

The corporation has earned a total of \$610,000 in net income after income taxes and paid out a total of \$312,600 in cash dividends since incorporation.

Instructions

Prepare the stockholders' equity section of the balance sheet in proper form for Vicario Corporation as of December 31, 2016. Account for treasury stock using the cost method.

8

P15-10 (Stock Dividends and Stock Split) Oregon Inc. \$10 par common stock is selling for \$110 per share. Four million shares are currently issued and outstanding. The board of directors wishes to stimulate interest in Oregon common stock before a forthcoming stock issue but does not wish to distribute capital at this time. The board also believes that too many adjustments to the stockholders' equity section, especially retained earnings, might discourage potential investors.

The board has considered three options for stimulating interest in the stock:

- A 20% stock dividend.
- A 100% stock dividend.
- A 2-for-1 stock split.

Instructions

Acting as financial advisor to the board, you have been asked to report briefly on each option and, considering the board's wishes, make a recommendation. Discuss the effects of each of the foregoing options.

7 8
9

P15-11 (Stock and Cash Dividends) Earnhart Corporation has outstanding 3,000,000 shares of common stock of a par value of \$10 each. The balance in its Retained Earnings account at January 1, 2014, was \$24,000,000, and it then had Paid-in Capital in Excess of Par—Common Stock of \$5,000,000. During 2014,

the company's net income was \$4,700,000. A cash dividend of \$0.60 a share was declared on May 5, 2014, and was paid June 30, 2014, and a 6% stock dividend was declared on November 30, 2014, and distributed to stockholders of record at the close of business on December 31, 2014. You have been asked to advise on the proper accounting treatment of the stock dividend.

The existing stock of the company is quoted on a national stock exchange. The market price of the stock has been as follows.

October 31, 2014	\$31
November 30, 2014	\$34
December 31, 2014	\$38

Instructions

- Prepare the journal entry to record the declaration and payment of the cash dividend.
- Prepare the journal entry to record the declaration and distribution of the stock dividend.
- Prepare the stockholders' equity section (including schedules of retained earnings and additional paid-in capital) of the balance sheet of Earnhart Corporation for the year 2014 on the basis of the foregoing information. Draft a note to the financial statements setting forth the basis of the accounting for the stock dividend, and add separately appropriate comments or explanations regarding the basis chosen.

3 4 P15-12 (Analysis and Classification of Equity Transactions) Penn Company was formed on July 1, 2012. It was authorized to issue 300,000 shares of \$10 par value common stock and 100,000 shares of 8% \$25 par value, cumulative and nonparticipating preferred stock. Penn Company has a July 1–June 30 fiscal year.

7 8 9 The following information relates to the stockholders' equity accounts of Penn Company.

Common Stock

Prior to the 2014–2015 fiscal year, Penn Company had 110,000 shares of outstanding common stock issued as follows.

- 85,000 shares were issued for cash on July 1, 2012, at \$31 per share.
- On July 24, 2012, 5,000 shares were exchanged for a plot of land which cost the seller \$70,000 in 2006 and had an estimated fair value of \$220,000 on July 24, 2012.
- 20,000 shares were issued on March 1, 2013, for \$42 per share.

During the 2014–2015 fiscal year, the following transactions regarding common stock took place.

November 30, 2014	Penn purchased 2,000 shares of its own stock on the open market at \$39 per share. Penn uses the cost method for treasury stock.
December 15, 2014	Penn declared a 5% stock dividend for stockholders of record on January 15, 2015, to be issued on January 31, 2015. Penn was having a liquidity problem and could not afford a cash dividend at the time. Penn's common stock was selling at \$52 per share on December 15, 2014.
June 20, 2015	Penn sold 500 shares of its own common stock that it had purchased on November 30, 2014, for \$21,000.

Preferred Stock

Penn issued 40,000 shares of preferred stock at \$44 per share on July 1, 2013.

Cash Dividends

Penn has followed a schedule of declaring cash dividends in December and June, with payment being made to stockholders of record in the following month. The cash dividends which have been declared since inception of the company through June 30, 2015, are shown below.

Declaration Date	Common Stock	Preferred Stock
12/15/13	\$0.30 per share	\$1.00 per share
6/15/14	\$0.30 per share	\$1.00 per share
12/15/14	—	\$1.00 per share

No cash dividends were declared during June 2015 due to the company's liquidity problems.

Retained Earnings

As of June 30, 2014, Penn's retained earnings account had a balance of \$690,000. For the fiscal year ending June 30, 2015, Penn reported net income of \$40,000.

Instructions

Prepare the stockholders' equity section of the balance sheet, including appropriate notes, for Penn Company as of June 30, 2015, as it should appear in its annual report to the shareholders.

(CMA adapted)

PROBLEMS SET B

See the book's companion website, at www.wiley.com/college/kieso, for an additional set of problems.

CONCEPTS FOR ANALYSIS

CA15-1 (Preemptive Rights and Dilution of Ownership) Wallace Computer Company is a small, closely held corporation. Eighty percent of the stock is held by Derek Wallace, president. Of the remainder, 10% is held by members of his family and 10% by Kathy Baker, a former officer who is now retired. The balance sheet of the company at June 30, 2014, was substantially as shown below.

Assets		Liabilities and Stockholders' Equity	
Cash	\$ 22,000	Current liabilities	\$ 50,000
Other	450,000	Common stock	250,000
	\$472,000	Retained earnings	172,000
			\$472,000

Additional authorized common stock of \$300,000 par value had never been issued. To strengthen the cash position of the company, Wallace issued common stock with a par value of \$100,000 to himself at par for cash. At the next stockholders' meeting, Baker objected and claimed that her interests had been injured.

Instructions

- (a) Which stockholder's right was ignored in the issue of shares to Derek Wallace?
- (b) How may the damage to Baker's interests be repaired most simply?
- (c) If Derek Wallace offered Baker a personal cash settlement and they agreed to employ you as an impartial arbitrator to determine the amount, what settlement would you propose? Present your calculations with sufficient explanation to satisfy both parties.

CA15-2 (Issuance of Stock for Land) Martin Corporation is planning to issue 3,000 shares of its own \$10 par value common stock for two acres of land to be used as a building site.

Instructions

- (a) What general rule should be applied to determine the amount at which the land should be recorded?
- (b) Under what circumstances should this transaction be recorded at the fair value of the land?
- (c) Under what circumstances should this transaction be recorded at the fair value of the stock issued?
- (d) Assume Martin intentionally records this transaction at an amount greater than the fair value of the land and the stock. Discuss this situation.

CA15-3 (Conceptual Issues—Equity) Statements of Financial Accounting Concepts set forth financial accounting and reporting objectives and fundamentals that will be used by the Financial Accounting Standards Board in developing standards. *Concepts Statement No. 6* defines various elements of financial statements.

Instructions

Answer the following questions based on *SFAC No. 6*.

- (a) Define and discuss the term "equity."
- (b) What transactions or events change owners' equity?
- (c) Define "investments by owners" and provide examples of this type of transaction. What financial statement element other than equity is typically affected by owner investments?
- (d) Define "distributions to owners" and provide examples of this type of transaction. What financial statement element other than equity is typically affected by distributions?
- (e) What are examples of changes within owners' equity that do not change the total amount of owners' equity?

CA15-4 (Stock Dividends and Splits) The directors of Merchant Corporation are considering the issuance of a stock dividend. They have asked you to discuss the proposed action by answering the following questions.

Instructions

- (a) What is a stock dividend? How is a stock dividend distinguished from a stock split (1) from a legal standpoint, and (2) from an accounting standpoint?
 - (b) For what reasons does a corporation usually declare a stock dividend? A stock split?
 - (c) Discuss the amount, if any, of retained earnings to be capitalized in connection with a stock dividend.
- (AICPA adapted)

CA15-5 (Stock Dividends) Kulikowski Inc., a client, is considering the authorization of a 10% common stock dividend to common stockholders. The financial vice president of Kulikowski wishes to discuss the accounting implications of such an authorization with you before the next meeting of the board of directors.

Instructions

- (a) The first topic the vice president wishes to discuss is the nature of the stock dividend to the recipient. Discuss the case against considering the stock dividend as income to the recipient.
 - (b) The other topic for discussion is the propriety of issuing the stock dividend to all “stockholders of record” or to “stockholders of record exclusive of shares held in the name of the corporation as treasury stock.” Discuss the case against issuing stock dividends on treasury shares.
- (AICPA adapted)

CA15-6 (Stock Dividend, Cash Dividend, and Treasury Stock) Mask Company has 30,000 shares of \$10 par value common stock authorized and 20,000 shares issued and outstanding. On August 15, 2014, Mask purchased 1,000 shares of treasury stock for \$18 per share. Mask uses the cost method to account for treasury stock. On September 14, 2014, Mask sold 500 shares of the treasury stock for \$20 per share.

In October 2014, Mask declared and distributed 1,950 shares as a stock dividend from unissued shares when the market price of the common stock was \$21 per share.

On December 20, 2014, Mask declared a \$1 per share cash dividend, payable on January 10, 2015, to shareholders of record on December 31, 2014.

Instructions

- (a) How should Mask account for the purchase and sale of the treasury stock, and how should the treasury stock be presented in the balance sheet at December 31, 2014?
 - (b) How should Mask account for the stock dividend, and how would it affect the stockholders’ equity at December 31, 2014? Why?
 - (c) How should Mask account for the cash dividend, and how would it affect the balance sheet at December 31, 2014? Why?
- (AICPA adapted)

CA15-7 (Treasury Stock—Ethics) Lois Kenseth, president of Sycamore Corporation, is concerned about several large stockholders who have been very vocal lately in their criticisms of her leadership. She thinks they might mount a campaign to have her removed as the corporation’s CEO. She decides that buying them out by purchasing their shares could eliminate them as opponents, and she is confident they would accept a “good” offer. Kenseth knows the corporation’s cash position is decent, so it has the cash to complete the transaction. She also knows the purchase of these shares will increase earnings per share, which should make other investors quite happy. (Earnings per share is calculated by dividing net income available for the common shareholders by the weighted-average number of shares outstanding. Therefore, if the number of shares outstanding is decreased by purchasing treasury shares, earnings per share increases.)

Instructions

Answer the following questions.

- (a) Who are the stakeholders in this situation?
- (b) What are the ethical issues involved?
- (c) Should Kenseth authorize the transaction?

USING YOUR JUDGMENT

FINANCIAL REPORTING

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix 5B. The company’s complete annual report, including the notes to the financial statements, can be accessed at the book’s companion website, www.wiley.com/college/kieso.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- What is the par or stated value of P&G's preferred stock?
- What is the par or stated value of P&G's common stock?
- What percentage of P&G's authorized common stock was issued at June 30, 2011?
- How many shares of common stock were outstanding at June 30, 2011, and June 30, 2010?
- What was the dollar amount effect of the cash dividends on P&G's stockholders' equity?
- What is P&G's return on common stock equity for 2011 and 2010?
- What is P&G's payout ratio for 2011 and 2010?
- What was the market price range (high/low) of P&G's common stock during the quarter ended June 30, 2011?

Comparative Analysis Case**The Coca-Cola Company and PepsiCo, Inc.****Instructions**

Go to the book's companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- What is the par or stated value of Coca-Cola's and PepsiCo's common or capital stock?
- What percentage of authorized shares was issued by Coca-Cola at December 31, 2011, and by PepsiCo at December 31, 2011?
- How many shares are held as treasury stock by Coca-Cola at December 31, 2011, and by PepsiCo at December 31, 2011?
- How many Coca-Cola common shares are outstanding at December 31, 2011? How many PepsiCo shares of capital stock are outstanding at December 31, 2011?
- What amounts of cash dividends per share were declared by Coca-Cola and PepsiCo in 2011? What were the dollar amount effects of the cash dividends on each company's stockholders' equity?
- What are Coca-Cola's and PepsiCo's return on common/capital stock equity for 2011 and 2010? Which company gets the higher return on the equity of its shareholders?
- What are Coca-Cola's and PepsiCo's payout ratios for 2011?
- What was the market price range (high/low) for Coca-Cola's common stock and PepsiCo's capital stock during the fourth quarter of 2011? Which company's (Coca-Cola's or PepsiCo's) stock price increased more (%) during 2011?

Financial Statement Analysis Cases**Case 1 Kellogg Company**

Kellogg Company is the world's leading producer of ready-to-eat cereal products. In recent years, the company has taken numerous steps aimed at improving its profitability and earnings per share. Presented below are some basic facts for Kellogg.

	2011	2010
Net sales	\$13,198	\$12,397
Net income	1,229	1,240
Total assets	11,901	11,847
Total liabilities	10,139	9,693
Common stock, \$0.25 par value	105	105
Capital in excess of par value	522	495
Retained earnings	6,721	6,122
Treasury stock, at cost	3,130	2,650
Number of shares outstanding (in millions)	357	366

Instructions

- What are some of the reasons that management purchases its own stock?
- Explain how earnings per share might be affected by treasury stock transactions.
- Calculate the ratio of debt to assets for 2010 and 2011, and discuss the implications of the change.

Case 2 Wiebold, Incorporated

The following note related to stockholders' equity was reported in **Wiebold, Inc.**'s annual report.

On February 1, the Board of Directors declared a 3-for-2 stock split, distributed on February 22 to shareholders of record on February 10. Accordingly, all numbers of common shares, except unissued shares and treasury shares, and all per share data have been restated to reflect this stock split.

On the basis of amounts declared and paid, the annualized quarterly dividends per share were \$0.80 in the current year and \$0.75 in the prior year.

Instructions

- (a) What is the significance of the date of record and the date of distribution?
- (b) Why might Wiebold have declared a 3-for-2 for stock split?
- (c) What impact does Wiebold's stock split have on (1) total stockholders' equity, (2) total par value, (3) outstanding shares, and (4) book value per share?

Accounting, Analysis, and Principles

On January 1, 2014, Agassi Corporation had the following stockholders' equity accounts.

Common Stock (\$10 par value, 60,000 shares issued and outstanding)	\$600,000
Paid-in Capital in Excess of Par—Common Stock	500,000
Retained Earnings	620,000

During 2014, the following transactions occurred.

- Jan. 15 Declared and paid a \$1.05 cash dividend per share to stockholders.
- Apr. 15 Declared and paid a 10% stock dividend. The market price of the stock was \$14 per share.
- May 15 Reacquired 2,000 common shares at a market price of \$15 per share.
- Nov. 15 Reissued 1,000 shares held in treasury at a price of \$18 per share.
- Dec. 31 Determined that net income for the year was \$370,000.

Accounting

Journalize the above transactions. (Include entries to close net income to Retained Earnings.) Determine the ending balances for Paid-in Capital, Retained Earnings, and Stockholders' Equity.

Analysis

Calculate the payout ratio and the return on common stock equity.

Principles

R. Federer is examining Agassi's financial statements and wonders whether the "gains" or "losses" on Agassi's treasury stock transactions should be included in income for the year. Briefly explain whether, and the conceptual reasons why, gains or losses on treasury stock transactions should be recorded in income.

BRIDGE TO THE PROFESSION

Professional Research: FASB Codification

Recall from Chapter 13 that Hincapie Co. (a specialty bike-accessory manufacturer) is expecting growth in sales of some products targeted to the low-price market. Hincapie is contemplating a preferred stock issue to help finance this expansion in operations. The company is leaning toward participating preferred stock because ownership will not be diluted, but the investors will get an extra dividend if the company does well. The company management wants to be certain that its reporting of this transaction is transparent to its current shareholders and wants you to research the disclosure requirements related to its capital structure.

Instructions

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

- (a) Identify the authoritative literature that addresses disclosure of information about capital structure.
- (b) Find definitions of the following:
 - (1) Securities.
 - (2) Participation rights.
 - (3) Preferred stock.
- (c) What information about securities must companies disclose? Discuss how Hincapie should report the proposed preferred stock issue.

Additional Professional Resources

See the book's companion website, at www.wiley.com/college/kieso, for professional simulations as well as other study resources.

IFRS

INSIGHTS

LEARNING OBJECTIVE 11

Compare the procedures for accounting for stockholders' equity under GAAP and IFRS.

The primary IFRS related to stockholders' equity are *IAS 1* ("Presentation of Financial Statements"), *IAS 32* ("Financial Instruments: Presentation"), and *IAS 39* ("Financial Instruments: Recognition and Measurement").

RELEVANT FACTS

Following are the key similarities and differences between GAAP and IFRS related to stockholders' equity.

Similarities

- The accounting for the issuance of shares and purchase of treasury stock are similar under both IFRS and GAAP.
- The accounting for declaration and payment of dividends and the accounting for stock splits are similar under both IFRS and GAAP.

Differences

- Major differences relate to terminology used, introduction of concepts such as revaluation surplus, and presentation of stockholders' equity information.
- Many countries have different investor groups than the United States. For example, in Germany, financial institutions like banks are not only the major creditors but often are the largest shareholders as well. In the United States and the United Kingdom, many companies rely on substantial investment from private investors.
- The accounting for treasury share retirements differs between IFRS and GAAP. Under GAAP, a company has three options: (1) charge the excess of the cost of treasury shares over par value to retained earnings, (2) allocate the difference between paid-in capital and retained earnings, or (3) charge the entire amount to paid-in capital. Under IFRS, the excess may have to be charged to paid-in capital, depending on the original transaction related to the issuance of the shares.
- The statement of changes in equity is usually referred to as the statement of stockholders' equity (or shareholders' equity) under GAAP.
- Both IFRS and GAAP use the term retained earnings. However, IFRS relies on the term "reserve" as a dumping ground for other types of equity transactions, such as other comprehensive income items as well as various types of unusual transactions related

to convertible debt and share option contracts. GAAP relies on the account Accumulated Other Comprehensive Income (Loss). We also use this account in the discussion below, as it appears this account is gaining prominence within the IFRS literature.

- Under IFRS, it is common to report “revaluation surplus” related to increases or decreases in items such as property, plant, and equipment; mineral resources; and intangible assets. The term surplus is generally not used in GAAP. In addition, unrealized gains on the above items are not reported in the financial statements under GAAP.

ABOUT THE NUMBERS

Equity

Equity is the residual interest in the assets of the company after deducting all liabilities. Equity is often referred to as shareholders’ equity, stockholders’ equity, or corporate capital. Equity is often subclassified on the statement of financial position (balance sheet) into the following categories (as discussed in Chapter 5).

- | | |
|-----------------------|--|
| 1. Share capital. | 4. Accumulated other comprehensive income. |
| 2. Share premium. | 5. Treasury shares. |
| 3. Retained earnings. | 6. Non-controlling interest (minority interest). |

Such classifications help financial statement users to better understand the legal or other restrictions related to the ability of the company to pay dividends or otherwise use its equity for certain defined purposes. Companies often make a distinction between contributed capital (paid-in capital) and earned capital. **Contributed capital (paid-in capital)** is the total amount paid in on capital shares—the amount provided by shareholders to the corporation for use in the business. Contributed capital includes items such as the par value of all outstanding shares and premiums less discounts on issuance. **Earned capital** is the capital that develops from profitable operations. It consists of all undistributed income that remains invested in the company. **Retained earnings** represents the earned capital of the company.

As indicated above, equity is a **residual interest** and therefore its value is derived from the amount of the corporations’ assets and liabilities. Only in unusual cases will a company’s equity equal the total fair value of its shares. For example, **BMW** recently had total equity of €20,265 million and a market capitalization of €21,160 million. BMW’s equity represents the net contributions from shareholders (from both majority and minority shareholders) plus retained earnings and accumulated other comprehensive income. As a residual interest, its equity has no existence apart from the assets and liabilities of BMW—equity equals net assets. Equity is not a claim to specific assets but a claim against a portion of the total assets. Its amount is not specified or fixed; it depends on BMW’s profitability. Equity grows if it is profitable. It shrinks, or may disappear entirely, if BMW loses money.

Issuance of Ordinary Shares

Under IFRS, the accounting for share issuances is similar to GAAP. The primary difference is the account titles. GAAP uses an account, Common Stock, for the par value of shares, while IFRS uses an account labeled Share Capital. What about no-par shares? In some countries, as in the United States, the total issue price for no-par shares may be considered legal capital, which could reduce the flexibility in paying dividends. Corporations sell no-par shares, like par value shares, for whatever price they will bring. However, unlike par value shares, corporations issue them without a premium or a discount. The exact amount received represents the credit to ordinary or preference shares.

For example, Video Electronics Corporation is organized with 10,000 ordinary shares authorized without par value. Video Electronics makes only a memorandum entry for the authorization, inasmuch as no amount is involved. If Video Electronics then issues 500 shares for cash at \$10 per share, it makes the following entry.

Cash	5,000	
Share Capital—Ordinary		5,000

If it issues another 500 shares for \$11 per share, Video Electronics makes this entry.

Cash	5,500	
Share Capital—Ordinary		5,500

True no-par shares should be carried in the accounts at issue price without any share premium reported. But some countries require that no-par shares have a **stated value**. The stated value is a minimum value below which a company cannot issue it. Thus, instead of being no-par shares, such stated-value shares become, in effect, shares with a very low par value. It thus is open to all the criticism and abuses that first encouraged the development of no-par shares.

If no-par shares have a stated value of \$5 per share but sell for \$11, all such amounts in excess of \$5 are recorded as share premium, which in many jurisdictions is fully or partially available for dividends. Thus, no-par value shares, with a low stated value, permit a new corporation to commence its operations with share premium that may exceed its stated capital. For example, if a company issued 1,000 of the shares with a \$5 stated value at \$15 per share for cash, it makes the following entry.

Cash	15,000	
Share Capital—Ordinary		5,000
Share Premium—Ordinary		10,000

Most corporations account for no-par shares with a stated value as if they were par value shares with par equal to the stated value.

Accounting for and Reporting Preference Shares

The accounting for preference shares at issuance is similar to that for ordinary shares. A corporation allocates proceeds between the par value of the preference shares and share premium. To illustrate, assume that Bishop Co. issues 10,000 shares of \$10 par value preference shares for \$12 cash per share. Bishop records the issuance as follows.

Cash	120,000	
Share Capital—Preference		100,000
Share Premium—Preference		20,000

Thus, Bishop maintains separate accounts for these different classes of shares. Corporations consider convertible preference shares as a part of equity. In addition, when exercising convertible preference shares, there is no theoretical justification for recognition of a gain or loss. A company recognizes no gain or loss when dealing with shareholders in their capacity as business owners. Instead, the company **employs the book value method**: debit Share Capital—Preference, along with any related Share Premium—Preference; credit Share Capital—Ordinary and Share Premium—Ordinary (if an excess exists).

Preference shares generally have no maturity date. Therefore, no legal obligation exists to pay the preference shareholder. As a result, companies classify preference shares as part of equity. Companies generally report preference shares at par value as the first item in the equity section. They report any excess over par value as part of share premium. They also consider dividends on preference shares as a distribution of income and not an expense. Companies must disclose the pertinent rights of the preference shares outstanding.

Presentation of Equity

Statement of Financial Position

Illustration IFRS15-1 shows a comprehensive equity section from the statement of financial position of Frost Company that includes the equity items we discussed previously.

FROST COMPANY		
EQUITY		
DECEMBER 31, 2014		
Share capital—preference, \$100 par value, 7% cumulative, 100,000 shares authorized, 30,000 shares issued and outstanding	\$3,000,000	
Share capital—ordinary, no-par, stated value \$10 per share, 500,000 shares authorized, 400,000 shares issued	4,000,000	
Ordinary share dividend distributable	200,000	\$ 7,200,000
Share premium—preference	150,000	
Share premium—ordinary	840,000	990,000
Retained earnings		4,360,000
Treasury shares (2,000 ordinary shares)		(190,000)
Accumulated other comprehensive loss		(360,000)
Total equity		\$12,000,000

ILLUSTRATION IFRS15-1

Comprehensive Equity
Presentation

Frost should disclose the pertinent rights and privileges of the various securities outstanding. For example, companies must disclose all of the following: dividend and liquidation preferences, participation rights, call prices and dates, conversion or exercise prices and pertinent dates, sinking fund requirements, unusual voting rights, and significant terms of contracts to issue additional shares. Liquidation preferences should be disclosed in the equity section of the statement of financial position, rather than in the notes to the financial statements, to emphasize the possible effect of this restriction on future cash flows.

Presentation of Statement of Changes in Equity

Companies are also required to present a **statement of changes in equity**. The statement of changes in equity includes the following.

1. Total comprehensive income for the period, showing separately the total amounts attributable to owners of the parent and to non-controlling interests.
2. For each component of equity, the effects of retrospective application or retrospective restatement.
3. For each component of equity, a reconciliation between the carrying amount at the beginning and the end of the period, separately disclosing changes resulting from:
 - (a) Profit or loss;
 - (b) Each item of other comprehensive income; and
 - (c) Transactions with owners in their capacity as owners, showing separately contributions by and distributions to owners and changes in ownership interests in subsidiaries that do not result in a loss of control.

A typical statement of changes in equity is shown in Illustration IFRS15-2.

ILLUSTRATION IFRS15-2

Statement of Changes
in Equity

	Share Capital	Retained Earnings	Unrealized Holding Gain (Loss) on Non-Trading Equity Investments	Unrealized Holding Gain (Loss) on Property, Plant, and Equipment	Total
Balance—December 31, 2014	\$600,000	\$120,000	\$22,000	\$15,000	\$ 757,000
Issue of Ordinary Shares	200,000				200,000
Total Comprehensive Income		70,000	11,000	8,000	89,000
Dividends		(20,000)			(20,000)
Balance—December 31, 2015	<u>\$800,000</u>	<u>\$170,000</u>	<u>\$33,000</u>	<u>\$23,000</u>	<u>\$1,026,000</u>

In addition, companies are required to present, either in the statement of changes in equity or in the notes, the amount of dividends recognized as distributions to owners during the period and the related amount per share.

ON THE HORIZON

As indicated in earlier discussions, the IASB and the FASB are currently working on a project related to financial statement presentation. An important part of this study is to determine whether certain line items, subtotals, and totals should be clearly defined and required to be displayed in the financial statements. For example, it is likely that the statement of changes in equity and its presentation will be examined closely. In addition, the options of how to present other comprehensive income under GAAP will change in any converged standard.

IFRS SELF-TEST QUESTIONS

- Which of the following does **not** represent a pair of GAAP/IFRS-comparable terms?
 - Additional paid-in capital/Share premium.
 - Treasury stock/Repurchase reserve.
 - Common stock/Share capital—ordinary.
 - Preferred stock/Preference shares.
- Under IFRS, the amount of capital received in excess of par value would be credited to:
 - Retained Earnings.
 - Contributed Capital.
 - Share Premium.
 - Par value is not used under IFRS.
- The term *reserves* is used under IFRS with reference to all of the following **except**:
 - gains and losses on revaluation of property, plant, and equipment.
 - capital received in excess of the par value of issued shares.
 - retained earnings.
 - fair value differences.
- Which of the following is **false**?
 - Under GAAP, companies cannot record gains on transactions involving their own shares.
 - Under IFRS, companies cannot record gains on transactions involving their own shares.
 - Under IFRS, the statement of stockholders' equity is a required statement.
 - Under IFRS, a company records a revaluation surplus when it experiences an increase in the price of its common stock.
- Under IFRS, a purchase by a company of its own shares results in:
 - an increase in treasury shares.
 - a decrease in assets.
 - a decrease in equity.
 - All of the above.

IFRS CONCEPTS AND APPLICATION

IFRS15-1 Where can authoritative IFRS guidance related to stockholders' equity be found?

IFRS15-2 Briefly describe some of the similarities and differences between GAAP and IFRS with respect to the accounting for stockholders' equity.

IFRS15-3 Briefly discuss the implications of the financial statement presentation project for the reporting of stockholders' equity.

IFRS15-4 Mary Tokar is comparing a GAAP-based company to a company that uses IFRS. Both companies report equity investments. The IFRS company reports unrealized losses on these investments under the heading "Reserves" in its equity section. However, Mary can find no similar heading in the GAAP-based company financial statements. Can Mary conclude that the GAAP-based company has no unrealized gains or losses on its non-trading equity investments? Explain.

IFRS15-5 Explain each of the following terms: authorized ordinary shares, unissued ordinary shares, issued ordinary shares, outstanding ordinary shares, and treasury shares.

IFRS15-6 Indicate how each of the following accounts should be classified in the equity section.

- (a) Share Capital—Ordinary. (e) Share Premium—Treasury.
 (b) Retained Earnings. (f) Share Capital—Preference.
 (c) Share Premium—Ordinary. (g) Accumulated Other Comprehensive Income.
 (d) Treasury Shares.

IFRS15-7 Kaymer Corporation issued 300 shares of \$10 par value ordinary shares for \$4,500. Prepare Kaymer's journal entry.

IFRS15-8 Wilco Corporation has the following account balances at December 31, 2014.

Share capital—ordinary, \$5 par value	\$ 510,000
Treasury shares	90,000
Retained earnings	2,340,000
Share premium—ordinary	1,320,000

Instructions

Prepare Wilco's December 31, 2014, equity section.

IFRS15-9 Ravonette Corporation issued 300 shares of \$10 par value ordinary shares and 100 shares of \$50 par value preference shares for a lump sum of \$13,500. The ordinary shares have a market price of \$20 per share, and the preference shares have a market price of \$90 per share.

Instructions

Prepare the journal entry to record the issuance.

IFRS15-10 Weisberg Corporation has 10,000 shares of \$100 par value, 6%, preference shares and 50,000 ordinary shares of \$10 par value outstanding at December 31, 2014.

Instructions

Answer the questions in each of the following independent situations.

- (a) If the preference shares are cumulative and dividends were last paid on the preference shares on December 31, 2011, what are the dividends in arrears that should be reported on the December 31, 2014, statement of financial position? How should these dividends be reported?
- (b) If the preference shares are convertible into seven shares of \$10 par value ordinary shares and 3,000 shares are converted, what entry is required for the conversion, assuming the preference shares were issued at par value?
- (c) If the preference shares were issued at \$107 per share, how should the preference shares be reported in the equity section?

IFRS15-11 Teller Corporation's post-closing trial balance at December 31, 2014, was as follows.

TELLER CORPORATION		
POST-CLOSING TRIAL BALANCE		
DECEMBER 31, 2014		
	Dr.	Cr.
Accounts payable		\$ 310,000
Accounts receivable	\$ 480,000	
Accumulated depreciation—building and equipment		185,000
Allowance for doubtful accounts		30,000
Bonds payable		700,000
Building and equipment	1,450,000	
Cash	190,000	
Dividends payable on preference shares—cash		4,000
Inventories	560,000	
Land	400,000	
Prepaid expenses	40,000	
Retained earnings		201,000
Share capital—ordinary (\$1 par value)		200,000
Share capital—preference (\$50 par value)		500,000
Share premium—ordinary		1,000,000
Share premium—treasury		160,000
Treasury shares—ordinary at cost	170,000	
Totals	<u>\$3,290,000</u>	<u>\$3,290,000</u>

At December 31, 2014, Teller had the following number of ordinary and preference shares.

	<u>Ordinary</u>	<u>Preference</u>
Authorized	600,000	60,000
Issued	200,000	10,000
Outstanding	190,000	10,000

The dividends on preference shares are \$4 cumulative. In addition, the preference shares have a preference in liquidation of \$50 per share.

Instructions

Prepare the equity section of Teller's statement of financial position at December 31, 2014.

Professional Research

IFRS15-12 Hincapie Co. (a specialty bike-accessory manufacturer) is expecting growth in sales of some products targeted to the low-price market. Hincapie is contemplating a preference share issue to help finance this expansion in operations. The company is leaning toward preference shares because ownership will not be diluted, but the investors will get an extra dividend if the company does well. The company management wants to be certain that its reporting of this transaction is transparent to its current shareholders and wants you to research the disclosure requirements related to its capital structure.

Instructions

Access the IFRS authoritative literature at the IASB website (<http://eifrs.iasb.org/>). (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- Identify the authoritative literature that addresses disclosure of information about capital structure.
- What information about share capital must companies disclose? Discuss how Hincapie should report the proposed preference share issue.

International Financial Reporting Problem Marks and Spencer plc

IFRS15-13 The financial statements of **Marks and Spencer plc (M&S)** are available at the book's companion website or can be accessed at http://annualreport.marksandspencer.com/_assets/downloads/Marks-and-Spencer-Annual-report-and-financial-statements-2012.pdf.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- What is the par or stated value of M&S's preference shares?
- What is the par or stated value of M&S's ordinary shares?
- What percentage of M&S's authorized ordinary shares was issued at 31 March 2012?
- How many ordinary shares were outstanding at 31 March 2012, and 2 April 2011?
- What was the pound amount effect of the cash dividends on M&S's equity?
- What is M&S's return on ordinary share equity for 2012 and 2011?
- What is M&S's payout ratio for 2012 and 2011?

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Describe the accounting for the issuance, conversion, and retirement of convertible securities.
- 2 Explain the accounting for convertible preferred stock.
- 3 Contrast the accounting for stock warrants and for stock warrants issued with other securities.
- 4 Describe the accounting for stock compensation plans.
- 5 Discuss the controversy involving stock compensation plans.
- 6 Compute earnings per share in a simple capital structure.
- 7 Compute earnings per share in a complex capital structure.

Kicking the Habit

Some habits die hard. Take stock options—called by some “the crack cocaine of incentives.” Stock options are a form of compensation that gives key employees the choice to purchase shares at a given (usually lower-than-market) price. For many years, companies were hooked on these products. Why? The combination of a hot equity market and favorable accounting treatment made stock options the incentive of choice. They were compensation with no expense to the companies that granted them, and they were popular with key employees, so companies granted them with abandon. However, the accounting rules that took effect in 2005 required *expensing* the fair value of stock options. This new treatment has made it easier for companies to kick this habit.

As shown in the chart above, a review of option use for the U.S. companies in the S&P 500 indicates a decline in the use of option-based compensation and an increase in restricted-stock plans. Fewer companies are granting stock options, following implementation of stock-option expensing. As a spokesperson at one company commented, “Once you begin expensing options, the attractiveness significantly drops.”

CONCEPTUAL FOCUS

- > See the **Underlying Concepts** on pages 890 and 897.
- > Read the **Evolving Issue** on page 890 for a discussion of convertible debt.

INTERNATIONAL FOCUS

- > See the **International Perspectives** on pages 885, 892, 896, 901, and 904.
- > Read the **IFRS Insights** on pages 941–949 for a discussion of:
 - Accounting for convertible debt
 - Employee share-purchase plans

In the 1990s, executives with huge option stockpiles had an almost irresistible incentive to do whatever it took to increase the stock price and cash in their options. By reining in options, many companies are taking the first steps toward curbing both out-of-control executive pay and the era of corporate corruption that it spawned.

As indicated earlier, some of the ways that companies are curbing option grants include replacing options with restricted shares. Further analysis of these trends indicates that restricted-stock use is more than 10 times the magnitude of options grants in the financial industry. Even after excluding financial companies from the statistics, restricted shares are now the plan of choice.

And in the information technology area (where in the past, share options were heavily favored), the fair value of restricted-share plans exceeds that for share options. In this industry, some companies are simply reducing option grants, without offering a replacement, while others, like **Microsoft** and **Yahoo!**, have switched to restricted-stock plans completely. Is this a good trend? Most believe it is; the requirement to expense stock-based compensation similar to other forms of compensation has changed the focus of compensation plans to rewarding talent and performance without breaking the bank. The positive impact on corporate behavior, while hard to measure, should benefit investors in years to come.

PREVIEW OF CHAPTER

16

As the opening story indicates, companies are rethinking the use of various forms of stock-based compensation. The purpose of this chapter is to discuss the proper accounting for stock-based

compensation. In addition, the chapter examines issues related to other types of financial instruments, such as convertible securities, warrants, and contingent shares, including their effects on reporting earnings per share. The content and organization of the chapter are as follows.

DILUTIVE SECURITIES

Debt and Equity

LEARNING OBJECTIVE 1

Describe the accounting for the issuance, conversion, and retirement of convertible securities.

Many of the controversies related to the accounting for financial instruments such as stock options, convertible securities, and preferred stock relate to whether companies should report these instruments as a liability or as equity. For example, companies should classify nonredeemable common shares as equity because the issuer has no **obligation** to pay dividends or repurchase the stock. Declaration of dividends is at the issuer's discretion, as is the decision to repurchase the stock. Similarly, preferred stock that is not redeemable does not require the issuer to pay dividends or repurchase the stock. Thus, nonredeemable common or preferred stock lacks an important characteristic of a liability—an obligation to pay the holder of the common or preferred stock at some point in the future.

However the classification is not as clear-cut for other financial instruments. For example, in Chapter 15 we discussed the accounting for mandatorily redeemable preferred stock. Companies originally classified this security as part of equity. The SEC then prohibited equity classification, and most companies classified these securities between debt and equity on the balance sheet in a separate section often referred to as the “mezzanine section.” The FASB now requires companies to report these types of securities as a liability.¹ [1]

See the FASB Codification section (page 923).

In this chapter, we discuss securities that have characteristics of *both* debt and equity. For example, a convertible bond has both debt and equity characteristics. Should a company classify this security as debt, as equity, or as part debt and part equity? In addition, how should a company compute earnings per share if it has convertible bonds and other convertible securities in its capital structure? Convertible securities as well as options, warrants, and other securities are often called **dilutive securities** because upon exercise they may reduce (dilute) earnings per share.

Accounting for Convertible Debt

Convertible bonds can be changed into other corporate securities during some specified period of time after issuance. A convertible bond combines the benefits of a bond with the privilege of exchanging it for stock at the holder's option. Investors who purchase it desire the security of a bond holding (guaranteed interest and principal) plus the added option of conversion if the value of the stock appreciates significantly.

Corporations issue convertibles for two main reasons. One is to raise equity capital without giving up more ownership control than necessary. To illustrate, assume a company wants to raise \$1 million; its common stock is selling at \$45 a share. To raise the \$1 million, the company would have to sell 22,222 shares (ignoring issue costs). By selling 1,000 bonds at \$1,000 par, each convertible into 20 shares of common stock, the company could raise \$1 million by committing only 20,000 shares of its common stock.

¹ The FASB (and IASB) have studied the accounting for financial instruments with characteristics of both debt and equity. At one time, the Boards proposed a definition of equity that is far more restrictive than current practice. Under the proposed “basic ownership approach,” only common stock is classified as equity. All other instruments (e.g., preferred stock, options, and convertible debt) are classified as liabilities. Instruments classified as liabilities are measured at fair value, and changes are reported in income. Adoption of a narrow definition provides fewer opportunities to structure instruments and arrangements to achieve a desired accounting treatment. See “Financial Instruments with Characteristics of Equity” (November 30, 2007) at <http://www.fasb.org>. While the Boards have agreed on some provisions to improve and simplify the financial reporting requirements for financial instruments with characteristics of debt and equity, the project is currently inactive as the Boards have focused on other major convergence projects.

A second reason to issue convertibles is to obtain debt financing at cheaper rates. Many companies could issue debt only at high interest rates unless they attach a convertible covenant. The conversion privilege entices the investor to accept a lower interest rate than would normally be the case on a straight debt issue. For example, **Amazon.com** at one time issued convertible bonds that pay interest at an effective yield of 4.75 percent. This rate was much lower than Amazon would have had to pay by issuing straight debt. For this lower interest rate, the investor receives the right to buy Amazon's common stock at a fixed price until the bond's maturity.²

As indicated earlier, the accounting for convertible debt involves reporting issues at the time of (1) issuance, (2) conversion, and (3) retirement.

At Time of Issuance

The method for recording convertible bonds **at the date of issue follows the method used to record straight debt issues**. None of the proceeds are recorded as equity. Companies amortize to the maturity date any discount or premium that results from the issuance of convertible bonds. Why this treatment? Because it is difficult to predict when, if at all, conversion will occur. However, the accounting for convertible debt as a straight debt issue is controversial; we discuss it more fully later in the chapter.

International Perspective

IFRS requires that the issuer of convertible debt record the liability and equity components separately.

At Time of Conversion

If converting bonds into other securities, a company uses the **book value method** to record the conversion. The book value method records the securities exchanged for the bond at the carrying amount (book value) of the bond.

To illustrate, assume that Hilton, Inc. has a \$1,000 bond that is convertible into 10 shares of common stock (par value \$10). At the time of conversion, the unamortized premium is \$50. Hilton records the conversion of the bonds as follows.

Bonds Payable	1,000	
Premium on Bonds Payable	50	
Common Stock		100
Paid-in Capital in Excess of Par—Common Stock		950

Support for the book value approach is based on the argument that an agreement was established at the date of the issuance either to pay a stated amount of cash at maturity or to issue a stated number of shares of equity securities. Therefore, when the debtholder converts the debt to equity in accordance with the preexisting contract terms, the issuing company recognizes no gain or loss upon conversion.

Induced Conversions

Sometimes the issuer wishes to encourage prompt conversion of its convertible debt to equity securities in order to reduce interest costs or to improve its debt to equity ratio. Thus, the issuer may offer some form of additional consideration (such as cash or common stock), called a "sweetener," to **induce conversion**. The issuing company reports the sweetener as an expense of the current period. Its amount is the fair value of the additional securities or other consideration given.

²As with any investment, a buyer has to be careful. For example, **Wherehouse Entertainment Inc.**, which had 6¼ percent convertibles outstanding, was taken private in a leveraged buyout. As a result, the convertible was suddenly as risky as a junk bond of a highly leveraged company with a coupon of only 6¼ percent. As one holder of the convertibles noted, "What's even worse is that the company will be so loaded down with debt that it probably won't have enough cash flow to make its interest payments. And the convertible debt we hold is subordinated to the rest of Wherehouse's debt." These types of situations make convertibles less attractive and lead to the introduction of takeover protection covenants in some convertible bond offerings. Or, sometimes convertibles are permitted to be called at par, and therefore the conversion premium may be lost.

Assume that Helloid, Inc. has outstanding \$1,000,000 par value convertible debentures convertible into 100,000 shares of \$1 par value common stock. Helloid wishes to reduce its annual interest cost. To do so, Helloid agrees to pay the holders of its convertible debentures an additional \$80,000 if they will convert. Assuming conversion occurs, Helloid makes the following entry.

Debt Conversion Expense	80,000	
Bonds Payable	1,000,000	
Common Stock		100,000
Paid-in Capital in Excess of Par—Common Stock		900,000
Cash		80,000

Helloid records the additional \$80,000 as **an expense of the current period** and not as a reduction of equity.

Some argue that the cost of a conversion inducement is a cost of obtaining equity capital. As a result, they contend, companies should recognize the cost of conversion as a cost of (a reduction of) the equity capital acquired, and not as an expense. However, the FASB indicated that when an issuer makes an additional payment to encourage conversion, the payment is for a service (bondholders converting at a given time) and should be reported as an expense. The issuing company does not report this expense as an extraordinary item. [2]

Retirement of Convertible Debt

As indicated earlier, the method for recording the **issuance** of convertible bonds follows that used in recording straight debt issues. Specifically this means that issuing companies should not attribute any portion of the proceeds to the conversion feature, nor should it credit a paid-in capital account.

Although some raise theoretical objections to this approach, to be consistent, companies need to recognize a gain or loss on **retiring convertible debt in the same way that they recognize a gain or loss on retiring nonconvertible debt**. For this reason, companies should report differences between the cash acquisition price of debt and its carrying amount **in current income as a gain or loss**.

Convertible Preferred Stock

LEARNING OBJECTIVE 2

Explain the accounting for convertible preferred stock.

Convertible preferred stock includes an option for the holder to convert preferred shares into a fixed number of common shares. The major difference between accounting for a convertible bond and convertible preferred stock at the date of issue is their classification. Convertible bonds are considered liabilities, whereas convertible preferreds (unless mandatory redemption exists) are considered part of stockholders' equity.

In addition, when stockholders exercise convertible preferred stock, there is no theoretical justification for recognizing a gain or loss. A company does not recognize a gain or loss when it deals with stockholders in their capacity as business owners. Therefore, companies do not recognize a gain or loss when stockholders exercise convertible preferred stock.

In accounting for the exercise of convertible preferred stock, a company uses the **book value method**. It debits Preferred Stock, along with any related Paid-in Capital in Excess of Par—Preferred Stock, and it credits Common Stock and Paid-in Capital in Excess of Par—Common Stock (if an excess exists). The treatment differs when the par value of the common stock issued **exceeds** the book value of the preferred stock. In that case, the company usually debits Retained Earnings for the difference.

To illustrate, assume Host Enterprises issued 1,000 shares of common stock (par value \$2) upon conversion of 1,000 shares of preferred stock (par value \$1) that was originally issued for a \$200 premium. The entry would be:

Convertible Preferred Stock	1,000	
Paid-in Capital in Excess of Par—Preferred Stock	200	
Retained Earnings	800	
Common Stock		2,000

The rationale for the debit to Retained Earnings is that Host has offered the preferred stockholders an **additional return** to facilitate their conversion to common stock. In this example, Host charges the additional return to retained earnings. Many states, however, require that this charge simply reduce additional paid-in capital from other sources.

What do the numbers mean? HOW LOW CAN YOU GO?

Financial engineers are always looking for the next innovation in security design to meet the needs of both issuers and investors. Consider the convertible bonds issued by **STMicroelectronics (STM)**. STM's 10-year bonds have a zero coupon and are convertible into STM common stock at an exercise price of \$33.43. When issued, the bonds sold at an effective yield of -0.05 percent. That's right—a negative yield.

How could this happen? When STM issued the bonds, investors thought the options to convert were so valuable that they were willing to take zero interest payments and invest an amount *in excess of* the maturity value of the bonds.

In essence, the investors are paying interest to STM, and STM records interest revenue. Why would investors do this? If the stock price rises, as many thought it would for STM and many tech companies at this time, these bond investors could convert and get a big gain in the stock.

Investors did get some additional protection in the deal: They can redeem the \$1,000 bonds after three years and receive \$975 (and after five and seven years, for lower amounts), if it looks like the bonds will never convert. In the end, STM has issued bonds with a significant equity component. And because the entire bond issue is classified as debt, STM records negative interest expense.

Stock Warrants

Warrants are certificates entitling the holder to acquire shares of stock at a certain price within a stated period. This option is similar to the conversion privilege in a convertible bond. Warrants, if exercised, become common stock and usually have a dilutive effect (reduce earnings per share) similar to that of the conversion of convertible securities. However, a substantial difference between convertible securities and stock warrants is that upon exercise of the warrants, the holder has to pay a certain amount of money to obtain the shares.

The issuance of warrants or options to buy additional shares normally arises under three situations:

1. When issuing different types of securities, such as bonds or preferred stock, companies often include warrants **to make the security more attractive**—by providing an "equity kicker."
2. Upon the issuance of additional common stock, existing stockholders have a **preemptive right to purchase common stock** first. Companies may issue warrants to evidence that right.
3. Companies give warrants, often referred to as *stock options*, **to executives and employees** as a form of **compensation**.

3 LEARNING OBJECTIVE

Contrast the accounting for stock warrants and for stock warrants issued with other securities.

The problems in accounting for stock warrants are complex and present many difficulties—some of which remain unresolved. The following sections address the accounting for stock warrants in the three situations listed above.

Stock Warrants Issued with Other Securities

Warrants issued with other securities are basically long-term options to buy common stock at a fixed price. Generally the life of warrants is five years, occasionally 10 years; very occasionally, a company may offer perpetual warrants.

A warrant works like this. **Tenneco, Inc.** offered a unit comprising one share of stock and one detachable warrant. As its name implies, the **detachable stock warrant** can be detached (separated) from the stock and traded as a separate security. The Tenneco warrant in this example is exercisable at \$24.25 per share and good for five years. The unit (share of stock plus detachable warrant) sold for 22.75 (\$22.75). Since the price of the common stock the day before the sale was 19.88 (\$19.88), the difference suggests a price of 2.87 (\$2.87) for the warrant.

The investor pays for the warrant in order to receive the right to buy the stock, at a fixed price of \$24.25, sometime in the future. It would not be profitable at present for the purchaser to exercise the warrant and buy the stock, because the price of the stock was much below the exercise price.³ But if, for example, the price of the stock rises to \$30, the investor gains \$2.88 ($\$30 - \$24.25 - \$2.87$) on an investment of \$2.87, a 100 percent increase! If the price never rises, the investor loses the full \$2.87 per warrant.⁴

A company should allocate the proceeds from the sale of debt with detachable stock warrants **between the two securities**.⁵ The profession takes the position that two separable instruments are involved, that is, (1) a bond and (2) a warrant giving the holder the right to purchase common stock at a certain price. Companies can trade detachable warrants separately from the debt. This allows the determination of a fair value. The two methods of allocation available are:

1. The proportional method.
2. The incremental method.

Proportional Method. At one time, **AT&T** issued bonds with detachable five-year warrants to buy one share of common stock (par value \$5) at \$25. At the time, a share of AT&T stock was selling for approximately \$50. These warrants enabled AT&T to price its bond offering at par with an 8¾ percent yield (quite a bit lower than prevailing rates at that time). To account for the proceeds from this offering, AT&T would place a value on the two securities: (1) the value of the bonds without the warrants, and (2) the value of the warrants. The **proportional method** then allocates the proceeds using the proportion of the two amounts, based on fair values.

For example, assume that AT&T's bonds (par \$1,000) sold for 99 without the warrants soon after their issue. The market price of the warrants at that time was \$30. (Prior to sale the warrants will not have a fair value.) The allocation relies on an estimate of fair value, generally as established by an investment banker, or on the relative fair value of the bonds and the warrants soon after the company issues and trades them. The price paid for 10,000, \$1,000 bonds with the warrants attached was par, or \$10,000,000. Illustration 16-1 shows the proportional allocation of the bond proceeds between the bonds and warrants.

³Later in this discussion, we will show that the value of the warrant is normally determined on the basis of a relative fair value approach because of the difficulty of imputing a warrant value in any other manner.

⁴From the illustration, it is apparent that buying warrants can be an “all or nothing” proposition.

⁵A detachable warrant means that the warrant can sell separately from the bond. GAAP makes a distinction between detachable and nondetachable warrants because companies must sell nondetachable warrants with the security as a complete package. Thus, no allocation is permitted. [3]

Fair value of bonds (without warrants) ($\$10,000,000 \times .99$)	\$ 9,900,000
Fair value of warrants ($10,000 \times \$30$)	300,000
Aggregate fair value	<u>\$10,200,000</u>
Allocated to bonds:	$\frac{\$9,900,000}{\$10,200,000} \times \$10,000,000 = \$ 9,705,882$
Allocated to warrants:	$\frac{\$300,000}{\$10,200,000} \times \$10,000,000 = \$ 294,118$
Total allocation	<u>\$10,000,000</u>

ILLUSTRATION 16-1
Proportional Allocation of Proceeds between Bonds and Warrants

In this situation, the bonds sell at a discount. AT&T records the sale as follows.

Cash	9,705,882	
Discount on Bonds Payable	294,118	
Bonds Payable		10,000,000

In addition, AT&T sells warrants that it credits to paid-in capital. It makes the following entry.

Cash	294,118	
Paid-in Capital—Stock Warrants		294,118

AT&T may combine the entries if desired. Here, we show them separately, to indicate that the purchaser of the bond is buying not only a bond but also a possible future claim on common stock in the form of the stock warrant.

Assuming investors exercise all 10,000 warrants (one warrant per one share of stock), AT&T makes the following entry.

Cash ($10,000 \times \$25$)	250,000	
Paid-in Capital—Stock Warrants	294,118	
Common Stock ($10,000 \times \$5$)		50,000
Paid-in Capital in Excess of Par—Common Stock		494,118

What if investors fail to exercise the warrants? In that case, AT&T debits Paid-in Capital—Stock Warrants for \$294,118 and credits Paid-in Capital—Expired Stock Warrants for a like amount. The additional paid-in capital reverts to the former stockholders.

Incremental Method. In instances where a company cannot determine the fair value of either the warrants or the bonds, it applies the **incremental method** used in lump-sum security purchases (as explained in Chapter 15, page 827). That is, the company uses the security for which it *can* determine the fair value. It allocates the remainder of the purchase price to the security for which it does not know the fair value.

For example, assume that the fair value of the AT&T warrants is \$300,000, but the company cannot determine the fair value of the bonds without the warrants. Illustration 16-2 shows the amount allocated to the warrants and the stock in this case.

Lump-sum receipt	\$10,000,000
Allocated to the warrants	(300,000)
Balance allocated to bonds	<u>\$ 9,700,000</u>

ILLUSTRATION 16-2
Incremental Allocation of Proceeds between Bonds and Warrants

Conceptual Questions. The question arises whether the allocation of value to the warrants is consistent with the handling of convertible debt, in which companies allocate no value to the conversion privilege. The FASB stated that the features of a

convertible security are **inseparable** in the sense that choices are mutually exclusive. The holder either converts the bonds or redeems them for cash, but cannot do both. No basis, therefore, exists for recognizing the conversion value in the accounts.

Underlying Concepts

Reporting a convertible bond solely as debt is not representationally faithful. However, the cost constraint is used to justify the failure to allocate between debt and equity.

The Board, however, indicated that the issuance of bonds with **detachable warrants** involves *two* securities, one a debt security, which will remain outstanding until maturity, and the other a warrant to purchase common stock. At the time of issuance, separable instruments exist. The existence of two instruments therefore justifies separate treatment. **Nondetachable warrants**, however, **do not require an allocation of the proceeds between the bonds and the warrants**. Similar to the accounting for convertible bonds, companies record the entire proceeds from nondetachable warrants as debt.⁶

Evolving Issue

IS THAT ALL DEBT?

Many argue that the conversion feature of a convertible bond is not significantly different in nature from the call represented by a warrant. The question is whether, although the legal forms differ, sufficient similarities of substance exist to support the same accounting treatment. Some contend that inseparability *per se* is an insufficient basis for restricting allocation between identifiable components of a transaction.

Examples of allocation between assets of value in a single transaction *do* exist, such as allocation of values in basket purchases and separation of principal and interest in capitalizing long-term leases. Critics of the current accounting for convertibles say that to deny recognition of value to the conversion feature merely looks to the form of the instrument and does not deal with the substance of the transaction. In an exposure draft on this subject (project now inactive), the FASB indicates that companies should separate the debt and equity components of securities such as convertible debt or bonds issued with nondetachable warrants (see footnotes 1 and 6).

We agree with this position. In both situations (convertible debt and debt issued with warrants), the investor has made a payment to the company for an equity feature—the right to acquire an equity instrument in the future. The only real distinction between them is that the additional payment made when the equity instrument is formally acquired takes different forms. The warrant holder pays additional cash to the issuing company; the convertible debt holder pays for stock by forgoing the receipt of interest from conversion date until maturity date and by forgoing the receipt of the maturity value itself. Thus, the difference is one of method or form of payment only, rather than one of substance. However, until the profession officially reverses its stand with respect to accounting for convertible debt, companies will continue to report convertible debt and bonds issued with nondetachable warrants solely as debt.

Rights to Subscribe to Additional Shares

If the directors of a corporation decide to issue new shares of stock, the old stockholders generally have the right (**preemptive privilege**) to purchase newly issued shares in proportion to their holdings. This privilege, referred to as a **stock right**, saves existing stockholders from suffering a dilution of voting rights without their consent. Also, it may allow them to purchase stock somewhat below its fair value. Unlike the warrants issued with other securities, the warrants issued for stock rights are of short duration.

The certificate representing the stock right states the number of shares the holder of the right may purchase. Each share of stock owned ordinarily gives the owner one stock right. The certificate also states the price at which the new shares may be purchased. The

⁶GAAP requires that for convertible debt that can be settled in cash, companies should account for the liability and equity components separately. In deliberations of the debt/equity project (see footnote 1), the FASB has proposed that all convertible bonds be separated into liability and equity components. As indicated, this project is inactive at this time. [4] Academic research indicates that estimates of the debt and equity components of convertible bonds are subject to considerable measurement error. See Mary Barth, Wayne Landsman, and Richard Rendleman, Jr., "Option Pricing-Based Bond Value Estimates and a Fundamental Components Approach to Account for Corporate Debt," *The Accounting Review* (January 1998). This and other challenges explain in part the extended time needed to develop new standards in this area.

price is normally less than the current market price of such shares, which gives the rights a value in themselves. From the time they are issued until they expire, holders of stock rights may purchase and sell them like any other security.

Companies make only a memorandum entry when they issue rights to existing stockholders. This entry indicates the number of rights issued to existing stockholders in order to ensure that the company has additional unissued stock registered for issuance in case the rights are exercised. Companies make no formal entry at this time because they have not yet issued stock nor received cash.

If holders exercise the stock rights, a cash payment of some type usually is involved. If the company receives cash equal to the par value, it makes an entry crediting Common Stock at par value. If the company receives cash in excess of par value, it credits Paid-in Capital in Excess of Par—Common Stock. If it receives cash less than par value, a debit to Paid-in Capital in Excess of Par—Common Stock is appropriate.

Stock Compensation Plans

The third form of warrant arises in stock compensation plans to pay and motivate employees. This warrant is a **stock option**, which gives key employees the option to purchase common stock at a given price over an extended period of time.

A consensus of opinion is that effective compensation programs are ones that do the following: (1) base compensation on employee and company performance, (2) motivate employees to high levels of performance, (3) help retain executives and allow for recruitment of new talent, (4) maximize the employee's after-tax benefit and minimize the employer's after-tax cost, and (5) use performance criteria over which the employee has control. Straight cash-compensation plans (salary and perhaps a bonus), though important, are oriented to the short run. Many companies recognize that they need a longer-term compensation plan in addition to the cash component.

Long-term compensation plans attempt to develop company loyalty among key employees by giving them "a piece of the action"—that is, an equity interest. These plans, generally referred to as **stock-based compensation plans**, come in many forms. Essentially, they provide the employee with the opportunity to receive stock if the performance of the company (by whatever measure) is satisfactory. Typical performance measures focus on long-term improvements that are readily measurable and that benefit the company as a whole, such as increases in earnings per share, revenues, stock price, or market share.

As indicated in our opening story, companies are changing the way they use stock-based compensation. Illustration 16-3 indicates that option expense is a much smaller element of compensation relative to **restricted stock** at companies such as **Ford** and **Wal-Mart**.

Company	Fair Value of Option Grants	Fair Value of Restricted Stock Grants
Disney	\$120.6	\$515.1
Ford	37.3	124.4
Urban Outfitters	1.0	35.8
Wal-Mart Stores	19.6	550.9

ILLUSTRATION 16-3
2011 Company Equity Grants (\$ in millions)

The major reasons for this change are two-fold. Critics often cited the indiscriminate use of stock options as a reason why company executives manipulated accounting numbers in an attempt to achieve higher share price. As a result, many responsible companies decided to cut back on the issuance of options, both to avoid such accounting manipulations and to head off investor doubts. In addition, GAAP now results in companies recording a higher expense when stock options are granted.

The data reported in Illustration 16-4 (page 892) reinforce the point that the fair value of stock grants is significant and increasing. The study documents that compensation

increased 7.7 percent for S&P 500 executives in 2011, with equity grants being the biggest source of growth.

ILLUSTRATION 16-4
Compensation Elements

(\$ in millions)	2011	% Change from 2010
Salary	\$ 1,781.3	0.2%
Bonus	648.8	-2.8
Fair value of equity grants	8389.1	13.8
Non-equity incentive compensation	2719.2	-2.9
Pension benefits	1309.2	11.9
All other	590.6	7.8
Total executive compensation	<u>\$15,438.2</u>	<u>7.7%</u>

Illustration 16-4 shows that cash compensation is less than 20 percent of total compensation. The fair value of equity grants comprised approximately 54 percent of total compensation.

The Major Reporting Issue. Suppose that as an employee for Hurdle Inc., you receive options to purchase 10,000 shares of the firm's common stock as part of your compensation. The date you receive the options is referred to as the **grant date**. The options are good for 10 years. The market price and the exercise price for the stock are both \$20 at the grant date. **What is the value of the compensation you just received?**

Some believe that what you have received has no value. They reason that because the difference between the market price and the exercise price is zero, no compensation results. Others argue these options do have value. If the stock price goes above \$20 any time in the next 10 years and you exercise the options, you may earn substantial compensation. For example, if at the end of the fourth year, the market price of the stock is \$30 and you exercise your options, you earn \$100,000 [10,000 options \times (\$30 - \$20)], ignoring income taxes.

**International
Perspective**

IFRS follows the same model as GAAP for recognizing share-based compensation.

The question for Hurdle is how to report the granting of these options. One approach measures compensation cost by the excess of the market price of the stock over its exercise price at the grant date. This approach is referred to as the **intrinsic-value method**. It measures what the holder would receive today if the option was immediately exercised. That intrinsic value is **the difference between the market price of the stock and the exercise price of the options at the grant date**. Using the intrinsic-value method, Hurdle would not recognize any compensation expense related to your options because at the grant date the market price equaled the exercise price. (In the preceding paragraph, those who answered that the options had no value were looking at the question from the intrinsic-value approach.)

The second way to look at the question of how to report the granting of these options bases the cost of employee stock options on the **fair value** of the stock options granted. Under this **fair value method**, companies use acceptable option-pricing models to value the options at the date of grant. These models take into account the many factors that determine an option's underlying value.⁷

GAAP requires that companies recognize compensation cost using the fair value method. [5] The FASB position is that companies should base the accounting for the cost of employee services on the fair value of compensation paid. This amount is presumed to be a measure of the value of the services received. We will discuss more about the politics of GAAP in this area later (see "Debate over Stock-Option Accounting," page 897). Let's first describe the procedures involved.

⁷These factors include the volatility of the underlying stock, the expected life of the options, the risk-free rate during the option life, and expected dividends during the option life.

ACCOUNTING FOR STOCK COMPENSATION

Stock-Option Plans

Stock-option plans involve two main accounting issues:

1. How to determine compensation expense.
2. Over what periods to allocate compensation expense.

4 LEARNING OBJECTIVE

Describe the accounting for stock compensation plans.

Determining Expense

Under the **fair value method**, companies compute total compensation expense based on the fair value of the options expected to vest on the date they grant the options to the employee(s) (i.e., the **grant date**).⁸ Public companies estimate fair value by using an option-pricing model, with some adjustments for the unique factors of employee stock options. No adjustments occur after the grant date in response to subsequent changes in the stock price—either up or down.

Allocating Compensation Expense

In general, a company recognizes compensation expense in the periods in which its employees perform the service—the **service period**. Unless otherwise specified, the service period is the vesting period—the time between the grant date and the vesting date. Thus, the company determines total compensation cost at the grant date and allocates it to the periods benefited by its employees' services.

Stock Compensation Example

An example will help show the accounting for a stock-option plan. Assume that on November 1, 2013, the stockholders of Chen Company approve a plan that grants the company's five executives options to purchase 2,000 shares each of the company's \$1 par value common stock. The company grants the options on January 1, 2014. The executives may exercise the options at any time within the next 10 years. The option price per share is \$60, and the market price of the stock at the date of grant is \$70 per share.

Under the fair value method, the company computes total compensation expense by applying an acceptable fair value option-pricing model (such as the Black-Scholes option-pricing model). To keep this illustration simple, we assume that the fair value option-pricing model determines Chen's total compensation expense to be \$220,000.

Basic Entries. Under the fair value method, a company recognizes the value of the options as an expense in the periods in which the employee performs services. In the case of Chen Company, assume that the expected period of benefit is two years, starting with the grant date. Chen would record the transactions related to this option contract as follows.

At date of grant (January 1, 2014)

No entry.

To record compensation expense for 2014 (December 31, 2014)

Compensation Expense	110,000	
Paid-in Capital—Stock Options ($\$220,000 \div 2$)		110,000

To record compensation expense for 2015 (December 31, 2015)

Compensation Expense	110,000	
Paid-in Capital—Stock Options		110,000

⁸"To vest" means "to earn the rights to." An employee's award becomes vested at the date that the employee's right to receive or retain shares of stock or cash under the award is no longer contingent on remaining in the service of the employer.

As indicated, Chen allocates compensation expense evenly over the two-year service period.

Exercise. If Chen's executives exercise 2,000 of the 10,000 options (20 percent of the options) on June 1, 2017 (three years and five months after date of grant), the company records the following journal entry.

June 1, 2017		
Cash (2,000 × \$60)		120,000
Paid-in Capital—Stock Options (20% × \$220,000)		44,000
Common Stock (2,000 × \$1.00)		2,000
Paid-in Capital in Excess of Par—Common Stock		162,000

Expiration. If Chen's executives fail to exercise the remaining stock options before their expiration date, the company transfers the balance in the Paid-in Capital—Stock Options account to a more properly titled paid-in capital account, such as Paid-in Capital—Expired Stock Options. Chen records this transaction at the date of expiration as follows.

January 1, 2024 (expiration date)		
Paid-in Capital—Stock Options		176,000
Paid-in Capital—Expired Stock Options (80% × \$220,000)		176,000

Adjustment. An unexercised stock option does not nullify the need to record the costs of services received from executives and attributable to the stock option plan. Under GAAP, a company therefore does not adjust compensation expense upon expiration of the options.

However, if an employee forfeits a stock option because **the employee fails to satisfy a service requirement** (e.g., leaves employment), the company should adjust the estimate of compensation expense recorded in the current period (as a change in estimate). A company records this change in estimate by debiting Paid-in Capital—Stock Options and crediting Compensation Expense for the amount of cumulative compensation expense recorded to date (thus decreasing compensation expense in the period of forfeiture).

Restricted Stock

As indicated earlier, many companies also use restricted stock (in some cases, replacing options altogether) to compensate employees. **Restricted-stock plans** transfer shares of stock to employees, subject to an agreement that the shares cannot be sold, transferred, or pledged until vesting occurs. Similar to stock options, these shares are subject to forfeiture if the conditions for vesting are not met.⁹

Major advantages of restricted-stock plans are:

- 1. Restricted stock never becomes completely worthless.** In contrast, if the stock price does not exceed the exercise price for a stock option, the options are worthless. The restricted stock, however, still has value.
- 2. Restricted stock generally results in less dilution to existing stockholders.** Restricted-stock awards are usually one-half to one-third the size of stock options. For example,

⁹Most companies base vesting on future service for a period of generally three to five years. Vesting may also be conditioned on some performance target such as revenue, net income, cash flows, or some combination of these three factors. The employee also collects dividends on the restricted stock, and these dividends generally must be repaid if forfeiture occurs.

if a company issues stock options on 1,000 shares, an equivalent restricted-stock offering might be 333 to 500 shares. The reason for the difference is that at the end of the vesting period, the restricted stock will have value, whereas the stock options may not. As a result, fewer shares are involved in restricted-stock plans, and therefore less dilution results if the stock price rises.

3. **Restricted stock better aligns the employee incentives with the companies' incentives.** The holder of restricted stock is essentially a stockholder and should be more interested in the long-term objectives of the company. In contrast, the recipients of stock options often have a short-run focus which leads to taking risks to hype the stock price for short-term gain to the detriment of the long-term.¹⁰

The accounting for restricted stock follows the same general principles as accounting for stock options at the date of grant. That is, the company determines the fair value of the restricted stock at the date of grant (usually the fair value of a share of stock) and then expenses that amount over the service period. Subsequent changes in the fair value of the stock are ignored for purposes of computing compensation expense.

Restricted Stock Example

Assume that on January 1, 2014, Ogden Company issues 1,000 shares of restricted stock to its CEO, Christie DeGeorge. Ogden's stock has a fair value of \$20 per share on January 1, 2014. Additional information is as follows.

1. The service period related to the restricted stock is five years.
2. Vesting occurs if DeGeorge stays with the company for a five-year period.
3. The par value of the stock is \$1 per share.

Ogden makes the following entry on the grant date (January 1, 2014).

Unearned Compensation	20,000	
Common Stock (1,000 × \$1)		1,000
Paid-in Capital in Excess of Par—Common Stock (1,000 × \$19)		19,000

The credits to Common Stock and Paid-in Capital in Excess of Par—Common Stock indicate that Ogden has issued shares of stock. The debit to Unearned Compensation (often referred to as Deferred Compensation Expense) identifies the total compensation expense the company will recognize over the five-year period. **Unearned Compensation represents the cost of services yet to be performed, which is not an asset.** Consequently, the company reports Unearned Compensation in stockholders' equity in the balance sheet, as a contra equity account (similar to the reporting of treasury stock at cost).

At December 31, 2014, Ogden records compensation expense of \$4,000 (1,000 shares × \$20 × 20%) as follows.

Compensation Expense	4,000	
Unearned Compensation		4,000

Ogden records compensation expense of \$4,000 for each of the next four years (2015, 2016, 2017, and 2018).

¹⁰One important rationale for moving away from options to restricted stock is summarized by Bill Gates of **Microsoft**: "When you win [with options], you win the lottery. And when you don't win, you still want it. I can imagine an employee going home at night and considering two wildly different possibilities with his compensation program. Either he can buy six summer homes or no summer homes. Either he can send his kids to college 50 times, or no times. The variation is huge; much greater than most employees have an appetite for. And so as soon as they saw that options could go both ways, we proposed an economic equivalent. So what we do now is give shares, not options." See <http://www.mystockoptions.com/pdfs/Restricted%20Stock.pdf>.

What happens if DeGeorge leaves the company before the five years has elapsed? In this situation, DeGeorge forfeits her rights to the stock, and Ogden reverses the compensation expense already recorded.

For example, assume that DeGeorge leaves on February 3, 2016 (before any expense has been recorded during 2016). The entry to record this forfeiture is as follows.

Common Stock	1,000	
Paid-in Capital in Excess of Par—Common Stock	19,000	
Compensation Expense ($\$4,000 \times 2$)		8,000
Unearned Compensation		12,000

In this situation, Ogden reverses the compensation expense of \$8,000 recorded through 2015. In addition, the company debits Common Stock and Paid-in Capital in Excess of Par—Common Stock, reflecting DeGeorge's forfeiture. It credits the balance of Unearned Compensation since none remains when DeGeorge leaves Ogden.

This accounting is similar to accounting for stock options when employees do not fulfill vesting requirements. Recall that once compensation expense is recorded for stock options, it is not reversed. The only exception is if the employee does not fulfill the vesting requirement, by leaving the company before vesting occurs.

In Ogden's restricted-stock plan, vesting never occurred because DeGeorge left the company before she met the service requirement. Because DeGeorge was never vested, she had to forfeit her shares. Therefore, the company must reverse compensation expense recorded to date.¹¹

Employee Stock-Purchase Plans

Employee stock-purchase plans (ESPPs) generally permit all employees to purchase stock at a discounted price for a short period of time. The company often uses such plans to secure equity capital or to induce widespread ownership of its common stock among employees. These plans are considered compensatory unless they satisfy **all three** conditions presented below.

1. Substantially all full-time employees may participate on an equitable basis.
2. The discount from market is small. That is, the discount does not exceed the per share amount of costs avoided by not having to raise cash in a public offering. If the amount of the discount is 5 percent or less, no compensation needs to be recorded.
3. The plan offers no substantive option feature.

International Perspective

IFRS requires that any discount from the market price in employee stock-purchase plans be recorded as compensation expense.

For example, Masthead Company's stock-purchase plan allowed employees who met minimal employment qualifications to purchase its stock at a 5 percent reduction from market price for a short period of time. The reduction from market price is not considered compensatory. Why? Because the per share amount of the costs avoided by not having to raise the cash in a public offering equals 5 percent.

Companies that offer their employees a compensatory ESPP should record the compensation expense over the service life of the employees. It will be difficult for some companies to claim that their ESPPs are non-compensatory (and therefore not record compensation expense) unless they change their discount policy which in the past often was 15 percent. If they change their discount policy to 5 percent, participation in these plans will undoubtedly be lower. As a result, it is likely that some companies will end up dropping these plans.

¹¹There are numerous variations on restricted-stock plans, including restricted-stock units (for which the shares are issued at the end of the vesting period) and restricted-stock plans with performance targets, such as EPS or stock price growth.

Disclosure of Compensation Plans

Companies must fully disclose the status of their compensation plans at the end of the periods presented. To meet these objectives, companies must make extensive disclosures. Specifically, a company with one or more share-based payment arrangements must disclose information that enables users of the financial statements to understand:

1. The nature and terms of such arrangements that existed during the period and the potential effects of those arrangements on shareholders.
2. The effect on the income statement of compensation cost arising from share-based payment arrangements.
3. The method of estimating the fair value of the goods or services received, or the fair value of the equity instruments granted (or offered to grant), during the period.
4. The cash flow effects resulting from share-based payment arrangements.

Illustration 16-5 (on page 898) presents the type of information disclosed for compensation plans.

Debate over Stock-Option Accounting

The FASB faced considerable opposition when it proposed the fair value method for accounting for stock options. This is not surprising, given that the fair value method results in greater compensation costs relative to the intrinsic-value model. One study documented that, on average, companies in the Standard & Poor's 500 stock index overstated earnings in a recent year by 10 percent through the use of the intrinsic-value method. (See the "What Do the Numbers Mean" box on page 899.) Nevertheless, some companies, such as **Coca-Cola**, **General Electric**, **Wachovia**, **Bank One**, and **The Washington Post**, decided to use the fair value method. As the CFO of Coca-Cola stated, "There is no doubt that stock options are compensation. If they weren't, none of us would want them."

Yet many in corporate America resisted the fair value method. Many small high-technology companies were especially vocal in their opposition, arguing that only through offering stock options can they attract top professional management. They contended that recognizing large amounts of compensation expense under these plans places them at a competitive disadvantage against larger companies that can withstand higher compensation charges. As one high-tech executive stated, "If your goal is to attack fat-cat executive compensation in multi-billion dollar firms, then please do so! But not at the expense of the people who are 'running lean and mean,' trying to build businesses and creating jobs in the process."

The stock-option saga is a classic example of the difficulty the FASB faces in issuing new accounting guidance. Many powerful interests aligned against the Board. Even some who initially appeared to support the Board's actions later reversed themselves. These efforts undermine the authority of the FASB, which in turn damages confidence in our financial reporting system.

Transparent financial reporting—including recognition of stock-based expense—should not be criticized because companies will report lower income. We may not like what the financial statements say, but we are always better off when the statements are representationally faithful to the underlying economic substance of transactions.

5 LEARNING OBJECTIVE

Discuss the controversy involving stock compensation plans.

Underlying Concepts

The stock-option controversy involves economic-consequence issues. The FASB believes companies should follow the neutrality concept. Others disagree, noting that factors other than accounting theory should be considered.

ILLUSTRATION 16-5Stock-Option Plan
Disclosure

Description of plan

Stock-Option Plan

The Company has a share-based compensation plan. The compensation cost that has been charged against income for the plan was \$29.4 million, and \$28.7 million for 2014 and 2013, respectively.

The Company's 2014 Employee Share-Option Plan (the Plan), which is shareholder-approved, permits the grant of share options and shares to its employees for up to 8 million shares of common stock. The Company believes that such awards better align the interests of its employees with those of its shareholders. Option awards are generally granted with an exercise price equal to the market price of the Company's stock at the date of grant; those option awards generally vest based on 5 years of continuous service and have 10-year contractual terms. Share awards generally vest over five years. Certain option and share awards provide for accelerated vesting if there is a change in control (as defined by the Plan).

The fair value of each option award is estimated on the date of grant using an option valuation model based on the assumptions noted in the following table.

Valuation model
assumptions

	2014	2013
Expected volatility	25%–40%	24%–38%
Weighted-average volatility	33%	30%
Expected dividends	1.5%	1.5%
Expected term (in years)	5.3–7.8	5.5–8.0
Risk-free rate	6.3%–11.2%	6.0%–10.0%

A summary of option activity under the Plan as of December 31, 2014, and changes during the year then ended are presented below.

Option plan activity
and balances

Options	Shares (000)	Weighted- Average Exercise Price	Weighted- Average Remaining Contractual Term	Aggregate Intrinsic Value (\$000)
Outstanding at January 1, 2014	4,660	42		
Granted	950	60		
Exercised	(800)	36		
Forfeited or expired	(80)	59		
Outstanding at December 31, 2014	<u>4,730</u>	<u>47</u>	<u>6.5</u>	<u>85,140</u>
Exercisable at December 31, 2014	<u>3,159</u>	<u>41</u>	<u>4.0</u>	<u>75,816</u>

The weighted-average grant-date fair value of options granted during the years 2014 and 2013 was \$19.57 and \$17.46, respectively. The total intrinsic value of options exercised during the years ended December 31, 2014 and 2013, was \$25.2 million, and \$20.9 million, respectively.

Option expense

As of December 31, 2014, there was \$25.9 million of total unrecognized compensation cost related to nonvested share-based compensation arrangements granted under the Plan. That cost is expected to be recognized over a weighted-average period of 4.9 years. The total fair value of shares vested during the years ended December 31, 2014 and 2013, was \$22.8 million and \$21 million, respectively.

Restricted-stock plan
details**Restricted-Stock Awards**

The Company also has a restricted-stock plan. The Plan is intended to retain and motivate the Company's Chief Executive Officer over the term of the award and to bring his total compensation package closer to median levels for Chief Executive Officers of comparable companies. The fair value of grants during the year was \$1,889,000, or \$35.68 per share, equivalent to 92% of the market price of a share of the Company's Common Stock on the date the award was granted.

Restricted-stock activity for the year ended 2014 is as follows.

	Shares	Price
Outstanding at December 31, 2013	57,990	—
Granted	149,000	\$12.68
Vested	(19,330)	—
Forfeited	—	—
Outstanding at December 31, 2014	<u>187,660</u>	

By leaving stock-based compensation expense out of income, reported income is biased. Biased reporting not only raises concerns about the credibility of companies' reports, but also of financial reporting in general. Even good companies get tainted by the biased reporting of a few "bad apples." If we write standards to achieve some social, economic, or public policy goal, financial reporting loses its credibility.

What do the numbers mean? A LITTLE HONESTY GOES A LONG WAY

As you have learned, GAAP requires companies to expense compensation paid in the form of stock options. However, before the change to require expensing, some companies voluntarily expensed options rather than simply disclosing the estimated costs in the notes to the financial statements. You might think investors would punish companies that decided to expense stock options. After all, most of corporate America has been battling for years to avoid having to expense them, worried that accounting for those perks would destroy

earnings. And indeed, **Merrill Lynch** estimated that if all S&P 500 companies were to expense options, reported profits would fall by as much as 10 percent.

Yet, this small band of big-name companies voluntarily made the switch to expensing, and investors for the most part showered them with love. As shown in the following table, with a few exceptions, the stock prices of the “expensers,” from **Cinergy** to **The Washington Post**, outpaced the market after they announced the change.

Company	Estimated EPS		% Change Since Announcement
	Without Options	With Options Expensed	Company Stock Price
Cinergy	\$ 2.80	\$ 2.77	22.4%
The Washington Post	20.48	20.10	16.4
Computer Associates	-0.46	-0.62	11.1
Fannie Mae	6.15	6.02	6.7
Bank One	2.77	2.61	2.6
General Motors	5.84	5.45	2.6
Procter & Gamble	3.57	3.35	-2.3
Coca-Cola	1.79	1.70	-6.2
General Electric	1.65	1.61	-6.2
Amazon.com	0.04	-0.99	-11.4

Sources: Merrill Lynch; company reports.

The market’s general positive reaction to the expensing of stock options provides a good case study supporting the value that investors place on transparent accounting and

reporting. It is puzzling why some companies continued to fight implementation of the expensing rule.

Source: David Stires, “A Little Honesty Goes a Long Way,” *Fortune* (September 2, 2002), p. 186. Reprinted by permission. See also Troy Wolverton, “Foes of Expensing Welcome FASB Delay,” *TheStreet.com* (October 15, 2004).

COMPUTING EARNINGS PER SHARE

As indicated earlier, stockholders and potential investors widely use earnings per share in evaluating the profitability of a company. As a result, much attention is given to earnings per share by the financial press. **Earnings per share** indicates the income earned by each share of common stock. Thus, **companies report earnings per share only for common stock**. For example, if Oscar Co. has net income of \$300,000 and a weighted average of 100,000 shares of common stock outstanding for the year, earnings per share is \$3 ($\$300,000 \div 100,000$). Because of the importance of earnings per share information, most companies must report this information on the face of the income statement.¹² [6] The exception, due to cost-benefit considerations, is nonpublic companies.¹³ Generally, companies report earnings per share information below

6 LEARNING OBJECTIVE

Compute earnings per share in a simple capital structure.

¹²For an article on the usefulness of reported EPS data and the application of the qualitative characteristics of accounting information to EPS data, see Lola W. Dudley, “A Critical Look at EPS,” *Journal of Accountancy* (August 1985), pp. 102–111.

¹³A nonpublic enterprise is an enterprise (1) whose debt or equity securities are not traded in a public market on a foreign or domestic stock exchange or in the over-the-counter market (including securities quoted locally or regionally), or (2) that is not required to file financial statements with the SEC. An enterprise is not considered a nonpublic enterprise when its financial statements are issued in preparation for the sale of any class of securities in a public market.

net income in the income statement. Illustration 16-6 shows Oscar Co.'s income statement presentation of earnings per share.

ILLUSTRATION 16-6

Income Statement
Presentation of EPS

Net income	\$300,000
Earnings per share	<u>\$3.00</u>

When the income statement contains intermediate components of income (such as discontinued operations or extraordinary items), companies should disclose earnings per share for each component. The presentation in Illustration 16-7 is representative.

ILLUSTRATION 16-7

Income Statement
Presentation of EPS
Components

Earnings per share:	
Income from continuing operations	\$4.00
Loss from discontinued operations, net of tax	<u>0.60</u>
Income before extraordinary item	3.40
Extraordinary gain, net of tax	<u>1.00</u>
Net income	<u>\$4.40</u>

These disclosures enable the user of the financial statements to recognize the effects on EPS of income from continuing operations, as distinguished from income or loss from irregular items.¹⁴

Earnings per Share—Simple Capital Structure

A corporation's capital structure is **simple** if it consists only of common stock or includes no **potential common stock** that upon conversion or exercise could dilute earnings per common share. A capital structure is **complex** if it includes securities that could have a dilutive effect on earnings per common share.

The computation of earnings per share for a simple capital structure involves two items (other than net income)—(1) preferred stock dividends and (2) weighted-average number of shares outstanding.

Preferred Stock Dividends

As we indicated earlier, earnings per share relates to earnings per *common share*. When a company has both common and preferred stock outstanding, **it subtracts the current-year preferred stock dividend from net income to arrive at income available to common stockholders**. Illustration 16-8 shows the formula for computing earnings per share.

ILLUSTRATION 16-8

Formula for Computing
Earnings per Share

$$\text{Earnings per Share} = \frac{\text{Net Income} - \text{Preferred Dividends}}{\text{Weighted-Average Number of Shares Outstanding}}$$

In reporting earnings per share information, a company must calculate income available to common stockholders. To do so, the company subtracts dividends on preferred stock from each of the intermediate components of income (income from continuing operations and income before extraordinary items) and finally from net income. If a company declares dividends on preferred stock and a net loss occurs, **the**

¹⁴Companies should present, either on the face of the income statement or in the notes to the financial statements, per share amounts for discontinued operations and extraordinary items.

company adds the preferred dividend to the loss for purposes of computing the loss per share.

If the preferred stock is cumulative and the company has net income but declares no dividend in the current year, it subtracts **an amount equal to the dividend that it should have declared for the current year only**. If the stock is cumulative and the company reports a net loss, but declares no dividend in the current year, it **adds** an amount equal to the dividend to the net loss. The company should have included dividends in arrears for previous years in the previous years' computations.

International Perspective

The FASB and the IASB are working together on a project to improve EPS accounting by simplifying the computational guidance and thereby increasing the comparability of EPS data on an international basis.

Weighted-Average Number of Shares Outstanding

In all computations of earnings per share, the **weighted-average number of shares outstanding** during the period constitutes the basis for the per share amounts reported. Shares issued or purchased during the period affect the amount outstanding. Companies must **weight the shares by the fraction of the period they are outstanding**. The rationale for this approach is to find the equivalent number of whole shares outstanding for the year.

To illustrate, assume that Franks Inc. has changes in its common stock shares outstanding for the period as shown in Illustration 16-9.

Date	Share Changes	Shares Outstanding
January 1	Beginning balance	90,000
April 1	Issued 30,000 shares for cash	<u>30,000</u>
		120,000
July 1	Purchased 39,000 shares	<u>(39,000)</u>
		81,000
November 1	Issued 60,000 shares for cash	<u>60,000</u>
December 31	Ending balance	<u><u>141,000</u></u>

ILLUSTRATION 16-9

Shares Outstanding, Ending Balance—Franks Inc.

Franks computes the weighted-average number of shares outstanding as follows.

Dates Outstanding	(A) Shares Outstanding	(B) Fraction of Year	(C) Weighted Shares (A × B)
Jan. 1–Apr. 1	90,000	3/12	22,500
Apr. 1–July 1	120,000	3/12	30,000
July 1–Nov. 1	81,000	4/12	27,000
Nov. 1–Dec. 31	141,000	2/12	<u>23,500</u>
	Weighted-average number of shares outstanding		<u><u>103,000</u></u>

ILLUSTRATION 16-10

Weighted-Average Number of Shares Outstanding

As Illustration 16-10 shows, 90,000 shares were outstanding for three months, which is equivalent to 22,500 whole shares for the entire year. Because Franks issued additional shares on April 1, it must weight these shares for the time outstanding. When the company purchased 39,000 shares on July 1, it reduced the shares outstanding. Therefore, from July 1 to November 1, only 81,000 shares were outstanding, which is equivalent to 27,000 shares. The issuance of 60,000 shares increases shares outstanding for the last two months of the year. Franks then makes a new computation to determine the proper weighted shares outstanding.

Stock Dividends and Stock Splits. When **stock dividends** or **stock splits** occur, companies need to restate the shares outstanding before the stock dividend or split, in order to compute the weighted-average number of shares. For example, assume that Vijay Corporation had 100,000 shares outstanding on January 1 and issued a 25 percent stock dividend on June 30. For purposes of computing a weighted-average for the current year, it assumes the additional 25,000 shares outstanding as a result of the stock dividend to be **outstanding since the beginning of the year**. Thus, the weighted-average for the year for Vijay is 125,000 shares.

Companies restate the issuance of a stock dividend or stock split, but not the issuance or repurchase of stock for cash. Why? Because stock splits and stock dividends do not increase or decrease the net assets of the company. The company merely issues additional shares of stock. Because of the added shares, it must restate the weighted-average shares. Restating allows valid comparisons of earnings per share between periods before and after the stock split or stock dividend. Conversely, the issuance or purchase of stock for cash **changes the amount of net assets**. As a result, the company either earns more or less in the future as a result of this change in net assets. Stated another way, **a stock dividend or split does not change the shareholders' total investment**—it only increases (unless it is a reverse stock split) the number of common shares representing this investment.

To illustrate how a stock dividend affects the computation of the weighted-average number of shares outstanding, assume that Sabrina Company has the following changes in its common stock shares during the year.

ILLUSTRATION 16-11

Shares Outstanding,
Ending Balance—Sabrina
Company

Date	Share Changes	Shares Outstanding
January 1	Beginning balance	100,000
March 1	Issued 20,000 shares for cash	<u>20,000</u>
		120,000
June 1	60,000 additional shares (50% stock dividend)	<u>60,000</u>
		180,000
November 1	Issued 30,000 shares for cash	<u>30,000</u>
December 31	Ending balance	<u><u>210,000</u></u>

Sabrina computes the weighted-average number of shares outstanding as follows.

ILLUSTRATION 16-12

Weighted-Average
Number of Shares
Outstanding—Stock
Issue and Stock Dividend

Dates Outstanding	(A) Shares Outstanding	(B) Restatement	(C) Fraction of Year	(D) Weighted Shares (A × B × C)
Jan. 1–Mar. 1	100,000	1.50	2/12	25,000
Mar. 1–June 1	120,000	1.50	3/12	45,000
June 1–Nov. 1	180,000		5/12	75,000
Nov. 1–Dec. 31	210,000		2/12	<u>35,000</u>
				<u><u>180,000</u></u>

Sabrina must restate the shares outstanding prior to the stock dividend. The company adjusts the shares outstanding from January 1 to June 1 for the stock dividend, so that it now states these shares on the same basis as shares issued subsequent to the stock dividend. Sabrina does not restate shares issued after the stock dividend because they are on the new basis. The stock dividend simply restates existing shares. **The same type of treatment applies to a stock split.**

If a stock dividend or stock split occurs after the end of the year but before issuing the financial statements, a company must restate the weighted-average number of shares outstanding for the year (and any other years presented in comparative form). For example, assume that Hendricks Company computes its weighted-average number of shares as 100,000 for the year ended December 31, 2014. On January 15, 2015, before issuing the financial statements, the company splits its stock 3 for 1. In this case, the weighted-average number of shares used in computing earnings per share for 2014 is now 300,000 shares. If providing earnings per share information for 2013 as comparative information, Hendricks must also adjust it for the stock split.

Comprehensive Example

Let’s study a comprehensive illustration for a simple capital structure. Darin Corporation has income before extraordinary item of \$580,000 and an extraordinary gain, net of tax, of \$240,000. In addition, it has declared preferred dividends of \$1 per share on 100,000 shares of preferred stock outstanding. Darin also has the following changes in its common stock shares outstanding during 2014.

Dates	Share Changes	Shares Outstanding
January 1	Beginning balance	180,000
May 1	Purchased 30,000 treasury shares	<u>(30,000)</u>
		150,000
July 1	300,000 additional shares (3-for-1 stock split)	<u>300,000</u>
		450,000
December 31	Issued 50,000 shares for cash	<u>50,000</u>
December 31	Ending balance	<u>500,000</u>

ILLUSTRATION 16-13
Shares Outstanding,
Ending Balance—
Darin Corp.

To compute the earnings per share information, Darin determines the weighted-average number of shares outstanding as follows.

Dates	(A) Shares Outstanding	(B) Restatement	(C) Fraction of Year	(D) Weighted Shares (A × B × C)
Jan. 1–May 1	180,000	3	4/12	180,000
May 1–July 1	150,000	3	2/12	75,000
July 1–Dec. 31	450,000		6/12	<u>225,000</u>
	Weighted-average number of shares outstanding			<u>480,000</u>

ILLUSTRATION 16-14
Weighted-Average
Number of Shares
Outstanding

In computing the weighted-average number of shares, the company ignores the shares sold on December 31, 2014, because they have not been outstanding during the year. Darin then divides the weighted-average number of shares into income before extraordinary item and net income to determine earnings per share. It subtracts its preferred dividends of \$100,000 from income before extraordinary item (\$580,000) to arrive at income before extraordinary item available to common stockholders of \$480,000 (\$580,000 – \$100,000).

Deducting the preferred dividends from the income before extraordinary item also reduces net income without affecting the amount of the extraordinary item. The

final amount is referred to as **income available to common stockholders**, as shown in Illustration 16-15.

ILLUSTRATION 16-15

Computation of Income Available to Common Stockholders

	(A) Income Information	(B) Weighted Shares	(C) Earnings per Share (A ÷ B)
Income before extraordinary item available to common stockholders	\$480,000*	480,000	\$1.00
Extraordinary gain (net of tax)	240,000	480,000	0.50
Income available to common stockholders	\$720,000	480,000	\$1.50
*\$580,000 – \$100,000			

Darin must disclose the per share amount for the extraordinary item (net of tax) either on the face of the income statement or in the notes to the financial statements. Illustration 16-16 shows the income and per share information reported on the face of Darin's income statement.

Net income	<u>\$1.50</u>

Earnings per Share—Complex Capital Structure

LEARNING OBJECTIVE 7

Compute earnings per share in a complex capital structure.

The EPS discussion to this point applies to **basic EPS** for a simple capital structure. One problem with a **basic EPS** computation is that it fails to recognize the potential impact of a corporation's dilutive securities. As discussed at the beginning of the chapter, **dilutive securities** are securities that can be converted to common stock.¹⁵ Upon conversion or exercise by the holder, the dilutive securities reduce (dilute) earnings per share. This adverse effect on EPS can be significant and, more importantly, *unexpected* unless financial statements call attention to their potential dilutive effect.

As indicated earlier, a complex capital structure exists when a corporation has convertible securities, options, warrants, or other rights that upon conversion or exercise could dilute earnings per share. When a company has a complex capital structure, **it generally reports both basic and diluted earnings per share.**

Computing **diluted EPS** is similar to computing basic EPS. The difference is that diluted EPS includes the effect of all potential dilutive common shares that were outstanding during the period. The formula in Illustration 16-17 shows the relationship between basic EPS and diluted EPS.

Some securities are antidilutive. **Antidilutive securities** are securities that upon conversion or exercise **increase** earnings per share (or reduce the loss per share). Companies with complex capital structures will not report diluted EPS if the securities in their capital structure are antidilutive. The purpose of presenting both basic and diluted EPS is to inform financial statement users of

International Perspective

The provisions in GAAP are substantially the same as those in *International Accounting Standard No. 33, "Earnings per Share,"* issued by the IASB.

¹⁵Issuance of these types of securities is typical in mergers and compensation plans.

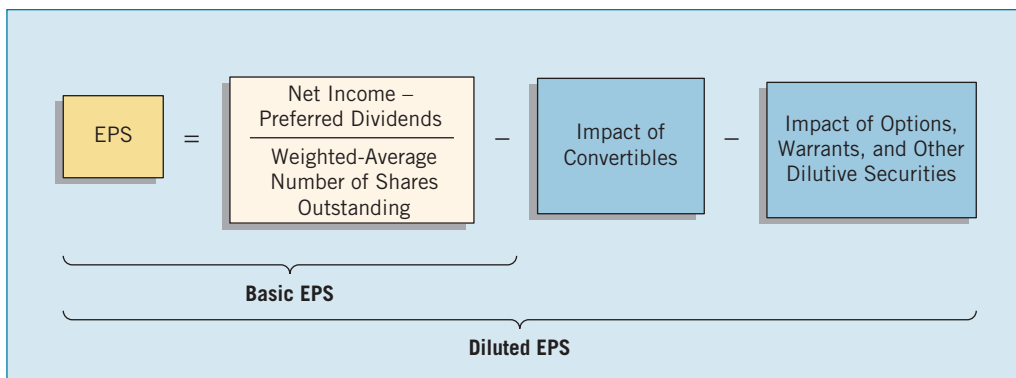

ILLUSTRATION 16-17
Relationship between Basic and Diluted EPS

situations that will likely occur (basic EPS) and also to provide “worst case” dilutive situations (dilutive EPS). If the securities are antidilutive, the likelihood of conversion or exercise is considered remote. Thus, companies that have only antidilutive securities must report only the basic EPS number. We illustrated the computation of basic EPS in the prior section. In the following sections, we address the effects of convertible and other dilutive securities on EPS calculations.

Diluted EPS—Convertible Securities

At conversion, companies exchange convertible securities for common stock. Companies measure the dilutive effects of potential conversion on EPS using the **if-converted method**. This method for a convertible bond assumes (1) the conversion of the convertible securities at the beginning of the period (or at the time of issuance of the security, if issued during the period), and (2) the elimination of related interest, net of tax. Thus, the additional shares assumed issued increase the **denominator**—the weighted-average number of shares outstanding. The amount of interest expense, net of tax associated with those potential common shares, increases the **numerator**—net income.

Comprehensive Example—If-Converted Method. As an example, Mayfield Corporation has net income of \$210,000 for the year and a weighted-average number of common shares outstanding during the period of 100,000 shares. The basic earnings per share is therefore \$2.10 (\$210,000 ÷ 100,000). The company has two convertible debenture bond issues outstanding. One is a 6 percent issue sold at 100 (total \$1,000,000) in a prior year and convertible into 20,000 common shares. The other is a 10 percent issue sold at 100 (total \$1,000,000) on April 1 of the current year and convertible into 32,000 common shares. The tax rate is 40 percent.

As Illustration 16-18 shows, to determine the numerator for diluted earnings per share, Mayfield adds back the interest on the if-converted securities, less the related tax effect. Because the if-converted method assumes conversion as of the beginning of the year, Mayfield assumes that it pays no interest on the convertibles during the year. The interest on the 6 percent convertibles is \$60,000 for the year (\$1,000,000 × 6%). The increased tax expense is \$24,000 (\$60,000 × 0.40). The interest added back net of taxes is \$36,000 [\$60,000 – \$24,000, or simply \$60,000 × (1 – 0.40)].

Net income for the year	\$210,000
Add: Adjustment for interest (net of tax)	
6% debentures (\$60,000 × [1 – .40])	36,000
10% debentures (\$100,000 × 9/12 × [1 – .40])	45,000
Adjusted net income	<u>\$291,000</u>

ILLUSTRATION 16-18
Computation of Adjusted Net Income

Continuing with the information in Illustration 16-18, because Mayfield issues 10 percent convertibles subsequent to the beginning of the year, it weights the shares. In other words, it considers these shares to have been outstanding from April 1 to the end of the year. As a result, the interest adjustment to the numerator for these bonds reflects the interest for only nine months. Thus, the interest added back on the 10 percent convertible is \$45,000 [$\$1,000,000 \times 10\% \times 9/12 \text{ year} \times (1 - 0.4)$]. The final item in Illustration 16-18 shows the adjusted net income. This amount becomes the numerator for Mayfield's computation of diluted earnings per share.

Mayfield then calculates the weighted-average number of shares outstanding, as shown in Illustration 16-19. This number of shares becomes the denominator for Mayfield's computation of diluted earnings per share.

ILLUSTRATION 16-19

Computation of
Weighted-Average
Number of Shares

Weighted-average number of shares outstanding	100,000
Add: Shares assumed to be issued:	
6% debentures (as of beginning of year)	20,000
10% debentures (as of date of issue, April 1; $9/12 \times 32,000$)	<u>24,000</u>
Weighted-average number of shares adjusted for dilutive securities	<u><u>144,000</u></u>

In its income statement, Mayfield reports basic and diluted earnings per share.¹⁶ Illustration 16-20 shows this dual presentation.

ILLUSTRATION 16-20

Earnings per Share
Disclosure

Net income for the year	<u>\$210,000</u>
Earnings per Share (Note X)	
Basic earnings per share ($\$210,000 \div 100,000$)	<u>\$2.10</u>
Diluted earnings per share ($\$291,000 \div 144,000$)	<u>\$2.02</u>

Other Factors. The example above assumed that Mayfield sold its bonds at the face amount. If it instead sold the bonds at a premium or discount, the company must adjust the interest expense each period to account for this occurrence. Therefore, the interest expense reported on the income statement is the amount of interest expense, net of tax, added back to net income. (It is not the interest paid in cash during the period.)

In addition, the conversion rate on a dilutive security may change during the period in which the security is outstanding. For the diluted EPS computation in such a situation, the **company uses the most dilutive conversion rate available**. For example, assume that a company issued a convertible bond on January 1, 2013, with a conversion rate of 10 common shares for each bond starting January 1, 2015. Beginning January 1, 2018, the conversion rate is 12 common shares for each bond, and beginning January 1, 2022, it is 15 common shares for each bond. In computing diluted EPS in 2013, the company uses the conversion rate of 15 shares to one bond.

A final issue relates to preferred stock. For example, assume that Mayfield's 6 percent convertible debentures were instead 6 percent convertible *preferred stock*. In that case, Mayfield considers the convertible preferred as potential common shares. Thus, it includes them in its diluted EPS calculations as shares outstanding. The company does not subtract preferred dividends from net income in computing the numerator. Why

¹⁶Conversion of bonds is dilutive because EPS with conversion (\$2.02) is less than basic EPS (\$2.10). See Appendix 16B for a comprehensive evaluation of antidilution with multiple securities.

not? Because for purposes of computing EPS, it assumes conversion of the convertible preferreds to outstanding common stock. The company uses net income as the numerator—it computes **no tax effect** because preferred dividends generally are not tax-deductible.

Diluted EPS—Options and Warrants

A company includes in diluted earnings per share stock options and warrants outstanding (whether or not presently exercisable), unless they are antidilutive. Companies use the **treasury-stock method** to include options and warrants and their equivalents in EPS computations.

The treasury-stock method assumes that the options or warrants are exercised at the beginning of the year (or date of issue if later), and that the company uses those proceeds to purchase common stock for the treasury. If the exercise price is lower than the market price of the stock, then the proceeds from exercise are insufficient to buy back all the shares. The company then adds the incremental shares remaining to the weighted-average number of shares outstanding for purposes of computing diluted earnings per share.

For example, if the exercise price of a warrant is \$5 and the market price of the stock is \$15, the treasury-stock method increases the shares outstanding. Exercise of the warrant results in one additional share outstanding, but the \$5 received for the one share issued is insufficient to purchase one share in the market at \$15. The company needs to exercise three warrants (and issue three additional shares) to produce enough money (\$15) to acquire one share in the market. Thus, a net increase of two shares outstanding results.

To see this computation using larger numbers, assume 1,500 options outstanding at an exercise price of \$30 for a common share and a common stock market price per share of \$50. Through application of the treasury-stock method, the company would have 600 incremental shares outstanding, computed as shown in Illustration 16-21.¹⁷

Proceeds from exercise of 1,500 options (1,500 × \$30)	<u>\$45,000</u>
Shares issued upon exercise of options	1,500
Treasury shares purchasable with proceeds (\$45,000 ÷ \$50)	<u>(900)</u>
Incremental shares outstanding (potential common shares)	<u>600</u>

ILLUSTRATION 16-21
Computation of Incremental Shares

Thus, if the exercise price of the option or warrant is **lower** than the market price of the stock, dilution occurs. An exercise price of the option or warrant **higher** than the market price of the stock reduces common shares. In this case, the options or warrants are **antidilutive** because their assumed exercise leads to an increase in earnings per share.

For both options and warrants, exercise is assumed only if the average market price of the stock exceeds the exercise price during the reported period.¹⁸ As a practical

¹⁷The incremental number of shares may be more simply computed:

$$\frac{\text{Market price} - \text{Option price}}{\text{Market price}} \times \text{Number of options} = \text{Number of shares}$$

$$\frac{\$50 - \$30}{\$50} \times 1,500 \text{ options} = 600 \text{ shares}$$

¹⁸Options and warrants have essentially the same assumptions and computational problems, although the warrants may allow or require the tendering of some other security, such as debt, in lieu of cash upon exercise. In such situations, the accounting becomes quite complex and is beyond the scope of this textbook.

matter, a simple average of the weekly or monthly prices is adequate, so long as the prices do not fluctuate significantly.

Comprehensive Example—Treasury-Stock Method. To illustrate application of the treasury-stock method, assume that Kubitz Industries, Inc. has net income for the period of \$220,000. The average number of shares outstanding for the period was 100,000 shares. Hence, basic EPS—ignoring all dilutive securities—is \$2.20. The average number of shares related to options outstanding (although not exercisable at this time), at an option price of \$20 per share, is 5,000 shares. The average market price of the common stock during the year was \$28. Illustration 16-22 shows the computation of EPS using the treasury-stock method.

ILLUSTRATION 16-22
Computation of Earnings
per Share—Treasury-
Stock Method

	Basic Earnings per Share	Diluted Earnings per Share

Treasury shares that could be repurchased with proceeds (\$100,000 ÷ \$28)		<u>3,571</u>
Excess of shares under option over the treasury shares that could be repurchased (5,000 – 3,571)—potential common incremental shares		1,429
Average number of common shares outstanding	<u>100,000</u>	<u>100,000</u>
Total average number of common shares outstanding and potential common shares	<u>100,000 (A)</u>	<u>101,429 (C)</u>
Net income for the year	<u>\$220,000 (B)</u>	<u>\$220,000 (D)</u>
Earnings per share	<u>\$2.20 (B ÷ A)</u>	<u>\$2.17 (D ÷ C)</u>

Contingent Issue Agreement

In business combinations, the acquirer may promise to issue additional shares—referred to as **contingent shares**—under certain conditions. Sometimes the company issues these contingent shares as a result of a **passage-of-time condition** or upon the attainment of a **certain earnings or market price level**. If this passage-of-time condition occurs during the current year, or if the company meets the earnings or market price **by the end of the year**, the company considers the contingent shares as outstanding for the computation of diluted earnings per share.¹⁹

For example, assume that Watts Corporation purchased Cardoza Company and agreed to give Cardoza's stockholders 20,000 additional shares in 2017 if Cardoza's net income in 2016 is \$90,000. In 2015, Cardoza's net income is \$100,000. Because Cardoza has already attained the 2016 stipulated earnings of \$90,000, in computing diluted earnings per share for 2015, Watts would include the 20,000 contingent shares in the shares-outstanding computation.

Antidilution Revisited

In computing diluted EPS, a company must consider the aggregate of all dilutive securities. But first it must determine which potentially dilutive securities are in fact individually dilutive and which are antidilutive. **A company should exclude any**

¹⁹In addition to contingent issuances of stock, other situations that might lead to dilution are the issuance of participating securities and two-class common shares. The reporting of these types of securities in EPS computations is beyond the scope of this textbook.

security that is **antidilutive**, nor can the company use such a security to offset dilutive securities.

Recall that including antidilutive securities in earnings per share computations increases earnings per share (or reduces net loss per share). With options or warrants, whenever the exercise price exceeds the market price, the security is antidilutive. Convertible debt is antidilutive if the addition to income of the interest (net of tax) causes a greater percentage increase in income (numerator) than conversion of the bonds causes a percentage increase in common and potentially dilutive shares (denominator). In other words, convertible debt is antidilutive if conversion of the security causes common stock earnings to increase by a greater amount per additional common share than earnings per share was before the conversion.

To illustrate, assume that Martin Corporation has a 6 percent, \$1,000,000 debt issue that is convertible into 10,000 common shares. Net income for the year is \$210,000, the weighted-average number of common shares outstanding is 100,000 shares, and the tax rate is 40 percent. In this case, assumed conversion of the debt into common stock at the beginning of the year requires the following adjustments of net income and the weighted-average number of shares outstanding.

ILLUSTRATION 16-23
Test for Antidilution

Net income for the year	\$210,000	Average number of shares outstanding	100,000
Add: Adjustment for interest (net of tax) on 6% debentures		Add: Shares issued upon assumed conversion of debt	<u>10,000</u>
\$60,000 × (1 - .40)	<u>36,000</u>	Average number of common and potential common shares outstanding	<u>110,000</u>
Adjusted net income	<u>\$246,000</u>		
Basic EPS = \$210,000 ÷ 100,000 = \$2.10 Diluted EPS = \$246,000 ÷ 110,000 = \$2.24 = Antidilutive			

As a shortcut, Martin can also identify the convertible debt as antidilutive by comparing the EPS resulting from conversion, \$3.60 (\$36,000 additional earnings ÷ 10,000 additional shares), with EPS before inclusion of the convertible debt, \$2.10.

Companies should ignore antidilutive securities in all calculations and in computing diluted earnings per share. This approach is reasonable. The profession’s intent was to inform the investor of the possible dilution that might occur in reported earnings per share and not to be concerned with securities that, if converted or exercised, would result in an increase in earnings per share. Appendix 16B to this chapter provides an extended example of how companies consider antidilution in a complex situation with multiple securities.

EPS Presentation and Disclosure

A company with a complex capital structure would present its EPS information as follows.

ILLUSTRATION 16-24
EPS Presentation—
Complex Capital
Structure

Earnings per common share	
Basic earnings per share	<u>\$3.30</u>
Diluted earnings per share	<u>\$2.70</u>

When the earnings of a period include irregular items, a company should show per share amounts (where applicable) for the following: income from continuing operations, income before extraordinary items, and net income. Companies that report a discontinued operation or an extraordinary item should present per share amounts **for those line items** either on the face of the income statement or in the notes to the financial statements. Illustration 16-25 (page 910) shows a presentation reporting extraordinary items.

ILLUSTRATION 16-25EPS Presentation, with
Extraordinary Item

Basic earnings per share		
Income before extraordinary item		\$3.80
Extraordinary item		<u>(0.80)</u>
Net income		<u>\$3.00</u>
Diluted earnings per share		
Income before extraordinary item		\$3.35
Extraordinary item		<u>(0.65)</u>
Net income		<u>\$2.70</u>

A company must show earnings per share amounts for all periods presented. Also, the company should restate all prior period earnings per share amounts presented for stock dividends and stock splits. If it reports diluted EPS data for at least one period, the company should report such data for all periods presented, even if it is the same as basic EPS. When a company restates results of operations of a prior period as a result of an error or a change in accounting principle, it should also restate the earnings per share data shown for the prior periods. Complex capital structures and dual presentation of earnings per share require the following additional disclosures in note form.

1. Description of pertinent rights and privileges of the various securities outstanding.
2. A reconciliation of the numerators and denominators of the basic and diluted per share computations, including individual income and share amount effects of all securities that affect EPS.
3. The effect given preferred dividends in determining income available to common stockholders in computing basic EPS.
4. Securities that could potentially dilute basic EPS in the future that were excluded in the computation because they would be antidilutive.
5. Effect of conversions subsequent to year-end, but before issuing statements.

Illustration 16-26 presents the reconciliation and the related disclosure to meet the requirements of this standard.²⁰ [7]

ILLUSTRATION 16-26Reconciliation for Basic
and Diluted EPS

	For the Year Ended 2014		
	Income (Numerator)	Shares (Denominator)	Per Share Amount
Income before extraordinary item	\$7,500,000		
Less: Preferred stock dividends	<u>45,000</u>		
Basic EPS	7,455,000	3,991,666	<u>\$1.87</u>
Warrants		30,768	
Convertible preferred stock	45,000	308,333	
4% convertible bonds (net of tax)	<u>60,000</u>	<u>50,000</u>	
Diluted EPS	<u>\$7,560,000</u>	<u>4,380,767</u>	<u>\$1.73</u>

Stock options to purchase 1,000,000 shares of common stock at \$85 per share were outstanding during the second half of 2014 but were not included in the computation of diluted EPS because the options' exercise price was greater than the average market price of the common shares. The options were still outstanding at the end of year 2014 and expire on June 30, 2024.

²⁰Note that GAAP has specific disclosure requirements regarding stock-based compensation plans and earnings per share disclosures as well. The earnings per share effects of noncontrolling interest (discussed in Chapter 4) should also be presented, with the amounts of income from continuing operations and discontinued operations (if present), attributable to the controlling interest disclosed. However, only the net income attributable to the controlling interest should be used in computing earnings per share.

What do the numbers mean? PRO FORMA EPS CONFUSION

Many companies are reporting pro forma EPS numbers along with GAAP-based EPS numbers in the financial information provided to investors. Pro forma earnings generally exceed GAAP earnings because the pro forma numbers exclude such items as restructuring charges, impairments of assets, R&D expenditures, and stock compensation expense. Here are some examples.

Company	GAAP EPS	Pro Forma EPS
Adapttec	\$(0.62)	\$ 0.05
Corning	(0.24)	0.09
General Motors	(0.41)	0.85
Honeywell International	(0.38)	0.44
International Paper	(0.57)	0.14
Qualcomm	(0.06)	0.20
Broadcom	(6.36)	(0.13)
Lucent Technologies	(2.16)	(0.27)

Source: Company press releases.

Another case of possibly misleading pro forma reporting is the case of social media darlings **Facebook**, **Zynga**, and **Groupon**. For example, social gaming company Zynga recently reported so much stock-compensation expense

(\$600 million) that it overwhelmed its operating profit; these expenses took operating profit negative to the tune of \$406 million. The accounting? Zynga “window dressed” the expense by encouraging Wall Street analysts to use a non-GAAP pro forma accounting figure—“adjusted earnings before interest, taxes, depreciation and amortization”—that ignores the stock compensation. **LinkedIn** and **Groupon** also use non-GAAP metrics that exclude stock compensation. LinkedIn’s \$30 million stock-compensation expense roughly halved its operating profit, while Groupon’s \$94 million took operating profit \$203 million into the red. Wall Street analysts tend to go along with the accounting hocus-pocus, as it allows them to justify higher valuations for stocks. Investors should remember, however, that employee equity awards are real costs.

As discussed in Chapter 4, SEC Regulation G requires companies to provide a clear reconciliation between pro forma and GAAP information. And this applies to EPS measures as well. This reconciliation is especially important, given the spike in pro forma reporting by companies adding back employee stock-option expense.

Summary of EPS Computation

As you can see, computation of earnings per share is a complex issue. It is a controversial area because many securities, although technically not common stock, have many of its basic characteristics. Indeed, some companies have issued these other securities rather than common stock in order to avoid an adverse dilutive effect on earnings per share. Illustrations 16-27 and 16-28 (page 912) display the elementary points of calculating earnings per share in a simple capital structure and in a complex capital structure.

SUMMARY OF LEARNING OBJECTIVES

- 1 Describe the accounting for the issuance, conversion, and retirement of convertible securities.** The method for recording convertible bonds at the date of issuance follows that used to record straight debt issues. Companies amortize any discount or premium that results from the issuance of convertible bonds, assuming the bonds will be held to maturity. If companies convert bonds into other securities, the principal accounting problem is to determine the amount at which to record the securities exchanged for the bonds. The book value method is considered GAAP. The retirement of convertible debt is considered a debt retirement, and the difference between the carrying amount of the retired convertible debt and the cash paid should result in a gain or loss.
- 2 Explain the accounting for convertible preferred stock.** When convertible preferred stock is converted, a company uses the book value method. It debits Preferred Stock, along with any related Paid-in Capital in Excess of Par—Preferred Stock, and credits Common Stock and Paid-in Capital in Excess of Par—Common Stock (if an excess exists).
- 3 Contrast the accounting for stock warrants and for stock warrants issued with other securities.** *Stock warrants:* Companies should allocate the proceeds from the sale of debt with detachable warrants between the two securities.

Warrants that are detachable can be traded separately from the debt, and therefore companies can determine their fair value. Two methods of allocation are available: the proportional method and the incremental method. Nondetachable warrants do not require an allocation of the proceeds between the bonds and the warrants; companies record the entire proceeds as debt. *Stock rights*: No entry is required when a company issues rights to existing stockholders. The company needs only to make a memorandum entry to indicate the number of rights issued to existing stockholders and to ensure that the company has additional unissued stock registered for issuance in case the stockholders exercise the rights.

4 Describe the accounting for stock compensation plans. Companies must use the fair value approach to account for stock-based compensation. Under this approach, a company computes total compensation expense based on the fair value of the options that it expects to vest on the grant date. Companies recognize compensation expense in the periods in which the employee performs the services. Restricted-stock plans follow the same general accounting principles as those for stock options. Companies estimate total compensation cost at the grant date based on the fair value of the restricted stock; they expense that cost over the service period. If vesting does not occur, companies reverse the compensation expense.

5 Discuss the controversy involving stock compensation plans. When first proposed, there was considerable opposition to the recognition provisions contained in the fair value approach. The reason: that approach could result in substantial, previously unrecognized compensation expense. Corporate America, particularly the high-technology sector, vocally opposed the proposed standard. They believed that the standard would place them at a competitive disadvantage with larger companies that can withstand higher compensation charges. Offsetting such opposition is the need for greater transparency in financial reporting, on which our capital markets depend.

6 Compute earnings per share in a simple capital structure. When a company has both common and preferred stock outstanding, it subtracts the current-year preferred stock dividend from net income to arrive at income available to common stockholders. The formula for computing earnings per share is net income less preferred stock dividends, divided by the weighted-average number of shares outstanding.

7 Compute earnings per share in a complex capital structure. A complex capital structure requires a dual presentation of earnings per share, each with equal prominence on the face of the income statement. These two presentations are referred to as basic earnings per share and diluted earnings per share. Basic earnings per share relies on the number of weighted-average common shares outstanding (i.e., equivalent to EPS for a simple capital structure). Diluted earnings per share indicates the dilution of earnings per share that will occur if all potential issuances of common stock that would reduce earnings per share takes place. Companies with complex capital structures should exclude antidilutive securities when computing earnings per share.

APPENDIX 16A

ACCOUNTING FOR STOCK-APPRECIATION RIGHTS

A major disadvantage of many stock-option plans is that an executive must pay income tax on the difference between the market price of the stock and the option price at the **date of exercise**. This feature of stock-option plans (those referred to as **nonqualified**) can be a financial hardship for an executive who wishes to keep the stock (rather than sell it immediately) because he or she would have to pay not

8 LEARNING OBJECTIVE

Explain the accounting for stock-appreciation rights plans.

only income tax but the option price as well. In another type of plan (an **incentive plan**), the executive pays no taxes at exercise but may need to borrow to finance the exercise price, which leads to related interest cost.

One solution to this problem was the creation of **stock-appreciation rights (SARs)**. In this type of plan, the company gives an executive the right to receive compensation equal to the share appreciation. **Share appreciation** is the excess of the market price of the stock at the date of exercise over a pre-established price. The company may pay the share appreciation in cash, shares, or a combination of both.

The major advantage of SARs is that the executive often does not have to make a cash outlay at the date of exercise, but receives a payment for the share appreciation. Unlike shares acquired under a stock-option plan, the company does not issue the shares that constitute the basis for computing the appreciation in a SARs plan. Rather, the company simply awards the executive cash or stock having a fair value equivalent to the appreciation. The accounting for stock-appreciation rights depends on whether the company classifies the rights as equity or as a liability.

SARS—SHARE-BASED EQUITY AWARDS

Companies classify SARs as **equity awards** if at the date of exercise, the holder receives shares of stock from the company upon exercise. In essence, SARs are essentially equivalent to a stock option. The major difference relates to the form of payment. With the stock option, the holder pays the exercise price and then receives the stock. In an equity SAR, the holder receives shares in an amount equal to the **share-price appreciation** (the difference between the market price and the pre-established price). The accounting for SARs when they are equity awards follows the accounting used for stock options. At the date of grant, the company determines a fair value for the SAR and then allocates this amount to compensation expense over the service period of the employees.

SARS—SHARE-BASED LIABILITY AWARDS

Companies classify SARs as liability awards if at the date of exercise, the holder receives a cash payment. In this case the holder is not receiving additional shares of stock but a cash payment equal to the amount of share-price appreciation. The company's compensation expense therefore changes as the value of the liability changes.

A company uses the following approach to record share-based liability awards:

1. Measure the fair value of the award at the grant date and accrue compensation over the service period.
2. Remeasure the fair value each reporting period, until the award is settled. Adjust the compensation cost each period for changes in fair value prorated for the portion of the service period completed.
3. Once the service period is completed, determine compensation expense each subsequent period by reporting the full change in market price as an adjustment to compensation expense.

For liability awards, the company estimates the fair value of the SARs, using an option-pricing model. The company then allocates this total estimated compensation cost over the service period, recording expense (or a decrease in expense if fair value declines) in each period. At the end of each period, total compensation expense reported to date should equal the percentage of the total service period that has elapsed, multiplied by the total estimated compensation cost.

For example, assume that the service period is 40 percent complete and total estimated compensation is \$100,000. The company reports cumulative compensation expense to date of \$40,000 ($\$100,000 \times .40$).

The method of allocating compensation expense is called the **percentage approach**. In this method, in the first year of, say, a four-year plan, the company charges one-fourth of the estimated cost to date. In the second year, it charges off two-fourths, or 50 percent, of the estimated cost to date, less the amount already recognized in the first year. In the third year, it charges off three-fourths of the estimated cost to date, less the amount recognized previously. In the fourth year, it charges off the remaining compensation expense.

A special problem arises when the exercise date is later than the service period. In the previous example, if the stock-appreciation rights were not exercised at the end of four years, in the fifth year the company would have to account for the difference in the market price and the pre-established price. In this case, the company adjusts compensation expense whenever a change in the market price of the stock **occurs in subsequent reporting periods, until the rights expire or are exercised, whichever comes first**.

Increases or decreases in the fair value of the SAR between the date of grant and the exercise date, therefore, result in a change in the measure of compensation. Some periods will have credits to compensation expense if the fair value decreases from one period to the next. The credit to compensation expense, however, cannot exceed previously recognized compensation expense. In other words, **cumulative compensation expense cannot be negative**.

STOCK-APPRECIATION RIGHTS EXAMPLE

Assume that American Hotels, Inc. establishes a stock-appreciation rights plan on January 1, 2014. The plan entitles executives to receive cash at the date of exercise for the difference between the market price of the stock and the pre-established price of \$10 on 10,000 SARs. The fair value of the SARs on December 31, 2014, is \$3, and the service period runs for two years (2014–2015). Illustration 16A-1 indicates the amount of compensation expense to be recorded each period, assuming that the executives hold the SARs for three years, at which time they exercise the rights.

STOCK-APPRECIATION RIGHTS SCHEDULE OF COMPENSATION EXPENSE							
(1)	(2)	(3)	(4)	(5)			
Date	Fair Value	Cumulative Compensation Recognizable ^a	Percentage Accrued ^b	Cumulative Compensation Accrued to Date	Expense 2014	Expense 2015	Expense 2016
12/31/14	\$3	\$30,000	50%	\$ 15,000	\$15,000		
				55,000		\$55,000	
12/31/15	7	70,000	100%	70,000			
				(20,000)			
12/31/16	5	50,000	100%	\$ 50,000			\$(20,000)

^aCumulative compensation for unexercised SARs to be allocated to periods of service.
^bThe percentage accrued is based upon a two-year service period (2014–2015).

In 2014, American Hotels records compensation expense of \$15,000 because 50 percent of the \$30,000 total compensation cost estimated at December 31, 2014, is allocable to 2014. In 2015, the fair value increased to \$7 per right (\$70,000 total). The

ILLUSTRATION 16A-1
Compensation Expense,
Stock-Appreciation
Rights

company recorded additional compensation expense of \$55,000 (\$70,000 minus \$15,000).

The executives held the SARs through 2016, during which time the fair value declined to \$5 (and the obligation to the executives equals \$50,000). American Hotels recognizes the decrease by recording a \$20,000 credit to compensation expense and a debit to Liability under Stock-Appreciation Plan. Note that after the service period ends, since the rights are still outstanding, the company adjusts the rights to market at December 31, 2016. Any such credit to compensation expense cannot exceed previous charges to expense attributable to that plan.

As the company records the compensation expense each period, the corresponding credit is to a liability account, because the company will pay the stock appreciation in cash. American Hotels records compensation expense in the first year as follows.

Compensation Expense	15,000	
Liability under Stock-Appreciation Plan		15,000

The company would credit the liability account for \$55,000 again in 2015. In 2016, when it records negative compensation expense, American would debit the account for \$20,000. The entry to record the negative compensation expense is as follows.

Liability under Stock-Appreciation Plan	20,000	
Compensation Expense		20,000

At December 31, 2016, the executives receive \$50,000 (which equals the market price of the shares less the pre-established price). American would remove the liability with the following entry.

Liability under Stock-Appreciation Plan	50,000	
Cash		50,000

Compensation expense can increase or decrease substantially from one period to the next. The reason is that compensation expense is remeasured each year, which can lead to large swings in compensation expense.

stock-appreciation rights (SARs), 914

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 16A

8 Explain the accounting for stock-appreciation rights plans. The accounting for stock-appreciation rights depends on whether the rights are classified as equity- or liability-based. If equity-based, the accounting is similar to that used for stock options. If liability-based, companies remeasure compensation expense each period and allocate it over the service period using the percentage approach.

APPENDIX 16B

COMPREHENSIVE EARNINGS PER SHARE EXAMPLE

LEARNING OBJECTIVE 9
Compute earnings per share in a complex situation.

This appendix illustrates the method of computing dilution when many securities are involved. We present the following section of the balance sheet of Webster Corporation for analysis. Assumptions related to the capital structure follow the balance sheet.

WEBSTER CORPORATION	
BALANCE SHEET (PARTIAL)	
AT DECEMBER 31, 2014	
Long-term debt	
Notes payable, 14%	\$ 1,000,000
8% convertible bonds payable	2,500,000
10% convertible bonds payable	<u>2,500,000</u>
Total long-term debt	<u>\$ 6,000,000</u>
Stockholders' equity	
10% cumulative, convertible preferred stock, par value \$100; 100,000 shares authorized, 25,000 shares issued and outstanding	\$ 2,500,000
Common stock, par value \$1, 5,000,000 shares authorized, 500,000 shares issued and outstanding	500,000
Additional paid-in capital	2,000,000
Retained earnings	<u>9,000,000</u>
Total stockholders' equity	<u>\$14,000,000</u>

ILLUSTRATION 16B-1

Balance Sheet for
Comprehensive
Illustration

Notes and Assumptions
December 31, 2014

1. Options were granted in July 2012 to purchase 50,000 shares of common stock at \$20 per share. The average market price of Webster's common stock during 2014 was \$30 per share. All options are still outstanding at the end of 2014.
2. Both the 8 percent and 10 percent convertible bonds were issued in 2013 at face value. Each convertible bond is convertible into 40 shares of common stock. (Each bond has a face value of \$1,000.)
3. The 10 percent cumulative, convertible preferred stock was issued at the beginning of 2014 at par. Each share of preferred is convertible into four shares of common stock.
4. The average income tax rate is 40 percent.
5. The 500,000 shares of common stock were outstanding during the entire year.
6. Preferred dividends were not declared in 2014.
7. Net income was \$1,750,000 in 2014.
8. No bonds or preferred stock were converted during 2014.

The computation of basic earnings per share for 2014 starts with the amount based upon the weighted-average number of shares outstanding, as shown in Illustration 16B-2.

Net income	\$1,750,000
Less: 10% cumulative, convertible preferred stock dividend requirements	<u>250,000</u>
Income applicable to common stockholders	<u>\$1,500,000</u>
Weighted-average number of shares outstanding	<u>500,000</u>
Earnings per common share (\$1,500,000 ÷ 500,000)	<u>\$3.00</u>

ILLUSTRATION 16B-2

Computation of Earnings
per Share—Simple
Capital Structure

Note the following points concerning this calculation.

1. When preferred stock is cumulative, the company subtracts the preferred dividend to arrive at income applicable to common stock, whether the dividend is declared or not.
2. The company must compute earnings per share of \$3 as a starting point, because it is the per share amount that is subject to reduction due to the existence of convertible securities and options.

DILUTED EARNINGS PER SHARE

The steps for computing diluted earnings per share are:

1. Determine, for each dilutive security, the per share effect assuming exercise/conversion.
2. Rank the results from step 1 from smallest to largest earnings effect per share. That is, rank the results from most dilutive to least dilutive.
3. Beginning with the earnings per share based upon the weighted-average number of shares outstanding (\$3), recalculate earnings per share by adding the smallest per share effects from step 2. If the results from this recalculation are less than \$3, proceed to the next smallest per share effect and recalculate earnings per share. Continue this process so long as each recalculated earnings per share is smaller than the previous amount. The process will end either because there are no more securities to test or a particular security maintains or increases earnings per share (is antidilutive).

We'll now apply the three steps to Webster Corporation. (Note that net income and income available to common stockholders are not the same if preferred dividends are declared or cumulative.) Webster Corporation has four securities that could reduce EPS: options, 8 percent convertible bonds, 10 percent convertible bonds, and the convertible preferred stock.

The first step in the computation of diluted earnings per share is to determine a per share effect for each potentially dilutive security. Illustrations 16B-3 through 16B-6 illustrate these computations.

ILLUSTRATION 16B-3

Per Share Effect of Options (Treasury-Stock Method), Diluted Earnings per Share

Number of shares under option	50,000
Option price per share	× \$20
Proceeds upon assumed exercise of options	<u>\$1,000,000</u>
Average 2014 market price of common	<u>\$30</u>
Treasury shares that could be acquired with proceeds (\$1,000,000 ÷ \$30)	<u>33,333</u>
Excess of shares under option over treasury shares that could be repurchased (50,000 – 33,333)	<u>16,667</u>
Per share effect:	
$\frac{\text{Incremental Numerator Effect}}{\text{Incremental Denominator Effect}} = \frac{\text{None}}{16,667 \text{ shares}} =$	<u>\$0</u>

Per share effect:	
$\frac{\text{Incremental Numerator Effect}}{\text{Incremental Denominator Effect}} = \frac{\$250,000}{100,000 \text{ shares}} =$	<u>\$2.50</u>

ILLUSTRATION 16B-6
Per Share Effect of 10% Convertible Preferred (If-Converted Method), Diluted Earnings per Share

Illustration 16B-7 shows the ranking of all four potentially dilutive securities.

	Effect per Share
1. Options	\$ 0
2. 8% convertible bonds	1.20
3. 10% convertible bonds	1.50
4. 10% convertible preferred	2.50

ILLUSTRATION 16B-7
Ranking of per Share Effects (Smallest to Largest), Diluted Earnings per Share

The next step is to determine earnings per share giving effect to the ranking in Illustration 16B-7. Starting with the earnings per share of \$3 computed previously, add the incremental effects of the options to the original calculation, as follows.

Options	
Income applicable to common stockholders	\$1,500,000
Add: Incremental numerator effect of options	<u>none</u>
Total	<u>\$1,500,000</u>
Weighted-average number of shares outstanding	500,000
Add: Incremental denominator effect of options (Illustration 16B-3)	<u>16,667</u>
Total	<u>516,667</u>
Recomputed earnings per share (\$1,500,000 ÷ 516,667 shares)	<u>\$2.90</u>

ILLUSTRATION 16B-8
Recomputation of EPS Using Incremental Effect of Options

Since the recomputed earnings per share is reduced (from \$3 to \$2.90), the effect of the options is dilutive. Again, we could have anticipated this effect because the average market price (\$30) exceeded the option price (\$20).

Assuming that Webster converts the 8 percent bonds, recomputed earnings per share is as shown in Illustration 16B-9.

8% Convertible Bonds	
Numerator from previous calculation	\$1,500,000
Add: Interest expense avoided (net of tax)	<u>120,000</u>
Total	<u>\$1,620,000</u>
Denominator from previous calculation (shares)	516,667
Add: Number of common shares assumed issued upon conversion of bonds	<u>100,000</u>
Total	<u>616,667</u>
Recomputed earnings per share (\$1,620,000 ÷ 616,667 shares)	<u>\$2.63</u>

ILLUSTRATION 16B-9
Recomputation of EPS Using Incremental Effect of 8% Convertible Bonds

Since the recomputed earnings per share is reduced (from \$2.90 to \$2.63), the effect of the 8 percent bonds is dilutive.

Next, assuming Webster converts the 10 percent bonds, the company recomputes earnings per share as shown in Illustration 16B-10 (page 920).

ILLUSTRATION 16B-10

Recomputation of EPS Using Incremental Effect of 10% Convertible Bonds

10% Convertible Bonds	
Numerator from previous calculation	\$1,620,000
Add: Interest expense avoided (net of tax)	<u>150,000</u>
Total	<u>\$1,770,000</u>
Denominator from previous calculation (shares)	616,667
Add: Number of common shares assumed issued upon conversion of bonds	<u>100,000</u>
Total	<u>716,667</u>
Recomputed earnings per share ($\$1,770,000 \div 716,667$ shares)	<u>\$2.47</u>

Since the recomputed earnings per share is reduced (from \$2.63 to \$2.47), the effect of the 10 percent convertible bonds is dilutive.

The final step is the recomputation that includes the 10 percent preferred stock. This is shown in Illustration 16B-11.

ILLUSTRATION 16B-11

Recomputation of EPS Using Incremental Effect of 10% Convertible Preferred

10% Convertible Preferred	
Numerator from previous calculation	\$1,770,000
Add: Dividend requirement avoided	<u>250,000</u>
Total	<u>\$2,020,000</u>
Denominator from previous calculation (shares)	716,667
Add: Number of common shares assumed issued upon conversion of preferred	<u>100,000</u>
Total	<u>816,667</u>
Recomputed earnings per share ($\$2,020,000 \div 816,667$ shares)	<u>\$2.47</u>

Since the recomputed earnings per share is not reduced, the effect of the 10 percent convertible preferred is not dilutive. Diluted earnings per share is \$2.47. The per share effects of the preferred are not used in the computation.

Finally, Illustration 16B-12 shows Webster Corporation’s disclosure of earnings per share on its income statement.

ILLUSTRATION 16B-12

Income Statement Presentation, EPS

Net income	<u>\$1,750,000</u>
Basic earnings per common share (Note X)	<u>\$3.00</u>
Diluted earnings per common share	<u>\$2.47</u>

A company uses income from continuing operations (adjusted for preferred dividends) to determine whether potential common stock is dilutive or antidilutive. Some refer to this measure as the **control number**. To illustrate, assume that Barton Company provides the following information.

ILLUSTRATION 16B-13

Barton Company Data

Income from continuing operations	\$2,400,000
Loss from discontinued operations	<u>3,600,000</u>
Net loss	<u>\$1,200,000</u>
Weighted-average number of shares outstanding	1,000,000
Potential common stock	200,000

Barton reports basic and dilutive earnings per share as follows.

Basic earnings per share	
Income from continuing operations	\$2.40
Loss from discontinued operations	<u>3.60</u>
Net loss	<u>\$1.20</u>
Diluted earnings per share	
Income from continuing operations	\$2.00
Loss from discontinued operations	<u>3.00</u>
Net loss	<u>\$1.00</u>

ILLUSTRATION 16B-14
Basic and Diluted EPS

As Illustration 16B-14 shows, basic earnings per share from continuing operations is higher than the diluted earnings per share from continuing operations. The reason: The diluted earnings per share from continuing operations includes an additional 200,000 shares of potential common stock in its denominator.²¹

Companies use income from continuing operations as the control number because many of them show income from continuing operations (or a similar line item above net income if it appears on the income statement) but report a final net loss due to a loss on discontinued operations. If a company uses final net loss as the control number, basic and diluted earnings per share would be the same because the potential common shares are antidilutive.²²

Gateway to
the Profession

*EPS Illustration with Multiple
Dilutive Securities*

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 16B

KEY TERM

control number, 920

9 **Compute earnings per share in a complex situation.** For diluted EPS, make the following computations. (1) For each potentially dilutive security, determine the per share effect assuming exercise/conversion. (2) Rank the results from most dilutive to least dilutive. (3) Recalculate EPS starting with the most dilutive, and continue adding securities until EPS does not change or becomes larger.

DEMONSTRATION PROBLEM

On January 1, 2013, Scutaro Company issued 10-year, \$200,000 face value, 6% bonds at par (payable annually on January 1). Each \$1,000 bond is convertible into 30 shares of Garner \$2 par value common stock. The company has had 10,000 shares of common stock (and no preferred stock) outstanding throughout its life. None of the bonds have been converted as of the end of 2014.

²¹A company that does not report a discontinued operation but reports an extraordinary item should use that line item (for example, income before extraordinary items) as the control number.

²²If a company reports a loss from continuing operations, basic and diluted earnings per share will be the same because potential common stock will be antidilutive, even if the company reports final net income. The FASB believes that comparability of EPS information will be improved by using income from continuing operations as the control number.

Scutaro also has adopted a stock-option plan that granted options to key executives to purchase 4,000 shares of the company's common stock. The options were granted on January 2, 2013, and were exercisable 2 years after the date of grant if the grantee was still an employee of the company. The options expired 6 years from the date of grant. The option price was set at \$4, and the fair value option-pricing model determines the total compensation expense to be \$18,000. All of the options were exercised during the year 2015: 3,000 on January 3 when the market price was \$6, and 1,000 on May 1 when the market price was \$7 a share. (Ignore all tax effects.)

Instructions

- Prepare the journal entry Scutaro would have made on January 1, 2013, to record the issuance of the bonds.
- Prepare the journal entry to record interest expense and compensation expense in 2014.
- Scutaro's net income in 2014 was \$30,000 and was \$27,000 in 2013. Compute basic and diluted earnings per share for Scutaro for 2014 and 2013. Scutaro's average stock price was \$4.40 in 2013 and \$5 in 2014.
- Assume that 75 percent of the holders of Scutaro's convertible bonds convert their bonds to stock on June 30, 2015, when Scutaro's stock is trading at \$8 per share. Scutaro pays \$2 per bond to induce bondholders to convert. Prepare the journal entry to record the conversion.

Solution

- Under U.S. GAAP, proceeds from the issuance of convertible debt are recorded entirely as debt.

Cash	200,000	
Bonds Payable		200,000

-

December 31, 2014

Interest Expense	12,000	
Interest Payable		12,000
[To record interest expense for 2014 (\$200,000 × 6%)]		
Compensation Expense	9,000	
Paid-in Capital—Stock Options		9,000
[To record compensation expense for 2014 (1/2 × \$18,000)]		

-

	<u>2014</u>	<u>2013</u>
Basic EPS		
Net income (a)	\$30,000	\$27,000
Outstanding shares (b)	10,000	10,000
Basic EPS (a ÷ b)	<u>\$ 3.00</u>	<u>\$ 2.70</u>
Diluted EPS		
Net income	\$30,000	\$27,000
Add: Interest savings (\$200,000 × 6%)	12,000	12,000
Adjusted net income (a)	<u>\$42,000</u>	<u>\$39,000</u>
Outstanding shares	10,000	10,000
Shares upon conversion (200 × 30)	6,000	6,000
Options (treasury-stock method)	800*	364*
Total shares for diluted EPS (b)	<u>16,800</u>	<u>16,364</u>
Diluted EPS (a ÷ b)	<u>\$ 2.50</u>	<u>\$ 2.38</u>

*Treasury-stock method:

	<u>2014</u>		<u>2013</u>	
Cash proceeds	(\$4 × 4,000)	\$16,000		\$16,000
Shares repurchased	(\$16,000 ÷ \$5)	3,200	(\$16,000 ÷ \$4.40)	3,636
Net shares issued	(4,000 – 3,200)	800	(4,000 – 3,636)	364

(d)	Bond Conversion Expense**	300	
	Bonds Payable	150,000	
	Common Stock*		9,000
	Paid-in-Capital in Excess of Par—Common Stock*		141,000
	Cash		300

*\$200,000 × 75% = \$150,000 of bonds converted

\$150,000 ÷ \$1,000 per bond = 150 bonds

150 bonds × 30 shares per bond = 4,500 new shares issued

4,500 shares × \$2 par value = \$9,000 increase in common stock account

\$150,000 – \$9,000 = \$141,000 increase in paid-in capital account

**150 bonds X \$2 per bond = \$300 bond conversion expense

Exercises

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

CE16-1 Access the glossary (“Master Glossary”) to answer the following.

- (a) What is the definition of “basic earnings per share”?
- (b) What is “dilution”?
- (c) What is a “warrant”?
- (d) What is a “grant date”?

CE16-2 For how many periods must a company present EPS data?

CE16-3 For each period that an income statement is presented, what must a company disclose about its EPS?

CE16-4 If a company’s outstanding shares are increased through a stock dividend or a stock split, how would that alter the presentation of its EPS data?

An additional Codification case can be found in the Using Your Judgment section, on page 941.

Be sure to check the book’s companion website for a Review and Analysis Exercise, with solution.

WileyPLUS

Brief Exercises, Exercises, Problems, and many more learning and assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

QUESTIONS

1. What is meant by a dilutive security?
2. Briefly explain why corporations issue convertible securities.
3. Discuss the similarities and the differences between convertible debt and debt issued with stock warrants.
4. Bridgewater Corp. offered holders of its 1,000 convertible bonds a premium of \$160 per bond to induce conversion into shares of its common stock. Upon conversion of all the bonds, Bridgewater Corp. recorded the \$160,000 premium as a reduction of paid-in capital. Comment on Bridgewater's treatment of the \$160,000 "sweetener."
5. Explain how the conversion feature of convertible debt has a value (a) to the issuer and (b) to the purchaser.
6. What are the arguments for giving separate accounting recognition to the conversion feature of debentures?
7. Four years after issue, debentures with a face value of \$1,000,000 and book value of \$960,000 are tendered for conversion into 80,000 shares of common stock immediately after an interest payment date. At that time, the market price of the debentures is 104, and the common stock is selling at \$14 per share (par value \$10). The company records the conversion as follows.

Bonds Payable	1,000,000	
Discount on Bonds Payable		40,000
Common Stock		800,000
Paid-in Capital in Excess of Par— Common Stock		160,000

Discuss the propriety of this accounting treatment.
8. On July 1, 2014, Roberts Corporation issued \$3,000,000 of 9% bonds payable in 20 years. The bonds include detachable warrants giving the bondholder the right to purchase for \$30 one share of \$1 par value common stock at any time during the next 10 years. The bonds were sold for \$3,000,000. The value of the warrants at the time of issuance was \$100,000. Prepare the journal entry to record this transaction.
9. What are stock rights? How does the issuing company account for them?
10. Briefly explain the accounting requirements for stock compensation plans under GAAP.
11. Cordero Corporation has an employee stock-purchase plan which permits all full-time employees to purchase 10 shares of common stock on the third anniversary of their employment and an additional 15 shares on each subsequent anniversary date. The purchase price is set at the market price on the date purchased and no commission is charged. Discuss whether this plan would be considered compensatory.
12. What date or event does the profession believe should be used in determining the value of a stock option? What arguments support this position?
13. Over what period of time should compensation cost be allocated?
14. How is compensation expense computed using the fair value approach?
15. What are the advantages of using restricted stock to compensate employees?
16. At December 31, 2014, Reid Company had 600,000 shares of common stock issued and outstanding, 400,000 of which had been issued and outstanding throughout the year and 200,000 of which were issued on October 1, 2014. Net income for 2014 was \$2,000,000, and dividends declared on preferred stock were \$400,000. Compute Reid's earnings per common share. (Round to the nearest penny.)
17. What effect do stock dividends or stock splits have on the computation of the weighted-average number of shares outstanding?
18. Define the following terms.
 - (a) Basic earnings per share.
 - (b) Potentially dilutive security.
 - (c) Diluted earnings per share.
 - (d) Complex capital structure.
 - (e) Potential common stock.
19. What are the computational guidelines for determining whether a convertible security is to be reported as part of diluted earnings per share?
20. Discuss why options and warrants may be considered potentially dilutive common shares for the computation of diluted earnings per share.
21. Explain how convertible securities are determined to be potentially dilutive common shares and how those convertible securities that are not considered to be potentially dilutive common shares enter into the determination of earnings per share data.
22. Explain the treasury-stock method as it applies to options and warrants in computing dilutive earnings per share data.
23. Earnings per share can affect market prices of common stock. Can market prices affect earnings per share? Explain.
24. What is meant by the term antidilution? Give an example.
25. What type of earnings per share presentation is required in a complex capital structure?
- *26. How is antidilution determined when multiple securities are involved?

BRIEF EXERCISES

- 1** **BE16-1** Archer Inc. issued \$4,000,000 par value, 7% convertible bonds at 99 for cash. If the bonds had not included the conversion feature, they would have sold for 95. Prepare the journal entry to record the issuance of the bonds.
- 1** **BE16-2** Petrenko Corporation has outstanding 2,000 \$1,000 bonds, each convertible into 50 shares of \$10 par value common stock. The bonds are converted on December 31, 2014, when the unamortized discount is \$30,000 and the market price of the stock is \$21 per share. Record the conversion using the book value approach.
- 2** **BE16-3** Pechstein Corporation issued 2,000 shares of \$10 par value common stock upon conversion of 1,000 shares of \$50 par value preferred stock. The preferred stock was originally issued at \$60 per share. The common stock is trading at \$26 per share at the time of conversion. Record the conversion of the preferred stock.
- 3** **BE16-4** Eisler Corporation issued 2,000 \$1,000 bonds at 101. Each bond was issued with one detachable stock warrant. After issuance, the bonds were selling in the market at 98, and the warrants had a market price of \$40. Use the proportional method to record the issuance of the bonds and warrants.
- 3** **BE16-5** McIntyre Corporation issued 2,000 \$1,000 bonds at 101. Each bond was issued with one detachable stock warrant. After issuance, the bonds were selling separately at 98. The market price of the warrants without the bonds cannot be determined. Use the incremental method to record the issuance of the bonds and warrants.
- 4** **BE16-6** On January 1, 2014, Barwood Corporation granted 5,000 options to executives. Each option entitles the holder to purchase one share of Barwood's \$5 par value common stock at \$50 per share at any time during the next 5 years. The market price of the stock is \$65 per share on the date of grant. The fair value of the options at the grant date is \$150,000. The period of benefit is 2 years. Prepare Barwood's journal entries for January 1, 2014, and December 31, 2014 and 2015.
- 4** **BE16-7** Refer to the data for Barwood Corporation in BE16-6. Repeat the requirements assuming that instead of options, Barwood granted 2,000 shares of restricted stock.
- 4** **BE16-8** On January 1, 2014 (the date of grant), Lutz Corporation issues 2,000 shares of restricted stock to its executives. The fair value of these shares is \$75,000, and their par value is \$10,000. The stock is forfeited if the executives do not complete 3 years of employment with the company. Prepare the journal entry (if any) on January 1, 2014, and on December 31, 2014, assuming the service period is 3 years.
- 6** **BE16-9** Kalin Corporation had 2014 net income of \$1,000,000. During 2014, Kalin paid a dividend of \$2 per share on 100,000 shares of preferred stock. During 2014, Kalin had outstanding 250,000 shares of common stock. Compute Kalin's 2014 earnings per share.
- 6** **BE16-10** Douglas Corporation had 120,000 shares of stock outstanding on January 1, 2014. On May 1, 2014, Douglas issued 60,000 shares. On July 1, Douglas purchased 10,000 treasury shares, which were reissued on October 1. Compute Douglas's weighted-average number of shares outstanding for 2014.
- 6** **BE16-11** Tomba Corporation had 300,000 shares of common stock outstanding on January 1, 2014. On May 1, Tomba issued 30,000 shares. (a) Compute the weighted-average number of shares outstanding if the 30,000 shares were issued for cash. (b) Compute the weighted-average number of shares outstanding if the 30,000 shares were issued in a stock dividend.
- 7** **BE16-12** Rockland Corporation earned net income of \$300,000 in 2014 and had 100,000 shares of common stock outstanding throughout the year. Also outstanding all year was \$800,000 of 10% bonds, which are convertible into 16,000 shares of common. Rockland's tax rate is 40%. Compute Rockland's 2014 diluted earnings per share.
- 7** **BE16-13** DiCenta Corporation reported net income of \$270,000 in 2014 and had 50,000 shares of common stock outstanding throughout the year. Also outstanding all year were 5,000 shares of cumulative preferred stock, each convertible into 2 shares of common. The preferred stock pays an annual dividend of \$5 per share. DiCenta's tax rate is 40%. Compute DiCenta's 2014 diluted earnings per share.
- 7** **BE16-14** Bedard Corporation reported net income of \$300,000 in 2014 and had 200,000 shares of common stock outstanding throughout the year. Also outstanding all year were 45,000 options to purchase common stock at \$10 per share. The average market price of the stock during the year was \$15. Compute diluted earnings per share.

- 6** **BE16-15** The 2014 income statement of Wasmeier Corporation showed net income of \$480,000 and an extraordinary loss of \$120,000. Wasmeier had 100,000 shares of common stock outstanding all year. Prepare Wasmeier's income statement presentation of earnings per share.
- 8** ***BE16-16** Ferraro, Inc. established a stock-appreciation rights (SAR) program on January 1, 2014, which entitles executives to receive cash at the date of exercise for the difference between the market price of the stock and the pre-established price of \$20 on 5,000 SARs. The required service period is 2 years. The fair value of the SARs are determined to be \$4 on December 31, 2014, and \$9 on December 31, 2015. Compute Ferraro's compensation expense for 2014 and 2015.

EXERCISES

- 1** **3** **E16-1 (Issuance and Conversion of Bonds)** For each of the unrelated transactions described below, present the entry(ies) required to record each transaction.

1. Grand Corp. issued \$20,000,000 par value 10% convertible bonds at 99. If the bonds had not been convertible, the company's investment banker estimates they would have been sold at 95. Expenses of issuing the bonds were \$70,000.
2. Hoosier Company issued \$20,000,000 par value 10% bonds at 98. One detachable stock purchase warrant was issued with each \$100 par value bond. At the time of issuance, the warrants were selling for \$4.
3. Suppose **Sepracor, Inc.** called its convertible debt in 2014. Assume the following related to the transaction. The 11%, \$10,000,000 par value bonds were converted into 1,000,000 shares of \$1 par value common stock on July 1, 2014. On July 1, there was \$55,000 of unamortized discount applicable to the bonds, and the company paid an additional \$75,000 to the bondholders to induce conversion of all the bonds. The company records the conversion using the book value method.

- 1** **E16-2 (Conversion of Bonds)** Aubrey Inc. issued \$4,000,000 of 10%, 10-year convertible bonds on June 1, 2014, at 98 plus accrued interest. The bonds were dated April 1, 2014, with interest payable April 1 and October 1. Bond discount is amortized semiannually on a straight-line basis.

On April 1, 2015, \$1,500,000 of these bonds were converted into 30,000 shares of \$20 par value common stock. Accrued interest was paid in cash at the time of conversion.

Instructions

- (a) Prepare the entry to record the interest expense at October 1, 2014. Assume that accrued interest payable was credited when the bonds were issued. (Round to nearest dollar.)
 - (b) Prepare the entry(ies) to record the conversion on April 1, 2015. (Book value method is used.) Assume that the entry to record amortization of the bond discount and interest payment has been made.
- 1** **E16-3 (Conversion of Bonds)** Vargo Company has bonds payable outstanding in the amount of \$500,000, and the Premium on Bonds Payable account has a balance of \$7,500. Each \$1,000 bond is convertible into 20 shares of preferred stock of par value of \$50 per share. All bonds are converted into preferred stock.

Instructions

Assuming that the book value method was used, what entry would be made?

- 1** **E16-4 (Conversion of Bonds)** On January 1, 2013, when its \$30 par value common stock was selling for \$80 per share, Plato Corp. issued \$10,000,000 of 8% convertible debentures due in 20 years. The conversion option allowed the holder of each \$1,000 bond to convert the bond into five shares of the corporation's common stock. The debentures were issued for \$10,800,000. The present value of the bond payments at the time of issuance was \$8,500,000, and the corporation believes the difference between the present value and the amount paid is attributable to the conversion feature. On January 1, 2014, the corporation's \$30 par value common stock was split 2 for 1, and the conversion rate for the bonds was adjusted accordingly. On January 1, 2015, when the corporation's \$15 par value common stock was selling for \$135 per share, holders of 30% of the convertible debentures exercised their conversion options. The corporation uses the straight-line method for amortizing any bond discounts or premiums.

Instructions

- (a) Prepare in general journal form the entry to record the original issuance of the convertible debentures.

(b) Prepare in general journal form the entry to record the exercise of the conversion option, using the book value method. Show supporting computations in good form.

1 E16-5 (Conversion of Bonds) The December 31, 2014, balance sheet of Kepler Corp. is as follows.

10% callable, convertible bonds payable (semiannual interest dates April 30 and October 31; convertible into 6 shares of \$25 par value common stock per \$1,000 of bond principal; maturity date April 30, 2020)	\$500,000	
Discount on bonds payable	<u>10,240</u>	\$489,760

On March 5, 2015, Kepler Corp. called all of the bonds as of April 30 for the principal plus interest through April 30. By April 30, all bondholders had exercised their conversion to common stock as of the interest payment date. Consequently, on April 30, Kepler Corp. paid the semiannual interest and issued shares of common stock for the bonds. The discount is amortized on a straight-line basis. Kepler uses the book value method.

Instructions

Prepare the entry(ies) to record the interest expense and conversion on April 30, 2015. Reversing entries were made on January 1, 2015. (Round to the nearest dollar.)

1 E16-6 (Conversion of Bonds) On January 1, 2014, Gottlieb Corporation issued \$4,000,000 of 10-year, 8% convertible debentures at 102. Interest is to be paid semiannually on June 30 and December 31. Each \$1,000 debenture can be converted into eight shares of Gottlieb Corporation \$100 par value common stock after December 31, 2015.

On January 1, 2016, \$400,000 of debentures are converted into common stock, which is then selling at \$110. An additional \$400,000 of debentures are converted on March 31, 2016. The market price of the common stock is then \$115. Accrued interest at March 31 will be paid on the next interest date.

Bond premium is amortized on a straight-line basis.

Instructions

Make the necessary journal entries for:

- | | |
|------------------------|---------------------|
| (a) December 31, 2015. | (c) March 31, 2016. |
| (b) January 1, 2016. | (d) June 30, 2016. |

Record the conversions using the book value method.

3 E16-7 (Issuance of Bonds with Warrants) Illiad Inc. has decided to raise additional capital by issuing \$170,000 face value of bonds with a coupon rate of 10%. In discussions with investment bankers, it was determined that to help the sale of the bonds, detachable stock warrants should be issued at the rate of one warrant for each \$100 bond sold. The value of the bonds without the warrants is considered to be \$136,000, and the value of the warrants in the market is \$24,000. The bonds sold in the market at issuance for \$152,000.

Instructions

- What entry should be made at the time of the issuance of the bonds and warrants?
- If the warrants were nondetachable, would the entries be different? Discuss.

3 E16-8 (Issuance of Bonds with Detachable Warrants) On September 1, 2014, Sands Company sold at 104 (plus accrued interest) 4,000 of its 9%, 10-year, \$1,000 face value, nonconvertible bonds with detachable stock warrants. Each bond carried two detachable warrants. Each warrant was for one share of common stock at a specified option price of \$15 per share. Shortly after issuance, the warrants were quoted on the market for \$3 each. No fair value can be determined for the Sands Company bonds. Interest is payable on December 1 and June 1. Bond issue costs of \$30,000 were incurred.

Instructions

Prepare in general journal format the entry to record the issuance of the bonds.

(AICPA adapted)

3 E16-9 (Issuance of Bonds with Stock Warrants) On May 1, 2014, Friendly Company issued 2,000 \$1,000 bonds at 102. Each bond was issued with one detachable stock warrant. Shortly after issuance, the bonds were selling at 98, but the fair value of the warrants cannot be determined.

Instructions

- Prepare the entry to record the issuance of the bonds and warrants.
- Assume the same facts as part (a), except that the warrants had a fair value of \$30. Prepare the entry to record the issuance of the bonds and warrants.

- 4 E16-10 (Issuance and Exercise of Stock Options)** On November 1, 2014, Columbo Company adopted a stock-option plan that granted options to key executives to purchase 30,000 shares of the company's \$10 par value common stock. The options were granted on January 2, 2015, and were exercisable 2 years after the date of grant if the grantee was still an employee of the company. The options expired 6 years from date of grant. The option price was set at \$40, and the fair value option-pricing model determines the total compensation expense to be \$450,000.

All of the options were exercised during the year 2017: 20,000 on January 3 when the market price was \$67, and 10,000 on May 1 when the market price was \$77 a share.

Instructions

Prepare journal entries relating to the stock option plan for the years 2015, 2016, and 2017. Assume that the employee performs services equally in 2015 and 2016.

- 4 E16-11 (Issuance, Exercise, and Termination of Stock Options)** On January 1, 2015, Titania Inc. granted stock options to officers and key employees for the purchase of 20,000 shares of the company's \$10 par common stock at \$25 per share. The options were exercisable within a 5-year period beginning January 1, 2017, by grantees still in the employ of the company, and expiring December 31, 2021. The service period for this award is 2 years. Assume that the fair value option-pricing model determines total compensation expense to be \$350,000.

On April 1, 2016, 2,000 options were terminated when the employees resigned from the company. The market price of the common stock was \$35 per share on this date.

On March 31, 2017, 12,000 options were exercised when the market price of the common stock was \$40 per share.

Instructions

Prepare journal entries to record issuance of the stock options, termination of the stock options, exercise of the stock options, and charges to compensation expense, for the years ended December 31, 2015, 2016, and 2017.

- 4 E16-12 (Issuance, Exercise, and Termination of Stock Options)** On January 1, 2013, Nichols Corporation granted 10,000 options to key executives. Each option allows the executive to purchase one share of Nichols' \$5 par value common stock at a price of \$20 per share. The options were exercisable within a 2-year period beginning January 1, 2015, if the grantee is still employed by the company at the time of the exercise. On the grant date, Nichols' stock was trading at \$25 per share, and a fair value option-pricing model determines total compensation to be \$400,000.

On May 1, 2015, 8,000 options were exercised when the market price of Nichols' stock was \$30 per share. The remaining options lapsed in 2017 because executives decided not to exercise their options.

Instructions

Prepare the necessary journal entries related to the stock option plan for the years 2013 through 2017.

- 4 E16-13 (Accounting for Restricted Stock)** Derrick Company issues 4,000 shares of restricted stock to its CFO, Dane Yaping, on January 1, 2014. The stock has a fair value of \$120,000 on this date. The service period related to this restricted stock is 4 years. Vesting occurs if Yaping stays with the company for 4 years. The par value of the stock is \$5. At December 31, 2015, the fair value of the stock is \$145,000.

Instructions

- Prepare the journal entries to record the restricted stock on January 1, 2014 (the date of grant), and December 31, 2015.
- On March 4, 2016, Yaping leaves the company. Prepare the journal entry (if any) to account for this forfeiture.

- 4 E16-14 (Accounting for Restricted Stock)** Tweedie Company issues 10,000 shares of restricted stock to its CFO, Mary Tokar, on January 1, 2014. The stock has a fair value of \$500,000 on this date. The service period related to this restricted stock is 5 years. Vesting occurs if Tokar stays with the company until December 31, 2018. The par value of the stock is \$10. At December 31, 2014, the fair value of the stock is \$450,000.

Instructions

- Prepare the journal entries to record the restricted stock on January 1, 2014 (the date of grant), and December 31, 2015.
- On July 25, 2018, Tokar leaves the company. Prepare the journal entry (if any) to account for this forfeiture.

- 6 E16-15 (Weighted-Average Number of Shares)** Newton Inc. uses a calendar year for financial reporting. The company is authorized to issue 9,000,000 shares of \$10 par common stock. At no time has Newton issued any potentially dilutive securities. Listed below is a summary of Newton's common stock activities.

1. Number of common shares issued and outstanding at December 31, 2012	2,000,000
2. Shares issued as a result of a 10% stock dividend on September 30, 2013	200,000
3. Shares issued for cash on March 31, 2014	<u>2,000,000</u>
Number of common shares issued and outstanding at December 31, 2014	<u>4,200,000</u>
4. A 2-for-1 stock split of Newton's common stock took place on March 31, 2015	

Instructions

- Compute the weighted-average number of common shares used in computing earnings per common share for 2013 on the 2014 comparative income statement.
- Compute the weighted-average number of common shares used in computing earnings per common share for 2014 on the 2014 comparative income statement.
- Compute the weighted-average number of common shares to be used in computing earnings per common share for 2014 on the 2015 comparative income statement.
- Compute the weighted-average number of common shares to be used in computing earnings per common share for 2015 on the 2015 comparative income statement.

(CMA adapted)

- 6 E16-16 (EPS: Simple Capital Structure)** On January 1, 2015, Wilke Corp. had 480,000 shares of common stock outstanding. During 2015, it had the following transactions that affected the common stock account.

February 1	Issued 120,000 shares
March 1	Issued a 10% stock dividend
May 1	Acquired 100,000 shares of treasury stock
June 1	Issued a 3-for-1 stock split
October 1	Reissued 60,000 shares of treasury stock

Instructions

- Determine the weighted-average number of shares outstanding as of December 31, 2015.
- Assume that Wilke Corp. earned net income of \$3,456,000 during 2015. In addition, it had 100,000 shares of 9%, \$100 par nonconvertible, noncumulative preferred stock outstanding for the entire year. Because of liquidity considerations, however, the company did not declare and pay a preferred dividend in 2015. Compute earnings per share for 2015, using the weighted-average number of shares determined in part (a).
- Assume the same facts as in part (b), except that the preferred stock was cumulative. Compute earnings per share for 2015.
- Assume the same facts as in part (b), except that net income included an extraordinary gain of \$864,000 and a loss from discontinued operations of \$432,000. Both items are net of applicable income taxes. Compute earnings per share for 2015.

- 6 E16-17 (EPS: Simple Capital Structure)** Ace Company had 200,000 shares of common stock outstanding on December 31, 2015. During the year 2016, the company issued 8,000 shares on May 1 and retired 14,000 shares on October 31. For the year 2016, Ace Company reported net income of \$249,690 after a casualty loss of \$40,600 (net of tax).

Instructions

What earnings per share data should be reported at the bottom of its income statement, assuming that the casualty loss is extraordinary?

- 6 E16-18 (EPS: Simple Capital Structure)** Flagstad Inc. presented the following data.

Net income	\$2,500,000
Preferred stock: 50,000 shares outstanding, \$100 par, 8% cumulative, not convertible	5,000,000
Common stock: Shares outstanding 1/1	750,000
Issued for cash, 5/1	300,000
Acquired treasury stock for cash, 8/1	150,000
2-for-1 stock split, 10/1	

Instructions

Compute earnings per share.

- 6 E16-19 (EPS: Simple Capital Structure)** A portion of the combined statement of income and retained earnings of Seminole Inc. for the current year follows.

Income before extraordinary item		\$15,000,000
Extraordinary loss, net of applicable income tax (Note 1)		<u>1,340,000</u>
Net income		13,660,000
Retained earnings at the beginning of the year		<u>83,250,000</u>
		96,910,000
Dividends declared:		
On preferred stock—\$6.00 per share	\$ 300,000	
On common stock—\$1.75 per share	<u>14,875,000</u>	<u>15,175,000</u>
Retained earnings at the end of the year		<u>\$81,735,000</u>

Note 1. During the year, Seminole Inc. suffered a major casualty loss of \$1,340,000 after applicable income tax reduction of \$1,200,000.

At the end of the current year, Seminole Inc. has outstanding 8,500,000 shares of \$10 par common stock and 50,000 shares of 6% preferred. On April 1 of the current year, Seminole Inc. issued 1,000,000 shares of common stock for \$32 per share to help finance the casualty.

Instructions

Compute the earnings per share on common stock for the current year as it should be reported to stockholders.

- 6 E16-20 (EPS: Simple Capital Structure)** On January 1, 2014, Lennon Industries had stock outstanding as follows.

6% Cumulative preferred stock, \$100 par value, issued and outstanding 10,000 shares	\$1,000,000
Common stock, \$10 par value, issued and outstanding 200,000 shares	2,000,000

To acquire the net assets of three smaller companies, Lennon authorized the issuance of an additional 160,000 common shares. The acquisitions took place as shown below.

<u>Date of Acquisition</u>	<u>Shares Issued</u>
Company A April 1, 2014	50,000
Company B July 1, 2014	80,000
Company C October 1, 2014	30,000

On May 14, 2014, Lennon realized a \$90,000 (before taxes) insurance gain on the expropriation of investments originally purchased in 2000.

On December 31, 2014, Lennon recorded net income of \$300,000 before tax and exclusive of the gain.

Instructions

Assuming a 50% tax rate, compute the earnings per share data that should appear on the financial statements of Lennon Industries as of December 31, 2014. Assume that the expropriation is extraordinary.

- 6 E16-21 (EPS: Simple Capital Structure)** At January 1, 2014, Langley Company's outstanding shares included the following.

280,000 shares of \$50 par value, 7% cumulative preferred stock
900,000 shares of \$1 par value common stock

Net income for 2014 was \$2,530,000. No cash dividends were declared or paid during 2014. On February 15, 2015, however, all preferred dividends in arrears were paid, together with a 5% stock dividend on common shares. There were no dividends in arrears prior to 2014.

On April 1, 2014, 450,000 shares of common stock were sold for \$10 per share, and on October 1, 2014, 110,000 shares of common stock were purchased for \$20 per share and held as treasury stock.

Instructions

Compute earnings per share for 2014. Assume that financial statements for 2014 were issued in March 2015.

- 7 E16-22 (EPS with Convertible Bonds, Various Situations)** In 2013, Chirac Enterprises issued, at par, 60 \$1,000, 8% bonds, each convertible into 100 shares of common stock. Chirac had revenues of \$17,500 and

expenses other than interest and taxes of \$8,400 for 2014. (Assume that the tax rate is 40%.) Throughout 2014, 2,000 shares of common stock were outstanding; none of the bonds was converted or redeemed.

Instructions

- (a) Compute diluted earnings per share for 2014.
- (b) Assume the same facts as those assumed for part (a), except that the 60 bonds were issued on September 1, 2014 (rather than in 2013), and none have been converted or redeemed.
- (c) Assume the same facts as assumed for part (a), except that 20 of the 60 bonds were actually converted on July 1, 2014.

- 7 E16-23 (EPS with Convertible Bonds)** On June 1, 2012, Andre Company and Agassi Company merged to form Lancaster Inc. A total of 800,000 shares were issued to complete the merger. The new corporation reports on a calendar-year basis.

On April 1, 2014, the company issued an additional 400,000 shares of stock for cash. All 1,200,000 shares were outstanding on December 31, 2014.

Lancaster Inc. also issued \$600,000 of 20-year, 8% convertible bonds at par on July 1, 2014. Each \$1,000 bond converts to 40 shares of common at any interest date. None of the bonds have been converted to date.

Lancaster Inc. is preparing its annual report for the fiscal year ending December 31, 2014. The annual report will show earnings per share figures based upon a reported after-tax net income of \$1,540,000. (The tax rate is 40%.)

Instructions

Determine the following for 2014.

- (a) The number of shares to be used for calculating:
 - (1) Basic earnings per share.
 - (2) Diluted earnings per share.
- (b) The earnings figures to be used for calculating:
 - (1) Basic earnings per share.
 - (2) Diluted earnings per share.

(CMA adapted)

- 7 E16-24 (EPS with Convertible Bonds and Preferred Stock)** The Simon Corporation issued 10-year, \$5,000,000 par, 7% callable convertible subordinated debentures on January 2, 2014. The bonds have a par value of \$1,000, with interest payable annually. The current conversion ratio is 14:1, and in 2 years it will increase to 18:1. At the date of issue, the bonds were sold at 98. Bond discount is amortized on a straight-line basis. Simon's effective tax was 35%. Net income in 2014 was \$9,500,000, and the company had 2,000,000 shares outstanding during the entire year.

Instructions

- (a) Prepare a schedule to compute both basic and diluted earnings per share.
- (b) Discuss how the schedule would differ if the security was convertible preferred stock.

- 7 E16-25 (EPS with Convertible Bonds and Preferred Stock)** On January 1, 2014, Crocker Company issued 10-year, \$2,000,000 face value, 6% bonds, at par. Each \$1,000 bond is convertible into 15 shares of Crocker common stock. Crocker's net income in 2014 was \$300,000, and its tax rate was 40%. The company had 100,000 shares of common stock outstanding throughout 2014. None of the bonds were converted in 2014.

Instructions

- (a) Compute diluted earnings per share for 2014.
- (b) Compute diluted earnings per share for 2014, assuming the same facts as above, except that \$1,000,000 of 6% convertible preferred stock was issued instead of the bonds. Each \$100 preferred share is convertible into 5 shares of Crocker common stock.

- 7 E16-26 (EPS with Options, Various Situations)** Venezuela Company's net income for 2014 is \$50,000. The only potentially dilutive securities outstanding were 1,000 options issued during 2013, each exercisable for one share at \$6. None has been exercised, and 10,000 shares of common were outstanding during 2014. The average market price of Venezuela's stock during 2014 was \$20.

Instructions

- (a) Compute diluted earnings per share. (Round to nearest cent.)
- (b) Assume the same facts as those assumed for part (a), except that the 1,000 options were issued on October 1, 2014 (rather than in 2013). The average market price during the last 3 months of 2014 was \$20.

- 7 E16-27 (EPS with Contingent Issuance Agreement)** Winsor Inc. recently purchased Holiday Corp., a large midwestern home painting corporation. One of the terms of the merger was that if Holiday's income

for 2014 was \$110,000 or more, 10,000 additional shares would be issued to Holiday's stockholders in 2015. Holiday's income for 2013 was \$120,000.

Instructions

- Would the contingent shares have to be considered in Winsor's 2013 earnings per share computations?
- Assume the same facts, except that the 10,000 shares are contingent on Holiday's achieving a net income of \$130,000 in 2014. Would the contingent shares have to be considered in Winsor's earnings per share computations for 2013?

- 7** **E16-28 (EPS with Warrants)** Howat Corporation earned \$360,000 during a period when it had an average of 100,000 shares of common stock outstanding. The common stock sold at an average market price of \$15 per share during the period. Also outstanding were 15,000 warrants that could be exercised to purchase one share of common stock for \$10 for each warrant exercised.

Instructions

- Are the warrants dilutive?
- Compute basic earnings per share.
- Compute diluted earnings per share.

- 8** ***E16-29 (Stock-Appreciation Rights)** On December 31, 2010, Beckford Company issues 150,000 stock-appreciation rights to its officers entitling them to receive cash for the difference between the market price of its stock and a pre-established price of \$10. The fair value of the SARs is estimated to be \$4 per SAR on December 31, 2011; \$1 on December 31, 2012; \$10 on December 31, 2013; and \$9 on December 31, 2014. The service period is 4 years, and the exercise period is 7 years.

Instructions

- Prepare a schedule that shows the amount of compensation expense allocable to each year affected by the stock-appreciation rights plan.
- Prepare the entry at December 31, 2014, to record compensation expense, if any, in 2014.
- Prepare the entry on December 31, 2014, assuming that all 150,000 SARs are exercised.

- 8** ***E16-30 (Stock-Appreciation Rights)** Capulet Company establishes a stock-appreciation rights program that entitles its new president Ben Davis to receive cash for the difference between the market price of the stock and a pre-established price of \$30 (also market price) on December 31, 2010, on 30,000 SARs. The date of grant is December 31, 2010, and the required employment (service) period is 4 years. President Davis exercises all of the SARs in 2016. The fair value of the SARs is estimated to be \$6 per SAR on December 31, 2011; \$9 on December 31, 2012; \$15 on December 31, 2013; \$6 on December 31, 2014; and \$18 on December 31, 2015.

Instructions

- Prepare a 5-year (2011–2015) schedule of compensation expense pertaining to the 30,000 SARs granted president Davis.
- Prepare the journal entry for compensation expense in 2011, 2014, and 2015 relative to the 30,000 SARs.

EXERCISES SET B

See the book's companion website, at www.wiley.com/college/kieso, for an additional set of exercises.

PROBLEMS

- 1** **3** **P16-1 (Entries for Various Dilutive Securities)** The stockholders' equity section of Martino Inc. at the beginning of the current year appears below.

Common stock, \$10 par value, authorized 1,000,000 shares, 300,000 shares issued and outstanding	\$3,000,000
Paid-in capital in excess of par—common stock	600,000
Retained earnings	570,000

During the current year, the following transactions occurred.

1. The company issued to the stockholders 100,000 rights. Ten rights are needed to buy one share of stock at \$32. The rights were void after 30 days. The market price of the stock at this time was \$34 per share.
2. The company sold to the public a \$200,000, 10% bond issue at 104. The company also issued with each \$100 bond one detachable stock purchase warrant, which provided for the purchase of common stock at \$30 per share. Shortly after issuance, similar bonds without warrants were selling at 96 and the warrants at \$8.
3. All but 5,000 of the rights issued in (1) were exercised in 30 days.
4. At the end of the year, 80% of the warrants in (2) had been exercised, and the remaining were outstanding and in good standing.
5. During the current year, the company granted stock options for 10,000 shares of common stock to company executives. The company, using a fair value option-pricing model, determines that each option is worth \$10. The option price is \$30. The options were to expire at year-end and were considered compensation for the current year.
6. All but 1,000 shares related to the stock-option plan were exercised by year-end. The expiration resulted because one of the executives failed to fulfill an obligation related to the employment contract.

Instructions

- (a) Prepare general journal entries for the current year to record the transactions listed above.
- (b) Prepare the stockholders' equity section of the balance sheet at the end of the current year. Assume that retained earnings at the end of the current year is \$750,000.

1

P16-2 (Entries for Conversion, Amortization, and Interest of Bonds) Volker Inc. issued \$2,500,000 of convertible 10-year bonds on July 1, 2014. The bonds provide for 12% interest payable semiannually on January 1 and July 1. The discount in connection with the issue was \$54,000, which is being amortized monthly on a straight-line basis.

The bonds are convertible after one year into 8 shares of Volker Inc.'s \$100 par value common stock for each \$1,000 of bonds.

On August 1, 2015, \$250,000 of bonds were turned in for conversion into common stock. Interest has been accrued monthly and paid as due. At the time of conversion, any accrued interest on bonds being converted is paid in cash.

Instructions

Prepare the journal entries to record the conversion, amortization, and interest in connection with the bonds as of the following dates. (Round to the nearest dollar.)

- (a) August 1, 2015. (Assume the book value method is used.)
- (b) August 31, 2015.
- (c) December 31, 2015, including closing entries for end-of-year.

(AICPA adapted)

4

P16-3 (Stock-Option Plan) Berg Company adopted a stock-option plan on November 30, 2013, that provided that 70,000 shares of \$5 par value stock be designated as available for the granting of options to officers of the corporation at a price of \$9 a share. The market price was \$12 a share on November 30, 2014.

On January 2, 2014, options to purchase 28,000 shares were granted to president Tom Winter—15,000 for services to be rendered in 2014 and 13,000 for services to be rendered in 2015. Also on that date, options to purchase 14,000 shares were granted to vice president Michelle Bennett—7,000 for services to be rendered in 2014 and 7,000 for services to be rendered in 2015. The market price of the stock was \$14 a share on January 2, 2014. The options were exercisable for a period of one year following the year in which the services were rendered. The fair value of the options on the grant date was \$4 per option.

In 2015, neither the president nor the vice president exercised their options because the market price of the stock was below the exercise price. The market price of the stock was \$8 a share on December 31, 2015, when the options for 2014 services lapsed.

On December 31, 2016, both president Winter and vice president Bennett exercised their options for 13,000 and 7,000 shares, respectively, when the market price was \$16 a share.

Instructions

Prepare the necessary journal entries in 2013 when the stock-option plan was adopted, in 2014 when options were granted, in 2015 when options lapsed, and in 2016 when options were exercised.

4

P16-4 (Stock-Based Compensation) Assume that **Amazon.com** has a stock-option plan for top management. Each stock option represents the right to purchase a share of Amazon \$1 par value common stock in

the future at a price equal to the fair value of the stock at the date of the grant. Amazon has 5,000 stock options outstanding, which were granted at the beginning of 2014. The following data relate to the option grant.

Exercise price for options	\$40
Market price at grant date (January 1, 2014)	\$40
Fair value of options at grant date (January 1, 2014)	\$6
Service period	5 years

Instructions

- Prepare the journal entry(ies) for the first year of the stock-option plan.
- Prepare the journal entry(ies) for the first year of the plan assuming that, rather than options, 700 shares of restricted stock were granted at the beginning of 2014.
- Now assume that the market price of Amazon stock on the grant date was \$45 per share. Repeat the requirements for (a) and (b).
- Amazon would like to implement an employee stock-purchase plan for rank-and-file employees, but it would like to avoid recording expense related to this plan. Which of the following provisions must be in place for the plan to avoid recording compensation expense?
 - Substantially all employees may participate.
 - The discount from market is small (less than 5%).
 - The plan offers no substantive option feature.
 - There is no preferred stock outstanding.

7 P16-5 (EPS with Complex Capital Structure) Amy Dyken, controller at Fitzgerald Pharmaceutical Industries, a public company, is currently preparing the calculation for basic and diluted earnings per share and the related disclosure for Fitzgerald's financial statements. Below is selected financial information for the fiscal year ended June 30, 2014.

FITZGERALD PHARMACEUTICAL INDUSTRIES
SELECTED BALANCE SHEET
INFORMATION
JUNE 30, 2014

Long-term debt	
Notes payable, 10%	\$ 1,000,000
8% convertible bonds payable	5,000,000
10% bonds payable	<u>6,000,000</u>
Total long-term debt	<u>\$12,000,000</u>
Shareholders' equity	
Preferred stock, 6% cumulative, \$50 par value, 100,000 shares authorized, 25,000 shares issued and outstanding	\$ 1,250,000
Common stock, \$1 par, 10,000,000 shares authorized, 1,000,000 shares issued and outstanding	1,000,000
Additional paid-in capital	4,000,000
Retained earnings	<u>6,000,000</u>
Total shareholders' equity	<u>\$12,250,000</u>

The following transactions have also occurred at Fitzgerald.

- Options were granted on July 1, 2013, to purchase 200,000 shares at \$15 per share. Although no options were exercised during fiscal year 2014, the average price per common share during fiscal year 2014 was \$20 per share.
- Each bond was issued at face value. The 8% convertible bonds will convert into common stock at 50 shares per \$1,000 bond. The bonds are exercisable after 5 years and were issued in fiscal year 2013.
- The preferred stock was issued in 2013.
- There are no preferred dividends in arrears; however, preferred dividends were not declared in fiscal year 2014.
- The 1,000,000 shares of common stock were outstanding for the entire 2014 fiscal year.
- Net income for fiscal year 2014 was \$1,500,000, and the average income tax rate is 40%.

Instructions

For the fiscal year ended June 30, 2014, calculate the following for Fitzgerald Pharmaceutical Industries.

- (a) Basic earnings per share.
- (b) Diluted earnings per share.

6 P16-6 (Basic EPS: Two-Year Presentation) Melton Corporation is preparing the comparative financial statements for the annual report to its shareholders for fiscal years ended May 31, 2014, and May 31, 2015. The income from operations for each year was \$1,800,000 and \$2,500,000, respectively. In both years, the company incurred a 10% interest expense on \$2,400,000 of debt, an obligation that requires interest-only payments for 5 years. The company experienced a loss of \$600,000 from a fire in its Scotland facility in February 2015, which was determined to be an extraordinary loss. The company uses a 40% effective tax rate for income taxes.

The capital structure of Melton Corporation on June 1, 2013, consisted of 1 million shares of common stock outstanding and 20,000 shares of \$50 par value, 6%, cumulative preferred stock. There were no preferred dividends in arrears, and the company had not issued any convertible securities, options, or warrants.

On October 1, 2013, Melton sold an additional 500,000 shares of the common stock at \$20 per share. Melton distributed a 20% stock dividend on the common shares outstanding on January 1, 2014. On December 1, 2014, Melton was able to sell an additional 800,000 shares of the common stock at \$22 per share. These were the only common stock transactions that occurred during the two fiscal years.

Instructions

- (a) Identify whether the capital structure at Melton Corporation is a simple or complex capital structure, and explain why.
- (b) Determine the weighted-average number of shares that Melton Corporation would use in calculating earnings per share for the fiscal year ended:
 - (1) May 31, 2014.
 - (2) May 31, 2015.
- (c) Prepare, in good form, a comparative income statement, beginning with income from operations, for Melton Corporation for the fiscal years ended May 31, 2014, and May 31, 2015. This statement will be included in Melton's annual report and should display the appropriate earnings per share presentations.

(CMA adapted)

7 P16-7 (Computation of Basic and Diluted EPS) Charles Austin of the controller's office of Thompson Corporation was given the assignment of determining the basic and diluted earnings per share values for the year ending December 31, 2015. Austin has compiled the information listed below.

1. The company is authorized to issue 8,000,000 shares of \$10 par value common stock. As of December 31, 2014, 2,000,000 shares had been issued and were outstanding.
2. The per share market prices of the common stock on selected dates were as follows.

	<u>Price per Share</u>
July 1, 2014	\$20.00
January 1, 2015	21.00
April 1, 2015	25.00
July 1, 2015	11.00
August 1, 2015	10.50
November 1, 2015	9.00
December 31, 2015	10.00

3. A total of 700,000 shares of an authorized 1,200,000 shares of convertible preferred stock had been issued on July 1, 2014. The stock was issued at its par value of \$25, and it has a cumulative dividend of \$3 per share. The stock is convertible into common stock at the rate of one share of convertible preferred for one share of common. The rate of conversion is to be automatically adjusted for stock splits and stock dividends. Dividends are paid quarterly on September 30, December 31, March 31, and June 30.
4. Thompson Corporation is subject to a 40% income tax rate.
5. The after-tax net income for the year ended December 31, 2015, was \$11,550,000.

The following specific activities took place during 2015.

1. January 1—A 5% common stock dividend was issued. The dividend had been declared on December 1, 2014, to all stockholders of record on December 29, 2014.

2. April 1—A total of 400,000 shares of the \$3 convertible preferred stock was converted into common stock. The company issued new common stock and retired the preferred stock. This was the only conversion of the preferred stock during 2015.
3. July 1—A 2-for-1 split of the common stock became effective on this date. The board of directors had authorized the split on June 1.
4. August 1—A total of 300,000 shares of common stock were issued to acquire a factory building.
5. November 1—A total of 24,000 shares of common stock were purchased on the open market at \$9 per share. These shares were to be held as treasury stock and were still in the treasury as of December 31, 2015.
6. Common stock cash dividends—Cash dividends to common stockholders were declared and paid as follows.

April 15—\$0.30 per share
October 15—\$0.20 per share
7. Preferred stock cash dividends—Cash dividends to preferred stockholders were declared and paid as scheduled.

Instructions

- (a) Determine the number of shares used to compute basic earnings per share for the year ended December 31, 2015.
- (b) Determine the number of shares used to compute diluted earnings per share for the year ended December 31, 2015.
- (c) Compute the adjusted net income to be used as the numerator in the basic earnings per share calculation for the year ended December 31, 2015.

7 P16-8 (Computation of Basic and Diluted EPS) The information below pertains to Barkley Company for 2015.

Net income for the year	\$1,200,000
7% convertible bonds issued at par (\$1,000 per bond); each bond is convertible into 30 shares of common stock	2,000,000
6% convertible, cumulative preferred stock, \$100 par value; each share is convertible into 3 shares of common stock	4,000,000
Common stock, \$10 par value	6,000,000
Tax rate for 2015	40%
Average market price of common stock	\$25 per share

There were no changes during 2015 in the number of common shares, preferred shares, or convertible bonds outstanding. There is no treasury stock. The company also has common stock options (granted in a prior year) to purchase 75,000 shares of common stock at \$20 per share.

Instructions

- (a) Compute basic earnings per share for 2015.
- (b) Compute diluted earnings per share for 2015.

6 P16-9 (EPS with Stock Dividend and Extraordinary Items) Agassi Corporation is preparing the comparative financial statements to be included in the annual report to stockholders. Agassi employs a fiscal year ending May 31.

Income from operations before income taxes for Agassi was \$1,400,000 and \$660,000, respectively, for fiscal years ended May 31, 2015 and 2014. Agassi experienced an extraordinary loss of \$400,000 because of an earthquake on March 3, 2015. A 40% combined income tax rate pertains to any and all of Agassi Corporation's profits, gains, and losses.

Agassi's capital structure consists of preferred stock and common stock. The company has not issued any convertible securities or warrants and there are no outstanding stock options.

Agassi issued 40,000 shares of \$100 par value, 6% cumulative preferred stock in 2011. All of this stock is outstanding, and no preferred dividends are in arrears.

There were 1,000,000 shares of \$1 par common stock outstanding on June 1, 2013. On September 1, 2013, Agassi sold an additional 400,000 shares of the common stock at \$17 per share. Agassi distributed a 20% stock dividend on the common shares outstanding on December 1, 2014. These were the only common stock transactions during the past 2 fiscal years.

Instructions

- (a) Determine the weighted-average number of common shares that would be used in computing earnings per share on the current comparative income statement for:
 - (1) The year ended May 31, 2014.
 - (2) The year ended May 31, 2015.

- (b) Starting with income from operations before income taxes, prepare a comparative income statement for the years ended May 31, 2015 and 2014. The statement will be part of Agassi Corporation's annual report to stockholders and should include appropriate earnings per share presentation.
- (c) The capital structure of a corporation is the result of its past financing decisions. Furthermore, the earnings per share data presented on a corporation's financial statements is dependent upon the capital structure.
 - (1) Explain why Agassi Corporation is considered to have a simple capital structure.
 - (2) Describe how earnings per share data would be presented for a corporation that has a complex capital structure.

(CMA adapted)

PROBLEMS SET B

See the book's companion website, at www.wiley.com/college/kieso, for an additional set of problems.

CONCEPTS FOR ANALYSIS

CA16-1 (Warrants Issued with Bonds and Convertible Bonds) Incurring long-term debt with an arrangement whereby lenders receive an option to buy common stock during all or a portion of the time the debt is outstanding is a frequent corporate financing practice. In some situations, the result is achieved through the issuance of convertible bonds; in others, the debt instruments and the warrants to buy stock are separate.

Instructions

- (a) (1) Describe the differences that exist in current accounting for original proceeds of the issuance of convertible bonds and of debt instruments with separate warrants to purchase common stock.
- (2) Discuss the underlying rationale for the differences described in (a)(1) above.
- (3) Summarize the arguments that have been presented in favor of accounting for convertible bonds in the same manner as accounting for debt with separate warrants.
- (b) At the start of the year, Huish Company issued \$18,000,000 of 12% bonds along with detachable warrants to buy 1,200,000 shares of its \$10 par value common stock at \$18 per share. The bonds mature over the next 10 years, starting one year from date of issuance, with annual maturities of \$1,800,000. At the time, Huish had 9,600,000 shares of common stock outstanding. The company received \$20,040,000 for the bonds and the warrants. For Huish Company, 12% was a relatively low borrowing rate. If offered alone, at this time, the bonds would have sold in the market at a 22% discount. Prepare the journal entry (or entries) for the issuance of the bonds and warrants for the cash consideration received.

(AICPA adapted)

CA16-2 (Ethical Issues—Compensation Plan) The executive officers of Rouse Corporation have a performance-based compensation plan. The performance criteria of this plan is linked to growth in earnings per share. When annual EPS growth is 12%, the Rouse executives earn 100% of the shares; if growth is 16%, they earn 125%. If EPS growth is lower than 8%, the executives receive no additional compensation.

In 2014, Joan Devers, the controller of Rouse, reviews year-end estimates of bad debt expense and warranty expense. She calculates the EPS growth at 15%. Kurt Adkins, a member of the executive group, remarks over lunch one day that the estimate of bad debt expense might be decreased, increasing EPS growth to 16.1%. Devers is not sure she should do this because she believes that the current estimate of bad debts is sound. On the other hand, she recognizes that a great deal of subjectivity is involved in the computation.

Instructions

Answer the following questions.

- (a) What, if any, is the ethical dilemma for Devers?
- (b) Should Devers's knowledge of the compensation plan be a factor that influences her estimate?
- (c) How should Devers respond to Adkins's request?

CA16-3 (Stock Warrants—Various Types) For various reasons a corporation may issue warrants to purchase shares of its common stock at specified prices that, depending on the circumstances, may be less than, equal to, or greater than the current market price. For example, warrants may be issued:

1. To existing stockholders on a pro rata basis.
2. To certain key employees under an incentive stock-option plan.
3. To purchasers of the corporation's bonds.

Instructions

For each of the three examples of how stock warrants are used:

- (a) Explain why they are used.
- (b) Discuss the significance of the price (or prices) at which the warrants are issued (or granted) in relation to (1) the current market price of the company's stock, and (2) the length of time over which they can be exercised.
- (c) Describe the information that should be disclosed in financial statements, or notes thereto, that are prepared when stock warrants are outstanding in the hands of the three groups listed above.

(AICPA adapted)

CA16-4 (Stock Compensation Plans) The following two items appeared on the Internet concerning the GAAP requirement to expense stock options.

WASHINGTON, D.C.—February 17, 2005 Congressman David Dreier (R-CA), Chairman of the House Rules Committee, and Congresswoman Anna Eshoo (D-CA) reintroduced legislation today that will preserve broad-based employee stock option plans and give investors critical information they need to understand how employee stock options impact the value of their shares.

"Last year, the U.S. House of Representatives overwhelmingly voted for legislation that would have ensured the continued ability of innovative companies to offer stock options to rank-and-file employees," Dreier stated. "Both the Financial Accounting Standards Board (FASB) and the Securities and Exchange Commission (SEC) continue to ignore our calls to address legitimate concerns about the impact of FASB's new standard on workers' ability to have an ownership stake in the New Economy, and its failure to address the real need of shareholders: accurate and meaningful information about a company's use of stock options."

"In December 2004, FASB issued a stock option expensing standard that will render a huge blow to the 21st century economy," Dreier said. "Their action and the SEC's apparent lack of concern for protecting shareholders, requires us to once again take a firm stand on the side of investors and economic growth. Giving investors the ability to understand how stock options impact the value of their shares is critical. And equally important is preserving the ability of companies to use this innovative tool to attract talented employees."

"Here We Go Again!" by Jack Ciesielski (2/21/2005, <http://www.accountingobserver.com/blog/2005/02/here-we-go-again>) On February 17, Congressman David Dreier (R-CA), and Congresswoman Anna Eshoo (D-CA), officially entered Silicon Valley's bid to gum up the launch of honest reporting of stock option compensation: They co-sponsored a bill to "preserve broad-based employee stock option plans and give investors critical information they need to understand how employee stock options impact the value of their shares." You know what "critical information" they mean: stuff like the stock compensation for the top five officers in a company, with a rigged value set as close to zero as possible. Investors *crave* this kind of information. Other ways the good Congresspersons want to "help" investors: The bill "also requires the SEC to study the effectiveness of those disclosures over three years, during which time, no new accounting standard related to the treatment of stock options could be recognized. Finally, the bill requires the Secretary of Commerce to conduct a study and report to Congress on the impact of broad-based employee stock option plans on expanding employee corporate ownership, skilled worker recruitment and retention, research and innovation, economic growth, and international competitiveness."

It's the old "four corners" basketball strategy: stall, stall, stall. In the meantime, hope for regime change at your opponent, the FASB.

Instructions

- (a) What are the major recommendations of the stock-based compensation pronouncement?
- (b) How do the provisions of GAAP in this area differ from the bill introduced by members of Congress (Dreier and Eshoo), which would require expensing for options issued to only the top five officers in a company? Which approach do you think would result in more useful information? (Focus on comparability.)

- (c) The bill in Congress urges the FASB to develop a rule that preserves “the ability of companies to use this innovative tool to attract talented employees.” Write a response to these Congress-people explaining the importance of neutrality in financial accounting and reporting.

CA16-5 (EPS: Preferred Dividends, Options, and Convertible Debt) “Earnings per share” (EPS) is the most featured, single financial statistic about modern corporations. Daily published quotations of stock prices have recently been expanded to include for many securities a “times earnings” figure that is based on EPS. Stock analysts often focus their discussions on the EPS of the corporations they study.

Instructions

- (a) Explain how dividends or dividend requirements on any class of preferred stock that may be outstanding affect the computation of EPS.
- (b) One of the technical procedures applicable in EPS computations is the “treasury-stock method.” Briefly describe the circumstances under which it might be appropriate to apply the treasury-stock method.
- (c) Convertible debentures are considered potentially dilutive common shares. Explain how convertible debentures are handled for purposes of EPS computations.

(AICPA adapted)

CA16-6 (EPS, Antidilution) Brad Dolan, a stockholder of Rhode Corporation, has asked you, the firm’s accountant, to explain why his stock warrants were not included in diluted EPS. In order to explain this situation, you must briefly explain what dilutive securities are, why they are included in the EPS calculation, and why some securities are antidilutive and thus not included in this calculation.

Rhode Corporation earned \$228,000 during the period, when it had an average of 100,000 shares of common stock outstanding. The common stock sold at an average market price of \$25 per share during the period. Also outstanding were 30,000 warrants that could be exercised to purchase one share of common stock at \$30 per warrant.

Instructions

Write Mr. Dolan a 1–1.5-page letter explaining why the warrants are not included in the calculation.

USING YOUR JUDGMENT

FINANCIAL REPORTING

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix 5B. The company’s complete annual report, including the notes to the financial statements, can be accessed at the book’s companion website, www.wiley.com/college/kieso.

Instructions

Refer to P&G’s financial statements and accompanying notes to answer the following questions.

- (a) Under P&G’s stock-based compensation plan, stock options are granted annually to key managers and directors.
- (1) How many options were granted during 2011 under the plan?
 - (2) How many options were exercisable at June 30, 2011?
 - (3) How many options were exercised in 2011, and what was the average price of those exercised?
 - (4) How many years from the grant date do the options expire?
 - (5) To what accounts are the proceeds from these option exercises credited?
 - (6) What was the number of outstanding options at June 30, 2011, and at what average exercise price?
- (b) What number of diluted weighted-average common shares outstanding was used by P&G in computing earnings per share for 2011, 2010, and 2009? What was P&G’s diluted earnings per share in 2011, 2010, and 2009?
- (c) What other stock-based compensation plans does P&G have?

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

Instructions

Go to the book's companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- What employee stock-option compensation plans are offered by Coca-Cola and PepsiCo?
- How many options are outstanding at year-end 2011 for both Coca-Cola and PepsiCo?
- How many options were granted by Coca-Cola and PepsiCo to officers and employees during 2011?
- How many options were exercised during 2011?
- What was the average exercise price for Coca-Cola and PepsiCo employees during 2011?
- What are the weighted-average number of shares used by Coca-Cola and PepsiCo in 2011, 2010, and 2009 to compute diluted earnings per share?
- What was the diluted net income per share for Coca-Cola and PepsiCo for 2011, 2010, and 2009?

Financial Statement Analysis Case

Ragatz, Inc.

Ragatz, Inc., a drug company, reported the following information. The company prepares its financial statements in accordance with GAAP.

	2014 (,000)
Current liabilities	\$ 554,114
Convertible subordinated debt	648,020
Total liabilities	1,228,313
Stockholders' equity	176,413
Net income	58,333

Analysts attempting to compare Ragatz to drug companies that issue debt with detachable warrants may face a challenge due to differences in accounting for convertible debt.

Instructions

- Compute the following ratios for Ragatz, Inc. (Assume that year-end balances approximate annual averages.)
 - Return on assets.
 - Return on common stock equity.
 - Debt to assets ratio.
- Briefly discuss the operating performance and financial position of Ragatz. Industry averages for these ratios in 2014 were ROA 3.5%; return on equity 16%; and debt to assets 75%. Based on this analysis, would you make an investment in the company's 5% convertible bonds? Explain.
- Assume you want to compare Ragatz to an IFRS company like **Merck** (which issues nonconvertible debt with detachable warrants). Assuming that the fair value of the equity component of Ragatz's convertible bonds is \$150,000, how would you adjust the analysis above to make valid comparisons between Ragatz and Merck?

Accounting, Analysis, and Principles

On January 1, 2013, Garner issued 10-year, \$200,000 face value, 6% bonds at par. Each \$1,000 bond is convertible into 30 shares of Garner \$2 par value common stock. The company has had 10,000 shares of common stock (and no preferred stock) outstanding throughout its life. None of the bonds have been converted as of the end of 2014. (Ignore all tax effects.)

Accounting

- Prepare the journal entry Garner would have made on January 1, 2013, to record the issuance of the bonds.
- Garner's net income in 2014 was \$30,000 and was \$27,000 in 2013. Compute basic and diluted earnings per share for Garner for 2014 and 2013.
- Assume that 75% of the holders of Garner's convertible bonds convert their bonds to stock on June 30, 2015, when Garner's stock is trading at \$32 per share. Garner pays \$50 per bond to induce bondholders to convert. Prepare the journal entry to record the conversion.

Analysis

Show how Garner will report income and EPS for 2014 and 2013. Briefly discuss the importance of GAAP for EPS to analysts evaluating companies based on price-earnings ratios. Consider comparisons for a company over time, as well as comparisons between companies at a point in time.

Principles

In order to converge GAAP and IFRS, the FASB is considering whether the equity element of a convertible bond should be reported as equity. Describe how the journal entry you made in part (a) above would differ under IFRS. In terms of the accounting principles discussed in Chapter 2, what does IFRS for convertible debt accomplish that GAAP potentially sacrifices? What does GAAP for convertible debt accomplish that IFRS potentially sacrifices?

BRIDGE TO THE PROFESSION

Professional Research: FASB Codification

Richardson Company is contemplating the establishment of a share-based compensation plan to provide long-run incentives for its top management. However, members of the compensation committee of the board of directors have voiced some concerns about adopting these plans, based on news accounts related to a recent accounting standard in this area. They would like you to conduct some research on this recent standard so they can be better informed about the accounting for these plans.

Instructions

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

- Identify the authoritative literature that addresses the accounting for share-based payment compensation plans.
- Briefly discuss the objectives for the accounting for stock compensation. What is the role of fair value measurement?
- The Richardson Company board is also considering an employee share-purchase plan, but the Board does not want to record expense related to the plan. What criteria must be met to avoid recording expense on an employee stock-purchase plan?

Additional Professional Resources

See the book's companion website, at www.wiley.com/college/kieso, for professional simulations as well as other study resources.

IFRS

INSIGHTS

The primary IFRS related to financial instruments, including dilutive securities, is *IAS 39, "Financial Instruments: Recognition and Measurement."* The accounting for various forms of stock-based compensation under IFRS is found in *IFRS 2, "Share-Based Payment."* This standard was recently amended, resulting in significant convergence between IFRS and GAAP in this area. The IFRS addressing accounting and reporting for earnings per share computations is *IAS 33, "Earnings per Share."*

10 LEARNING OBJECTIVE

Compare the accounting for dilutive securities and earnings per share under GAAP and IFRS.

RELEVANT FACTS

Following are the key similarities and differences between GAAP and IFRS related to dilutive securities and earnings per share.

Similarities

- IFRS and GAAP follow the same model for recognizing stock-based compensation: The fair value of shares and options awarded to employees is recognized over the period to which the employees' services relate.
- Although the calculation of basic and diluted earnings per share is similar between IFRS and GAAP, the Boards are working to resolve the few minor differences in EPS reporting. One proposal in the FASB project concerns contracts that can be settled in either cash or shares. IFRS requires that share settlement must be used, while GAAP gives companies a choice. The FASB project proposes adopting the IFRS approach, thus converging GAAP and IFRS in this regard.

Differences

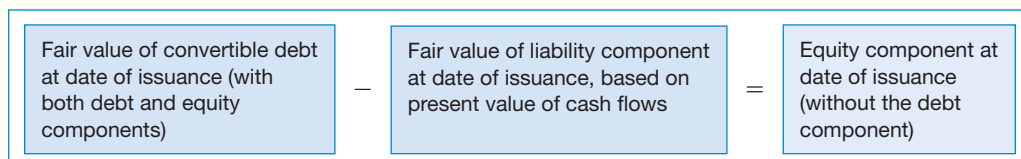

- A significant difference between IFRS and GAAP is the accounting for securities with characteristics of debt and equity, such as convertible debt. Under GAAP, all of the proceeds of convertible debt are recorded as long-term debt. Under IFRS, convertible bonds are "bifurcated"—separated into the equity component (the value of the conversion option) of the bond issue and the debt component.
- Related to employee share-purchase plans, under IFRS, all employee share-purchase plans are deemed to be compensatory; that is, compensation expense is recorded for the amount of the discount. Under GAAP, these plans are often considered noncompensatory and therefore no compensation is recorded. Certain conditions must exist before a plan can be considered noncompensatory—the most important being that the discount generally cannot exceed 5 percent.
- Modification of a share option results in the recognition of any incremental fair value under both IFRS and GAAP. However, if the modification leads to a reduction, IFRS does not permit the reduction but GAAP does.
- Other EPS differences relate to (1) the treasury-stock method and how the proceeds from extinguishment of a liability should be accounted for, and (2) how to compute the weighted average of contingently issuable shares.

ABOUT THE NUMBERS

Accounting for Convertible Debt

Convertible debt is accounted for as a **compound instrument** because it contains both a liability and an equity component. IFRS requires that compound instruments be separated into their liability and equity components for purposes of accounting. Companies use the "**with-and-without**" method to value compound instruments. Illustration IFRS16-1 identifies the components used in the with-and-without method.

ILLUSTRATION IFRS16-1 Convertible Debt Components

As indicated, the equity component is the residual amount after subtracting the liability component. IFRS does not permit companies to assign a value to the equity amount first and then determine the liability component. To do so would be inconsistent with the

definition of equity, which is considered a residual amount. To implement the with-and-without approach, companies do the following.

1. First, the company determines the total fair value of the convertible debt *with* both the liability and equity component. **This is straightforward, as this amount is the proceeds received upon issuance.**
2. The company then determines the liability component by computing the net present value of all contractual future cash flows discounted at the market rate of interest. This market rate is the rate the company would pay on similar nonconvertible debt.
3. In the final step, the company subtracts the liability component estimated in the second step from the fair value of the convertible debt (issue proceeds) to arrive at the equity component. That is, the equity component is the fair value of the convertible debt *without* the liability component.

Accounting at Time of Issuance

To illustrate the accounting for convertible debt, assume that **Roche Group** issues 2,000 convertible bonds at the beginning of 2013. The bonds have a four-year term with a stated rate of interest of 6 percent, and are issued at par with a face value of \$1,000 per bond (the total proceeds received from issuance of the bonds are \$2,000,000). Interest is payable annually at December 31. Each bond is convertible into 250 ordinary shares with a par value of \$1. The market rate of interest on similar nonconvertible debt is 9 percent. The time diagram in Illustration IFRS16-2 depicts both the interest and principal cash flows.

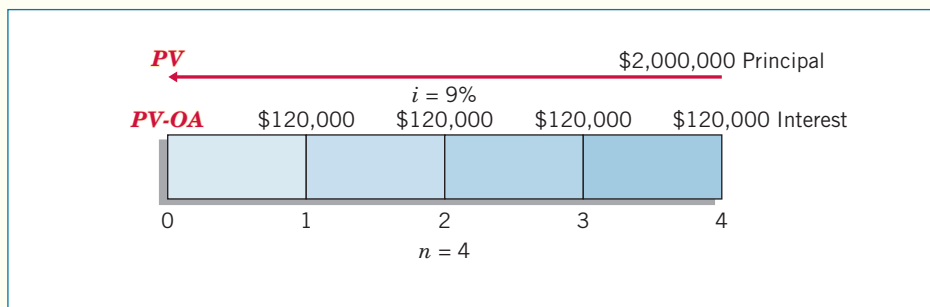

ILLUSTRATION IFRS16-2
Time Diagram for Convertible Bond

The liability component of the convertible debt is computed as shown in Illustration IFRS16-3.

Present value of principal: $\$2,000,000 \times .70843$ (Table 6-2; $n = 4, i = 9\%$)	\$1,416,860
Present value of the interest payments: $\$120,000 \times 3.23972$ (Table 6-4; $n = 4, i = 9\%$)	<u>388,766</u>
Present value of the liability component	<u>\$1,805,626</u>

ILLUSTRATION IFRS16-3
Fair Value of Liability Component of Convertible Bond

The equity component of Roche's convertible debt is then computed as shown in Illustration IFRS16-4.

Fair value of convertible debt at date of issuance	\$2,000,000
Less: Fair value of liability component at date of issuance	<u>1,805,626</u>
Fair value of equity component at date of issuance	<u>\$ 194,374</u>

ILLUSTRATION IFRS16-4
Equity Component of Convertible Bond

The journal entry to record this transaction is as follows.

Cash	2,000,000	
Bonds Payable		1,805,626
Share Premium—Conversion Equity		194,374

The liability component of Roche's convertible debt issue is recorded as Bonds Payable. As shown in Chapter 14, the amount of the discount relative to the face value of the bond is amortized at each reporting period so at maturity, the Bonds Payable account is reported at \$2,000,000 (face value). The equity component of the convertible bond is recorded in the Share Premium—Conversion Equity account and is reported in the equity section of the statement of financial position. Because this amount is considered part of contributed capital, it does not change over the life of the convertible. **Transaction costs related to the liability and equity components are allocated in proportion to the proceeds received from the two components.** For purposes of homework, use the Share Premium—Conversion Equity account to record the equity component. **In practice, there may be considerable variation in the accounts used to record this component.**

Settlement of Convertible Bonds

We illustrate four settlement situations: (1) repurchase at maturity, (2) conversion at maturity, (3) conversion before maturity, and (4) repurchase before maturity.

Repurchase at Maturity. If the bonds are not converted at maturity, Roche makes the following entry to pay off the convertible debtholders.

Bonds Payable	2,000,000	
Cash		2,000,000
(To record the purchase of bonds at maturity)		

Because the carrying value of the bonds equals the face value, there is no gain or loss on repurchase at maturity. The amount originally allocated to equity of \$194,374 either remains in the Share Premium—Conversion Equity account or is transferred to Share Premium—Ordinary.

Conversion of Bonds at Maturity. If the bonds are converted at maturity, Roche makes the following entry.

Share Premium—Conversion Equity	194,374	
Bonds Payable	2,000,000	
Share Capital—Ordinary		500,000
Share Premium—Ordinary		1,694,374
(To record the conversion of bonds at maturity)		

As indicated, Roche records a credit to Share Capital—Ordinary for \$500,000 (2,000 bonds \times 250 shares \times \$1 par) and the remainder to Share Premium—Ordinary for \$1,694,374. There is no gain or loss on conversion at maturity. The original amount allocated to equity (\$194,374) is transferred to the Share Premium—Ordinary account. As a result, Roche's equity has increased by a total of \$2,194,374 through issuance and conversion of the convertible bonds. This accounting approach is often referred to as the **book value method** in that the carrying amount (book value) of the bond and related conversion equity determines the amount in the ordinary equity accounts.

Conversion of Bonds before Maturity. What happens if bonds are converted before maturity? To understand the accounting, we again use the Roche Group example. A schedule of bond amortization related to Roche's convertible bonds is shown in Illustration IFRS16-5.

ILLUSTRATION
IFRS16-5
 Convertible Bond
 Amortization Schedule

SCHEDULE OF BOND AMORTIZATION				
EFFECTIVE-INTEREST METHOD				
6% BOND DISCOUNTED AT 9%				
Date	Cash Paid	Interest Expense	Discount Amortized	Carrying Amount of Bonds
1/1/13				\$1,805,626
12/31/13	\$120,000	\$162,506	\$42,506	1,848,132
12/31/14	120,000	166,332	46,332	1,894,464
12/31/15	120,000	170,502	50,502	1,944,966
12/31/16	120,000	175,034*	55,034	2,000,000

*\$13 difference due to rounding.

Assuming that Roche converts its bonds into ordinary shares on December 31, 2014, Roche debits the Bonds Payable account for its carrying value of \$1,894,464 (see Illustration IFRS16-5). In addition, Roche credits Share Capital—Ordinary for \$500,000 ($2,000 \times 250 \times \1) and credits Share Premium—Ordinary for \$1,588,838. The entry to record this conversion is as follows.

Share Premium—Conversion Equity	194,374	
Bonds Payable	1,894,464	
Share Capital—Ordinary		500,000
Share Premium—Ordinary		1,588,838

(To record the conversion of bonds before maturity)

There is no gain or loss on conversion before maturity: The original amount allocated to equity (\$194,374) is transferred to the Share Premium—Ordinary account.

Repurchase before Maturity. In some cases, companies decide to repurchase the convertible debt before maturity. The approach used for allocating the amount paid upon repurchase follows the approach used when the convertible bond was originally issued. That is, Roche determines the fair value of the liability component of the convertible bonds at December 31, 2014, and then subtracts this amount from the fair value of the convertible bond issue (including the equity component) to arrive at the value for the equity. After this allocation is completed:

1. The difference between the consideration allocated to the liability component and the carrying amount of the liability is recognized as a gain or loss, and
2. The amount of consideration relating to the equity component is recognized (as a reduction) in equity.

To illustrate, instead of converting the bonds on December 31, 2014, assume that Roche repurchases the convertible bonds from the bondholders. Pertinent information related to this conversion is as follows.

- Fair value of the convertible debt (including both liability and equity components), based on market prices at December 31, 2014, is \$1,965,000.
- The fair value of the liability component is \$1,904,900. This amount is based on computing the present value of a nonconvertible bond with a two-year term (which corresponds to the shortened time to maturity of the repurchased bonds).

We first determine the gain or loss on the liability component, as computed in Illustration IFRS16-6.

Present value of liability component at December 31, 2014 (given above)	\$ 1,904,900
Carrying value of liability component at December 31, 2014 (per Illustration IFRS16-5)	<u>(1,894,464)</u>
Loss on repurchase	<u>\$ 10,436</u>

ILLUSTRATION
IFRS16-6
 Gain or Loss on Debt
 Repurchase

Roche has a loss on this repurchase because the value of the debt extinguished is greater than its carrying amount. To determine any adjustment to equity, we compute the value of the equity as shown in Illustration IFRS16-7.

ILLUSTRATION IFRS16-7

Equity Adjustment on
Repurchase of
Convertible Bonds

Fair value of convertible debt at December 31, 2014 (with equity component)	\$1,965,000
Less: Fair value of liability component at December 31, 2014 (similar 2-year nonconvertible debt)	<u>1,904,900</u>
Fair value of equity component at December 31, 2014 (without debt component)	<u>\$ 60,100</u>

Roche makes the following compound journal entry to record the entire repurchase transaction.

Bonds Payable	1,894,464	
Share Premium—Conversion Equity	60,100	
Loss on Repurchase	10,436	
Cash		1,965,000
(To record the repurchase of convertible bonds)		

In summary, the repurchase results in a loss related to the liability component and a reduction in Share Premium—Conversion Equity. The remaining balance in Share Premium—Conversion Equity of \$134,274 (\$194,374 – \$60,100) is often transferred to Share Premium—Ordinary upon the repurchase.

Employee Share-Purchase Plans

Employee share-purchase plans (ESPPs) generally permit all employees to purchase shares at a discounted price for a short period of time. The company often uses such plans to secure equity capital or to induce widespread ownership of its ordinary shares among employees. **These plans are considered compensatory and should be recorded as expense over the service period.**

To illustrate, assume that Masthead Company offers all its 1,000 employees the opportunity to participate in an employee share-purchase plan. Under the terms of the plan, the employees are entitled to purchase 100 ordinary shares (par value \$1 per share) at a 20 percent discount. The purchase price must be paid immediately upon acceptance of the offer. In total, 800 employees accept the offer, and each employee purchases on average 80 shares. That is, the employees purchase a total of 64,000 shares. The weighted-average market price of the shares at the purchase date is \$30 per share, and the weighted-average purchase price is \$24 per share. The entry to record this transaction is as follows.

Cash (64,000 × \$24)	1,536,000	
Compensation Expense [64,000 × (\$30 – \$24)]	384,000	
Share Capital—Ordinary (64,000 × \$1)		64,000
Share Premium—Ordinary		1,856,000
(Issue shares in an employee share-purchase plan)		

The IASB indicates that there is no reason to treat broad-based employee share plans differently from other employee share plans. Some have argued that because these plans are used to raise capital, they should not be compensatory. However, IFRS requires recording expense for these arrangements. The Board notes that because these arrangements are available only to employees, it is sufficient to conclude that the benefits provided represent employee compensation.

ON THE HORIZON

The FASB has been working on a standard that will likely converge to IFRS in the accounting for convertible debt. Similar to the FASB, the IASB is examining the classification of hybrid securities; the IASB is seeking comment on a discussion document similar to the FASB Preliminary Views document, “*Financial Instruments with Characteristics of*

Equity. It is hoped that the Boards will develop a converged standard in this area. While GAAP and IFRS are similar as to the presentation of EPS, the Boards have been working together to resolve remaining differences related to earnings per share computations.

IFRS SELF-TEST QUESTIONS

- All of the following are key similarities between GAAP and IFRS with respect to accounting for dilutive securities and EPS **except**:
 - the model for recognizing stock-based compensation.
 - the calculation of basic and diluted EPS.
 - the accounting for convertible debt.
 - the accounting for modifications of share options, when the value increases.
- Which of the following statements is **correct**?
 - IFRS separates the proceeds of a convertible bond between debt and equity by determining the fair value of the debt component before the equity component.
 - Both IFRS and GAAP assume that when there is choice of settlement of an option for cash or shares, share settlement is assumed.
 - IFRS separates the proceeds of a convertible bond between debt and equity, based on relative fair values.
 - Both GAAP and IFRS separate the proceeds of convertible bonds between debt and equity.
- Under IFRS, convertible bonds:
 - are separated into the bond component and the expense component.
 - are separated into debt and equity components.
 - are separated into their components based on relative fair values.
 - All of the above.
- Mae Jong Corp. issues \$1,000,000 of 10% bonds payable which may be converted into 10,000 shares of \$2 par value ordinary shares. The market rate of interest on similar bonds is 12%. Interest is payable annually on December 31, and the bonds were issued for total proceeds of \$1,000,000. In accounting for these bonds, Mae Jong Corp. will:
 - first assign a value to the equity component, then determine the liability component.
 - assign no value to the equity component since the conversion privilege is not separable from the bond.
 - first assign a value to the liability component based on the face amount of the bond.
 - use the "with-and-without" method to value the compound instrument.
- Anazazi Co. offers all its 10,000 employees the opportunity to participate in an employee share-purchase plan. Under the terms of the plan, the employees are entitled to purchase 100 ordinary shares (par value \$1 per share) at a 20% discount. The purchase price must be paid immediately upon acceptance of the offer. In total, 8,500 employees accept the offer, and each employee purchases on average 80 shares at \$22 share (market price \$27.50). Under IFRS, Anazazi Co. will record:
 - no compensation since the plan is used to raise capital, not compensate employees.
 - compensation expense of \$5,500,000.
 - compensation expense of \$18,700,000.
 - compensation expense of \$3,740,000.

IFRS CONCEPTS AND APPLICATION

IFRS16-1 Where can authoritative IFRS be found related to dilutive securities, stock-based compensation, and earnings per share?

IFRS16-2 Briefly describe some of the similarities and differences between GAAP and IFRS with respect to the accounting for dilutive securities, stock-based compensation, and earnings per share.

IFRS16-3 Norman Co., a fast-growing golf equipment company, uses GAAP. It is considering the issuance of convertible bonds. The bonds mature in 10 years, have a face value of \$400,000, and pay interest annually at a rate of 4%. The equity component of the bond issue has a fair value of \$35,000. Greg Shark is curious as to the difference in accounting for these bonds if the company were to use IFRS. (a) Prepare the entry to record issuance of the bonds at par under GAAP. (b) Repeat the requirement for part (a), assuming application of IFRS to the bond issuance. (c) Which approach provides the better accounting? Explain.

IFRS16-4 Briefly discuss the convergence efforts that are under way by the IASB and FASB in the area of dilutive securities and earnings per share.

IFRS16-5 Explain how the conversion feature of convertible debt has a value (a) to the issuer and (b) to the purchaser.

IFRS16-6 What are the arguments for giving separate accounting recognition to the conversion feature of debentures?

IFRS16-7 Four years after issue, debentures with a face value of \$1,000,000 and book value of \$960,000 are tendered for conversion into 80,000 ordinary shares immediately after an interest payment date. At that time, the market price of the debentures is 104, and the ordinary shares are selling at \$14 per share (par value \$10). At date of issue, the company recorded Share Premium—Conversion Equity of \$50,000. The company records the conversion as follows.

Bonds Payable	960,000	
Share Premium—Conversion Equity	50,000	
Share Capital—Ordinary		800,000
Share Premium—Ordinary		210,000

Discuss the propriety of this accounting treatment.

IFRS16-8 Cordero Corporation has an employee share-purchase plan which permits all full-time employees to purchase 10 ordinary shares on the third anniversary of their employment and an additional 15 shares on each subsequent anniversary date. The purchase price is set at the market price on the date purchased less a 10% discount. How is this discount accounted for by Cordero?

IFRS16-9 Archer Company issued \$4,000,000 par value, 7% convertible bonds at 99 for cash. The net present value of the debt without the conversion feature is \$3,800,000. Prepare the journal entry to record the issuance of the convertible bonds.

IFRS16-10 Petrenko Corporation has outstanding 2,000 \$1,000 bonds, each convertible into 50 shares of \$10 par value ordinary shares. The bonds are converted on December 31, 2014. The bonds payable has a carrying value of \$1,950,000 and conversion equity of \$20,000. Record the conversion using the book value method.

IFRS16-11 Angela Corporation issues 2,000 convertible bonds at January 1, 2013. The bonds have a 3-year life, and are issued at par with a face value of \$1,000 per bond, giving total proceeds of \$2,000,000. Interest is payable annually at 6%. Each bond is convertible into 250 ordinary shares (par value of \$1). When the bonds are issued, the market rate of interest for similar debt without the conversion option is 8%.

Instructions

- (a) Compute the liability and equity component of the convertible bond on January 1, 2013.
- (b) Prepare the journal entry to record the issuance of the convertible bond on January 1, 2013.
- (c) Prepare the journal entry to record the repurchase of the convertible bond for cash at January 1, 2016, its maturity date.

IFRS16-12 Assume the same information in IFRS16-11, except that Angela Corporation converts its convertible bonds on January 1, 2014.

Instructions

- (a) Compute the carrying value of the bond payable on January 1, 2014.
- (b) Prepare the journal entry to record the conversion on January 1, 2014.
- (c) Assume that the bonds were repurchased on January 1, 2014, for \$1,940,000 cash instead of being converted. The net present value of the liability component of the convertible bonds on January 1, 2014, is \$1,900,000. Prepare the journal entry to record the repurchase on January 1, 2014.

IFRS16-13 Assume that Sarazan Company has a share-option plan for top management. Each share option represents the right to purchase a \$1 par value ordinary share in the future at a price equal to the fair value of the shares at the date of the grant. Sarazan has 5,000 share options outstanding, which were granted at the beginning of 2014. The following data relate to the option grant.

Exercise price for options	\$40
Market price at grant date (January 1, 2014)	\$40
Fair value of options at grant date (January 1, 2014)	\$6
Service period	5 years

Instructions

- (a) Prepare the journal entry(ies) for the first year of the share-option plan.
- (b) Prepare the journal entry(ies) for the first year of the plan assuming that, rather than options, 700 shares of restricted shares were granted at the beginning of 2014.
- (c) Now assume that the market price of Sarazan shares on the grant date was \$45 per share. Repeat the requirements for (a) and (b).
- (d) Sarazan would like to implement an employee share-purchase plan for rank-and-file employees, but it would like to avoid recording expense related to this plan. Explain how employee share-purchase plans are recorded.

Professional Research

IFRS16-14 Richardson Company is contemplating the establishment of a share-based compensation plan to provide long-run incentives for its top management. However, members of the compensation committee of the board of directors have voiced some concerns about adopting these plans, based on news accounts related to a recent accounting standard in this area. They would like you to conduct some research on this recent standard so they can be better informed about the accounting for these plans.

Instructions

Access the IFRS authoritative literature at the IASB website (<http://eifrs.iasb.org/>). (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) Identify the authoritative literature that addresses the accounting for share-based payment compensation plans.
- (b) Briefly discuss the objectives for the accounting for share-based compensation. What is the role of fair value measurement?
- (c) The Richardson Company board is also considering an employee share-purchase plan, but the Board does not want to record expense related to the plan. What are the IFRS requirements for the accounting for an employee share-purchase plan?

International Financial Reporting Problem

Marks and Spencer plc

IFRS16-15 The financial statements of **Marks and Spencer plc (M&S)** are available at the book's companion website or can be accessed at http://annualreport.marksandspencer.com/_assets/downloads/Marks-and-Spencer-Annual-report-and-financial-statements-2012.pdf.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) Under M&S's share-based compensation plan, share options are granted annually to key managers and directors.
 - (1) How many options were granted during 2012 under the plan?
 - (2) How many options were exercisable at 31 March 2012?
 - (3) How many options were exercised in 2012, and what was the average price of those exercised?
 - (4) How many years from the grant date do the options expire?
 - (5) To what accounts are the proceeds from these option exercises credited?
 - (6) What was the number of outstanding options at 31 March 2012, and at what average exercise price?
- (b) What number of diluted weighted-average shares outstanding was used by M&S in computing earnings per share for 2012 and 2011? What was M&S's diluted earnings per share in 2012 and 2011?
- (c) What other share-based compensation plans does M&S have?

ANSWERS TO IFRS SELF-TEST QUESTIONS

1. c 2. a 3. b 4. d 5. d

Remember to check the book's companion website to find additional resources for this chapter.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Identify the three categories of debt securities and describe the accounting and reporting treatment for each category.
- 2 Understand the procedures for discount and premium amortization on bond investments.
- 3 Identify the categories of equity securities and describe the accounting and reporting treatment for each category.
- 4 Explain the equity method of accounting and compare it to the fair value method for equity securities.
- 5 Describe the accounting for the fair value option and for impairments of debt and equity investments.
- 6 Describe the reporting of reclassification adjustments and the accounting for transfers between categories.

What to Do?

A few years ago, a bank reported an \$87.3 million write-down on its mortgage-backed securities for the third quarter of 2008. However, the bank stated that it expected its actual losses to be only \$44,000. The loss of \$44,000 was equal to a modest loss on a condo foreclosure. The bank's regulator found "the accounting result absurd." And the bank regulator was right, as the bank, in the third quarter of 2009, raised its credit-loss estimate by **\$263.1 million**, quite a difference from its original loss estimate of **\$44,000**.

The discussion above highlights the challenge of valuing financial assets such as loans, derivatives, and other debt investments. The fundamental question that arose out of the example above and, more significantly, the recent financial crisis is: Should financial instruments be valued at amortized cost, fair value, or some other measure(s)? As one writer noted, the opinion that fair value accounting weakens financial and economic stability has persisted among many regulators and politicians. But some investors and others believe that fair value is the right answer because it is more transparent information. OK, so what to do?

Well, the FASB originally issued a proposal to account for just about all financial assets at fair value with gains and losses recorded in income (amortized cost would be disclosed for some financial assets). The FASB indicated this approach will provide the most relevant and transparent information about financial assets. In contrast, the IASB issued a new standard on financial assets (*IFRS 9*) that uses a mixed-attribute approach. Some of the financial assets are valued at amortized cost and others at fair value.

Interestingly, the European Union refused to consider adopting the requirements of *IFRS 9*, arguing that it contained **too much** fair value information. Nevertheless, the standard was issued and other countries that follow IFRS will have to implement the new standard in 2015. At the same time, as soon as the FASB issues its new standard, the IASB has indicated that it may revisit the valuation issue once again. Thus, the early reaction to *IFRS 9* indicates that, unfortunately, once again politics

CONCEPTUAL FOCUS

- > See the **Underlying Concepts** on pages 954, 955, and 957.
- > Read the **Evolving Issues** on pages 968 and 975 for a discussion of the fair value controversy, and proposed classification and measurement model for financial instruments.

INTERNATIONAL FOCUS

- > See the **International Perspectives** on pages 952, 953, 966, 968, 987, 989, and 995.
- > Read the **IFRS Insights** on pages 1026–1039 for a discussion of:
 - Accounting for financial assets
 - Debt investments
 - Equity investments
 - Impairments

is raising its ugly head on an accounting issue. Some European regulators have suggested that the IASB's future funding may even depend on the IASB putting more limits on the use of fair value.

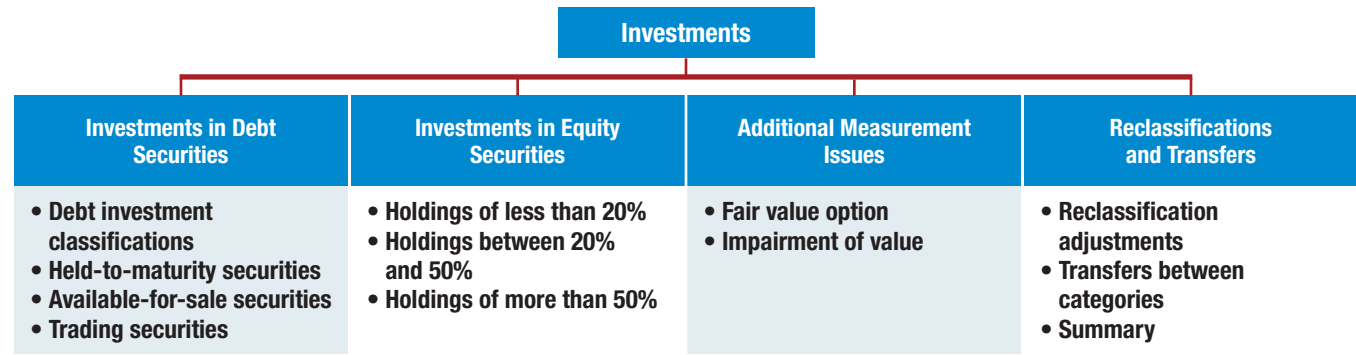

Now, let's go back to the FASB. Recently, the FASB dropped its plan to value loans at fair value and permits amortized cost accounting for these loans. This decision means banks will continue to value loans as they do today. This reversal is a big victory for the banking industry, which argued that the fair value approach would hurt lending and provide unnecessary volatility in their financial results. As a consequence, the FASB is moving much closer to the IASB's position. So after much discussion about what went wrong in the accounting for financial instruments during the financial crises, it looks like we are headed back to most of the same measurement rules that occurred before the financial collapse of 2008. We deem that unfortunate.

Sources: Adapted from Jonathan Weil, "Suing Wall Street Banks Never Looked So Shady," <http://www.bloomberg.com/> (February 28, 2010); and Rachel Sanderson and Jennifer Hughes, "Carried Forward," *Financial Times Online* (April 20, 2010).

PREVIEW OF CHAPTER

17

As indicated in the opening story, the accounting for financial assets is highly controversial. How to measure, recognize, and disclose this information is now being debated and discussed extensively. In this chapter, we address the accounting for debt and equity investments. Appendices to this chapter discuss the accounting for derivative instruments, variable-interest entities, and fair value disclosures. The content and organization of this chapter are as follows.

INVESTMENTS IN DEBT SECURITIES

LEARNING OBJECTIVE 1

Identify the three categories of debt securities and describe the accounting and reporting treatment for each category.

Companies have different motivations for investing in securities issued by other companies.¹ **One motivation is to earn a high rate of return.** For example, companies like **Coca-Cola** and **PepsiCo** can receive interest revenue from a debt investment or dividend revenue from an equity investment. In addition, they can realize capital gains on both types of securities. **Another motivation for investing (in equity securities) is to secure certain operating or financing arrangements with another company.** For example, Coca-Cola and PepsiCo are able to exercise some control over bottler companies based on their significant (but not controlling) equity investments.

To provide useful information, companies account for investments based on the type of security (debt or equity) and their intent with respect to the investment. As indicated in Illustration 17-1, we organize our study of investments by type of security. Within this section, we explain the accounting for investments in debt. We address equity securities later in the chapter.

ILLUSTRATION 17-1 Summary of Investment Accounting Approaches

Type of Security	Management Intent	Valuation Approach
Debt	No plans to sell	Amortized cost
	Plan to sell	Fair value
Equity	Plan to sell	Fair value
	Exercise some control	Equity method

Debt securities represent a creditor relationship with another entity. Debt securities include U.S. government securities, municipal securities, corporate bonds, convertible debt, and commercial paper. Trade accounts receivable and loans receivable are not debt securities because they do not meet the definition of a security.

Debt Investment Classifications

Companies group investments in debt securities into three separate categories for accounting and reporting purposes:

- **Held-to-maturity:** Debt securities that the company has the positive intent and ability to hold to maturity.
- **Trading:** Debt securities bought and held primarily for sale in the near term to generate income on short-term price differences.
- **Available-for-sale:** Debt securities not classified as held-to-maturity or trading securities.

Illustration 17-2 identifies these categories, along with the accounting and reporting treatments required for each.

International Perspective

Under IFRS, debt investments are classified as either held-for-collection or trading.

¹A **security** is a share, participation, or other interest in property or in an enterprise of the issuer or an obligation of the issuer that has the following three characteristics. (1) It either is represented by an instrument issued in bearer or registered form or, if not represented by an instrument, is registered in books maintained to record transfers by or on behalf of the issuer. (2) It is commonly traded on securities exchanges or markets or, when represented by an instrument, is commonly recognized in any area in which it is issued or dealt in as a medium for investment. (3) It either is one of a class or series or by its terms is divisible into a class or series of shares, participations, interests, or obligations. [1]

See the FASB
Codification section
(page 1005).

Category	Valuation	Unrealized Holding Gains or Losses	Other Income Effects
Held-to-maturity	Amortized cost	Not recognized	Interest when earned; gains and losses from sale.
Trading securities	Fair value	Recognized in net income	Interest when earned; gains and losses from sale.
Available-for-sale	Fair value	Recognized as other comprehensive income and as separate component of stockholders' equity	Interest when earned; gains and losses from sale.

ILLUSTRATION 17-2

Accounting for Debt Securities by Category

International Perspective

Under IFRS, held-for-collection debt investments are valued at amortized cost; all other investments are measured at fair value.

Amortized cost is the acquisition cost adjusted for the amortization of discount or premium, if appropriate. **Fair value** is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. [2]

Held-to-Maturity Securities

Only debt securities can be classified as held-to-maturity. By definition, equity securities have no maturity date. A company like **Starbucks** should classify a debt security as **held-to-maturity** only if it has **both (1) the positive intent and (2) the ability to hold those securities to maturity**. It should not classify a debt security as held-to-maturity if it intends to hold the security for an indefinite period of time. Likewise, if Starbucks anticipates that a sale may be necessary due to changes in interest rates, foreign currency risk, liquidity needs, or other asset-liability management reasons, it should not classify the security as held-to-maturity.²

Companies account for held-to-maturity securities **at amortized cost**, not fair value. If management intends to hold certain investment securities to maturity and has no plans to sell them, fair values (selling prices) are not relevant for measuring and evaluating the cash flows associated with these securities. Finally, because companies do not adjust held-to-maturity securities to fair value, these securities do not increase the volatility of either reported earnings or reported capital as do trading securities and available-for-sale securities.

To illustrate the accounting for held-to-maturity debt securities, assume that Robinson Company purchased \$100,000 of 8 percent bonds of Evermaster Corporation on January 1, 2013, at a discount, paying \$92,278. The bonds mature January 1, 2018 and yield 10%. Interest is payable each July 1 and January 1. Robinson records the investment as follows.

January 1, 2013		
Debt Investments	92,278	
Cash		92,278

²The FASB defines situations where, even though a company sells a security before maturity, it has constructively held the security to maturity, and thus does not violate the held-to-maturity requirement. These include selling a security close enough to maturity (such as three months) so that interest rate risk is no longer an important pricing factor.

However, companies must be extremely careful with debt securities held to maturity. If a company prematurely sells a debt security in this category, the sale may “taint” the entire held-to-maturity portfolio. That is, a management’s statement regarding “intent” is no longer credible. Therefore, the company may have to reclassify the securities. This could lead to unfortunate consequences. An interesting by-product of this situation is that companies that wish to retire their debt securities early are finding it difficult to do so. The holder will not sell because the securities are classified as held-to-maturity.

2 LEARNING OBJECTIVE

Understand the procedures for discount and premium amortization on bond investments.

Calculator Solution for Bond Price		
	Inputs	Answer
N	10	
I	5	
PV	?	-92,278
PMT	4,000	
FV	100,000	

Robinson uses a Debt Investments account to indicate the type of debt security purchased.³

As indicated in Chapter 14, companies must amortize premium or discount using the **effective-interest method** unless some other method—such as the straight-line method—yields a similar result. They apply the effective-interest method to bond investments in a way similar to that for bonds payable. To compute interest revenue, companies compute the effective-interest rate or yield at the time of investment and apply that rate to the beginning carrying amount (book value) for each interest period. The investment carrying amount is increased by the amortized discount or decreased by the amortized premium in each period.

Illustration 17-3 shows the effect of the discount amortization on the interest revenue that Robinson records each period for its investment in Evermaster bonds.

Underlying Concepts

The use of some simpler method that yields results similar to the effective-interest method is an application of the materiality concept.

ILLUSTRATION 17-3

Schedule of Interest Revenue and Bond Discount Amortization—Effective-Interest Method

8% BONDS PURCHASED TO YIELD 10%				
Date	Cash Received	Interest Revenue	Bond Discount Amortization	Carrying Amount of Bonds
1/1/13				\$ 92,278
7/1/13	\$ 4,000 ^a	\$ 4,614 ^b	\$ 614 ^c	92,892 ^d
1/1/14	4,000	4,645	645	93,537
7/1/14	4,000	4,677	677	94,214
1/1/15	4,000	4,711	711	94,925
7/1/15	4,000	4,746	746	95,671
1/1/16	4,000	4,783	783	96,454
7/1/16	4,000	4,823	823	97,277
1/1/17	4,000	4,864	864	98,141
7/1/17	4,000	4,907	907	99,048
1/1/18	4,000	4,952	952	100,000
	<u>\$40,000</u>	<u>\$47,722</u>	<u>\$7,722</u>	

^a\$4,000 = \$100,000 × .08 × $\frac{6}{12}$
^b\$4,614 = \$92,278 × .10 × $\frac{6}{12}$
^c\$614 = \$4,614 - \$4,000
^d\$92,892 = \$92,278 + \$614

Robinson records the receipt of the first semiannual interest payment on July 1, 2013 (using the data in Illustration 17-3), as follows.

July 1, 2013		
Cash		4,000
Debt Investments		614
Interest Revenue		4,614

Because Robinson is on a calendar-year basis, it accrues interest and amortizes the discount at December 31, 2013, as follows.

December 31, 2013		
Interest Receivable		4,000
Debt Investments		645
Interest Revenue		4,645

Again, Illustration 17-3 shows the interest and amortization amounts.

³Companies generally record investments acquired at par, at a discount, or at a premium in the accounts at cost, including brokerage and other fees but excluding the accrued interest. They generally do not record investments at maturity value. The use of a separate discount or premium account as a valuation account is acceptable procedure for investments, but in practice companies do not widely use it.

Robinson reports its investment in Evermaster bonds in its December 31, 2013, financial statements, as follows.

Balance Sheet	
Current assets	
Interest receivable	\$ 4,000
Long-term investments	
Debt investments (held-to-maturity)	\$93,537
Income Statement	
Other revenues and gains	
Interest revenue	\$ 9,259

ILLUSTRATION 17-4
Reporting of Held-to-Maturity Securities

Sometimes, a company sells a held-to-maturity debt security so close to its maturity date that a change in the market interest rate would not significantly affect the security's fair value. Such a sale may be considered a sale at maturity and would not call into question the company's original intent to hold the investment to maturity. Let's assume, as an example, that Robinson Company sells its investment in Evermaster bonds on November 1, 2017, at $99\frac{3}{4}$ plus accrued interest. The discount amortization from July 1, 2017, to November 1, 2017, is \$635 ($\frac{4}{6} \times \952). Robinson records this discount amortization as follows.

November 1, 2017	
Debt Investments	635
Interest Revenue	635

Illustration 17-5 shows the computation of the realized gain on the sale.

Selling price of bonds (exclusive of accrued interest)	\$99,750
Less: Book value of bonds on November 1, 2017:	
Amortized cost, July 1, 2017	\$99,048
Add: Discount amortized for the period July 1, 2017, to November 1, 2017	635
	<u>99,683</u>
Gain on sale of bonds	<u>\$ 67</u>

ILLUSTRATION 17-5
Computation of Gain on Sale of Bonds

Robinson records the sale of the bonds as:

November 1, 2017	
Cash	102,417
Interest Revenue ($\frac{4}{6} \times \$4,000$)	2,667
Debt Investments	99,683
Gain on Sale of Investments	67

The credit to Interest Revenue represents accrued interest for four months, for which the purchaser pays cash. The debit to Cash represents the selling price of the bonds plus accrued interest ($\$99,750 + \$2,667$). The credit to Debt Investments represents the book value of the bonds on the date of sale. The credit to Gain on Sale of Investments represents the excess of the selling price over the book value of the bonds.

Available-for-Sale Securities

Companies like **Amazon.com** report **available-for-sale** securities at fair value. It records the unrealized gains and losses related to changes in the fair value of available-for-sale debt securities in an unrealized holding gain or loss account. Amazon adds (subtracts) this amount to other comprehensive income for the

Underlying Concepts

Recognizing unrealized gains and losses is an application of the concept of comprehensive income.

Calculator Solution for Bond Price

Inputs	Answer
N 10	
I 4	
PV ?	-108,111
PMT 5,000	
FV 100,000	

period. Other comprehensive income is then added to (subtracted from) accumulated other comprehensive income, which is shown as a separate component of stockholders' equity until realized. Thus, **companies report available-for-sale securities at fair value on the balance sheet but do not report changes in fair value as part of net income until after selling the security.** This approach reduces the volatility of net income.

Example: Single Security

To illustrate the accounting for available-for-sale securities, assume that Graff Corporation purchases \$100,000, 10 percent, five-year bonds on January 1, 2013, with interest payable on July 1 and January 1. The bonds sell for \$108,111, which results in a bond premium of \$8,111 and an effective-interest rate of 8 percent.

Graff records the purchase of the bonds as follows.

January 1, 2013

Debt Investments	108,111	
Cash		108,111

Illustration 17-6 discloses the effect of the premium amortization on the interest revenue Graff records each period using the effective-interest method.

ILLUSTRATION 17-6
Schedule of Interest Revenue and Bond Premium Amortization—Effective-Interest Method

10% BONDS PURCHASED TO YIELD 8%				
Date	Cash Received	Interest Revenue	Bond Premium Amortization	Carrying Amount of Bonds
1/1/13				\$108,111
7/1/13	\$ 5,000 ^a	\$ 4,324 ^b	\$ 676 ^c	107,435 ^d
1/1/14	5,000	4,297	703	106,732
7/1/14	5,000	4,269	731	106,001
1/1/15	5,000	4,240	760	105,241
7/1/15	5,000	4,210	790	104,451
1/1/16	5,000	4,178	822	103,629
7/1/16	5,000	4,145	855	102,774
1/1/17	5,000	4,111	889	101,885
7/1/17	5,000	4,075	925	100,960
1/1/18	5,000	4,040	960	100,000
	<u>\$50,000</u>	<u>\$41,889</u>	<u>\$8,111</u>	

^a\$5,000 = \$100,000 × .10 × 6/12

^b\$4,324 = \$108,111 × .08 × 6/12

^c\$676 = \$5,000 – \$4,324

^d\$107,435 = \$108,111 – \$676

The entry to record interest revenue on July 1, 2013, is as follows.

July 1, 2013

Cash	5,000	
Debt Investments		676
Interest Revenue		4,324

At December 31, 2013, Graff makes the following entry to recognize interest revenue.

December 31, 2013

Interest Receivable	5,000	
Debt Investments		703
Interest Revenue		4,297

As a result, Graff reports revenue for 2013 of \$8,621 (\$4,324 + \$4,297).

To apply the fair value method to these debt investments, assume that at year-end the fair value of the bonds is \$105,000 and that the carrying amount of the investments is \$106,732. Comparing this fair value with the carrying amount (amortized cost) of the

bonds at December 31, 2013, Graff recognizes an unrealized holding loss of \$1,732 (\$106,732 – \$105,000). It reports this loss as other comprehensive income. Graff makes the following entry.

December 31, 2013		
Unrealized Holding Gain or Loss—Equity	1,732	
Fair Value Adjustment (available-for-sale)		1,732

Graff uses a valuation account instead of crediting the Debt Investments account. The use of the **Fair Value Adjustment** (available-for-sale) account enables the company to maintain a record of its amortized cost. Because the adjustment account has a credit balance in this case, Graff subtracts it from the balance of the Debt Investments account to determine fair value. Graff reports this fair value amount on the balance sheet. At each reporting date, Graff reports the bonds at fair value with an adjustment to the Unrealized Holding Gain or Loss—Equity account.

Underlying Concepts

Companies report some debt securities at fair value not only because the information is relevant but also because it is representationally faithful.

Example: Portfolio of Securities

To illustrate the accounting for a portfolio of securities, assume that Webb Corporation has two debt securities classified as available-for-sale. Illustration 17-7 identifies the amortized cost, fair value, and the amount of the unrealized gain or loss.

AVAILABLE-FOR-SALE DEBT SECURITY PORTFOLIO			
DECEMBER 31, 2014			
Investments	Amortized Cost	Fair Value	Unrealized Gain (Loss)
Watson Corporation 8% bonds	\$ 93,537	\$103,600	\$ 10,063
Anacomp Corporation 10% bonds	200,000	180,400	(19,600)
Total of portfolio	<u>\$293,537</u>	<u>\$284,000</u>	(9,537)
Previous fair value adjustment balance			-0-
Fair value adjustment—Cr.			<u>\$ (9,537)</u>

ILLUSTRATION 17-7

Computation of Fair Value Adjustment—Available-for-Sale Securities (2014)

The fair value of Webb's available-for-sale portfolio totals \$284,000. The gross unrealized gains are \$10,063, and the gross unrealized losses are \$19,600, resulting in a net unrealized loss of \$9,537. That is, the fair value of available-for-sale securities is \$9,537 lower than its amortized cost. Webb makes an adjusting entry to a valuation allowance to record the decrease in value and to record the loss as follows.

December 31, 2014		
Unrealized Holding Gain or Loss—Equity	9,537	
Fair Value Adjustment (available-for-sale)		9,537

Webb reports the unrealized holding loss of \$9,537 as other comprehensive income and a reduction of stockholders' equity. Recall that companies exclude from net income any unrealized holding gains and losses related to available-for-sale securities.

Sale of Available-for-Sale Securities

If a company sells bonds carried as investments in available-for-sale securities before the maturity date, it must make entries to remove from the Debt Investments account the amortized cost of bonds sold. To illustrate, assume that Webb Corporation sold the Watson bonds (from Illustration 17-7) on July 1, 2015, for \$90,000, at which time it had an amortized cost of \$94,214. Illustration 17-8 (on page 958) shows the computation of the realized loss.

ILLUSTRATION 17-8
Computation of Loss on
Sale of Bonds

Amortized cost (Watson bonds)	\$94,214
Less: Selling price of bonds	<u>90,000</u>
Loss on sale of bonds	<u>\$ 4,214</u>

Webb records the sale of the Watson bonds as follows.

July 1, 2015		
Cash	90,000	
Loss on Sale of Investments	4,214	
Debt Investments		94,214

Webb reports this realized loss in the “Other expenses and losses” section of the income statement.⁴ Assuming no other purchases and sales of bonds in 2015, Webb on December 31, 2015, prepares the information shown in Illustration 17-9.

ILLUSTRATION 17-9
Computation of Fair
Value Adjustment—
Available-for-Sale (2015)

AVAILABLE-FOR-SALE DEBT SECURITY PORTFOLIO DECEMBER 31, 2015			
Investments	Amortized Cost	Fair Value	Unrealized Gain (Loss)
Anacomp Corporation 10% bonds (total portfolio)	<u>\$200,000</u>	<u>\$195,000</u>	\$(5,000)
Previous fair value adjustment balance—Cr.			(9,537)
Fair value adjustment—Dr.			<u>\$ 4,537</u>

Webb has an unrealized holding loss of \$5,000. However, the Fair Value Adjustment (available-for-sale) account already has a credit balance of \$9,537. To reduce the adjustment account balance to \$5,000, Webb debits it for \$4,537, as follows.

December 31, 2015		
Fair Value Adjustment (available-for-sale)	4,537	
Unrealized Holding Gain or Loss—Equity		4,537

Financial Statement Presentation

Webb’s December 31, 2015, balance sheet and the 2015 income statement include the following items and amounts (the Anacomp bonds are long-term investments but are not intended to be held to maturity).

ILLUSTRATION 17-10
Reporting of Available-
for-Sale Securities

Balance Sheet	
Current assets	
Interest receivable	\$ xxx
Investments	
Debt investments (available-for-sale)	\$195,000
Stockholders’ equity	
Accumulated other comprehensive loss	\$ 5,000
Income Statement	
Other revenues and gains	
Interest revenue	\$ xxx
Other expenses and losses	
Loss on sale of investments	\$ 4,214

⁴On the date of sale, any unrealized gains or losses on the sold security is not adjusted in accumulated other comprehensive income. This adjustment occurs at year-end when the portfolio is evaluated for fair value adjustment.

Some favor including the unrealized holding gain or loss in net income rather than showing it as other comprehensive income.⁵ However, some companies, particularly financial institutions, note that recognizing gains and losses on assets, but not liabilities, introduces substantial volatility in net income. They argue that hedges often exist between assets and liabilities so that gains in assets are offset by losses in liabilities, and vice versa. In short, to recognize gains and losses only on the asset side is unfair and not representative of the economic activities of the company.

This argument convinced the FASB. As a result, companies **do not include in net income** these unrealized gains and losses. [3] However, even this approach solves only some of the problems because **volatility of capital** still results. This is of concern to financial institutions because regulators restrict financial institutions' operations based on their level of capital. However, companies can still manage their net income by engaging in **gains trading** (i.e., selling the winners and holding the losers).

What do the numbers mean?

WHAT IS FAIR VALUE?

In the fall of 2000, Wall Street brokerage firm **Morgan Stanley** told investors that rumors of big losses in its bond portfolio were "greatly exaggerated." As it turns out, Morgan Stanley also was exaggerating.

As a result, the SEC accused Morgan Stanley of violating securities laws by overstating the value of certain bonds by \$75 million. The SEC said the overvaluations stemmed more from wishful thinking than reality, which violated generally accepted accounting principles. "In effect, Morgan Stanley valued its positions at the price at which it thought a willing buyer and seller should enter into an exchange, rather than at a price at which a willing buyer and a willing seller would enter into a current exchange," the SEC wrote.

Especially egregious, stated one accounting expert, were the SEC's findings that Morgan Stanley in some instances

used its own more optimistic assumptions as a substitute for external pricing sources. "What that is saying is: 'Fair value is what you want the value to be. Pick a number . . .' That's especially troublesome."

As indicated in the opening story, both the FASB and the IASB are assessing what is fair and what isn't when it comes to assigning valuations. Concerns over the issue caught fire after the collapses of **Enron Corp.** and other energy traders that abused the wide discretion given them under fair value accounting. Investors have expressed similar worries about some financial companies, which use internal—and subjectively designed—mathematical models to come up with valuations when market quotes aren't available. Similar concerns have been raised when companies revalue their debt obligations when they apply the fair value option.

Sources: Adapted from Susanne Craig and Jonathan Weil, "SEC Targets Morgan Stanley Values," *Wall Street Journal* (November 8, 2004), p. C3; Floyd Norris, "Distortions in Baffling Financial Statements," *The New York Times* (November 10, 2011); and Marie Leone, "The Fair Value Deadbeat Debate Returns," *CFO.com* (June 25, 2009).

Trading Securities

Companies hold **trading securities** with the intention of selling them in a short period of time. "Trading" in this context means frequent buying and selling. Companies thus use trading securities to generate profits from short-term differences in price. Companies generally hold these securities for less than three months, some for merely days or hours.

Companies report trading securities at fair value, with unrealized holding gains and losses reported as part of net income. Similar to held-to-maturity or available-for-sale investments, companies are required to amortize any discount or premium. A **holding gain or loss** is the net change in the fair value of a security from one period to another, exclusive of dividend or interest revenue recognized but not received. In short, the FASB says to adjust the trading securities to fair value, at each reporting date. In addition, companies report the change in value as part of net income, not other comprehensive income.

⁵In Chapter 4, we discussed the concept of, and reporting for, other comprehensive income.

To illustrate, assume that on December 31, 2014, Western Publishing Corporation determined its trading securities portfolio to be as shown in Illustration 17-11. (Assume that 2014 is the first year that Western Publishing held trading securities.) At the date of acquisition, Western Publishing recorded these trading securities at cost, including brokerage commissions and taxes, in the account entitled Debt Investments. This is the first valuation of this recently purchased portfolio.

ILLUSTRATION 17-11

Computation of Fair Value Adjustment—Trading Securities Portfolio (2014)

TRADING DEBT SECURITY PORTFOLIO			
DECEMBER 31, 2014			
Investments	Amortized Cost	Fair Value	Unrealized Gain (Loss)
Burlington Northern 6% bonds	\$ 43,860	\$ 51,500	\$ 7,640
GM Corporation 7% bonds	184,230	175,200	(9,030)
Time Warner 8% bonds	86,360	91,500	5,140
Total of portfolio	<u>\$314,450</u>	<u>\$318,200</u>	3,750
Previous fair value adjustment balance			-0-
Fair value adjustment—Dr.			<u>\$ 3,750</u>

The total cost of Western Publishing's trading portfolio is \$314,450. The gross unrealized gains are \$12,780 (\$7,640 + \$5,140), and the gross unrealized losses are \$9,030, resulting in a net unrealized gain of \$3,750. The fair value of trading securities is \$3,750 greater than its cost.

At December 31, Western Publishing makes an adjusting entry to a valuation allowance, referred to as Fair Value Adjustment (trading), to record the increase in value and to record the unrealized holding gain.

December 31, 2014		
Fair Value Adjustment (trading)	3,750	
Unrealized Holding Gain or Loss—Income		3,750

Because the Fair Value Adjustment account balance is a debit, Western Publishing adds it to the cost of the Debt Investments account to arrive at a fair value for the trading securities. Western Publishing reports this fair value amount on the balance sheet.

As with other debt investments, when a trading investment is sold, the Debt Investments account is reduced by the amount of the amortized cost of the bonds. Any realized gain or loss is recorded in the "Other expenses and losses" section of the income statement. The Fair Value Adjustment account is then adjusted at year-end for the unrealized gains or losses on the remaining securities in the trading investment portfolio.

When securities are actively traded, the FASB believes that the investments should be reported at fair value on the balance sheet. In addition, changes in fair value (unrealized gains and losses) should be reported in income. Such reporting on trading securities provides more relevant information to existing and prospective stockholders.

INVESTMENTS IN EQUITY SECURITIES

LEARNING OBJECTIVE 3

Identify the categories of equity securities and describe the accounting and reporting treatment for each category.

Equity securities represent ownership interests such as common, preferred, or other capital stock. They also include rights to acquire or dispose of ownership interests at an agreed-upon or determinable price, such as in warrants, rights, and call or put options. Companies do not treat convertible debt securities as equity securities. Nor do they treat as equity securities redeemable preferred stock (which must be redeemed for common stock). The cost of equity securities includes the purchase price of the security plus broker's commissions and other fees incidental to the purchase.

The degree to which one corporation (**investor**) acquires an interest in the common stock of another corporation (**investee**) generally determines the accounting treatment for the investment subsequent to acquisition. The classification of such investments depends on the percentage of the investee voting stock that is held by the investor:

1. Holdings of less than 20 percent (**fair value method**)—investor has passive interest.
2. Holdings between 20 percent and 50 percent (**equity method**)—investor has significant influence.
3. Holdings of more than 50 percent (**consolidated statements**)—investor has controlling interest.

Illustration 17-12 lists these levels of interest or influence and the corresponding valuation and reporting method that companies must apply to the investment.

Percentage of Ownership Level of Influence Valuation Method	0% ←→ 20% ←→ 50% ←→ 100%	
	Little or None Fair Value Method	Significant Equity Method

ILLUSTRATION 17-12
Levels of Influence Determine Accounting Methods

The accounting and reporting for equity securities therefore depend on the level of influence and the type of security involved, as shown in Illustration 17-13.

Category	Valuation	Unrealized Holding Gains or Losses	Other Income Effects
Holdings less than 20%			
1. Available-for-sale	Fair value	Recognized in “Other comprehensive income” and as separate component of stockholders’ equity	Dividends declared; gains and losses from sale.
2. Trading	Fair value	Recognized in net income	Dividends declared; gains and losses from sale.
Holdings between 20% and 50%	Equity	Not recognized	Proportionate share of investee’s net income.
Holdings more than 50%	Consolidation	Not recognized	Not applicable.

ILLUSTRATION 17-13
Accounting and Reporting for Equity Securities by Category

Holdings of Less Than 20%

When an investor has an interest of less than 20 percent, it is presumed that the investor has little or no influence over the investee. In such cases, if market prices are available subsequent to acquisition, the company values and reports the investment using the **fair value method**.⁶ The fair value method requires that companies classify equity securities at acquisition as **available-for-sale securities** or **trading securities**. Because equity securities have no maturity date, companies cannot classify them as held-to-maturity.

⁶If an equity investment is not publicly traded, a company values the investment and reports it at cost in periods subsequent to acquisition. This approach is often referred to as the cost method. Companies recognize dividends when received. They value the portfolio and report it at acquisition cost. Companies only recognize gains or losses after selling the securities.

Available-for-Sale Securities

Upon acquisition, companies record available-for-sale securities at cost.⁷ To illustrate, assume that on November 3, 2014, Republic Corporation purchased common stock of three companies, each investment representing less than a 20 percent interest.

	Cost
Northwest Industries, Inc.	\$259,700
Campbell Soup Co.	317,500
St. Regis Pulp Co.	141,350
Total cost	<u>\$718,550</u>

Republic records these investments as follows.

November 3, 2014		
Equity Investments	718,550	
Cash		718,550

On December 6, 2014, Republic receives a cash dividend of \$4,200 on its investment in the common stock of Campbell Soup Co. It records the cash dividend as follows.

December 6, 2014		
Cash	4,200	
Dividend Revenue		4,200

All three of the investee companies reported net income for the year, but only Campbell Soup declared and paid a dividend to Republic. But, recall that when an investor owns less than 20 percent of the common stock of another corporation, it is presumed that the investor has relatively little influence on the investee. As a result, **net income of the investee is not a proper basis for recognizing income from the investment by the investor.** Why? Because the increased net assets resulting from profitable operations may be permanently retained for use in the investee's business. Therefore, **the investor recognizes net income only when the investee declares cash dividends.**

At December 31, 2014, Republic's available-for-sale equity security portfolio has the cost and fair value shown in Illustration 17-14.

ILLUSTRATION 17-14

Computation of Fair Value Adjustment—Available-for-Sale Equity Security Portfolio (2014)

AVAILABLE-FOR-SALE EQUITY SECURITY PORTFOLIO			
DECEMBER 31, 2014			
Investments	Cost	Fair Value	Unrealized Gain (Loss)
Northwest Industries, Inc.	\$259,700	\$275,000	\$ 15,300
Campbell Soup Co.	317,500	304,000	(13,500)
St. Regis Pulp Co.	141,350	104,000	(37,350)
Total of portfolio	<u>\$718,550</u>	<u>\$683,000</u>	(35,550)
Previous fair value adjustment balance			-0-
Fair value adjustment—Cr.			<u><u>\$(35,550)</u></u>

⁷Companies should record equity securities acquired in **exchange for noncash consideration** (property or services) at (1) the fair value of the consideration given, or (2) the fair value of the security received, whichever is more clearly determinable. Accounting for numerous purchases of securities requires the preservation of information regarding the cost of individual purchases, as well as the dates of purchases and sales. If specific identification is not possible, companies may use average-cost for multiple purchases of the same class of security. The **first-in, first-out method (FIFO)** of assigning costs to investments at the time of sale is also acceptable and normally employed.

For Republic's available-for-sale equity securities portfolio, the gross unrealized gains are \$15,300, and the gross unrealized losses are \$50,850 (\$13,500 + \$37,350), resulting in a net unrealized loss of \$35,550. The fair value of the available-for-sale securities portfolio is below cost by \$35,550.

As with available-for-sale **debt** securities, Republic records the net unrealized gains and losses related to changes in the fair value of available-for-sale **equity** securities in an Unrealized Holding Gain or Loss—Equity account. Republic reports this amount as a **part of other comprehensive income and as a component of other accumulated comprehensive income (reported in stockholders' equity) until realized**. In this case, Republic prepares an adjusting entry debiting the Unrealized Holding Gain or Loss—Equity account and crediting the Fair Value Adjustment account to record the decrease in fair value and to record the loss as follows.

December 31, 2014		
Unrealized Holding Gain or Loss—Equity	35,550	
Fair Value Adjustment (available-for-sale)		35,550

On January 23, 2015, Republic sold all of its Northwest Industries, Inc. common stock receiving net proceeds of \$287,220. Illustration 17-15 shows the computation of the realized gain on the sale.

Net proceeds from sale	\$287,220
Cost of Northwest shares	259,700
Gain on sale of stock	<u><u>\$ 27,520</u></u>

ILLUSTRATION 17-15
Computation of Gain on Sale of Stock

Republic records the sale as follows.

January 23, 2015		
Cash	287,220	
Equity Investments		259,700
Gain on Sale of Investments		27,520

In addition, assume that on February 10, 2015, Republic purchased 20,000 shares of Continental Trucking at a market price of \$12.75 per share plus brokerage commissions of \$1,850 (total cost, \$256,850).

Illustration 17-16 lists Republic's portfolio of available-for-sale securities, as of December 31, 2015.

AVAILABLE-FOR-SALE EQUITY SECURITY PORTFOLIO			
DECEMBER 31, 2015			
Investments	Cost	Fair Value	Unrealized Gain (Loss)
Continental Trucking	\$256,850	\$278,350	\$ 21,500
Campbell Soup Co.	317,500	362,550	45,050
St. Regis Pulp Co.	141,350	139,050	(2,300)
Total of portfolio	<u><u>\$715,700</u></u>	<u><u>\$779,950</u></u>	64,250
Previous fair value adjustment balance—Cr.			(35,550)
Fair value adjustment—Dr.			<u><u>\$ 99,800</u></u>

ILLUSTRATION 17-16
Computation of Fair Value Adjustment—Available-for-Sale Equity Security Portfolio (2015)

At December 31, 2015, the fair value of Republic's available-for-sale equity securities portfolio exceeds cost by \$64,250 (unrealized gain). The Fair Value Adjustment account had a credit balance of \$35,550 at December 31, 2015. To adjust its December 31, 2015,

available-for-sale portfolio to fair value, the company debits the Fair Value Adjustment account for \$99,800 (\$35,550 + \$64,250). Republic records this adjustment as follows.

December 31, 2015		
Fair Value Adjustment (available-for-sale)	99,800	
Unrealized Holding Gain or Loss—Equity		99,800

Trading Securities

The accounting entries to record trading equity securities are the same as for available-for-sale equity securities, except for recording the unrealized holding gain or loss. For trading equity securities, companies **report the unrealized holding gain or loss as part of net income**. Thus, the account titled Unrealized Holding Gain or Loss—Income is used.

What do the numbers mean?

MORE DISCLOSURE, PLEASE

How to account for investment securities is a particularly sensitive area, given the large amounts of equity investments involved. And presently companies report investments in equity securities at cost, equity, fair value, and full consolidation, depending on the circumstances. As a recent SEC study noted, “there are so many different accounting treatments for investments that it raises the question of whether they are all needed.”

Presented in the right-hand column is an estimate of the percentage of companies on the major exchanges that have investments in the equity of other entities.

As the table indicates, many companies have equity investments of some type. These investments can be substantial. For example, the total amount of equity-method investments appearing on company balance sheets is approximately

Investments in the Equity of Other Companies	
Categorized by Accounting Treatment	Percent of Companies
Presenting consolidated financial statements	91.1%
Reporting equity method investments	23.5
Reporting cost method investments*	17.4
Reporting available-for-sale investments	37.4
Reporting trading investments	6.2

*If the equity investments are not publicly traded, the company often accounts for the investment under the cost method. Changes in value are therefore not recognized unless there is impairment.

\$403 billion, and the amount shown in the income statements in any one year for all companies is approximately \$38 billion.

Source: “Report and Recommendations Pursuant to Section 401(c) of the Sarbanes–Oxley Act of 2002 on Arrangements with Off-Balance Sheet Implications, Special Purpose Entities, and Transparency of Filings by Issuers,” United States Securities and Exchange Commission—Office of Chief Accountant, Office of Economic Analyses, Division of Corporation Finance (June 2005), pp. 36–39.

Holdings Between 20% and 50%

LEARNING OBJECTIVE 4
 Explain the equity method of accounting and compare it to the fair value method for equity securities.

An investor corporation may hold an interest of less than 50 percent in an investee corporation and thus not possess legal control. However, an investment in voting stock of less than 50 percent can still give the investor the ability to exercise significant influence over the operating and financial policies of the investee company. **[4]**

Significant influence may be indicated in several ways. Examples include representation on the board of directors, participation in policy-making processes, material inter-company transactions, interchange of managerial personnel, or technological dependency.

Another important consideration is the extent of ownership by an investor in relation to the concentration of other shareholdings. To achieve a reasonable degree of uniformity in application of the “significant influence” criterion, the profession concluded that an investment (direct or indirect) of 20 percent or more of the voting stock of an investee should lead to a presumption that in the absence of evidence to the contrary, an investor has the ability to exercise significant influence over an investee.⁸

⁸Cases in which an investment of 20 percent or more might not enable an investor to exercise significant influence include (1) the investee opposes the investor’s acquisition of its stock, (2) the investor and investee sign an agreement under which the investor surrenders significant shareholder rights, (3) the investor’s ownership share does not result in “significant influence” because majority ownership of the investee is concentrated among a small group of shareholders who operate the investee without regard to the views of the investor, and (4) the investor tries and fails to obtain representation on the investee’s board of directors. **[5]**

In instances of “significant influence” (generally an investment of 20 percent or more), the investor must account for the investment using the **equity method**.

Equity Method

Under the **equity method**, the investor and the investee acknowledge a substantive economic relationship. The company originally records the investment at the cost of the shares acquired but subsequently adjusts the amount each period for changes in the investee’s net assets. That is, **the investor’s proportionate share of the earnings (losses) of the investee periodically increases (decreases) the investment’s carrying amount. All cash dividends received by the investor from the investee also decrease the investment’s carrying amount.** The equity method recognizes that investee’s earnings increase investee’s net assets, and that investee’s losses and dividends decrease these net assets.

To illustrate the equity method and compare it with the fair value method, assume that Maxi Company purchases a 20 percent interest in Mini Company. To apply the fair value method in this example, assume that Maxi does not have the ability to exercise significant influence, and classifies the securities as available-for-sale. Where this example applies the equity method, assume that the 20 percent interest permits Maxi to exercise significant influence. Illustration 17-17 shows the entries.

ILLUSTRATION 17-17
Comparison of Fair Value Method and Equity Method

ENTRIES BY MAXI COMPANY				
Fair Value Method		Equity Method		
On January 2, 2014, Maxi Company acquired 48,000 shares (20% of Mini Company common stock) at a cost of \$10 a share.				
Equity Investments	480,000		Equity Investments	480,000
Cash		480,000	Cash	480,000
For the year 2014, Mini Company reported net income of \$200,000; Maxi Company’s share is 20%, or \$40,000.				
	No entry		Equity Investments	40,000
			Investment Income	40,000
At December 31, 2014, the 48,000 shares of Mini Company have a fair value (market price) of \$12 a share, or \$576,000.				
Fair Value Adjustment (available-for-sale)	96,000		No entry	
Unrealized Holding Gain or Loss—Equity		96,000		
On January 28, 2015, Mini Company announced and paid a cash dividend of \$100,000; Maxi Company received 20%, or \$20,000.				
Cash	20,000		Cash	20,000
Dividend Revenue		20,000	Equity Investments	20,000
For the year 2015, Mini reported a net loss of \$50,000; Maxi Company’s share is 20%, or \$10,000.				
	No entry		Investment Loss	10,000
			Equity Investments	10,000
At December 31, 2015, the Mini Company 48,000 shares have a fair value (market price) of \$11 a share, or \$528,000.				
Unrealized Holding Gain or Loss—Equity	48,000		No entry	
Fair Value Adjustment (available-for-sale)		48,000		

Note that under the fair value method, Maxi reports as revenue only the cash dividends received from Mini. **The earning of net income by Mini (the investee) is not**

considered a proper basis for recognition of income from the investment by Maxi (the investor). Why? Mini may permanently retain in the business any increased net assets resulting from its profitable operation. Therefore, Maxi only recognizes revenue when it receives dividends from Mini.

International Perspective

IFRS has similar accounting rules for significant influence equity investments.

Under the equity method, Maxi reports as revenue its share of the net income reported by Mini. Maxi records the cash dividends received from Mini as a decrease in the investment carrying value. As a result, Maxi records its share of the net income of Mini in the year when it is recognized. With significant influence, Maxi can ensure that Mini will pay dividends, if desired, on any net asset increases resulting from net income. To wait until receiving a dividend ignores the fact that Maxi is better off if the investee has earned income.

Using dividends as a basis for recognizing income poses an additional problem. For example, assume that the investee reports a net loss. However, the investor exerts influence to force a dividend payment from the investee. In this case, the investor reports income, even though the investee is experiencing a loss. **In other words, using dividends as a basis for recognizing income fails to report properly the economics of the situation.**

For some companies, equity accounting can be a real pain to the bottom line. For example, **Amazon.com**, the pioneer of Internet retailing, at one time struggled to turn a profit. Furthermore, some of Amazon's equity investments had resulted in Amazon's earnings performance going from bad to worse. At one time, Amazon disclosed equity stakes in such companies as **Altera International**, **Basis Technology**, **Drugstore.com**, and **Eziba.com**. These equity investees reported losses that made Amazon's already bad bottom line even worse, accounting for up to 22 percent of its reported loss in one year alone.

Investee Losses Exceed Carrying Amount. If an investor's share of the investee's losses exceeds the carrying amount of the investment, should the investor recognize additional losses? Ordinarily, the investor should discontinue applying the equity method and not recognize additional losses.

If the investor's potential loss is not limited to the amount of its original investment (by guarantee of the investee's obligations or other commitment to provide further financial support) or if imminent return to profitable operations by the investee appears to be assured, the investor should recognize additional losses. [6]

Holdings of More Than 50%

When one corporation acquires a voting interest of more than 50 percent in another corporation, it is said to have a **controlling interest**. In such a relationship, the investor corporation is referred to as the **parent** and the investee corporation as the **subsidiary**.

Companies present the investment in the common stock of the subsidiary as a long-term investment on the separate financial statements of the parent.

When the parent treats the investment as a subsidiary, the parent generally prepares **consolidated financial statements**. Consolidated financial statements treat the parent and subsidiary corporations as a single economic entity. (Advanced accounting courses extensively discuss the subject of when and how to prepare consolidated financial statements.) Whether or not consolidated financial statements are prepared, the parent company generally accounts for the investment in the subsidiary **using the equity method** as explained in the previous section of this chapter.

International Perspective

In contrast to U.S. firms, financial statements of non-U.S. companies often include both consolidated (group) statements and parent company financial statements.

What do the numbers mean? WHO'S IN CONTROL HERE?

Molson Coors Brewing Company owns 42 percent of the **MillerCoors'** brewing venture operating in the United States and Puerto Rico. As part of the agreement, Molson helps the MillerCoors unit produce and sell its products in the U.S. and Puerto Rican markets. **Lenovo Group** owns a significant percentage (45 percent) of the shares of **Beijing Lenovo Parasaga Information Technology Co.** (which develops and distributes computer software). Beijing Lenovo is important to Lenovo because it develops and sells the software that is used with Lenovo computers. In return, Beijing Lenovo depends on Lenovo to provide the products that make its software and services valuable, as well as perform significant customer and market support. Indeed, it can be said that to some extent Lenovo controls Beijing Lenovo, which would likely not exist without the support of Lenovo.

As you have learned, because a company like Lenovo owns less than 50 percent of the shares, it does not consolidate Beijing Lenovo but instead accounts for its investment using

the *equity method*. Under the equity method, Lenovo reports a single income item for its profits from Beijing Lenovo and only the net amount of its investment in the statement of financial position. Equity method accounting gives Lenovo a pristine statement of financial position and income statement, by separating the assets and liabilities and the profit margins of the related companies from its laptop-computer businesses.

Some are critical of equity method accounting. They argue that some investees, like Beijing Lenovo, should be consolidated. The FASB has issued rules to consider other factors, in addition to voting interests, when determining whether an entity should be consolidated. We discuss these rules in Appendix 17B. The FASB has tightened up consolidation rules, so that companies will be more likely to consolidate more of their 20–50-percent-owned investments. Consolidation of entities, such as MillerCoors and Beijing Lenovo, is warranted if Molson and Lenovo effectively control their equity method investments.

ADDITIONAL MEASUREMENT ISSUES

Fair Value Option

As indicated in earlier chapters, companies have the option to report most financial instruments at fair value, with all gains and losses related to changes in fair value reported in the income statement. This option is applied on an instrument-by-instrument basis. The fair value option is generally available only at the time a company first purchases the financial asset or incurs a financial liability. If a company chooses to use the fair value option, it must measure this instrument at fair value until the company no longer has ownership.

For example, assume that **Abbott Laboratories** purchased debt securities in 2014 that it classified as held-to-maturity. Abbott does not choose to report this security using the fair value option. In 2015, Abbott buys another held-to-maturity debt security. Abbott decides to report this security using the fair value option. Once it chooses the fair value option for the security bought in 2015, the decision is irrevocable (may not be changed). In addition, Abbott does not have the option to value the held-to-maturity security purchased in 2014 at fair value in 2015 or in subsequent periods.

Many support the use of the fair value option as a step closer to total fair value reporting for financial instruments. They believe this treatment leads to an improvement in financial reporting. Others argue that the fair value option is confusing. A company can choose from period to period whether to use the fair value option for any new investment in a financial instrument. By permitting an instrument-by-instrument approach, companies are able to report some financial instruments at fair value but not others. To illustrate the accounting issues related to the fair value option, we discuss two different situations.

Available-for-Sale Securities

Available-for-sale securities are presently reported at fair value, with any unrealized gains and losses recorded as part of other comprehensive income. Assume that Hardy Company purchases stock in Fielder Company during 2014 that it classifies

5 LEARNING OBJECTIVE

Describe the accounting for the fair value option and for impairments of debt and equity investments.

as available-for-sale. At December 31, 2014, the cost of this security is \$100,000; its fair value at December 31, 2014, is \$125,000. If Hardy chooses the fair value option to account for the Fielder Company stock, it makes the following entry at December 31, 2014.

Equity Investments	25,000	
Unrealized Holding Gain or Loss—Income		25,000

In this situation, Hardy uses an account titled Equity Investments to record the change in fair value at December 31. It does not use a Fair Value Adjustment account because the accounting for a fair value option is on an investment-by-investment basis rather than on a portfolio basis. Because Hardy selected the fair value option, the unrealized gain or loss is recorded as part of net income. Hardy must continue to use the fair value method to record this investment until it no longer has ownership of the security.

Equity Method Investments

Companies may also use the fair value option for investments that otherwise follow the equity method of accounting. To illustrate, assume that Durham Company holds a 28 percent stake in Suppan Inc. Durham purchased the investment in 2014 for \$930,000. At December 31, 2014, the fair value of the investment is \$900,000. Durham elects to report the investment in Suppan using the fair value option. The entry to record this investment is as follows.

Unrealized Holding Gain or Loss—Income	30,000	
Equity Investments		30,000

In contrast to equity method accounting, if the fair value option is chosen, Durham does not report its pro rata share of the income or loss from Suppan. In addition, any dividend payments are credited to Dividend Revenue and therefore do not reduce the Equity Investments account.

One major advantage of using the fair value option for this type of investment is that it addresses confusion about the equity method of accounting. In other words, what exactly does the one-line consolidation related to the equity method of accounting on the balance sheet tell investors? Many believe it does not provide information about liquidity or solvency, nor does it provide an indication of the worth of the company.

International Perspective

IFRS does not allow the use of the fair value option for equity method investments. The FASB is considering a proposal to converge to IFRS in this area.

Evolving Issue

FAIR VALUE CONTROVERSY

The reporting of investment securities is controversial. Some believe that all securities should be reported at fair value. Others believe they all should be stated at amortized cost. Still others favor the present approach. Here are some of the major unresolved issues:

- **Measurement based on intent.** Companies classify debt securities as held-to-maturity, available-for-sale, or trading. As a result, companies can report three identical debt securities in three different ways in the financial

statements. Some argue such treatment is confusing. Furthermore, the held-to-maturity category relies on intent, a subjective evaluation. What is not subjective is the fair value of the debt instrument. In other words, the three classifications are subjective, resulting in arbitrary classifications.

- **Gains trading.** Companies can classify certain debt securities as held-to-maturity and therefore report them at amortized cost. Companies can classify other debt and equity

securities as available-for-sale and report them at fair value, with the unrealized gain or loss reported as other comprehensive income. In either case, a company can become involved in “gains trading” (also referred to as “cherry picking,” “snacking,” or “sell the best and keep the rest”). In **gains trading**, companies sell their “winners,” reporting the gains in income, and hold on to the losers.

- **Liabilities not fairly valued.** Many argue that if companies report investment securities at fair value, they also should report liabilities at fair value. Why? By recog-

nizing changes in value on only one side of the balance sheet (the asset side), a high degree of volatility can occur in the income and stockholders’ equity amounts. Further, financial institutions are involved in asset and liability management (not just asset management). Viewing only one side may lead managers to make un-economic decisions as a result of the accounting. The fair value option may address this concern to some extent. However, there is debate on the usefulness of fair value estimates for liabilities.

Impairment of Value

A company should evaluate every investment, at each reporting date, to determine if it has suffered **impairment**—a loss in value that is other than temporary. For example, if an investee experiences a bankruptcy or a significant liquidity crisis, the investor may suffer a permanent loss. **If the decline is judged to be other than temporary, a company writes down the cost basis of the individual security to a new cost basis.** The company accounts for the write-down as a realized loss. Therefore, it includes the amount in net income.

For debt securities, a company uses the impairment test to determine whether “it is probable that the investor will be unable to collect all amounts due according to the contractual terms.”

For equity securities, the guideline is less precise. Any time realizable value is lower than the carrying amount of the investment, a company must consider an impairment. Factors involved include the length of time and the extent to which the fair value has been less than cost, the financial condition and near-term prospects of the issuer, and the intent and ability of the investor company to retain its investment to allow for any anticipated recovery in fair value.

To illustrate an impairment, assume that Strickler Company holds available-for-sale bond securities with a par value and amortized cost of \$1 million. The fair value of these securities is \$800,000. Strickler has previously reported an unrealized loss on these securities of \$200,000 as part of other comprehensive income. In evaluating the securities, Strickler now determines that it probably will not collect all amounts due. In this case, it reports the unrealized loss of \$200,000 as a loss on impairment of \$200,000. Strickler includes this amount in income, with the bonds stated at their new cost basis. It records this impairment as follows.

Loss on Impairment	200,000	
Debt Investments		200,000

The new cost basis of the investment in debt securities is \$800,000. Strickler includes subsequent increases and decreases in the fair value of impaired available-for-sale securities as other comprehensive income.⁹

Companies base impairment for debt and equity securities on a fair value test. This test differs slightly from the impairment test for loans that we discuss in Appendix 7B.

⁹In addition, any balance in the Unrealized Gain or Loss—Equity and Fair Value Adjustment accounts related to the impaired security would be eliminated. Companies may not amortize any discount related to the debt securities after recording the impairment. The new cost basis of impaired held-to-maturity securities does not change unless additional impairment occurs.

The FASB rejected the discounted cash flow alternative for securities because of the availability of market price information.¹⁰

An example of the criteria used by **Caterpillar** to assess impairment is provided in Illustration 17-18.

ILLUSTRATION 17-18

Disclosure of Impairment Assessment Criteria

Caterpillar, Inc.
Notes to Financial Statements

Note 1. Impairment of available-for-sale securities
Available-for-sale securities are reviewed monthly to identify market values below cost of 20% or more. If a decline for a debt security is in excess of 20% for six months, the investment is evaluated to determine if the decline is due to general declines in the marketplace or if the investment has been impaired and should be written down to market value. . . . After the six-month period, debt securities with declines from cost in excess of 20% are evaluated monthly for impairment. For equity securities, if a decline from cost of 20% or more continues for a 12-month period, an other than temporary impairment is recognized without continued analysis.

RECLASSIFICATIONS AND TRANSFERS

Reclassification Adjustments

LEARNING OBJECTIVE 6

Describe the reporting of reclassification adjustments and the accounting for transfers between categories.

As we indicated in Chapter 4, companies report changes in unrealized holding gains and losses related to available-for-sale securities as part of other comprehensive income. Companies may display the components of other comprehensive income in one of two ways: (1) in a combined statement of income and comprehensive income, or (2) in a separate statement of comprehensive income that begins with net income.

The reporting of changes in unrealized gains or losses in comprehensive income is straightforward unless a company sells securities during the year. In that case, double-counting results when the company reports realized gains or losses as part of net income but also shows the amounts as part of other comprehensive income in the current period or in previous periods.

To ensure that gains and losses are not counted twice when a sale occurs, a **reclassification adjustment** is necessary. To illustrate, assume that Open Company has the following two available-for-sale securities in its portfolio at the end of 2013 (its first year of operations).

ILLUSTRATION 17-19

Available-for-Sale Security Portfolio (2013)

Investments	Cost	Fair Value	Unrealized Holding Gain (Loss)
Lehman Inc. common stock	\$ 80,000	\$105,000	\$25,000
Woods Co. common stock	120,000	135,000	15,000
Total of portfolio	<u>\$200,000</u>	<u>\$240,000</u>	<u>40,000</u>
Previous fair value adjustment balance			-0-
Fair value adjustment—Dr.			<u>\$40,000</u>

The entry to record the unrealized holding gain in 2013 is as follows.

Fair Value Adjustment (available-for-sale)	40,000	
Unrealized Holding Gain or Loss—Equity		40,000

¹⁰The FASB is currently exploring a new impairment model for financial instruments. The model focuses on the recognition of all expected losses which are “an estimate of contractual cash flows not expected to be collected.” This differs from the current model, known as the incurred loss model, which requires evidence that a loss actually has occurred before the loss can be recorded.

If Open Company reports net income in 2013 of \$350,000, it presents a statement of comprehensive income as follows.

OPEN COMPANY	
STATEMENT OF COMPREHENSIVE INCOME	
FOR THE YEAR ENDED DECEMBER 31, 2013	
Net income	\$350,000
Other comprehensive income	
Unrealized holding gain	40,000
Comprehensive income	<u>\$390,000</u>

ILLUSTRATION 17-20
Statement of Comprehensive Income (2013)

At December 31, 2013, Open Company reports on its balance sheet equity investments of \$240,000 (cost \$200,000 plus fair value adjustment of \$40,000) and accumulated other comprehensive income in stockholders' equity of \$40,000. The entry to transfer the unrealized holding gain—equity to accumulated other comprehensive income is as follows.

Unrealized Holding Gain or Loss—Equity	40,000	
Accumulated Other Comprehensive Income		40,000

In 2014, Open Company sells its Lehman Inc. common stock for \$105,000 and realizes a gain on the sale of \$25,000 (\$105,000 – \$80,000). The journal entry to record this transaction is as follows.

Cash	105,000	
Equity Investments		80,000
Gain on Sale of Investments		25,000

At the end of 2014, the fair value of the Woods Co. common stock increased an additional \$20,000 (\$155,000 – \$135,000), to \$155,000. Illustration 17-21 shows the computation of the change in the Fair Value Adjustment account (based on only the Woods Co. investment).

Investments	Cost	Fair Value	Unrealized Holding Gain (Loss)
Woods Co. common stock	<u>\$120,000</u>	<u>\$155,000</u>	\$35,000
Previous fair value adjustment balance—Dr.			(40,000)
Fair value adjustment—Cr.			<u>\$ (5,000)</u>

ILLUSTRATION 17-21
Available-for-Sale Security Portfolio (2014)

The entry to record the unrealized holding gain in 2014 is as follows.

Unrealized Holding Gain or Loss—Equity	5,000	
Fair Value Adjustment (available-for-sale)		5,000

If we assume that Open Company reports net income of \$720,000 in 2014, including the realized sale on the Lehman stock, its income statement is presented as shown in Illustration 17-22.

OPEN COMPANY	
STATEMENT OF COMPREHENSIVE INCOME	
FOR THE YEAR ENDED DECEMBER 31, 2014	
Net income (includes \$25,000 realized gain on Lehman shares)	\$720,000
Other comprehensive income	
Unrealized holding loss	(5,000)
Comprehensive income	<u>\$715,000</u>

ILLUSTRATION 17-22
Statement of Comprehensive Income (2014)

At December 31, 2014, Open Company reports on its balance sheet equity investments of \$155,000 (cost \$120,000 plus a fair value adjustment of \$35,000) and accumulated other comprehensive income in stockholders' equity of \$35,000 (\$40,000 – \$5,000). The entry to transfer the unrealized holding loss—equity to accumulated other comprehensive income is as follows.

Accumulated Other Comprehensive Income	5,000	
Unrealized Holding Gain or Loss—Equity		5,000

In 2013, Open included the unrealized gain on the Lehman Co. common stock in comprehensive income. In 2014, Open sold the stock. It reported the realized gain (\$25,000) in net income, which increased comprehensive income again. To avoid double-counting this gain, Open makes a reclassification adjustment to eliminate the realized gain from the computation of comprehensive income in 2014.

This reclassification adjustment may be made in the income statement, in accumulated other comprehensive income or in a note to the financial statements. The FASB prefers to show the reclassification amount in accumulated other comprehensive income in the notes to the financial statements.¹¹ For Open Company, this presentation is as shown in Illustration 17-23.

ILLUSTRATION 17-23

Note Disclosure of
Reclassification
Adjustments

OPEN COMPANY		
NOTES TO FINANCIAL STATEMENTS		
CHANGES IN ACCUMULATED OTHER COMPREHENSIVE INCOME		
Beginning balance, January 1, 2014		\$40,000
Current-period other comprehensive income (\$155,000 – \$135,000)	\$ 20,000	
Amount reclassified from accumulated other comprehensive income	<u>(25,000)</u>	
Unrealized holding loss		<u>(5,000)</u>
Ending balance, December 31, 2014		<u>\$35,000</u>

Comprehensive Example

To provide a single-period example of the reporting of investment securities and related gain or loss on available-for-sale securities, assume that on January 1, 2014, Hinges Co. had cash and common stock of \$50,000.¹² At that date, the company had no other asset, liability, or equity balance. On January 2, Hinges purchased for cash \$50,000 of equity securities classified as available-for-sale. On June 30, Hinges sold part of the available-for-sale security portfolio, realizing a gain as shown in Illustration 17-24.

ILLUSTRATION 17-24

Computation of Realized
Gain

Fair value of securities sold	\$22,000
Less: Cost of securities sold	<u>20,000</u>
Realized gain	<u>\$ 2,000</u>

¹¹Recently, the FASB has proposed requiring companies to provide a tabular disclosure about items reclassified out of accumulated other comprehensive income. In general, for items reclassified to net income (e.g., gains or losses on available-for-sale securities), the disclosure includes the amount reclassified and identifies the line item affected on the income statement.

¹²We adapted this example from Dennis R. Beresford, L. Todd Johnson, and Cheri L. Reither, "Is a Second Income Statement Needed?" *Journal of Accountancy* (April 1996), p. 71.

Hinges did not purchase or sell any other securities during 2014. It received \$3,000 in dividends during the year. At December 31, 2014, the remaining portfolio is as shown in Illustration 17-25.

Fair value of portfolio	\$34,000
Less: Cost of portfolio	<u>30,000</u>
Unrealized gain	<u>\$ 4,000</u>

Net income	<u>\$5,000</u>

ILLUSTRATION 17-26
Income Statement

The company reports its change in the unrealized holding gain in a statement of comprehensive income as follows.

HINGES CO. STATEMENT OF COMPREHENSIVE INCOME FOR THE YEAR ENDED DECEMBER 31, 2014	
Net income (includes realized gain of \$2,000)	\$5,000
Other comprehensive income:	
Unrealized holding gain	<u>4,000</u>
Comprehensive income	<u>\$9,000</u>

ILLUSTRATION 17-27
Statement of
Comprehensive Income

Its statement of stockholders' equity appears in Illustration 17-28.

HINGES CO. STATEMENT OF STOCKHOLDERS' EQUITY FOR THE YEAR ENDED DECEMBER 31, 2014				
	Common Stock	Retained Earnings	Accumulated Other Comprehensive Income	Total
Beginning balance	\$50,000	\$ -0-	\$-0-	\$50,000
Add: Net income		5,000		5,000
Other comprehensive income			<u>4,000*</u>	<u>4,000</u>
Ending balance	<u>\$50,000</u>	<u>\$5,000</u>	<u>\$4,000</u>	<u>\$59,000</u>

*Total holding gains of \$6,000 less reclassification adjustment of \$2,000.

ILLUSTRATION 17-28
Statement of
Stockholders' Equity

The comparative balance sheet is shown below in Illustration 17-29.

ILLUSTRATION 17-29
Comparative Balance Sheet

HINGES CO.		
COMPARATIVE BALANCE SHEET		
	1/1/14	12/31/14
Assets		
Cash	\$50,000	\$25,000
Equity investments (available-for-sale)		34,000
Total assets	<u>\$50,000</u>	<u>\$59,000</u>
Stockholders' equity		
Common stock	\$50,000	\$50,000
Retained earnings		5,000
Accumulated other comprehensive income		4,000
Total stockholders' equity	<u>\$50,000</u>	<u>\$59,000</u>

This example indicates how an unrealized gain or loss on available-for-sale securities affects all the financial statements. Note that a company must disclose the components that comprise accumulated other comprehensive income.

Transfers Between Categories

Companies account for transfers between any of the categories at fair value. Thus, if a company transfers available-for-sale securities to held-to-maturity investments, it records the new investments (held-to-maturity) at the date of transfer at fair value in the new category. Similarly, if it transfers held-to-maturity investments to available-for-sale investments, it records the new investments (available-for-sale) at fair value. This fair value rule assures that a company cannot omit recognition of fair value simply by transferring securities to the held-to-maturity category. Illustration 17-30 summarizes the accounting treatment for transfers.

ILLUSTRATION 17-30
Accounting for Transfers

Type of Transfer	Measurement Basis	Impact of Transfer on Stockholders' Equity*	Impact of Transfer on Net Income*
Transfer from trading to available-for-sale	Security transferred at fair value at the date of transfer, which is the new cost basis of the security.	The unrealized gain or loss at the date of transfer increases or decreases stockholders' equity.	The unrealized gain or loss at the date of transfer is recognized in income.
Transfer from available-for-sale to trading	Security transferred at fair value at the date of transfer, which is the new cost basis of the security.	The unrealized gain or loss at the date of transfer increases or decreases stockholders' equity.	The unrealized gain or loss at the date of transfer is recognized in income.
Transfer from held-to-maturity to available-for-sale**	Security transferred at fair value at the date of transfer.	The separate component of stockholders' equity is increased or decreased by the unrealized gain or loss at the date of transfer.	None
Transfer from available-for-sale to held-to-maturity	Security transferred at fair value at the date of transfer.	The unrealized gain or loss at the date of transfer carried as a separate component of stockholders' equity is amortized over the remaining life of the security.	None

*Assumes that adjusting entries to report changes in fair value for the current period are not yet recorded.
**According to GAAP, these types of transfers should be rare.

Summary of Reporting Treatment of Securities

Illustration 17-31 summarizes the major debt and equity securities and their reporting treatment.

Category*	Balance Sheet	Income Statement
Trading (debt and equity securities)	Investments shown at fair value. Current assets.	Interest and dividends are recognized as revenue. Unrealized holding gains and losses are included in net income.
Available-for-sale (debt and equity securities)	Investments shown at fair value. Current or long-term assets. Unrealized holding gains and losses are a separate component of stockholders' equity.	Interest and dividends are recognized as revenue. Unrealized holding gains and losses are not included in net income but in other comprehensive income.
Held-to-maturity (debt securities)	Investments shown at amortized cost. Current or long-term assets.	Interest is recognized as revenue.
Equity method and/or consolidation (equity securities)	Investments originally are carried at cost, are periodically adjusted by the investor's share of the investee's earnings or losses, and are decreased by all dividends received from the investee. Classified as long-term.	Revenue is recognized to the extent of the investee's earnings or losses reported subsequent to the date of investment.

*Companies have the option to report financial instruments at fair value with all gains and losses related to changes in fair value reported in the income statement. If a company chooses to use the fair option for some of its financial instruments, these assets or liabilities should be reported separately from other financial instruments that use a different valuation basis. To accomplish separate reporting, a company may either (a) report separate line items for the fair value and non-fair value amounts or (b) report the total fair value and non-fair value amounts in one line and parenthetically report the fair value amount in that line also.¹³

Discussion of Special Issues Related to Investments

You will want to read the

IFRS INSIGHTS
on pages 1026–1039

for discussion of IFRS related to the accounting for investments.

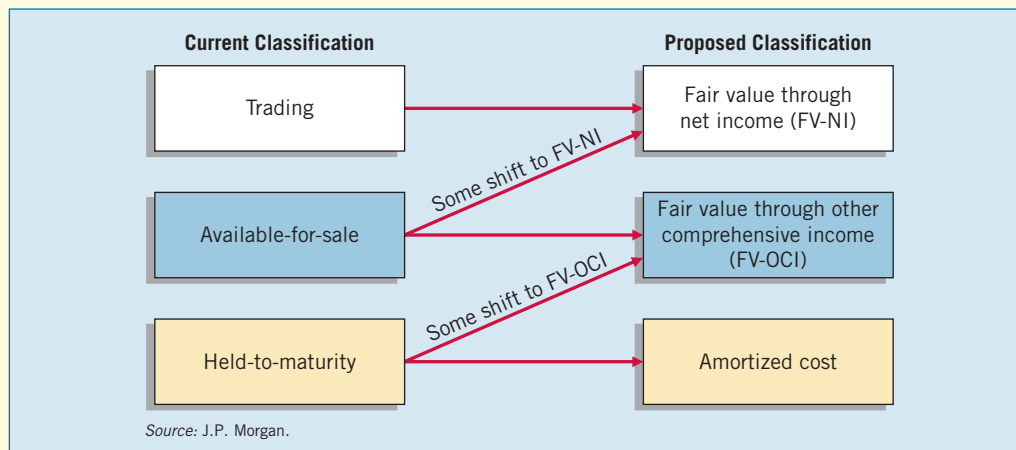

Evolving Issue

CLASSIFICATION AND MEASUREMENT—THE LONG ROAD

As discussed in the opening story, the FASB and IASB have been on divergent approaches to financial instrument classification and measurement. These differences have narrowed recently with the decision to permit a “Fair Value through

Other Comprehensive Income” category for some debt instruments. The following table summarizes the agreed-upon approach in comparison to current GAAP.

As indicated, under the new model, there will still be three “buckets” although the proportions of financial instruments within the new classifications will change. For example,

the FV-NI category will likely be larger than the current trading category because publicly traded companies will likely be required to classify all equity securities (both marketable

¹³Not surprisingly, the disclosure requirements for investments and other financial assets and liabilities are extensive. We provide an expanded discussion with examples of these disclosure requirements in Appendix 17C.

and nonmarketable) in FV-NI. Currently, companies are able to classify some equities in the available-for-sale category if particular criteria are met. To the extent a company has traditionally classified a large portion of its equity securities in the available-for-sale category, more equity instruments accounted for in the FV-NI category could create more net income volatility than under current GAAP.

The FV-OCI category may be larger or smaller than a company's current available-for-sale category. On the one hand, equities will no longer be eligible for classification in this category, which will make it smaller. On the other hand, some instruments that are currently classified as held-to-

maturity will not be eligible for amortized cost classification and instead will end up being moved into the FV-OCI category.

For most companies, the amortized cost category generally will be smaller than the current held-to-maturity category because securities will no longer be eligible for classification in this category. Our expectation is that most of the instruments that will no longer meet the eligibility criteria for amortized cost accounting will likely move to the FV-OCI category.

The FASB is expected to issue a revised proposal in 2013. The IASB has specified that a revised *IFRS 9* will be effective for annual periods beginning on or after January 1, 2015.

SUMMARY OF LEARNING OBJECTIVES

- 1 Identify the three categories of debt securities and describe the accounting and reporting treatment for each category.** (1) Carry and report *held-to-maturity debt securities* at amortized cost. (2) Value *trading debt securities* for reporting purposes at fair value, with unrealized holding gains or losses included in net income. (3) Value *available-for-sale debt securities* for reporting purposes at fair value, with unrealized holding gains or losses reported as other comprehensive income and as a separate component of stockholders' equity.
- 2 Understand the procedures for discount and premium amortization on bond investments.** Similar to bonds payable, companies should amortize discount or premium on bond investments using the effective-interest method. They apply the effective-interest rate or yield to the beginning carrying value of the investment for each interest period in order to compute interest revenue.
- 3 Identify the categories of equity securities and describe the accounting and reporting treatment for each category.** The degree to which one corporation (investor) acquires an interest in the common stock of another corporation (investee) generally determines the accounting treatment for the investment. Long-term investments by one corporation in the common stock of another can be classified according to the percentage of the voting stock of the investee held by the investor.
- 4 Explain the equity method of accounting and compare it to the fair value method for equity securities.** Under the equity method, the investor and the investee acknowledge a substantive economic relationship. The company originally records the investment at cost but subsequently adjusts the amount each period for changes in the net assets of the investee. That is, the investor's proportionate share of the earnings (losses) of the investee periodically increases (decreases) the investment's carrying amount. All dividends received by the investor from the investee decrease the investment's carrying amount. Under the fair value method, a company reports the equity investment at fair value each reporting period irrespective of the investee's earnings or dividends paid to it. A company applies the equity method to investment holdings between 20 percent and 50 percent of ownership. It applies the fair value method to holdings below 20 percent.

5 Describe the accounting for the fair value option and for impairments of debt and equity investments. Companies have the option to report most financial instruments at fair value, with all gains and losses related to changes in fair value reported in the income statement. This option is applied on an instrument-by-instrument basis. The fair value option is generally available only at the time a company first purchases the financial asset or incurs a financial liability. If a company chooses to use the fair value option, it must measure this instrument at fair value until the company no longer has ownership.

Impairments of debt and equity securities are losses in value that are determined to be other than temporary, are based on a fair value test, and are charged to income.

6 Describe the reporting of reclassification adjustments and the accounting for transfers between categories. A company needs a reclassification adjustment when it reports realized gains or losses as part of net income but also shows the amounts as part of other comprehensive income in the current or in previous periods. Companies should report unrealized holding gains or losses related to available-for-sale securities in other comprehensive income and the aggregate balance as accumulated comprehensive income on the balance sheet.

Transfers of securities between categories of investments should be accounted for at fair value, with unrealized holding gains or losses treated in accordance with the nature of the transfer.

APPENDIX 17A

ACCOUNTING FOR DERIVATIVE INSTRUMENTS

Until the early 1970s, most financial managers worked in a cozy, if unthrilling, world. Since then, constant change caused by volatile markets, new technology, and deregulation has increased the risks to businesses. In response, the financial community developed products to manage these risks.

These products—called **derivative financial instruments** or simply **derivatives**—are useful for managing risk. Companies use the fair values or cash flows of these instruments to offset the changes in fair values or cash flows of the at-risk assets. The development of powerful computing and communication technology has aided the growth in derivative use. This technology provides new ways to analyze information about markets as well as the power to process high volumes of payments.

7 LEARNING OBJECTIVE
Describe the uses of and accounting for derivatives.

DEFINING DERIVATIVES

In order to understand derivatives, consider the following examples.

Example 1—Forward Contract. Assume that a company like **Dell** believes that the price of **Google**'s stock will increase substantially in the next 3 months. Unfortunately, it does not have the cash resources to purchase the stock today. Dell therefore enters into a contract with a broker for delivery of 10,000 shares of Google stock in 3 months at the price of \$110 per share.

Dell has entered into a **forward contract**, a type of derivative. As a result of the contract, Dell **has received the right** to receive 10,000 shares of Google stock in 3 months. Further, it **has an obligation** to pay \$110 per share at that time. What is the benefit of this derivative contract? Dell can buy Google stock today and take delivery in 3 months. If the price goes up, as it expects, Dell profits. If the price goes down, Dell loses.

Example 2—Option Contract. Now suppose that Dell needs 2 weeks to decide whether to purchase Google stock. It therefore enters into a different type of contract, one that gives it the right to purchase Google stock at its current price any time within the next 2 weeks. As part of the contract, the broker charges \$3,000 for holding the contract open for 2 weeks at a set price.

Dell has now entered into an **option contract**, another type of derivative. As a result of this contract, **it has received the right but not the obligation** to purchase this stock. If the price of the Google stock increases in the next 2 weeks, Dell exercises its option. In this case, the cost of the stock is the price of the stock stated in the contract, plus the cost of the option contract. If the price does not increase, Dell does not exercise the contract but still incurs the cost for the option.

The forward contract and the option contract both involve a future delivery of stock. The value of the contract relies on the underlying asset—the Google stock. Thus, these financial instruments are known as derivatives because they **derive their value from** values of other assets (e.g., stocks, bonds, or commodities). Or, put another way, their value relates to a market-determined indicator (e.g., stock price, interest rates, or the Standard and Poor’s 500 stock composite index).

In this appendix, we discuss the accounting for three different types of derivatives:

1. Financial forwards or financial futures.
2. Options.
3. Swaps.

WHO USES DERIVATIVES, AND WHY?

Whether to protect for changes in interest rates, the weather, stock prices, oil prices, or foreign currencies, derivative contracts help to smooth the fluctuations caused by various types of risks. A company that wants to ensure against certain types of business risks often uses derivative contracts to achieve this objective.¹⁴

Producers and Consumers

To illustrate, assume that Heartland Ag is a large producer of potatoes for the consumer market. The present price for potatoes is excellent. Unfortunately, Heartland needs two months to harvest its potatoes and deliver them to the market. Because Heartland expects the price of potatoes to drop in the coming months, it signs a forward contract. It agrees to sell its potatoes today at the current market price for delivery in 2 months.

Who would buy this contract? Suppose on the other side of the contract is **McDonald’s Corporation**. McDonald’s wants to have potatoes (for French fries) in 2 months and believes that prices will increase. McDonald’s is therefore agreeable to accepting delivery in 2 months at current prices. It knows that it will need potatoes in 2 months and that it can make an acceptable profit at this price level.

In this situation, if the price of potatoes increases before delivery, Heartland loses and McDonald’s wins. Conversely, if the price decreases, Heartland wins and McDonald’s loses. However, the objective is not to gamble on the outcome. Regardless of which way the price moves, both Heartland and McDonald’s have received a price at

¹⁴Derivatives are traded on many exchanges throughout the world. In addition, many derivative contracts (primarily interest rate swaps) are privately negotiated.

which they obtain an acceptable profit. In this case, although Heartland is a **producer** and McDonald's is a **consumer**, both companies are **hedgers**. They both **hedge their positions** to ensure an acceptable financial result.

Commodity prices are volatile. They depend on weather, crop production, and general economic conditions. For the producer and the consumer to plan effectively, it makes good sense to lock in specific future revenues or costs in order to run their businesses successfully.

Speculators and Arbitrageurs

In some cases, instead of McDonald's taking a position in the forward contract, a speculator may purchase the contract from Heartland. The **speculator** bets that the price of potatoes will rise, thereby increasing the value of the forward contract. The speculator, who may be in the market for only a few hours, will then sell the forward contract to another speculator or to a company like McDonald's.

Arbitrageurs also use derivatives. These market players attempt to exploit inefficiencies in markets. They seek to lock in profits by simultaneously entering into transactions in two or more markets. For example, an arbitrageur might trade in a futures contract. At the same time, the arbitrageur will also trade in the commodity underlying the futures contract, hoping to achieve small price gains on the difference between the two. Markets rely on speculators and arbitrageurs to keep the market liquid on a daily basis.

In these illustrations, we explained why Heartland (the producer) and McDonald's (the consumer) would become involved in a derivative contract. Consider other types of situations that companies face.

1. Airlines, like **Delta**, **Southwest**, and **United**, are affected by changes in the price of jet fuel.
2. Financial institutions, such as **Citigroup**, **Bankers Trust**, and **BMO Harris**, are involved in borrowing and lending funds that are affected by changes in interest rates.
3. Multinational corporations, like **Cisco Systems**, **Coca-Cola**, and **General Electric**, are subject to changes in foreign exchange rates.

In fact, most corporations are involved in some form of derivatives transactions. Companies give these reasons (in their annual reports) as to why they use derivatives:

1. **ExxonMobil** uses derivatives to hedge its exposure to fluctuations in interest rates, foreign currency exchange rates, and hydrocarbon prices.
2. **Caterpillar** uses derivatives to manage foreign currency exchange rates, interest rates, and commodity price exposure.
3. **Johnson & Johnson** uses derivatives to manage the impact of interest rate and foreign exchange rate changes on earnings and cash flows.

Many corporations use derivatives extensively and successfully. However, derivatives can be dangerous. All parties involved must understand the risks and rewards associated with these contracts.¹⁵

¹⁵There are some well-publicized examples of companies that have suffered considerable losses using derivatives. For example, companies such as **Fannie Mae** (U.S.), **Enron** (U.S.), **Showa Shell Sekiyu** (Japan), **Metallgesellschaft** (Germany), **Procter & Gamble** (U.S.), and **Air Products & Chemicals** (U.S.) incurred significant losses from investments in derivative instruments.

BASIC PRINCIPLES IN ACCOUNTING FOR DERIVATIVES

The FASB concluded that derivatives such as forwards and options are assets and liabilities. It also concluded that companies should report them in the balance sheet at **fair value**.¹⁶ The Board believes that fair value will provide statement users the best information about derivatives. Relying on some other basis of valuation for derivatives, such as historical cost, does not make sense. Why? Because many derivatives have a historical cost of zero. Furthermore, the markets for derivatives, and the assets upon which derivatives' values rely, are well developed. As a result, the Board believes that companies can determine reliable fair value amounts for derivatives.¹⁷

On the income statement, a company should recognize any unrealized gain or loss in income, if it uses the derivative for speculation purposes. If using the derivative for hedging purposes, the accounting for any gain or loss depends on the type of hedge used. We discuss the accounting for hedged transactions later in the appendix.

In summary, companies follow these guidelines in accounting for derivatives.

1. Recognize derivatives in the financial statements as assets and liabilities.
2. Report derivatives at fair value.
3. Recognize gains and losses resulting from speculation in derivatives immediately in income.
4. Report gains and losses resulting from hedge transactions differently, depending on the type of hedge.

Example of Derivative Financial Instrument—Speculation

To illustrate the measurement and reporting of a derivative for speculative purposes, we examine a derivative whose value depends on the market price of Laredo Inc. common stock. A company can realize a gain from the increase in the value of the Laredo shares with the use of a derivative, such as a call option.¹⁸ A **call option** gives the holder the right, but not the obligation, to buy shares at a preset price. This price is often referred to as the **strike price** or the **exercise price**.

¹⁶GAAP covers accounting and reporting for all derivative instruments, whether financial or not. In this appendix, we focus on derivative financial instruments because of their widespread use in practice. [7]

¹⁷As discussed in earlier chapters, fair value is defined as “the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.” Fair value is therefore a market-based measure. The FASB has also developed a fair value hierarchy, which indicates the priority of valuation techniques to use to determine fair value. *Level 1* fair value measures are based on observable inputs that reflect quoted prices for identical assets or liabilities in active markets. *Level 2* measures are based on inputs other than quoted prices included in Level 1 but that can be corroborated with observable data. *Level 3* fair values are based on unobservable inputs (for example, a company's own data or assumptions). Thus, Level 1 is the most reliable because it is based on quoted prices, like a closing stock price in the *Wall Street Journal*. Level 2 is the next most reliable and would rely on evaluating similar assets or liabilities in active markets. For Level 3 (the least reliable), much judgment is needed, based on the best information available, to arrive at a relevant and reliable fair value measurement. [8]

¹⁸Investors can use a different type of option contract—a **put option**—to realize a gain if anticipating a decline in the Laredo stock value. A put option gives the holder the option to sell shares at a preset price. Thus, a put option **increases** in value when the underlying asset **decreases** in value.

For example, assume a company enters into a call option contract with Baird Investment Co., which gives it the option to purchase Laredo stock at \$100 per share.¹⁹ If the price of Laredo stock increases above \$100, the company can exercise this option and purchase the shares for \$100 per share. If Laredo’s stock never increases above \$100 per share, the call option is worthless.

Accounting Entries. To illustrate the accounting for a call option, assume that the company purchases a call option contract on January 2, 2014, when Laredo shares are trading at \$100 per share. The contract gives it the option to purchase 1,000 shares (referred to as the **notional amount**) of Laredo stock at an option price of \$100 per share. The option expires on April 30, 2014. The company purchases the call option for \$400 and makes the following entry.

January 2, 2014		
Call Option	400	
Cash		400

This payment is referred to as the **option premium**. It is generally much less than the cost of purchasing the shares directly. The option premium consists of two amounts: (1) intrinsic value and (2) time value. Illustration 17A-1 shows the formula to compute the option premium.

ILLUSTRATION 17A-1
Option Premium
Formula

Intrinsic value is the difference between the market price and the preset strike price at any point in time. It represents the amount realized by the option holder, if exercising the option immediately. On January 2, 2014, the intrinsic value is zero because the market price equals the preset strike price.

Time value refers to the option’s value over and above its intrinsic value. Time value reflects the possibility that the option has a fair value greater than zero. How? Because there is some expectation that the price of Laredo shares will increase above the strike price during the option term. As indicated, the time value for the option is \$400.²⁰

The following additional data are available with respect to the call option.

Date	Market Price of Laredo Shares	Time Value of Call Option
March 31, 2014	\$120 per share	\$100
April 16, 2014	\$115 per share	\$ 60

As indicated, on March 31, 2014, the price of Laredo shares increases to \$120 per share. The intrinsic value of the call option contract is now \$20,000. That is, the company can exercise the call option and purchase 1,000 shares from Baird Investment for \$100 per share. It can then sell the shares in the market for \$120 per share. This gives the

¹⁹Baird Investment Co. is referred to as the **counterparty**. Counterparties frequently are investment bankers or other companies that hold inventories of financial instruments.

²⁰This cost is estimated using option-pricing models, such as the Black-Scholes equation. The volatility of the underlying stock, the expected life of the option, the risk-free rate of interest, and expected dividends on the underlying stock during the option term affect the Black-Scholes fair value estimate.

company a gain of \$20,000 (\$120,000 – \$100,000) on the option contract.²¹ It records the increase in the intrinsic value of the option as follows.

March 31, 2014		
Call Option	20,000	
Unrealized Holding Gain or Loss—Income		20,000

A market appraisal indicates that the time value of the option at March 31, 2014, is \$100.²² The company records this change in value of the option as follows.

March 31, 2014		
Unrealized Holding Gain or Loss—Income	300	
Call Option (\$400 – \$100)		300

At March 31, 2014, the company reports the call option in its balance sheet at fair value of \$20,100.²³ The unrealized holding gain increases net income for the period. The loss on the time value of the option decreases net income.

On April 16, 2014, the company settles the option before it expires. To properly record the settlement, it updates the value of the option for the decrease in the intrinsic value of \$5,000 $(\$20 - \$15) \times 1,000$ as follows.

April 16, 2014		
Unrealized Holding Gain or Loss—Income	5,000	
Call Option		5,000

The decrease in the time value of the option of \$40 (\$100 – \$60) is recorded as follows.

April 16, 2014		
Unrealized Holding Gain or Loss—Income	40	
Call Option		40

Thus, at the time of the settlement, the call option’s carrying value is as follows.

Call Option			
January 2, 2014	400	March 31, 2014	300
March 31, 2014	20,000	April 16, 2014	5,000
		April 16, 2014	40
Balance, April 16, 2014	15,060		

The company records the settlement of the option contract with Baird as follows.

April 16, 2014		
Cash	15,000	
Loss on Settlement of Call Option	60	
Call Option		15,060

Illustration 17A-2 summarizes the effects of the call option contract on net income.

ILLUSTRATION 17A-2
Effect on Income—
Derivative Financial
Instrument

Date	Transaction	Income (Loss) Effect
March 31, 2014	Net increase in value of call option (\$20,000 – \$300)	\$19,700
April 16, 2014	Decrease in value of call option (\$5,000 + \$40)	(5,040)
April 16, 2014	Settle call option	(60)
	Total net income	<u>\$14,600</u>

²¹In practice, investors generally do not have to actually buy and sell the Laredo shares to settle the option and realize the gain. This is referred to as the **net settlement** feature of option contracts.

²²The decline in value reflects both the decreased likelihood that the Laredo shares will continue to increase in value over the option period and the shorter time to maturity of the option contract.

²³As indicated earlier, the total value of the option at any point in time equals the intrinsic value plus the time value.

The accounting summarized in Illustration 17A-2 is in accord with GAAP. That is, because the call option meets the definition of an asset, the company records it in the balance sheet on March 31, 2014. Furthermore, it reports the call option at fair value, with any gains or losses reported in income.

Differences Between Traditional and Derivative Financial Instruments

How does a traditional financial instrument differ from a derivative one? A derivative financial instrument has the following three basic characteristics. [9]

- 1. The instrument has (1) one or more underlyings and (2) an identified payment provision.** An **underlying** is a specified interest rate, security price, commodity price, index of prices or rates, or other market-related variable. The interaction of the underlying, with the face amount or the number of units specified in the derivative contract (the notional amounts), determines payment. For example, the value of the call option increased in value when the value of the Laredo stock increased. In this case, the underlying is the stock price. To arrive at the payment provision, multiply the change in the stock price by the number of shares (notional amount).
- 2. The instrument requires little or no investment at the inception of the contract.** To illustrate, the company paid a small premium to purchase the call option—an amount much less than if purchasing the Laredo shares as a direct investment.
- 3. The instrument requires or permits net settlement.** As indicated in the call option example, the company could realize a profit on the call option without taking possession of the shares. This **net settlement** feature reduces the transaction costs associated with derivatives.

Illustration 17A-3 summarizes the differences between traditional and derivative financial instruments. Here, we use a trading security for the traditional financial instrument and a call option as an example of a derivative one.

Feature	Traditional Financial Instrument (Trading Security)	Derivative Financial Instrument (Call Option)
Payment provision	Stock price times the number of shares.	Change in stock price (underlying) times number of shares (notional amount).
Initial investment	Investor pays full cost.	Initial investment is much less than full cost.
Settlement	Deliver stock to receive cash.	Receive cash equivalent, based on changes in stock price times the number of shares.

ILLUSTRATION 17A-3
Features of Traditional and Derivative Financial Instruments

DERIVATIVES USED FOR HEDGING

Flexibility in use and the low-cost features of derivatives relative to traditional financial instruments explain the popularity of derivatives. An additional use for derivatives is in risk management. For example, companies such as **Coca-Cola**, **ExxonMobil**, and **General Electric** borrow and lend substantial amounts in credit markets. In doing so, they are exposed to significant **interest rate risk**. That is, they face substantial risk that the fair values or cash flows of interest-sensitive assets or liabilities will change if interest rates increase or decrease. These same companies also have significant international operations. As such,

they are also exposed to **exchange rate risk**—the risk that changes in foreign currency exchange rates will negatively impact the profitability of their international businesses.

Companies can use derivatives to offset the negative impacts of changes in interest rates or foreign currency exchange rates. This use of derivatives is referred to as **hedging**. GAAP established accounting and reporting standards for derivative financial instruments used in hedging activities. The FASB allows special accounting for two types of hedges—fair value and cash flow hedges.²⁴

What do the numbers mean?

RISKY BUSINESS

As shown in the graph below, use of derivatives has grown substantially in the past 10 years. In fact, over \$450 trillion (in notional amounts) in derivative contracts were in play at the end of 2010. The primary players in the market for

derivatives are large companies and various financial institutions, which continue to find new uses for derivatives for speculation and risk management

Financial engineers continue to develop new uses for derivatives, many times through the use of increasingly complex webs of transactions, spanning a number of markets. As new uses for derivatives appear, the financial system as a whole can be dramatically affected. As a result, some market-watchers are concerned about the risk that a crisis in one company or sector could bring the entire financial system to its knees.

This was the case recently when credit default swaps were used to facilitate the sales of mortgage-backed securities

(MBS). However, when the real estate market went south, the MBS defaulted, exposing large international financial institutions, like **Barclays**, **AIG**, and **Bank of America**, to massive losses. The losses were so widespread that government bailouts were required to prevent international securities markets from collapsing. In response, market regulators are proposing new rules to mitigate risks to broader markets from derivatives trading.

Source: P. Eavis, "Bill on Derivatives Overhaul Is Long Overdue," *Wall Street Journal* (April 14, 2010).

Fair Value Hedge

LEARNING OBJECTIVE 8

Explain how to account for a fair value hedge.

In a **fair value hedge**, a company uses a derivative to hedge (offset) the exposure to changes in the fair value of a recognized asset or liability or of an unrecognized commitment. In a perfectly hedged position, the gain or loss on the fair value of the derivative equals and offsets that of the hedged asset or liability.

²⁴GAAP also addresses the accounting for certain foreign currency hedging transactions. In general, these transactions are special cases of the two hedges we discuss here. **[10]** Understanding of foreign currency hedging transactions requires knowledge related to consolidation of multinational entities, which is beyond the scope of this textbook.

Companies commonly use several types of fair value hedges. For example, companies use interest rate swaps to hedge the risk that changes in interest rates will impact the fair value of debt obligations. Or, they use put options to hedge the risk that an equity investment will decline in value.

To illustrate a fair value hedge, assume that on April 1, 2014, Hayward Co. purchases 100 shares of Sonoma stock at a market price of \$100 per share. Hayward does not intend to actively trade this investment. It consequently classifies the Sonoma investment as available-for-sale. Hayward records this available-for-sale investment as follows.

April 1, 2014		
Equity Investments	10,000	
Cash		10,000

Hayward records available-for-sale securities at fair value on the balance sheet. It reports unrealized gains and losses in equity as part of other comprehensive income.²⁵ Fortunately for Hayward, the value of the Sonoma shares increases to \$125 per share during 2014. Hayward records the gain on this investment as follows.

December 31, 2014		
Fair Value Adjustment (available-for-sale)	2,500	
Unrealized Holding Gain or Loss—Equity		2,500

Illustration 17A-4 indicates how Hayward reports the Sonoma investment in its balance sheet.

HAYWARD CO. BALANCE SHEET (PARTIAL) DECEMBER 31, 2014		
Assets		
Equity investments (available-for-sale)		\$12,500
Stockholders' Equity		
Accumulated other comprehensive income		
Unrealized holding gain		\$2,500

ILLUSTRATION 17A-4
Balance Sheet
Presentation of Available-
for-Sale Securities

While Hayward benefits from an increase in the price of Sonoma shares, it is exposed to the risk that the price of the Sonoma stock will decline. To hedge this risk, Hayward locks in its gain on the Sonoma investment by purchasing a put option on 100 shares of Sonoma stock.

Hayward enters into the put option contract on January 2, 2015, and designates the option as a fair value hedge of the Sonoma investment. This put option (which expires in two years) gives Hayward the option to sell Sonoma shares at a price of \$125. Since the exercise price equals the current market price, no entry is necessary at inception of the put option.²⁶

January 2, 2015

No entry required. A memorandum indicates the signing of the put option contract and its designation as a fair value hedge for the Sonoma investment.

At December 31, 2015, the price of the Sonoma shares has declined to \$120 per share. Hayward records the following entry for the Sonoma investment.

December 31, 2015		
Unrealized Holding Gain or Loss—Income	500	
Fair Value Adjustment (available-for-sale)		500

²⁵We discussed the distinction between trading and available-for-sale investments in the chapter.

²⁶To simplify the example, we assume no premium is paid for the option.

Note that upon designation of the hedge, the accounting for the available-for-sale security changes from regular GAAP. That is, Hayward records the unrealized holding loss in income, not in equity. **If Hayward had not followed this accounting, a mismatch of gains and losses in the income statement would result.** Thus, special accounting for the hedged item (in this case, an available-for-sale security) is necessary in a fair value hedge.

The following journal entry records the increase in value of the put option on Sonoma shares.

December 31, 2015		
Put Option	500	
Unrealized Holding Gain or Loss—Income		500

The decline in the price of Sonoma shares results in an increase in the fair value of the put option. That is, Hayward could realize a gain on the put option by purchasing 100 shares in the open market for \$120 and then exercise the put option, selling the shares for \$125. This results in a gain to Hayward of \$500 (100 shares × [\$125 – \$120]).²⁷

Illustration 17A-5 indicates how Hayward reports the amounts related to the Sonoma investment and the put option.

ILLUSTRATION 17A-5
Balance Sheet
Presentation of Fair Value
Hedge

HAYWARD CO.	
BALANCE SHEET (PARTIAL)	
DECEMBER 31, 2015	
<u>Assets</u>	
Equity investments (available-for-sale)	\$12,000
Put option	500

The increase in fair value on the option offsets or hedges the decline in value on Hayward’s available-for-sale security. By using fair value accounting for both financial instruments, the financial statements reflect the underlying substance of Hayward’s net exposure to the risks of holding Sonoma stock. By using fair value accounting for both these financial instruments, the balance sheet reports the amount that Hayward would receive on the investment and the put option contract if Hayward sold and settled them, respectively.

Illustration 17A-6 illustrates the reporting of the effects of the hedging transaction on income for the year ended December 31, 2015.

ILLUSTRATION 17A-6
Income Statement
Presentation of Fair Value
Hedge

HAYWARD CO.	
INCOME STATEMENT (PARTIAL)	
FOR THE YEAR ENDED DECEMBER 31, 2015	
<u>Other Income</u>	
Unrealized holding gain—put option	\$ 500
Unrealized holding loss—available-for-sale securities	(500)

The income statement indicates that the gain on the put option offsets the loss on the available-for-sale securities.²⁸ The reporting for these financial instruments, even when

²⁷In practice, Hayward generally does not have to actually buy and sell the Sonoma shares to realize this gain. Rather, unless the counterparty wants to hold Hayward shares, Hayward can “close out” the contract by having the counterparty pay it \$500 in cash. This is an example of the net settlement feature of derivatives.

²⁸Note that the fair value changes in the option contract will not offset *increases* in the value of the Hayward investment. Should the price of Sonoma stock increase above \$125 per share, Hayward would have no incentive to exercise the put option.

they reflect a hedging relationship, illustrates why the FASB argued that fair value accounting provides the most relevant information about financial instruments, including derivatives.

Cash Flow Hedge

Companies use **cash flow hedges** to hedge exposures to **cash flow risk**, which results from the variability in cash flows. The FASB allows special accounting for cash flow hedges. Generally, companies measure and report derivatives at fair value on the balance sheet. They report gains and losses directly in net income.

However, companies account for derivatives used in cash flow hedges at fair value on the balance sheet, but they **record gains or losses in equity, as part of other comprehensive income**.

To illustrate, assume that in September 2014, Allied Can Co. anticipates purchasing 1,000 metric tons of aluminum in January 2015. Concerned that prices for aluminum will increase in the next few months, Allied wants to hedge the risk that it might pay higher prices for inventory in January 2015. As a result, Allied enters into an aluminum futures contract.

A **futures contract** gives the holder the right and the obligation to purchase an asset at a preset price for a specified period of time.²⁹ In this case, the aluminum futures contract gives Allied the right and the obligation to purchase 1,000 metric tons of aluminum for \$1,550 per ton. This contract price is good until the contract expires in January 2015. The underlying for this derivative is the price of aluminum. If the price of aluminum rises above \$1,550, the value of the futures contract to Allied increases. Why? Because Allied will be able to purchase the aluminum at the lower price of \$1,550 per ton.³⁰

Allied enters into the futures contract on September 1, 2014. Assume that the price to be paid today for inventory to be delivered in January—the **spot price**—equals the contract price. With the two prices equal, the futures contract has no value. Therefore, no entry is necessary.

September 2014

No entry required. A memorandum indicates the signing of the futures contract.

At December 31, 2014, the price for January delivery of aluminum increases to \$1,575 per metric ton. Allied makes the following entry to record the increase in the value of the futures contract.

December 31, 2014

Futures Contract	25,000	
Unrealized Holding Gain or Loss—Equity		
([\$1,575 – \$1,550] × 1,000 tons)		25,000

Allied reports the futures contract in the balance sheet as a current asset. It reports the gain on the futures contract as part of other comprehensive income.

²⁹A **futures contract** is a firm contractual agreement between a buyer and seller for a specified asset on a fixed date in the future which also trades on an exchange. The contract also has a standard specification so both parties know exactly what is being traded. A **forward** is similar but is not traded on an exchange and does not have standardized conditions.

³⁰As with the earlier call option example, the actual aluminum does not have to be exchanged. Rather, the parties to the futures contract settle by paying the cash difference between the futures price and the price of aluminum on each settlement date.

9 LEARNING OBJECTIVE

Explain how to account for a cash flow hedge.

International Perspective

Under IFRS, companies record unrealized holding gains or losses on cash flow hedges as adjustments to the value of the hedged item, not as “Other comprehensive income.”

Since Allied has not yet purchased and sold the inventory, this gain arises from an **anticipated transaction**. In this type of transaction, a company accumulates in equity gains or losses on the futures contract as part of other comprehensive income until the period in which it sells the inventory, thereby affecting earnings.

In January 2015, Allied purchases 1,000 metric tons of aluminum for \$1,575 and makes the following entry.³¹

January 2015		
Aluminum Inventory	1,575,000	
Cash (\$1,575 × 1,000 tons)		1,575,000

At the same time, Allied makes final settlement on the futures contract. It records the following entry.

January 2015		
Cash	25,000	
Futures Contract (\$1,575,000 – \$1,550,000)		25,000

Through use of the futures contract derivative, Allied fixes the cost of its inventory. The \$25,000 futures contract settlement offsets the amount paid to purchase the inventory at the prevailing market price of \$1,575,000. The result: net cash outflow of \$1,550 per metric ton, as desired. As Illustration 17A-7 shows, Allied has therefore effectively hedged the cash flow for the purchase of inventory.

ILLUSTRATION 17A-7
Effect of Hedge on Cash Flows

There are no income effects at this point. Allied accumulates in equity the gain on the futures contract as part of other comprehensive income until the period when it sells the inventory, affecting earnings through cost of goods sold.

For example, assume that Allied processes the aluminum into finished goods (cans). The total cost of the cans (including the aluminum purchases in January 2015) is \$1,700,000. Allied sells the cans in July 2015 for \$2,000,000, and records this sale as follows.

July 2015		
Cash	2,000,000	
Sales Revenue		2,000,000
Cost of Goods Sold	1,700,000	
Inventory (cans)		1,700,000

Since the effect of the anticipated transaction has now affected earnings, Allied makes the following entry related to the hedging transaction.

³¹In practice, futures contracts are settled on a daily basis. For our purposes, we show only one settlement for the entire amount.

July 2015		
Unrealized Holding Gain or Loss—Equity	25,000	
Cost of Goods Sold		25,000

The gain on the futures contract, which Allied reported as part of other comprehensive income, now reduces cost of goods sold. As a result, the cost of aluminum included in the overall cost of goods sold is \$1,550,000. The futures contract has worked as planned. Allied has managed the cash paid for aluminum inventory and the amount of cost of goods sold.

OTHER REPORTING ISSUES

The preceding examples illustrate the basic reporting issues related to the accounting for derivatives. Next, we discuss the following additional issues:

1. The accounting for embedded derivatives.
2. Qualifying hedge criteria.

10 LEARNING OBJECTIVE

Identify special reporting issues related to derivative financial instruments that cause unique accounting problems.

Embedded Derivatives

As we indicated at the beginning of this appendix, rapid innovation in the development of complex financial instruments drove efforts toward unifying and improving the accounting standards for derivatives. In recent years, this innovation has led to the development of **hybrid securities**. These securities have characteristics of both debt and equity. They often combine traditional and derivative financial instruments.

For example, a convertible bond (discussed in Chapter 16) is a hybrid instrument. It consists of two parts: (1) a debt security, referred to as the **host security**, combined with (2) an option to convert the bond to shares of common stock, the **embedded derivative**.

To provide consistency in accounting for similar derivatives, a company must account for embedded derivatives similarly to other derivatives. Therefore, to account for an embedded derivative, a company **should separate it from the host security** and then account for it using the accounting for derivatives. This separation process is referred to as **bifurcation**.³² Thus, a company investing in a convertible bond must separate the stock option component of the instrument. It then accounts for the derivative (the stock option) at fair value and the host instrument (the debt) according to GAAP, as if there were no embedded derivative.³³

Qualifying Hedge Criteria

The FASB identified certain criteria that hedging transactions must meet before requiring the special accounting for hedges. The FASB designed these criteria to ensure the use of hedge accounting in a consistent manner across different hedge transactions. The general criteria relate to the following areas.

1. **Documentation, risk management, and designation.** At inception of the hedge, there must be formal **documentation** of the hedging relationship, the company's **risk management** objective, and the strategy for undertaking the hedge. **Designation**

International Perspective

IFRS qualifying hedge criteria are similar to those used in GAAP.

³²A company can also designate such a derivative as a hedging instrument. The company would apply the hedge accounting provisions outlined earlier in the chapter.

³³The issuer of the convertible bonds would not bifurcate the option component of the convertible bonds payable. GAAP explicitly precludes embedded derivative accounting for an embedded derivative that is indexed to a company's own common stock. If the conversion feature was tied to **another company's** stock, then the derivative would be bifurcated.

refers to identifying the hedging instrument, the hedged item or transaction, the nature of the risk being hedged, and how the hedging instrument will offset changes in the fair value or cash flows attributable to the hedged risk.

The FASB decided that documentation and designation are critical to the implementation of the special accounting for hedges. Without these requirements, companies might try to apply the hedge accounting provisions retroactively, only in response to negative changes in market conditions, to offset the negative impact of a transaction on the financial statements. Allowing special hedge accounting in such a setting could mask the speculative nature of the original transaction.

2. **Effectiveness of the hedging relationship.** At inception and on an ongoing basis, the hedging relationship should be **highly effective** in achieving offsetting changes in fair value or cash flows. Companies must assess effectiveness whenever preparing financial statements.

The general guideline for effectiveness is that the fair values or cash flows of the hedging instrument (the derivative) and the hedged item exhibit a high degree of correlation. In practice, high effectiveness is assumed when the correlation is close to one (e.g., within plus or minus .10). In our earlier hedging examples (put option and the futures contract on aluminum inventory), the fair values and cash flows are perfectly correlated. That is, when the cash payment for the inventory purchase increased, it offset, dollar for dollar, the cash received on the futures contract.

If the effectiveness criterion is not met, either at inception or because of changes following inception of the hedging relationship, the FASB no longer allows special hedge accounting. The company should then account for the derivative as a free-standing derivative.³⁴

3. **Effect on reported earnings of changes in fair values or cash flows.** A change in the fair value of a hedged item or variation in the cash flow of a hedged forecasted transaction must have the potential to change the amount recognized in reported earnings.³⁵ There is no need for special hedge accounting if a company accounts for both the hedging instrument and the hedged item at fair value under existing GAAP. In this case, earnings will properly reflect the offsetting gains and losses.

For example, special accounting is not needed for a fair value hedge of a trading security, because a company accounts for both the investment and the derivative at fair value on the balance sheet with gains or losses reported in earnings. Thus, “special” hedge accounting is necessary only when there is a mismatch of the accounting effects for the hedging instrument and the hedged item under GAAP.³⁶

Summary of Derivatives Accounting

Illustration 17A-8 summarizes the accounting provisions for derivatives and hedging transactions.

³⁴That is, the accounting for the part of a derivative that is not effective in a hedge is at fair value, with gains and losses recorded in income.

³⁵GAAP gives companies the option to measure most types of financial instruments—from equity investments to debt issued by the company—at fair value. Changes in fair value are recognized in net income each reporting period. Thus, GAAP provides companies with the opportunity to hedge their financial instruments without the complexity inherent in applying hedge accounting provisions. For example, if the fair value option is used, bifurcation of an embedded derivative is not required. [11]

³⁶An important criterion specific to cash flow hedges is that the forecasted transaction in a cash flow hedge “is likely to occur.” A company should support this probability (defined as significantly greater than the term “more likely than not”) by observable facts such as frequency of similar past transactions and its financial and operational ability to carry out the transaction.

ILLUSTRATION 17A-8
Summary of Derivative
Accounting under GAAP

Derivative Use	Accounting for Derivative	Accounting for Hedged Item	Common Example
Speculation	At fair value with unrealized holding gains and losses recorded in income.	Not applicable.	Call or put option on an equity security.
Hedging Fair value	At fair value with holding gains and losses recorded in income.	At fair value with gains and losses recorded in income.	Put option to hedge an equity investment.
Cash flow	At fair value with unrealized holding gains and losses from the hedge recorded in other comprehensive income, and reclassified in income when the hedged transaction's cash flows affect earnings.	Use other generally accepted accounting principles for the hedged item.	Use of a futures contract to hedge a forecasted purchase of inventory.

As indicated, the general accounting for derivatives relies on fair values. GAAP also establishes special accounting guidance when companies use derivatives **for hedging purposes**. For example, when a company uses a put option to hedge price changes in an available-for-sale stock investment in a fair value hedge (see the Hayward example earlier), it records unrealized gains on the investment in earnings, which is not GAAP for available-for-sale securities without such a hedge. This special accounting is justified in order to accurately report the nature of the hedging relationship in the balance sheet (recording both the put option and the investment at fair value) and in the income statement (reporting offsetting gains and losses in the same period).

Special accounting also is used for cash flow hedges. Companies account for derivatives used in qualifying cash flow hedges at fair value on the balance sheet, but record unrealized holding gains or losses in other comprehensive income until selling or settling the hedged item. In a cash flow hedge, a company continues to record the hedged item at its historical cost.

Disclosure requirements for derivatives are complex. Recent pronouncements on fair value information and financial instruments provide a helpful disclosure framework for reporting derivative instruments. Appendix 17C illustrates many of these disclosures, except for discussion of hedging issues. In general, companies that have derivatives are required to disclose the objectives for holding or issuing those instruments (speculation or hedging), the hedging context (fair value or cash flow), and the strategies for achieving risk-management objectives.

COMPREHENSIVE HEDGE ACCOUNTING EXAMPLE

To provide a comprehensive example of hedge accounting, we examine the use of an interest rate swap. First, let's consider how swaps work and why companies use them.

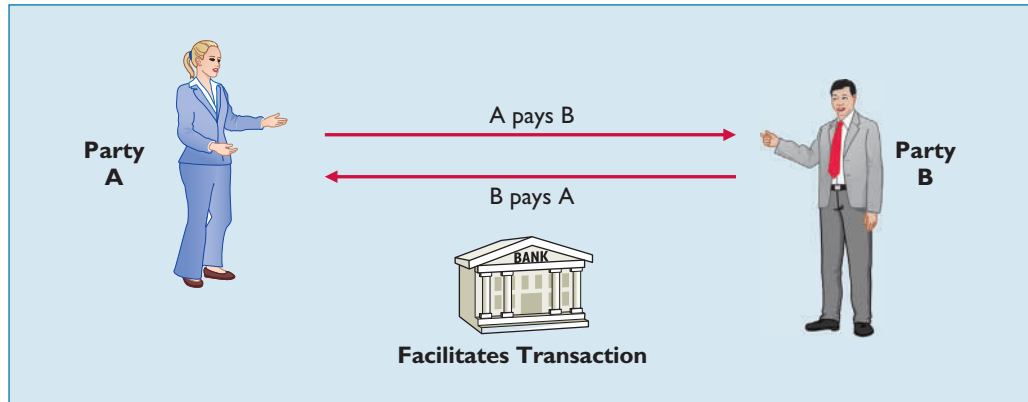

Options and futures trade on organized securities exchanges. Because of this, options and futures have standardized terms. Although that standardization makes the trading easier, it limits the flexibility needed to tailor contracts to specific circumstances. In addition, most types of derivatives have relatively short time horizons, thereby excluding their use for reducing long-term risk exposure.

As a result, many corporations instead turn to the swap, a very popular type of derivative. A **swap** is a transaction between two parties in which the first party promises

to make a payment to the second party. Similarly, the second party promises to make a simultaneous payment to the first party.

The most common type of swap is the **interest rate swap**. In this type, one party makes payments based on a fixed or floating rate, and the second party does just the opposite. In most cases, large money-center banks bring together the two parties. These banks handle the flow of payments between the parties, as shown in Illustration 17A-9.

ILLUSTRATION 17A-9
Swap Transaction

Fair Value Hedge

To illustrate the use of a swap in a fair value hedge, assume that Jones Company issues \$1,000,000 of five-year, 8 percent bonds on January 2, 2014. Jones records this transaction as follows.

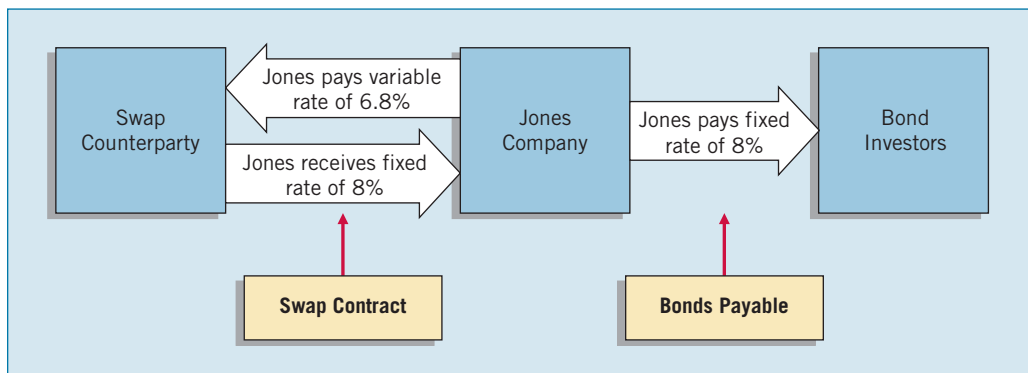

January 2, 2014		
Cash	1,000,000	
Bonds Payable		1,000,000

Jones offered a fixed interest rate to appeal to investors. But Jones is concerned that if market interest rates decline, the fair value of the liability will increase. The company will then suffer an economic loss.³⁷ To protect against the risk of loss, Jones hedges the risk of a decline in interest rates by entering into a five-year interest rate swap contract. Jones agrees to the following terms:

1. Jones will receive fixed payments at 8 percent (based on the \$1,000,000 amount).
2. Jones will pay variable rates, based on the market rate in effect for the life of the swap contract. The variable rate at the inception of the contract is 6.8 percent.

As Illustration 17A-10 shows, this swap allows Jones to change the interest on the bonds payable from a fixed rate to a variable rate.

ILLUSTRATION 17A-10
Interest Rate Swap

³⁷This economic loss arises because Jones is locked into the 8 percent interest payments even if rates decline.

The settlement dates for the swap correspond to the interest payment dates on the debt (December 31). On each interest payment (settlement) date, Jones and the counterparty compute the difference between current market interest rates and the fixed rate of 8 percent, and determine the value of the swap.³⁸ If interest rates decline, the value of the swap contract to Jones increases (Jones has a gain), while at the same time Jones's fixed-rate debt obligation increases (Jones has an economic loss).

The swap is an effective risk-management tool in this setting. Its value relates to the same underlying (interest rates) that will affect the value of the fixed-rate bond payable. Thus, if the value of the swap goes up, it offsets the loss related to the debt obligation.

Assuming that Jones enters into the swap on January 2, 2014 (the same date as the issuance of the debt), the swap at this time has no value. Therefore, no entry is necessary.

January 2, 2014

No entry required. A memorandum indicates the signing of the swap contract.

At the end of 2014, Jones makes the interest payment on the bonds. It records this transaction as follows.

December 31, 2014

Interest Expense	80,000	
Cash (8% × \$1,000,000)		80,000

At the end of 2014, market interest rates have declined substantially. Therefore, the value of the swap contract increases. Recall (see Illustration 17A-9) that in the swap, Jones receives a fixed rate of 8 percent, or \$80,000 ($\$1,000,000 \times 8\%$), and pays a variable rate (6.8%), or \$68,000. Jones therefore receives \$12,000 ($\$80,000 - \$68,000$) as a settlement payment on the swap contract on the first interest payment date. Jones records this transaction as follows.

December 31, 2014

Cash	12,000	
Interest Expense		12,000

In addition, a market appraisal indicates that the value of the interest rate swap has increased \$40,000. Jones records this increase in value as follows.³⁹

December 31, 2014

Swap Contract	40,000	
Unrealized Holding Gain or Loss—Income		40,000

Jones reports this swap contract in the balance sheet. It reports the gain on the hedging transaction in the income statement. Because interest rates have declined, the company records a loss and a related increase in its liability as follows.

December 31, 2014

Unrealized Holding Gain or Loss—Income	40,000	
Bonds Payable		40,000

Jones reports the loss on the hedging activity in net income. It adjusts bonds payable in the balance sheet to fair value (which deviates from normal accounting at amortized cost).

³⁸The underlying for an interest rate swap is some index of market interest rates. The most commonly used index is the London Interbank Offer Rate, or LIBOR. In this example, we assume the LIBOR is 6.8 percent.

³⁹Theoretically, this fair value change reflects the present value of expected future differences in variable and fixed interest rates.

Financial Statement Presentation of an Interest Rate Swap

Illustration 17A-11 indicates how Jones reports the asset and liability related to this hedging transaction on the balance sheet.

ILLUSTRATION 17A-11

Balance Sheet
Presentation of Fair
Value Hedge

JONES COMPANY BALANCE SHEET (PARTIAL) DECEMBER 31, 2014	
<u>Current assets</u>	
Swap contract	\$40,000
<u>Long-term liabilities</u>	
Bonds payable	\$1,040,000

The effect on Jones’s balance sheet is the addition of the swap asset and an increase in the carrying value of the bonds payable. Illustration 17A-12 indicates how Jones reports the effects of this swap transaction in the income statement.

ILLUSTRATION 17A-12

Income Statement
Presentation of Fair
Value Hedge

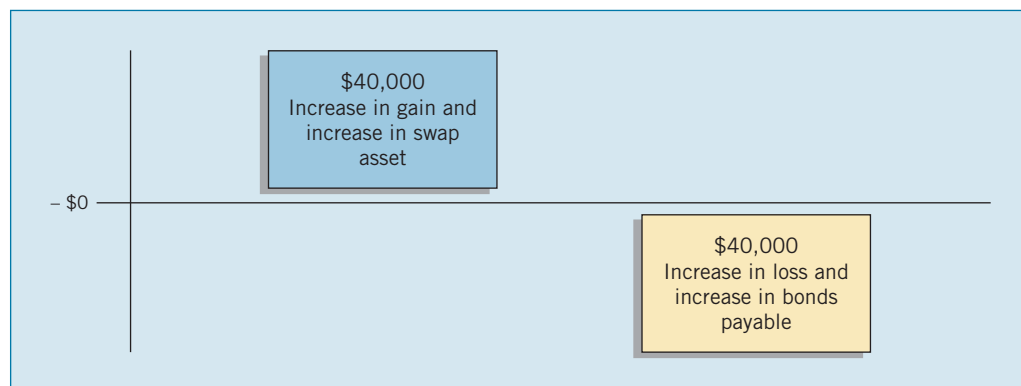

JONES COMPANY INCOME STATEMENT (PARTIAL) FOR THE YEAR ENDED DECEMBER 31, 2014		
Interest expense (\$80,000 – \$12,000)		\$68,000
<u>Other income</u>		
Unrealized holding gain—swap contract	\$40,000	
Unrealized holding loss—bonds payable	(40,000)	
Net gain (loss)		\$–0–

On the income statement, Jones reports interest expense of \$68,000. Jones has effectively changed the debt’s interest rate from fixed to variable. That is, by receiving a fixed rate and paying a variable rate on the swap, the company converts the fixed rate on the bond payable to variable. This results in an effective-interest rate of 6.8 percent in 2014.⁴⁰ Also, the gain on the swap offsets the loss related to the debt obligation. Therefore, the net gain or loss on the hedging activity is zero.

Illustration 17A-13 shows the overall impact of the swap transaction on the financial statements.

ILLUSTRATION 17A-13

Impact on Financial
Statements of Fair Value
Hedge

⁴⁰Jones will apply similar accounting and measurement at future interest payment dates. Thus, if interest rates increase, Jones will continue to receive 8 percent on the swap (records a loss) but will also be locked into the fixed payments to the bondholders at an 8 percent rate (records a gain).

In summary, to account for fair value hedges (as illustrated in the Jones example) **record the derivative at its fair value in the balance sheet, and record any gains and losses in income.** Thus, the gain on the swap offsets or hedges the loss on the bond payable, due to the decline in interest rates.

By adjusting the hedged item (the bond payable in the Jones case) to fair value, with the gain or loss recorded in earnings, the accounting for the Jones bond payable deviates from amortized cost. This special accounting is justified in order to report accurately the nature of the hedging relationship between the swap and the bond payable in the balance sheet (both the swap and the debt obligation are recorded at fair value) and in the income statement (offsetting gains and losses are reported in the same period).⁴¹

International Perspective

International accounting for hedges (IAS 39) is similar to the provisions of GAAP.

CONTROVERSY AND CONCLUDING REMARKS

Companies need rules to properly measure and report derivatives in financial statements. However, some argue that reporting derivatives at fair value results in unrealized gains and losses that are difficult to interpret. Others raise concerns about the complexity and cost of implementing GAAP in this area.

However, we believe that the long-term benefits of using fair value and reporting derivatives at fair value will far outweigh any short-term implementation costs. As the volume and complexity of derivatives and hedging transactions continue to grow, so does the risk that investors and creditors will be exposed to unexpected losses arising from derivative transactions. Statement readers must have comprehensive information concerning many derivative financial instruments and the effects of hedging transactions using derivatives.

SUMMARY OF LEARNING OBJECTIVES FOR APPENDIX 17A

7 Describe the uses of and accounting for derivatives. Any company or individual that wants to ensure against different types of business risks may use derivative contracts to achieve this objective. In general, these transactions involve some type of hedge. Speculators also use derivatives, attempting to find an enhanced return. Speculators are very important to the derivatives market because they keep it liquid on a daily basis. Arbitrageurs attempt to exploit inefficiencies in various derivative contracts. A company primarily uses derivatives for purposes of hedging its exposure to fluctuations in interest rates, foreign currency exchange rates, and commodity prices.

Companies should recognize derivatives in the financial statements as assets and liabilities, and report them at fair value. Companies should recognize gains and losses resulting from speculation immediately in income. They report gains and losses resulting from hedge transactions in different ways, depending on the type of hedge.

⁴¹An interest rate swap can also be used in a cash flow hedge. A common setting is the cash flow risk inherent in having variable rate debt as part of a company's debt structure. In this situation, the variable debt issuer can hedge the cash flow risk by entering into a swap contract to receive variable rate cash flows but pay fixed rate. The cash received on the swap contract will offset the variable cash flows to be paid on the debt obligation.

Companies report derivative financial instruments in the balance sheet, and record them at fair value. Except for derivatives used in hedging, companies record realized and unrealized gains and losses on derivative financial instruments in income.

8 Explain how to account for a fair value hedge. A company records the derivative used in a qualifying fair value hedge at its fair value in the balance sheet, recording any gains and losses in income. In addition, the company also accounts for the item being hedged with the derivative at fair value. By adjusting the hedged item to fair value, with the gain or loss recorded in earnings, the accounting for the hedged item may deviate from GAAP in the absence of a hedge relationship. This special accounting is justified in order to report accurately the nature of the hedging relationship between the derivative hedging instruments and the hedged item. A company reports both in the balance sheet, reporting offsetting gains and losses in income in the same period.

9 Explain how to account for a cash flow hedge. Companies account for derivatives used in qualifying cash flow hedges at fair value on the balance sheet, but record gains or losses in equity as part of other comprehensive income. Companies accumulate these gains or losses, and reclassify them in income when the hedged transaction's cash flows affect earnings. Accounting is according to GAAP for the hedged item.

10 Identify special reporting issues related to derivative financial instruments that cause unique accounting problems. A company should separate a derivative that is embedded in a hybrid security from the host security, and account for it using the accounting for derivatives. This separation process is referred to as bifurcation. Special hedge accounting is allowed only for hedging relationships that meet certain criteria. The main criteria are as follows. (1) There is formal documentation of the hedging relationship, the company's risk-management objective, and the strategy for undertaking the hedge, and the company designates the derivative as either a cash flow or fair value hedge. (2) The company expects the hedging relationship to be highly effective in achieving offsetting changes in fair value or cash flows. (3) "Special" hedge accounting is necessary only when there is a mismatch of the accounting effects for the hedging instrument and the hedged item under GAAP.

APPENDIX 17B

VARIABLE-INTEREST ENTITIES

LEARNING OBJECTIVE 11

Describe the accounting for variable-interest entities.

The FASB has issued rules to address the concern that some companies are not reporting the risks and rewards of certain investments and other financial arrangements in their consolidated financial statements. [12] As one analyst noted, **Enron** showed the world the power of the idea that "if investors can't see it, they can't ask you about it—the 'it' being assets and liabilities."

What exactly did Enron do? First, it created a number of entities whose purpose was to hide debt, avoid taxes, and enrich certain management personnel to the detriment of the company and its stockholders. In effect, these entities, called **special-purpose entities (SPEs)**, appeared to be separate entities for which Enron had a limited economic interest. However, for many of these arrangements, Enron actually had a substantial economic interest. The risks and rewards of ownership were not shifted to the entities but remained with Enron. In short, Enron was obligated to repay investors in these SPEs when they were unsuccessful. Once Enron's problems were discovered, it soon became apparent that many other companies had similar problems.

WHAT ABOUT GAAP?

A reasonable question to ask with regard to SPEs is, “Why didn’t GAAP prevent companies from hiding SPE debt and other risks, by forcing companies to include these obligations in their consolidated financial statements?” To understand why, we have to look at the basic rules of consolidation.

The GAAP rules indicate that consolidated financial statements are “usually necessary for a fair presentation when one of the companies in the group directly or indirectly has a controlling financial interest in other companies.” They further note that “the usual condition for a controlling financial interest is ownership of a majority voting interest.”⁴² In other words, if a company like **Intel** owns more than 50 percent of the voting stock of another company, Intel consolidates that company. GAAP also indicates that controlling financial interest may be achieved through arrangements that do not involve voting interests. However, applying these guidelines in practice is difficult.

Whenever GAAP uses a clear line, like “greater than 50 percent,” companies sometimes exploit the criterion. For example, some companies set up joint ventures in which each party owns exactly 50 percent. In that case, neither party consolidates. Or like **Coca-Cola**, a company may own less than 50 percent of the voting stock but maintain effective control through board of director relationships, supply relationships, or through some other type of financial arrangement.

So the FASB realized that changes had to be made to GAAP for consolidations, and it issued expanded consolidation guidelines. These guidelines define when a company should use factors other than voting interest to determine controlling financial interest. In this pronouncement, the FASB created a new risk-and-reward model to be used in situations where voting interests were unclear. The risk-and-reward model answers the basic questions of who stands to gain or lose the most from ownership in an SPE when ownership is uncertain.

In other words, we now have two models for consolidation:

1. **Voting-interest model**—If a company owns more than 50 percent of another company, then consolidate in most cases.
2. **Risk-and-reward model**—If a company is involved substantially in the economics of another company, then consolidate.

Operationally, the voting-interest model is easy to apply. It sets a “bright-line” ownership standard of more than 50 percent of the voting stock. However, if companies cannot determine control based on voting interest, they must use the risk-and-reward model.

CONSOLIDATION OF VARIABLE-INTEREST ENTITIES

To answer the question of who gains or loses when voting rights do not determine consolidation, the FASB developed the risk-and-reward model. In this model, the FASB introduced the notion of a variable-interest entity. A **variable-interest entity (VIE)** is an entity that has one of the following characteristics:

1. **Insufficient equity investment at risk.** Stockholders are assumed to have sufficient capital investment to support the entity’s operations. If thinly capitalized, the entity is considered a VIE and is subject to the risk-and-reward model.

⁴²“Consolidation of Certain Special Purpose Entities,” Proposed Interpretation (Norwalk, Conn.: FASB, June 28, 2002).

2. *Stockholders lack decision-making rights.* In some cases, stockholders do not have the influence to control the company's destiny.
3. *Stockholders do not absorb the losses or receive the benefits of a normal stockholder.* In some entities, stockholders are shielded from losses related to their primary risks, or their returns are capped or must be shared with other parties.

Once the company determines that an entity is a variable-interest entity, it no longer can use the voting-interest model. The question that must then be asked is, "What party is exposed to the majority of the risks and rewards associated with the VIE?" This party is called the primary beneficiary and must consolidate the VIE. Illustration 17B-1 shows the decision model for the VIE consolidation model.⁴³

ILLUSTRATION 17B-1
VIE Consolidation Model

Some Examples

Let's look at a couple of examples to illustrate how this process works.

Example 1

Assume that **Citigroup** sells notes receivable to another entity called RAKO. RAKO's assets are financed in two ways: Lenders provide 90 percent, and investors provide the remaining 10 percent as an equity investment. If Citigroup does not guarantee the debt, Citigroup has low or nonexistent risk. Therefore, Citigroup would not consolidate the assets and liabilities of RAKO. On the other hand, if Citigroup guarantees RAKO's debt, then RAKO is a VIE, and Citigroup is the primary beneficiary. In that case, Citigroup must consolidate.

⁴³In a recent amendment to the VIE consolidation rules, the FASB expanded the factors to be considered when deciding whether a VIE should be consolidated. The new guidelines require evaluation of qualitative factors related to the power to direct activities of the VIE and assessment of obligations to absorb losses or rights to receive benefits from the VIE. These qualitative factors must be considered in addition to the quantitative analysis of the expected losses of the entity to determine consolidation. [13] The IASB has recently issued new rules on consolidation that are similar to GAAP.

Example 2

San Diego Gas and Electric (SDGE) is required by law to buy power from small, local producers. In some cases, SDGE has contracts requiring it to purchase substantially all the power generated by these local companies over their lifetime. Because SDGE controls the outputs of the producers, they are VIEs. In this case, the risks and rewards related to ownership apply to SDGE. In other words, it is the primary beneficiary, and SDGE should include these producers in the consolidated financial statements.

Note that the primary beneficiary may have the risks and rewards of ownership through use of a variety of instruments and financial arrangements, such as equity investments, loans to the VIE, leases, derivatives, and guarantees. Potential VIEs include corporations, partnerships, limited liability companies, and majority-owned subsidiaries.

What Is Happening in Practice?

For most companies, the reporting related to VIEs will not materially affect their financial statements. As shown in Illustration 17B-2, one study of 509 companies with total market values over \$500 million found that just 17 percent of the companies reviewed had a material impact when the VIE rules were first implemented.

Of the material VIEs disclosed in the study, the most common types (42 percent) were related to joint-venture equity investments, followed by off-balance-sheet lease arrangements (22 percent). In some cases, companies restructured transactions to avoid consolidation. For example, **Pep Boys**, **Choice Point, Inc.**, and **Anadarko** all appear to have restructured their lease transactions to avoid consolidation. On the other hand, companies like **eBay**, **Kimberly-Clark**, and **Williams-Sonoma Inc.** had to consolidate their VIEs. With respect to the new guidelines for VIEs, companies began reporting under these rules in 2010. Some estimates have as much as \$5 trillion of assets that could be brought on-balance-sheet under the new rules. As an example, **JP Morgan** reported in a recent annual report that up to \$160 billion of credit card receivables and other mortgage-backed loans will have to be consolidated when it adopts the new rules.

In summary, companies are required to consolidate certain investments and other financing arrangements that previously were reported off-balance-sheet. As a result, financial statements should be more complete in reporting the risks and rewards of these transactions.

ILLUSTRATION 17B-2
Impact of Rule Involving Risk-and-Reward Model

Source: Company Reports; Glass, Lewis, & Co. Research Report (November 6, 2003).

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 17B

11 Describe the accounting for variable-interest entities. Special variable-interest accounting is used in situations where control cannot be determined based on voting rights. A company is required to consolidate a variable-interest entity if it is the primary beneficiary of the variable-interest entity.

APPENDIX 17C**FAIR VALUE DISCLOSURES**

As indicated in the chapter, the FASB believes that fair value information is relevant for making effective business decisions. However, others express concern about fair value measurements for two reasons: (1) the lack of reliability related to the fair value measurement in certain cases, and (2) the ability to manipulate fair value

12 LEARNING OBJECTIVE

Describe required fair value disclosures.

measurements to achieve financial results inconsistent with the underlying economics of the situation.

The Board recognizes these concerns and has attempted to develop a sound conceptual basis for measuring and reporting fair value information. In addition, it has placed emphasis on developing guidelines for reporting fair value information for financial instruments because many of these instruments have relatively active markets for which valuations can be reliably determined. The purpose of this appendix is to explain the disclosure requirements for financial instruments related to fair value information.

DISCLOSURE OF FAIR VALUE INFORMATION: FINANCIAL INSTRUMENTS

One requirement related to fair value disclosure is that both the cost and the fair value of all financial instruments be reported in the notes to the financial statements. [14] This enables readers of the financial statements to understand the fair value of the company's financial instruments and the potential gains and losses that might occur in the future as a result of these instruments.

The Board also decided that companies should disclose information that enables users to determine the extent of usage of fair value and the inputs used to implement fair value measurement. Two reasons for additional disclosure beyond the simple itemization of fair values are:

- 1. Differing levels of reliability exist in the measurement of fair value information.** It therefore is important to understand the varying risks involved in measurement. It is difficult to incorporate these levels of uncertainty into the financial statements. Disclosure provides a framework for addressing the qualitative aspects related to risk and measurement.
- 2. Changes in the fair value of financial instruments are reported differently in the financial statements, depending on the type of financial instrument involved and whether the fair value option is employed.** Note disclosure provides an opportunity to explain more precisely the impact that changes in the value of financial instruments have on financial results. In assessing the inputs, the Board recognizes that the reliability of the fair value measurement is of extreme importance. Many financial instruments are traded in active markets, and their valuation is not difficult. Other instruments are complex/illiquid, and their valuation is difficult.

To highlight these levels of reliability in valuation, the FASB established a fair value hierarchy. As discussed in Chapter 2 (page 57), this hierarchy identifies three broad levels—1, 2, and 3—related to the measurement of fair values. Level 1 is the most reliable measurement because fair value is based on quoted prices in active markets *for identical assets or liabilities*. Level 2 is less reliable; it is not based on quoted market prices for identical assets and liabilities but instead may be based on *similar assets or liabilities*. Level 3 is least reliable; it uses unobservable inputs that reflect the company's assumption as to the value of the financial instrument.

Illustration 17C-1 is an example of a fair value note disclosure for Sabathia Company. It includes both the fair value amounts and the reliability level. (A similar disclosure would be presented for liabilities.)

ILLUSTRATION 17C-1
Example of Fair Value Hierarchy

SABATHIA COMPANY NOTES TO THE FINANCIAL STATEMENTS				
(\$ in 000s)	Fair Value Measurements at Reporting Data Using			
	Fair Value 12/31/14	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Description				
Trading securities	\$115	\$105	\$10	
Available-for-sale securities	75	75		
Derivatives	60	25	15	\$20
Venture capital investments	10			10
Total	<u>\$260</u>	<u>\$205</u>	<u>\$25</u>	<u>\$30</u>

For assets and liabilities measured at fair value and classified as Level 3, a reconciliation of Level 3 changes for the period is required. In addition, companies should report an analysis of how Level 3 changes in fair value affect total gains and losses and their impact on net income. Illustration 17C-2 is an example of this disclosure.

ILLUSTRATION 17C-2
Reconciliation of Level 3 Inputs

SABATHIA COMPANY NOTES TO THE FINANCIAL STATEMENTS			
(\$ in 000s)	Fair Value Measurements Using Significant Unobservable Inputs (Level 3)		
	Derivatives	Venture Capital Investments	Total
Beginning balance	\$14	\$11	\$25
Total gains or losses (realized/unrealized)			
Included in earnings (or changes in net assets)	11	(3)	8
Included in other comprehensive income	4		4
Purchases, issuances, and settlements	(7)	2	(5)
Transfers in and/or out of Level 3	(2)		(2)
Ending balance	<u>\$20</u>	<u>\$10</u>	<u>\$30</u>
The amount of total gains or losses for the period included in earnings (or changes in net assets) attributable to the change in unrealized gains or losses relating to assets still held at the reporting date	<u>\$7</u>	<u>\$2</u>	<u>\$9</u>
Gains and losses (realized and unrealized) included in earnings (or changes in net assets) for the period (above) are reported in trading revenues and in other revenues as follows.			
	Trading Revenues	Other Revenues	
Total gains or losses included in earnings (or changes in net assets) for the period (as shown in the table above)	<u>\$11</u>	<u>\$(3)</u>	
Change in unrealized gains or losses relating to assets still held at reporting date	<u>\$7</u>	<u>\$2</u>	

Sabathia Company's disclosure provides to the user of the financial statements an understanding of the following:

1. The carrying amount and the fair value of the company's financial instruments segregated by level of reliability. Thus, the reader of the financial statements has a basis for judging what credence should be given to the fair value amounts.

2. For Level 3 financial instruments, a reconciliation of the balance from the beginning to the end of the period. This reconciliation enables the reader to understand the composition of the change. It is important because these calculations are most affected by subjective estimates and could be subject to manipulation.
3. The impact of changes in fair value on the net assets of the company from one period to the next.

For companies that choose to use the fair value option for some or all of their financial instruments [15], they are permitted to incorporate the entire guidelines related to fair value measurement into one master schedule, or they can provide in a separate schedule information related solely to the fair value option.

Finally, companies must provide the following (with special emphasis on Level 3 measurements):

1. Quantitative information about significant unobservable inputs used for all Level 3 measurements.
2. A qualitative discussion about the sensitivity of recurring Level 3 measurements to changes in the unobservable inputs disclosed, including interrelationships between inputs.
3. A description of the company's valuation process.
4. Any transfers between Levels 1 and 2 of the fair value hierarchy.
5. Information about nonfinancial assets measured at fair value at amounts that differ from the assets' highest and best use.
6. The proper hierarchy classification for items that are not recognized on the balance sheet but are disclosed in the notes to the financial statements.

ILLUSTRATION 17C-3

Quantitative Information about Level 3 Fair Value Measurements

A typical disclosure related to Level 3 fair value measurements is presented in Illustration 17C-3.

(\$ in millions)	Fair Value at 12/31/2014	Valuation Technique(s)	Unobservable Input	Range (Weighted-Average)
Residential mortgage-backed securities	125	Discounted cash flow	Constant prepayment rate Probability of default Loss severity	3.5%–5.5% (4.5%) 5%–50% (10%) 40%–100% (60%)
Collateralized debt obligations	35	Consensus pricing	Offered quotes Comparability adjustments (%)	20–45 –10%–+15% (+5%)
Direct venture capital investments: Healthcare	53	Discounted cash flow	Weighted-average cost of capital Long-term revenue growth rate Long-term pretax operating margin Discount for lack of marketability ^a Control premium ^a	7%–16% (12.1%) 2%–5% (4.2%) 3%–20% (10.3%) 5%–20% (17%) 10%–30% (20%)
		Market-comparable companies	EBITDA multiple ^b Revenue multiple ^b Discount for lack of marketability ^a Control premium ^a	6.5–12 (9.5) 1.0–3.0 (2.0) 5%–20% (10%) 10%–20% (12%)
Credit contracts	38	Option model	Annualized volatility of credit ^c Counterparty credit risk ^d Own credit risk ^d	10%–20% 0.5–3.5% 0.3–2.0%

^aRepresents amounts used when the reporting entity has determined that market participants would take into account these premiums and discounts when pricing the investments.

^bRepresents amounts used when the reporting entity has determined that market participants would use such multiples when pricing the investments.

^cRepresents the range of the volatility curves used in the valuation analysis that the reporting entity has determined market participants would use when pricing the contracts.

^dRepresents the range of the credit default swap spread curves used in the valuation analysis that the reporting entity has determined market participants would use when pricing the contracts.

(Note: For liabilities, a similar table should be presented.)

DISCLOSURE OF FAIR VALUES: IMPAIRED ASSETS OR LIABILITIES

In addition to financial instruments, companies often have assets or liabilities that are remeasured on a nonrecurring basis due to impairment. In this case, the fair value hierarchy can highlight the reliability of the measurement, coupled with the related gain or loss for the period. Illustration 17C-4 highlights this disclosure for McClung Company.

McCLUNG COMPANY				
NOTES TO THE FINANCIAL STATEMENTS				
(\$ in millions)	Fair Value Measurements Using			
	Year Ended 12/31/14	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Description				
Long-lived assets held and used	\$75	—	\$75	—
Goodwill	30	—	—	\$30
Long-lived assets held for sale	26	—	26	—

Long-lived assets held and used with a carrying amount of \$100 million were written down to their fair value of \$75 million, resulting in an impairment charge of \$25 million, which was included in earnings for the period.

Goodwill with a carrying amount of \$65 million was written down to its implied fair value of \$30 million, resulting in an impairment charge of \$35 million, which was included in earnings for the period.

In accordance with the provisions of the Impairment or Disposal of Long-Lived Assets Subsections of FASB Codification Subtopic 360-10, long-lived assets held for sale with a carrying amount of \$35 million were written down to their fair value of \$26 million, less cost to sell of \$6 million (or \$20 million), resulting in a loss of \$15 million, which was included in earnings for the period.

ILLUSTRATION 17C-4
Disclosure of Fair Value,
with Impairment

CONCLUSION

With recent joint FASB and IASB standard-setting efforts, we now have convergence with respect to fair value measurement, both in terms of the definition and measurement guidelines when fair value is the measurement approach in GAAP and IFRS. In addition, GAAP and IFRS have the same fair value disclosure requirements, as illustrated in this appendix. As the former chair of the IASB noted, this “marks the completion of a major convergence project and is a fundamentally important element of our joint response to the global crisis. The result is clearer and more consistent guidance on measuring fair value, where its use is already required.”

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 17C

12 Describe required fair value disclosures. The FASB has developed required fair value disclosures in response to concerns about the reliability of fair value measures. Disclosure elements include fair value amounts and reliability levels as well as impaired assets or liabilities.

DEMONSTRATION PROBLEM

Rogers Corporation carries an account in its general ledger called Investments, which contained the following debits for investment purchases and no credits.

Feb. 1, 2014	Jordy Company common stock, \$100 par, 200 shares	\$ 37,400
April 1	U.S. government bonds, 11%, due April 1, 2024, interest payable April 1 and October 1, 100 bonds at \$1,000 each	100,000
July 1	Driver Company 12% bonds, par \$50,000, dated March 1, 2010, purchased at par plus accrued interest, interest payable annually on March 1, due March 1, 2034	52,000

Instructions

- (a) Prepare the entries necessary to classify the amounts into proper accounts, assuming that all the securities are classified as available-for-sale.
- (b) Prepare the entry to record the accrued interest on December 31, 2014.
- (c) The fair values of the securities on December 31, 2014, were:

Jordy Company common stock	\$ 33,800 (1% of total shares)
U.S. government bonds	124,700
Driver Company bonds	58,600

What entry or entries, if any, would you recommend be made?

- (d) The U.S. government bonds were sold on July 1, 2015, for \$119,200 plus accrued interest. Give the proper entry.
- (e) Now assume Rogers' investment in Jordy Company represents 30% of Jordy's shares. Prepare the 2014 entries for the investment in Jordy stock. In 2014, Jordy declared and paid dividends of \$9,000 (on September 30) and reported net income of \$30,000.

Exercises

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

CE17-1 Access the glossary (“Master Glossary”) to answer the following.

- (a) What are trading securities?
- (b) What is the definition of “holding gain or loss”?
- (c) What is a cash flow hedge?
- (d) What is a fair value hedge?

CE17-2 What guidance does the SEC give for disclosures regarding accounting policies used for derivatives?

CE17-3 When would an investor discontinue applying the equity method in an investment? Are there any exceptions to this rule?

CE17-4 For balance sheet purposes, can the fair value of a derivative in a loss position be netted against the fair value of a derivative in a gain position?

An additional Codification case can be found in the Using Your Judgment section, on page 1026.

Be sure to check the book’s companion website for a Review and Analysis Exercise, with solution.

WileyPLUS

Brief Exercises, Exercises, Problems, and many more learning and assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

QUESTIONS

1. Distinguish between a debt security and an equity security.
2. What purpose does the variety in bond features (types and characteristics) serve?
3. What is the cost of a long-term investment in bonds?
4. Identify and explain the three types of classifications for investments in debt securities.
5. When should a debt security be classified as held-to-maturity?
6. Explain how trading securities are accounted for and reported.
7. At what amount should trading, available-for-sale, and held-to-maturity securities be reported on the balance sheet?
8. On July 1, 2014, Wheeler Company purchased \$4,000,000 of Duggen Company’s 8% bonds, due on July 1, 2021. The bonds, which pay interest semiannually on January 1 and July 1, were purchased for \$3,500,000 to yield 10%. Determine the amount of interest revenue Wheeler should report on its income statement for the year ended December 31, 2014.
9. If the bonds in Question 8 are classified as available-for-sale and they have a fair value at December 31, 2014, of \$3,604,000, prepare the journal entry (if any) at December 31, 2014, to record this transaction.
10. Indicate how unrealized holding gains and losses should be reported for investments securities classified as trading, available-for-sale, and held-to-maturity.
11. (a) Assuming no Fair Value Adjustment (available-for-sale) account balance at the beginning of the year, prepare the adjusting entry at the end of the year if Laura Company’s available-for-sale securities have a fair value \$60,000 below cost. (b) Assume the same information as part (a), except that Laura Company has a debit balance in its Fair Value Adjustment account of \$10,000 at the beginning of the year. Prepare the adjusting entry at year-end.
12. Identify and explain the different types of classifications for investments in equity securities.
13. Why are held-to-maturity investments applicable only to debt securities?
14. Hayes Company sold 10,000 shares of Kenyon Co. common stock for \$27.50 per share, incurring \$1,770 in brokerage commissions. These securities were classified as trading and originally cost \$260,000. Prepare the entry to record the sale of these securities.

15. Distinguish between the accounting treatment for available-for-sale equity securities and trading equity securities.
16. What constitutes "significant influence" when an investor's financial interest is below the 50% level?
17. Explain how the investment account is affected by investee activities under the equity method.
18. Your classmate Kate believes that the equity method is applied with a strict application of the "20%" rule. Do you agree? Explain.
19. Hiram Co. uses the equity method to account for investments in common stock. What accounting should be made for dividends received from these investments subsequent to the date of investment?
20. Raleigh Corp. has an investment with a carrying value (equity method) on its books of \$170,000 representing a 30% interest in Borg Company, which suffered a \$620,000 loss this year. How should Raleigh Corp. handle its proportionate share of Borg's loss?
21. Where on the asset side of the balance sheet are trading securities, available-for-sale securities, and held-to-maturity securities reported? Explain.
22. Explain why reclassification adjustments are necessary.
23. Briefly discuss how a transfer of securities from the available-for-sale category to the trading category affects stockholders' equity and income.
24. When is a debt security considered impaired? Explain how to account for the impairment of an available-for-sale debt security.
25. What is the GAAP definition of fair value?
26. What is the fair value option?
27. Franklin Corp. has an investment that it has held for several years. When it purchased the investment, Franklin classified and accounted for it as available-for-sale. Can Franklin use the fair value option for this investment? Explain.
- *28. What is meant by the term "underlying" as it relates to derivative financial instruments?
- *29. What are the main distinctions between a traditional financial instrument and a derivative financial instrument?
- *30. What is the purpose of a fair value hedge?
- *31. In what situation will the unrealized holding gain or loss on an available-for-sale security be reported in income?
- *32. Why might a company become involved in an interest rate swap contract to receive fixed interest payments and pay variable?
- *33. What is the purpose of a cash flow hedge?
- *34. Where are gains and losses related to cash flow hedges involving anticipated transactions reported?
- *35. What are hybrid securities? Give an example of a hybrid security.
- *36. Explain the difference between the voting-interest model and the risk-and-reward model used for consolidation.
- *37. What is a variable-interest entity?

BRIEF EXERCISES

- 2** **BE17-1** Garfield Company purchased, as a held-to-maturity investment, \$80,000 of the 9%, 5-year bonds of Chester Corporation for \$74,086, which provides an 11% return. Prepare Garfield's journal entries for (a) the purchase of the investment, and (b) the receipt of annual interest and discount amortization. Assume effective-interest amortization is used.
- 2** **BE17-2** Use the information from BE17-1 but assume the bonds are purchased as an available-for-sale security. Prepare Garfield's journal entries for (a) the purchase of the investment, (b) the receipt of annual interest and discount amortization, and (c) the year-end fair value adjustment. (Assume a zero balance in the Fair Value Adjustment account.) The bonds have a year-end fair value of \$75,500.
- 2** **BE17-3** Carow Corporation purchased, as a held-to-maturity investment, \$60,000 of the 8%, 5-year bonds of Harrison, Inc. for \$65,118, which provides a 6% return. The bonds pay interest semiannually. Prepare Carow's journal entries for (a) the purchase of the investment, and (b) the receipt of semiannual interest and premium amortization. Assume effective-interest amortization is used.
- 2** **BE17-4** Hendricks Corporation purchased trading investment bonds for \$50,000 at par. At December 31, Hendricks received annual interest of \$2,000, and the fair value of the bonds was \$47,400. Prepare Hendricks' journal entries for (a) the purchase of the investment, (b) the interest received, and (c) the fair value adjustment. (Assume a zero balance in the Fair Value Adjustment account.)
- 3** **BE17-5** Fairbanks Corporation purchased 400 shares of Sherman Inc. common stock as an available-for-sale investment for \$13,200. During the year, Sherman paid a cash dividend of \$3.25 per share. At year-end, Sherman stock was selling for \$34.50 per share. Prepare Fairbanks' journal entries to record (a) the purchase of the investment, (b) the dividends received, and (c) the fair value adjustment. (Assume a zero balance in the Fair Value Adjustment account.)

- 3** BE17-6 Use the information from BE17-5 but assume the stock was purchased as a trading security. Prepare Fairbanks' journal entries to record (a) the purchase of the investment, (b) the dividends received, and (c) the fair value adjustment.
- 4** BE17-7 Zoop Corporation purchased for \$300,000 a 30% interest in Murphy, Inc. This investment enables Zoop to exert significant influence over Murphy. During the year, Murphy earned net income of \$180,000 and paid dividends of \$60,000. Prepare Zoop's journal entries related to this investment.
- 3** BE17-8 Cleveland Company has a stock portfolio valued at \$4,000 (available-for-sale). Its cost was \$3,300. If the Fair Value Adjustment account has a debit balance of \$200, prepare the journal entry at year-end.
- 6** BE17-9 The following information relates to **Starbucks** for the year ended October 2, 2011: net income 1,245.7 million; unrealized holding loss of \$10.9 million related to available-for-sale securities during the year; accumulated other comprehensive income of \$57.2 million on October 3, 2010. Assuming no other changes in accumulated other comprehensive income, determine (a) other comprehensive income for 2011, (b) comprehensive income for 2011, and (c) accumulated other comprehensive income at October 2, 2011.
- 5** BE17-10 Hillsborough Co. has an available-for-sale investment in the bonds of Schuyler Corp. with a carrying (and fair) value of \$70,000. Hillsborough determined that due to poor economic prospects for Schuyler, the bonds have decreased in value to \$60,000. It is determined that this loss in value is other-than-temporary. Prepare the journal entry, if any, to record the reduction in value.

EXERCISES

- 1** **3** E17-1 (Investment Classifications) For the following investments identify whether they are:

1. Trading Securities
2. Available-for-Sale Securities
3. Held-to-Maturity Securities

Each case is independent of the other.

- (a) A bond that will mature in 4 years was bought 1 month ago when the price dropped. As soon as the value increases, which is expected next month, it will be sold.
- (b) 10% of the outstanding stock of Farm-Co was purchased. The company is planning on eventually getting a total of 30% of its outstanding stock.
- (c) 10-year bonds were purchased this year. The bonds mature at the first of next year.
- (d) Bonds that will mature in 5 years are purchased. The company would like to hold them until they mature, but money has been tight recently and they may need to be sold.
- (e) Preferred stock was purchased for its constant dividend. The company is planning to hold the preferred stock for a long time.
- (f) A bond that matures in 10 years was purchased. The company is investing money set aside for an expansion project planned 10 years from now.

- 2** E17-2 (Entries for Held-to-Maturity Securities) On January 1, 2013, Dagwood Company purchased at par 12% bonds having a maturity value of \$300,000. They are dated January 1, 2013, and mature January 1, 2018, with interest receivable December 31 of each year. The bonds are classified in the held-to-maturity category.

XLS

Instructions

- (a) Prepare the journal entry at the date of the bond purchase.
- (b) Prepare the journal entry to record the interest received for 2013.
- (c) Prepare the journal entry to record the interest received for 2014.

- 2** E17-3 (Entries for Held-to-Maturity Securities) On January 1, 2013, Hi and Lois Company purchased 12% bonds having a maturity value of \$300,000 for \$322,744.44. The bonds provide the bondholders with a 10% yield. They are dated January 1, 2013, and mature January 1, 2018, with interest receivable December 31 of each year. Hi and Lois Company uses the effective-interest method to allocate unamortized discount or premium. The bonds are classified in the held-to-maturity category.

Instructions

- (a) Prepare the journal entry at the date of the bond purchase.
- (b) Prepare a bond amortization schedule.

- (c) Prepare the journal entry to record the interest received and the amortization for 2013.
 (d) Prepare the journal entry to record the interest received and the amortization for 2014.

- 2** E17-4 (Entries for Available-for-Sale Securities) Assume the same information as in E17-3 except that the securities are classified as available-for-sale. The fair value of the bonds at December 31 of each year-end is as follows.

2013	\$320,500	2016	\$310,000
2014	\$309,000	2017	\$300,000
2015	\$308,000		

Instructions

- (a) Prepare the journal entry at the date of the bond purchase.
 (b) Prepare the journal entries to record the interest received and recognition of fair value for 2013.
 (c) Prepare the journal entry to record the recognition of fair value for 2014.

- 2** E17-5 (Effective-Interest versus Straight-Line Bond Amortization) On January 1, 2013, Phantom Company acquires \$200,000 of Spiderman Products, Inc., 9% bonds at a price of \$185,589. The interest is payable each December 31, and the bonds mature December 31, 2015. The investment will provide Phantom Company a 12% yield. The bonds are classified as held-to-maturity.

XLS

Instructions

- (a) Prepare a 3-year schedule of interest revenue and bond discount amortization, applying the straight-line method.
 (b) Prepare a 3-year schedule of interest revenue and bond discount amortization, applying the effective-interest method.
 (c) Prepare the journal entry for the interest receipt of December 31, 2014, and the discount amortization under the straight-line method.
 (d) Prepare the journal entry for the interest receipt of December 31, 2014, and the discount amortization under the effective-interest method.

- 3** E17-6 (Entries for Available-for-Sale and Trading Securities) The following information is available for Barkley Company at December 31, 2014, regarding its investments.

Securities	Cost	Fair Value
3,000 shares of Myers Corporation Common Stock	\$40,000	\$48,000
1,000 shares of Cole Incorporated Preferred Stock	25,000	22,000
	<u>\$65,000</u>	<u>\$70,000</u>

Instructions

- (a) Prepare the adjusting entry (if any) for 2014, assuming the securities are classified as trading.
 (b) Prepare the adjusting entry (if any) for 2014, assuming the securities are classified as available-for-sale.
 (c) Discuss how the amounts reported in the financial statements are affected by the entries in (a) and (b).

- 3** E17-7 (Trading Securities Entries) On December 21, 2013, Bucky Katt Company provided you with the following information regarding its trading securities.

December 31, 2013			
Investments (Trading)	Cost	Fair Value	Unrealized Gain (Loss)
Clemson Corp. stock	\$20,000	\$19,000	\$(1,000)
Colorado Co. stock	10,000	9,000	(1,000)
Buffaloes Co. stock	20,000	20,600	600
Total of portfolio	<u>\$50,000</u>	<u>\$48,600</u>	(1,400)
Previous fair value adjustment balance			-0-
Fair value adjustment—Cr.			<u>\$(1,400)</u>

During 2014, Colorado Company stock was sold for \$9,400. The fair value of the stock on December 31, 2014, was Clemson Corp. stock—\$19,100; Buffaloes Co. stock—\$20,500.

Instructions

- Prepare the adjusting journal entry needed on December 31, 2013.
- Prepare the journal entry to record the sale of the Colorado Company stock during 2014.
- Prepare the adjusting journal entry needed on December 31, 2014.

- 3 E17-8 (Available-for-Sale Securities Entries and Reporting)** Satchel Corporation purchases equity securities costing \$73,000 and classifies them as available-for-sale securities. At December 31, the fair value of the portfolio is \$65,000.

Instructions

Prepare the adjusting entry to report the securities properly. Indicate the statement presentation of the accounts in your entry.

- 3 E17-9 (Available-for-Sale Securities Entries and Financial Statement Presentation)** At December 31, 2013, the available-for-sale equity portfolio for Steffi Graf, Inc. is as follows.

<u>Security</u>	<u>Cost</u>	<u>Fair Value</u>	<u>Unrealized Gain (Loss)</u>
A	\$17,500	\$15,000	(\$2,500)
B	12,500	14,000	1,500
C	23,000	25,500	2,500
Total	<u>\$53,000</u>	<u>\$54,500</u>	1,500
Previous fair value adjustment balance—Dr.			400
Fair value adjustment—Dr.			<u>\$1,100</u>

On January 20, 2014, Steffi Graf, Inc. sold security A for \$15,100. The sale proceeds are net of brokerage fees.

Instructions

- Prepare the adjusting entry at December 31, 2013, to report the portfolio at fair value.
- Show the balance sheet presentation of the investment-related accounts at December 31, 2013. (Ignore notes presentation.)
- Prepare the journal entry for the 2014 sale of security A.

- 6 E17-10 (Comprehensive Income Disclosure)** Assume the same information as E17-9 and that Steffi Graf Inc. reports net income in 2013 of \$120,000 and in 2014 of \$140,000. Total holding gains (including any realized holding gain or loss) total \$40,000.

Instructions

- Prepare a statement of comprehensive income for 2013 starting with net income.
- Prepare a statement of comprehensive income for 2014 starting with net income.

- 3 E17-11 (Equity Securities Entries)** Arantxa Corporation made the following cash purchases of securities during 2014, which is the first year in which Arantxa invested in securities.

- On January 15, purchased 10,000 shares of Sanchez Company's common stock at \$33.50 per share plus commission \$1,980.
- On April 1, purchased 5,000 shares of Vicario Co.'s common stock at \$52.00 per share plus commission \$3,370.
- On September 10, purchased 7,000 shares of WTA Co.'s preferred stock at \$26.50 per share plus commission \$4,910.

On May 20, 2014, Arantxa sold 4,000 shares of Sanchez Company's common stock at a market price of \$35 per share less brokerage commissions, taxes, and fees of \$3,850. The year-end fair values per share were Sanchez \$30, Vicario \$55, and WTA \$28. In addition, the chief accountant of Arantxa told you that Arantxa Corporation plans to hold these securities for the long term but may sell them in order to earn profits from appreciation in prices.

Instructions

- Prepare the journal entries to record the above three security purchases.
- Prepare the journal entry for the security sale on May 20.
- Compute the unrealized gains or losses and prepare the adjusting entries for Arantxa on December 31, 2014.

- 3 4 E17-12 (Journal Entries for Fair Value and Equity Methods)** The following are two independent situations.

Situation 1: Conchita Cosmetics acquired 10% of the 200,000 shares of common stock of Martinez Fashion at a total cost of \$13 per share on March 18, 2014. On June 30, Martinez declared and paid a \$75,000 cash dividend. On December 31, Martinez reported net income of \$122,000 for the year. At December 31, the market price of Martinez Fashion was \$15 per share. The securities are classified as available-for-sale.

Situation 2: Monica, Inc. obtained significant influence over Seles Corporation by buying 30% of Seles's 30,000 outstanding shares of common stock at a total cost of \$9 per share on January 1, 2014. On June 15, Seles declared and paid a cash dividend of \$36,000. On December 31, Seles reported a net income of \$85,000 for the year.

Instructions

Prepare all necessary journal entries in 2014 for both situations.

- 4** **E17-13 (Equity Method)** Parent Co. invested \$1,000,000 in Sub Co. for 25% of its outstanding stock. Sub Co. pays out 40% of net income in dividends each year.

Instructions

Use the information in the following T-account for the investment in Sub to answer the following questions.

Investment in Sub Co.	
1,000,000	
110,000	44,000

- (a) How much was Parent Co.'s share of Sub Co.'s net income for the year?
- (b) How much was Parent Co.'s share of Sub Co.'s dividends for the year?
- (c) What was Sub Co.'s total net income for the year?
- (d) What was Sub Co.'s total dividends for the year?

- 3** **E17-14 (Equity Investment—Trading)** Oregon Co. had purchased 200 shares of Washington Co. for \$40 each this year and classified the investment as a trading security. Oregon Co. sold 100 shares of the stock for \$45 each. At year-end, the price per share of the Washington Co. stock had dropped to \$35.

Instructions

Prepare the journal entries for these transactions and any year-end adjustments.

- 3** **E17-15 (Equity Investments—Trading)** Kenseth Company has the following securities in its trading portfolio of securities on December 31, 2013.

Investments (Trading)	Cost	Fair Value
1,500 shares of Gordon, Inc., Common	\$ 73,500	\$ 69,000
5,000 shares of Wallace Corp., Common	180,000	175,000
400 shares of Martin, Inc., Preferred	60,000	61,600
	\$313,500	\$305,600

All of the securities were purchased in 2013.

In 2014, Kenseth completed the following securities transactions.

- March 1 Sold the 1,500 shares of Gordon, Inc., Common, @ \$45 less fees of \$1,200
 April 1 Bought 700 shares of Earnhart Corp., Common, @ \$75 plus fees of \$1,300

Kenseth Company's portfolio of trading securities appeared as follows on December 31, 2014.

Investments (Trading)	Cost	Fair Value
5,000 shares of Wallace Corp., Common	\$180,000	\$175,000
700 shares of Earnhart Corp., Common	53,800	50,400
400 shares of Martin, Inc., Preferred	60,000	58,000
	\$293,800	\$283,400

Instructions

Prepare the general journal entries for Kenseth Company for:

- (a) The 2013 adjusting entry.
- (b) The sale of the Gordon stock.
- (c) The purchase of the Earnhart stock.
- (d) The 2014 adjusting entry for the trading portfolio.

- 3 4 E17-16 (Fair Value and Equity Method Compared)** Jaycie Phelps Inc. acquired 20% of the outstanding common stock of Theresa Kulikowski Inc. on December 31, 2013. The purchase price was \$1,200,000 for 50,000 shares. Kulikowski Inc. declared and paid an \$0.85 per share cash dividend on June 30 and on December 31, 2014. Kulikowski reported net income of \$730,000 for 2014. The fair value of Kulikowski's stock was \$27 per share at December 31, 2014.

Instructions

- Prepare the journal entries for Jaycie Phelps Inc. for 2013 and 2014, assuming that Phelps cannot exercise significant influence over Kulikowski. The securities should be classified as available-for-sale.
 - Prepare the journal entries for Jaycie Phelps Inc. for 2013 and 2014, assuming that Phelps can exercise significant influence over Kulikowski.
 - At what amount is the investment in securities reported on the balance sheet under each of these methods at December 31, 2014? What is the total net income reported in 2014 under each of these methods?
- 4 E17-17 (Equity Method)** On January 1, 2014, Pennington Corporation purchased 30% of the common shares of Edwards Company for \$180,000. During the year, Edwards earned net income of \$80,000 and paid dividends of \$20,000.

Instructions

Prepare the entries for Pennington to record the purchase and any additional entries related to this investment in Edwards Company in 2014.

- 5 E17-18 (Impairment of Debt Securities)** Hagar Corporation has municipal bonds classified as available-for-sale at December 31, 2013. These bonds have a par value of \$800,000, an amortized cost of \$800,000, and a fair value of \$720,000. The unrealized loss of \$80,000 previously recognized as other comprehensive income and as a separate component of stockholders' equity is now determined to be other than temporary. That is, the company believes that impairment accounting is now appropriate for these bonds.

Instructions

- Prepare the journal entry to recognize the impairment. No entry is needed to adjust accumulated other comprehensive income.
 - What is the new cost basis of the municipal bonds? Given that the maturity value of the bonds is \$800,000, should Hagar Corporation amortize the difference between the carrying amount and the maturity value over the life of the bonds?
 - At December 31, 2014, the fair value of the municipal bonds is \$760,000. Prepare the entry (if any) to record this information.
- 3 5 E17-19 (Fair Value Measurement)** Presented below is information related to the purchases of common stock by Lilly Company during 2014.

	Cost (at purchase date)	Fair Value (at December 31)
Investment in Arroyo Company stock	\$100,000	\$ 80,000
Investment in Lee Corporation stock	250,000	300,000
Investment in Woods Inc. stock	180,000	190,000
Total	<u>\$530,000</u>	<u>\$570,000</u>

Instructions

(Assume a zero balance for any Fair Value Adjustment account.)

- What entry would Lilly make at December 31, 2014, to record the investment in Arroyo Company stock if it chooses to report this security using the fair value option?
 - What entry would Lilly make at December 31, 2014, to record the investment in Lee Corporation, assuming that Lilly wants to classify this security as available-for-sale? This security is the only available-for-sale security that Lilly presently owns.
 - What entry would Lilly make at December 31, 2014, to record the investment in Woods Inc., assuming that Lilly wants to classify this investment as a trading security?
- 3 5 E17-20 (Fair Value Measurement Issues)** Assume the same information as in E17-19 for Lilly Company. In addition, assume that the investment in the Woods Inc. stock was sold during 2015 for \$195,000.

At December 31, 2015, the following information relates to its two remaining investments of common stock.

	Cost (at purchase date)	Fair Value (at December 31)
Investment in Arroyo Company stock	\$100,000	\$140,000
Investment in Lee Corporation stock	250,000	310,000
Total	<u>\$350,000</u>	<u>\$450,000</u>

Net income before any security gains and losses for 2015 was \$905,000.

Instructions

- Compute the amount of net income or net loss that Lilly should report for 2015, taking into consideration Lilly's security transactions for 2015.
- Prepare the journal entry to record unrealized gain or loss related to the investment in Arroyo Company stock at December 31, 2015.

- 2** **3** **E17-21 (Fair Value Option)** Presented below is selected information related to the financial instruments of Dawson Company at December 31, 2014. This is Dawson Company's first year of operations.

5

	Carrying Amount	Fair Value (at December 31)
Investment in debt securities (intent is to hold to maturity)	\$ 40,000	\$ 41,000
Investment in Chen Company stock	800,000	910,000
Bonds payable	220,000	195,000

Instructions

- Dawson elects to use the fair value option whenever possible. Assuming that Dawson's net income is \$100,000 in 2014 before reporting any securities gains or losses, determine Dawson's net income for 2014.
- Record the journal entry, if any, necessary at December 31, 2014, to record the fair value option for the bonds payable.

- 7** ***E17-22 (Derivative Transaction)** On January 2, 2014, Jones Company purchases a call option for \$300 on Merchant common stock. The call option gives Jones the option to buy 1,000 shares of Merchant at a strike price of \$50 per share. The market price of a Merchant share is \$50 on January 2, 2014 (the intrinsic value is therefore \$0). On March 31, 2014, the market price for Merchant stock is \$53 per share, and the time value of the option is \$200.

Instructions

- Prepare the journal entry to record the purchase of the call option on January 2, 2014.
- Prepare the journal entry(ies) to recognize the change in the fair value of the call option as of March 31, 2014.
- What was the effect on net income of entering into the derivative transaction for the period January 2 to March 31, 2014?

- 8** ***E17-23 (Fair Value Hedge)** On January 2, 2014, MacCloud Co. issued a 4-year, \$100,000 note at 6% fixed interest, interest payable semiannually. MacCloud now wants to change the note to a variable-rate note.

As a result, on January 2, 2014, MacCloud Co. enters into an interest rate swap where it agrees to receive 6% fixed and pay LIBOR of 5.7% for the first 6 months on \$100,000. At each 6-month period, the variable rate will be reset. The variable rate is reset to 6.7% on June 30, 2014.

Instructions

- Compute the net interest expense to be reported for this note and related swap transaction as of June 30, 2014.
- Compute the net interest expense to be reported for this note and related swap transaction as of December 31, 2014.

- 9** ***E17-24 (Cash Flow Hedge)** On January 2, 2014, Parton Company issues a 5-year, \$10,000,000 note at LIBOR, with interest paid annually. The variable rate is reset at the end of each year. The LIBOR rate for the first year is 5.8%.

Parton Company decides it prefers fixed-rate financing and wants to lock in a rate of 6%. As a result, Parton enters into an interest rate swap to pay 6% fixed and receive LIBOR based on \$10 million. The variable rate is reset to 6.6% on January 2, 2015.

Instructions

- (a) Compute the net interest expense to be reported for this note and related swap transactions as of December 31, 2014.
- (b) Compute the net interest expense to be reported for this note and related swap transactions as of December 31, 2015.

- 8** *E17-25 (Fair Value Hedge) Sarazan Company issues a 4-year, 7.5% fixed-rate interest only, nonprepayable \$1,000,000 note payable on December 31, 2013. It decides to change the interest rate from a fixed rate to variable rate and enters into a swap agreement with M&S Corp. The swap agreement specifies that Sarazan will receive a fixed rate at 7.5% and pay variable with settlement dates that match the interest payments on the debt. Assume that interest rates have declined during 2014 and that Sarazan received \$13,000 as an adjustment to interest expense for the settlement at December 31, 2014. The loss related to the debt (due to interest rate changes) was \$48,000. The value of the swap contract increased \$48,000.

Instructions

- (a) Prepare the journal entry to record the payment of interest expense on December 31, 2014.
 - (b) Prepare the journal entry to record the receipt of the swap settlement on December 31, 2014.
 - (c) Prepare the journal entry to record the change in the fair value of the swap contract on December 31, 2014.
 - (d) Prepare the journal entry to record the change in the fair value of the debt on December 31, 2014.
- 7** *E17-26 (Call Option) On August 15, 2013, Outkast Co. invested idle cash by purchasing a call option on Counting Crows Inc. common shares for \$360. The notional value of the call option is 400 shares, and the option price is \$40. The option expires on January 31, 2014. The following data are available with respect to the call option.

Date	Market Price of Counting Crows Shares	Time Value of Call Option
September 30, 2013	\$48 per share	\$180
December 31, 2013	\$46 per share	65
January 15, 2014	\$47 per share	30

Instructions

Prepare the journal entries for Outkast for the following dates.

- (a) Investment in call option on Counting Crows shares on August 15, 2013.
 - (b) September 30, 2013—Outkast prepares financial statements.
 - (c) December 31, 2013—Outkast prepares financial statements.
 - (d) January 15, 2014—Outkast settles the call option on the Counting Crows shares.
- 9** *E17-27 (Cash Flow Hedge) Hart Golf Co. uses titanium in the production of its specialty drivers. Hart anticipates that it will need to purchase 200 ounces of titanium in November 2014, for clubs that will be shipped in the spring and summer of 2015. However, if the price of titanium increases, this will increase the cost to produce the clubs, which will result in lower profit margins.

To hedge the risk of increased titanium prices, on May 1, 2014, Hart enters into a titanium futures contract and designates this futures contract as a cash flow hedge of the anticipated titanium purchase. The notional amount of the contract is 200 ounces, and the terms of the contract give Hart the option to purchase titanium at a price of \$500 per ounce. The price will be good until the contract expires on November 30, 2014.

Assume the following data with respect to the price of the call options and the titanium inventory purchase.

Date	Spot Price for November Delivery
May 1, 2014	\$500 per ounce
June 30, 2014	520 per ounce
September 30, 2014	525 per ounce

Instructions

Present the journal entries for the following dates/transactions.

- (a) May 1, 2014—Inception of futures contract, no premium paid.
- (b) June 30, 2014—Hart prepares financial statements.
- (c) September 30, 2014—Hart prepares financial statements.
- (d) October 5, 2014—Hart purchases 200 ounces of titanium at \$525 per ounce and settles the futures contract.

- (e) December 15, 2014—Hart sells clubs containing titanium purchased in October 2014 for \$250,000. The cost of the finished goods inventory is \$140,000.
- (f) Indicate the amount(s) reported in the income statement related to the futures contract and the inventory transactions on December 31, 2014.

EXERCISES SET B

See the book's companion website, at www.wiley.com/college/kieso, for an additional set of exercises.

PROBLEMS

- 2 P17-1 (Debt Securities)** Presented below is an amortization schedule related to Spangler Company's 5-year, \$100,000 bond with a 7% interest rate and a 5% yield, purchased on December 31, 2012, for \$108,660.

Date	Cash Received	Interest Revenue	Bond Premium Amortization	Carrying Amount of Bonds
12/31/12				\$108,660
12/31/13	\$7,000	\$5,433	\$1,567	107,093
12/31/14	7,000	5,354	1,646	105,447
12/31/15	7,000	5,272	1,728	103,719
12/31/16	7,000	5,186	1,814	101,905
12/31/17	7,000	5,095	1,905	100,000

The following schedule presents a comparison of the amortized cost and fair value of the bonds at year-end.

	12/31/13	12/31/14	12/31/15	12/31/16	12/31/17
Amortized cost	\$107,093	\$105,447	\$103,719	\$101,905	\$100,000
Fair value	\$106,500	\$107,500	\$105,650	\$103,000	\$100,000

Instructions

- (a) Prepare the journal entry to record the purchase of these bonds on December 31, 2012, assuming the bonds are classified as held-to-maturity securities.
- (b) Prepare the journal entry(ies) related to the held-to-maturity bonds for 2013.
- (c) Prepare the journal entry(ies) related to the held-to-maturity bonds for 2015.
- (d) Prepare the journal entry(ies) to record the purchase of these bonds, assuming they are classified as available-for-sale.
- (e) Prepare the journal entry(ies) related to the available-for-sale bonds for 2013.
- (f) Prepare the journal entry(ies) related to the available-for-sale bonds for 2015.

- 2 P17-2 (Available-for-Sale Debt Securities)** On January 1, 2014, Novotna Company purchased \$400,000, 8% bonds of Aguirre Co. for \$369,114. The bonds were purchased to yield 10% interest. Interest is payable semiannually on July 1 and January 1. The bonds mature on January 1, 2019. Novotna Company uses the effective-interest method to amortize discount or premium. On January 1, 2016, Novotna Company sold the bonds for \$370,726 after receiving interest to meet its liquidity needs.

Instructions

- (a) Prepare the journal entry to record the purchase of bonds on January 1. Assume that the bonds are classified as available-for-sale.
- (b) Prepare the amortization schedule for the bonds.
- (c) Prepare the journal entries to record the semiannual interest on July 1, 2014, and December 31, 2014.
- (d) If the fair value of Aguirre bonds is \$372,726 on December 31, 2015, prepare the necessary adjusting entry. (Assume the fair value adjustment balance on January 1, 2015, is a debit of \$3,375.)
- (e) Prepare the journal entry to record the sale of the bonds on January 1, 2016.

- 2 3 P17-3 (Available-for-Sale Investments)** Cardinal Paz Corp. carries an account in its general ledger called Investments, which contained debits for investment purchases, and no credits, with the following descriptions.

Feb. 1, 2014	Sharapova Company common stock, \$100 par, 200 shares	\$ 37,400
April 1	U.S. government bonds, 11%, due April 1, 2024, interest payable April 1 and October 1, 110 bonds of \$1,000 par each	110,000
July 1	McGrath Company 12% bonds, par \$50,000, dated March 1, 2014, purchased at 104 plus accrued interest, interest payable annually on March 1, due March 1, 2034	54,000

Instructions

(Round all computations to the nearest dollar.)

- Prepare entries necessary to classify the amounts into proper accounts, assuming that all the securities are classified as available-for-sale.
- Prepare the entry to record the accrued interest and the amortization of premium on December 31, 2014, using the straight-line method.
- The fair values of the investments on December 31, 2014, were:

Sharapova Company common stock	\$ 31,800
U.S. government bonds	124,700
McGrath Company bonds	58,600

What entry or entries, if any, would you recommend be made?

- The U.S. government bonds were sold on July 1, 2015, for \$119,200 plus accrued interest. Give the proper entry.

- 2 P17-4 (Available-for-Sale Debt Investments)** Presented below is information taken from a bond investment amortization schedule with related fair values provided. These bonds are classified as available-for-sale.

	12/31/14	12/31/15	12/31/16
Amortized cost	\$491,150	\$519,442	\$550,000
Fair value	\$497,000	\$509,000	\$550,000

Instructions

- Indicate whether the bonds were purchased at a discount or at a premium.
- Prepare the adjusting entry to record the bonds at fair value at December 31, 2014. The Fair Value Adjustment account has a debit balance of \$1,000 prior to adjustment.
- Prepare the adjusting entry to record the bonds at fair value at December 31, 2015.

- 3 P17-5 (Equity Securities Entries and Disclosures)** Parnevik Company has the following securities in its investment portfolio on December 31, 2014 (all securities were purchased in 2014): (1) 3,000 shares of Anderson Co. common stock which cost \$58,500, (2) 10,000 shares of Munter Ltd. common stock which cost \$580,000, and (3) 6,000 shares of King Company preferred stock which cost \$255,000. The Fair Value Adjustment account shows a credit of \$10,100 at the end of 2014.

In 2015, Parnevik completed the following securities transactions.

- On January 15, sold 3,000 shares of Anderson's common stock at \$22 per share less fees of \$2,150.
- On April 17, purchased 1,000 shares of Castle's common stock at \$33.50 per share plus fees of \$1,980.

On December 31, 2015, the market prices per share of these securities were Munter \$61, King \$40, and Castle \$29. In addition, the accounting supervisor of Parnevik told you that, even though all these securities have readily determinable fair values, Parnevik will not actively trade these securities because the top management intends to hold them for more than one year.

Instructions

- Prepare the entry for the security sale on January 15, 2015.
- Prepare the journal entry to record the security purchase on April 17, 2015.
- Compute the unrealized gains or losses and prepare the adjusting entry for Parnevik on December 31, 2015.
- How should the unrealized gains or losses be reported on Parnevik's balance sheet?

- 3 P17-6 (Trading and Available-for-Sale Securities Entries)** McElroy Company has the following portfolio of investment securities at September 30, 2014, its last reporting date.

Trading Securities	Cost	Fair Value
Horton, Inc. common (5,000 shares)	\$215,000	\$200,000
Monty, Inc. preferred (3,500 shares)	133,000	140,000
Oakwood Corp. common (1,000 shares)	180,000	179,000

On October 10, 2014, the Horton shares were sold at a price of \$54 per share. In addition, 3,000 shares of Patriot common stock were acquired at \$54.50 per share on November 2, 2014. The December 31, 2014, fair values were Monty \$106,000, Patriot \$132,000, and the Oakwood common \$193,000. All the securities are classified as trading.

Instructions

- (a) Prepare the journal entries to record the sale, purchase, and adjusting entries related to the trading securities in the last quarter of 2014.
- (b) How would the entries in part (a) change if the securities were classified as available-for-sale?

2 P17-7 (Available-for-Sale and Held-to-Maturity Debt Securities Entries) The following information relates to the debt securities investments of Wildcat Company.

1. On February 1, the company purchased 10% bonds of Gibbons Co. having a par value of \$300,000 at 100 plus accrued interest. Interest is payable April 1 and October 1.
2. On April 1, semiannual interest is received.
3. On July 1, 9% bonds of Sampson, Inc. were purchased. These bonds with a par value of \$200,000 were purchased at 100 plus accrued interest. Interest dates are June 1 and December 1.
4. On September 1, bonds with a par value of \$60,000, purchased on February 1, are sold at 99 plus accrued interest.
5. On October 1, semiannual interest is received.
6. On December 1, semiannual interest is received.
7. On December 31, the fair value of the bonds purchased February 1 and July 1 are 95 and 93, respectively.

Instructions

- (a) Prepare any journal entries you consider necessary, including year-end entries (December 31), assuming these are available-for-sale securities.
- (b) If Wildcat classified these as held-to-maturity investments, explain how the journal entries would differ from those in part (a).

3 4 P17-8 (Fair Value and Equity Methods) Brooks Corp. is a medium-sized corporation specializing in quarrying stone for building construction. The company has long dominated the market, at one time achieving a 70% market penetration. During prosperous years, the company's profits, coupled with a conservative dividend policy, resulted in funds available for outside investment. Over the years, Brooks has had a policy of investing idle cash in equity securities. In particular, Brooks has made periodic investments in the company's principal supplier, Norton Industries. Although the firm currently owns 12% of the outstanding common stock of Norton Industries, Brooks does not have significant influence over the operations of Norton Industries.

Cheryl Thomas has recently joined Brooks as assistant controller, and her first assignment is to prepare the 2014 year-end adjusting entries for the accounts that are valued by the "fair value" rule for financial reporting purposes. Thomas has gathered the following information about Brooks' pertinent accounts.

1. Brooks has trading securities related to Delaney Motors and Patrick Electric. During this fiscal year, Brooks purchased 100,000 shares of Delaney Motors for \$1,400,000; these shares currently have a fair value of \$1,600,000. Brooks' investment in Patrick Electric has not been profitable; the company acquired 50,000 shares of Patrick in April 2014 at \$20 per share, a purchase that currently has a value of \$720,000.
2. Prior to 2014, Brooks invested \$22,500,000 in Norton Industries and has not changed its holdings this year. This investment in Norton Industries was valued at \$21,500,000 on December 31, 2013. Brooks' 12% ownership of Norton Industries has a current fair value of \$22,225,000.

Instructions

- (a) Prepare the appropriate adjusting entries for Brooks as of December 31, 2014, to reflect the application of the "fair value" rule for both classes of securities described above.
- (b) For both classes of securities presented above, describe how the results of the valuation adjustments made in (a) would be reflected in the body of and notes to Brooks' 2014 financial statements.
- (c) Prepare the entries for the Norton investment, assuming that Brooks owns 25% of Norton's shares. Norton reported income of \$500,000 in 2014 and paid cash dividends of \$100,000.

- 3 6 P17-9 (Financial Statement Presentation of Available-for-Sale Investments)** Kennedy Company has the following portfolio of available-for-sale securities at December 31, 2014.

Security	Quantity	Percent Interest	Per Share	
			Cost	Price
Frank, Inc.	2,000 shares	8%	\$11	\$16
Ellis Corp.	5,000 shares	14%	23	19
Mendota Company	4,000 shares	2%	31	24

Instructions

- (a) What should be reported on Kennedy's December 31, 2014, balance sheet relative to these long-term available-for-sale securities?

On December 31, 2015, Kennedy's portfolio of available-for-sale securities consisted of the following common stocks.

Security	Quantity	Percent Interest	Per Share	
			Cost	Price
Ellis Corp.	5,000 shares	14%	\$23	\$28
Mendota Company	4,000 shares	2%	31	23
Mendota Company	2,000 shares	1%	25	23

At the end of 2015, Kennedy Company changed its intent relative to its investment in Frank, Inc. and reclassified the shares to trading securities status when the shares were selling for \$8 per share.

- (b) What should be reported on the face of Kennedy's December 31, 2015, balance sheet relative to available-for-sale securities investments? What should be reported to reflect the transactions above in Kennedy's 2015 income statement?

- 3 5 P17-10 (Gain on Sale of Investments and Comprehensive Income)** On January 1, 2014, Acker Inc. had the following balance sheet.

ACKER INC.			
BALANCE SHEET			
AS OF JANUARY 1, 2014			
Assets		Equity	
Cash	\$ 50,000	Common stock	\$260,000
Equity investments (available-for-sale)	240,000	Accumulated other comprehensive income	30,000
Total	<u>\$290,000</u>	Total	<u>\$290,000</u>

The accumulated other comprehensive income related to unrealized holding gains on available-for-sale securities. The fair value of Acker Inc.'s available-for-sale securities at December 31, 2014, was \$190,000; its cost was \$140,000. No securities were purchased during the year. Acker Inc.'s income statement for 2014 was as follows. (Ignore income taxes.)

ACKER INC.	
INCOME STATEMENT	
FOR THE YEAR ENDED DECEMBER 31, 2014	
Dividend revenue	\$ 5,000
Gain on sale of investments	30,000
Net income	<u>\$35,000</u>

Instructions

(Assume all transactions during the year were for cash.)

- (a) Prepare the journal entry to record the sale of the available-for-sale securities in 2014.
 (b) Prepare a statement of comprehensive income for 2014.
 (c) Prepare a balance sheet as of December 31, 2014.

- 3 P17-11 (Equity Investments—Available-for-Sale)** Castleman Holdings, Inc. had the following available-for-sale investment portfolio at January 1, 2014.

Evers Company	1,000 shares @ \$15 each	\$15,000
Rogers Company	900 shares @ \$20 each	18,000
Chance Company	500 shares @ \$9 each	4,500
Equity investments (available-for-sale) @ cost		37,500
Fair value adjustment (available-for-sale)		(7,500)
Equity investments (available-for-sale) @ fair value		<u>\$30,000</u>

During 2014, the following transactions took place.

- On March 1, Rogers Company paid a \$2 per share dividend.
- On April 30, Castleman Holdings, Inc. sold 300 shares of Chance Company for \$11 per share.
- On May 15, Castleman Holdings, Inc. purchased 100 more shares of Evers Co. stock at \$16 per share.
- At December 31, 2014, the stocks had the following price per share values: Evers \$17, Rogers \$19, and Chance \$8.

During 2015, the following transactions took place.

- On February 1, Castleman Holdings, Inc. sold the remaining Chance shares for \$8 per share.
- On March 1, Rogers Company paid a \$2 per share dividend.
- On December 21, Evers Company declared a cash dividend of \$3 per share to be paid in the next month.
- At December 31, 2015, the stocks had the following price per share values: Evers \$19 and Rogers \$21.

Instructions

- Prepare journal entries for each of the above transactions.
- Prepare a partial balance sheet showing the investment-related amounts to be reported at December 31, 2014 and 2015.

- 3 5 P17-12 (Available-for-Sale Securities—Statement Presentation)** Fernandez Corp. invested its excess cash in available-for-sale securities during 2014. As of December 31, 2014, the portfolio of available-for-sale securities consisted of the following common stocks.

Security	Quantity	Cost	Fair Value
Lindsay Jones, Inc.	1,000 shares	\$ 15,000	\$ 21,000
Poley Corp.	2,000 shares	40,000	42,000
Arnold Aircraft	2,000 shares	72,000	60,000
Totals		<u>\$127,000</u>	<u>\$123,000</u>

Instructions

- What should be reported on Fernandez's December 31, 2014, balance sheet relative to these securities? What should be reported on Fernandez's 2014 income statement?
On December 31, 2015, Fernandez's portfolio of available-for-sale securities consisted of the following common stocks.

Security	Quantity	Cost	Fair Value
Lindsay Jones, Inc.	1,000 shares	\$ 15,000	\$20,000
Lindsay Jones, Inc.	2,000 shares	33,000	40,000
Duff Company	1,000 shares	16,000	12,000
Arnold Aircraft	2,000 shares	72,000	22,000
Totals		<u>\$136,000</u>	<u>\$94,000</u>

During the year 2015, Fernandez Corp. sold 2,000 shares of Poley Corp. for \$38,200 and purchased 2,000 more shares of Lindsay Jones, Inc. and 1,000 shares of Duff Company.

- What should be reported on Fernandez's December 31, 2015, balance sheet? What should be reported on Fernandez's 2015 income statement?
On December 31, 2016, Fernandez's portfolio of available-for-sale securities consisted of the following common stocks.

<u>Security</u>	<u>Quantity</u>	<u>Cost</u>	<u>Fair Value</u>
Arnold Aircraft	2,000 shares	\$72,000	\$82,000
Duff Company	500 shares	8,000	6,000
Totals		<u>\$80,000</u>	<u>\$88,000</u>

During the year 2016, Fernandez Corp. sold 3,000 shares of Lindsay Jones, Inc. for \$39,900 and 500 shares of Duff Company at a loss of \$2,700.

- (c) What should be reported on the face of Fernandez's December 31, 2016, balance sheet? What should be reported on Fernandez's 2016 income statement?
- (d) What would be reported in a statement of comprehensive income at (1) December 31, 2014, and (2) December 31, 2015?

- 7 *P17-13 (Derivative Financial Instrument)** The treasurer of Miller Co. has read on the Internet that the stock price of Wade Inc. is about to take off. In order to profit from this potential development, Miller Co. purchased a call option on Wade common shares on July 7, 2014, for \$240. The call option is for 200 shares (notional value), and the strike price is \$70. (The market price of a share of Wade stock on that date is \$70.) The option expires on January 31, 2015. The following data are available with respect to the call option.

<u>Date</u>	<u>Market Price of Wade Shares</u>	<u>Time Value of Call Option</u>
September 30, 2014	\$77 per share	\$180
December 31, 2014	75 per share	65
January 4, 2015	76 per share	30

Instructions

Prepare the journal entries for Miller Co. for the following dates.

- (a) July 7, 2014—Investment in call option on Wade shares.
 (b) September 30, 2014—Miller prepares financial statements.
 (c) December 31, 2014—Miller prepares financial statements.
 (d) January 4, 2015—Miller settles the call option on the Wade shares.

- 7 *P17-14 (Derivative Financial Instrument)** Johnstone Co. purchased a put option on Ewing common shares on July 7, 2014, for \$240. The put option is for 200 shares, and the strike price is \$70. (The market price of a share of Ewing stock on that date is \$70.) The option expires on January 31, 2015. The following data are available with respect to the put option.

<u>Date</u>	<u>Market Price of Ewing Shares</u>	<u>Time Value of Put Option</u>
September 30, 2014	\$77 per share	\$125
December 31, 2014	75 per share	50
January 31, 2015	78 per share	0

Instructions

Prepare the journal entries for Johnstone Co. for the following dates.

- (a) July 7, 2014—Investment in put option on Ewing shares.
 (b) September 30, 2014—Johnstone prepares financial statements.
 (c) December 31, 2014—Johnstone prepares financial statements.
 (d) January 31, 2015—Put option expires.

- 7 *P17-15 (Free-Standing Derivative)** Warren Co. purchased a put option on Echo common shares on January 7, 2014, for \$360. The put option is for 400 shares, and the strike price is \$85 (which equals the price of an Echo share on the purchase date). The option expires on July 31, 2014. The following data are available with respect to the put option.

<u>Date</u>	<u>Market Price of Echo Shares</u>	<u>Time Value of Put Option</u>
March 31, 2014	\$80 per share	\$200
June 30, 2014	82 per share	90
July 6, 2014	77 per share	25

Instructions

Prepare the journal entries for Warren Co. for the following dates.

- (a) January 7, 2014—Investment in put option on Echo shares.
 (b) March 31, 2014—Warren prepares financial statements.
 (c) June 30, 2014—Warren prepares financial statements.
 (d) July 6, 2014—Warren settles the put option on the Echo shares.

8 *P17-16 (Fair Value Hedge Interest Rate Swap) On December 31, 2014, Mercantile Corp. had a \$10,000,000, 8% fixed-rate note outstanding, payable in 2 years. It decides to enter into a 2-year swap with Chicago First Bank to convert the fixed-rate debt to variable-rate debt. The terms of the swap indicate that Mercantile will receive interest at a fixed rate of 8.0% and will pay a variable rate equal to the 6-month LIBOR rate, based on the \$10,000,000 amount. The LIBOR rate on December 31, 2014, is 7%. The LIBOR rate will be reset every 6 months and will be used to determine the variable rate to be paid for the following 6-month period.

Mercantile Corp. designates the swap as a fair value hedge. Assume that the hedging relationship meets all the conditions necessary for hedge accounting. The 6-month LIBOR rate and the swap and debt fair values are as follows.

<u>Date</u>	<u>6-Month LIBOR Rate</u>	<u>Swap Fair Value</u>	<u>Debt Fair Value</u>
December 31, 2014	7.0%	—	\$10,000,000
June 30, 2015	7.5%	(200,000)	9,800,000
December 31, 2015	6.0%	60,000	10,060,000

Instructions

- Present the journal entries to record the following transactions.
 - The entry, if any, to record the swap on December 31, 2014.
 - The entry to record the semiannual debt interest payment on June 30, 2015.
 - The entry to record the settlement of the semiannual swap amount receivables at 8%, less amount payable at LIBOR, 7%.
 - The entry to record the change in the fair value of the debt on June 30, 2015.
 - The entry to record the change in the fair value of the swap at June 30, 2015.
- Indicate the amount(s) reported on the balance sheet and income statement related to the debt and swap on December 31, 2014.
- Indicate the amount(s) reported on the balance sheet and income statement related to the debt and swap on June 30, 2015.
- Indicate the amount(s) reported on the balance sheet and income statement related to the debt and swap on December 31, 2015.

9 *P17-17 (Cash Flow Hedge) LEW Jewelry Co. uses gold in the manufacture of its products. LEW anticipates that it will need to purchase 500 ounces of gold in October 2014, for jewelry that will be shipped for the holiday shopping season. However, if the price of gold increases, LEW's cost to produce its jewelry will increase, which would reduce its profit margins.

To hedge the risk of increased gold prices, on April 1, 2014, LEW enters into a gold futures contract and designates this futures contract as a cash flow hedge of the anticipated gold purchase. The notional amount of the contract is 500 ounces, and the terms of the contract give LEW the right and the obligation to purchase gold at a price of \$300 per ounce. The price will be good until the contract expires on October 31, 2014.

Assume the following data with respect to the price of the futures contract and the gold inventory purchase.

<u>Date</u>	<u>Spot Price for October Delivery</u>
April 1, 2014	\$300 per ounce
June 30, 2014	310 per ounce
September 30, 2014	315 per ounce

Instructions

Prepare the journal entries for the following transactions.

- April 1, 2014—Inception of the futures contract, no premium paid.
- June 30, 2014—LEW Co. prepares financial statements.
- September 30, 2014—LEW Co. prepares financial statements.
- October 10, 2014—LEW Co. purchases 500 ounces of gold at \$315 per ounce and settles the futures contract.
- December 20, 2014—LEW sells jewelry containing gold purchased in October 2014 for \$350,000. The cost of the finished goods inventory is \$200,000.
- Indicate the amount(s) reported on the balance sheet and income statement related to the futures contract on June 30, 2014.
- Indicate the amount(s) reported in the income statement related to the futures contract and the inventory transactions on December 31, 2014.

8 *P17-18 (Fair Value Hedge) On November 3, 2014, Sprinkle Co. invested \$200,000 in 4,000 shares of the common stock of Pratt Co. Sprinkle classified this investment as available-for-sale. Sprinkle Co. is considering making a more significant investment in Pratt Co. at some point in the future but has decided to wait and see how the stock does over the next several quarters.

To hedge against potential declines in the value of Pratt stock during this period, Sprinkle also purchased a put option on the Pratt stock. Sprinkle paid an option premium of \$600 for the put option, which gives Sprinkle the option to sell 4,000 Pratt shares at a strike price of \$50 per share. The option expires on July 31, 2015. The following data are available with respect to the values of the Pratt stock and the put option.

Date	Market Price of Pratt Shares	Time Value of Put Option
December 31, 2014	\$50 per share	\$375
March 31, 2015	45 per share	175
June 30, 2015	43 per share	40

Instructions

- (a) Prepare the journal entries for Sprinkle Co. for the following dates.
 - (1) November 3, 2014—Investment in Pratt stock and the put option on Pratt shares.
 - (2) December 31, 2014—Sprinkle Co. prepares financial statements.
 - (3) March 31, 2015—Sprinkle prepares financial statements.
 - (4) June 30, 2015—Sprinkle prepares financial statements.
 - (5) July 1, 2015—Sprinkle settles the put option and sells the Pratt shares for \$43 per share.
- (b) Indicate the amount(s) reported on the balance sheet and income statement related to the Pratt investment and the put option on December 31, 2014.
- (c) Indicate the amount(s) reported on the balance sheet and income statement related to the Pratt investment and the put option on June 30, 2015.

PROBLEMS SET B

See the book's companion website, at www.wiley.com/college/kieso, for an additional set of problems.

CONCEPTS FOR ANALYSIS

CA17-1 (Issues Raised about Investment Securities) You have just started work for Warren Co. as part of the controller's group involved in current financial reporting problems. Jane Henshaw, controller for Warren, is interested in your accounting background because the company has experienced a series of financial reporting surprises over the last few years. Recently, the controller has learned from the company's auditors that there is authoritative literature that may apply to its investment in securities. She assumes that you are familiar with this pronouncement and asks how the following situations should be reported in the financial statements.

Situation 1: Trading securities in the current assets section have a fair value that is \$4,200 lower than cost.

Situation 2: A trading security whose fair value is currently less than cost is transferred to the available-for-sale category.

Situation 3: An available-for-sale security whose fair value is currently less than cost is classified as noncurrent but is to be reclassified as current.

Situation 4: A company's portfolio of available-for-sale securities consists of the common stock of one company. At the end of the prior year, the fair value of the security was 50% of original cost, and this reduction in fair value was reported as an other than temporary impairment. However, at the end of the current year, the fair value of the security had appreciated to twice the original cost.

Situation 5: The company has purchased some convertible debentures that it plans to hold for less than a year. The fair value of the convertible debentures is \$7,700 below its cost.

Instructions

What is the effect upon carrying value and earnings for each of the situations above? Assume that these situations are unrelated.

CA17-2 (Equity Securities) Lexington Co. has the following available-for-sale securities outstanding on December 31, 2014 (its first year of operations).

	Cost	Fair Value
Greenspan Corp. Stock	\$20,000	\$19,000
Summerset Company Stock	9,500	8,800
Tinkers Company Stock	20,000	20,600
	<u>\$49,500</u>	<u>\$48,400</u>

During 2015, Summerset Company stock was sold for \$9,200, the difference between the \$9,200 and the “fair value” of \$8,800 being recorded as a “Gain on Sale of Investments.” The market price of the stock on December 31, 2015, was Greenspan Corp. stock \$19,900; Tinkers Company stock \$20,500.

Instructions

- What justification is there for valuing available-for-sale securities at fair value and reporting the unrealized gain or loss as part of stockholders’ equity?
- How should Lexington Company apply this rule on December 31, 2014? Explain.
- Did Lexington Company properly account for the sale of the Summerset Company stock? Explain.
- Are there any additional entries necessary for Lexington Company at December 31, 2015, to reflect the facts on the financial statements in accordance with generally accepted accounting principles? Explain.

(AICPA adapted)

CA17-3 (Financial Statement Effect of Equity Securities) Presented below are three unrelated situations involving equity securities.

Situation 1: An equity security, whose fair value is currently less than cost, is classified as available-for-sale but is to be reclassified as trading.

Situation 2: A noncurrent portfolio with an aggregate fair value in excess of cost includes one particular security whose fair value has declined to less than one-half of the original cost. The decline in value is considered to be other than temporary.

Situation 3: The portfolio of trading securities has a cost in excess of fair value of \$13,500. The available-for-sale portfolio has a fair value in excess of cost of \$28,600.

Instructions

What is the effect upon carrying value and earnings for each of the situations above?

CA17-4 (Investment Accounted for under the Equity Method) On July 1, 2015, Fontaine Company purchased for cash 40% of the outstanding capital stock of Knoblett Company. Both Fontaine Company and Knoblett Company have a December 31 year-end. Knoblett Company, whose common stock is actively traded in the over-the-counter market, reported its total net income for the year to Fontaine Company and also paid cash dividends on November 15, 2015, to Fontaine Company and its other stockholders.

Instructions

How should Fontaine Company report the above facts in its December 31, 2015, balance sheet and its income statement for the year then ended? Discuss the rationale for your answer.

(AICPA adapted)

CA17-5 (Equity Investment) On July 1, 2014, Selig Company purchased for cash 40% of the outstanding capital stock of Spoor Corporation. Both Selig and Spoor have a December 31 year-end. Spoor Corporation, whose common stock is actively traded on the American Stock Exchange, paid a cash dividend on November 15, 2014, to Selig Company and its other stockholders. It also reported its total net income for the year of \$920,000 to Selig Company.

Instructions

Prepare a one-page memorandum of instructions on how Selig Company should report the above facts in its December 31, 2014, balance sheet and its 2014 income statement. In your memo, identify and describe the method of valuation you recommend. Provide rationale where you can. Address your memo to the chief accountant at Selig Company.

CA17-6 (Fair Value) Addison Manufacturing holds a large portfolio of debt and equity securities as an investment. The fair value of the portfolio is greater than its original cost, even though some securities have decreased in value. Sam Beresford, the financial vice president, and Angie Nielson, the controller, are near year-end in the process of classifying for the first time this securities portfolio in accordance with GAAP. Beresford wants to classify those securities that have increased in value during the period as trading securities in order to increase net income this year. He wants to classify all the securities that have decreased in value as available-for-sale (the equity securities) and as held-to-maturity (the debt securities).

Nielson disagrees. She wants to classify those securities that have decreased in value as trading securities and those that have increased in value as available-for-sale (equity) and held-to-maturity (debt). She contends that the company is having a good earnings year and that recognizing the losses will help to smooth the income this year. As a result, the company will have built-in gains for future periods when the company may not be as profitable.

Instructions

Answer the following questions.

- (a) Will classifying the portfolio as each proposes actually have the effect on earnings that each says it will?
- (b) Is there anything unethical in what each of them proposes? Who are the stakeholders affected by their proposals?
- (c) Assume that Beresford and Nielson properly classify the entire portfolio into trading, available-for-sale, and held-to-maturity categories. But then each proposes to sell just before year-end the securities with gains or with losses, as the case may be, to accomplish their effect on earnings. Is this unethical?

USING YOUR JUDGMENT

FINANCIAL REPORTING

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix 5B. The company's complete annual report, including the notes to the financial statements, can be accessed at the book's companion website, www.wiley.com/college/kieso.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- (a) What investments does P&G report in 2011, and how are these investments accounted for in its financial statements?
- (b) How are P&G's investments valued? How does P&G determine fair value?
- (c) How does P&G use derivative financial instruments?

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

Instructions

Go to the book's companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- (a) Based on the information contained in these financial statements, determine each of the following for each company.
 - (1) Cash used in (for) investing activities during 2011 (from the statement of cash flows).
 - (2) Cash used for acquisitions and investments in unconsolidated affiliates (or principally bottling companies) during 2011.
 - (3) Total investment in unconsolidated affiliates (or investments and other assets) at the end of 2011.
- (b) (1) Briefly identify from Coca-Cola's December 31, 2011, balance sheet the investments it reported as being accounted for under the equity method. (2) What is the amount of investments that Coca-Cola reported in its 2011 balance sheet as "cost method investments," and what is the nature of these investments?
- (c) In its Note 2 on Investments, what total amounts did Coca-Cola report at December 31, 2011, as: (1) trading securities, (2) available-for-sale securities, and (3) held-to-maturity securities?

Financial Statement Analysis Case

Union Planters

Union Planters is a Tennessee bank holding company (that is, a corporation that owns banks). (Union Planters is now part of **Regions Bank**.) Union Planters manages \$32 billion in assets, the largest of which is its loan portfolio of \$19 billion. In addition to its loan portfolio, however, like other banks it has significant debt investments. The nature of these investments varies from short-term in nature to long-term in nature. As a consequence, consistent with the requirements of accounting rules, Union Planters reports its

investments in two different categories—trading and available-for-sale. The following facts were found in a recent Union Planters' annual report.

(all dollars in millions)	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value
Trading account assets	\$ 275	—	—	\$ 275
Securities available for sale	8,209	\$108	\$15	8,302
Net income				224
Net securities gains (losses)				(9)

Instructions

- Why do you suppose Union Planters purchases investments, rather than simply making loans? Why does it purchase investments that vary in nature both in terms of their maturities and in type (debt versus stock)?
- How must Union Planters account for its investments in each of the two categories?
- In what ways does classifying investments into two different categories assist investors in evaluating the profitability of a company like Union Planters?
- Suppose that the management of Union Planters was not happy with its net income for the year. What step could it have taken with its investment portfolio that would have definitely increased reported profit? How much could it have increased reported profit? Why do you suppose it chose not to do this?

Accounting, Analysis, and Principles

Instar Company has several investments in the securities of other companies. The following information regarding these investments is available at December 31, 2014.

- Instar holds bonds issued by Dorsel Corp. The bonds have an amortized cost of \$320,000 and their fair value at December 31, 2014, is \$400,000. Instar intends to hold the bonds until they mature on December 31, 2022.
- Instar has invested idle cash in the equity securities of several publicly traded companies. Instar intends to sell these securities during the first quarter of 2015, when it will need the cash to acquire seasonal inventory. These equity securities have a cost basis of \$800,000 and a fair value of \$920,000 at December 31, 2014.
- Instar has a significant ownership stake in one of the companies that supplies Instar with various components Instar uses in its products. Instar owns 6% of the common stock of the supplier, does not have any representation on the supplier's board of directors, does not exchange any personnel with the supplier, and does not consult with the supplier on any of the supplier's operating, financial, or strategic decisions. The cost basis of the investment in the supplier is \$1,200,000 and the fair value of the investment at December 31, 2014, is \$1,550,000. Instar does not intend to sell the investment in the foreseeable future. The supplier reported net income of \$80,000 for 2014 and paid no dividends.
- Instar owns some common stock of Forter Corp. The cost basis of the investment in Forter is \$200,000 and the fair value at December 31, 2014, is \$50,000. Instar believes the decline in the value of its investment in Forter is other than temporary, but Instar does not intend to sell its investment in Forter in the foreseeable future.
- Instar purchased 25% of the stock of Slobbaer Co. for \$900,000. Instar has significant influence over the operating activities of Slobbaer Co. During 2014, Slobbaer Co. reported net income of \$300,000 and paid a dividend of \$100,000.

Accounting

- Determine whether each of the investments described above should be classified as available-for-sale, held-to-maturity, trading, or equity method.
- Prepare any December 31, 2014, journal entries needed for Instar relating to Instar's various investments in other companies. Assume 2014 is Instar's first year of operations.

Analysis

What is the effect on Instar's 2014 net income (as reported on Instar's income statement) of Instar's investments in other companies?

Principles

Briefly explain the different rationales for the different accounting and reporting rules for different types of investments in the securities of other companies.

BRIDGE TO THE PROFESSION**Professional Research: FASB Codification**

Your client, Cascade Company, is planning to invest some of its excess cash in 5-year revenue bonds issued by the county and in the stock of one of its suppliers, Teton Co. Teton's shares trade on the over-the-counter market. Cascade plans to classify these investments as available-for-sale. They would like you to conduct some research on the accounting for these investments.

Instructions

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

- Since the Teton shares do not trade on one of the large stock markets, Cascade argues that the fair value of this investment is not readily available. According to the authoritative literature, when is the fair value of a security "readily determinable"?
- How is an impairment of a security accounted for?
- To avoid volatility in their financial statements due to fair value adjustments, Cascade debated whether the bond investment could be classified as held-to-maturity; Cascade is pretty sure it will hold the bonds for 5 years. How close to maturity could Cascade sell an investment and still classify it as held-to-maturity?
- What disclosures must be made for any sale or transfer from securities classified as held-to-maturity?

Additional Professional Resources

See the book's companion website, at www.wiley.com/college/kieso, for professional simulations as well as other study resources.

**IFRS**

INSIGHTS

LEARNING OBJECTIVE 13

Compare the accounting for investments under GAAP and IFRS.

The accounting for investments is discussed in *IAS 27* ("Consolidated and Separate Financial Statements"), *IAS 28* ("Accounting for Investments in Associates"), *IAS 39* ("Financial Instruments: Recognition and Measurement"), and *IFRS 9* ("Financial Instruments"). Until recently, when the IASB issued *IFRS 9*, the accounting and reporting for investments under IFRS and GAAP were for the most part very similar. However, *IFRS 9* introduces new investment classifications and increases the situations when investments are accounted for at fair value, with gains and losses recorded in income.

RELEVANT FACTS

Following are the key similarities and differences between GAAP and IFRS related to investments.

Similarities

- GAAP and IFRS use similar classifications for trading investments.
- The accounting for trading investments is the same between GAAP and IFRS. Held-to-maturity (GAAP) and held-for-collection (IFRS) investments are accounted for at

amortized cost. Gains and losses on some investments are reported in other comprehensive income.

- Both GAAP and IFRS use the same test to determine whether the equity method of accounting should be used, that is, significant influence with a general guideline of over 20 percent ownership.
- GAAP and IFRS are similar in the accounting for the fair value option. That is, the option to use the fair value method must be made at initial recognition, the selection is irrevocable, and gains and losses are reported as part of income.
- The measurement of impairments is similar under GAAP and IFRS.

Differences

- While GAAP classifies investments as trading, available-for-sale (both debt and equity investments), and held-to-maturity (only for debt investments), IFRS uses held-for-collection (debt investments), trading (both debt and equity investments), and non-trading equity investment classifications.
- The basis for consolidation under IFRS is control. Under GAAP, a bipolar approach is used, which is a risk-and-reward model (often referred to as a variable-entity approach, discussed in Appendix 17B) and a voting-interest approach. However, under both systems, for consolidation to occur, the investor company must generally own 50 percent of another company.
- While the measurement of impairments is similar under GAAP and IFRS, GAAP does not permit the reversal of an impairment charge related to available-for-sale debt and equity investments. IFRS allows reversals of impairments of held-for-collection investments.
- While GAAP and IFRS are similar in the accounting for the fair value option, one difference is that GAAP permits the fair value option for equity method investments; IFRS does not.

ABOUT THE NUMBERS

Accounting for Financial Assets

A **financial asset** is cash, an equity investment of another company (e.g., ordinary or preference shares), or a contractual right to receive cash from another party (e.g., loans, receivables, and bonds). The accounting for cash is relatively straightforward and is discussed in Chapter 7. The accounting and reporting for equity and debt investments, as discussed in the opening story, is extremely contentious, particularly in light of the credit crisis in the latter part of 2008.

IFRS requires that companies determine how to measure their financial assets based on two criteria:

- The company's business model for managing its financial assets; and
- The contractual cash flow characteristics of the financial asset.

If a company has (1) a business model whose objective is to hold assets in order to collect contractual cash flows and (2) the contractual terms of the financial asset provides specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding, then the company should use amortized cost.

For example, assume that **Mitsubishi** purchases a bond investment that it intends to hold to maturity. Its business model for this type of investment is to collect interest and then principal at maturity. The payment dates for the interest rate and principal are stated on the bond. In this case, Mitsubishi accounts for the investment at amortized cost. If, on the other hand, Mitsubishi purchased the bonds as part of a trading strategy to

speculate on interest rate changes (a trading investment), then the debt investment is reported at fair value. As a result, only debt investments such as receivables, loans, and bond investments that meet the two criteria above are recorded at amortized cost. All other debt investments are recorded and reported at fair value.

Equity investments are generally recorded and reported at fair value. Equity investments do not have a fixed interest or principal payment schedule and therefore cannot be accounted for at amortized cost. In summary, companies account for investments based on the type of security, as indicated in Illustration IFRS17-1.

ILLUSTRATION IFRS17-1

Summary of Investment
Accounting Approaches

Type of Investment	Assessment of Accounting Criteria	Valuation Approach
Debt	Meets business model (held-for-collection) and contractual cash flow tests.	Amortized cost
	Does not meet the business model test (not held-for-collection).	Fair value
Equity	Does not meet contractual cash flow test.	Fair value
	Exercises some control.	Equity method

Debt Investments

Debt Investments—Amortized Cost

Only debt investments can be measured at amortized cost. If a company like **Carrefour** makes an investment in the bonds of **Nokia**, it will receive contractual cash flows of interest over the life of the bonds and repayment of the principal at maturity. If it is Carrefour's strategy to hold this investment in order to receive these cash flows over the life of the bond, it has a held-for-collection strategy and it will measure the investment at amortized cost.⁴⁴

Example: Debt Investment at Amortized Cost. To illustrate the accounting for a debt investment at amortized cost, assume that Robinson Company purchased \$100,000 of 8 percent bonds of Evermaster Corporation on January 1, 2014, at a discount, paying \$92,278. The bonds mature January 1, 2019, and yield 10 percent; interest is payable each July 1 and January 1. Robinson records the investment as follows.

January 1, 2014		
	Debt Investments	92,278
	Cash	92,278

As indicated in Chapter 14, companies must amortize premiums or discounts using the **effective-interest method**. They apply the effective-interest method to bond investments in a way similar to that for bonds payable. To compute interest revenue, companies compute the effective-interest rate or yield at the time of investment and apply that rate to the beginning carrying amount (book value) for each interest period. The investment carrying amount is increased by the amortized discount or decreased by the amortized premium in each period.

Illustration IFRS17-2 shows the effect of the discount amortization on the interest revenue that Robinson records each period for its investment in Evermaster bonds.

⁴⁴Classification as held-for-collection does not mean the security must be held to maturity. For example, a company may sell an investment before maturity if (1) the security does not meet the company's investment strategy (e.g., the company has a policy to invest in only AAA-rated bonds but the bond investment has a decline in its credit rating), (2) a company changes its strategy to invest only in securities within a certain maturity range, or (3) the company needs to sell a security to fund certain capital expenditures. However, if a company begins trading held-for-collection investments on a regular basis, it should assess whether such trading is consistent with the held-for-collection classification.

1/1/17	4,000	4,783	783	96,454
7/1/17	4,000	4,823	823	97,277
1/1/18	4,000	4,864	864	98,141
7/1/18	4,000	4,907	907	99,048
1/1/19	4,000	4,952	952	100,000
	<u>\$40,000</u>	<u>\$47,722</u>	<u>\$7,722</u>	

^a\$4,000 = \$100,000 × .08 × 6/12
^b\$4,614 = \$92,278 × .10 × 6/12
^c\$614 = \$4,614 - \$4,000
^d\$92,892 = \$92,278 + \$614

Robinson records the receipt of the first semiannual interest payment on July 1, 2014 (using the data in Illustration IFRS17-2), as follows.

July 1, 2014		
Cash		4,000
Debt Investments		614
Interest Revenue		4,614

Because Robinson is on a calendar-year basis, it accrues interest and amortizes the discount at December 31, 2014, as follows.

December 31, 2014		
Interest Receivable		4,000
Debt Investments		645
Interest Revenue		4,645

Again, Illustration IFRS17-2 shows the interest and amortization amounts. Thus, the accounting for held-for-collection investments in IFRS is the same as held-to-maturity investments under GAAP.

Debt Investments—Fair Value

In some cases, companies both manage and evaluate investment performance on a fair value basis. In these situations, these investments are managed and evaluated based on a documented risk-management or investment strategy based on fair value information. For example, some companies often hold debt investments with the intention of selling them in a short period of time. These debt investments are often referred to as **trading investments** because companies frequently buy and sell these investments to generate profits in short-term differences in price.

Companies that account for and report debt investments at fair value follow the same accounting entries as debt investments held-for-collection during the reporting period. That is, they are recorded at amortized cost. However, **at each reporting date, companies adjust the amortized cost to fair value, with any unrealized holding gain or loss reported as part of net income (fair value method).** An **unrealized holding gain or loss** is the net change in the fair value of a debt investment from one period to another.

Example: Debt Investment at Fair Value. To illustrate the accounting for debt investments using the fair value approach, assume the same information as in our previous

illustration for Robinson Company. Recall that Robinson Company purchased \$100,000 of 8 percent bonds of Evermaster Corporation on January 1, 2014, at a discount, paying \$92,278.⁴⁵ The bonds mature January 1, 2019, and yield 10 percent; interest is payable each July 1 and January 1.

The journal entries in 2014 are exactly the same as those for amortized cost. These entries are as follows.

January 1, 2014		
Debt Investments	92,278	
Cash		92,278
July 1, 2014		
Cash	4,000	
Debt Investments	614	
Interest Revenue		4,614
December 31, 2014		
Interest Receivable	4,000	
Debt Investments	645	
Interest Revenue		4,645

Again, Illustration IFRS17-2 shows the interest and amortization amounts. If the debt investment is held-for-collection, no further entries are necessary. To apply the fair value approach, Robinson determines that, due to a decrease in interest rates, the fair value of the debt investment increased to \$95,000 at December 31, 2014. Comparing the fair value with the carrying amount of these bonds at December 31, 2014, Robinson has an unrealized holding gain of \$1,463, as shown in Illustration IFRS17-3.

ILLUSTRATION IFRS17-3

Computation of
Unrealized Gain on Fair
Value Debt Investment
(2014)

Fair value at December 31, 2014	\$95,000
Amortized cost at December 31, 2014 (per Illustration IFRS17-2)	<u>93,537</u>
Unrealized holding gain or (loss)	<u>\$ 1,463</u>

Robinson therefore makes the following entry to record the adjustment of the debt investment to fair value at December 31, 2014.

Fair Value Adjustment	1,463	
Unrealized Holding Gain or Loss—Income		1,463

Robinson uses a valuation account (**Fair Value Adjustment**) instead of debiting Debt Investments to record the investment at fair value. The use of the Fair Value Adjustment account enables Robinson to maintain a record at amortized cost in the accounts. Because the valuation account has a debit balance, in this case the fair value of Robinson's debt investment is higher than its amortized cost.

The Unrealized Holding Gain or Loss—Income account is reported in the other income and expense section of the income statement as part of net income. This account is closed to net income each period. The Fair Value Adjustment account is not closed each period and is simply adjusted each period to its proper valuation. The Fair Value Adjustment balance is not shown on the statement of financial position but is simply used to restate the debt investment account to fair value.

⁴⁵Companies may incur brokerage and transaction costs in purchasing securities. For investments accounted for at fair value (both debt and equity), IFRS requires that these costs be recorded in net income as other income and expense and not as an adjustment to the carrying value of the investment.

Robinson reports its investment in Evermaster bonds in its December 31, 2014, financial statements as shown in Illustration IFRS17-4.

Statement of Financial Position	
Current assets	
Interest receivable	\$ 4,000
Debt investments (trading)	95,000
Income Statement	
Other income and expense	
Interest revenue (\$4,614 + \$4,645)	\$ 9,259
Unrealized holding gain or (loss)	1,463

ILLUSTRATION IFRS17-4

Financial Statement
Presentation of Debt
Investments at Fair Value

As you can see from this example, the accounting for trading debt investments under IFRS is the same as GAAP.

Equity Investments

As in GAAP, under IFRS, the degree to which one corporation (**investor**) acquires an interest in the shares of another corporation (**investee**) generally determines the accounting treatment for the investment subsequent to acquisition. To review, the classification of such investments depends on the percentage of the investee voting shares that is held by the investor:

1. Holdings of less than 20 percent (**fair value method**)—investor has passive interest.
2. Holdings between 20 percent and 50 percent (**equity method**)—investor has significant influence.
3. Holdings of more than 50 percent (**consolidated statements**)—investor has controlling interest.

The accounting and reporting for equity investments therefore depend on the level of influence and the type of security involved, as shown in Illustration IFRS17-5.

Category	Valuation	Unrealized Holding Gains or Losses	Other Income Effects
Holdings less than 20%			
1. Trading	Fair value	Recognized in net income	Dividends declared; gains and losses from sale.
2. Non- Trading	Fair value	Recognized in “Other comprehensive income” (OCI) and as separate component of equity	Dividends declared; gains and losses from sale.
Holdings between 20% and 50%	Equity	Not recognized	Proportionate share of investee’s net income.
Holdings more than 50%	Consolidation	Not recognized	Not applicable.

ILLUSTRATION IFRS17-5

Accounting and
Reporting for Equity
Investments by Category

Equity Investments at Fair Value

When an investor has an interest of less than 20 percent, it is presumed that the investor has little or no influence over the investee. As indicated in Illustration IFRS17-5, there are two classifications for holdings less than 20 percent. Under IFRS, the presumption is

that equity investments are held-for-trading. That is, companies hold these securities to profit from price changes. As with debt investments that are held-for trading, the general accounting and reporting rule for these investments is to value the securities at fair value and record unrealized gains and losses in net income (**fair value method**).⁴⁶

However, some equity investments are held for purposes other than trading. For example, a company may be required to hold an equity investment in order to sell its products in a particular area. In this situation, the recording of unrealized gains and losses in income, as is required for trading investments, is not indicative of the company's performance with respect to this investment. As a result, IFRS allows companies to classify some equity investments as non-trading. **Non-trading equity investments** are recorded at fair value on the statement of financial position, with unrealized gains and losses reported in other comprehensive income.

Example: Equity Investment (Income). Upon acquisition, companies record equity investments at fair value. To illustrate, assume that on November 3, 2014, Republic Corporation purchased ordinary shares of three companies, each investment representing less than a 20 percent interest.

	Cost
Burberry	\$259,700
Nestlé	317,500
St. Regis Pulp Co.	141,350
Total cost	<u>\$718,550</u>

Republic records these investments as follows.

November 3, 2014		
Equity Investments	718,550	
Cash		718,550

On December 6, 2014, Republic receives a cash dividend of \$4,200 on its investment in the ordinary shares of Nestlé. It records the cash dividend as follows.

December 6, 2014		
Cash	4,200	
Dividend Revenue		4,200

All three of the investee companies reported net income for the year, but only Nestlé declared and paid a dividend to Republic. But, recall that when an investor owns less than 20 percent of the shares of another corporation, it is presumed that the investor has relatively little influence on the investee. As a result, **net income of the investee is not a proper basis for recognizing income from the investment by the investor.** Why? Because the increased net assets resulting from profitable operations may be permanently retained for use in the investee's business. Therefore, **the investor recognizes net income only when the investee declares cash dividends.**

At December 31, 2014, Republic's equity investment portfolio has the carrying value and fair value shown in Illustration IFRS17-6.

⁴⁶Fair value at initial recognition is the transaction price (exclusive of brokerage and other transaction costs). Subsequent fair value measurements should be based on market prices, if available. For non-traded investments, a valuation technique based on discounted expected cash flows can be used to develop a fair value estimate. While IFRS requires that all equity investments be measured at fair value, in certain limited cases, cost may be an appropriate estimate of fair value for an equity investment.

EQUITY INVESTMENT PORTFOLIO DECEMBER 31, 2014			
Investments	Carrying Value	Fair Value	Unrealized Gain (Loss)
Burberry	\$259,700	\$275,000	\$ 15,300
Nestlé	317,500	304,000	(13,500)
St. Regis Pulp Co.	141,350	104,000	(37,350)
Total of portfolio	<u>\$718,550</u>	<u>\$683,000</u>	(35,550)
Previous fair value adjustment balance			-0-
Fair value adjustment—Cr.			<u>\$(35,550)</u>

ILLUSTRATION IFRS17-6

Computation of Fair Value Adjustment—Equity Investment Portfolio (2014)

For Republic's equity investment portfolio, the gross unrealized gains are \$15,300, and the gross unrealized losses are \$50,850 (\$13,500 + \$37,350), resulting in a net unrealized loss of \$35,550. The fair value of the equity investment portfolio is below cost by \$35,550.

As with **debt** investments, Republic records the net unrealized gains and losses related to changes in the fair value of **equity** investments in an Unrealized Holding Gain or Loss—Income account. Republic reports this amount as other income and expense. In this case, Republic prepares an adjusting entry debiting the Unrealized Holding Gain or Loss—Income account and crediting the Fair Value Adjustment account to record the decrease in fair value and to record the loss as follows.

December 31, 2014		
Unrealized Holding Gain or Loss—Income	35,550	
Fair Value Adjustment		35,550

On January 23, 2015, Republic sold all of its Burberry ordinary shares, receiving \$287,220. Illustration IFRS17-7 shows the computation of the realized gain on the sale.

Net proceeds from sale	\$287,220
Cost of Burberry shares	259,700
Gain on sale of shares	<u>\$ 27,520</u>

ILLUSTRATION IFRS17-7

Computation of Gain on Sale of Burberry Shares

Republic records the sale as follows.

January 23, 2015		
Cash	287,220	
Equity Investments		259,700
Gain on Sale of Equity Investment		27,520

As indicated in this example, the fair value method accounting for trading equity investments under IFRS is the same as GAAP for trading equity investments. As shown in the next section, the accounting for *non-trading* equity investments under IFRS is similar to the accounting for available-for-sale equity investments under GAAP.

Example: Equity Investments (OCI). The accounting entries to record non-trading equity investments are the same as for trading equity investments, except for recording the unrealized holding gain or loss. For non-trading equity investments, companies **report the unrealized holding gain or loss as other comprehensive income (OCI)**. Thus, the account titled Unrealized Holding Gain or Loss—Equity is used.

To illustrate, assume that on December 10, 2014, Republic Corporation purchased \$20,750 of 1,000 ordinary shares of Hawthorne Company for \$20.75 per share (which represents less than a 20 percent interest). Hawthorne is a distributor for Republic products in certain locales, the laws of which require a minimum level of share ownership of a company in that region. The investment in Hawthorne meets this regulatory

requirement. As a result, Republic accounts for this investment at fair value, with unrealized gains and losses recorded in OCI.⁴⁷ Republic records this investment as follows.

December 10, 2014		
Equity Investments	20,750	
Cash		20,750

On December 27, 2014, Republic receives a cash dividend of \$450 on its investment in the ordinary shares of Hawthorne Company. It records the cash dividend as follows.

December 27, 2014		
Cash	450	
Dividend Revenue		450

Similar to the accounting for trading investments, when an investor owns less than 20 percent of the ordinary shares of another corporation, it is presumed that the investor has relatively little influence on the investee. Therefore, **the investor earns income when the investee declares cash dividends.**

At December 31, 2014, Republic's investment in Hawthorne has the carrying value and fair value shown in Illustration IFRS17-8.

ILLUSTRATION IFRS17-8

Computation of Fair Value Adjustment—Non-Trading Equity Investment (2014)

Non-Trading Equity Investment	Carrying Value	Fair Value	Unrealized Gain (Loss)
Hawthorne Company	\$20,750	\$24,000	\$3,250
Previous fair value adjustment balance			0
Fair value adjustment (Dr.)			\$3,250

For Republic's non-trading investment, the unrealized gain is \$3,250. That is, the fair value of the Hawthorne investment exceeds cost by \$3,250. Because Republic has classified this investment as non-trading, Republic records the unrealized gains and losses related to changes in the fair value of this non-trading **equity** investment in an Unrealized Holding Gain or Loss—Equity account. Republic reports this amount as **a part of other comprehensive income and as a component of other accumulated comprehensive income (reported in equity) until realized.** In this case, Republic prepares an adjusting entry crediting the Unrealized Holding Gain or Loss—Equity account and debiting the Fair Value Adjustment account to record the decrease in fair value and to record the loss as follows.

December 31, 2014		
Fair Value Adjustment	3,250	
Unrealized Holding Gain or Loss—Equity		3,250

Republic reports its equity investments in its December 31, 2014, financial statements as shown in Illustration IFRS17-9.

ILLUSTRATION IFRS17-9

Financial Statement Presentation of Equity Investments at Fair Value (2014)

Statement of Financial Position	
Investments	
Equity investments (non-trading)	\$24,000
Equity	
Accumulated other comprehensive gain	\$ 3,250
Statement of Comprehensive Income	
Other income and expense	
Dividend revenue	\$ 450
Other comprehensive income	
Unrealized holding gain	\$ 3,250

⁴⁷The classification of an equity investment as non-trading is irrevocable. This approach is designed to provide some discipline to the application of the non-trading classification, which allows unrealized gains and losses to bypass net income.

During 2015, sales of Republic products through Hawthorne as a distributor did not meet management's goals. As a result, Republic withdrew from these markets and on December 20, 2015, Republic sold all of its Hawthorne Company ordinary shares, receiving net proceeds of \$22,500. Illustration IFRS17-10 shows the computation of the realized gain on the sale.

Net proceeds from sale	\$22,500
Cost of Hawthorne shares	<u>20,750</u>
Gain on sale of shares	<u>\$ 1,750</u>

ILLUSTRATION IFRS17-10

Computation of Gain on
Sale of Shares

Republic records the sale as follows.

December 20, 2015		
Cash	22,500	
Equity Investments		20,750
Gain on Sale of Equity Investment		1,750

Because Republic no longer holds any equity investments, it makes the following entry to eliminate the Fair Value Adjustment account.

December 31, 2015		
Unrealized Holding Gain or Loss—Equity	3,250	
Fair Value Adjustment		3,250

In summary, the accounting for non-trading equity investments deviates from the general provisions for equity investments. The IASB noted that while fair value provides the most useful information about investments in equity investments, recording unrealized gains or losses in other comprehensive income is more representative for non-trading equity investments.

Impairments

A company should evaluate every held-for-collection investment, at each reporting date, to determine if it has suffered **impairment**—a loss in value such that the fair value of the investment is below its carrying value.⁴⁸ For example, if an investee experiences a bankruptcy or a significant liquidity crisis, the investor may suffer a permanent loss. **If the company determines that an investment is impaired, it writes down the amortized cost basis of the individual security to reflect this loss in value.** The company accounts for the write-down as a realized loss, and it includes the amount in net income.

For debt investments, a company uses the impairment test to determine whether “it is probable that the investor will be unable to collect all amounts due according to the contractual terms.” If an investment is impaired, the company should measure the loss due to the **impairment**. This impairment loss is calculated as the difference between the carrying amount plus accrued interest and the expected future cash flows discounted at the investment's historical effective-interest rate.

Example: Impairment Loss

At December 31, 2013, Mayhew Company has a debt investment in Bellovary Inc., purchased at par for \$200,000. The investment has a term of four years, with annual interest payments at 10 percent, paid at the end of each year (the historical effective-interest rate is 10 percent). This debt investment is classified as held-for-collection. Unfortunately, Bellovary is experiencing significant financial difficulty and indicates that it will be unable

⁴⁸Note that impairments tests are conducted only for debt investments that are held-for-collection (which are accounted for at amortized cost). Other debt and equity investments are measured at fair value each period; thus, an impairment test is not needed.

to make all payments according to the contractual terms. Mayhew uses the present value method for measuring the required impairment loss. Illustration IFRS17-11 shows the cash flow schedule prepared for this analysis.

**ILLUSTRATION
IFRS17-11**
Investment Cash Flows

Dec. 31	Contractual Cash Flows	Expected Cash Flows	Loss of Cash Flows
2014	\$ 20,000	\$ 16,000	\$ 4,000
2015	20,000	16,000	4,000
2016	20,000	16,000	4,000
2017	220,000	216,000	4,000
Total cash flows	<u>\$280,000</u>	<u>\$264,000</u>	<u>\$16,000</u>

As indicated, the expected cash flows of \$264,000 are less than the contractual cash flows of \$280,000. The amount of the impairment to be recorded equals the difference between the recorded investment of \$200,000 and the present value of the expected cash flows, as shown in Illustration IFRS17-12.

**ILLUSTRATION
IFRS17-12**
Computation of
Impairment Loss

Recorded investment	\$200,000
Less: Present value of \$200,000 due in 4 years at 10% (Table 6-2); $FV(PVF_{4,10\%})$; $(\$200,000 \times .68301)$	\$136,602
Present value of \$16,000 interest receivable annually for 4 years at 10% (Table 6-4); $R(PVF-OA_{4,10\%})$; $(\$16,000 \times 3.16986)$	<u>50,718</u>
	<u>187,320</u>
Loss on impairment	<u>\$ 12,680</u>

The loss due to the impairment is \$12,680. Why isn't it \$16,000 ($\$280,000 - \$264,000$)? A loss of \$12,680 is recorded because Mayhew must measure the loss at a present value amount, not at an undiscounted amount. Mayhew recognizes an impairment loss of \$12,680 by debiting Loss on Impairment for the expected loss. At the same time, it reduces the overall value of the investment. The journal entry to record the loss is therefore as follows.

Loss on Impairment	12,680	
Debt Investments		12,680

Recovery of Impairment Loss

Subsequent to recording an impairment, events or economic conditions may change such that the extent of the impairment loss decreases (e.g., due to an improvement in the debtor's credit rating). In this situation, some or all of the previously recognized impairment loss shall be reversed with a debit to the Debt Investments account and a credit to Recovery of Impairment Loss. Similar to the accounting for impairments of receivables shown in Chapter 7, the reversal of impairment losses shall not result in a carrying amount of the investment that exceeds the amortized cost that would have been reported had the impairment not been recognized.

ON THE HORIZON

At one time, both the FASB and IASB have indicated that they believe that all financial instruments should be reported at fair value and that changes in fair value should be reported as part of net income. However, the recently issued IFRS indicates that the IASB believes that certain debt investments should not be reported at fair value. The IASB's decision to issue new rules on investments, prior to the FASB's completion of its deliberations on financial instrument accounting, could create obstacles for the Boards in converging the accounting in this area.

IFRS SELF-TEST QUESTIONS

1. All of the following are key similarities between GAAP and IFRS with respect to accounting for investments **except**:
 - (a) IFRS and GAAP have a held-to-maturity investment classification.
 - (b) IFRS and GAAP apply the equity method to significant influence equity investments.
 - (c) IFRS and GAAP have a fair value option for financial instruments.
 - (d) the accounting for impairment of investments is similar, although IFRS allows recovery of impairment losses.
2. Which of the following statements is **correct**?
 - (a) GAAP has a held-for-collection investment classification.
 - (b) GAAP permits recovery of impairment losses.
 - (c) Under IFRS, non-trading equity investments are accounted for at amortized cost.
 - (d) IFRS and GAAP both have a trading investment classification.
3. IFRS requires companies to measure their financial assets at fair value based on:
 - (a) the company's business model for managing its financial assets.
 - (b) whether the financial asset is a debt investment.
 - (c) whether the financial asset is an equity investment.
 - (d) All of the choices are IFRS requirements.
4. Select the investment accounting approach with the correct valuation approach:

Not Held-for-Collection	Held-for-Collection
(a) Amortized cost	Amortized cost
(b) Fair value	Fair value
(c) Fair value	Amortized cost
(d) Amortized cost	Fair value
5. Under IFRS, a company:
 - (a) should evaluate only equity investments for impairment.
 - (b) accounts for an impairment as an unrealized loss, and includes it as a part of other comprehensive income and as a component of other accumulated comprehensive income until realized.
 - (c) calculates the impairment loss on debt investments as the difference between the carrying amount plus accrued interest and the expected future cash flows discounted at the investment's historical effective-interest rate.
 - (d) All of the above.

IFRS CONCEPTS AND APPLICATION

IFRS17-1 Where can authoritative IFRS be found related to investments?

IFRS17-2 Briefly describe some of the similarities and differences between GAAP and IFRS with respect to the accounting for investments.

IFRS17-3 Describe the two criteria for determining the valuation of financial assets.

IFRS17-4 Which types of investments are valued at amortized cost? Explain the rationale for this accounting.

IFRS17-5 Lady Gaga Co. recently made an investment in the bonds issued by Chili Peppers Inc. Lady Gaga's business model for this investment is to profit from trading in response to changes in market interest rates. How should this investment be classified by Lady Gaga? Explain.

IFRS17-6 Consider the bond investment by Lady Gaga in IFRS17-5. Discuss the accounting for this investment if Lady Gaga's business model is to hold the investment to collect interest while outstanding and to receive the principal at maturity.

IFRS17-7 Indicate how unrealized holding gains and losses should be reported for investments classified as trading and held for-collection.

IFRS17-8 Ramirez Company has a held-for-collection investment in the 6%, 20-year bonds of Soto Company. The investment was originally purchased for \$1,200,000 in 2013. Early in 2014, Ramirez recorded an impairment of \$300,000 on the Soto investment, due to Soto's financial distress. In 2015, Soto returned to

profitability and the Soto investment was no longer impaired. What entry does Ramirez make in 2015 under (a) GAAP and (b) IFRS?

IFRS17-9 Carow Corporation purchased, as a held-for-collection investment, \$60,000 of the 8%, 5-year bonds of Harrison, Inc. for \$65,118, which provides a 6% return. The bonds pay interest semiannually. Prepare Carow's journal entries for (a) the purchase of the investment, and (b) the receipt of semiannual interest and premium amortization.

IFRS17-10 Fairbanks Corporation purchased 400 ordinary shares of Sherman Inc. as a trading investment for \$13,200. During the year, Sherman paid a cash dividend of \$3.25 per share. At year-end, Sherman shares were selling for \$34.50 per share. Prepare Fairbanks' journal entries to record (a) the purchase of the investment, (b) the dividends received, and (c) the fair value adjustment.

IFRS17-11 Use the information from IFRS17-10 but assume the shares were purchased to meet a non-trading regulatory requirement. Prepare Fairbanks' journal entries to record (a) the purchase of the investment, (b) the dividends received, and (c) the fair value adjustment.

IFRS17-12 On January 1, 2014, Roosevelt Company purchased 12% bonds, having a maturity value of \$500,000, for \$537,907.40. The bonds provide the bondholders with a 10% yield. They are dated January 1, 2014, and mature January 1, 2019, with interest receivable December 31 of each year. Roosevelt's business model is to hold these bonds to collect contractual cash flows.

Instructions

- Prepare the journal entry at the date of the bond purchase.
- Prepare a bond amortization schedule.
- Prepare the journal entry to record the interest received and the amortization for 2014.
- Prepare the journal entry to record the interest received and the amortization for 2015.

IFRS17-13 Assume the same information as in IFRS17-12 except that Roosevelt has an active trading strategy for these bonds. The fair value of the bonds at December 31 of each year-end is as follows.

2014	\$534,200	2017	\$517,000
2015	\$515,000	2018	\$500,000
2016	\$513,000		

Instructions

- Prepare the journal entry at the date of the bond purchase.
- Prepare the journal entries to record the interest received and recognition of fair value for 2014.
- Prepare the journal entry to record the recognition of fair value for 2015.

IFRS17-14 On December 21, 2014, Zurich Company provided you with the following information regarding its trading investments.

December 31, 2014			
Investments (Trading)	Cost	Fair Value	Unrealized Gain (Loss)
Stargate Corp. shares	\$20,000	\$19,000	\$(1,000)
Carolina Co. shares	10,000	9,000	(1,000)
Vectorman Co. shares	20,000	20,600	600
Total of portfolio	\$50,000	\$48,600	\$(1,400)
Previous fair value adjustment balance	-0-		
Fair value adjustment—Cr.	\$ (1,400)		

During 2015, Carolina Company shares were sold for \$9,500. The fair value of the shares on December 31, 2015, was Stargate Corp. shares—\$19,300; Vectorman Co. shares—\$20,500.

Instructions

- Prepare the adjusting journal entry needed on December 31, 2014.
- Prepare the journal entry to record the sale of the Carolina Company shares during 2015.
- Prepare the adjusting journal entry needed on December 31, 2015.

IFRS17-15 Komissarov Company has a debt investment in the bonds issued by Keune Inc. The bonds were purchased at par for \$400,000 and, at the end of 2014, have a remaining life of 3 years with annual interest payments at 10%, paid at the end of each year. This debt investment is classified as held-for-collection. Keune is facing a tough economic environment and informs all of its investors that it will be unable to

make all payments according to the contractual terms. The controller of Komissarov has prepared the following revised expected cash flow forecast for this bond investment.

Dec. 31	Expected Cash Flows
2015	\$ 35,000
2016	35,000
2017	385,000
Total cash flows	\$455,000

Instructions

- Determine the impairment loss for Komissarov at December 31, 2014.
- Prepare the entry to record the impairment loss for Komissarov at December 31, 2014.
- On January 15, 2015, Keune receives a major capital infusion from a private equity investor. It informs Komissarov that the bonds now will be paid according to the contractual terms. Briefly describe how Komissarov would account for the bond investment in light of this new information.

Professional Research

IFRS17-16 Your client, Cascade Company, is planning to invest some of its excess cash in 5-year revenue bonds issued by the county and in the shares of one of its suppliers, Teton Co. Teton's shares trade on the over-the-counter market. Cascade plans to classify these investments as trading. They would like you to conduct some research on the accounting for these investments.

Instructions

Access the IFRS authoritative literature at the IASB website (<http://eifrs.iasb.org/>). (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- Since the Teton shares do not trade on one of the large securities exchanges, Cascade argues that the fair value of this investment is not readily available. According to the authoritative literature, when is the fair value of a security "readily determinable"?
- How is an impairment of a debt investment accounted for?
- To avoid volatility in their financial statements due to fair value adjustments, Cascade debated whether the bond investment could be classified as held-for-collection; Cascade is pretty sure it will hold the bonds for 5 years. What criteria must be met for Cascade to classify it as held-for-collection?

International Financial Reporting Problem

Marks and Spencer plc

IFRS17-17 The financial statements of **Marks and Spencer plc (M&S)** are available at the book's companion website or can be accessed at http://annualreport.marksandspencer.com/_assets/downloads/Marks-and-Spencer-Annual-report-and-financial-statements-2012.pdf.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- What investments does M&S report in 2012, and where are these investments reported in its financial statements?
- How are M&S's investments valued? How does M&S determine fair value?
- How does M&S use derivative financial instruments?

ANSWERS TO IFRS SELF-TEST QUESTIONS

1. a 2. d 3. a 4. c 5. c

Remember to check the book's companion website to find additional resources for this chapter.

It's Back

Several years after passage, the accounting world continues to be preoccupied with the Sarbanes-Oxley Act of 2002 (SOX). Unfortunately, SOX did not solve one of the classic accounting issues—how to properly account for revenue. In fact, revenue recognition practices are the most prevalent reasons for accounting restatements. A number of the revenue recognition issues relate to possible fraudulent behavior by company executives and employees.

As a result of such revenue recognition problems, the SEC has increased its enforcement actions in this area. In some of these cases, companies made significant adjustments to previously issued financial statements. As Lynn Turner, a former chief accountant of the SEC, indicated, “When people cross over the boundaries of legitimate reporting, the Commission will take appropriate action to ensure the fairness and integrity that investors need and depend on every day.”

Consider some SEC actions:

- The SEC charged the former co-chairman and CEO of **Qwest Communications International Inc.** and eight other former Qwest officers and employees with fraud and other violations of the federal securities laws. Three of these people fraudulently characterized nonrecurring revenue from one-time sales as revenue from recurring data and Internet services. The SEC release notes that internal correspondence likened Qwest's dependence on these transactions to fill the gap between actual and projected revenue to an addiction.
- The SEC filed a complaint against three former senior officers of **iGo Corp.**, alleging that the defendants collectively caused iGo to improperly recognize revenue on consignment sales and products that were not shipped or that were shipped after the end of a fiscal quarter.
- The SEC filed a complaint against the former CEO and chairman of **Homestore Inc.** and its former executive vice president of business development, alleging that they engaged in a fraudulent scheme to overstate advertising and subscription revenues. The scheme involved a complex structure of “round-trip” transactions using various third-party companies that, in essence, allowed Homestore to recognize its own cash as revenue.
- The SEC claims that **Lantronix** deliberately sent excessive product to distributors and granted them generous return rights and extended payment terms. In addition, as part of its alleged channel stuffing and to prevent product returns, Lantronix loaned funds to a third party to purchase Lantronix products from one of its distributors. The third party later returned the product. The SEC also asserted that Lantronix engaged in

other improper revenue recognition practices, including shipping without a purchase order and recognizing revenue on a contingent sale.

Though the cases cited involved fraud and irregularity, not all revenue recognition errors are intentional. For example, in April 2005 **American Home Mortgage Investment Corp.** announced that it would reverse revenue recognized from its fourth-quarter 2004 loan securitization and would recognize it in the first quarter of 2005 instead. As a result, American Home restated its financial results for 2004.

So, how does a company ensure that revenue transactions are recorded properly? Some answers will become apparent after you study this chapter.

Evolving Issue REVENUE RECOGNITION

This chapter provides the present GAAP related to revenue recognition as of February 28, 2013. It is highly likely that later in 2013, the FASB and IASB will issue a new converged pronouncement on revenue recognition. For the most recent

information concerning how the new guidelines will impact revenue recognition, go to the book's companion website, www.wiley.com/college/kieso.

PREVIEW OF CHAPTER 18

As indicated in the opening story, the issue of when revenue should be recognized is complex. The many methods of marketing products and services make it difficult to develop guidelines that will apply to all situations. This chapter provides you with general guidelines used in most business transactions. The content and organization of the chapter are as follows.

OVERVIEW OF REVENUE RECOGNITION

LEARNING OBJECTIVE 1

Describe and apply the revenue recognition principle.

Most revenue transactions pose few problems for revenue recognition. This is because, in many cases, the transaction is initiated and completed at the same time. However, not all transactions are that simple. For example, consider a customer who enters into a mobile phone contract with a company such as **Verizon**.

The customer is often provided with a package that may include a handset, free minutes of talk time, data downloads, and text messaging service. In addition, some providers will bundle that with a fixed-line broadband service. At the same time, customers may pay for these services in a variety of ways, possibly receiving a discount on the handset, then paying higher prices for connection fees, and so forth. In some cases, depending on the package purchased, the company may provide free applications in subsequent periods. How then should the various pieces of this sale be reported by Verizon? The answer is not obvious.

It is therefore not surprising that a recent survey of financial executives noted that the revenue recognition process is increasingly more complex to manage, prone to error, and material to financial statements compared to any other area in financial reporting. The report went on to note that revenue recognition is a top fraud risk and that regardless of the accounting rules followed (GAAP or IFRS), the risk or errors and inaccuracies in revenue reporting is significant.¹

International Perspective

The FASB and IASB have a joint project to improve the accounting for revenue.

Indeed, both the FASB and the IASB indicate that the present state of reporting for revenue is unsatisfactory. IFRS is criticized because it lacks guidance in a number of areas. For example, IFRS has one basic standard on revenue recognition—*IAS 18*—plus some limited guidance related to certain minor topics. In contrast, GAAP has numerous standards related to revenue recognition (by some counts over 100), but many believe the standards are often inconsistent with one another. Thus, the accounting for revenues provides a most fitting contrast of the principles-based (IFRS) and rules-based (GAAP) approaches. While both sides have their advocates, the FASB and IASB recognize a number of deficiencies in this area.²

Unfortunately, inappropriate recognition of revenue can occur in any industry. Products that are sold to distributors for resale pose different risks than products or services that are sold directly to customers. Sales in high-technology industries, where rapid product obsolescence is a significant issue, pose different risks than sales of inventory with a longer life, such as farm or construction equipment, automobiles, trucks, and appliances.³ As a consequence, as discussed in the opening story, restatements for improper revenue recognition are relatively common and can lead to significant share price adjustments.

¹See www.prweb.com/releases/RecognitionRevenue/IFRS/prweb1648994.htm.

²See, for example, "Preliminary Views on Revenue Recognition in Contracts with Customers," *IASB/FASB Discussion Paper* (December 19, 2008). Some of the problems noted are that GAAP has so many standards that at times they are inconsistent with each other in applying basic principles. In addition, even with the many standards, no guidance is provided for service transactions. Conversely, IFRS has a lack of guidance in certain fundamental areas such as multiple-deliverable arrangements, which are becoming increasingly common. In addition, there is inconsistency in applying revenue recognition principles to long-term contracts versus other elements of revenue recognition.

³Adapted from American Institute of Certified Public Accountants, Inc., *Audit Issues in Revenue Recognition* (New York: AICPA, 1999).

Guidelines for Revenue Recognition

Revenue arises from ordinary operations and is referred to by various names such as sales, fees, rent, interest, royalties, and service revenue. Gains, on the other hand, may or may not arise in the normal course of operations. Typical gains are gains on sale of noncurrent assets or unrealized gains related to investments or noncurrent assets. The primary issue related to revenue recognition is when to recognize the revenue.

As indicated in Chapter 2, the revenue recognition principle developed by the FASB and IASB in a recent exposure draft indicates that companies recognize revenue in the accounting period when a performance obligation is satisfied. Until new revenue recognition rules are adopted, existing GAAP guidelines for revenue recognition are quite broad. On top of the broad guidelines, certain industries have specific additional guidelines that provide further insight into when revenue should be recognized. The **revenue recognition principle** under current GAAP provides that companies should recognize revenue⁴ (1) when it is realized or realizable, and (2) when it is earned.⁵ Therefore, proper revenue recognition revolves around three terms:

- Revenues are **realized** when a company exchanges goods and services for cash or claims to cash (receivables).
- Revenues are **realizable** when assets a company receives in exchange are readily convertible to known amounts of cash or claims to cash.
- Revenues are **earned** when a company has substantially accomplished what it must do to be entitled to the benefits represented by the revenues—that is, when the earnings process is complete or virtually complete.⁶

Four revenue transactions are recognized in accordance with this principle:

1. Companies recognize revenue from selling products at the date of sale. This date is usually interpreted to mean the date of delivery to customers.
2. Companies recognize revenue from services provided, when services have been performed and are billable.
3. Companies recognize revenue from permitting others to use enterprise assets, such as interest, rent, and royalties, as time passes or as the assets are used.
4. Companies recognize revenue from disposing of assets other than products at the date of sale.

Underlying Concepts

Revenues are inflows of assets and/or settlements of liabilities from delivering or producing goods, providing services, or other earning activities that constitute a company's ongoing major or central operations during a period.

⁴Recognition is “the process of formally recording or incorporating an item in the accounts and financial statements of an entity” (SFAC No. 3, par. 83). “Recognition includes depiction of an item in both words and numbers, with the amount included in the totals of the financial statements” (SFAC No. 5, par. 6). For an asset or liability, recognition involves recording not only acquisition or incurrence of the item but also later changes in it, including removal from the financial statements previously recognized.

Recognition is not the same as realization, although the two are sometimes used interchangeably in accounting literature and practice. *Realization* is “the process of converting noncash resources and rights into money and is most precisely used in accounting and financial reporting to refer to sales of assets for cash or claims to cash” (SFAC No. 3, par. 83).

⁵“Recognition and Measurement in Financial Statements of Business Enterprises,” *Statement of Financial Accounting Concepts No. 5* (Stamford, Conn.: FASB, 1984), par. 83.

⁶Gains (as contrasted to revenues) commonly result from transactions and other events that do not involve an “earning process.” For gain recognition, being earned is generally less significant than being realized or realizable. Companies commonly recognize gains at the time of an asset's sale, disposition of a liability, or when prices of certain assets change.

These revenue transactions are diagrammed in Illustration 18-1.

ILLUSTRATION 18-1

Revenue Recognition Classified by Nature of Transaction

The preceding statements are the basis of accounting for revenue transactions. Yet, in practice there are departures from the revenue recognition principle. Companies sometimes recognize revenue at other points in the earning process, owing in great measure to the considerable variety of revenue transactions.⁷

Departures from the Sale Basis

An FASB study found some common **reasons for departures from the sale basis**.⁸ One reason is a desire to **recognize earlier** than the time of sale the effect of earning activities. Earlier recognition is appropriate if there is a high degree of certainty about the amount of revenue earned. A second reason is a desire to **delay recognition** of revenue beyond the time of sale. Delayed recognition is appropriate if the degree of uncertainty concerning the amount of either revenue or costs is sufficiently high or if the sale does not represent substantial completion of the earnings process.

This chapter focuses on two of the four general types of revenue transactions described earlier: (1) selling products and (2) providing services. Both of these are **sales transactions**. (In several other sections of the textbook, we discuss the other two types of revenue transactions—revenue from permitting others to use enterprise assets, and revenue from disposing of assets other than products.) Our discussion of product sales transactions in this chapter is organized around the following topics:

1. Revenue recognition at point of sale (delivery).
2. Revenue recognition before delivery.
3. Revenue recognition after delivery.

Illustration 18-2 depicts this organization of revenue recognition topics.

⁷As indicated earlier, the FASB and IASB are now involved in a joint project on revenue recognition. The purpose of this project is to develop comprehensive conceptual guidance on when to recognize revenue. Presently, the Boards are evaluating a customer-consideration model. In this model, a company accounts for the contract asset or liability that arises from the rights and performance obligations in an enforceable contract with the customer. At contract inception, the rights in the contract are measured at the amount of the promised customer payment (that is, the customer consideration). That amount is then allocated to the individual performance obligations identified within the contract in proportion to the standalone selling price of each good or service underlying the performance obligation. It is hoped that this approach (rather than using the earned and realized or realizable criteria) will lead to a better basis for revenue recognition. See www.fasb.org/project/revenue_recognition.shtml.

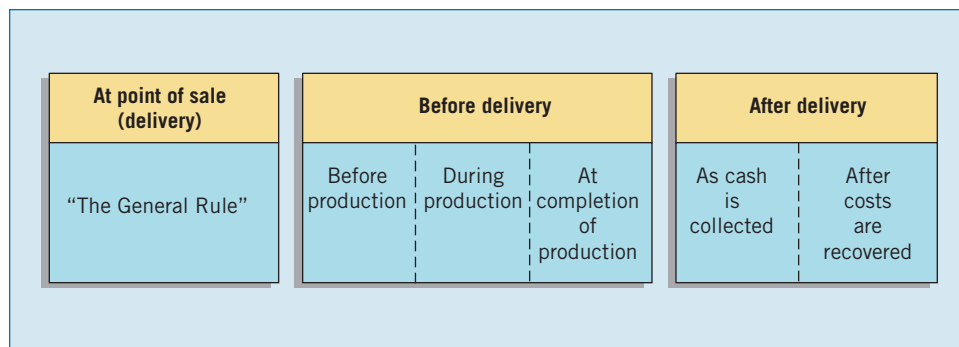

ILLUSTRATION 18-2
Revenue Recognition Alternatives

What do the numbers mean? LIABILITY OR REVENUE?

Suppose you purchased a gift card for spa services at Sundara Spa for \$300. The gift card expires at the end of six months. When should Sundara record the revenue? Here are two choices:

1. At the time Sundara receives the cash for the gift card.
2. At the time Sundara provides the service to the gift-card holder.

If you answered number 2, you would be right. Companies should recognize revenue when the obligation is satisfied—which is when Sundara performs the service.

Now let's add a few more facts. Suppose that the gift-card holder fails to use the card in the six-month period. Statistics show that between 2 and 15 percent of gift-card holders never redeem their cards. So, do you still believe that Sundara should record the revenue at the expiration date?

If you say you are not sure, you are probably right. Here is why: Certain states do not recognize expiration dates, and therefore the customer has the right to redeem an otherwise expired gift card at any time. Let's say for the moment we are in one of these states. Because the card holder may never redeem, when can Sundara recognize the revenue? In that case, Sundara would have to show statistically that after a certain period of time, the likelihood of redemption is remote. If it can make that case, it can recognize the revenue. Otherwise, it may have to wait a long time.

Sources: PricewaterhouseCoopers, "Issues Surrounding the Recognition of Gift Card Sales and Escheat Liabilities," *Quick Brief* (December 2004); and R. Banham, "Looking in the Mouth of the Gift Card," *CFO.com* (September 1, 2011).

Unfortunately, Sundara may still have a problem. It may be required to turn over the value of the spa services to the state. The treatment for unclaimed gift cards may fall under the abandoned-and-unclaimed-property laws. Most common unclaimed items are required to be remitted to the states after a five-year period. Failure to report and remit the property can result in additional fines and penalties. So if Sundara is in a state where unclaimed property must be sent to the state, Sundara should report a liability on its balance sheet.

New federal laws enacted in 2010 added additional complexity for gift-card issuers. The Federal Reserve rules expand disclosure requirements to consumers and put restrictions on dormancy, inactivity, and service fees, which can kick in only after a consumer has not used a gift card for at least a year. It also generally prohibits the sale or issuance of gift cards if they have an expiration date of less than five years. While the legislation aims to improve consumer protections, it may compete with a morass of conflicting state laws. The biggest challenge for gift-card programs is to determine on a state-by-state basis whether or not their gift-card programs are compliant. As one analyst noted, "you need three sets of books—GAAP books, tax books, and what I'll call legal books." So while customers and marketing departments love gift cards, they can create headaches for the finance department.

REVENUE RECOGNITION AT POINT OF SALE (DELIVERY)

According to the FASB's *Concepts Statement No. 5*, companies usually meet the two conditions for recognizing revenue (being realized or realizable and being earned) by the time they deliver products or render services to customers.⁹ Therefore,

⁹The SEC believes that revenue is realized or realizable and earned when all of the following criteria are met: (1) persuasive evidence of an arrangement exists, (2) delivery has occurred or services have been provided, (3) the seller's price to the buyer is fixed or determinable, and (4) collectibility is reasonably assured. [1] The SEC provided more specific guidance because the general criteria were difficult to interpret.

2 LEARNING OBJECTIVE

Describe accounting issues for revenue recognition at point of sale.

See the FASB Codification section (page 1086).

companies commonly recognize revenues from manufacturing and selling activities at **point of sale** (usually meaning delivery).¹⁰ Implementation problems, however, can arise. We discuss some of these problematic situations on the following pages.

Sales with Discounts

Any trade discounts or volume rebates should reduce consideration received and reduce revenue earned. In addition, if the payment is delayed, the seller should impute an interest rate for the difference between the cash or cash equivalent price and the deferred amount. In essence, the seller is financing the sale and should record interest revenue over the payment term. Illustrations 18-3 and 18-4 provide examples of transactions that illustrate these points.

ILLUSTRATION 18-3 Revenue Measurement— Volume Discount

VOLUME DISCOUNT

Facts: Sansung Company has an arrangement with its customers that it will provide a 3% volume discount to its customers if they purchase at least \$2 million of its product during the calendar year. On March 31, 2014, Sansung has made sales of \$700,000 to Artic Co. In the previous two years, Sansung sold over \$3,000,000 to Artic in the period April 1 to December 31.

Question: How much revenue should Sansung recognize for the first three months of 2014?

Solution: In this case, Sansung should reduce its revenue by \$21,000 ($\$700,000 \times 3\%$) because it is probable that it will provide this rebate. Revenue should therefore be reported at \$679,000 ($\$700,000 - \$21,000$). To not recognize this volume discount overstates Sansung's revenue for the first three months of 2014. In other words, the appropriate revenue is \$679,000, not \$700,000.

In this case, Sansung makes the following entry on March 31, 2014.

Accounts Receivable	679,000	
Sales Revenue		679,000

Assuming that Sansung's customers **meet the discount threshold**, Sansung makes the following entry.

Cash	679,000	
Accounts Receivable		679,000

If Sansung's customers **fail to meet the discount threshold**, Sansung makes the following entry upon payment.

Cash	700,000	
Accounts Receivable		679,000
Sales Discounts Forfeited		21,000

As indicated in Chapter 7 (page 352), Sales Discounts Forfeited is reported in the "Other revenue" section of the income statement.

In some cases, companies provide cash discounts to customers for a short period of time (often referred to as prompt settlement discounts). For example, assume that terms are payment due in 60 days, but if payment is made within 5 days, a 2 percent discount is given. These prompt settlement discounts should reduce revenues, if material. In most cases, companies record the revenue at full price (gross) and record a sales discount if payment is made within the discount period.

When a sales transaction involves a financing arrangement, the fair value is determined either by measuring the consideration received or by discounting the payment using an imputed interest rate. The imputed interest rate is the more clearly determinable

¹⁰Statement of Financial Accounting Concepts No. 5, *op. cit.*, par. 84.

of either (1) the prevailing rate for a similar instrument of an issuer with a similar credit rating, or (2) a rate of interest that discounts the nominal amount of the instrument to the current sales price of the goods or services. [2] This issue is addressed in Illustration 18-4.

EXTENDED PAYMENT TERMS

Facts: On July 1, 2014, SEK Company sold goods to Grant Company for \$900,000 in exchange for a 4-year, zero-interest-bearing note in the face amount of \$1,416,163. The goods have an inventory cost on SEK's books of \$590,000.

Questions: (a) How much revenue should SEK Company record on July 1, 2014? (b) How much revenue should it report related to this transaction on December 31, 2014?

Solution:

- (a) SEK should record revenue of \$900,000 on July 1, 2014, which is the fair value of the inventory in this case.
- (b) SEK is also financing this purchase and records interest revenue on the note over the 4-year period. In this case, the interest rate is imputed and is determined to be 12%. SEK records interest revenue of \$54,000 ($12\% \times \frac{1}{2} \times \$900,000$) at December 31, 2014.

The journal entry to record SEK's sale to Grant Company is as follows (ignoring the cost of goods sold entry).

July 1, 2014		
Notes Receivable	1,416,163	
Sales Revenue		900,000
Discount on Notes Receivable		516,163

SEK makes the following entry to record interest revenue.

December 31, 2014		
Discount on Notes Receivable	54,000	
Interest Revenue ($12\% \times \frac{1}{2} \times \$900,000$)		54,000

Sales with Right of Return

Whether cash or credit sales are involved, a special problem arises with claims for returns and allowances. In Chapter 7, we presented the accounting treatment for normal returns and allowances. However, certain companies experience such a **high rate of returns**—a high ratio of returned merchandise to sales—that they find it necessary to postpone reporting sales until the return privilege has substantially expired.

For example, in the publishing industry, the rate of return approaches 25 percent for hardcover books and 65 percent for some magazines. Other types of companies that experience high return rates are perishable food dealers, distributors who sell to retail outlets, recording-industry companies, and some toy and sporting goods manufacturers. Returns in these industries are frequently made either through a right of contract or as a matter of practice involving “guaranteed sales” agreements or consignments.

Three alternative revenue recognition methods are available when the right of return exposes the seller to continued risks of ownership. These are (1) not recording a sale until all return privileges have expired; (2) recording the sale, but reducing sales by an estimate of future returns; and (3) recording the sale and accounting for the returns as they occur. The FASB concluded that if a company sells its product but gives the buyer the right to return it, the company should **recognize revenue** from the sales transactions at the time of sale **only if all of the following six conditions** have been met. [3]

1. The seller's price to the buyer is substantially fixed or determinable at the date of sale.
2. The buyer has paid the seller, or the buyer is obligated to pay the seller, and the obligation is not contingent on resale of the product.

ILLUSTRATION 18-4 Revenue Measurement— Deferred Payment

3. The buyer's obligation to the seller would not be changed in the event of theft or physical destruction or damage of the product.
4. The buyer acquiring the product for resale has economic substance apart from that provided by the seller.
5. The seller does not have significant obligations for future performance to directly bring about resale of the product by the buyer.
6. The seller can reasonably estimate the amount of future returns.

What if the six conditions are not met? In that case, the company must recognize sales revenue and cost of sales either when the return privilege has substantially expired or when those six conditions subsequently are met, **whichever occurs first**. In the income statement, the company must reduce sales revenue and cost of sales by the amount of the estimated returns.¹¹

An example of a return situation is presented in Illustration 18-5.

ILLUSTRATION 18-5 Recognition—Returns

SALES WITH RETURNS

Facts: Pesido Company is in the beta-testing stage for new laser equipment that will help patients who have acid reflux problems. The product that Pesido is selling has been very successful in trials to date. As a result, Pesido has received regulatory authority to sell this equipment to various hospitals. Because of the uncertainty surrounding this product, Pesido has granted to the participating hospitals the right to return the device and receive full reimbursement for a period of 9 months.

Question: When should Pesido recognize the revenue for the sale of the new laser equipment?

Solution: Given that the hospital has the right to rescind the purchase for a reason specified in the sales contract and Pesido is uncertain about the probability of return, Pesido should not record revenue at the time of delivery. If there is uncertainty about the possibility of return, revenue is recognized when the goods have been delivered and the time period for rejection has elapsed. Only at that time have the risks and rewards of ownership transferred and its performance obligation satisfied.

Companies may retain only an insignificant risk of ownership when a refund or right of return is provided. For example, revenue is recognized at the time of sale (even though a right of return exists or refund is permitted), provided the seller can reliably estimate future returns. In this case, the seller recognizes an allowance for returns based on previous experience and other relevant factors.

Returning to the Pesido example, assume that Pesido sold \$300,000 of laser equipment on August 1, 2014, and retains only an insignificant risk of ownership. On October 15, 2014, \$10,000 in equipment was returned. In this case, Pesido makes the following entries.

August 1, 2014			
Accounts Receivable		300,000	
Sales Revenue			300,000
October 15, 2014			
Sales Returns and Allowances		10,000	
Accounts Receivable			10,000

At December 31, 2014, based on prior experience, Pesido estimates that returns on the remaining balance will be 4 percent. Pesido makes the following entry to record the expected returns.

¹¹Here is an example where GAAP provides detailed guidelines beyond the general revenue recognition principle.

December 31, 2014		
Sales Returns and Allowances		
$[(\$300,000 - \$10,000) \times 4\%]$	11,600	
Allowance for Sales Returns and Allowances		11,600

The Sales Returns and Allowances account is reported as contra revenue in the income statement, and Allowance for Sales Returns and Allowances is reported as a contra account to Accounts Receivable in the balance sheet. As a result, the net revenue and net accounts receivable recognized are adjusted for the amount of the expected returns.

Sales with Buybacks

If a company sells a product in one period and agrees to buy it back in the next period, has the company sold the product? As indicated in Chapter 8, legal title has transferred in this situation. However, the economic substance of this transaction is that the seller retains the risks of ownership. Illustration 18-6 provides an example of a sale with a buyback provision.

SALE WITH BUYBACK

Facts: Morgan Inc., an equipment dealer, sells equipment to Lane Company for \$135,000. The equipment has a cost of \$115,000. Morgan agrees to repurchase the equipment at the end of 2 years at its fair value. Lane Company pays full price at the sales date, and there are no restrictions on the use of the equipment over the 2 years.

Question: How should Morgan record this transaction?

Solution: For a sale and repurchase agreement, the terms of the agreement need to be analyzed to ascertain whether, in substance, the seller has transferred the risks and rewards of ownership to the buyer. In this case, it appears that the risks and rewards of ownership are transferred to Lane Company and therefore a sale should be recorded. That is, Lane will receive fair value at the date of repurchase, which indicates Morgan has transferred risks of ownership and satisfied its performance obligation. Furthermore, Lane has no restrictions on use of the equipment, which indicates that Morgan has transferred the rewards of ownership.

ILLUSTRATION 18-6

Recognition—Sale with Buyback

Morgan records the sale and related cost of goods sold as follows.

Cash	135,000	
Sales Revenue		135,000
Cost of Goods Sold	115,000	
Inventory		115,000

Now assume that Morgan requires Lane to sign a note with repayment to be made in 24 monthly payments. Lane is also required to maintain the equipment at a certain level. Morgan sets the payment schedule such that it receives a normal lender's rate of return on the transaction. In addition, Morgan agrees to repurchase the equipment after two years for \$95,000.

In this case, this arrangement appears to be a financing transaction rather than a sale. That is, **Lane is required to maintain the equipment at a certain level and Morgan agrees to repurchase at a set price, resulting in a lender's return.** Thus, the risks and rewards of ownership are to a great extent still with Morgan. When the seller has retained the risks and rewards of ownership, even though legal title has been transferred, the transaction is a financing arrangement and does not give rise to revenue.¹² In other words, Morgan has not satisfied its performance obligation.

¹²In essence, Lane is renting the equipment from Morgan for two years. We discuss the accounting for such rental or lease arrangements in Chapter 21.

Bill and Hold Sales

Bill and hold sales result when the buyer is not yet ready to take delivery but does take title and accept billing. For example, a customer may request a company to enter into such an arrangement because of (1) lack of available space for the product, (2) delays in its production schedule, or (3) more than sufficient inventory in its distribution channel.¹³ Illustration 18-7 provides an example of a bill and hold arrangement.

ILLUSTRATION 18-7 Recognition—Bill and Hold

BILL AND HOLD

Facts: Butler Company sells \$450,000 of fireplaces to a local coffee shop, Baristo, which is planning to expand its locations around the city. Under the agreement, Baristo asks Butler to retain these fireplaces in its warehouses until the new coffee shops that will house the fireplaces are ready. Title passes to Baristo at the time the agreement is signed.

Question: Should Butler report the revenue from this bill and hold arrangement when the agreement is signed, or should revenue be deferred and reported when the fireplaces are delivered?

Solution: When to recognize revenue in a bill and hold situation depends on the circumstances. Butler should record the revenue at the time title passes, provided (1) the risks of ownership have passed to Baristo, that is, Butler does not have specific performance obligations other than storage; (2) Baristo makes a fixed commitment to purchase the goods, requests that the transaction be on a bill and hold basis, and sets a fixed delivery date; and (3) goods must be segregated, complete, and ready for shipment. Otherwise, if these conditions are not met, it is assumed that the risks and rewards of ownership remain with the seller even though title has passed. In this case, it appears that these conditions were probably met and therefore revenue recognition should be permitted at the time the agreement is signed.

Butler makes the following entry to record the bill and hold sale.

Accounts Receivable	450,000	
Sales Revenue		450,000

If a significant period of time elapses before payment, the accounts receivable is discounted. In addition, it is likely that one of the conditions above is violated (such as the normal payment terms). In this case, the most appropriate approach for bill and hold sales is to defer revenue recognition until the goods are delivered because the risks and rewards of ownership usually do not transfer until that point. [4]

Principal-Agent Relationships

In a **principal-agent relationship**, amounts collected on behalf of the principal are not revenue of the agent. Instead, revenue for the agent is the amount of the commission it receives (usually a percentage of the total revenue).

Classic Example

An example of principal-agent relationships is an airline that sells tickets through a travel agent. For example, assume that Fly-Away Travels sells airplane tickets for **British Airways (BA)** to various customers. In this case, the principal is BA and the agent is Fly-Away Travels. BA is acting as a principal because it has exposure to the significant risks and rewards associated with the sale of its services. Fly-Away is acting as an agent because it does not have exposure to significant risks and rewards related to the tickets. Although Fly-Away collects the full airfare from the client, it then remits this amount to BA less a commission. Fly-Away therefore should not record the full amount of the fare as revenue on its books—to do so overstates its revenue. **Its revenue is the commission—not the full fare price.** The risks and rewards of ownership are not transferred to Fly-Away because it does not bear any inventory risk as it sells tickets to customers.

¹³Proposed Accounting Standards Update, “Revenue from Contracts with Customers” (Stamford, Conn.: FASB, June 24, 2010), p. 54.

This distinction is very important for revenue recognition purposes. Some might argue that there is no harm in letting Fly-Away record revenue for the full price of the ticket and then charging the cost of the ticket against the revenue (often referred to as the **gross method** of recognizing revenue). Others note that this approach overstates the agent's revenue and is misleading. The revenue received is the commission for providing the travel services, not the full fare price (often referred to as the **net approach**). The profession believes the net approach is the correct method for recognizing revenue in a principal-agent relationship. As a result, the FASB has developed specific criteria to determine when a principal-agent relationship exists.¹⁴ An important feature in deciding whether Fly-Away is acting as an agent is whether the amount it earns is predetermined, being either a fixed fee per transaction or a stated percentage of the amount billed to the customer.

What do the numbers mean? GROSSED OUT

As you learned in Chapter 4, many corporate executives obsess over the bottom line. However, analysts on the outside look at the big picture, which includes examination of both the top line and the important subtotals in the income statement, such as gross profit. Recently, the top line is causing some concern, with nearly all companies in the S&P 500 reporting a 2 percent decline in the bottom line while the top line saw revenue decline by 1 percent. This is troubling because it is the first decline in revenues since we crawled out of the recession following the financial crisis. **McDonald's** gave an ominous preview—it saw its first monthly sales decline in nine years. And the United States, rather than foreign markets, led the drop.

What about income subtotals like gross margin? These metrics too have been under pressure. There is concern that struggling companies may employ a number of manipulations to mask the impact of gross margin declines on the bottom line. In fact, **Rite Aid** prepares an income statement that omits the gross margin subtotal. That is not surprising when you consider that Rite Aid's gross margin has steadily declined from 28 percent in 2010 to 26 percent in 2012. Rite Aid has used a number of suspect accounting adjustments related to tax allowances and inventory gains to offset its weak gross margin.

Or, consider the classic case of **Priceline.com**, the company made famous by William Shatner's ads about "naming

your own price" for airline tickets and hotel rooms. In one quarter, Priceline reported that it earned \$152 million in revenues. But, that included the full amount customers paid for tickets, hotel rooms, and rental cars. Traditional travel agencies call that amount "gross bookings," not revenues. And, much like regular travel agencies, Priceline keeps only a small portion of gross bookings—namely, the spread between the customers' accepted bids and the price it paid for the merchandise. The rest, which Priceline calls "product costs," it pays to the airlines and hotels that supply the tickets and rooms.

However, Priceline's product costs came to \$134 million, leaving Priceline just \$18 million of what it calls "gross profit" and what most other companies would call revenues. And that's before all of Priceline's other costs—like advertising and salaries—which netted out to a loss of \$102 million. The difference isn't academic. Priceline shares traded at about 23 times its reported revenues but at a mind-boggling 214 times its "gross profit." This and other aggressive recognition practices explains the stricter revenue recognition guidance, indicating that if a company performs as an agent or broker without assuming the risks and rewards of ownership of the goods, the company should report sales on a net (fee) basis.

Ketz, "RITE AID: Is Management Selling Drugs or Using Them?" *Grumpy Old Accountants* (August 22, 2011); and S. Jakab, "Weak Revenue Is New Worry for Investors," *Wall Street Journal* (November 25, 2012).

Consignments

Another common principal-agent relationship involves consignments. In these cases, manufacturers (or wholesalers) deliver goods but retain title to the goods until they are sold. This specialized method of marketing certain types of products makes use of a device

¹⁴Common principal-agent arrangements include (but are not limited to) (1) arrangements with third-party suppliers to drop-ship merchandise on behalf of the entity, (2) services offered by a company that will be provided by a third-party service provider, (3) shipping and handling fees and costs billed to customers, and (4) reimbursements for out-of-pocket expenses (expenses often include, but are not limited to, expenses related to airfare, mileage, hotel stays, out-of-town meals, photocopies, and telecommunications and facsimile charges). Principal-agent accounting guidance is not limited to entities that sell products or services over the Internet but also to transactions related to advertisements, mailing lists, event tickets, travel tickets, auctions (and reverse auctions), magazine subscription brokers, and catalog, consignment, or special-order retail sales. [5]

known as a **consignment**. Under this arrangement, the **consignor** (manufacturer or wholesaler) ships merchandise to the **consignee** (dealer), who is to act as an agent for the consignor in selling the merchandise. Both consignor and consignee are interested in selling—the former to make a profit or develop a market, the latter to make a commission on the sale.

The consignee accepts the merchandise and agrees to exercise due diligence in caring for and selling it. The consignee remits to the consignor cash received from customers, after deducting a sales commission and any chargeable expenses.

In consignment sales, the consignor uses a modified version of the sale basis of revenue recognition. That is, the consignor recognizes revenue only after receiving notification of sale and the cash remittance from the consignee. The consignor carries the merchandise as inventory throughout the consignment, separately classified as Inventory (consignments). **The consignee does not record the merchandise as an asset on its books.** Upon sale of the merchandise, the consignee has a **liability for the net amount due the consignor**. The consignor periodically receives from the consignee a report called **account sales** that shows the merchandise received, merchandise sold, expenses chargeable to the consignment, and the cash remitted. Revenue is then recognized by the consignor. Analysis of a consignment arrangement is provided in Illustration 18-8.

ILLUSTRATION 18-8
Entries for Consignment Sales

SALES ON CONSIGNMENT

Facts: Nelba Manufacturing Co. ships merchandise costing \$36,000 on consignment to Best Value Stores. Nelba pays \$3,750 of freight costs, and Best Value pays \$2,250 for local advertising costs that are reimbursable from Nelba. By the end of the period, Best Value has sold two-thirds of the consigned merchandise for \$40,000 cash. Best Value notifies Nelba of the sales, retains a 10% commission, and remits the cash due Nelba.

Question: What are the journal entries that the consignor (Nelba) and the consignee (Best Value) make to record this transaction?

Solution:

NELBA MFG. CO. (CONSIGNOR)		BEST VALUE STORES (CONSIGNEE)	
Shipment of consigned merchandise			
Inventory (consignments)	36,000	No entry (record memo of merchandise received).	
Finished Goods Inventory	36,000		
Payment of freight costs by consignor			
Inventory (consignments)	3,750	No entry.	
Cash	3,750		
Payment of advertising by consignee			
No entry until notified.		Receivable from Consignor	2,250
		Cash	2,250
Sales of consigned merchandise			
No entry until notified.		Cash	40,000
		Payable to Consignor	40,000
Notification of sales and expenses and remittance of amount due			
Cash	33,750	Payable to Consignor	40,000
Advertising Expense	2,250	Receivable from	
Commission Expense	4,000	Consignor	2,250
Revenue from		Commission Revenue	4,000
Consignment Sales	40,000	Cash	33,750
Adjustment of inventory on consignment for cost of sales			
Cost of Goods Sold	26,500	No entry.	
Inventory (consignments)	26,500		
[2/3 (\$36,000 + \$3,750) = \$26,500]			

Under the consignment arrangement, the consignor accepts the risk that the merchandise might not sell and relieves the consignee of the need to commit part of its working capital to inventory. Companies use a variety of different systems and account titles to record consignments, but they all share the common goal of postponing the recognition of revenue until it is known that a sale to a third party has occurred.

Trade Loading and Channel Stuffing

One commentator describes **trade loading** this way: “Trade loading is a crazy, uneconomic, insidious practice through which manufacturers—trying to show sales, profits, and market share they don’t actually have—induce their wholesale customers, known as the trade, to buy more product than they can promptly resell.” For example, the cigarette industry appears to have exaggerated a couple years’ operating profits by as much as \$600 million by taking the profits from future years.

In the computer software industry, a similar practice is referred to as **channel stuffing**. When a software maker needed to make its financial results look good, it offered deep discounts to its distributors to overbuy and then recorded revenue when the software left the loading dock. Of course, the distributors’ inventories become bloated and the marketing channel gets too filled with product, but the software maker’s current-period financials are improved. However, financial results in future periods will suffer, unless the company repeats the process.

Trade loading and channel stuffing distort operating results and “window dress” financial statements. In addition, similar to consignment transactions or sales with buy-back agreements, these arrangements generally do not transfer the risks and rewards of ownership. If used without an appropriate allowance for sales returns, channel stuffing is a classic example of booking tomorrow’s revenue today. Business managers need to be aware of the ethical dangers of misleading the financial community by engaging in such practices to improve their financial statements.

What do the numbers mean? NO TAKE-BACKS

Investors in **Lucent Technologies** were negatively affected when Lucent violated one of the fundamental criteria for revenue recognition—the “no take-back” rule. This rule holds that revenue should not be booked on inventory that is shipped if the customer can return it at some point in the future. In this particular case, Lucent agreed to take back shipped inventory from its distributors if the distributors were unable to sell the items to their customers.

In essence, Lucent was “stuffing the channel.” By booking sales when goods were shipped, even though they most likely would get them back, Lucent was able to report continued sales growth. However, Lucent investors got a nasty surprise when distributors returned those goods and Lucent had to restate its financial results. The restatement erased \$679 million in revenues, turning an operating profit into a loss. In response to this bad news, Lucent’s share price

declined \$1.31 per share, or 8.5 percent. Lucent is not alone in this practice. **Sunbeam** got caught stuffing the sales channel with barbecue grills and other outdoor items, which contributed to its troubles when it was forced to restate its earnings.

Investors can be tipped off to potential channel stuffing by carefully reviewing a company’s revenue recognition policy for generous return policies or use of cash incentives to encourage distributors to buy products (as was done at **Monsanto**) and by watching inventory and receivables levels. When sales increase along with receivables, that’s one sign that customers are not paying for goods shipped on credit. And growing inventory levels are an indicator that customers have all the goods they need. Both scenarios suggest a higher likelihood of goods being returned and revenues and income being restated. So remember, no take-backs!

Young, “Lucent Slashes First Quarter Outlook, Erases Revenue from Latest Quarter,” *Wall Street Journal Online* (December 22, 2000); Tracey Byrnes, “Too Many Thin Mints: Spotting the Practice of Channel Stuffing,” *Wall Street Journal Online* (February 7, 2002); and H. Weitzman, “Monsanto to Restate Results After SEC Probe,” *Financial Times* (October 5, 2011).

Multiple-Deliverable Arrangements

One of the most difficult issues related to revenue recognition involves **multiple-deliverable arrangements** (MDAs). MDAs provide multiple products or services to customers as part of a single arrangement. The major accounting issues related to this type of arrangement are how to allocate the revenue to the various products and services and how to allocate the revenue to the proper period.

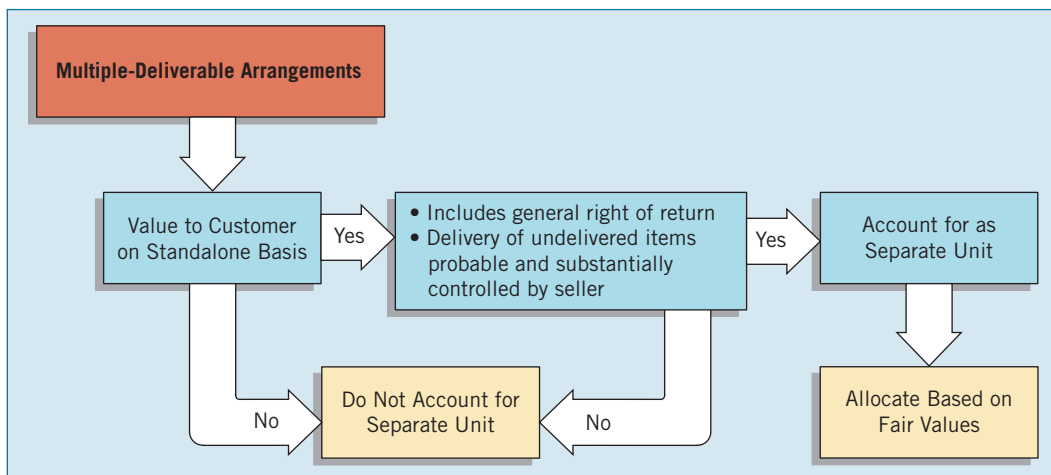

These issues are particularly complex in the technology area. Many devices have contracts that typically include such multiple deliverables as hardware, software, professional services, maintenance, and support—all of which are valued and accounted for differently. A classic example relates to the **Apple** iPhone and its AppleTV product. Basically, until a recent rule change, revenues and related costs were accounted for on a subscription basis over a period of years. The reason was that Apple provides future unspecified software upgrades and other features without charge. It was argued that Apple should defer a significant portion of the cash received for the iPhone and recognize it over future periods. At the same time, engineering, marketing, and warranty costs were expensed as incurred. As a result, Apple reported conservative numbers related to its iPhone revenue. However, as a result of efforts to more clearly define the various services related to an item such as the iPhone, Apple is now able to report more revenue at the point of sale.

In general, all units in a multiple-deliverable arrangement are considered separate units of accounting, provided that:

1. A delivered item has value to the customer on a standalone basis; and
2. The arrangement includes a general right of return relative to the delivered item; and
3. Delivery or performance of the undelivered item is considered probable and substantially in the control of the seller.

Once the separate units of accounting are determined, the amount paid for the arrangement is allocated among the separate units based on **relative fair value**. A company determines fair value based on what the vendor could sell the component for on a standalone basis. If this information is not available, the seller may rely on third-party evidence or if not available, the seller may use its best estimate of what the item might sell for as a standalone unit. [6] Illustration 18-9 identifies the steps in the evaluation process.

ILLUSTRATION 18-9
Multiple-Deliverable
Evaluation Process

Presented in Illustrations 18-10 and 18-11 are two examples of the accounting for MDAs.

MULTIPLE DELIVERABLES

Facts: Lopez Company enters into a contract to build, run, and maintain a highly complex piece of electronic equipment for a period of 5 years, commencing upon delivery of the equipment. There is a fixed fee for each of the build, run, and maintenance deliverables, and any progress payments made are not refundable. In addition, there is a right of return in the arrangement. All the deliverables have a standalone value, and there is verifiable evidence of the selling price for the building and maintenance but not for running the equipment.

Question: Should Lopez separate and then measure and allocate the amounts paid for the MDA?

Solution: Assuming delivery (performance) is probable and Lopez controls any undelivered items, Lopez determines whether the components have standalone value. The components of the MDA are the equipment, maintenance of the equipment, and running the equipment; each component has a standalone value. Lopez can determine standalone values of equipment and the maintenance agreement by third-party evidence of fair values. The company then makes its best estimate of the selling price for running of the equipment. Lopez next applies the relative fair value method at the inception of the MDA to determine the proper allocation to each component. Once the allocation is performed, the company recognizes revenue independently for each component using regular revenue recognition criteria.

ILLUSTRATION 18-10 MDA—Equipment and Maintenance

PRODUCT, INSTALLATION, AND SERVICE

Facts: Handler Company is an experienced manufacturer of equipment used in the construction industry. Handler's products range from small to large individual pieces of automated machinery to complex systems containing numerous components. Unit selling prices range from \$600,000 to \$4,000,000 and are quoted inclusive of installation and training. The installation process does not involve changes to the features of the equipment and does not require proprietary information about the equipment in order for the installed equipment to perform to specifications. Handler has the following arrangement with Chai Company.

- Chai purchases equipment from Handler for a price of \$2,000,000 and chooses Handler to do the installation. Handler charges the same price for the equipment irrespective of whether it does the installation or not. (Some companies do the installation themselves because they either prefer their own employees to do the work or because of relationships with other customers.) The price of the installation service is estimated to have a fair value of \$20,000.
- The fair value of the training sessions is estimated at \$50,000.
- Chai is obligated to pay Handler the \$2,000,000 upon the delivery and installation of the equipment. Handler delivers the equipment on September 1, 2014, and completes the installation of the equipment on November 1, 2014. Training related to the equipment starts once the installation is completed and lasts for 1 year. The equipment has a useful life of 10 years.

Questions: (a) What are the standalone units for purposes of accounting for the sale of the equipment? (b) If there is more than one standalone unit, how should the fee of \$2,000,000 be allocated to various components?

Solution:

- (a) The first condition for separation into a standalone unit for the equipment is met. That is, the equipment, installation, and training are three separate components.
- (b) The total revenue of \$2,000,000 should be allocated to the three components based on their relative fair values. In this case, the fair value of the equipment should be considered \$2,000,000, the installation fee is \$20,000, and the training is \$50,000. The total fair value to consider is \$2,070,000 (\$2,000,000 + \$20,000 + \$50,000). The allocation is as follows.

Equipment	\$1,932,367	$(\$2,000,000 \div \$2,070,000) \times \$2,000,000$
Installation	19,324	$(\$20,000 \div \$2,070,000) \times \$2,000,000$
Training	48,309	$(\$50,000 \div \$2,070,000) \times \$2,000,000$

ILLUSTRATION 18-11 MDA—Product, Installation, and Service

Handler makes the following entries on November 1, 2014.

November 1, 2014		
Cash	2,000,000	
Service Revenue (installation)		19,324
Unearned Service Revenue		48,309
Sales Revenue		1,932,367

The sale of the equipment should be recognized once the installation is completed on November 1, 2014, and the installation fee also should be recognized because these services have been provided. The training revenues should be allocated on a straight-line basis starting on November 1, 2014, or \$4,026 ($\$48,309 \div 12$) per month for one year (unless a more appropriate method such as the percentage-of-completion method is warranted). The journal entry to recognize the training revenue for two months in 2014 is as follows.

December 31, 2014		
Unearned Service Revenue	8,052	
Service Revenue (training) ($\$4,026 \times 2$)		8,052

Therefore, the total revenue recognized at December 31, 2014, is \$1,959,743 ($\$1,932,367 + \$19,324 + \$8,052$). Handler makes the following journal entry to recognize the training revenue in 2015, assuming adjusting entries are made at year-end.

December 31, 2015		
Unearned Service Revenue	40,257	
Service Revenue (training) ($\$48,309 - \$8,052$)		40,257

Summary

ILLUSTRATION 18-12
Revenue Recognition at
the Point of Sale

Illustration 18-12 provides a summary of revenue recognition methods and related accounting guidance.

General Principles	
Recognize revenue (1) when it is realized or realizable, and (2) when it is earned. In numerous cases, GAAP provides additional specific guidance to help determine proper revenue recognition.	
Specific Transactions	Accounting Guidance
Sales with discounts	Trade, volume, and cash discounts reduce sales revenue.
Sales with extended payment terms	The fair value measurement of revenue is determined by using the fair value of the consideration received or by discounting the future payments using an imputed interest rate.
Sales with right of return	If there is uncertainty about the possibility of return, recognize revenue when the goods are delivered and the return period has lapsed. If the company can reliably estimate future returns, revenue (less estimated returns) is recognized at the point of sale.
Sales with buyback	Terms of the buyback agreement must be analyzed to determine if, in substance, the seller has transferred the risks and rewards of ownership.
Bill and hold sales	Recognition depends on the circumstances. Recognize revenue when title passes if (1) the risks of ownership have passed to the customer, and the seller does not have specific obligations other than storage; (2) the customer makes a fixed commitment to purchase the goods, requests that the transaction be on a bill and hold basis, and sets a fixed delivery date; and (3) goods must be segregated, complete, and ready for shipment.
Sales involving principal-agent relationship (general)	Amounts collected by the agent on behalf of the principal are not revenue of the agent. Instead, revenue to the agent is the amount of commission it receives.
Sales involving principal-agent relationship (consignments)	Consignor recognizes revenue (sales and cost of goods sold) when goods are sold by consignee. Consignee recognizes revenue for commissions received.
Trade loading and channel stuffing	Unless returns can be reliably measured, revenue should not be recognized until the goods are sold (by the distributor) to third parties.
Multiple-deliverable arrangements	Apply general revenue recognition principles to each element of the arrangement that has stand-alone value. Once the separate units of accounting are determined, the amount paid for the arrangement is allocated among the separate units based on relative fair value.

REVENUE RECOGNITION BEFORE DELIVERY

For the most part, companies recognize revenue at the point of sale (delivery) because at point of sale most of the uncertainties in the earning process are removed and the exchange price is known. Under certain circumstances, however, companies recognize revenue prior to completion and delivery. The most notable example is long-term construction contract accounting, which uses the percentage-of-completion method.

Long-term contracts frequently provide that the seller (builder) may bill the purchaser at intervals, as it reaches various points in the project. Examples of long-term contracts are construction-type contracts, development of military and commercial aircraft, weapons-delivery systems, and space exploration hardware. When the project consists of separable units, such as a group of buildings or miles of roadway, contract provisions may provide for delivery in installments. In that case, the seller would bill the buyer and transfer title at stated stages of completion, such as the completion of each building unit or every 10 miles of road. The accounting records should record sales when installments are “delivered.”¹⁵

Two distinctly different methods of accounting for long-term construction contracts are recognized.¹⁶ They are:

- **Percentage-of-completion method.** Companies recognize revenues and gross profits each period based upon the progress of the construction—that is, the percentage of completion. The company accumulates construction costs **plus gross profit earned to date** in an inventory account (Construction in Process), and it accumulates progress billings in a contra inventory account (Billings on Construction in Process).
- **Completed-contract method.** Companies recognize revenues and gross profit **only** when the contract is completed. The company accumulates construction costs in an inventory account (Construction in Process), and it accumulates progress billings in a contra inventory account (Billings on Construction in Process).

The rationale for using percentage-of-completion accounting is that under most of these contracts the buyer and seller have enforceable rights. The buyer has the legal right to require specific performance on the contract. The seller has the right to require progress payments that provide evidence of the buyer’s ownership interest. As a result, a continuous sale occurs as the work progresses. Companies should recognize revenue according to that progression.

Companies *must* use the percentage-of-completion method when estimates of progress toward completion, revenues, and costs are reasonably dependable and **all of the following conditions** exist. [7]

1. The contract clearly specifies the enforceable rights regarding goods or services to be provided and received by the parties, the consideration to be exchanged, and the manner and terms of settlement.
2. The buyer can be expected to satisfy all obligations under the contract.
3. The contractor can be expected to perform the contractual obligations.

3 LEARNING OBJECTIVE

Apply the percentage-of-completion method for long-term contracts

Underlying Concepts

The percentage-of-completion method recognizes revenue from long-term contracts in the periods in which the revenue is earned. The firm contract fixes the selling price. And, if costs are estimable and collection reasonably assured, the revenue recognition concept is not violated.

¹⁵Statement of Financial Accounting Concepts No. 5, par. 84, item c.

¹⁶Accounting Trends and Techniques—2012 reports that of the 83 of its 500 sample companies that referred to long-term construction contracts, 75 used the percentage-of-completion method and 8 used the completed-contract method.

Companies should use the completed-contract method when one of the following conditions applies:

- When a company has primarily short-term contracts, *or*
- When a company cannot meet the conditions for using the percentage-of-completion method, *or*
- When there are inherent hazards in the contract beyond the normal, recurring business risks.

The presumption is that percentage-of-completion is the better method. Therefore, companies should use the completed-contract method only when the percentage-of-completion method is inappropriate. We discuss the two methods in more detail in the following sections.

Percentage-of-Completion Method

The **percentage-of-completion method** recognizes revenues, costs, and gross profit as a company makes progress toward completion on a long-term contract. To defer recognition of these items until completion of the entire contract is to misrepresent the efforts (costs) and accomplishments (revenues) of the accounting periods during the contract. In order to apply the percentage-of-completion method, a company must have some basis or standard for measuring the progress toward completion at particular interim dates.

Measuring the Progress toward Completion

As one practicing accountant wrote, “The big problem in applying the percentage-of-completion method . . . has to do with the ability to make reasonably accurate estimates of completion and the final gross profit.”¹⁷ Companies use various methods to determine the **extent of progress toward completion**. The most common are the *cost-to-cost* and *units-of-delivery* methods.¹⁸

The objective of all these methods is to measure the extent of progress in terms of costs, units, or value added. Companies identify the various measures (costs incurred, labor hours worked, tons produced, floors completed, etc.) and classify them as input or output measures. **Input measures** (costs incurred, labor hours worked) are efforts devoted to a contract. **Output measures** (with units of delivery measured as tons produced, floors of a building completed, miles of a highway completed) track results. Neither are universally applicable to all long-term projects. Their use requires the exercise of judgment and careful tailoring to the circumstances.

Both input and output measures have certain disadvantages. The input measure is based on an established relationship between a unit of input and productivity. If inefficiencies cause the productivity relationship to change, inaccurate measurements result. Another potential problem is front-end loading, in which significant up-front costs result in higher estimates of completion. To avoid this problem, companies should disregard some early-stage construction costs—for example, costs of uninstalled materials or costs of subcontracts not yet performed—if they do not relate to contract performance.

Similarly, output measures can produce inaccurate results if the units used are not comparable in time, effort, or cost to complete. For example, using floors (stories) completed can be deceiving. Completing the first floor of an eight-story building may require more than one-eighth the total cost because of the substructure and foundation construction.

¹⁷Richard S. Hickok, “New Guidance for Construction Contractors: ‘A Credit Plus,’” *The Journal of Accountancy* (March 1982), p. 46.

¹⁸R. K. Larson and K. L. Brown, “Where Are We with Long-Term Contract Accounting?” *Accounting Horizons* (September 2004), pp. 207–219.

The most popular input measure used to determine the progress toward completion is the **cost-to-cost basis**. Under this basis, a company like **EDS** measures the percentage of completion by comparing costs incurred to date with the most recent estimate of the total costs required to complete the contract. Illustration 18-13 shows the formula for the cost-to-cost basis.

$$\frac{\text{Costs incurred to date}}{\text{Most recent estimate of total costs}} = \text{Percent complete}$$

ILLUSTRATION 18-13
Formula for Percentage-of-Completion, Cost-to-Cost Basis

Once EDS knows the percentage that costs incurred bear to total estimated costs, it applies that percentage to the total revenue or the estimated total gross profit on the contract. The resulting amount is the revenue or the gross profit to be recognized to date. Illustration 18-14 shows this computation.

$$\text{Percent complete} \times \text{Estimated total revenue (or gross profit)} = \text{Revenue (or gross profit) to be recognized to date}$$

ILLUSTRATION 18-14
Formula for Total Revenue to Be Recognized to Date

To find the amounts of revenue and gross profit recognized each period, EDS subtracts total revenue or gross profit recognized in prior periods, as shown in Illustration 18-15.

$$\text{Revenue (or gross profit) to be recognized to date} - \text{Revenue (or gross profit) recognized in prior periods} = \text{Current-period revenue (or gross profit)}$$

ILLUSTRATION 18-15
Formula for Amount of Current-Period Revenue, Cost-to-Cost Basis

Because the **cost-to-cost method is widely used** (without excluding other bases for measuring progress toward completion), we have adopted it for use in our examples. [8]

Example of Percentage-of-Completion Method—Cost-to-Cost Basis

To illustrate the percentage-of-completion method, assume that Hardhat Construction Company has a contract to construct a \$4,500,000 bridge at an estimated cost of \$4,000,000. The contract is to start in July 2014, and the bridge is to be completed in October 2016. The following data pertain to the construction period. (Note that by the end of 2015, Hardhat has revised the estimated total cost from \$4,000,000 to \$4,050,000.)

	2014	2015	2016
Costs to date	\$1,000,000	\$2,916,000	\$4,050,000
Estimated costs to complete	3,000,000	1,134,000	—
Progress billings during the year	900,000	2,400,000	1,200,000
Cash collected during the year	750,000	1,750,000	2,000,000

Hardhat would compute the percentage complete as shown in Illustration 18-16.

	2014	2015	2016
Contract price	\$4,500,000	\$4,500,000	\$4,500,000
Less estimated cost:			
Costs to date	1,000,000	2,916,000	4,050,000
Estimated costs to complete	3,000,000	1,134,000	—
Estimated total costs	4,000,000	4,050,000	4,050,000
Estimated total gross profit	\$ 500,000	\$ 450,000	\$ 450,000
Percent complete	25%	72%	100%
	$\left(\frac{\$1,000,000}{\$4,000,000}\right)$	$\left(\frac{\$2,916,000}{\$4,050,000}\right)$	$\left(\frac{\$4,050,000}{\$4,050,000}\right)$

ILLUSTRATION 18-16
Application of Percentage-of-Completion Method, Cost-to-Cost Basis

On the basis of the data above, Hardhat would make the following entries to record (1) the costs of construction, (2) progress billings, and (3) collections. These entries appear as summaries of the many transactions that would be entered individually as they occur during the year.

ILLUSTRATION 18-17

Journal Entries—
Percentage-of-
Completion Method,
Cost-to-Cost Basis

	2014	2015	2016
To record cost of construction:			
Construction in Process	1,000,000	1,916,000	1,134,000
Materials, Cash, Payables, etc.	1,000,000	1,916,000	1,134,000
To record progress billings:			
Accounts Receivable	900,000	2,400,000	1,200,000
Billings on Construction in Process	900,000	2,400,000	1,200,000
To record collections:			
Cash	750,000	1,750,000	2,000,000
Accounts Receivable	750,000	1,750,000	2,000,000

In this example, the costs incurred to date are a measure of the extent of progress toward completion. To determine this, Hardhat evaluates the costs incurred to date as a proportion of the estimated total costs to be incurred on the project. The estimated revenue and gross profit that Hardhat will recognize for each year are calculated as shown in Illustration 18-18.

ILLUSTRATION 18-18

Percentage-of-
Completion Revenue,
Costs, and Gross Profit
by Year

	To Date	Recognized in Prior Years	Recognized in Current Year
2014			
Revenues (\$4,500,000 × 25%)	\$1,125,000		\$1,125,000
Costs	1,000,000		1,000,000
Gross profit	\$ 125,000		\$ 125,000
2015			
Revenues (\$4,500,000 × 72%)	\$3,240,000	\$1,125,000	\$2,115,000
Costs	2,916,000	1,000,000	1,916,000
Gross profit	\$ 324,000	\$ 125,000	\$ 199,000
2016			
Revenues (\$4,500,000 × 100%)	\$4,500,000	\$3,240,000	\$1,260,000
Costs	4,050,000	2,916,000	1,134,000
Gross profit	\$ 450,000	\$ 324,000	\$ 126,000

Illustration 18-19 shows Hardhat’s entries to recognize revenue and gross profit each year and to record completion and final approval of the contract.

ILLUSTRATION 18-19

Journal Entries to
Recognize Revenue and
Gross Profit and to
Record Contract
Completion—Percentage-
of-Completion Method,
Cost-to-Cost Basis

	2014	2015	2016
To recognize revenue and gross profit:			
Construction in Process (gross profit)	125,000	199,000	126,000
Construction Expenses	1,000,000	1,916,000	1,134,000
Revenue from Long-Term Contracts	1,125,000	2,115,000	1,260,000
To record completion of the contract:			
Billings on Construction in Process			4,500,000
Construction in Process			4,500,000

Note that **Hardhat debits gross profit (as computed in Illustration 18-18) to Construction in Process**. Similarly, it credits Revenue from Long-Term Contracts for the amounts computed in Illustration 18-18. Hardhat then debits the difference between the amounts recognized each year for revenue and gross profit to a nominal account, Construction Expenses (similar to Cost of Goods Sold in a manufacturing company). It reports that amount in the income statement as the actual cost of construction incurred in that period. For example, Hardhat uses the actual costs of \$1,000,000 to compute both the gross profit of \$125,000 and the percent complete (25 percent).

Hardhat continues to accumulate costs in the Construction in Process account, in order to maintain a record of total costs incurred (plus recognized gross profit) to date. Although theoretically a series of “sales” takes place using the percentage-of-completion method, the selling company cannot remove the inventory cost until the construction is completed and transferred to the new owner. Hardhat’s Construction in Process account for the bridge would include the following summarized entries over the term of the construction project.

Construction in Process			
2014 construction costs	\$1,000,000	12/31/16	to close
2014 recognized gross profit	125,000		completed
2015 construction costs	1,916,000		project
2015 recognized gross profit	199,000		\$4,500,000
2016 construction costs	1,134,000		
2016 recognized gross profit	126,000		
Total	<u>\$4,500,000</u>	Total	<u>\$4,500,000</u>

ILLUSTRATION 18-20

Content of Construction in Process Account—Percentage-of-Completion Method

Recall that the Hardhat Construction Company example contained a **change in estimate**: In the second year, 2015, it increased the estimated total costs from \$4,000,000 to \$4,050,000. The change in estimate is accounted for in a **cumulative catch-up manner**. This is done by first adjusting the percent completed to the new estimate of total costs. Next, Hardhat deducts the amount of revenues and gross profit recognized in prior periods from revenues and gross profit computed for progress to date. That is, it accounts for the change in estimate in the period of change. That way, the balance sheet at the end of the period of change and the accounting in subsequent periods are as they would have been if the revised estimate had been the original estimate.

Financial Statement Presentation—Percentage-of-Completion

Generally, when a company records a receivable from a sale, it reduces the Inventory account. Under the percentage-of-completion method, however, the company continues to carry both the receivable and the inventory. Subtracting the balance in the **Billings account** from Construction in Process avoids double-counting the inventory. During the life of the contract, Hardhat reports in the balance sheet the difference between the Construction in Process and the Billings on Construction in Process accounts. If that amount is a debit, Hardhat reports it **as a current asset**; if it is a credit, it reports it **as a current liability**.

At times, the costs incurred plus the gross profit recognized to date (the balance in Construction in Process) exceed the billings. In that case, Hardhat reports this excess as a current asset entitled “Cost and recognized profit in excess of billings.” Hardhat can at any time calculate the unbilled portion of revenue recognized to date by subtracting the billings to date from the revenue recognized to date, as illustrated for 2014 for Hardhat Construction in Illustration 18-21.

Contract revenue recognized to date:	$\$4,500,000 \times \frac{\$1,000,000}{\$4,000,000}$	\$1,125,000
Billings to date		(900,000)
Unbilled revenue		<u>\$ 225,000</u>

ILLUSTRATION 18-21

Computation of Unbilled Contract Price at 12/31/14

At other times, the billings exceed costs incurred and gross profit to date. In that case, Hardhat reports this excess as a current liability entitled “Billings in excess of costs and recognized profit.”

It probably has occurred to you that companies often have more than one project going at a time. When a company has a number of projects, costs exceed billings on some contracts and billings exceed costs on others. In such a case, the company segregates the contracts. The asset side includes only those contracts on which costs and recognized profit exceed billings. The liability side includes only those on which billings exceed costs and recognized profit. Separate disclosures of the dollar volume of billings and costs are preferable to a summary presentation of the net difference.

Using data from the bridge example, Hardhat Construction Company would report the status and results of its long-term construction activities under the percentage-of-completion method as shown in Illustration 18-22.

ILLUSTRATION 18-22

Costs of construction	1,134,000
Gross profit	<u>\$ 126,000</u>

ILLUSTRATION 18-24
Financial Statement Presentation—Percentage-of-Completion Method (2016)

In addition, Hardhat should disclose the following information in each year.

Note 1. Summary of significant accounting policies.
Long-Term Construction Contracts. The company recognizes revenues and reports profits from long-term construction contracts, its principal business, under the percentage-of-completion method of accounting. These contracts generally extend for periods in excess of one year. The amounts of revenues and profits recognized each year are based on the ratio of costs incurred to the total estimated costs. Costs included in construction in process include direct materials, direct labor, and project-related overhead. Corporate general and administrative expenses are charged to the periods as incurred and are not allocated to construction contracts.

ILLUSTRATION 18-25
Percentage-of-Completion Method Note Disclosure

Completed-Contract Method

Under the **completed-contract method**, companies recognize revenue and gross profit only at point of sale—that is, when the contract is completed. Under this method, companies accumulate costs of long-term contracts in process, but they make no interim charges or credits to income statement accounts for revenues, costs, or gross profit.

The principal advantage of the completed-contract method is that reported revenue reflects final results rather than *estimates* of unperformed work. Its major disadvantage is that it does not reflect current performance when the period of a contract extends into more than one accounting period. Although operations may be fairly uniform during the period of the contract, the company will not report revenue until the year of completion, creating a distortion of earnings.

Under the completed-contract method, the company would make the same **annual entries** to record costs of construction, progress billings, and collections from customers as those illustrated under the percentage-of-completion method. The significant difference is that the company **would not make entries to recognize revenue and gross profit**.

For example, under the completed-contract method for the bridge project illustrated on the preceding pages, Hardhat Construction Company would make the following entries in 2016 to recognize revenue and costs and to close out the inventory and billing accounts.

Billings on Construction in Process	4,500,000	
Revenue from Long-Term Contracts		4,500,000
Costs of Construction	4,050,000	
Construction in Process		4,050,000

Illustration 18-26 compares the amount of gross profit that Hardhat Construction Company would recognize for the bridge project under the two revenue recognition methods.

	Percentage-of-Completion	Completed-Contract
2014	\$125,000	\$ 0
2015	199,000	0
2016	126,000	450,000

ILLUSTRATION 18-26
Comparison of Gross Profit Recognized under Different Methods

4 LEARNING OBJECTIVE
Apply the completed-contract method for long-term contracts.

International Perspective 

IFRS prohibits the use of the completed-contract method of accounting for long-term construction contracts. Companies must use the percentage-of-completion method. If revenues and costs are difficult to estimate, then companies recognize revenue only to the extent of the cost incurred—a zero-profit approach.

Under the completed-contract method, Hardhat Construction would report its long-term construction activities as follows.

ILLUSTRATION 18-27

Financial Statement
Presentation—
Completed-Contract
Method

HARDHAT CONSTRUCTION COMPANY			
	2014	2015	2016
Income Statement

Current liabilities			
Billings (\$3,300,000) in excess of costs (\$2,916,000)		384,000	—0-
Note 1. Summary of significant accounting policies.			
Long-Term Construction Contracts. The company recognizes revenues and reports profits from long-term construction contracts, its principal business, under the completed-contract method. These contracts generally extend for periods in excess of one year. Contract costs and billings are accumulated during the periods of construction, but no revenues or profits are recognized until completion of the contract. Costs included in construction in process include direct material, direct labor, and project-related overhead. Corporate general and administrative expenses are charged to the periods as incurred.			

Long-Term Contract Losses

LEARNING OBJECTIVE 5

Identify the proper accounting for losses on long-term contracts.

Two types of losses can become evident under long-term contracts:¹⁹

1. **Loss in the current period on a profitable contract.** This condition arises when, during construction, there is a significant increase in the estimated total contract costs but the increase does not eliminate all profit on the contract. Under the percentage-of-completion method only, the estimated cost increase requires a current-period adjustment of excess gross profit recognized on the project in prior periods. The company records this adjustment as a loss in the current period because it is a **change in accounting estimate** (discussed in Chapter 22).
2. **Loss on an unprofitable contract.** Cost estimates at the end of the current period may indicate that a loss will result on completion of the *entire* contract. Under both the percentage-of-completion and the completed-contract methods, the company must recognize in the current period the entire expected contract loss.

The treatment described for unprofitable contracts is consistent with the accounting custom of anticipating foreseeable losses to avoid overstatement of current and future income (conservatism).

Loss in Current Period

To illustrate a loss in the current period on a contract expected to be profitable upon completion, we'll continue with the Hardhat Construction Company bridge project.

¹⁹Sak Bhamornsiri, "Losses from Construction Contracts," *The Journal of Accountancy* (April 1982), p. 26.

Assume that on December 31, 2015, Hardhat estimates the costs to complete the bridge contract at \$1,468,962 instead of \$1,134,000 (refer to page 1059). Assuming all other data are the same as before, Hardhat would compute the percentage complete and recognize the loss as shown in Illustration 18-28. Compare these computations with those for 2015 in Illustration 18-16 (page 1059). The “percent complete” has dropped, from 72 percent to 66½ percent, due to the increase in estimated future costs to complete the contract.

Cost to date (12/31/15)	\$2,916,000
Estimated costs to complete (revised)	1,468,962
Estimated total costs	<u>\$4,384,962</u>
Percent complete ($\$2,916,000 \div \$4,384,962$)	66½%
Revenue recognized in 2015 ($\$4,500,000 \times 66\frac{1}{2}\%$) – \$1,125,000	\$1,867,500
Costs incurred in 2015	<u>1,916,000</u>
Loss recognized in 2015	\$ (48,500)

ILLUSTRATION 18-28
Computation of
Recognizable Loss,
2015—Loss in Current
Period

The 2015 loss of \$48,500 is a cumulative adjustment of the “excessive” gross profit recognized on the contract in 2014. Instead of restating the prior period, the company absorbs the prior period misstatement entirely in the current period. In this illustration, the adjustment was large enough to result in recognition of a loss.

Hardhat Construction would record the loss in 2015 as follows.

Construction Expenses	1,916,000	
Construction in Process (loss)		48,500
Revenue from Long-Term Contracts		1,867,500

Hardhat will report the loss of \$48,500 on the 2015 income statement as the difference between the reported revenues of \$1,867,500 and the costs of \$1,916,000.²⁰ **Under the completed-contract method, the company does not recognize a loss in 2015.** Why not? Because the company still expects the contract **to result in a profit**, to be recognized in the year of completion.

Loss on an Unprofitable Contract

To illustrate the accounting for an **overall loss on a long-term contract**, assume that at December 31, 2015, Hardhat Construction Company estimates the costs to complete the bridge contract at \$1,640,250 instead of \$1,134,000. Revised estimates for the bridge contract are as follows.

	2014	2015
	Original Estimates	Revised Estimates
Contract price	\$4,500,000	\$4,500,000
Estimated total cost	<u>4,000,000</u>	<u>4,556,250*</u>
Estimated gross profit	\$ 500,000	
Estimated loss		<u>\$ (56,250)</u>

*(\$2,916,000 + \$1,640,250)

²⁰In 2016, Hardhat Construction will recognize the remaining 33½ percent of the revenue (\$1,507,500), with costs of \$1,468,962 as expected, and will report a gross profit of \$38,538. The total gross profit over the three years of the contract would be \$115,038 [$\$125,000$ (2014) – \$48,500 (2015) + \$38,538 (2016)]. This amount is the difference between the total contract revenue of \$4,500,000 and the total contract costs of \$4,384,962.

Under the percentage-of-completion method, Hardhat recognized \$125,000 of gross profit in 2014 (see Illustration 18-18 on page 1060). This amount must be offset in 2015 because it is no longer expected to be realized. In addition, since losses must be recognized as soon as estimable, the company must recognize the total estimated loss of \$56,250 in 2015. Therefore, Hardhat must recognize a total loss of \$181,250 (\$125,000 + \$56,250) in 2015.

Illustration 18-29 shows Hardhat’s computation of the revenue to be recognized in 2015.

ILLUSTRATION 18-29
Computation of Revenue Recognizable, 2015—Unprofitable Contract

Revenue recognized in 2015:	
Contract price	\$4,500,000
Percent complete	× 64%*
Revenue recognizable to date	2,880,000
Less: Revenue recognized prior to 2015	1,125,000
Revenue recognized in 2015	<u>\$1,755,000</u>
*Cost to date (12/31/15) \$2,916,000	
Estimated cost to complete	1,640,250
Estimated total costs	<u>\$4,556,250</u>
Percent complete: \$2,916,000 ÷ \$4,556,250 = 64%	

To compute the construction costs to be expensed in 2015, Hardhat adds the total loss to be recognized in 2015 (\$125,000 + \$56,250) to the revenue to be recognized in 2015. Illustration 18-30 shows this computation.

ILLUSTRATION 18-30
Computation of Construction Expense, 2015—Unprofitable Contract

Revenue recognized in 2015 (computed above)	\$1,755,000
Total loss recognized in 2015:	
Reversal of 2014 gross profit	\$125,000
Total estimated loss on the contract	<u>56,250</u>
Construction cost expensed in 2015	<u>\$1,936,250</u>

Hardhat Construction would record the long-term contract revenues, expenses, and loss in 2015 as follows.

Construction Expenses	1,936,250	
Construction in Process (loss)		181,250
Revenue from Long-Term Contracts		1,755,000

At the end of 2015, Construction in Process has a balance of \$2,859,750 as shown below.²¹

ILLUSTRATION 18-31
Content of Construction in Process Account at End of 2015—Unprofitable Contract

Construction in Process			
2014 Construction costs	1,000,000		
2014 Recognized gross profit	125,000		
2015 Construction costs	1,916,000	2015 Recognized loss	181,250
Balance	2,859,750		

²¹If the costs in 2016 are \$1,640,250 as projected, at the end of 2016 the Construction in Process account will have a balance of \$1,640,250 + \$2,859,750, or \$4,500,000, equal to the contract price. When the company matches the revenue remaining to be recognized in 2016 of \$1,620,000 [\$4,500,000 (total contract price) – \$1,125,000 (2014) – \$1,755,000 (2015)] with the construction expense to be recognized in 2016 of \$1,620,000 [total costs of \$4,556,250 less the total costs recognized in prior years of \$2,936,250 (2014, \$1,000,000; 2015, \$1,936,250)], a zero profit results. Thus, the total loss has been recognized in 2015, the year in which it first became evident.

Under the completed-contract method, Hardhat also would recognize the contract loss of \$56,250 through the following entry in 2015 (the year in which the loss first became evident).

Loss from Long-Term Contracts	56,250	
Construction in Process (loss)		56,250

Just as the Billings account balance cannot exceed the contract price, neither can the balance in Construction in Process exceed the contract price. In circumstances where the Construction in Process balance exceeds the billings, the company can deduct the recognized loss from such accumulated costs on the balance sheet. That is, under both the percentage-of-completion and the completed-contract methods, the provision for the loss (the credit) may be combined with Construction in Process, thereby reducing the inventory balance. In those circumstances, however (as in the 2015 example above), where the billings exceed the accumulated costs, Hardhat must report separately on the balance sheet, as a current liability, the amount of the estimated loss. That is, under both the percentage-of-completion and the completed-contract methods, Hardhat would take the \$56,250 loss, as estimated in 2015, from the Construction in Process account and report it separately as a current liability titled “Estimated liability from long-term contracts.” [9]

What do the numbers mean?

LESS CONSERVATIVE

Halliburton provides engineering- and construction-related services in jobs around the world. Much of the company’s work is completed under contract over long periods of time. The company uses percentage-of-completion accounting. The SEC started enforcement proceedings against the company related to its accounting for contract claims and disagreements with customers, including those arising from change orders and disputes about billable amounts and costs associated with a construction delay.

Prior to 1998, Halliburton took a very conservative approach to its accounting for disputed claims. As stated in the company’s 1997 annual report, “Claims for additional compensation are recognized during the period such claims are resolved.” That is, the company waited until all disputes were resolved before recognizing associated revenues. In contrast, in 1998 the company recognized revenue for disputed claims before their resolution, using estimates of amounts expected to be recovered. Such revenue and its related profit are more tentative and are subject to possible later adjustment than revenue and profit recognized when all claims have been resolved. As a case in point, the company noted that it incurred losses of \$99 million in 1998 related to customer claims.

The accounting method put in place in 1998 is more aggressive than the company’s former policy, but it is still within the boundaries of generally accepted accounting principles. However, the SEC noted that over six quarters, Halliburton failed to disclose its change in accounting practice. In the absence of any disclosure, the SEC believed the investing public was misled about the precise nature of Halliburton’s income in comparison to prior periods.

Similar issues have arisen in how **Boeing** accounts for losses on its Dreamliner aircraft long-term contracts. While costs for producing the first group of airplanes more than doubled in a recent year, the losses did not show up in Boeing’s bottom line. The reason? Boeing is spreading the higher cost over future years when it expects costs to decline and profit margins to increase. Boeing recently increased the number of planes over which future cost will be spread from 400 to 1,100 due to increased demand for the planes, which further reduces the impact on profitability. The Halliburton and Boeing situations illustrate the difficulty of using estimates in percentage-of-completion accounting and the impact of those estimates on the financial statements.

Ostrower, “Dreamliner Hits a Milestone,” *Wall Street Journal* (June 8, 2012).

Disclosures in Financial Statements

Construction contractors usually make some unique financial statement disclosures in addition to those required of all businesses. Generally, these additional disclosures are made in the notes to the financial statements. For example, a construction contractor should disclose the following: the method of recognizing revenue, [10] the basis used to classify assets and liabilities as current (the nature and length of the operating cycle), the basis for recording inventory, the effects of any revision of estimates, the amount of backlog on uncompleted contracts, and the details about receivables (billed and unbilled, maturity, interest rates, retainage provisions, and significant individual or group concentrations of credit risk).

Completion-of-Production Basis

Underlying Concepts

This is not an exception to the revenue recognition principle. At the completion of production, realization is virtually assured and the earning process is substantially completed.

In certain cases, companies recognize revenue at the completion of **production** even though no sale has been made. Examples of such situations involve precious metals or agricultural products with assured prices. Under the **completion-of-production basis**, companies recognize revenue when these metals are mined or agricultural crops harvested because the sales price is reasonably assured, the units are interchangeable, and no significant costs are involved in distributing the product.²² (See discussion in Chapter 9, page 481, “Valuation at Net Realizable Value.”)

Likewise, when sale or cash receipt precedes production and delivery, as in the case of magazine subscriptions, companies recognize revenues as earned by production and delivery.²³

REVENUE RECOGNITION AFTER DELIVERY

LEARNING OBJECTIVE 6

Describe the installment-sales method of accounting.

In some cases, the collection of the sales price is not reasonably assured and revenue recognition is deferred. One of two methods is generally employed to defer revenue recognition until the company receives cash: the **installment-sales method** or the **cost-recovery method**. A third method, the **deposit method**, applies in situations in which a company receives cash prior to delivery or transfer of the property; the company records that receipt as a deposit because the sales transaction is incomplete. This section examines these three methods.

Installment-Sales Method

The **installment-sales method** recognizes income in the periods of collection rather than in the period of sale. The logic underlying this method is that when there is no reasonable approach for estimating the degree of collectibility, companies should not recognize revenue until cash is collected.

The expression “installment sales” generally describes any type of sale for which payment is required in periodic installments over an extended period of time. All types of farm and home equipment as well as home furnishings are sold on an installment basis. The heavy equipment industry also sometimes uses the method for machine installations paid for over a long period. Another application of the method is in land-development sales.

²²Such revenue satisfies the criteria of *Concepts Statement No. 5* since the assets are readily realizable and the earning process is virtually complete (see par. 84, item c).

²³*Statement of Financial Accounting Concepts No. 5*, par. 84, item b.

Because payment is spread over a relatively long period, the risk of loss resulting from uncollectible accounts is greater in installment-sales transactions than in ordinary sales. Consequently, selling companies use various devices to protect themselves. Two common devices are (1) the use of a *conditional sales contract*, which specifies that title to the item sold does not pass to the purchaser until all payments are made, and (2) use of notes secured by a *chattel* (personal property) *mortgage* on the article sold. Either of these permits the seller to “repossess” the goods sold if the purchaser defaults on one or more payments. The seller can then resell the repossessed merchandise at whatever price it will bring to compensate for the uncollected installments and the expense of repossession.

Under the installment-sales method of accounting, companies defer income recognition until the period of cash collection. They recognize both revenues and costs of sales in the period of sale, but defer the related gross profit to those periods in which they collect the cash. Thus, **instead of deferring the sale, along with related costs and expenses, to the future periods of anticipated collection, the company defers only the proportional gross profit.** This approach is equivalent to deferring both sales and cost of sales. Other expenses—that is, selling expense, administrative expense, and so on—are not deferred.

Thus, the installment-sales method matches cost and expenses against sales through the gross profit figure, but no further. Companies using the installment-sales method generally record operating expenses without regard to the fact that they will defer some portion of the year’s gross profit. This practice is often justified on the basis that (1) these expenses do not follow sales as closely as does the cost of goods sold, and (2) accurate apportionment among periods would be so difficult that it could not be justified by the benefits gained.²⁴

Acceptability of the Installment-Sales Method

The use of the installment-sales method for revenue recognition has fluctuated widely. At one time, it was widely accepted for installment-sales transactions. Somewhat paradoxically, as installment-sales transactions increased in popularity, acceptance and use of the installment-sales method decreased. Finally, the profession concluded that except in special circumstances, “the installment method of recognizing revenue is not acceptable.” [11] The rationale for this position is simple. Because the installment method recognizes no income until cash is collected, it is not in accordance with the accrual-accounting concept.

Use of the installment-sales method was often justified on the grounds that the risk of not collecting an account receivable may be so great that the sale itself is not sufficient evidence that recognition should occur. In some cases, this reasoning is valid but not in a majority of cases. The general approach is that a company should recognize a completed sale. If the company expects bad debts, it should record this possibility as separate estimates of uncollectibles. Although collection expenses, repossession expenses, and bad debts are an unavoidable part of installment-sales activities, the incurrence of these costs and the collectibility of the receivables are reasonably predictable.

We study this topic in intermediate accounting because the method is acceptable in cases where a company believes there to be no reasonable basis of estimating the degree of collectibility. In addition, the sales method of revenue recognition has certain weaknesses when used for franchise and land-development operations. Application of the sales method to **franchise and license operations** has resulted in the abuse described

Underlying Concepts

Realization is a critical part of revenue recognition. Thus, if a high degree of uncertainty exists about collectibility, a company must defer revenue recognition.

²⁴In addition, other theoretical deficiencies of the installment-sales method could be cited. For example, see Richard A. Scott and Rita K. Scott, “Installment Accounting: Is It Inconsistent?” *The Journal of Accountancy* (November 1979).

earlier as “front-end loading.” In some cases, franchisors recognized revenue prematurely, when they granted a franchise or issued a license, rather than when revenue was earned or the cash is received. Many **land-development** ventures were susceptible to the same abuses. As a result, the FASB prescribes application of the installment-sales method of accounting for sales of real estate under certain circumstances. [12]²⁵

Procedure for Deferring Revenue and Cost of Sales of Merchandise

One could work out a procedure that deferred both the uncollected portion of the sales price and the proportionate part of the cost of the goods sold. Instead of apportioning both sales price and cost over the period of collection, however, the installment-sales method defers **only the gross profit**. This procedure has exactly the same effect as deferring both sales and cost of sales, but it requires only one deferred account rather than two.

For the **sales in any one year**, the steps companies use to defer gross profit are as follows.

1. During the year, record both sales and cost of sales in the regular way, using the special accounts described later, and compute the rate of gross profit on installment-sales transactions.
2. At the end of the year, apply the rate of gross profit to the cash collections of the current year’s installment sales, to arrive at the realized gross profit.
3. Defer to future years the gross profit not realized.

For **sales made in prior years**, companies apply the gross profit rate of each year’s sales against cash collections of accounts receivable resulting from that year’s sales, to arrive at the realized gross profit.

Special accounts must be used in the installment-sales method. These accounts provide certain information required to determine the realized and unrealized gross profit in each year of operations. In computing net income under the installment-sales method as generally applied, the only peculiarity is the **deferral of gross profit until realized by accounts receivable collection**. We will use the following data to illustrate the installment-sales method in accounting for the sales of merchandise.

	2014	2015	2016
Installment sales	\$200,000	\$250,000	\$240,000
Cost of installment sales	150,000	190,000	168,000
Gross profit	\$ 50,000	\$ 60,000	\$ 72,000
Rate of gross profit on sales	25% ^a	24% ^b	30% ^c
Cash receipts			
2014 sales	\$ 60,000	\$100,000	\$ 40,000
2015 sales		100,000	125,000
2016 sales			80,000
	^a \$50,000	^b \$60,000	^c \$72,000
	\$200,000	\$250,000	\$240,000

To simplify this example, we have excluded interest charges. Summary entries in general journal form for the year 2014 are as follows.

²⁵The installment-sales method of accounting must be applied to a retail land sale that meets all of the following criteria: (1) the period of cancellation of the sale with refund of the down payment and any subsequent payments has expired; (2) cumulative cash payments equal or exceed 10 percent of the sales value; and (3) the seller is financially capable of providing all promised contract representations (e.g., land improvements, off-site facilities).

2014

Realized on collections of 2014 sales	\$ 10,000
Realized on collections of 2015 sales	30,000
Realized on collections of 2016 sales	24,000
Total	<u>\$ 64,000</u>

In summary, here are the basic concepts you should understand about accounting for installment sales:

1. How to compute a proper gross profit percentage.
2. How to record installment sales, cost of installment sales, and deferred gross profit.
3. How to compute realized gross profit on installment receivables.
4. How the deferred gross profit balance at the end of the year results from applying the gross profit rate to the installment accounts receivable.

Additional Problems of Installment-Sales Accounting

In addition to computing realized and deferred gross profit currently, other problems are involved in accounting for installment-sales transactions. These problems are related to:

1. Interest on installment contracts.
2. Uncollectible accounts.
3. Defaults and repossessions.

Interest on Installment Contracts. Because the collection of installment receivables is spread over a long period, it is customary to charge the buyer interest on the unpaid balance. The seller and buyer set up a schedule of equal payments consisting of interest and principal. Each successive payment is attributable to a smaller amount of interest and a correspondingly larger amount of principal, as shown in Illustration 18-35. This illustration assumes that a company sells for \$3,000 an asset costing \$2,400 (rate of gross profit = 20%), with interest of 8 percent included in the three installments of \$1,164.10.

Date	Cash (Debit)	Interest Earned (Credit)	Installment Receivables (Credit)	Installment Unpaid Balance	Realized Gross Profit (20%)
1/2/14	—	—	—	\$3,000.00	—
1/2/15	\$1,164.10 ^a	\$240.00 ^b	\$ 924.10 ^c	2,075.90 ^d	\$184.82 ^e
1/2/16	1,164.10	166.07	998.03	1,077.87	199.61
1/2/17	1,164.10	86.23	1,077.87	—0—	215.57
					<u>\$600.00</u>

^aPeriodic payment = Original unpaid balance ÷ PV of an annuity of \$1.00 for three periods at 8%;
 $\$1,164.10 = \$3,000 \div 2.57710$.
^b $\$3,000.00 \times .08 = \240 .
^c $\$1,164.10 - \$240.00 = \$924.10$.
^d $\$3,000.00 - \$924.10 = \$2,075.90$.
^e $\$924.10 \times .20 = \184.82 .

ILLUSTRATION 18-35
Installment Payment
Schedule

The company accounts for interest separate from the gross profit recognized on the installment-sales collections during the period, by recognizing interest revenue at the time of its cash receipt.

Uncollectible Accounts. The problem of bad debts or uncollectible accounts receivable is somewhat different for concerns selling on an installment basis because of a repossession feature commonly incorporated in the sales agreement. This feature gives the selling company an opportunity to recoup an uncollectible account through repossession and resale of repossessed merchandise. If the experience of the company indicates that repossessions do not, as a rule, compensate for uncollectible balances, it may be advisable to provide for such losses through charges to a special bad debt expense account, just as is done for other credit sales.

Defaults and Repossessions. Depending on the terms of the sales contract and the policy of the credit department, the seller can repossess merchandise sold under an installment arrangement if the purchaser fails to meet payment requirements. The seller may then recondition repossessed merchandise before offering it for resale, for either cash or installment payments.

The accounting for **repossessions** recognizes that the company is not likely to collect the related installment receivable and should write it off. Along with the installment

account receivable, the company must remove the applicable deferred gross profit using the following entry.

Repossessed Merchandise (an inventory account)	xxx	
Deferred Gross Profit	xxx	
Installment Accounts Receivable		xxx

This entry assumes that the company will record the repossessed merchandise at exactly the amount of the uncollected account less the deferred gross profit applicable. This assumption may or may not be proper. To determine the correct amount, the company should consider the condition of the repossessed merchandise, the cost of reconditioning, and the market for secondhand merchandise of that particular type. The objective should be to put any asset acquired on the books at its fair value, or at the best possible approximation of fair value when fair value is not determinable. A loss can occur if the fair value of the repossessed merchandise is less than the uncollected balance less the deferred gross profit. In that case, the company should record a “loss on repossession” at the date of repossession.²⁶

To illustrate the required entry, assume that Klein Brothers sells a refrigerator to Marilyn Hunt for \$1,500 on September 1, 2014. Terms require a down payment of \$600 and \$60 on the first of every month for 15 months, starting October 1, 2014. It is further assumed that the refrigerator cost \$900 and that Klein Brothers priced it to provide a 40 percent rate of gross profit on selling price. At the year-end, December 31, 2014, Klein Brothers should have collected a total of \$180 in addition to the original down payment.

If Hunt makes her January and February payments in 2015 and then defaults, the account balances applicable to Hunt at time of default are as shown in Illustration 18-36.

ILLUSTRATION 18-36
Computation of
Installment Receivable
Balances

Installment accounts receivable (September 1, 2014)		\$1,500
Less: Down payment:	\$600	
Payments to date ($\$60 \times 5$)	300	900
Installment accounts receivable (March 1, 2015)		\$ 600
Installment accounts receivable (March 1, 2015)		\$ 600
Gross profit rate		× 40%
Deferred gross profit		\$ 240

As indicated, Klein Brothers compute the balance of deferred gross profit applicable to Hunt’s account by applying the gross profit rate for the year of sale to the balance of Hunt’s account receivable: 40 percent of \$600, or \$240. The account balances are therefore:

Installment Account Receivable, 2014	600 (Dr.)
Deferred Gross Profit, 2014	240 (Cr.)

²⁶Some contend that a company should record repossessed merchandise at a valuation that will permit the company to make its regular rate of gross profit on resale. If the company enters the value at its approximated cost to purchase, the regular rate of gross profit could be provided for upon its ultimate sale, but that is completely a secondary consideration. It is more important that the company record the repossessed asset at fair value. This accounting would be in accordance with the general practice of carrying assets at acquisition price, as represented by the fair value at the date of acquisition.

Klein repossesses the refrigerator following Hunt’s default. If Klein sets the estimated fair value of the repossessed article at \$150, it would make the following entry to record the repossession.

Deferred Gross Profit, 2014	240	
Repossessed Merchandise	150	
Loss on Repossession	210	
Installment Accounts Receivable, 2014		600

Klein determines the amount of the loss in two steps. (1) It subtracts the deferred gross profit from the amount of the account receivable, to determine the unrecovered cost (or book value) of the merchandise repossessed. (2) It then subtracts the estimated fair value of the merchandise repossessed from the unrecovered cost, to get the amount of the loss on repossession. Klein Brothers computes the loss on the refrigerator as shown in Illustration 18-37.

Balance of account receivable (representing uncollected selling price)	\$600
Less: Deferred gross profit	<u>240</u>
Unrecovered cost	360
Less: Estimated fair value of merchandise repossessed	<u>150</u>
Loss (Gain) on repossession	<u><u>\$210</u></u>

ILLUSTRATION 18-37
Computation of Loss on Repossession

As pointed out earlier, the loss on repossession may be charged to Allowance for Doubtful Accounts if a company carries such an account.

Financial Statement Presentation of Installment-Sales Transactions

If installment-sales transactions represent a significant part of total sales, it is desirable to make full disclosure of installment sales, the cost of installment sales, and any expenses allocable to installment sales. However, if installment-sales transactions constitute an insignificant part of total sales, it may be satisfactory to include only the realized gross profit in the income statement as a special item following the gross profit on sales. Illustration 18-38 shows this simpler presentation.

HEALTH MACHINE COMPANY	
INCOME STATEMENT	
FOR THE YEAR ENDED DECEMBER 31, 2015	
Sales	\$620,000
Cost of goods sold	<u>490,000</u>
Gross profit	130,000
Gross profit realized on installment sales	<u>51,000</u>
Total gross profit	<u><u>\$181,000</u></u>

ILLUSTRATION 18-38
Disclosure of Installment-Sales Transactions—Insignificant Amount

If a company wants more complete disclosure of installment-sales transactions, it would use a presentation similar to that shown in Illustration 18-39 (page 1076).

The presentation in Illustration 18-39 is awkward. Yet the awkwardness of this method is difficult to avoid if a company wants to provide full disclosure of installment-sales transactions in the income statement. One solution, of course, is to prepare a separate schedule showing installment-sales transactions, with only the final figure carried into the income statement.

ILLUSTRATION 18-39
Disclosure of Installment-
Sales Transactions—
Significant Amount

HEALTH MACHINE COMPANY			
INCOME STATEMENT			
FOR THE YEAR ENDED DECEMBER 31, 2015			
	<u>Installment</u> <u>Sales</u>	<u>Other</u> <u>Sales</u>	<u>Total</u>
Sales	\$248,000	\$620,000	\$868,000
Cost of goods sold	182,000	490,000	672,000
Gross profit	66,000	130,000	196,000
Less: Deferred gross profit on installment sales of this year	47,000		47,000
Realized gross profit on this year's sales	19,000	130,000	149,000
Add: Gross profit realized on installment sales of prior years	32,000		32,000
Gross profit realized this year	\$ 51,000	\$130,000	\$181,000

In the balance sheet, it is generally considered desirable to classify installment accounts receivable by year of collectibility. There is some question as to whether companies should include in current assets installment accounts that are not collectible for two or more years. Yet if installment sales are **part of normal operations**, companies may consider them as current assets because they are collectible within the operating cycle of the business. Little confusion should result from this practice if the company fully discloses maturity dates, as illustrated in the following example.

ILLUSTRATION 18-40
Disclosure of Installment
Accounts Receivable,
by Year

<u>Current assets</u>		
Notes and accounts receivable		
Trade customers	\$78,800	
Less: Allowance for doubtful accounts	3,700	
	75,100	
Installment accounts collectible in 2015	22,600	
Installment accounts collectible in 2016	47,200	\$144,900

On the other hand, a company may have receivables from an installment contract, resulting from a transaction not related to normal operations. In that case, the company should report such receivables in the "Other assets" section if due beyond one year.

Repossessed merchandise is a part of inventory, and companies should report it as such in the "Current assets" section of the balance sheet. They should include any gain or loss on repossession in the income statement in the "Other revenues and gains" or "Other expenses and losses" section.

If a company has **deferred gross profit on installment sales**, it generally treats it as unearned revenue and classifies it as a current liability. Theoretically, deferred gross profit consists of three elements: (1) income tax liability to be paid when the sales are reported as realized revenue (current liability); (2) allowance for collection expense, bad debts, and repossession losses (deduction from installment accounts receivable); and (3) net income (retained earnings, restricted as to dividend availability). Because of the difficulty in allocating deferred gross profit among these three elements, however, companies frequently report the whole amount as unearned revenue.

In contrast, the FASB in *SFAC No. 6* states that "no matter how it is displayed in financial statements, deferred gross profit on installment sales is conceptually an asset valuation—that is, a reduction of an asset."²⁷ We support the FASB position, but we

²⁷See *Statement of Financial Accounting Concepts No. 6*, paras. 232–234.

recognize that until an official standard on this topic is issued, financial statements will probably continue to report such deferred gross profit as a current liability.

Cost-Recovery Method

Under the **cost-recovery method**, a company recognizes no profit until cash payments by the buyer exceed the cost of the merchandise sold. After the seller has recovered all costs, it includes in income any additional cash collections. The seller’s income statement for the period reports sales revenue, the cost of goods sold, and the gross profit—both the amount (if any) that is recognized during the period and the amount that is deferred. The deferred gross profit is offset against the related receivable—reduced by collections—on the balance sheet. Subsequent income statements report the gross profit as a separate item of revenue when the company recognizes it as earned.

A seller is permitted to use the cost-recovery method to account for sales in which “there is no reasonable basis for estimating collectibility.” In addition, use of this method is required where a high degree of uncertainty exists related to the collection of receivables. [13], [14], [15]

To illustrate the cost-recovery method, assume that early in 2014, Fesmire Manufacturing sells inventory with a cost of \$25,000 to Higley Company for \$36,000. Higley will make payments of \$18,000 in 2014, \$12,000 in 2015, and \$6,000 in 2016. If the cost-recovery method applies to this transaction and Higley makes the payments as scheduled, Fesmire recognizes cash collections, revenue, cost, and gross profit as follows.²⁸

7 LEARNING OBJECTIVE

Explain the cost-recovery method of accounting.

	2014	2015	2016
Cash collected	\$18,000	\$12,000	\$6,000
Revenue	\$36,000	–0–	–0–
Cost of goods sold	25,000	–0–	–0–
Deferred gross profit	11,000	11,000	6,000
Less: Recognized gross profit	–0–	5,000*	6,000
Deferred gross profit balance (end of period)	\$11,000	\$ 6,000	\$ –0–

*\$25,000 – \$18,000 = \$7,000 of unrecovered cost at the end of 2014; \$12,000 – \$7,000 = \$5,000, the excess of cash received in 2015 over unrecovered cost.

ILLUSTRATION 18-41
Computation of Gross Profit—Cost-Recovery Method

Under the cost-recovery method, Fesmire reports total revenue and cost of goods sold in the period of sale, similar to the installment-sales method. However, unlike the installment-sales method, which recognizes income as cash is collected, Fesmire recognizes profit under the cost-recovery method **only when cash collections exceed the total cost of the goods sold.**

²⁸An alternative format for computing the amount of gross profit recognized annually is shown below.

Year	Cash Received	Original Cost Recovered	Balance of Unrecovered Cost	Gross Profit Realized
Beginning balance	–	–	\$25,000	–
12/31/14	\$18,000	\$18,000	7,000	\$ –0–
12/31/15	12,000	7,000	–0–	5,000
12/31/16	6,000	–0–	–0–	6,000

Therefore, Fesmire's journal entry to record the deferred gross profit on the Higley sales transaction (after recording the sale and the cost of sales in the normal manner) at the end of 2014 is as follows.

2014		
Sales Revenue	36,000	
Cost of Sales		25,000
Deferred Gross Profit		11,000
(To close sales and cost of sales and to record deferred gross profit on sales accounted for under the cost-recovery method)		

In 2015 and 2016, the deferred gross profit becomes realized gross profit as the cumulative cash collections exceed the total costs, by recording the following entries.

2015		
Deferred Gross Profit	5,000	
Realized Gross Profit		5,000
(To recognize gross profit to the extent that cash collections in 2015 exceed costs)		

2016		
Deferred Gross Profit	6,000	
Realized Gross Profit		6,000
(To recognize gross profit to the extent that cash collections in 2016 exceed costs)		

Deposit Method

In some cases, a company receives cash from the buyer before it transfers the goods or property. In such cases, the seller has not performed under the contract and has no claim against the purchaser. There is not sufficient transfer of the risks and rewards of ownership for a sale to be recorded. The method of accounting for these incomplete transactions is the **deposit method**.

Under the **deposit method**, the seller reports the cash received from the buyer as a deposit on the contract and classifies it on the balance sheet as a liability (refundable deposit or customer advance). The seller continues to report the property as an asset on its balance sheet, along with any related existing debt. Also, the seller continues to charge depreciation expense as a period cost for the property. **The seller does not recognize revenue or income until the sale is complete.** [16] At that time, it closes the deposit account and applies one of the revenue recognition methods discussed in this chapter to the sale.

The **major difference between the installment-sales and cost-recovery methods and the deposit method** relates to contract performance. In the installment-sales and cost-recovery methods, it is assumed that the seller has performed on the contract but cash collection is highly uncertain. **In the deposit method, the seller has *not* performed and no legitimate claim exists.** The deposit method postpones recognizing a sale until the company determines that a sale has occurred for accounting purposes. If there has not been sufficient transfer of risks and rewards of ownership, even if the selling company has received a deposit, the company postpones recognition of the sale until sufficient transfer has occurred. In that sense, the deposit method is not a revenue recognition method as are the installment-sales and cost-recovery methods.

Summary and Concluding Remarks

Illustration 18-42 summarizes the revenue recognition bases or methods, the criteria for their use, and the reasons for departing from the sale basis.

Specific Transactions	Accounting Guidance
Point of sale	See Illustration 18–12 (page 1056).
Long-term contracts (construction)	
(a) Percentage-of-completion method	Long-term construction of property; dependable estimates of extent of progress and cost to complete; reasonable assurance of collectibility of contract price; expectation that both contractor and buyer can meet obligations; and absence of inherent hazards that make estimates doubtful.
(b) Completed-contract method	Use on short-term contracts and whenever percentage-of-completion cannot be used on long-term contracts. Existence of inherent hazards in the contract beyond the normal, recurring business risks; conditions for using the percentage-of-completion method are absent.
Completion-of-production basis	Immediate marketability at quoted prices; unit interchangeability; and no significant distribution costs.
Installment-sales method and cost-recovery method	Absence of reasonable basis for estimating degree of collectibility and costs of collection. Collectibility of the receivable is so uncertain that gross profit (or income) is not recognized until cash is actually received.
Deposit method	Cash received before the sales transaction is completed. No recognition of revenue and income because there is not sufficient transfer of the risks and rewards of ownership.

ILLUSTRATION 18-42
Revenue Recognition Bases

As indicated, revenue recognition principles are sometimes difficult to apply and often vary by industry. Recently, the SEC has attempted to provide more guidance in this area because of concern that the revenue recognition principle is sometimes being incorrectly applied. Many cases of intentional misstatement of revenue to achieve better financial results have recently come to light. Such practices are fraudulent, and the SEC is vigorously prosecuting these situations.

For our capital markets to be efficient, investors must have confidence that the financial information provided is both relevant and reliable. As a result, it is imperative that the accounting profession, regulators, and companies eliminate aggressive revenue recognition practices. It is our hope that recent efforts by the SEC and the accounting profession will lead to higher-quality reporting in this area.

International Perspective

There is no international enforcement body comparable to the U.S. SEC.

You will want to read the **IFRS INSIGHTS** on pages 1109–1113 for discussion of IFRS related to revenue recognition.

SUMMARY OF LEARNING OBJECTIVES

- 1 Describe and apply the revenue recognition principle.** Companies should recognize revenue (1) when revenue is realized or realizable and (2) when it is earned. Revenues are realized when goods or services are exchanged for cash or claims to cash. Revenues are realizable when assets received in exchanges are readily convertible to known amounts of cash or claims to cash. Revenues are earned when a company has substantially accomplished what it must do to be entitled to the benefits represented by the revenues—that is, when the earnings process is complete or virtually complete.
- 2 Describe accounting issues for revenue recognition at point of sale.** The two conditions for recognizing revenue are usually met by the time a company delivers products or merchandise or provides services to customers. Companies commonly recognize revenue from manufacturing and selling activities at time of sale. Problems of implementation can arise because of (1) sales with discounts, (2) sales with extended payment terms, (3) sales with right of return, (4) sales with buyback, (5) bill and hold sales, (6) principal-agent relationships, (7) trade loading and channel stuffing, and (8) multiple-deliverable arrangements. Illustration 18-12 (page 1056) summarizes accounting guidance in these areas.
- 3 Apply the percentage-of-completion method for long-term contracts.** To apply the percentage-of-completion method to long-term contracts, a company must have some basis for measuring the progress toward completion at particular interim dates. One of the most popular input measures used to determine the progress toward completion is the cost-to-cost basis. Using this basis, a company measures the percentage of completion by comparing costs incurred to date with the most recent estimate of the total costs to complete the contract. The company applies that percentage to the total revenue or the estimated total gross profit on the contract, to arrive at the amount of revenue or gross profit to be recognized to date.
- 4 Apply the completed-contract method for long-term contracts.** Under this method, companies recognize revenue and gross profit only at point of sale—that is, when the company completes the contract. The company accumulates costs of long-term contracts in process and current billings. It makes no interim charges or credits to income statement accounts for revenues, costs, and gross profit. The annual entries to record costs of construction, progress billings, and collections from customers would be identical to those for the percentage-of-completion method—with the significant exclusion of the recognition of revenue and gross profit.
- 5 Identify the proper accounting for losses on long-term contracts.** Two types of losses can become evident under long-term contracts. (1) *Loss in current period on a profitable contract:* Under the percentage-of-completion method only, the estimated cost increase requires a current-period adjustment of excess gross profit recognized on the project in prior periods. The company records this adjustment as a loss in the current period because it is a change in accounting estimate. (2) *Loss on an unprofitable contract:* Under both the percentage-of-completion and the completed-contract methods, the company must recognize the entire expected contract loss in the current period.
- 6 Describe the installment-sales method of accounting.** The installment-sales method recognizes income in the periods of collection rather than in the period of sale. The installment-sales method of accounting is justified on the basis that when there is no reasonable approach for estimating the degree of collectibility, a company should not recognize revenue until it has collected cash.
- 7 Explain the cost-recovery method of accounting.** Under the cost-recovery method, companies do not recognize profit until cash payments by the buyer exceed the

seller's cost of the merchandise sold. After the seller has recovered all costs, it includes in income any additional cash collections. The income statement for the period of sale reports sales revenue, the cost of goods sold, and the gross profit—both the amount recognized during the period and the amount deferred. The deferred gross profit is offset against the related receivable on the balance sheet. Subsequent income statements report the gross profit as a separate item of revenue when revenue is recognized as earned.

APPENDIX 18A

REVENUE RECOGNITION FOR FRANCHISES

In this appendix, we cover a common yet unique type of business transaction—**franchises**. As indicated throughout this chapter, companies recognize revenue on the basis of two criteria: (1) when it is realized or realizable (occurrence of an exchange for cash or claims to cash), and (2) when it is earned (completion or virtual completion of the earnings process). These criteria are appropriate for most business activities. For some sales transactions, though, they do not adequately define when a company should recognize revenue. The fast-growing franchise industry is of special concern and challenge.

In accounting for franchise sales, a company must analyze the transaction and, considering all the circumstances, use judgment in selecting one or more of the revenue recognition bases, and then possibly must monitor the situation over a long period of time.

Four types of franchising arrangements have evolved: (1) manufacturer-retailer, (2) manufacturer-wholesaler, (3) service sponsor-retailer, and (4) wholesaler-retailer. The fastest-growing category of franchising, and the one that caused a reexamination of appropriate accounting, has been the third category, **service sponsor-retailer**. Included in this category are such industries and businesses as:

- Soft ice cream/frozen yogurt stores (**Tastee Freez, TCBY, Dairy Queen**)
- Food drive-ins (**McDonald's, KFC, Burger King**)
- Restaurants (**TGI Friday's, Pizza Hut, Denny's**)
- Motels (**Holiday Inn, Marriott, Best Western**)
- Auto rentals (**Avis, Hertz, National**)
- Others (**H & R Block, Meineke Mufflers, 7-Eleven Stores, Kelly Services**)

Franchise companies derive their revenue from one or both of two sources: (1) from the sale of initial franchises and related assets or services, and (2) from continuing fees based on the operations of franchises. The **franchisor** (the party who grants business rights under the franchise) normally provides the **franchisee** (the party who operates the franchised business) with the following services.

1. Assistance in site selection: (a) analyzing location and (b) negotiating lease.
2. Evaluation of potential income.
3. Supervision of construction activity: (a) obtaining financing, (b) designing building, and (c) supervising contractor while building.
4. Assistance in the acquisition of signs, fixtures, and equipment.
5. Bookkeeping and advisory services: (a) setting up franchisee's records; (b) advising on income, real estate, and other taxes; and (c) advising on local regulations of the franchisee's business.
6. Employee and management training.

8 LEARNING OBJECTIVE

Explain revenue recognition for franchises.

7. Quality control.
8. Advertising and promotion.²⁹

In the past, it was standard practice for franchisors to recognize the entire franchise fee at the date of sale, whether the fee was received then or was collectible over a long period of time. Frequently, franchisors recorded the entire amount as revenue in the year of sale, even though many of the services were yet to be performed and uncertainty existed regarding the collection of the entire fee.³⁰ (In effect, the franchisors were counting their fried chickens before they were hatched.) However, a **franchise agreement** may provide for refunds to the franchisee if certain conditions are not met, and franchise fee profit can be reduced sharply by future costs of obligations and services to be rendered by the franchisor. To curb the abuses in revenue recognition that existed and to standardize the accounting and reporting practices in the franchise industry, the FASB issued rules which form the basis for the accounting discussed below.

INITIAL FRANCHISE FEES

The **initial franchise fee** is payment for establishing the franchise relationship and providing some initial services. Franchisors record initial franchise fees as revenue only when and as they make “substantial performance” of the services they are obligated to perform and when collection of the fee is reasonably assured. **Substantial performance** occurs when the franchisor has no remaining obligation to refund any cash received or excuse any nonpayment of a note and has performed all the initial services required under the contract. Commencement of operations by the franchisee shall be presumed to be the earliest point at which substantial performance has occurred, unless it can be demonstrated that substantial performance of all obligations, including services rendered voluntarily, has occurred before that time. [17]

Example of Entries for Initial Franchise Fee

To illustrate, assume that Tum’s Pizza Inc. charges an initial franchise fee of \$50,000 for the right to operate as a franchisee of Tum’s Pizza. Of this amount, \$10,000 is payable when the franchisee signs the agreement, and the balance is payable in five annual payments of \$8,000 each. In return for the initial franchise fee, Tum’s will help locate the site, negotiate the lease or purchase of the site, supervise the construction activity, and provide the book-keeping services. The credit rating of the franchisee indicates that money can be borrowed at 8 percent. The present value of an ordinary annuity of five annual receipts of \$8,000 each discounted at 8 percent is \$31,941.68. The discount of \$8,058.32 represents the interest revenue to be accrued by the franchisor over the payment period. The following examples show the entries that Tum’s Pizza Inc. would make under various conditions.

1. If there is reasonable expectation that Tum’s Pizza Inc. may refund the down payment and if substantial future services remain to be performed by Tum’s Pizza Inc., the entry should be:

Cash	10,000.00	
Notes Receivable	40,000.00	
Discount on Notes Receivable		8,058.32
Unearned Franchise Fees		41,941.68

²⁹ Archibald E. MacKay, “Accounting for Initial Franchise Fee Revenue,” *The Journal of Accountancy* (January 1970), pp. 66–67.

³⁰ At one time, the SEC ordered a half-dozen fast-growing startup franchisors, including **Jiffy Lube International**, **Moto Photo, Inc.**, **Swensen’s, Inc.**, and **LePeep Restaurants, Inc.**, to defer their initial franchise fee recognition until earned. See “Claiming Tomorrow’s Profits Today,” *Forbes* (October 17, 1988), p. 78.

2. If the probability of refunding the initial franchise fee is extremely low, the amount of future services to be provided to the franchisee is minimal, collectibility of the note is reasonably assured, and substantial performance has occurred, the entry should be:

Cash	10,000.00	
Notes Receivable	40,000.00	
Discount on Notes Receivable		8,058.32
Revenue from Franchise Fees		41,941.68

3. If the initial down payment is not refundable, represents a fair measure of the services already provided, with a significant amount of services still to be performed by Tum's Pizza in future periods, and collectibility of the note is reasonably assured, the entry should be:

Cash	10,000.00	
Notes Receivable	40,000.00	
Discount on Notes Receivable		8,058.32
Revenue from Franchise Fees		10,000.00
Unearned Franchise Fees		31,941.68

4. If the initial down payment is not refundable and no future services are required by the franchisor, but collection of the note is so uncertain that recognition of the note as an asset is unwarranted, the entry should be:

Cash	10,000.00	
Revenue from Franchise Fees		10,000.00

5. Under the same conditions as those listed in case 4 above, except that the down payment is refundable or substantial services are yet to be performed, the entry should be:

Cash	10,000.00	
Unearned Franchise Fees		10,000.00

In cases 4 and 5—where collection of the note is extremely uncertain—franchisors may recognize cash collections using the installment-sales method or the cost-recovery method.³¹

CONTINUING FRANCHISE FEES

Continuing franchise fees are received in return for the continuing rights granted by the franchise agreement and for providing such services as management training, advertising and promotion, legal assistance, and other support. Franchisors report continuing fees as revenue when they are earned and receivable from the franchisee, unless a portion of them has been designated for a particular purpose, such as providing a specified amount for building maintenance or local advertising. In that case, the portion deferred shall be an amount sufficient to cover the estimated cost in excess of continuing franchise fees and provide a reasonable profit on the continuing services.

BARGAIN PURCHASES

In addition to paying continuing franchise fees, franchisees frequently purchase some or all of their equipment and supplies from the franchisor. The franchisor would account for these sales as it would for any other product sales.

³¹A study that compared four revenue recognition procedures—installment-sales basis, spreading recognition over the contract life, percentage-of-completion basis, and substantial performance—for franchise sales concluded that the percentage-of-completion method is the most acceptable revenue recognition method; the substantial-performance method was found sometimes to yield ultra-conservative results. See Charles H. Calhoun III, "Accounting for Initial Franchise Fees: Is It a Dead Issue?" *The Journal of Accountancy* (February 1975), pp. 60–67.

Sometimes, however, the franchise agreement grants the franchisee the right to make **bargain purchases** of equipment or supplies after the franchisee has paid the initial franchise fee. If the bargain price is lower than the normal selling price of the same product, or if it does not provide the franchisor a reasonable profit, then the franchisor should defer a portion of the initial franchise fee. The franchisor would account for the deferred portion as an adjustment of the selling price when the franchisee subsequently purchases the equipment or supplies.

OPTIONS TO PURCHASE

A franchise agreement may give the franchisor an **option to purchase** the franchisee's business. As a matter of management policy, the franchisor may reserve the right to purchase a profitable franchise outlet, or to purchase one that is in financial difficulty.

If it is **probable** at the time the option is given that the franchisor will ultimately purchase the outlet, then the franchisor should not recognize the initial franchise fee as revenue but should instead record it as a liability. When the franchisor exercises the option, the liability would reduce the franchisor's investment in the outlet.

FRANCHISOR'S COST

Franchise accounting also involves proper accounting for the **franchisor's cost**. The objective is to match related costs and revenues by reporting them as components of income in the same accounting period. Franchisors should ordinarily defer **direct costs** (usually incremental costs) relating to specific franchise sales for which revenue has not yet been recognized. They should not, however, defer costs without reference to anticipated revenue and its realizability. [18] **Indirect costs** of a regular and recurring nature, such as selling and administrative expenses that are incurred irrespective of the level of franchise sales, should be expensed as incurred.

DISCLOSURES OF FRANCHISORS

Franchisors must disclose all significant commitments and obligations resulting from franchise agreements, including a description of services that have not yet been substantially performed. They also should disclose any resolution of uncertainties regarding the collectibility of franchise fees. Franchisors segregate initial franchise fees from other franchise fee revenue if they are significant. Where possible, revenues and costs related to franchisor-owned outlets should be distinguished from those related to franchised outlets.

substantial performance, 1082

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 18A

8 Explain revenue recognition for franchises. In a franchise arrangement, the franchisor records as revenue the initial franchise fee as it makes substantial performance of the services it is obligated to perform and collection of the fee is reasonably assured. Franchisors recognize continuing franchise fees as revenue when they are earned and receivable from the franchisee.

DEMONSTRATION PROBLEM

Outback Industries manufactures power-distribution equipment, builds power plants, and develops real estate. While the company recognizes the majority of its revenues at point of sale, Outback appropriately recognizes revenue on long-term construction projects using the percentage-of-completion method. It recognizes sales of some properties using the installment-sales approach. Income data for 2014 from operations other than construction and real estate are as follows.

Revenues	\$6,500,000
Expenses	4,350,000

Other information:

1. Outback started a construction project during 2013. The total contract price is \$1,000,000, and \$100,000 in costs were incurred in 2014. Estimated costs to complete the project in 2015 are \$400,000. In 2013, Outback incurred \$200,000 of costs and recognized \$50,000 gross profit on this project.
2. During this year, Outback sold real estate parcels at a price of \$400,000. It recognizes gross profit at a 35% rate when cash is received. Outback collected \$200,000 during the year on these sales.
3. The reported revenues include an order for power relays valued at \$150,000. At year-end, this new customer is not ready to take delivery. Outback billed the customer and moved the relays to an Outback warehouse close to the customer for quick delivery when needed.

Instructions

- (a) Determine net income for Outback Industries for 2014. (Ignore taxes.)
- (b) Some year-end audit work discovered that in 2014 Outback made installment sales in the amount of \$80,000 (cost of sales \$52,000) to customers with very questionable credit backgrounds. The company accounted for these sales using the cost-recovery method. Outback collected \$20,000 from these customers in 2014. Determine the effect of this change in accounting on the income computed in part (a).

Solution

(a)

Revenues	\$6,350,000*
Expenses	<u>4,350,000</u>
	2,000,000
Gross profit on construction contract**	78,571
Gross profit on installment sales***	<u>70,000</u>
Net income	<u>\$2,148,571</u>

*\$6,500,000 – \$150,000. Outback should not recognize this revenue until the customer takes delivery.

$$** \frac{\$200,000 + \$100,000}{\$200,000 + \$100,000 + \$400,000} = 42.857\% \times (\$1,000,000 - \$700,000) = \$128,571$$

Less gross profit recognized in 2013 (50,000)

\$ 78,571

***\$200,000 × 35% = \$ 70,000

- (b) Cash received on these sales was $\$20,000 \times 35\% = 7,000$, which Outback recognized in (a) under the installment method. Income would be \$7,000 lower under cost-recovery; the company would recognize no gross profit until collections exceed cost. Thus, Outback will not recognize any gross profit on these sales until it collects another \$32,000 (\$52,000 – \$20,000).

Exercises

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/asclogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

CE18-1 Access the glossary (“Master Glossary”) to answer the following.

- (a) What is the cost-recovery method?
- (b) What is the percentage-of-completion method?
- (c) What is the deposit method?
- (d) What is the installment method?

CE18-2 Is the installment-sales method of recognizing revenue generally acceptable? Why or why not?

CE18-3 When would a construction company be allowed to use the completed-contract method?

CE18-4 When is it appropriate to use the cost-recovery method?

An additional Codification case can be found in the Using Your Judgment section, on page 1108.

Be sure to check the book's companion website for a Review and Analysis Exercise, with solution.

WileyPLUS

Brief Exercises, Exercises, Problems, and many more learning and assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

QUESTIONS

1. Explain the current environment regarding revenue recognition.
2. What is viewed as a major criticism of GAAP as regards revenue recognition?
3. What are the criteria to recognize revenue?
4. When is revenue recognized in the following situations: (a) Revenue from selling products? (b) Revenue from services performed? (c) Revenue from permitting others to use enterprise assets? (d) Revenue from disposing of assets other than products?
5. What is the proper accounting for volume discounts on sales of products?
6. What are the three alternative accounting methods available to a seller that is exposed to continued risks of ownership through return of the product?
7. Under what conditions may a seller who is exposed to continued risks of a high rate of return of the product sold recognize sales transactions as current revenue?
8. Explain a bill and hold sale. When is revenue recognized in these situations?
9. What are the reporting issues in a sale and buyback agreement?
10. Explain a principal-agent relationship and its significance to revenue recognition.
11. What is the nature of a sale on consignment?
12. Explain a multiple-deliverable arrangement. What is the major accounting issue related to these arrangements?
13. Explain how multiple-deliverable arrangements are measured and reported.
14. What are the two basic methods of accounting for long-term construction contracts? Indicate the circumstances that determine when one or the other of these methods should be used.
15. Hawkins Construction Co. has a \$60 million contract to construct a highway overpass and cloverleaf. The total estimated cost for the project is \$50 million. Costs incurred in the first year of the project are \$8 million. Hawkins Construction Co. appropriately uses the percentage-of-completion method. How much revenue and gross profit should Hawkins recognize in the first year of the project?
16. For what reasons should the percentage-of-completion method be used over the completed-contract method whenever possible?
17. What methods are used in practice to determine the extent of progress toward completion? Identify some "input measures" and some "output measures" that might be used to determine the extent of progress.
18. What are the two types of losses that can become evident in accounting for long-term contracts? What is the nature of each type of loss? How is each type accounted for?
19. Under the percentage-of-completion method, how are the Construction in Process and the Billings on Construction in Process accounts reported in the balance sheet?
20. Explain the differences between the installment-sales method and the cost-recovery method.
21. Identify and briefly describe the two methods generally employed to account for the cash received in situations where the collection of the sales price is not reasonably assured.
22. What is the deposit method and when might it be applied?
23. What is the nature of an installment sale? How do installment sales differ from ordinary credit sales?
24. Describe the installment-sales method of accounting.
25. How are operating expenses (not included in cost of goods sold) handled under the installment-sales method of accounting? What is the justification for such treatment?
26. Marjorie sold her condominium for \$500,000 on September 14, 2014; she had paid \$330,000 for it in 2006. Marjorie collected the selling price as follows: 2014, \$80,000; 2015, \$320,000; and 2016, \$100,000. Marjorie appropriately uses the installment-sales method. Prepare a schedule to determine the gross profit for 2014, 2015, and 2016 from the installment sale.

27. When interest is involved in installment-sales transactions, how should it be treated for accounting purposes?
28. How should the results of installment sales be reported on the income statement?
29. At what time is it proper to recognize income in the following cases: (a) Installment sales with no reasonable basis for estimating the degree of collectibility? (b) Sales for future delivery? (c) Merchandise shipped on consignment? (d) Profit on incomplete construction contracts? (e) Subscriptions to publications?
30. When is revenue recognized under the cost-recovery method?
31. When is revenue recognized under the deposit method? How does the deposit method differ from the installment-sales and cost-recovery methods?
- *32. Why in franchise arrangements may it not be proper to recognize the entire franchise fee as revenue at the date of sale?
- *33. How does the concept of “substantial performance” apply to accounting for franchise sales?
- *34. How should a franchisor account for continuing franchise fees and routine sales of equipment and supplies to franchisees?
- *35. What changes are made in the franchisor’s recording of the initial franchise fee when the franchise agreement:
- Contains an option allowing the franchisor to purchase the franchised outlet, and it is likely that the option will be exercised?
 - Allows the franchisee to purchase equipment and supplies from the franchisor at bargain prices?

BRIEF EXERCISES

- 2 **BE18-1** Manual Company sells goods to Nolan Company during 2014. It offers Nolan the following rebates based on total sales to Nolan. If total sales to Nolan are 10,000 units, it will grant a rebate of 2%. If it sells up to 20,000 units, it will grant a rebate of 4%. If it sells up to 30,000 units, it will grant a rebate of 6%. In the first quarter of the year, Manual sells 11,000 units to Nolan at a sales price of \$110,000. Manual, based on past experience, has sold over 40,000 units to Nolan and these sales normally take place in the third quarter of the year. Prepare the journal entry to record the sale of the 11,000 units in the first quarter of the year.
- 2 **BE18-2** Adani Inc. sells goods to Geo Company for \$11,000 on January 2, 2014, with payment due in 12 months. The fair value of the goods at the date of sale is \$10,000. Prepare the journal entry to record this transaction on January 2, 2014. How much total revenue should be recognized on this sale in 2014?
- 2 **BE18-3** Travel Inc. sells tickets for a Caribbean cruise to Carmel Company employees. The total cruise package costs Carmel \$70,000 from ShipAway cruise liner. Travel Inc. receives a commission of 6% of the total price. Travel Inc. therefore remits \$65,800 to ShipAway. Prepare the entry to record the revenue recognized by Travel Inc. on this transaction.
- 2 **BE18-4** Aamodt Music sold CDs to retailers and recorded sales revenue of \$700,000. During 2014, retailers returned CDs to Aamodt and were granted credit of \$78,000. Past experience indicates that the normal return rate is 15%. Prepare Aamodt’s entries to record (a) the \$78,000 of returns and (b) estimated returns at December 31, 2014.
- 2 **BE18-5** Jansen Corporation shipped \$20,000 of merchandise on consignment to Gooch Company. Jansen paid freight costs of \$2,000. Gooch Company paid \$500 for local advertising, which is reimbursable from Jansen. By year-end, 60% of the merchandise had been sold for \$21,500. Gooch notified Jansen, retained a 10% commission, and remitted the cash due to Jansen. Prepare Jansen’s entry when the cash is received.
- 2 **BE18-6** Telephone Sellers Inc. sells prepaid telephone cards to customers. Telephone Sellers then pays the telecommunications company, TeleExpress, for the actual use of its telephone lines. Assume that Telephone Sellers sells \$4,000 of prepaid cards in January 2014. It then pays TeleExpress based on usage, which turns out to be 50% in February, 30% in March, and 20% in April. The total payment by Telephone Sellers for TeleExpress lines over the 3 months is \$3,000. Indicate how much income Telephone Sellers should recognize in January, February, March, and April.
- 3 **BE18-7** Turner, Inc. began work on a \$7,000,000 contract in 2014 to construct an office building. During 2014, Turner, Inc. incurred costs of \$1,700,000, billed its customers for \$1,200,000, and collected \$960,000. At December 31, 2014, the estimated future costs to complete the project total \$3,300,000. Prepare Turner’s 2014 journal entries using the percentage-of-completion method.
- 3 **BE18-8** O’Neil, Inc. began work on a \$7,000,000 contract in 2014 to construct an office building. O’Neil uses the percentage-of-completion method. At December 31, 2014, the balances in certain accounts were

Construction in Process \$2,450,000; Accounts Receivable \$240,000; and Billings on Construction in Process \$1,400,000. Indicate how these accounts would be reported in O'Neil's December 31, 2014, balance sheet.

- 4** **BE18-9** Use the information from BE18-7, but assume Turner uses the completed-contract method. Prepare the company's 2014 journal entries.
- 4** **BE18-10** Guillen, Inc. began work on a \$7,000,000 contract in 2014 to construct an office building. Guillen uses the completed-contract method. At December 31, 2014, the balances in certain accounts were Construction in Process \$1,715,000; Accounts Receivable \$240,000; and Billings on Construction in Process \$1,000,000. Indicate how these accounts would be reported in Guillen's December 31, 2014, balance sheet.
- 5** **BE18-11** Archer Construction Company began work on a \$420,000 construction contract in 2014. During 2014, Archer incurred costs of \$278,000, billed its customer for \$215,000, and collected \$175,000. At December 31, 2014, the estimated future costs to complete the project total \$162,000. Prepare Archer's journal entry to record profit or loss using (a) the percentage-of-completion method and (b) the completed-contract method, if any.
- 6** **BE18-12** Gordeeva Corporation began selling goods on the installment basis on January 1, 2014. During 2014, Gordeeva had installment sales of \$150,000; cash collections of \$54,000; cost of installment sales of \$102,000. Prepare the company's entries to record installment sales, cash collected, cost of installment sales, deferral of gross profit, and gross profit recognized, using the installment-sales method.
- 6** **BE18-13** Lazaro Inc. sells goods on the installment basis and uses the installment-sales method. Due to a customer default, Lazaro repossessed merchandise that was originally sold for \$800, resulting in a gross profit rate of 40%. At the time of repossession, the uncollected balance is \$520, and the fair value of the repossessed merchandise is \$275. Prepare Lazaro's entry to record the repossession.
- 6** **BE18-14** At December 31, 2014, Grinkov Corporation had the following account balances.

Installment Accounts Receivable, 2013	\$ 65,000
Installment Accounts Receivable, 2014	110,000
Deferred Gross Profit, 2013	23,400
Deferred Gross Profit, 2014	41,800

Most of Grinkov's sales are made on a 2-year installment basis. Indicate how these accounts would be reported in Grinkov's December 31, 2014, balance sheet. The 2013 accounts are collectible in 2015, and the 2014 accounts are collectible in 2016.

- 7** **BE18-15** Schuss Corporation sold equipment to Potsdam Company for \$20,000. The equipment is on Schuss's books at a net amount of \$13,000. Schuss collected \$10,000 in 2014, \$5,000 in 2015, and \$5,000 in 2016. If Schuss uses the cost-recovery method, what amount of gross profit will be recognized in each year?
- 8** ***BE18-16** Frozen Delight, Inc. charges an initial franchise fee of \$75,000 for the right to operate as a franchisee of Frozen Delight. Of this amount, \$25,000 is collected immediately. The remainder is collected in 4 equal annual installments of \$12,500 each. These installments have a present value of \$41,402. There is reasonable expectation that the down payment may be refunded and substantial future services be performed by Frozen Delight, Inc. Prepare the journal entry required by Frozen Delight to record the franchise fee.

EXERCISES

- 2** **E18-1 (Revenue Recognition—Point of Sale)** Jupiter Company sells goods on January 1 that have a cost of \$500,000 to Danone Inc. for \$700,000, with payment due in 1 year. The cash price for these goods is \$610,000, with payment due in 30 days. If Danone paid immediately upon delivery, it would receive a cash discount of \$10,000.

Instructions

- Prepare the journal entry to record this transaction at the date of sale.
- How much revenue should Jupiter report for the entire year?

- 2** **E18-2 (Revenue Recognition—Point of Sale)** Shaw Company sells goods that cost \$300,000 to Ricard Company for \$410,000 on January 2, 2014. The sales price includes an installation fee, which is valued at \$40,000. The fair value of the goods is \$370,000. The installation is expected to take 6 months.

Instructions

- (a) Prepare the journal entry (if any) to record the sale on January 2, 2014.
- (b) Shaw prepares an income statement for the first quarter of 2014, ending on March 31, 2014. How much revenue should Shaw recognize related to its sale to Ricard?

2 E18-3 (**Revenue Recognition—Point of Sale**) Presented below are three revenue recognition situations.

- (a) Grupo sells goods to MTN for \$1,000,000, payment due at delivery.
- (b) Grupo sells goods on account to Grifols for \$800,000, payment due in 30 days.
- (c) Grupo sells goods to Magnus for \$500,000, payment due in two installments: the first installment payable in 6 months and the second payment due 3 months later.

Instructions

Indicate how each of these transactions is reported.

2 E18-4 (**Revenue Recognition—Point of Sale**) Wood-Mode Company is involved in the design, manufacture, and installation of various types of wood products for large construction projects. Wood-Mode recently completed a large contract for Stadium Inc., which consisted of building 35 different types of concession counters for a new soccer arena under construction. The terms of the contract are that upon completion of the counters, Stadium would pay \$2,000,000. Unfortunately, due to the depressed economy, the completion of the new soccer arena is now delayed. Stadium has therefore asked Wood-Mode to hold the counters at its manufacturing plant until the arena is completed. Stadium acknowledges in writing that it ordered the counters and that they now have ownership. The time that Wood-Mode Company must hold the counters is totally dependent on when the arena is completed. Because Wood-Mode has not received additional progress payments for the arena due to the delay, Stadium has provided a deposit of \$300,000.

Instructions

- (a) Explain this type of revenue recognition transaction.
- (b) What factors should be considered in determining when to recognize revenue in this transaction?
- (c) Prepare the journal entry(ies) that Wood-Mode should make, assuming it signed a valid sales contract to sell the counters and received at the time of sale the \$300,000 payment.

2 E18-5 (**Right of Return**) Organic Growth Company is presently testing a number of new agricultural seeds that it has recently harvested. To stimulate interest, it has decided to grant to five of its largest customers the unconditional right of return to these products if not fully satisfied. The right of return extends for 4 months. Organic Growth sells these seeds on account for \$1,500,000 on January 2, 2014. Companies are required to pay the full amount due by March 15, 2014.

Instructions

- (a) Prepare the journal entry for Organic Growth at January 2, 2014, assuming Organic Growth estimates returns of 20% based on prior experience. (Ignore cost of goods sold.)
- (b) Assume that one customer returns the seeds on March 1, 2014, due to unsatisfactory performance. Prepare the journal entry to record this transaction, assuming this customer purchased \$100,000 of seeds from Organic Growth.
- (c) Briefly describe the accounting for these sales, if Organic Growth is unable to reliably estimate returns.

1 2 E18-6 (**Revenue Recognition on Book Sales with High Returns**) Uddin Publishing Co. publishes college textbooks that are sold to bookstores on the following terms. Each title has a fixed wholesale price, terms f.o.b. shipping point, and payment is due 60 days after shipment. The retailer may return a maximum of 30% of an order at the retailer's expense. Sales are made only to retailers who have good credit ratings. Past experience indicates that the normal return rate is 12%, and the average collection period is 72 days.

Instructions

- (a) Identify alternative revenue recognition criteria that Uddin could employ concerning textbook sales.
- (b) Briefly discuss the reasoning for your answers in (a) above.
- (c) In late July, Uddin shipped books invoiced at \$15,000,000. Prepare the journal entry to record this event that best conforms to GAAP and your answer to part (b).
- (d) In October, \$2 million of the invoiced July sales were returned according to the return policy, and the remaining \$13 million was paid. Prepare the entries for the return and payment.

1 2 E18-7 (**Sales Recorded Both Gross and Net**) On June 3, Hunt Company sold to Ann Mount merchandise having a sales price of \$8,000 with terms of 2/10, n/60, f.o.b. shipping point. An invoice totaling \$120, terms n/30, was received by Mount on June 8 from the Olympic Transport Service for the freight cost. Upon receipt of the goods, June 5, Mount notified Hunt Company that merchandise costing \$600 contained

XLS

flaws that rendered it worthless. The same day, Hunt Company issued a credit memo covering the worthless merchandise and asked that it be returned at company expense. The freight on the returned merchandise was \$24, paid by Hunt Company on June 7. On June 12, the company received a check for the balance due from Mount.

Instructions

- (a) Prepare journal entries for Hunt Company to record all the events noted above under each of the following bases.
 - (1) Sales and receivables are entered at gross selling price.
 - (2) Sales and receivables are entered net of cash discounts.
- (b) Prepare the journal entry under basis (2), assuming that Ann Mount did not remit payment until August 5.

- 1 2 E18-8 (Revenue Recognition on Marina Sales with Discounts)** Taylor Marina has 300 available slips that rent for \$800 per season. Payments must be made in full at the start of the boating season, April 1, 2015. Slips for the next season may be reserved if paid for by December 31, 2014. Under a new policy, if payment is made by December 31, 2014, a 5% discount is allowed. The boating season ends October 31, and the marina has a December 31 year-end. To provide cash flow for major dock repairs, the marina operator is also offering a 20% discount to slip renters who pay for the 2016 season.

For the fiscal year ended December 31, 2014, all 300 slips were rented at full price. Two hundred slips were reserved and paid for the 2015 boating season, and 60 slips for the 2016 boating season were reserved and paid for.

Instructions

- (a) Prepare the appropriate journal entries for fiscal 2014.
- (b) Assume the marina operator is unsophisticated in business. Explain the managerial significance of the accounting above to this person.

- 1 2 E18-9 (Consignment Computations)** On May 3, 2014, Eisler Company consigned 80 freezers, costing \$500 each, to Remmers Company. The cost of shipping the freezers amounted to \$840 and was paid by Eisler Company. On December 30, 2014, a report was received from the consignee, indicating that 40 freezers had been sold for \$750 each. Remittance was made by the consignee for the amount due, after deducting a commission of 6%, advertising of \$200, and total installation costs of \$320 on the freezers sold.

Instructions

- (a) Compute the inventory value of the units unsold in the hands of the consignee.
- (b) Compute the profit for the consignor for the units sold.
- (c) Compute the amount of cash that will be remitted by the consignee.

- 2 E18-10 (Multiple-Deliverable Arrangement)** Appliance Center is an experienced home appliance dealer. Appliance Center also offers a number of services together with the home appliances that it sells. Assume that Appliance Center sells ovens on a standalone basis. Appliance Center also sells installation services and maintenance services for ovens. However, Appliance Center does not offer installation or maintenance services to customers who buy ovens from other vendors. Pricing for ovens is as follows.

Oven only	\$ 800
Oven with installation service	850
Oven with maintenance services	975
Oven with installation and maintenance services	1,000

In each instance in which maintenance services are provided, the maintenance service is separately priced within the arrangement at \$175. Additionally, the incremental amount charged by Appliance Center for installation approximates the amount charged by independent third parties. Ovens are sold subject to a general right of return. If a customer purchases an oven with installation and/or maintenance services, in the event Appliance Center does not complete the service satisfactorily, the customer is only entitled to a refund of the portion of the fee that exceeds \$800.

Instructions

- (a) Assume that a customer purchases an oven with both installation and maintenance services for \$1,000. Based on its experience, Appliance Center believes that it is probable that the installation of the equipment will be performed satisfactorily to the customer. Assume that the maintenance services are priced separately. Explain whether the conditions for a multiple-deliverable arrangement exist in this situation.
- (b) Indicate the amount of revenues that should be allocated to the oven, the installation, and to the maintenance contract.

- 2 E18-11 (Multiple-Deliverable Arrangement)** On December 31, 2014, Grando Company sells production equipment to Fargo Inc. for \$50,000. Grando includes a 1-year warranty service with the sale of all its equipment. The customer receives and pays for the equipment on December 31, 2014. Grando estimates the prices to be \$48,800 for the equipment and \$1,200 for the warranty.

Instructions

- (a) Prepare the journal entry to record this transaction on December 31, 2014.
 (b) Indicate how much (if any) revenue should be recognized on January 31, 2015, and for the year 2015.

- 3 4 E18-12 (Recognition of Profit on Long-Term Contracts)** During 2014, Nilsen Company started a construction job with a contract price of \$1,600,000. The job was completed in 2016. The following information is available.

	2014	2015	2016
Costs incurred to date	\$400,000	\$825,000	\$1,070,000
Estimated costs to complete	600,000	275,000	–0–
Billings to date	300,000	900,000	1,600,000
Collections to date	270,000	810,000	1,425,000

Instructions

- (a) Compute the amount of gross profit to be recognized each year, assuming the percentage-of-completion method is used.
 (b) Prepare all necessary journal entries for 2015.
 (c) Compute the amount of gross profit to be recognized each year, assuming the completed-contract method is used.
- 3 E18-13 (Analysis of Percentage-of-Completion Financial Statements)** In 2014, Steinrotter Construction Corp. began construction work under a 3-year contract. The contract price was \$1,000,000. Steinrotter uses the percentage-of-completion method for financial accounting purposes. The income to be recognized each year is based on the proportion of cost incurred to total estimated costs for completing the contract. The financial statement presentations relating to this contract at December 31, 2014, are shown below.

Balance Sheet		
Accounts receivable		\$18,000
Construction in process	\$65,000	
Less: Billings	<u>61,500</u>	
Costs and recognized profit in excess of billings		3,500
Income Statement		
Income (before tax) on the contract recognized in 2014		\$19,500

Instructions

- (a) How much cash was collected in 2014 on this contract?
 (b) What was the initial estimated total income before tax on this contract?

(AICPA adapted)

- 3 E18-14 (Gross Profit on Uncompleted Contract)** On April 1, 2014, Dougherty Inc. entered into a cost-plus-fixed-fee contract to construct an electric generator for Altom Corporation. At the contract date, Dougherty estimated that it would take 2 years to complete the project at a cost of \$2,000,000. The fixed fee stipulated in the contract is \$450,000. Dougherty appropriately accounts for this contract under the percentage-of-completion method. During 2014, Dougherty incurred costs of \$800,000 related to the project. The estimated cost at December 31, 2014, to complete the contract is \$1,200,000. Altom was billed \$600,000 under the contract.

Instructions

Prepare a schedule to compute the amount of gross profit to be recognized by Dougherty under the contract for the year ended December 31, 2014. Show supporting computations in good form.

(AICPA adapted)

- 3 E18-15 (Recognition of Profit, Percentage-of-Completion)** In 2014, Gurney Construction Company agreed to construct an apartment building at a price of \$1,200,000. The information relating to the costs and billings for this contract is shown below.

	2014	2015	2016
Costs incurred to date	\$280,000	\$600,000	\$ 785,000
Estimated costs yet to be incurred	520,000	200,000	–0–
Customer billings to date	150,000	500,000	1,200,000
Collection of billings to date	120,000	320,000	940,000

Instructions

- (a) Assuming that the percentage-of-completion method is used, (1) compute the amount of gross profit to be recognized in 2014 and 2015, and (2) prepare journal entries for 2015.
- (b) For 2015, show how the details related to this construction contract would be disclosed on the balance sheet and on the income statement.

- 3 4** **E18-16 (Recognition of Revenue on Long-Term Contract and Entries)** Hamilton Construction Company uses the percentage-of-completion method of accounting. In 2014, Hamilton began work under contract #E2-D2, which provided for a contract price of \$2,200,000. Other details follow:

	2014	2015
Costs incurred during the year	\$640,000	\$1,425,000
Estimated costs to complete, as of December 31	960,000	–0–
Billings during the year	420,000	1,680,000
Collections during the year	350,000	1,500,000

Instructions

- (a) What portion of the total contract price would be recognized as revenue in 2014? In 2015?
- (b) Assuming the same facts as those above except that Hamilton uses the completed-contract method of accounting, what portion of the total contract price would be recognized as revenue in 2015?
- (c) Prepare a complete set of journal entries for 2014 (using the percentage-of-completion method).

- 3 4** **E18-17 (Recognition of Profit and Balance Sheet Amounts for Long-Term Contracts)** Yanmei Construction Company began operations January 1, 2014. During the year, Yanmei Construction entered into a contract with Lundquist Corp. to construct a manufacturing facility. At that time, Yanmei estimated that it would take 5 years to complete the facility at a total cost of \$4,500,000. The total contract price for construction of the facility is \$6,000,000. During the year, Yanmei incurred \$1,185,800 in construction costs related to the construction project. The estimated cost to complete the contract is \$4,204,200. Lundquist Corp. was billed and paid 25% of the contract price.

Instructions

Prepare schedules to compute the amount of gross profit to be recognized for the year ended December 31, 2014, and the amount to be shown as “costs and recognized profit in excess of billings” or “billings in excess of costs and recognized profit” at December 31, 2014, under each of the following methods.

- (a) Completed-contract method.
- (b) Percentage-of-completion method.

Show supporting computations in good form.

(AICPA adapted)

- 4 5** **E18-18 (Long-Term Contract Reporting)** Berstler Construction Company began operations in 2014. Construction activity for the first year is shown below. All contracts are with different customers, and any work remaining at December 31, 2014, is expected to be completed in 2015.

Project	Total Contract Price	Billings through 12/31/14	Cash Collections through 12/31/14	Contract Costs Incurred through 12/31/14	Estimated Additional Costs to Complete
1	\$ 560,000	\$ 360,000	\$340,000	\$450,000	\$130,000
2	670,000	220,000	210,000	126,000	504,000
3	520,000	500,000	440,000	330,000	–0–
	<u>\$1,750,000</u>	<u>\$1,080,000</u>	<u>\$990,000</u>	<u>\$906,000</u>	<u>\$634,000</u>

Instructions

Prepare a partial income statement and balance sheet to indicate how the above information would be reported for financial statement purposes. Berstler Construction Company uses the completed-contract method.

- 6** **E18-19 (Installment-Sales Method Calculations, Entries)** Coffin Corporation appropriately uses the installment-sales method of accounting to recognize income in its financial statements. The following information is available for 2014 and 2015.

	2014	2015
Installment sales	\$900,000	\$1,000,000
Cost of installment sales	594,000	680,000
Cash collections on 2014 sales	370,000	350,000
Cash collections on 2015 sales	–0–	450,000

Instructions

- (a) Compute the amount of realized gross profit recognized in each year.
 (b) Prepare all journal entries required in 2015.

- 6 E18-20 (Analysis of Installment-Sales Accounts)** Samuels Co. appropriately uses the installment-sales method of accounting. On December 31, 2016, the books show balances as follows.

Installment Receivables		Deferred Gross Profit		Gross Profit on Sales	
2014	\$12,000	2014	\$ 7,000	2014	35%
2015	40,000	2015	26,000	2015	33%
2016	80,000	2016	95,000	2016	32%

Instructions

- (a) Prepare the adjusting entry or entries required on December 31, 2016 to recognize 2016 realized gross profit. (Installment receivables have already been credited for cash receipts during 2016.)
 (b) Compute the amount of cash collected in 2016 on accounts receivable from each year.

- 6 E18-21 (Gross Profit Calculations and Repossessed Merchandise)** Basler Corporation, which began business on January 1, 2014, appropriately uses the installment-sales method of accounting. The following data were obtained for the years 2014 and 2015.

	2014	2015
Installment sales	\$750,000	\$840,000
Cost of installment sales	510,000	588,000
General & administrative expenses	70,000	84,000
Cash collections on sales of 2014	310,000	300,000
Cash collections on sales of 2015	–0–	400,000

Instructions

- (a) Compute the balance in the deferred gross profit accounts on December 31, 2014, and on December 31, 2015.
 (b) A 2014 sale resulted in default in 2016. At the date of default, the balance on the installment receivable was \$12,000, and the repossessed merchandise had a fair value of \$8,000. Prepare the entry to record the repossession.

(AICPA adapted)

- 6 E18-22 (Interest Revenue from Installment Sale)** Becker Corporation sells farm machinery on the installment plan. On July 1, 2014, Becker entered into an installment-sales contract with Valente Inc. for an 8-year period. Equal annual payments under the installment sale are \$100,000 and are due on July 1. The first payment was made on July 1, 2014.

Additional information:

- The amount that would be realized on an outright sale of similar farm machinery is \$586,842.
- The cost of the farm machinery sold to Valente Inc. is \$425,000.
- The finance charges relating to the installment period are based on a stated interest rate of 10%, which is appropriate.
- Circumstances are such that the collection of the installments due under the contract is reasonably assured.

Instructions

What income or loss before income taxes should Becker record for the year ended December 31, 2014, as a result of the transaction above?

(AICPA adapted)

- 6 7 E18-23 (Installment-Sales Method and Cost-Recovery Method)** Swift Corp., a capital goods manufacturing business that started on January 4, 2014, and operates on a calendar-year basis, uses the installment-sales method of profit recognition in accounting for all its sales. The following data were taken from the 2014 and 2015 records.

	2014	2015
Installment sales	\$480,000	\$620,000
Gross profit as a percent of costs	25%	28%
Cash collections on sales of 2014	\$130,000	\$240,000
Cash collections on sales of 2015	–0–	\$160,000

The amounts given for cash collections exclude amounts collected for interest charges.

Instructions

- Compute the amount of realized gross profit to be recognized on the 2015 income statement, prepared using the installment-sales method. (Round percentages to three decimal places.)
- State where the balance of Deferred Gross Profit would be reported on the financial statements for 2015.
- Compute the amount of realized gross profit to be recognized on the income statement, prepared using the cost-recovery method.

(CIA adapted)

- 6 7 E18-24 (Installment-Sales Method and Cost-Recovery Method)** On January 1, 2014, Wetzel Company sold property for \$250,000. The note will be collected as follows: \$120,000 in 2014, \$90,000 in 2015, and \$40,000 in 2016. The property had cost Wetzel \$150,000 when it was purchased in 2012.

Instructions

- Compute the amount of gross profit realized each year, assuming Wetzel uses the cost-recovery method.
- Compute the amount of gross profit realized each year, assuming Wetzel uses the installment-sales method.

- 6 E18-25 (Installment-Sales—Default and Repossession)** Crawford Imports Inc. was involved in two default and repossession cases during the year:

- A refrigerator was sold to Cindy McClary for \$1,800, including a 30% markup on selling price. McClary made a down payment of 20%, four of the remaining 16 equal payments, and then defaulted on further payments. The refrigerator was repossessed, at which time the fair value was determined to be \$800.
- An oven that cost \$1,200 was sold to Travis Longman for \$1,500 on the installment basis. Longman made a down payment of \$240 and paid \$80 a month for six months, after which he defaulted. The oven was repossessed and the estimated fair value at time of repossession was determined to be \$750.

Instructions

Prepare journal entries to record each of these repossessions using a fair value approach. (Ignore interest charges.)

- 6 E18-26 (Installment-Sales—Default and Repossession)** Seaver Company uses the installment-sales method in accounting for its installment sales. On January 1, 2014, Seaver Company had an installment account receivable from Jan Noble with a balance of \$1,800. During 2014, \$500 was collected from Noble. When no further collection could be made, the merchandise sold to Noble was repossessed. The merchandise had a fair value of \$650 after the company spent \$60 for reconditioning of the merchandise. The merchandise was originally sold with a gross profit rate of 30%.

Instructions

Prepare the entries on the books of Seaver Company to record all transactions related to Noble during 2014. (Ignore interest charges.)

- 8 * E18-27 (Franchise Entries)** Pacific Crossburgers Inc. charges an initial franchise fee of \$70,000. Upon the signing of the agreement, a payment of \$28,000 is due. Thereafter, three annual payments of \$14,000 are required. The credit rating of the franchisee is such that it would have to pay interest at 10% to borrow money.

Instructions

Prepare the entries to record the initial franchise fee on the books of the franchisor under the following assumptions. (Round to the nearest dollar.)

- The down payment is not refundable, no future services are required by the franchisor, and collection of the note is reasonably assured.
- The franchisor has substantial services to perform, the down payment is refundable, and the collection of the note is very uncertain.
- The down payment is not refundable, collection of the note is reasonably certain, the franchisor has yet to perform a substantial amount of services, and the down payment represents a fair measure of the services already performed.

- 8 * E18-28 (Franchise Fee, Initial Down Payment)** On January 1, 2014, Lesley Benjamin signed an agreement to operate as a franchisee of Campbell Inc. for an initial franchise fee of \$50,000. The amount of \$10,000 was paid when the agreement was signed, and the balance is payable in five annual payments of \$8,000 each,

beginning January 1, 2015. The agreement provides that the down payment is not refundable and that no future services are required of the franchisor. Lesley Benjamin's credit rating indicates that she can borrow money at 11% for a loan of this type.

Instructions

- (a) How much should Campbell record as revenue from franchise fees on January 1, 2014? At what amount should Benjamin record the acquisition cost of the franchise on January 1, 2014?
- (b) What entry would be made by Campbell on January 1, 2014, if the down payment is refundable and substantial future services remain to be performed by Campbell?
- (c) How much revenue from franchise fees would be recorded by Campbell on January 1, 2014, if:
 - (1) The initial down payment is not refundable, it represents a fair measure of the services already provided, a significant amount of services is still to be performed by Campbell in future periods, and collectibility of the note is reasonably assured?
 - (2) The initial down payment is not refundable and no future services are required by the franchisor, but collection of the note is so uncertain that recognition of the note as an asset is unwarranted?
 - (3) The initial down payment has not been earned and collection of the note is so uncertain that recognition of the note as an asset is unwarranted?

EXERCISES SET B

See the book's companion website, at www.wiley.com/college/kieso, for an additional set of exercises.

PROBLEMS

- 2 3** **P18-1 (Comprehensive Three-Part Revenue Recognition)** Van Hatten Industries has three operating divisions—Depp Construction Division, DeMent Publishing Division, and Ankiel Securities Division. Each division maintains its own accounting system and method of revenue recognition.

Depp Construction Division

During the fiscal year ended November 30, 2014, Depp Construction Division had one construction project in process. A \$30,000,000 contract for construction of a civic center was granted on June 19, 2014, and construction began on August 1, 2014. Estimated costs of completion at the contract date were \$25,000,000 over a 2-year time period from the date of the contract. On November 30, 2014, construction costs of \$7,200,000 had been incurred and progress billings of \$9,500,000 had been made. The construction costs to complete the remainder of the project were reviewed on November 30, 2014, and were estimated to amount to only \$16,800,000 because of an expected decline in raw materials costs. Revenue recognition is based upon a percentage-of-completion method.

DeMent Publishing Division

The DeMent Publishing Division sells large volumes of novels to a few book distributors, which in turn sell to several national chains of bookstores. DeMent allows distributors to return up to 30% of sales, and distributors give the same terms to bookstores. While returns from individual titles fluctuate greatly, the returns from distributors have averaged 20% in each of the past 5 years. A total of \$7,000,000 of paperback novel sales were made to distributors during fiscal 2014. On November 30, 2014 (the end of the fiscal year), \$1,500,000 of fiscal 2014 sales were still subject to return privileges over the next 6 months. The remaining \$5,500,000 of fiscal 2014 sales had actual returns of 21%. Sales from fiscal 2013 totaling \$2,000,000 were collected in fiscal 2014 less 18% returns. This division records revenue according to the method referred to as revenue recognition when the right of return exists.

Ankiel Securities Division

Ankiel Securities Division works through manufacturers' agents in various cities. Orders for alarm systems and down payments are forwarded from agents, and the division ships the goods f.o.b. factory directly to customers (usually police departments and security guard companies). Customers are billed directly for the balance due plus actual shipping costs. The company received orders for \$6,000,000 of goods during the fiscal year ended November 30, 2014. Down payments of \$600,000 were received, and \$5,200,000 of goods

were billed and shipped. Actual freight costs of \$100,000 were also billed. Commissions of 10% on product price are paid to manufacturing agents after goods are shipped to customers. Such goods are warranted for 90 days after shipment, and warranty returns have been about 1% of sales. Revenue is recognized at the point of sale by this division.

Instructions

- (a) There are a variety of methods of revenue recognition. Define and describe each of the following methods of revenue recognition, and indicate whether each is in accordance with generally accepted accounting principles.
 - (1) Point of sale.
 - (2) Completion-of-production.
 - (3) Percentage-of-completion.
 - (4) Installment-sales.
- (b) Compute the revenue to be recognized in fiscal year 2014 for each of the three operating divisions of Van Hatten Industries in accordance with generally accepted accounting principles.

- 3 4 P18-2 (Recognition of Profit on Long-Term Contract)** Shanahan Construction Company has entered into a contract beginning January 1, 2014, to build a parking complex. It has been estimated that the complex will cost \$600,000 and will take 3 years to construct. The complex will be billed to the purchasing company at \$900,000. The following data pertain to the construction period.

	2014	2015	2016
Costs to date	\$270,000	\$450,000	\$610,000
Estimated costs to complete	330,000	150,000	–0–
Progress billings to date	270,000	550,000	900,000
Cash collected to date	240,000	500,000	900,000

Instructions

- (a) Using the percentage-of-completion method, compute the estimated gross profit that would be recognized during each year of the construction period.
- (b) Using the completed-contract method, compute the estimated gross profit that would be recognized during each year of the construction period.

- 3 4 P18-3 (Recognition of Profit and Entries on Long-Term Contract)** On March 1, 2014, Chance Company entered into a contract to build an apartment building. It is estimated that the building will cost \$2,000,000 and will take 3 years to complete. The contract price was \$3,000,000. The following information pertains to the construction period.

	2014	2015	2016
Costs to date	\$ 600,000	\$1,560,000	\$2,100,000
Estimated costs to complete	1,400,000	520,000	–0–
Progress billings to date	1,050,000	2,000,000	3,000,000
Cash collected to date	950,000	1,950,000	2,850,000

Instructions

- (a) Compute the amount of gross profit to be recognized each year, assuming the percentage-of-completion method is used.
- (b) Prepare all necessary journal entries for 2016.
- (c) Prepare a partial balance sheet for December 31, 2015, showing the balances in the receivables and inventory accounts.

- 3 P18-4 (Recognition of Profit and Balance Sheet Presentation, Percentage-of-Completion)** On February 1, 2014, Hewitt Construction Company obtained a contract to build an athletic stadium. The stadium (for a local high school) was to be built at a total cost of \$5,400,000 and was scheduled for completion by September 1, 2016. One clause of the contract stated that Hewitt was to deduct \$15,000 from the \$6,600,000 billing price for each week that completion was delayed. Completion was delayed 6 weeks, which resulted in a \$90,000 penalty. Below are the data pertaining to the construction period.

	2014	2015	2016
Costs to date	\$1,620,000	\$3,850,000	\$5,500,000
Estimated costs to complete	3,780,000	1,650,000	–0–
Progress billings to date	1,200,000	3,300,000	6,510,000
Cash collected to date	1,000,000	2,800,000	6,510,000

Instructions

- (a) Using the percentage-of-completion method, compute the estimated gross profit recognized in the years 2014–2016.
- (b) Prepare a partial balance sheet for December 31, 2015, showing the balances in the receivables and inventory accounts.

3 4

P18-5 (Completed-Contract and Percentage-of-Completion with Interim Loss) Reynolds Custom Builders (RCB) was established in 1987 by Avery Conway and initially built high-quality customized homes under contract with specific buyers. In 2002, Conway's two sons joined the company and expanded RCB's activities into the high-rise apartment and industrial plant markets. Upon the retirement of RCB's long-time financial manager, Conway's sons recently hired Ed Borke as controller for RCB. Borke, a former college friend of Conway's sons, has been associated with a public accounting firm for the last 6 years.

5

XLS

Upon reviewing RCB's accounting practices, Borke observed that RCB followed the completed-contract method of revenue recognition, a carryover from the years when individual home building was the majority of RCB's operations. Several years ago, the predominant portion of RCB's activities shifted to the high-rise and industrial building areas. From land acquisition to the completion of construction, most building contracts cover several years. Under the circumstances, Borke believes that RCB should follow the percentage-of-completion method of accounting. From a typical building contract, Borke developed the following data.

BLUESTEM TRACTOR PLANT

Contract price: \$8,000,000			
	2014	2015	2016
Estimated costs	\$1,600,000	\$2,880,000	\$1,920,000
Progress billings	1,000,000	2,500,000	4,500,000
Cash collections	800,000	2,300,000	4,900,000

Instructions

- (a) Explain the difference between completed-contract revenue recognition and percentage-of-completion revenue recognition.
- (b) Using the data provided for the Bluestem Tractor Plant and assuming the percentage-of-completion method of revenue recognition is used, calculate RCB's revenue and gross profit for 2014, 2015, and 2016, under **each** of the following circumstances.
 - (1) Assume that all costs are incurred, all billings to customers are made, and all collections from customers are received within 30 days of billing, as planned.
 - (2) Further assume that, as a result of unforeseen local ordinances and the fact that the building site was in a wetlands area, RCB experienced cost overruns of \$800,000 in 2014 to bring the site into compliance with the ordinances and to overcome wetlands barriers to construction.
 - (3) Further assume that, in addition to the cost overruns of \$800,000 for this contract incurred under part (b)(2), inflationary factors over and above those anticipated in the development of the original contract cost have caused an additional cost overrun of \$850,000 in 2015. It is not anticipated that any cost overruns will occur in 2016.

(CMA adapted)

3 4

P18-6 (Long-Term Contract with Interim Loss) On March 1, 2014, Pechstein Construction Company contracted to construct a factory building for Fabrik Manufacturing Inc. for a total contract price of \$8,400,000. The building was completed by October 31, 2016. The annual contract costs incurred, estimated costs to complete the contract, and accumulated billings to Fabrik for 2014, 2015, and 2016 are given below.

5

	2014	2015	2016
Contract costs incurred during the year	\$2,880,000	\$2,230,000	\$2,190,000
Estimated costs to complete the contract at 12/31	3,520,000	2,190,000	–0–
Billings to Fabrik during the year	3,200,000	3,500,000	1,700,000

Instructions

- (a) Using the percentage-of-completion method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2014, 2015, and 2016. (Ignore income taxes.)

- (b) Using the completed-contract method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2014, 2015, and 2016. (Ignore income taxes.)

- 3 4** **P18-7 (Long-Term Contract with an Overall Loss)** On July 1, 2014, Torvill Construction Company Inc. contracted to build an office building for Gumbel Corp. for a total contract price of \$1,900,000. On July 1, 2014, Torvill estimated that it would take between 2 and 3 years to complete the building. On December 31, 2016, the building was deemed substantially completed. Following are accumulated contract costs incurred, estimated costs to complete the contract, and accumulated billings to Gumbel for 2014, 2015, and 2016.

	At 12/31/14	At 12/31/15	At 12/31/16
Contract costs incurred to date	\$ 300,000	\$1,200,000	\$2,100,000
Estimated costs to complete the contract	1,200,000	800,000	—
Billings to Gumbel	300,000	1,100,000	1,850,000

Instructions

- (a) Using the percentage-of-completion method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2014, 2015, and 2016. (Ignore income taxes.)
- (b) Using the completed-contract method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2014, 2015, and 2016. (Ignore income taxes.)

- 6** **P18-8 (Installment-Sales Computations and Entries)** Presented below is summarized information for Johnston Co., which sells merchandise on the installment basis.

	2014	2015	2016
Sales (on installment plan)	\$250,000	\$260,000	\$280,000
Cost of sales	155,000	163,800	182,000
Gross profit	<u>\$ 95,000</u>	<u>\$ 96,200</u>	<u>\$ 98,000</u>
Collections from customers on:			
2014 installment sales	\$ 75,000	\$100,000	\$ 50,000
2015 installment sales		100,000	120,000
2016 installment sales			100,000

Instructions

- (a) Compute the realized gross profit for each of the years 2014, 2015, and 2016.
- (b) Prepare all entries required in 2016, applying the installment-sales method of accounting. (Ignore interest charges.)

- 6** **P18-9 (Installment-Sales Income Statements)** Chantal Stores sells merchandise on open account as well as on installment terms.

	2014	2015	2016
Sales on account	\$385,000	\$426,000	\$525,000
Installment sales	320,000	275,000	380,000
Collections on installment sales			
Made in 2014	100,000	90,000	40,000
Made in 2015		110,000	140,000
Made in 2016			125,000
Cost of sales			
Sold on account	270,000	277,000	341,000
Sold on installment	214,400	176,000	228,000
Selling expenses	77,000	87,000	92,000
Administrative expenses	50,000	51,000	52,000

Instructions

From the data above, which cover the 3 years since Chantal Stores commenced operations, determine the net income for each year, applying the installment-sales method of accounting. (Ignore interest charges.)

- 6 P18-10 (Installment-Sales Computations and Entries)** Paul Dobson Stores sell appliances for cash and also on the installment plan. Entries to record cost of sales are made monthly.

PAUL DOBSON STORES		
TRIAL BALANCE		
DECEMBER 31, 2015		
	Dr.	Cr.
Cash	\$153,000	
Installment Accounts Receivable, 2014	56,000	
Installment Accounts Receivable, 2015	91,000	
Inventory—New Merchandise	123,200	
Inventory—Repossessed Merchandise	24,000	
Accounts Payable		\$ 98,500
Deferred Gross Profit, 2014		45,600
Capital Stock		170,000
Retained Earnings		93,900
Sales Revenue		343,000
Installment Sales		200,000
Cost of Goods Sold	255,000	
Cost of Installment Sales	120,000	
Loss on Repossession	800	
Operating Expenses	128,000	
	\$951,000	\$951,000

The accounting department has prepared the following analysis of cash receipts for the year.

Cash sales (including repossessed merchandise)	\$424,000
Installment accounts receivable, 2014	96,000
Installment accounts receivable, 2015	109,000
Other	36,000
Total	\$665,000

Repossessions recorded during the year are summarized as follows.

	2014
Uncollected balance	\$8,000
Loss on repossession	800
Repossessed merchandise	4,800

Instructions

From the trial balance and accompanying information:

- (a) Compute the rate of gross profit on installment sales for 2014 and 2015.
- (b) Prepare closing entries as of December 31, 2015, under the installment-sales method of accounting.
- (c) Prepare an income statement for the year ended December 31, 2015. Include only the realized gross profit in the income statement.

- 6 P18-11 (Installment-Sales Entries)** The following summarized information relates to the installment-sales activity of Phillips Stores, Inc. for the year 2014.

Installment sales during 2014	\$500,000
Cost of goods sold on installment basis	350,000
Collections from customers	180,000
Unpaid balances on merchandise repossessed	24,000
Estimated value of merchandise repossessed	11,200

Instructions

- (a) Prepare journal entries at the end of 2014 to record on the books of Phillips Stores, Inc. the summarized data above.
- (b) Prepare the entry to record the gross profit realized during 2014.

- 6 P18-12 (Installment-Sales Computation and Entries—Periodic Inventory)** Mantle Inc. sells merchandise for cash and also on the installment plan. Entries to record cost of goods sold are made at the end of each year.

Repossessions of merchandise (sold in 2014) were made in 2015 and were recorded correctly as follows.

Deferred Gross Profit, 2014	7,200	
Repossessed Merchandise	8,000	
Loss on Repossession	2,800	
Installment Accounts Receivable, 2014		18,000

Part of this repossessed merchandise was sold for cash during 2015, and the sale was recorded by a debit to Cash and a credit to Sales Revenue.

The inventory of repossessed merchandise on hand December 31, 2015, is \$4,000; of new merchandise, \$127,400. There was no repossessed merchandise on hand January 1, 2015.

Collections on accounts receivable during 2015 were:

Installment Accounts Receivable, 2014	\$80,000
Installment Accounts Receivable, 2015	50,000

The cost of the merchandise sold under the installment plan during 2015 was \$111,600. The rate of gross profit on 2014 and on 2015 installment sales can be computed from the information given.

MANTLE INC.
TRIAL BALANCE
DECEMBER 31, 2015

	Dr.	Cr.
Cash	\$118,400	
Installment Accounts Receivable, 2014	80,000	
Installment Accounts Receivable, 2015	130,000	
Inventory, Jan. 1, 2015	120,000	
Repossessed Merchandise	8,000	
Accounts Payable		\$ 47,200
Deferred Gross Profit, 2014		64,000
Common Stock		200,000
Retained Earnings		40,000
Sales Revenue		400,000
Installment Sales		180,000
Purchases	360,000	
Loss on Repossession	2,800	
Operating Expenses	112,000	
	<u>\$931,200</u>	<u>\$931,200</u>

Instructions

- From the trial balance and other information given above, prepare adjusting and closing entries as of December 31, 2015.
- Prepare an income statement for the year ended December 31, 2015. Include only the realized gross profit in the income statement.

6 **P18-13 (Installment Repossession Entries)** Selected transactions of TV Land Company are presented below.

- A television set costing \$540 is sold to Jack Matre on November 1, 2014, for \$900. Matre makes a down payment of \$300 and agrees to pay \$30 on the first of each month for 20 months thereafter.
- Matre pays the \$30 installment due December 1, 2014.
- On December 31, 2014, the appropriate entries are made to record profit realized on the installment sales.
- The first seven 2015 installments of \$30 each are paid by Matre. (Make one entry.)
- In August 2015, the set is repossessed after Matre fails to pay the August 1 installment and indicates that he will be unable to continue the payments. The estimated fair value of the repossessed set is \$100.

Instructions

Prepare journal entries to record the transactions above on the books of TV Land Company. Closing entries should not be made.

6 **P18-14 (Installment-Sales Computations and Schedules)** Saprano Company, on January 2, 2014, entered into a contract with a manufacturing company to purchase room-size air conditioners and to sell the units on an installment plan with collections over approximately 30 months with no carrying charge.

1102 Chapter 18 Revenue Recognition

For income tax purposes, Saprano Company elected to report income from its sales of air conditioners according to the installment-sales method.

Purchases and sales of new units were as follows.

Year	Units Purchased		Units Sold	
	Quantity	Price Each	Quantity	Price Each
2014	1,400	\$130	1,100	\$200
2015	1,200	112	1,500	170
2016	900	136	800	205

Collections on installment sales were as follows.

	Collections Received		
	2014	2015	2016
2014 sales	\$42,000	\$88,000	\$ 80,000
2015 sales		51,000	110,000
2016 sales			34,600

In 2016, 50 units from the 2015 sales were repossessed and sold for \$120 each on the installment plan. At the time of repossession, \$2,000 had been collected from the original purchasers, and the units had a fair value of \$3,000.

General and administrative expenses for 2016 were \$60,000. No charge has been made against current income for the applicable insurance expense from a 3-year policy expiring June 30, 2017, costing \$7,200, and for an advance payment of \$12,000 on a new contract to purchase air conditioners beginning January 2, 2017.

Instructions

Assuming that the weighted-average method is used for determining the inventory cost, including repossessed merchandise, prepare schedules computing for 2014, 2015, and 2016:

- The cost of goods sold on installments.
 - The average unit cost of goods sold on installments for each year.
- The gross profit percentages for 2014, 2015, and 2016.
- The gain or loss on repossessions in 2016.
- The net income from installment sales for 2016. (Ignore income taxes.)

(AICPA adapted)

4 5 P18-15 (Completed-Contract Method) Monat Construction Company, Inc., entered into a firm fixed-price contract with Hyatt Clinic on July 1, 2014, to construct a four-story office building. At that time, Monat estimated that it would take between 2 and 3 years to complete the project. The total contract price for construction of the building is \$4,400,000. Monat appropriately accounts for this contract under the completed-contract method in its financial statements and for income tax reporting. The building was deemed substantially completed on December 31, 2016. Estimated percentage of completion, accumulated contract costs incurred, estimated costs to complete the contract, and accumulated billings to the Hyatt Clinic under the contract are shown below.

	At December 31, 2014	At December 31, 2015	At December 31, 2016
Percentage of completion	30%	70%	100%
Contract costs incurred	\$1,140,000	\$3,290,000	\$4,800,000
Estimated costs to complete the contract	\$2,660,000	\$1,410,000	—0—
Billings to Hyatt Clinic	\$1,400,000	\$2,500,000	\$4,300,000

Instructions

- Prepare schedules to compute the amount to be shown as “Cost in excess of billings” or “Billings in excess of costs” at December 31, 2014, 2015, and 2016. (Ignore income taxes.) Show supporting computations in good form.
- Prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2014, 2015, and 2016. (Ignore income taxes.) Show supporting computations in good form.

(AICPA adapted)

3 4 P18-16 (Revenue Recognition Methods—Comparison) Sue's Construction is in its fourth year of business. Sue performs long-term construction projects and accounts for them using the completed-contract method. Sue built an apartment building at a price of \$1,100,000. The costs and billings for this contract for the first three years are as follows.

	2014	2015	2016
Costs incurred to date	\$240,000	\$600,000	\$ 790,000
Estimated costs yet to be incurred	560,000	200,000	–0–
Customer billings to date	150,000	410,000	1,100,000
Collection of billings to date	120,000	340,000	950,000

Sue has contacted you, a certified public accountant, about the following concern. She would like to attract some investors, but she believes that in order to recognize revenue she must first "deliver" the product. Therefore, on her balance sheet, she did not recognize any gross profits from the above contract until 2016, when she recognized the entire \$310,000. That looked good for 2016, but the preceding years looked grim by comparison. She wants to know about an alternative to this completed-contract revenue recognition.

Instructions

Draft a letter to Sue, telling her about the percentage-of-completion method of recognizing revenue. Compare it to the completed-contract method. Explain the idea behind the percentage-of-completion method. In addition, illustrate how much revenue she could have recognized in 2014, 2015, and 2016 if she had used this method.

3 4 P18-17 (Comprehensive Problem—Long-Term Contracts) You have been engaged by Buhl Construction Company to advise it concerning the proper accounting for a series of long-term contracts. Buhl commenced doing business on January 1, 2014. Construction activities for the first year of operations are shown below. All contract costs are with different customers, and any work remaining at December 31, 2014, is expected to be completed in 2015.

Project	Total Contract Price	Billings Through 12/31/14	Cash Collections Through 12/31/14	Contract Costs Incurred Through 12/31/14	Estimated Additional Costs to Complete
A	\$ 300,000	\$200,000	\$180,000	\$248,000	\$ 72,000
B	350,000	110,000	105,000	67,800	271,200
C	280,000	280,000	255,000	186,000	–0–
D	200,000	35,000	25,000	118,000	87,000
E	240,000	205,000	200,000	190,000	10,000
	<u>\$1,370,000</u>	<u>\$830,000</u>	<u>\$765,000</u>	<u>\$809,800</u>	<u>\$440,200</u>

Instructions

- Prepare a schedule to compute gross profit (loss) to be reported, unbilled contract costs and recognized profit, and billings in excess of costs and recognized profit using the percentage-of-completion method.
- Prepare a partial income statement and balance sheet to indicate how the information would be reported for financial statement purposes.
- Repeat the requirements for part (a), assuming Buhl uses the completed-contract method.
- Using the responses above for illustrative purposes, prepare a brief report comparing the conceptual merits (both positive and negative) of the two revenue recognition approaches.

PROBLEMS SET B

See the book's companion website, at www.wiley.com/college/kieso, for an additional set of problems.

CONCEPTS FOR ANALYSIS

CA18-1 (Revenue Recognition—Alternative Methods) Peterson Industries has three operating divisions—Farber Mining, Enyart Paperbacks, and Glesen Protection Devices. Each division maintains its own accounting system and method of revenue recognition.

Farber Mining

Farber Mining specializes in the extraction of precious metals such as silver, gold, and platinum. During the fiscal year ended November 30, 2014, Farber entered into contracts worth \$2,250,000 and shipped metals worth \$2,000,000. A quarter of the shipments were made from inventories on hand at the beginning of the fiscal year, and the remainder were made from metals that were mined during the year. Mining totals for the year, valued at market prices, were silver at \$750,000, gold at \$1,400,000, and platinum at \$490,000. Farber uses the completion-of-production method to recognize revenue because its operations meet the specified criteria, i.e., reasonably assured sales prices, interchangeable units, and insignificant distribution costs.

Enyart Paperbacks

Enyart Paperbacks sells large quantities of novels to a few book distributors that in turn sell to several national chains of bookstores. Enyart allows distributors to return up to 30% of sales, and distributors give the same terms to bookstores. While returns from individual titles fluctuate greatly, the returns from distributors have averaged 20% in each of the past 5 years. A total of \$7,000,000 of paperback novel sales were made to distributors during the fiscal year. On November 30, 2014, \$2,200,000 of fiscal 2014 sales were still subject to return privileges over the next 6 months. The remaining \$4,800,000 of fiscal 2014 sales had actual returns of 21%. Sales from fiscal 2013 totaling \$2,500,000 were collected in fiscal 2014, with less than 18% of sales returned. Enyart records revenue according to the method referred to as revenue recognition when the right of return exits, because all applicable criteria for use of this method are met by Enyart's operations.

Glesen Protection Devices

Glesen Protection Devices works through manufacturers' agents in various cities. Orders for alarm systems and down payments are forwarded from agents, and Glesen ships the goods f.o.b. shipping point. Customers are billed for the balance due plus actual shipping costs. The firm received orders for \$6,000,000 of goods during the fiscal year ended November 30, 2014. Down payments of \$600,000 were received, and \$5,000,000 of goods were billed and shipped. Actual freight costs of \$100,000 were also billed. Commissions of 10% on product price were paid to manufacturers' agents after the goods were shipped to customers. Such goods are warranted for 90 days after shipment, and warranty returns have been about 1% of sales. Revenue is recognized at the point of sale by Glesen.

Instructions

- (a) There are a variety of methods for revenue recognition. Define and describe each of the following methods of revenue recognition, and indicate whether each is in accordance with generally accepted accounting principles.
 - (1) Completion-of-production method.
 - (2) Percentage-of-completion method.
 - (3) Installment-sales method.
- (b) Compute the revenue to be recognized in the fiscal year ended November 30, 2014, for
 - (1) Farber Mining.
 - (2) Enyart Paperbacks.
 - (3) Glesen Protection Devices.

(CMA adapted)

CA18-2 (Recognition of Revenue—Theory) Revenue is usually recognized at the point of sale. Under special circumstances, however, bases other than the point of sale are used for the timing of revenue recognition.

Instructions

- (a) Why is the point of sale usually used as the basis for the timing of revenue recognition?
- (b) Disregarding the special circumstances when bases other than the point of sale are used, discuss the merits of each of the following objections to the sale basis of revenue recognition:
 - (1) It is too conservative because revenue is earned throughout the entire process of production.
 - (2) It is not conservative enough because accounts receivable do not represent disposable funds, sales returns and allowances may be made, and collection and bad debt expenses may be incurred in a later period.

- (c) Revenue may also be recognized (1) during production and (2) when cash is received. For each of these two bases of timing revenue recognition, give an example of the circumstances in which it is properly used and discuss the accounting merits of its use in lieu of the sale basis.

(AICPA adapted)

CA18-3 (Recognition of Revenue—Theory) The earning of revenue by a business enterprise is recognized for accounting purposes when the transaction is recorded. In some situations, revenue is recognized approximately as it is earned in the economic sense. In other situations, however, accountants have developed guidelines for recognizing revenue by other criteria, such as at the point of sale.

Instructions

(Ignore income taxes.)

- (a) Explain and justify why revenue is often recognized as earned at time of sale.
- (b) Explain in what situations it would be appropriate to recognize revenue as the productive activity takes place.
- (c) At what times, other than those included in (a) and (b) above, may it be appropriate to recognize revenue? Explain.

CA18-4 (Recognition of Revenue—Bonus Dollars) Griseta & Dubel Inc. was formed early this year to sell merchandise credits to merchants who distribute the credits free to their customers. For example, customers can earn additional credits based on the dollars they spend with a merchant (e.g., airlines and hotels). Accounts for accumulating the credits and catalogs illustrating the merchandise for which the credits may be exchanged are maintained online. Centers with inventories of merchandise premiums have been established for redemption of the credits. Merchants may not return unused credits to Griseta & Dubel.

The following schedule expresses Griseta & Dubel’s expectations as to percentages of a normal month’s activity that will be attained. For this purpose, a “normal month’s activity” is defined as the level of operations expected when expansion of activities ceases or tapers off to a stable rate. The company expects that this level will be attained in the third year and that sales of credits will average \$6,000,000 per month throughout the third year.

Month	Actual	Merchandise	Credit
	Credit Sales Percent	Premium Purchases Percent	Redemptions Percent
6th	30%	40%	10%
12th	60	60	45
18th	80	80	70
24th	90	90	80
30th	100	100	95

Griseta & Dubel plans to adopt an annual closing date at the end of each 12 months of operation.

Instructions

- (a) Discuss the factors to be considered in determining when revenue should be recognized in measuring the income of a business enterprise.
- (b) Discuss the accounting alternatives that should be considered by Griseta & Dubel Inc. for the recognition of its revenues and related expenses.
- (c) For each accounting alternative discussed in (b), give balance sheet accounts that should be used and indicate how each should be classified.

(AICPA adapted)

CA18-5 (Recognition of Revenue from Subscriptions) *Cutting Edge* is a monthly magazine that has been on the market for 18 months. It currently has a circulation of 1.4 million copies. Negotiations are underway to obtain a bank loan in order to update the magazine’s facilities. They are producing close to capacity and expect to grow at an average of 20% per year over the next 3 years.

After reviewing the financial statements of *Cutting Edge*, Andy Rich, the bank loan officer, had indicated that a loan could be offered to *Cutting Edge* only if it could increase its current ratio and decrease its debt to equity ratio to a specified level.

Jonathan Embry, the marketing manager of *Cutting Edge*, has devised a plan to meet these requirements. Embry indicates that an advertising campaign can be initiated to immediately increase circulation. The potential customers would be contacted after the purchase of another magazine’s mailing list. The campaign would include:

1. An offer to subscribe to *Cutting Edge* at 3/4 the normal price.
2. A special offer to all new subscribers to receive the most current world atlas whenever requested at a guaranteed price of \$2.

- An unconditional guarantee that any subscriber will receive a full refund if dissatisfied with the magazine.

Although the offer of a full refund is risky, Embry claims that few people will ask for a refund after receiving half of their subscription issues. Embry notes that other magazine companies have tried this sales promotion technique and experienced great success. Their average cancellation rate was 25%. On average, each company increased its initial circulation threefold and in the long run increased circulation to twice that which existed before the promotion. In addition, 60% of the new subscribers are expected to take advantage of the atlas premium. Embry feels confident that the increased subscriptions from the advertising campaign will increase the current ratio and decrease the debt to equity ratio.

You are the controller of *Cutting Edge* and must give your opinion of the proposed plan.

Instructions

- When should revenue from the new subscriptions be recognized?
- How would you classify the estimated sales returns stemming from the unconditional guarantee?
- How should the atlas premium be recorded? Is the estimated premium claims a liability? Explain.
- Does the proposed plan achieve the goals of increasing the current ratio and decreasing the debt to equity ratio?

CA18-6 (Long-Term Contract—Percentage-of-Completion) Widjaja Company is accounting for a long-term construction contract using the percentage-of-completion method. It is a 4-year contract that is currently in its second year. The latest estimates of total contract costs indicate that the contract will be completed at a profit to Widjaja Company.

Instructions

- What theoretical justification is there for Widjaja Company's use of the percentage-of-completion method?
- How would progress billings be accounted for? Include in your discussion the classification of progress billings in Widjaja Company financial statements.
- How would the income recognized in the second year of the 4-year contract be determined using the cost-to-cost method of determining percentage of completion?
- What would be the effect on earnings per share in the second year of the 4-year contract of using the percentage-of-completion method instead of the completed-contract method? Discuss.

(AICPA adapted)

CA18-7 (Revenue Recognition—Membership Fees) Midwest Health Club (MHC) offers one-year memberships. Membership fees are due in full at the beginning of the individual membership period. As an incentive to new customers, MHC advertised that any customers not satisfied for any reason could receive a refund of the remaining portion of unused membership fees. As a result of this policy, Richard Nies, corporate controller, recognized revenue ratably over the life of the membership.

MHC is in the process of preparing its year-end financial statements. Rachel Avery, MHC's treasurer, is concerned about the company's lackluster performance this year. She reviews the financial statements Nies prepared and tells Nies to recognize membership revenue when the fees are received.

Instructions

Answer the following questions.

- What are the ethical issues involved?
- What should Nies do?

***CA18-8 (Franchise Revenue)** Amigos Burrito Inc. sells franchises to independent operators throughout the northwestern part of the United States. The contract with the franchisee includes the following provisions.

- The franchisee is charged an initial fee of \$120,000. Of this amount, \$20,000 is payable when the agreement is signed, and a \$20,000 non-interest-bearing note is payable at the end of each of the 5 subsequent years.
- All of the initial franchise fee collected by Amigos is to be refunded and the remaining obligation canceled if, for any reason, the franchisee fails to open his or her franchise.
- In return for the initial franchise fee, Amigos agrees to (a) assist the franchisee in selecting the location for the business, (b) negotiate the lease for the land, (c) obtain financing and assist with building design, (d) supervise construction, (e) establish accounting and tax records, and (f) provide expert advice over a 5-year period relating to such matters as employee and management training, quality control, and promotion.
- In addition to the initial franchise fee, the franchisee is required to pay to Amigos a monthly fee of 2% of sales for menu planning, receipt innovations, and the privilege of purchasing ingredients from Amigos at or below prevailing market prices.

Management of Amigos Burrito estimates that the value of the services rendered to the franchisee at the time the contract is signed amounts to at least \$20,000. All franchisees to date have opened their locations at the scheduled time, and none have defaulted on any of the notes receivable.

The credit ratings of all franchisees would entitle them to borrow at the current interest rate of 10%. The present value of an ordinary annuity of five annual receipts of \$20,000 each discounted at 10% is \$75,816.

Instructions

- Discuss the alternatives that Amigos Burrito Inc. might use to account for the initial franchise fees, evaluate each by applying generally accepted accounting principles, and give illustrative entries for each alternative.
- Given the nature of Amigos Burrito's agreement with its franchisees, when should revenue be recognized? Discuss the question of revenue recognition for both the initial franchise fee and the additional monthly fee of 2% of sales, and give illustrative entries for both types of revenue.
- Assume that Amigos Burrito sells some franchises for \$100,000, which includes a charge of \$20,000 for the rental of equipment for its useful life of 10 years; that \$50,000 of the fee is payable immediately and the balance on non-interest-bearing notes at \$10,000 per year; that no portion of the \$20,000 rental payment is refundable in case the franchisee goes out of business; and that title to the equipment remains with the franchisor. Under those assumptions, what would be the preferable method of accounting for the rental portion of the initial franchise fee? Explain.

(AICPA adapted)

USING YOUR JUDGMENT

FINANCIAL REPORTING

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix 5B. The company's complete annual report, including the notes to the financial statements, can be accessed at the book's companion website, www.wiley.com/college/kieso.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- What were P&G's net sales for 2011?
- What was the percentage of increase or decrease in P&G's net sales from 2010 to 2011? From 2009 to 2010? From 2009 to 2011?
- In its notes to the financial statements, what criteria does P&G use to recognize revenue?
- How does P&G account for trade promotions? Does the accounting conform to accrual accounting concepts? Explain.

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

Instructions

Go to the book's companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- What were Coca-Cola's and PepsiCo's net revenues (sales) for the year 2011? Which company increased its revenues more (dollars and percentage) from 2010 to 2011?
- Are the revenue recognition policies of Coca-Cola and PepsiCo similar? Explain.
- In which foreign countries (geographic areas) did Coca-Cola and PepsiCo experience significant revenues in 2011? Compare the amounts of foreign revenues to U.S. revenues for both Coca-Cola and PepsiCo.

Financial Statement Analysis Case

Westinghouse Electric Corporation

The following note appears in the "Summary of Significant Accounting Policies" section of the Annual Report of **Westinghouse Electric Corporation**.

Note 1 (in part): Revenue Recognition. Sales are primarily recorded as products are shipped and services are rendered. The percentage-of-completion method of accounting is used for nuclear steam supply system orders with delivery schedules generally in excess of five years and for certain construction projects where this method of accounting is consistent with industry practice.

WFSI revenues are generally recognized on the accrual method. When accounts become delinquent for more than two payment periods, usually 60 days, income is recognized only as payments are received. Such delinquent accounts for which no payments are received in the current month, and other accounts on which income is not being recognized because the receipt of either principal or interest is questionable, are classified as nonearning receivables.

Instructions

- Identify the revenue recognition methods used by Westinghouse Electric as discussed in its note on significant accounting policies.
- Under what conditions are the revenue recognition methods identified in the first paragraph of Westinghouse's note above acceptable?
- From the information provided in the second paragraph of Westinghouse's note, identify the type of operation being described and defend the acceptability of the revenue recognition method.

Accounting, Analysis, and Principles

Diversified Products, Inc. operates in several lines of business, including the construction and real estate industries. While the majority of its revenues are recognized at point of sale, Diversified appropriately recognizes revenue on long-term construction contracts using the percentage-of-completion method. It recognizes sales of some properties using the installment-sales approach. Income data for 2014 from operations other than construction and real estate are as follows.

Revenues	\$9,500,000
Expenses	7,750,000

- Diversified started a construction project during 2013. The total contract price is \$1,000,000, and \$200,000 in costs were incurred in both 2013 and 2014. In 2013, Diversified recognized \$50,000 gross profit on the project. Estimated costs to complete the project in 2015 were \$400,000.
- During 2014, Diversified sold real-estate parcels at a price of \$630,000. Gross profit at a 25% rate is recognized when cash is received. Diversified collected \$500,000 during the year on these sales.

Accounting

Determine Diversified Products' 2014 net income. (Ignore taxes.)

Analysis

Determine free cash flow (see Chapter 5) for Diversified Products for 2014. In 2014, Diversified had depreciation expense of \$175,000 and a net increase in working capital (changes in accounts receivable and accounts payable) of \$250,000. In 2014, capital expenditures were \$500,000; Diversified paid dividends of \$120,000.

Principles

"Application of the percentage-of-completion and installment-sales method revenue recognition approaches illustrates the trade-off between relevance and faithful representation of accounting information." Explain.

BRIDGE TO THE PROFESSION

Professional Research: FASB Codification

Employees at your company disagree about the accounting for sales returns. The sales manager believes that granting more generous return provisions can give the company a competitive edge and increase sales revenue. The controller cautions that, depending on the terms granted, loose return provisions might lead to non-GAAP revenue recognition. The company CFO would like you to research the issue to provide an authoritative answer.

Instructions

If your school has a subscription to the FASB Codification, go to <http://aaa.hq.org/asclogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

- What is the authoritative literature addressing revenue recognition when right of return exists?
- What is meant by “right of return”?
- When there is a right of return, what conditions must the company meet to recognize the revenue at the time of sale?
- What factors may impair the ability to make a reasonable estimate of future returns?

Additional Professional Resources

See the book’s companion website, at www.wiley.com/college/kieso, for professional simulations as well as other study resources.

**IFRS****INSIGHTS**

The general concepts and principles used for revenue recognition are similar between IFRS and GAAP. Where they differ is in the details. As indicated in the chapter, GAAP provides specific guidance related to revenue recognition for many different industries. That is not the case for IFRS.

9 LEARNING OBJECTIVE

Compare the accounting procedures related to revenue recognition under GAAP and IFRS.

RELEVANT FACTS

Following are the key similarities and differences between GAAP and IFRS related to revenue recognition.

Similarities

- Revenue recognition fraud is a major issue in U.S. financial reporting. The same situation occurs overseas as evidenced by revenue recognition breakdowns at Dutch software company **Baan NV**, Japanese electronics giant **NEC**, and Dutch grocer **AHold NV**.
- In general, the accounting at point of sale is similar between IFRS and GAAP. As indicated earlier, GAAP often provides detailed guidance, such as in the accounting for right of return and multiple-deliverable arrangements.
- In long-term construction contracts, IFRS requires recognition of a loss immediately if the overall contract is going to be unprofitable. In other words, GAAP and IFRS are the same regarding this issue.

Differences

- The IASB defines revenue to include both revenues and gains. GAAP provides separate definitions for revenues and gains.
- IFRS has one basic standard on revenue recognition—*IAS 18*. GAAP has numerous standards related to revenue recognition (by some counts over 100).
- Accounting for revenue provides a most fitting contrast of the principles-based (IFRS) and rules-based (GAAP) approaches. While both sides have their advocates, the IASB and the FASB have identified a number of areas for improvement in this area.
- In general, the IFRS revenue recognition principle is based on the probability that the economic benefits associated with the transaction will flow to the company selling the

goods, rendering the service, or receiving investment income. In addition, the revenues and costs must be capable of being measured reliably. GAAP uses concepts such as realized, realizable, and earned as a basis for revenue recognition.

- Under IFRS, revenue should be measured at fair value of the consideration received or receivable. GAAP measures revenue based on the fair value of what is given up (goods or services) or the fair value of what is received—whichever is more clearly evident.
- IFRS prohibits the use of the completed-contract method of accounting for long-term construction contracts (*IAS 13*). Companies must use the percentage-of-completion method. If revenues and costs are difficult to estimate, then companies recognize revenue only to the extent of the cost incurred—a cost-recovery (zero-profit) approach.

ABOUT THE NUMBERS

Long-Term Contracts (Construction)

Under IFRS, two distinctly different methods of accounting for long-term construction contracts are recognized. They are:

- *Percentage-of-completion method.* Companies recognize revenues and gross profits each period based on the progress of the construction—that is, the percentage of completion. The company accumulates construction costs **plus gross profit earned to date** in an inventory account (Construction in Process), and it accumulates progress billings in a contra inventory account (Billings on Construction in Process). This approach is the same as GAAP.
- *Cost-recovery (zero-profit) method.* In some cases, contract revenue is recognized only to the extent of costs incurred that are expected to be recoverable. Once all costs are recognized, profit is recognized. The company accumulates construction costs in an inventory account (Construction in Process), and it accumulates progress billings in a contra inventory account (Billings on Construction in Process).

The rationale for using percentage-of-completion accounting is that under most of these contracts, the buyer and seller have enforceable rights. The buyer has the legal right to require specific performance on the contract. The seller has the right to require progress payments that provide evidence of the buyer's ownership interest. As a result, a continuous sale occurs as the work progresses. Companies should recognize revenue according to that progression. Companies *must* use the percentage-of-completion method when estimates of progress toward completion, revenues, and costs can be estimated reliably and **all of the following conditions** exist.

1. Total contract revenue can be measured reliably;
2. It is probable that the economic benefits associated with the contract will flow to the company;
3. Both the contract costs to complete the contract and the stage of contract completion at the end of the reporting period can be measured reliably; and
4. The contract costs attributable to the contract can be clearly identified and measured reliably so the actual contract costs incurred can be compared with prior estimates.

Companies should use the cost-recovery method when **one of the following conditions** applies:

- When a company cannot meet the conditions for using the percentage-of-completion method, or
- When there are inherent hazards in the contract beyond the normal, recurring business risks.

The presumption is that percentage-of-completion is the better method. Therefore, companies should use the cost-recovery method only when the percentage-of-completion method is inappropriate.

Cost-Recovery (Zero-Profit) Method

During the early stages of a contract, a company like **Alcatel-Lucent** may not be able to estimate reliably the outcome of a long-term construction contract. Nevertheless, Alcatel-Lucent is confident that it will recover the contract costs incurred. In this case, Alcatel-Lucent uses the **cost-recovery method** (sometimes referred to as the zero-profit method). This method recognizes revenue only to the extent of costs incurred that are expected to be recoverable. Only after all costs are incurred is gross profit recognized.

To illustrate the cost-recovery method for a bridge project, recall the Hardhat Construction example on pages 1059–1067. Under the cost-recovery method, Hardhat would report the following revenues and costs for 2014–2016, as shown in Illustration IFRS18-1.

	To Date	Recognized in Prior Years	Recognized in Current Year
2014			
Revenues (costs incurred)	\$1,000,000		\$1,000,000
Costs	1,000,000		1,000,000
Gross profit	\$ 0		\$ 0
2015			
Revenues (costs incurred)	\$2,916,000	\$1,000,000	\$1,916,000
Costs	2,916,000	1,000,000	1,916,000
Gross profit	\$ 0	\$ 0	\$ 0
2016			
Revenues (\$4,500,000 × 100%)	\$4,500,000	\$2,916,000	\$1,584,000
Costs	4,050,000	2,916,000	1,134,000
Gross profit	\$ 450,000	\$ 0	\$ 450,000

ILLUSTRATION IFRS18-1

Cost-Recovery Method
Revenue, Costs, and
Gross Profit by Year

Illustration IFRS18-2 shows Hardhat's entries to recognize revenue and gross profit each year and to record completion and final approval of the contract.

	2014	2015	2016
Construction Expenses	1,000,000	1,916,000	
Revenue from Long-Term Contracts		1,000,000	1,916,000
(To recognize costs and related expenses)			
Construction in Process (Gross Profit)			450,000
Construction Expenses			1,134,000
Revenue from Long-Term Contracts			1,584,000
(To recognize costs and related expenses)			
Billings on Construction in Process			4,500,000
Construction in Process			4,500,000
(To record completion of the contract)			

ILLUSTRATION IFRS18-2

Journal Entries—
Cost-Recovery Method

As indicated, no gross profit is recognized in 2014 and 2015. In 2016, Hardhat then recognizes gross profit and closes the Billings and Construction in Process accounts.

Illustration IFRS18-3 (page 1112) compares the amount of gross profit that Hardhat Construction Company would recognize for the bridge project under the two revenue recognition methods.

Less: Construction in process	<u>2,916,000</u>		
Billings in excess of costs and recognized profits		384,000	-0-

Note 1. Summary of significant accounting policies.

Long-Term Construction Contracts. The company recognizes revenues and reports profits from long-term construction contracts, its principal business, under the cost-recovery method. These contracts generally extend for periods in excess of one year. Contract costs and billings are accumulated during the periods of construction, and revenues are recognized only to the extent of costs incurred that are expected to be recoverable. Only after all costs are incurred is net income recognized. Costs included in construction in process include direct material, direct labor, and project-related overhead. Corporate general and administrative expenses are charged to the periods as incurred.

ON THE HORIZON

The FASB and IASB are now involved in a joint project on revenue recognition. The objective of the project is to develop coherent conceptual guidance for revenue recognition and a comprehensive statement on revenue recognition based on those concepts. In particular, the project is intended to improve financial reporting by (1) converging U.S. and international standards on revenue recognition, (2) eliminating inconsistencies in the existing conceptual guidance on revenue recognition, (3) providing conceptual guidance that would be useful in addressing future revenue recognition issues, (4) eliminating inconsistencies in existing standards-level authoritative literature and accepted practices, (5) filling voids in revenue recognition guidance that have developed over time, and (6) establishing a single, comprehensive standard on revenue recognition. Presently, the Boards proposed a “customer-consideration” model; under this model, revenue is recognized when a performance obligation is satisfied. It is hoped that

this approach (rather than using the earned and realized criteria) will lead to a better basis for revenue recognition. For more on this topic, see http://www.fasb.org/project/revenue_recognition.shtml.

IFRS SELF-TEST QUESTIONS

1. The IASB:
 - (a) has issued over 100 standards related to revenue recognition.
 - (b) has issued one standard related to revenue recognition.
 - (c) indicates that the present state of reporting for revenue is satisfactory.
 - (d) All of the above.
2. Under IFRS, the revenue recognition principle indicates that revenue is recognized when:
 - I. the benefits can be measured reliably.
 - II. the sales transaction is initiated and completed.
 - III. it is probable the benefits will flow to the company.
 - IV. the date of sale, date of delivery, and billing have all occurred.
 - (a) I, II, and III.
 - (b) II and III.
 - (c) I and III.
 - (d) I, II, III and IV.
3. Lark Corp. has a contract to construct a \$5,000,000 cruise ship at an estimated cost of \$4,000,000. The company will begin construction of the cruise ship in early January 2013 and expects to complete the project sometime in late 2014. Lark Corp. has never constructed a cruise ship before, and the customer has never operated a cruise ship. Due to this and other circumstances, Lark Corp. believes there are inherent hazards in the contract beyond the normal, recurring business risks. Lark Corp. expects to recover all its costs under the contract. Under these circumstances, Lark Corp. should:
 - (a) wait until the completion of construction before it recognizes revenue.
 - (b) use the percentage-of-completion method and measure progress toward completion using the units-of-delivery method.
 - (c) use the percentage-of-completion method and measure progress toward completion using the cost-to-cost method.
 - (d) use the cost-recovery (zero-profit) method.
4. Swallow Corp. has a contract to construct a \$5,000,000 cruise ship at an estimated cost of \$4,000,000. The company will begin construction of the cruise ship in early January 2013 and expects to complete the project sometime in late 2016. Swallow Corp. has never constructed a cruise ship before, and the customer has never operated a cruise ship. Due to this and other circumstances, Swallow Corp. believes there are inherent hazards in the contract beyond the normal, recurring business risks. Swallow Corp. expects to recover all its costs under the contract. During 2013 and 2014, the company has the following activity:

	2013	2014
Costs to date	\$ 980,000	\$2,040,000
Estimated costs to complete	3,020,000	1,960,000
Progress billings during the year	1,000,000	1,000,000
Cash collected during the year	648,000	1,280,000

For the year ended December 31, 2014, how much revenue should Swallow Corp. recognize on its income statement?

- (a) \$980,000.
 - (b) \$2,040,000.
 - (c) \$1,300,000.
 - (d) \$1,060,000.
5. Given the information in question 4 above, on its statement of financial position at December 31, 2014, what amount is reported in the cost of construction and billings presentation by Swallow?
 - (a) \$40,000 costs in excess of billings.
 - (b) \$1,020,000 costs in excess of billings.
 - (c) \$40,000 billings in excess of costs.
 - (d) \$20,000 billings in excess of costs.

IFRS CONCEPTS AND APPLICATION

IFRS18-1 What is a major difference between IFRS and GAAP as regards revenue recognition practices?

IFRS18-2 IFRS prohibits the use of the completed-contract method in accounting for long-term contracts. If revenues and costs are difficult to estimate, how must companies account for long-term contracts?

IFRS18-3 Livesey Company has signed a long-term contract to build a new basketball arena. The total revenue related to the contract is \$120 million. Estimated costs for building the arena are \$40 million in the first year and \$30 million in both the second and third years. The costs cannot be reliably estimated. How much revenue should Livesey Company report in the first year under IFRS?

IFRS18-4 What are the two basic methods of accounting for long-term construction contracts? Indicate the circumstances that determine when one or the other of these methods should be used.

IFRS18-5 When is revenue recognized under the cost-recovery method?

IFRS18-6 Turner, Inc. began work on a \$7,000,000 contract in 2014 to construct an office building. During 2014, Turner, Inc. incurred costs of \$1,700,000, billed its customers for \$1,200,000, and collected \$960,000. At December 31, 2014, the estimated future costs to complete the project total \$3,300,000. Prepare Turner's 2014 journal entries using the percentage-of-completion method.

IFRS18-7 Use the information from IFRS18-6, but assume Turner uses the cost-recovery method. Prepare the company's 2014 journal entries.

IFRS18-8 Hamilton Construction Company uses the percentage-of-completion method of accounting. In 2014, Hamilton began work under contract #E2-D2, which provided for a contract price of \$2,200,000. Other details are as follows.

	2014	2015
Costs incurred during the year	\$640,000	\$1,425,000
Estimated costs to complete, as of December 31	960,000	–0–
Billings during the year	420,000	1,680,000
Collections during the year	350,000	1,500,000

Instructions

- (a) What portion of the total contract price would be recognized as revenue in 2014? In 2015?
- (b) Assuming the same facts as those shown above except that Hamilton uses the cost-recovery method of accounting, what portion of the total contract price would be recognized as revenue in 2015?

Professional Research

IFRS18-9 Employees at your company disagree about the accounting for sales returns. The sales manager believes that granting more generous return provisions and allowing customers to order items on a bill and hold basis can give the company a competitive edge and increase sales revenue. The controller cautions that, depending on the terms granted, loose return or bill and hold provisions might lead to non-IFRS revenue recognition. The company CFO would like you to research the issue to provide an authoritative answer.

Instructions

Access the IFRS authoritative literature at the IASB website (<http://eifrs.iasb.org/>). (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) What is the authoritative literature addressing revenue recognition when right of return exists?
- (b) What is meant by "right of return"? "Bill and hold"?
- (c) When there is a right of return, what conditions must the company meet to recognize the revenue at the time of sale?
- (d) What factors may impair the ability to make a reasonable estimate of future returns?
- (e) When goods are sold on a bill and hold basis, what conditions must be met to recognize revenue upon receipt of the order?

International Financial Reporting Problem

Marks and Spencer plc

IFRS18-10 The financial statements of **Marks and Spencer plc (M&S)** are available at the book's companion website or can be accessed at http://annualreport.marksandspencer.com/_assets/downloads/Marks-and-Spencer-Annual-report-and-financial-statements-2012.pdf.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) What were M&S's sales for 2012?
- (b) What was the percentage of increase or decrease in M&S's sales from 2011 to 2012? From 2010 to 2011? From 2010 to 2012?
- (c) In its notes to the financial statements, what criteria does M&S use to recognize revenue?
- (d) How does M&S account for discounts and loyalty schemes? Does the accounting conform to accrual-accounting concepts? Explain.

ANSWERS TO IFRS SELF-TEST QUESTIONS

Remember to check the book's companion website to find additional resources for this chapter.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- | | |
|---|--|
| <p>1 Identify differences between pretax financial income and taxable income.</p> <p>2 Describe a temporary difference that results in future taxable amounts.</p> <p>3 Describe a temporary difference that results in future deductible amounts.</p> <p>4 Explain the purpose of a deferred tax asset valuation allowance.</p> <p>5 Describe the presentation of income tax expense in the income statement.</p> | <p>6 Describe various temporary and permanent differences.</p> <p>7 Explain the effect of various tax rates and tax rate changes on deferred income taxes.</p> <p>8 Apply accounting procedures for a loss carryback and a loss carryforward.</p> <p>9 Describe the presentation of deferred income taxes in financial statements.</p> <p>10 Indicate the basic principles of the asset-liability method.</p> |
|---|--|

How Much Is Enough?

In the wake of the economic downturn due to the financial crisis, a number of companies and numerous banks reported operating losses. As you will learn in this chapter, the tax code allows companies that report operating losses to claim a tax credit related to these losses for taxes paid in the past (referred to as “carrybacks”) and to offset taxable income in periods following the operating loss (referred to as “carryforwards”). When companies use these offsets, they reduce income tax expense, which increases net income. For tax carryforwards, companies also record a deferred tax asset, which measures the expected future net cash inflows from lower taxable income in future periods.

Citigroup is a good example of a company that has used operating loss credits to reduce its tax bill. In 2008, it had deferred tax assets (DTAs) of \$28.5 billion, which represented 80 percent of stockholders’ equity and nearly eclipsed the bank’s market value of equity. Some analysts have raised concerns about Citi’s DTAs and whether these assets will ever be realized by Citi. Why the concerns?

Well, in order to receive the tax deductions in future years, a company like Citigroup needs to be reasonably sure it will have taxable income in the future. In Citi’s case, analysts predict that the struggling bank will need to earn \$99 billion in taxable income over the next 20 years. Given that Citigroup recorded operating losses of \$60 billion in 2008 and 2009, some are skeptical that the DTAs will be realized. As a result, market watchers are debating whether Citi should set up an allowance to reduce its deferred tax assets due to the possibility that the assets will not be realized. Not surprisingly, Citigroup has resisted setting up an allowance as it would reduce its DTAs and increase its income tax expense.

This accounting does not sit well with some market observers. As one critic noted, “Why should auditors, investors, regulators and others rely on Citigroup’s projections . . . to justify the use (realizability) of their DTAs?” Former SEC chief accountant, Lynn Turner, agrees: “Citi’s position defies imagination and logic. Instead of talking about making money, what Citi ought to do is to reserve for at least part of the deferred tax assets and reap the benefit of reducing the reserves once it actually makes money.”

CONCEPTUAL FOCUS

> Read the **Evolving Issue** on page 1143 for a discussion of uncertain tax positions.

INTERNATIONAL FOCUS

- > See the **International Perspectives** on pages 1119, 1128, 1137, 1140, and 1145.
- > Read the **IFRS Insights** on pages 1175–1181 for a discussion of:
 - Deferred tax asset (non-recognition)
 - Statement of financial position classification

In response, Citigroup, which accumulated deferred tax assets partly because of its huge losses during the financial crisis, said it was “very comfortable with the recording of our deferred tax assets.” And some market analysts sided with the bank, remarking that Citi’s accounts were not out of order due to a misstatement of its DTAs. The Citigroup debate has arisen because accounting standards on DTAs are vague, stating that an allowance is not needed if management believes it is “more likely than not” the company will earn enough taxable income in the future.

This debate over Citigroup’s accounting highlights the extent to which management judgment plays an important role in the accounting for taxes. After studying this chapter, you should be better able to evaluate Citigroup’s accounting as well as the other judgments inherent in the accounting for income taxes.

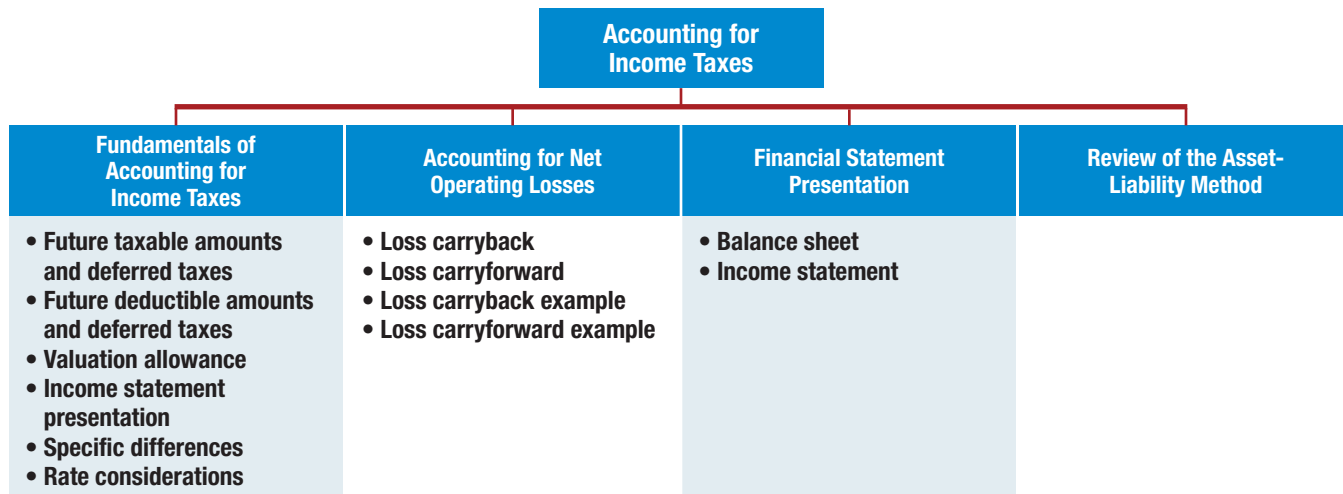

Sources: Adapted from J. Weil, “Citigroup’s Capital Was All Casing, No Meat,” *www.bloomberg.net* (November 24, 2008); and F. Guerra and J. Eaglesham, “Citi Under Fire Over Deferred Tax Assets,” *Financial Times* (September 6, 2010).

PREVIEW OF CHAPTER

19

As our opening story indicates, the accounting for income taxes involves significant judgment. Investors need to be knowledgeable of the accounting provisions related to taxes to be able to evaluate

these judgments. Thus, companies must present financial information to the investment community that provides a clear picture of present and potential tax obligations and tax benefits. In this chapter, we discuss the basic guidelines that companies must follow in reporting income taxes. The content and organization of the chapter are as follows.

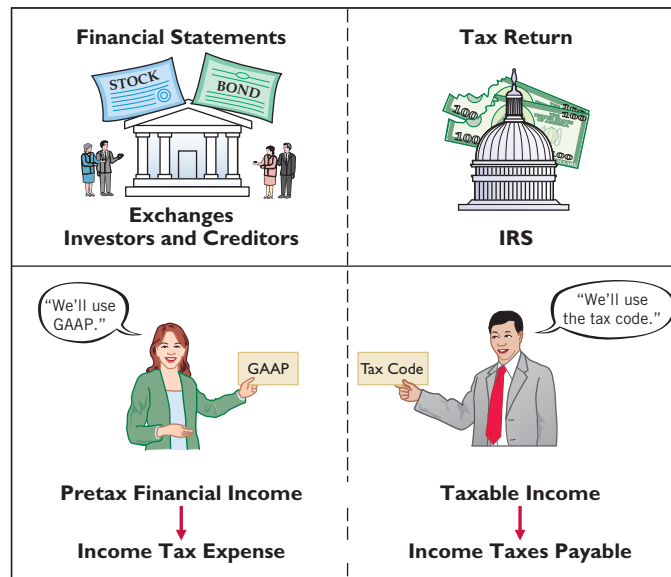

FUNDAMENTALS OF ACCOUNTING FOR INCOME TAXES

LEARNING OBJECTIVE 1

Identify differences between pretax financial income and taxable income.

Up to this point, you have learned the basic guidelines that corporations use to report information to investors and creditors. Corporations also must file income tax returns following the guidelines developed by the Internal Revenue Service (IRS). Because GAAP and tax regulations differ in a number of ways, so frequently do pretax financial income and taxable income. Consequently, the amount that a company reports as tax expense will differ from the amount of taxes payable to the IRS. Illustration 19-1 highlights these differences.

ILLUSTRATION 19-1
Fundamental Differences between Financial and Tax Reporting

Pretax financial income is a **financial reporting** term. It also is often referred to as income before taxes, income for financial reporting purposes, or income for book purposes. Companies determine pretax financial income according to GAAP. They measure it with the objective of providing useful information to investors and creditors.

Taxable income (income for tax purposes) is a **tax accounting** term. It indicates the amount used to compute income taxes payable. Companies determine taxable income according to the Internal Revenue Code (the tax code). Income taxes provide money to support government operations.

To illustrate how differences in GAAP and IRS rules affect financial reporting and taxable income, assume that Chelsea Inc. reported revenues of \$130,000 and expenses of \$60,000 in each of its first three years of operations. Illustration 19-2 shows the (partial) income statement over these three years.

ILLUSTRATION 19-2
Financial Reporting Income

CHELSEA INC. GAAP REPORTING				
	2014	2015	2016	Total
Revenues	\$130,000	\$130,000	\$130,000	
Expenses	60,000	60,000	60,000	
Pretax financial income	\$ 70,000	\$ 70,000	\$ 70,000	\$210,000
Income tax expense (40%)	\$ 28,000	\$ 28,000	\$ 28,000	\$ 84,000

For tax purposes (following the tax code), Chelsea reported the same expenses to the IRS in each of the years. But, as Illustration 19-3 shows, Chelsea reported taxable revenues of \$100,000 in 2014, \$150,000 in 2015, and \$140,000 in 2016.

CHELSEA INC. TAX REPORTING				
	2014	2015	2016	Total
Revenues	\$100,000	\$150,000	\$140,000	
Expenses	60,000	60,000	60,000	
Taxable income	\$ 40,000	\$ 90,000	\$ 80,000	\$210,000
Income taxes payable (40%)	\$ 16,000	\$ 36,000	\$ 32,000	\$ 84,000

ILLUSTRATION 19-3
Tax Reporting Income

Income tax expense and income taxes payable differed over the three years but were equal **in total**, as Illustration 19-4 shows.

CHELSEA INC. INCOME TAX EXPENSE AND INCOME TAXES PAYABLE				
	2014	2015	2016	Total
Income tax expense	\$28,000	\$28,000	\$28,000	\$84,000
Income taxes payable	16,000	36,000	32,000	84,000
Difference	\$12,000	\$ (8,000)	\$ (4,000)	\$ 0

ILLUSTRATION 19-4
Comparison of Income Tax Expense to Income Taxes Payable

The differences between income tax expense and income taxes payable in this example arise for a simple reason. For financial reporting, companies use the full accrual method to report revenues. For tax purposes, they use a modified cash basis. As a result, Chelsea reports pretax financial income of \$70,000 and income tax expense of \$28,000 for each of the three years. However, taxable income fluctuates. For example, in 2014 taxable income is only \$40,000, so Chelsea owes just \$16,000 to the IRS that year. Chelsea classifies the income taxes payable as a current liability on the balance sheet.

As Illustration 19-4 indicates, for Chelsea the \$12,000 (\$28,000 – \$16,000) difference between income tax expense and income taxes payable in 2014 reflects taxes that it will pay in future periods. This \$12,000 difference is often referred to as a **deferred tax amount**. In this case, it is a **deferred tax liability**. In cases where taxes will be lower in the future, Chelsea records a **deferred tax asset**. We explain the measurement and accounting for deferred tax liabilities and assets in the following two sections.¹

International Perspective

In some countries, taxable income equals pretax financial income. As a consequence, accounting for differences between tax and book income is insignificant.

Future Taxable Amounts and Deferred Taxes

The example summarized in Illustration 19-4 shows how income taxes payable can differ from income tax expense. This can happen when there are temporary differences between the amounts reported for tax purposes and those reported for

2 LEARNING OBJECTIVE

Describe a temporary difference that results in future taxable amounts.

¹Determining the amount of tax to pay the IRS is a costly exercise for both individuals and companies. Individuals and businesses must pay not only the taxes owed but also the costs of their own time spent filing and complying with the tax code, including (1) the tax collection costs of the IRS, and (2) the tax compliance outlays that individuals and businesses pay to help them file their taxes. One study estimated this cost to be 30 cents on every dollar sent to the government. Another study noted how big the tax compliance industry has become. According to the research, the tax compliance industry employs more people than all the workers at **Wal-Mart, UPS, McDonald's, IBM, and Citigroup** combined. Source: A. Laffer, "The 30-Cent Tax Premium," *Wall Street Journal* (April 18, 2011).

book purposes. A **temporary difference** is the difference between the tax basis of an asset or liability and its reported (carrying or book) amount in the financial statements, which will result in taxable amounts or deductible amounts in future years. **Taxable amounts** increase taxable income in future years. **Deductible amounts** decrease taxable income in future years.

In Chelsea's situation, the only difference between the book basis and tax basis of the assets and liabilities relates to accounts receivable that arose from revenue recognized for book purposes. Illustration 19-5 indicates that Chelsea reports accounts receivable at \$30,000 in the December 31, 2014, GAAP-basis balance sheet. However, the receivables have a zero tax basis.

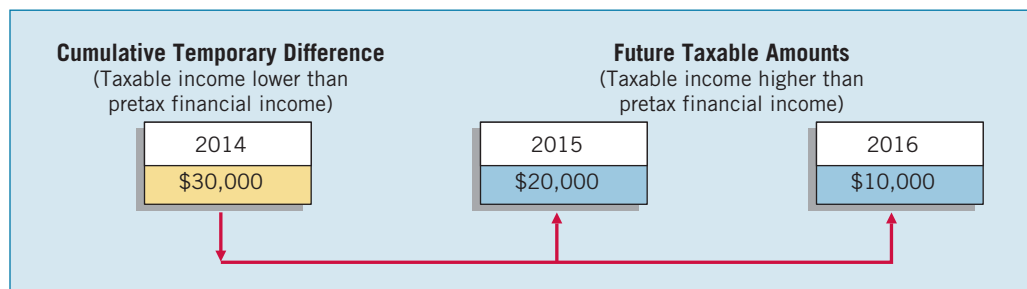

ILLUSTRATION 19-5
Temporary Difference,
Sales Revenue

<u>Per Books</u>	<u>12/31/14</u>	<u>Per Tax Return</u>	<u>12/31/14</u>
Accounts receivable	<u>\$30,000</u>	Accounts receivable	<u>\$-0-</u>

What will happen to the \$30,000 temporary difference that originated in 2014 for Chelsea? Assuming that Chelsea expects to collect \$20,000 of the receivables in 2015 and \$10,000 in 2016, this collection results in future taxable amounts of \$20,000 in 2015 and \$10,000 in 2016. These future taxable amounts will cause taxable income to exceed pretax financial income in both 2015 and 2016.

An assumption inherent in a company's GAAP balance sheet is that companies recover and settle the assets and liabilities at their reported amounts (carrying amounts). This assumption creates a requirement under accrual accounting to recognize **currently** the deferred tax consequences of temporary differences. That is, companies recognize the amount of income taxes that are payable (or refundable) when they recover and settle the reported amounts of the assets and liabilities, respectively. Illustration 19-6 shows the reversal of the temporary difference described in Illustration 19-5 and the resulting taxable amounts in future periods.

ILLUSTRATION 19-6
Reversal of Temporary
Difference, Chelsea Inc.

Chelsea assumes that it will collect the accounts receivable and report the \$30,000 collection as taxable revenues in future tax returns. A payment of income tax in both 2015 and 2016 will occur. Chelsea should therefore record in its books in 2014 the deferred tax consequences of the revenue and related receivables reflected in the 2014 financial statements. Chelsea does this by recording a deferred tax liability.

Deferred Tax Liability

A **deferred tax liability** is the deferred tax consequences attributable to taxable temporary differences. In other words, a **deferred tax liability represents the increase in taxes payable in future years as a result of taxable temporary differences existing at the end of the current year.**

Recall from the Chelsea example that income taxes payable is \$16,000 ($\$40,000 \times 40\%$) in 2014 (Illustration 19-4 on page 1119). In addition, a temporary difference exists

at year-end because Chelsea reports the revenue and related accounts receivable differently for book and tax purposes. The book basis of accounts receivable is \$30,000, and the tax basis is zero. Thus, the total deferred tax liability at the end of 2014 is \$12,000, computed as shown in Illustration 19-7.

Book basis of accounts receivable	\$30,000
Tax basis of accounts receivable	<u>-0-</u>
Cumulative temporary difference at the end of 2014	30,000
Tax rate	<u>40%</u>
Deferred tax liability at the end of 2014	<u>\$12,000</u>

ILLUSTRATION 19-7
Computation of Deferred Tax Liability, End of 2014

Companies may also compute the deferred tax liability by preparing a schedule that indicates the future taxable amounts due to existing temporary differences. Such a schedule, as shown in Illustration 19-8, is particularly useful when the computations become more complex.

	Future Years		Total
	2015	2016	
Future taxable amounts	\$20,000	\$10,000	\$30,000
Tax rate	<u>40%</u>	<u>40%</u>	
Deferred tax liability at the end of 2014	<u>\$ 8,000</u>	<u>\$ 4,000</u>	<u>\$12,000</u>

ILLUSTRATION 19-8
Schedule of Future Taxable Amounts

Because it is the first year of operations for Chelsea, there is no deferred tax liability at the beginning of the year. Chelsea computes the income tax expense for 2014 as shown in Illustration 19-9.

Deferred tax liability at end of 2014	\$12,000
Deferred tax liability at beginning of 2014	<u>-0-</u>
Deferred tax expense for 2014	12,000
Current tax expense for 2014 (income taxes payable)	<u>16,000</u>
Income tax expense (total) for 2014	<u>\$28,000</u>

ILLUSTRATION 19-9
Computation of Income Tax Expense, 2014

This computation indicates that income tax expense has two components—**current tax expense** (the amount of income taxes payable for the period) and deferred tax expense. **Deferred tax expense** is the increase in the deferred tax liability balance from the beginning to the end of the accounting period.

Companies credit taxes due and payable to Income Taxes Payable, and credit the increase in deferred taxes to Deferred Tax Liability. They then debit the sum of those two items to Income Tax Expense. For Chelsea, it makes the following entry at the end of 2014.

Income Tax Expense	28,000	
Income Taxes Payable		16,000
Deferred Tax Liability		12,000

At the end of 2015 (the second year), the difference between the book basis and the tax basis of the accounts receivable is \$10,000. Chelsea multiplies this difference by the applicable tax rate to arrive at the deferred tax liability of \$4,000 ($\$10,000 \times 40\%$), which it reports at the end of 2015. Income taxes payable for 2015 is \$36,000 (Illustration 19-3 on page 1119), and the income tax expense for 2015 is as shown in Illustration 19-10 (page 1122).

ILLUSTRATION 19-10

Computation of Income Tax Expense, 2015

Deferred tax liability at end of 2015	\$ 4,000
Deferred tax liability at beginning of 2015	12,000
Deferred tax expense (benefit) for 2015	(8,000)
Current tax expense for 2015 (income taxes payable)	36,000
Income tax expense (total) for 2015	<u>28,000</u>

Chelsea records income tax expense, the change in the deferred tax liability, and income taxes payable for 2015 as follows.

Income Tax Expense	28,000	
Deferred Tax Liability	8,000	
Income Taxes Payable		36,000

The entry to record income taxes at the end of 2016 reduces the Deferred Tax Liability by \$4,000. The Deferred Tax Liability account appears as follows at the end of 2016.

ILLUSTRATION 19-11

Deferred Tax Liability Account after Reversals

Deferred Tax Liability			
2015	8,000	2014	12,000
2016	4,000		

The Deferred Tax Liability account has a zero balance at the end of 2016.

What do the numbers mean?**“REAL LIABILITIES”**

Some analysts dismiss deferred tax liabilities when assessing the financial strength of a company. But the FASB indicates that the deferred tax liability meets the definition of a liability established in *Statement of Financial Accounting Concepts No. 6*, “Elements of Financial Statements” because:

- 1. It results from a past transaction.** In the Chelsea example, the company performed services for customers and recognized revenue in 2014 for financial reporting purposes but deferred it for tax purposes.
- 2. It is a present obligation.** Taxable income in future periods will exceed pretax financial income as a result of this temporary difference. Thus, a present obligation exists.

- 3. It represents a future sacrifice.** Taxable income and taxes due in future periods will result from past events. The payment of these taxes when they come due is the future sacrifice.

A study by B. Ayers indicates that the market views deferred tax assets and liabilities similarly to other assets and liabilities. Further, the study concludes that the FASB rules in this area increased the usefulness of deferred tax amounts in financial statements.

Source: B. Ayers, “Deferred Tax Accounting Under SFAS No. 109: An Empirical Investigation of Its Incremental Value-Relevance Relative to APB No. 11,” *The Accounting Review* (April 1998).

Summary of Income Tax Accounting Objectives

One objective of accounting for income taxes is to recognize the amount of taxes payable or refundable for the current year. In Chelsea’s case, income taxes payable is \$16,000 for 2014.

A **second objective** is to recognize deferred tax liabilities and assets for the future tax consequences of events already recognized in the financial statements or tax returns. For example, Chelsea sold services to customers that resulted in accounts receivable of \$30,000 in 2014. It reported that amount on the 2014 income statement, but not on the tax return as income. That amount will appear on future tax returns as income for the period **when collected**. As a result, a \$30,000 temporary difference exists at the end of 2014, which will cause future taxable amounts. Chelsea reports a deferred tax liability of \$12,000 on the balance sheet at the end of 2014, which represents the increase in taxes payable in future years (\$8,000 in 2015 and \$4,000 in 2016) as a result of a temporary difference existing at the end of the current year. The related deferred tax liability is reduced by \$8,000 at the end of 2015 and by another \$4,000 at the end of 2016.

In addition to affecting the balance sheet, deferred taxes impact income tax expense in each of the three years affected. In 2014, taxable income (\$40,000) is less than pretax financial income (\$70,000). Income taxes payable for 2014 is therefore \$16,000 (based on taxable income). Deferred tax expense of \$12,000 results from the increase in the Deferred Tax Liability account on the balance sheet. Income tax expense is then \$28,000 for 2014.

In 2015 and 2016, however, taxable income will exceed pretax financial income, due to the reversal of the temporary difference (\$20,000 in 2015 and \$10,000 in 2016). Income taxes payable will therefore exceed income tax expense in 2015 and 2016. Chelsea will debit the Deferred Tax Liability account for \$8,000 in 2015 and \$4,000 in 2016. It records credits for these amounts in Income Tax Expense. These credits are often referred to as a **deferred tax benefit** (which we discuss again later on).

Future Deductible Amounts and Deferred Taxes

Assume that during 2014, Cunningham Inc. estimated its warranty costs related to the sale of microwave ovens to be \$500,000, paid evenly over the next two years. For book purposes, in 2014 Cunningham reported warranty expense and a related estimated liability for warranties of \$500,000 in its financial statements. For tax purposes, **the warranty tax deduction is not allowed until paid**. Therefore, Cunningham recognizes no warranty liability on a tax-basis balance sheet. Illustration 19-12 shows the balance sheet difference at the end of 2014.

3 LEARNING OBJECTIVE

Describe a temporary difference that results in future deductible amounts.

Per Books	12/31/14	Per Tax Return	12/31/14
Estimated liability for warranties	\$500,000	Estimated liability for warranties	\$-0-

ILLUSTRATION 19-12

Temporary Difference, Warranty Liability

When Cunningham pays the warranty liability, it reports an expense (deductible amount) for tax purposes. Because of this temporary difference, Cunningham should recognize in 2014 the tax benefits (positive tax consequences) for the tax deductions that will result from the future settlement of the liability. Cunningham reports this future tax benefit in the December 31, 2014, balance sheet as a **deferred tax asset**.

We can think about this situation another way. Deductible amounts occur in future tax returns. These **future deductible amounts** cause taxable income to be less than pretax financial income in the future as a result of an existing temporary difference. Cunningham’s temporary difference originates (arises) in one period (2014) and reverses over two periods (2015 and 2016). Illustration 19-13 diagrams this situation.

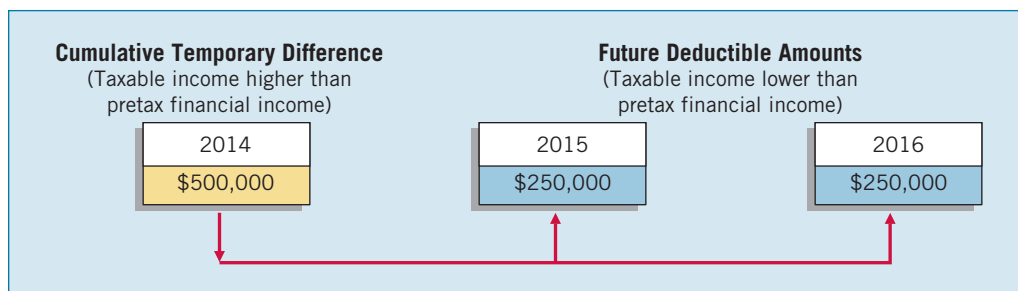

ILLUSTRATION 19-13

Reversal of Temporary Difference, Cunningham Inc.

Deferred Tax Asset

A **deferred tax asset** is the deferred tax consequence attributable to deductible temporary differences. In other words, a **deferred tax asset represents the increase in taxes refundable (or saved) in future years as a result of deductible temporary differences existing at the end of the current year.**

To illustrate, assume that Hunt Co. accrues a loss and a related liability of \$50,000 in 2014 for financial reporting purposes because of pending litigation. Hunt cannot deduct this amount for tax purposes until the period it pays the liability, expected in 2015. As a result, a deductible amount will occur in 2015 when Hunt settles the liability (Estimated Litigation Liability), causing taxable income to be lower than pretax financial income. Illustration 19-14 shows the computation of the deferred tax asset at the end of 2014 (assuming a 40 percent tax rate).

ILLUSTRATION 19-14
Computation of Deferred
Tax Asset, End of 2014

Book basis of litigation liability	\$50,000
Tax basis of litigation liability	<u>—0—</u>
Cumulative temporary difference at the end of 2014	50,000
Tax rate	<u>40%</u>
Deferred tax asset at the end of 2014	<u>\$20,000</u>

Hunt can also compute the deferred tax asset by preparing a schedule that indicates the future deductible amounts due to deductible temporary differences. Illustration 19-15 shows this schedule.

ILLUSTRATION 19-15
Schedule of Future
Deductible Amounts

	Future Years
Future deductible amounts	\$50,000
Tax rate	<u>40%</u>
Deferred tax asset at the end of 2014	<u>\$20,000</u>

Assuming that 2014 is Hunt's first year of operations and income taxes payable is \$100,000, Hunt computes its income tax expense as follows.

ILLUSTRATION 19-16
Computation of Income
Tax Expense, 2014

Deferred tax asset at end of 2014	\$ 20,000
Deferred tax asset at beginning of 2014	<u>—0—</u>
Deferred tax expense (benefit) for 2014	(20,000)
Current tax expense for 2014 (income taxes payable)	<u>100,000</u>
Income tax expense (total) for 2014	<u>\$ 80,000</u>

The **deferred tax benefit** results from the increase in the deferred tax asset from the beginning to the end of the accounting period (similar to the Chelsea example earlier). The deferred tax benefit is a negative component of income tax expense. The total income tax expense of \$80,000 on the income statement for 2014 thus consists of two elements—current tax expense of \$100,000 and a deferred tax benefit of \$20,000. For Hunt, it makes the following journal entry at the end of 2014 to record income tax expense, deferred income taxes, and income taxes payable.

Income Tax Expense	80,000	
Deferred Tax Asset	20,000	
Income Taxes Payable		100,000

At the end of 2015 (the second year), the difference between the book value and the tax basis of the litigation liability is zero. Therefore, there is no deferred tax asset at this date. Assuming that income taxes payable for 2015 is \$140,000, Hunt computes income tax expense for 2015 as shown in Illustration 19-17.

ILLUSTRATION 19-17
Computation of Income
Tax Expense, 2015

Deferred tax asset at the end of 2015	\$ —0—
Deferred tax asset at the beginning of 2015	<u>20,000</u>
Deferred tax expense (benefit) for 2015	20,000
Current tax expense for 2015 (income taxes payable)	<u>140,000</u>
Income tax expense (total) for 2015	<u>\$160,000</u>

The company records income taxes for 2015 as follows.

Income Tax Expense	160,000
Deferred Tax Asset	20,000
Income Taxes Payable	140,000

The total income tax expense of \$160,000 on the income statement for 2015 thus consists of two elements—current tax expense of \$140,000 and deferred tax expense of \$20,000. Illustration 19-18 shows the Deferred Tax Asset account at the end of 2015.

Deferred Tax Asset			
2014	20,000	2015	20,000

ILLUSTRATION 19-18
Deferred Tax Asset
Account after Reversals

What do the numbers mean? “REAL ASSETS”

A key issue in accounting for income taxes is whether a company should recognize a deferred tax asset in the financial records. Based on the conceptual definition of an asset, a deferred tax asset meets the three main conditions for an item to be recognized as an asset:

- 1. It results from a past transaction.** In the Hunt example, the accrual of the loss contingency is the past event that gives rise to a future deductible temporary difference.
- 2. It gives rise to a probable benefit in the future.** Taxable income exceeds pretax financial income in the current year (2014). However, in the next year the exact opposite occurs. That is, taxable income is lower than pretax financial income. Because this deductible temporary difference reduces taxes payable in the future, a

probable future benefit exists at the end of the current period.

- 3. The entity controls access to the benefits.** Hunt can obtain the benefit of existing deductible temporary differences by reducing its taxes payable in the future. Hunt has the exclusive right to that benefit and can control others' access to it.

Market analysts' reactions to the **write-off** of deferred tax assets also supports their treatment as assets. When **Bethlehem Steel** reported a \$1 billion charge to write off a deferred tax asset, analysts believed that Bethlehem was signaling that it would not realize the future benefits of the tax deductions. Thus, Bethlehem should write down the asset like other assets.

Source: J. Weil and S. Liesman, "Stock Gurus Disregard Most Big Write-Offs but They Often Hold Vital Clues to Outlook," *Wall Street Journal Online* (December 31, 2001).

Deferred Tax Asset—Valuation Allowance

Companies recognize a deferred tax asset for all deductible temporary differences. However, a company should reduce a deferred tax asset by a **valuation allowance** if, based on available evidence, **it is more likely than not that it will not realize** some portion or all of the deferred tax asset. "**More likely than not**" means a level of likelihood of at least slightly more than 50 percent.

4 LEARNING OBJECTIVE
Explain the purpose of a deferred tax asset valuation allowance.

Assume that Jensen Co. has a deductible temporary difference of \$1,000,000 at the end of its first year of operations. Its tax rate is 40 percent, which means it records a deferred tax asset of \$400,000 (\$1,000,000 × 40%). Assuming \$900,000 of income taxes payable, Jensen records income tax expense, the deferred tax asset, and income taxes payable as follows.

Income Tax Expense	500,000
Deferred Tax Asset	400,000
Income Taxes Payable	900,000

After careful review of all available evidence, Jensen determines that it is more likely than not that it will not realize \$100,000 of this deferred tax asset. Jensen records this reduction in asset value as follows.

Income Tax Expense	100,000
Allowance to Reduce Deferred Tax Asset to Expected Realizable Value	100,000

This journal entry increases income tax expense in the current period because Jensen does not expect to realize a favorable tax benefit for a portion of the deductible temporary difference. Jensen **simultaneously establishes a valuation allowance to recognize the reduction in the carrying amount of the deferred tax asset**. This valuation account is a contra account. Jensen reports it on the financial statements in the following manner.

ILLUSTRATION 19-19
Balance Sheet
Presentation of Valuation
Allowance Account

Deferred tax asset	\$400,000
Less: Allowance to reduce deferred tax asset to expected realizable value	<u>100,000</u>
Deferred tax asset (net)	\$300,000

Jensen then evaluates this allowance account at the end of each accounting period. If, at the end of the next period, the deferred tax asset is still \$400,000 but now the company expects to realize \$350,000 of this asset, Jensen makes the following entry to adjust the valuation account.

Allowance to Reduce Deferred Tax Asset to Expected Realizable Value	50,000	
Income Tax Expense		50,000

Jensen should consider all available evidence, both positive and negative, to determine whether, based on the weight of available evidence, it needs a valuation allowance. For example, if Jensen has been experiencing a series of loss years, it reasonably assumes that these losses will continue. Therefore, Jensen will lose the benefit of the future deductible amounts. We discuss the use of a valuation account under other conditions later in the chapter.

Income Statement Presentation

LEARNING OBJECTIVE 5
Describe the presentation of income tax expense in the income statement.

Circumstances dictate whether a company should add or subtract the change in deferred income taxes to or from income taxes payable in computing income tax expense. For example, a company adds an increase in a deferred tax liability to income taxes payable. On the other hand, it subtracts an increase in a deferred tax asset from income taxes payable. The formula in Illustration 19-20 is used to compute income tax expense (benefit).

ILLUSTRATION 19-20
Formula to Compute
Income Tax Expense

Income Taxes Payable or Refundable	±	Change in Deferred Income Taxes	=	Total Income Tax Expense or Benefit
---	---	--	---	--

In the income statement or in the notes to the financial statements, a company should disclose the significant components of income tax expense attributable to continuing operations. Given the information related to Chelsea on page 1121, Chelsea reports its income statement as follows.

ILLUSTRATION 19-21
Income Statement
Presentation of Income
Tax Expense

CHELSEA INC. INCOME STATEMENT FOR THE YEAR ENDING DECEMBER 31, 2014	
Revenues	\$130,000
Expenses	<u>60,000</u>
Income before income taxes	70,000
Income tax expense	
Current	\$16,000
Deferred	<u>12,000</u>
	<u>28,000</u>
Net income	<u>\$ 42,000</u>

As illustrated, Chelsea reports both the current portion (amount of income taxes payable for the period) and the deferred portion of income tax expense. Another option is to simply report the total income tax expense on the income statement and then indicate in the notes to the financial statements the current and deferred portions. Income tax expense is often referred to as "Provision for income taxes." Using this terminology, the current provision is \$16,000, and the provision for deferred taxes is \$12,000.

Specific Differences

Numerous items create differences between pretax financial income and taxable income. For purposes of accounting recognition, these differences are of two types: (1) temporary, and (2) permanent.

6 LEARNING OBJECTIVE

Describe various temporary and permanent differences.

Temporary Differences

Taxable temporary differences are temporary differences that will result in taxable amounts in future years when the related assets are recovered. **Deductible temporary differences** are temporary differences that will result in deductible amounts in future years, when the related book liabilities are settled. As discussed earlier, taxable temporary differences give rise to recording deferred tax liabilities. Deductible temporary differences give rise to recording deferred tax assets. Illustration 19-22 provides examples of temporary differences.

ILLUSTRATION 19-22 Examples of Temporary Differences

Revenues or gains are taxable after they are recognized in financial income.

An asset (e.g., accounts receivable or investment) may be recognized for revenues or gains that will result in **taxable amounts in future years** when the asset is recovered. Examples:

1. Sales accounted for on the accrual basis for financial reporting purposes and on the installment (cash) basis for tax purposes.
2. Contracts accounted for under the percentage-of-completion method for financial reporting purposes and a portion of related gross profit deferred for tax purposes.
3. Investments accounted for under the equity method for financial reporting purposes and under the cost method for tax purposes.
4. Gain on involuntary conversion of nonmonetary asset which is recognized for financial reporting purposes but deferred for tax purposes.
5. Unrealized holding gains for financial reporting purposes (including use of the fair value option), but deferred for tax purposes.

Expenses or losses are deductible after they are recognized in financial income.

A liability (or contra asset) may be recognized for expenses or losses that will result in **deductible amounts in future years** when the liability is settled. Examples:

1. Product warranty liabilities.
2. Estimated liabilities related to discontinued operations or restructurings.
3. Litigation accruals.
4. Bad debt expense recognized using the allowance method for financial reporting purposes; direct write-off method used for tax purposes.
5. Stock-based compensation expense.
6. Unrealized holding losses for financial reporting purposes (including use of the fair value option), but deferred for tax purposes.

Revenues or gains are taxable before they are recognized in financial income.

A liability may be recognized for an advance payment for goods or services to be provided in future years. For tax purposes, the advance payment is included in taxable income upon the receipt of cash. Future sacrifices to provide goods or services (or future refunds to those who cancel their orders) that settle the liability will result in **deductible amounts in future years**. Examples:

1. Subscriptions received in advance.
2. Advance rental receipts.
3. Sales and leasebacks for financial reporting purposes (income deferral) but reported as sales for tax purposes.
4. Prepaid contracts and royalties received in advance.

Expenses or losses are deductible before they are recognized in financial income.

The cost of an asset may have been deducted for tax purposes faster than it was expensed for financial reporting purposes. Amounts received upon future recovery of the amount of the asset for financial reporting (through use or sale) will exceed the remaining tax basis of the asset and thereby result in **taxable amounts in future years**. Examples:

1. Depreciable property, depletable resources, and intangibles.
2. Deductible pension funding exceeding expense.
3. Prepaid expenses that are deducted on the tax return in the period paid.

Determining a company’s temporary differences may prove difficult. A company should prepare a balance sheet for tax purposes that it can compare with its GAAP balance sheet. Many of the differences between the two balance sheets are temporary differences.

Originating and Reversing Aspects of Temporary Differences. An **originating temporary difference** is the initial difference between the book basis and the tax basis of an asset or liability, regardless of whether the tax basis of the asset or liability exceeds or is exceeded by the book basis of the asset or liability. A **reversing difference**, on the other hand, occurs when eliminating a temporary difference that originated in prior periods and then removing the related tax effect from the deferred tax account.

For example, assume that Sharp Co. has tax depreciation in excess of book depreciation of \$2,000 in 2012, 2013, and 2014. Further, it has an excess of book depreciation over tax depreciation of \$3,000 in 2015 and 2016 for the same asset. Assuming a tax rate of 30 percent for all years involved, the Deferred Tax Liability account reflects the following.

ILLUSTRATION 19-23

Tax Effects of Originating and Reversing Differences

		Deferred Tax Liability					
Tax Effects of Reversing Differences	{	2015	900	2012	600	}	Tax Effects of Originating Differences
		2016	900	2013	600		
				2014	600		

The originating differences for Sharp in each of the first three years are \$2,000. The related tax effect of each originating difference is \$600. The reversing differences in 2015 and 2016 are each \$3,000. The related tax effect of each is \$900.

Permanent Differences

Some differences between taxable income and pretax financial income are permanent. **Permanent differences** result from items that (1) enter into pretax financial income but **never** into taxable income, or (2) enter into taxable income but **never** into pretax financial income.

Congress has enacted a variety of tax law provisions to attain certain political, economic, and social objectives. Some of these provisions exclude certain revenues from taxation, limit the deductibility of certain expenses, and permit the deduction of certain other expenses in excess of costs incurred. A corporation that has tax-free income, nondeductible expenses, or allowable deductions in excess of cost has an effective tax rate that differs from its statutory (regular) tax rate.

Since permanent differences affect only the period in which they occur, they do not give rise to future taxable or deductible amounts. As a result, **companies recognize no deferred tax consequences.** Illustration 19-24 shows examples of permanent differences.

International Perspective

If companies switch to IFRS, the impact on tax accounting methods will require consideration. For example, in cases in which GAAP and tax rules are the same, what happens if IFRS is different from GAAP? Should the tax method change to IFRS? And what might happen at the state level, due to changes in the financial reporting rules?

ILLUSTRATION 19-24

Examples of Permanent Differences

Items are recognized for financial reporting purposes but not for tax purposes.
<p>Examples:</p> <ol style="list-style-type: none"> 1. Interest received on state and municipal obligations. 2. Expenses incurred in obtaining tax-exempt income. 3. Proceeds from life insurance carried by the company on key officers or employees. 4. Premiums paid for life insurance carried by the company on key officers or employees (company is beneficiary). 5. Fines and expenses resulting from a violation of law.
Items are recognized for tax purposes but not for financial reporting purposes.
<p>Examples:</p> <ol style="list-style-type: none"> 1. “Percentage depletion” of natural resources in excess of their cost. 2. The deduction for dividends received from U.S. corporations, generally 70% or 80%.

Examples of Temporary and Permanent Differences

To illustrate the computations used when both temporary and permanent differences exist, assume that Bio-Tech Company reports pretax financial income of \$200,000 in each of the years 2012, 2013, and 2014. The company is subject to a 30 percent tax rate and has the following differences between pretax financial income and taxable income.

1. Bio-Tech reports gross profit of \$18,000 from an installment sale in 2012 for tax purposes over an 18-month period at a constant amount per month beginning January 1, 2013. It recognizes the entire amount for book purposes in 2012.
2. It pays life insurance premiums for its key officers of \$5,000 in 2013 and 2014. Although not tax-deductible, Bio-Tech expenses the premiums for book purposes.

The installment sale is a temporary difference, whereas the life insurance premium is a permanent difference. Illustration 19-25 shows the reconciliation of Bio-Tech's pretax financial income to taxable income and the computation of income taxes payable.

	2012	2013	2014
Pretax financial income	\$200,000	\$200,000	\$200,000
Permanent difference			
Nondeductible expense		5,000	5,000
Temporary difference			
Installment sale	(18,000)	12,000	6,000
Taxable income	182,000	217,000	211,000
Tax rate	30%	30%	30%
Income taxes payable	<u>\$ 54,600</u>	<u>\$ 65,100</u>	<u>\$ 63,300</u>

ILLUSTRATION 19-25

Reconciliation and
Computation of Income
Taxes Payable

Note that Bio-Tech **deducts** the installment-sales gross profit from pretax financial income to arrive at taxable income. The reason: Pretax financial income includes the installment-sales gross profit; taxable income does not. Conversely, it **adds** the \$5,000 insurance premium to pretax financial income to arrive at taxable income. The reason: Pretax financial income records an expense for this premium, but for tax purposes the premium is not deductible. As a result, pretax financial income is lower than taxable income. Therefore, the life insurance premium must be added back to pretax financial income to reconcile to taxable income.

Bio-Tech records income taxes for 2012, 2013, and 2014 as follows.

December 31, 2012

Income Tax Expense (\$54,600 + \$5,400)	60,000	
Deferred Tax Liability (\$18,000 × 30%)		5,400
Income Taxes Payable (\$182,000 × 30%)		54,600

December 31, 2013

Income Tax Expense (\$65,100 − \$3,600)	61,500	
Deferred Tax Liability (\$12,000 × 30%)	3,600	
Income Taxes Payable (\$217,000 × 30%)		65,100

December 31, 2014

Income Tax Expense (\$63,300 − \$1,800)	61,500	
Deferred Tax Liability (\$6,000 × 30%)	1,800	
Income Taxes Payable (\$211,000 × 30%)		63,300

Bio-Tech has one temporary difference, which originates in 2012 and reverses in 2013 and 2014. It recognizes a deferred tax liability at the end of 2012 because the temporary difference causes future taxable amounts. As the temporary difference reverses,

Bio-Tech reduces the deferred tax liability. There is no deferred tax amount associated with the difference caused by the nondeductible insurance expense because it is a permanent difference.

Although an enacted tax rate of 30 percent applies for all three years, the effective rate differs from the enacted rate in 2013 and 2014. Bio-Tech computes the **effective tax rate** by dividing total income tax expense for the period by pretax financial income. The effective rate is 30 percent for 2012 ($\$60,000 \div \$200,000 = 30\%$) and 30.75 percent for 2013 and 2014 ($\$61,500 \div \$200,000 = 30.75\%$).

Tax Rate Considerations

LEARNING OBJECTIVE 7

Explain the effect of various tax rates and tax rate changes on deferred income taxes.

In our previous illustrations, the enacted tax rate did not change from one year to the next. Thus, to compute the deferred income tax amount to report on the balance sheet, a company simply multiplies the cumulative temporary difference by the current tax rate. Using Bio-Tech as an example, it multiplies the cumulative temporary difference of \$18,000 by the enacted tax rate, 30 percent in this case, to arrive at a deferred tax liability of \$5,400 ($\$18,000 \times 30\%$) at the end of 2012.

Future Tax Rates

What happens if tax rates are expected to change in the future? In this case, a company should use the **enacted tax rate** expected to apply. Therefore, a company must consider presently enacted changes in the tax rate that become effective for a particular future year(s) when determining the tax rate to apply to existing temporary differences. For example, assume that Warlen Co. at the end of 2011 has the following cumulative temporary difference of \$300,000, computed as shown in Illustration 19-26.

ILLUSTRATION 19-26

Computation of Cumulative Temporary Difference

Book basis of depreciable assets	\$1,000,000
Tax basis of depreciable assets	700,000
Cumulative temporary difference	\$ 300,000

Furthermore, assume that the \$300,000 will reverse and result in taxable amounts in the future, with the enacted tax rates shown in Illustration 19-27.

ILLUSTRATION 19-27

Deferred Tax Liability Based on Future Rates

	2012	2013	2014	2015	2016	Total
Future taxable amounts	\$80,000	\$70,000	\$60,000	\$50,000	\$40,000	\$300,000
Tax rate	40%	40%	35%	30%	30%	
Deferred tax liability	\$32,000	\$28,000	\$21,000	\$15,000	\$12,000	\$108,000

The total deferred tax liability at the end of 2011 is \$108,000. Warlen may only use tax rates other than the current rate when the future tax rates have been enacted, as is the case in this example. **If new rates are not yet enacted for future years, Warlen should use the current rate.**

In determining the appropriate enacted tax rate for a given year, companies must use the **average tax rate**. The Internal Revenue Service and other taxing jurisdictions tax income on a graduated tax basis. For a U.S. corporation, the IRS taxes the first \$50,000 of taxable income at 15 percent, the next \$25,000 at 25 percent, with higher incremental levels of income at rates as high as 39 percent. In computing deferred income taxes, companies for which graduated tax rates are a significant factor must therefore **determine the average tax rate and use that rate.**

What do the numbers mean? GLOBAL TAX RATES

If you are concerned about your tax rate and the taxes you pay, you might want to consider moving to Switzerland, which has a personal tax rate of anywhere from zero percent to 13.2 percent. You don't want to move to Denmark though. Yes, the people of Denmark are regularly voted to be the happiest people on Earth but it's uncertain how many of these polls take place at tax time. The government in Denmark charges income tax rates ranging from 38 percent to 59 percent. So, taxes are a major item to many individuals, wherever they reside.

Taxes are also a big deal to corporations. For example, the Organisation for Economic Co-operation and Development (OECD) is an international organization of 30 countries that accepts the principles of a free-market economy. Most OECD members are high-income economies and are regarded as developed countries. However, companies in the OECD can be subject to significant tax levies, as indicated in the following list of the ten highest corporate income tax rates for the OECD countries.

United States	40.0%	Germany	29.5%
Japan	38.0	Luxembourg	28.8
Belgium	33.9	New Zealand	28.0
France	33.3	Spain	28.0
Australia	30.0	Canada	26.0

On the low end of the tax rate spectrum are Iceland and Ireland, with tax rates of 15 percent and 12.5 percent, respectively. Indeed, corporate tax rates have been dropping around the world as countries attempt to spur capital investment, which in turn spurs international tax competition. However, with stagnant global economic growth, there is concern that governments will target increases in corporate tax rates as a source of revenues to address budget shortfalls. In addition, further expansion of value-added taxes (VAT) is being considered. Indirect taxes such as VAT are charged on consumption of goods and services, which is much more stable than the corporate tax.

If these tax proposals result in changes in the tax rates applied to future deductible and taxable amounts, be prepared for significant remeasurement of deferred tax assets and liabilities.

Source: The rates reported reflect the base corporate rate in effect in 2012. Effective rates paid may vary depending on country-specific additional levies for such items as unemployment and local taxes, and, in the case of Japan, earthquake damage assessments. Effective rates may be lower due to credits for investments and capital gains. See <http://www.kpmg.com/global/en/services/tax/tax-tools-and-resources/pages/tax-rates-online.aspx>. See also P. Toscano, "The World's Highest Tax Rates," <http://www.cnbc.com/id/30727913> (May 13, 2009).

Revision of Future Tax Rates

When a change in the tax rate is enacted, companies should record its effect on the existing deferred income tax accounts immediately. **A company reports the effect as an adjustment to income tax expense in the period of the change.**

Assume that on December 10, 2011, a new income tax act is signed into law that lowers the corporate tax rate from 40 percent to 35 percent, effective January 1, 2013. If Hostel Co. has one temporary difference at the beginning of 2011 related to \$3 million of excess tax depreciation, then it has a Deferred Tax Liability account with a balance of \$1,200,000 (\$3,000,000 × 40%) at January 1, 2011. If taxable amounts related to this difference are scheduled to occur equally in 2012, 2013, and 2014, the deferred tax liability at the end of 2011 is \$1,100,000, computed as follows.

	2012	2013	2014	Total
Future taxable amounts	\$1,000,000	\$1,000,000	\$1,000,000	\$3,000,000
Tax rate	40%	35%	35%	
Deferred tax liability	\$ 400,000	\$ 350,000	\$ 350,000	\$1,100,000

ILLUSTRATION 19-28
Schedule of Future Taxable Amounts and Related Tax Rates

Hostel, therefore, recognizes the decrease of \$100,000 (\$1,200,000 – \$1,100,000) at the end of 2011 in the deferred tax liability as follows.

Deferred Tax Liability	100,000	
Income Tax Expense		100,000

Corporate tax rates do not change often. Therefore, companies usually employ the current rate. However, state and foreign tax rates change more frequently, and they require adjustments in deferred income taxes accordingly.²

ACCOUNTING FOR NET OPERATING LOSSES

LEARNING OBJECTIVE 8

Apply accounting procedures for a loss carryback and a loss carryforward.

Every management hopes its company will be profitable. But hopes and profits may not materialize. For a start-up company, it is common to accumulate operating losses while expanding its customer base but before realizing economies of scale. For an established company, a major event such as a labor strike, rapidly changing regulatory and competitive forces, a disaster such as 9/11, or a general economic recession can cause expenses to exceed revenues—a net operating loss.

A **net operating loss (NOL)** occurs for tax purposes in a year when tax-deductible expenses exceed taxable revenues. An inequitable tax burden would result if companies were taxed during profitable periods without receiving any tax relief during periods of net operating losses. Under certain circumstances, therefore, the federal tax laws permit taxpayers to use the losses of one year to offset the profits of other years.

Companies accomplish this income-averaging provision through the **carryback and carryforward of net operating losses**. Under this provision, a company pays no income taxes for a year in which it incurs a net operating loss. In addition, it may select one of the two options discussed below and on the following pages.

Loss Carryback

Through use of a **loss carryback**, a company may carry the net operating loss back two years and receive refunds for income taxes paid in those years. The company must apply the loss to the earlier year first and then to the second year. It may **carry forward** any loss remaining after the two-year carryback up to 20 years to offset future taxable income. Illustration 19-29 diagrams the loss carryback procedure, assuming a loss in 2014.

ILLUSTRATION 19-29

Loss Carryback Procedure

Loss Carryforward

A company may forgo the loss carryback and use only the **loss carryforward** option, offsetting future taxable income for up to 20 years. Illustration 19-30 shows this approach.

²Tax rate changes nearly always will substantially impact income numbers and the reporting of deferred income taxes on the balance sheet. As a result, you can expect to hear an economic consequences argument every time that Congress decides to change the tax rates. For example, when Congress raised the corporate rate from 34 percent to 35 percent in 1993, companies took an additional “hit” to earnings if they were in a deferred tax liability position. Thus, corporate America is following closely the recent budget and deficit-reduction negotiations. Some proposals will eliminate certain corporate deductions (or loopholes) in order to “broaden the tax base” and therefore allow for lower tax rates. Depending on a company’s deferred tax position, a change in tax rates can have a positive or negative effect on net income.

ILLUSTRATION 19-30
Loss Carryforward
Procedure

Operating losses can be substantial. For example, **Yahoo!** at one time had net operating losses of approximately \$5.4 billion. That amount translates into tax savings of \$1.4 billion if Yahoo! is able to generate taxable income before the NOLs expire.

Loss Carryback Example

To illustrate the accounting procedures for a net operating loss carryback, assume that Groh Inc. has no temporary or permanent differences. Groh experiences the following.

Year	Taxable Income or Loss	Tax Rate	Tax Paid
2011	\$ 50,000	35%	\$17,500
2012	100,000	30%	30,000
2013	200,000	40%	80,000
2014	(500,000)	—	—0—

In 2014, Groh incurs a net operating loss that it decides to carry back. Under the law, Groh must apply the carryback first to the **second year preceding the loss year**. Therefore, it carries the loss back first to 2012. Then, Groh carries back any unused loss to 2013. Accordingly, Groh files amended tax returns for 2012 and 2013, receiving refunds for the \$110,000 (\$30,000 + \$80,000) of taxes paid in those years.

For accounting as well as tax purposes, the \$110,000 represents the **tax effect (tax benefit)** of the loss carryback. Groh should recognize this tax effect in 2014, the loss year. Since the tax loss gives rise to a refund that is both measurable and currently realizable, Groh should recognize the associated tax benefit in this loss period.

Groh makes the following journal entry for 2014.

Income Tax Refund Receivable	110,000	
Benefit Due to Loss Carryback (Income Tax Expense)		110,000

Groh reports the account debited, **Income Tax Refund Receivable**, on the balance sheet as a current asset at December 31, 2014. It reports the account credited on the income statement for 2014 as shown in Illustration 19-31.

GROH INC.	
INCOME STATEMENT (PARTIAL) FOR 2014	
Operating loss before income taxes	\$(500,000)
Income tax benefit	
Benefit due to loss carryback	<u>110,000</u>
Net loss	<u><u>\$(390,000)</u></u>

ILLUSTRATION 19-31
Recognition of Benefit of
the Loss Carryback in the
Loss Year

Since the \$500,000 net operating loss for 2014 exceeds the \$300,000 total taxable income from the 2 preceding years, Groh carries forward the remaining \$200,000 loss.

Loss Carryforward Example

If a carryback fails to fully absorb a net operating loss, or if the company decides not to carry the loss back, then it can carry forward the loss for up to 20 years.³ Because companies use carryforwards to offset future taxable income, the **tax effect of a loss carryforward** represents **future tax savings**. Realization of the future tax benefit depends on future earnings, an uncertain prospect.

The key accounting issue is whether there should be different requirements for recognition of a deferred tax asset for (a) deductible temporary differences, and (b) operating loss carryforwards. The FASB's position is that in substance these items are the same—both are tax-deductible amounts in future years. As a result, the Board concluded that there **should not be different requirements** for recognition of a deferred tax asset from deductible temporary differences and operating loss carryforwards.⁴

Carryforward without Valuation Allowance

To illustrate the accounting for an operating loss carryforward, return to the Groh example from the preceding section. In 2014, the company records the tax effect of the \$200,000 loss carryforward as a deferred tax asset of \$80,000 ($\$200,000 \times 40\%$), assuming that the enacted future tax rate is 40 percent. Groh records the benefits of the carryback and the carryforward in 2014 as follows.

To recognize benefit of loss carryback		
Income Tax Refund Receivable	110,000	
Benefit Due to Loss Carryback (Income Tax Expense)		110,000
To recognize benefit of loss carryforward		
Deferred Tax Asset	80,000	
Benefit Due to Loss Carryforward (Income Tax Expense)		80,000

Groh realizes the income tax refund receivable of \$110,000 immediately as a refund of taxes paid in the past. It establishes a Deferred Tax Asset account for the benefits of future tax savings. The two accounts credited are contra income tax expense items, which Groh presents on the 2014 income statement shown in Illustration 19-32.

ILLUSTRATION 19-32

Recognition of the Benefit of the Loss Carryback and Carryforward in the Loss Year

GROH INC.		
INCOME STATEMENT (PARTIAL) FOR 2014		
Operating loss before income taxes		\$(500,000)
Income tax benefit		
Benefit due to loss carryback	\$110,000	
Benefit due to loss carryforward	80,000	190,000
Net loss		\$(310,000)

The **current tax benefit** of \$110,000 is the income tax refundable for the year. Groh determines this amount by applying the carryback provisions of the tax law to the taxable loss for 2014. The \$80,000 is the **deferred tax benefit** for the year, which results from an increase in the deferred tax asset.

³The length of the carryforward and carryback periods has varied. The carryforward period has increased from 7 years to 20 years over a period of time. As part of the Economic Recovery Act of 2009, Congress enacted a temporary extension of the carryback period from 2 to 5 years for operating losses incurred in 2008 and 2009. It is estimated that the companies in the S&P 500 will reap a refund of \$5 billion due to this change. See D. Zion, A. Varshney, and C. Cornett, "Spinning Losses into Gold," *Equity Research—Accounting and Tax*, Credit Suisse (November 12, 2009).

⁴This requirement is controversial because many believe it is inappropriate to recognize deferred tax assets except when assured beyond a reasonable doubt. Others argue that companies should never recognize deferred tax assets for loss carryforwards until realizing the income in the future.

For 2015, assume that Groh returns to profitable operations and has taxable income of \$250,000 (prior to adjustment for the NOL carryforward), subject to a 40 percent tax rate. Groh then realizes the benefits of the carryforward for tax purposes in 2015, which it recognized for accounting purposes in 2014. Groh computes the income taxes payable for 2015 as shown in Illustration 19-33.

Taxable income prior to loss carryforward	\$ 250,000
Loss carryforward deduction	(200,000)
Taxable income for 2015	<u>50,000</u>
Tax rate	<u>40%</u>
Income taxes payable for 2015	<u>\$ 20,000</u>

ILLUSTRATION 19-33
Computation of Income Taxes Payable with Realized Loss Carryforward

Groh records income taxes in 2015 as follows.

Income Tax Expense	100,000	
Deferred Tax Asset		80,000
Income Taxes Payable		20,000

The benefits of the NOL carryforward, realized in 2015, reduce the Deferred Tax Asset account to zero.

The 2015 income statement that appears in Illustration 19-34 does **not report** the tax effects of either the loss carryback or the loss carryforward because Groh had reported both previously.

GROH INC.		
INCOME STATEMENT (PARTIAL) FOR 2015		
Income before income taxes		\$250,000
Income tax expense		
Current	\$20,000	
Deferred	<u>80,000</u>	<u>100,000</u>
Net income		<u>\$150,000</u>

ILLUSTRATION 19-34
Presentation of the Benefit of Loss Carryforward Realized in 2015, Recognized in 2014

Carryforward with Valuation Allowance

Let us return to the Groh example. Assume that it is more likely than not that Groh will *not* realize the entire NOL carryforward in future years. In this situation, Groh records the tax benefits of \$110,000 associated with the \$300,000 NOL carryback, as we previously described. In addition, it records Deferred Tax Asset of \$80,000 ($\$200,000 \times 40\%$) for the potential benefits related to the loss carryforward, and an allowance to reduce the deferred tax asset by the same amount. Groh makes the following journal entries in 2014.

To recognize benefit of loss carryback

Income Tax Refund Receivable	110,000	
Benefit Due to Loss Carryback (Income Tax Expense)		110,000

To recognize benefit of loss carryforward

Deferred Tax Asset	80,000	
Benefit Due to Loss Carryforward (Income Tax Expense)		80,000

To record allowance amount

Benefit Due to Loss Carryforward (Income Tax Expense)	80,000	
Allowance to Reduce Deferred Tax Asset to Expected Realizable Value		80,000

The latter entry indicates that because positive evidence of sufficient quality and quantity is unavailable to counteract the negative evidence, Groh needs a valuation allowance.

Illustration 19-35 shows Groh's 2014 income statement presentation.

ILLUSTRATION 19-35
Recognition of Benefit of
Loss Carryback Only

GROH INC.	
INCOME STATEMENT (PARTIAL) FOR 2014	
Operating loss before income taxes	\$(500,000)
Income tax benefit	
Benefit due to loss carryback	110,000
Net loss	\$(390,000)

In 2015, assuming that Groh has taxable income of \$250,000 (before considering the carryforward) subject to a tax rate of 40 percent, it realizes the deferred tax asset. It thus no longer needs the allowance. Groh records the following entries.

To record current and deferred income taxes		
Income Tax Expense	100,000	
Deferred Tax Asset		80,000
Income Taxes Payable		20,000
To eliminate allowance and recognize loss carryforward		
Allowance to Reduce Deferred Tax Asset to		
Expected Realizable Value	80,000	
Benefit Due to Loss Carryforward (Income Tax Expense)		80,000

Groh reports the \$80,000 Benefit Due to the Loss Carryforward on the 2015 income statement. The company did not recognize it in 2014 because it was more likely than not that it would not be realized. Assuming that Groh derives the income for 2015 from continuing operations, it prepares the income statement as shown in Illustration 19-36.

ILLUSTRATION 19-36
Recognition of Benefit of
Loss Carryforward When
Realized

GROH INC.	
INCOME STATEMENT (PARTIAL) FOR 2015	
Income before income taxes	\$250,000
Income tax expense	
Current	\$ 20,000
Deferred	80,000
Benefit due to loss carryforward	(80,000)
	20,000
Net income	\$230,000

Another method is to report only one line for total income tax expense of \$20,000 on the face of the income statement and disclose the components of income tax expense in the notes to the financial statements.

Valuation Allowance Revisited

A company should consider all positive and negative information in determining whether it needs a valuation allowance. Whether the company will realize a deferred tax asset depends on whether sufficient taxable income exists or will exist within the carryforward period available under tax law. Illustration 19-37 shows possible sources of taxable income that may be available under the tax law to realize a tax benefit for deductible temporary differences and carryforwards.⁵

⁵Companies implement a tax-planning strategy to realize a tax benefit for an operating loss or tax credit carryforward before it expires. Companies consider tax-planning strategies when assessing the need for and amount of a valuation allowance for deferred tax assets.

Taxable Income Sources

- a. Future reversals of existing taxable temporary differences.
- b. Future taxable income exclusive of reversing temporary differences and carryforwards.
- c. Taxable income in prior carryback year(s) if carryback is permitted under the tax law.
- d. **Tax-planning strategies** that would, if necessary, be implemented to:
 - (1) Accelerate taxable amounts to utilize expiring carryforwards.
 - (2) Change the character of taxable or deductible amounts from ordinary income or loss to capital gain or loss.
 - (3) Switch from tax-exempt to taxable investments. [1]

ILLUSTRATION 19-37

Possible Sources of Taxable Income

See the FASB Codification section (page 1156).

If any one of these sources is sufficient to support a conclusion that a valuation allowance is unnecessary, a company need not consider other sources.

Forming a conclusion that a valuation allowance is not needed is difficult when there is negative evidence such as cumulative losses in recent years. Companies may also cite positive evidence indicating that a valuation allowance is not needed. Illustration 19-38 presents examples (not prerequisites) of evidence to consider when determining the need for a valuation allowance.⁶

Negative Evidence

- a. A history of operating loss or tax credit carryforwards expiring unused.
- b. Losses expected in early future years (by a presently profitable entity).
- c. Unsettled circumstances that, if unfavorably resolved, would adversely affect future operations and profit levels on a continuing basis in future years.
- d. A carryback, carryforward period that is so brief that it would limit realization of tax benefits if (1) a significant deductible temporary difference is expected to reverse in a single year or (2) the enterprise operates in a traditionally cyclical business.

Positive Evidence

- a. Existing contracts or firm sales backlog that will produce more than enough taxable income to realize the deferred tax asset based on existing sale prices and cost structures.
- b. An excess of appreciated asset value over the tax basis of the entity's net assets in an amount sufficient to realize the deferred tax asset.
- c. A strong earnings history exclusive of the loss that created the future deductible amount (tax loss carryforward or deductible temporary difference) coupled with evidence indicating that the loss is an aberration rather than a continuing condition (for example, the result of an unusual, infrequent, or extraordinary item). [2]

ILLUSTRATION 19-38

Evidence to Consider in Evaluating the Need for a Valuation Account

The use of a valuation allowance provides a company with an opportunity to manage its earnings. As one accounting expert notes, "The 'more likely than not' provision is perhaps the most judgmental clause in accounting." Some companies may set up a valuation account and then use it to increase income as needed. Others may take the income immediately to increase capital or to offset large negative charges to income.

⁶In contrast to the valuation allowance issue for **Citigroup** in the opening story, **Sony Corp.** announced a \$3.2 billion net loss, blaming a \$4.4 billion write-off on a certain portion of deferred tax assets in Japan, in what would be the company's third straight year of red ink. The write-off is an admission that the March 2011 earthquake and tsunami have shattered its expectations for a robust current fiscal year. In the wake of the disaster, Sony temporarily shut 10 plants in and around the quake-hit region. Like other Japanese auto and electronics makers, Sony faced uncertainties because its recovery prospects are partially dependent on parts and materials suppliers, many of which have also been affected by the quake. Thus, the post-quake outlook put Sony in a position where it had to set aside reserves of ¥360 billion on certain deferred tax assets in its fiscal fourth quarter. See J. Osawa, "Sony Expects Hefty Loss: Electronics Giant Reverses Prediction for Full-Year Profit, Blaming Earthquake," *Wall Street Journal* (May 24, 2011).

International Perspective

Under IFRS (*IAS 12*), a company may not recognize a deferred tax asset unless realization is "probable." However, "probable" is not defined in the standard, leading to diversity in the recognition of deferred tax assets.

What do the numbers mean?

NOLs: GOOD NEWS OR BAD?

Here are some net operating loss numbers reported by several notable companies.

NOLs (\$ in millions)				
Company	Income (Loss)	Operating Loss Carryforward	Tax Benefit (Deferred Tax Asset)	Comment
Delta Air Lines, Inc.	\$(5,198.00)	\$7,500.00	\$2,848.00	Begins to expire in 2022. Valuation allowance recorded.
Goodyear	114.80	1,306.60	457.30	Begins to expire in next year. Full valuation allowance.
Kodak	556.00	509.00	234.00	Begins to expire in next year. Valuation allowance on foreign credits only.
Yahoo!	42.82	5,400.00	1,443.50	State and federal carryforwards. Begins to expire in next year. Valuation allowance recorded.

All of these companies are using the carryforward provisions of the tax code for their NOLs. For many of them, the NOL is an amount far exceeding their reported profits. Why carry forward the loss to get the tax deduction? First, the company may have already used up the carryback provision, which allows only a two-year carryback period. (Carryforwards can be claimed up to 20 years in the future.) In some cases, management expects the tax rates in the future to be higher. This difference in expected rates provides a bigger tax benefit if the losses are carried forward and matched against future income. Is there a downside? To realize the benefits of

carryforwards, a company must have future taxable income in the carryforward period in order to claim the NOL deductions. As we learned, if it is more likely than not that a company will not have taxable income, it must record a valuation allowance (and increased tax expense). As the data above indicate, recording a valuation allowance to reflect the uncertainty of realizing the tax benefits has merit. But for some, the NOL benefits begin to expire in the following year, which may be not enough time to generate sufficient taxable income in order to claim the NOL deduction.

Source: Company annual reports.

FINANCIAL STATEMENT PRESENTATION

Balance Sheet

LEARNING OBJECTIVE 9

Describe the presentation of deferred income taxes in financial statements.

Deferred tax accounts are reported on the balance sheet as assets and liabilities. Companies should classify these accounts as a net current amount and a net non-current amount. **An individual deferred tax liability or asset is classified as current or noncurrent based on the classification of the related asset or liability for financial reporting purposes.**

A company considers a deferred tax asset or liability to be related to an asset or liability if reduction of the asset or liability causes the temporary difference to reverse or turn around. A company should classify a deferred tax liability or asset that is unrelated to an asset or liability for financial reporting, including a deferred tax asset related to a loss carryforward, according to the expected reversal date of the temporary difference.

To illustrate, assume that Morgan Inc. records bad debt expense using the allowance method for accounting purposes and the direct write-off method for tax purposes. It currently has Accounts Receivable and Allowance for Doubtful Accounts balances of \$2 million and \$100,000, respectively. In addition, given a 40 percent tax rate, Morgan has a debit balance in the Deferred Tax Asset account of \$40,000 ($40\% \times \$100,000$). It considers the \$40,000 debit balance in the Deferred Tax Asset account to be related to the Accounts Receivable and the Allowance for Doubtful Accounts balances because collection or write-off of the receivables will cause the temporary difference to reverse. Therefore,

Morgan classifies the Deferred Tax Asset account as current, the same as the Accounts Receivable and Allowance for Doubtful Accounts balances.

In practice, most companies engage in a large number of transactions that give rise to deferred taxes. Companies should classify the balances in the deferred tax accounts on the balance sheet in two categories: one for the **net current amount**, and one for the **net noncurrent amount**. We summarize this procedure as follows.

- 1. Classify the amounts as current or non-current.** If related to a specific asset or liability, classify the amounts in the same manner as the related asset or liability. If not related, classify them on the basis of the expected reversal date of the temporary difference.
- 2. Determine the net current amount** by summing the various deferred tax assets and liabilities classified as current. If the net result is an asset, report it on the balance sheet as a current asset; if a liability, report it as a current liability.
- 3. Determine the net non-current amount** by summing the various deferred tax assets and liabilities classified as noncurrent. If the net result is an asset, report it on the balance sheet as a noncurrent asset; if a liability, report it as a long-term liability.

To illustrate, assume that K. Scott Company has four deferred tax items at December 31, 2014. Illustration 19-39 shows an analysis of these four temporary differences as current or noncurrent.

ILLUSTRATION 19-39
Classification of Temporary Differences as Current or Noncurrent

Temporary Difference	Resulting Deferred Tax		Related Balance Sheet Account	Classification
	(Asset)	Liability		
1. Rent collected in advance: recognized when earned for accounting purposes and when received for tax purposes.	\$(42,000)		Unearned Rent	Current
2. Use of straight-line depreciation for accounting purposes and accelerated depreciation for tax purposes.		\$214,000	Equipment	Noncurrent
3. Recognition of profits on installment sales during period of sale for accounting purposes and during period of collection for tax purposes.		45,000	Installment Accounts Receivable	Current
4. Warranty liabilities: recognized for accounting purposes at time of sale; for tax purpose at time paid.	(12,000)		Estimated Liability under Warranties	Current
Totals	<u>\$(54,000)</u>	<u>\$259,000</u>		

K. Scott classifies as current a deferred tax asset of \$9,000 (\$42,000 + \$12,000 – \$45,000). It also reports as noncurrent a deferred tax liability of \$214,000. Consequently, K. Scott’s December 31, 2014, balance sheet reports deferred income taxes as shown in Illustration 19-40.

ILLUSTRATION 19-40
Balance Sheet Presentation of Deferred Income Taxes

<u>Current assets</u>	
Deferred tax asset	\$ 9,000
<u>Long-term liabilities</u>	
Deferred tax liability	\$214,000

As we indicated earlier, a deferred tax asset or liability **may not be related** to an asset or liability for financial reporting purposes. One example is an operating loss carry-forward. In this case, a company records a deferred tax asset, but there is no related, identifiable asset or liability for financial reporting purposes. In these limited situations, deferred income taxes are classified according to the **expected reversal date** of the temporary difference. That is, a company should report the tax effect of any temporary difference reversing next year as current, and the remainder as noncurrent. If a deferred tax asset is noncurrent, a company should classify it in the “Other assets” section.

The total of all deferred tax liabilities, the total of all deferred tax assets, and the total valuation allowance should be disclosed. In addition, companies should disclose the following: (1) any net change during the year in the total valuation allowance, and (2) the types of temporary differences, carryforwards, or carrybacks that give rise to significant portions of deferred tax liabilities and assets.

International Perspective

IFRS requires that deferred tax assets and liabilities be classified as noncurrent, regardless of the classification of the underlying asset or liability.

Income taxes payable is reported as a current liability on the balance sheet. Corporations make estimated tax payments to the Internal Revenue Service quarterly. They record these estimated payments by a debit to Prepaid Income Taxes. As a result, the balance of the Income Taxes Payable offsets the balance of the Prepaid Income Taxes account when reporting income taxes on the balance sheet.

What do the numbers mean?

IMAGINATION AT WORK

Here’s one thing you can say that’s true about U.S. corporate taxes: The statutory rate (35 percent at the federal level, 39.2 percent when you average in state rates) is the highest on earth (see the “What Do the Numbers Mean?” box on page 1131). Here’s another thing you can say that’s true about U.S. corporate taxes: The average effective tax rate is more like 25 percent, and many corporations generally pay much less than that. How do they do it? Take **Apple**, for example. It uses a tax structure known as the “Double Irish with a Dutch Sandwich,” which reduces taxes by routing profits through Irish subsidiaries and the Netherlands and then to the Caribbean. As a result of using this tactic, Apple paid cash taxes of \$3.3 billion around the world on its reported profits of \$34.2 billion in a recent year, a tax rate of just 9.8 percent. **Google** uses the same strategy to reduce its overseas tax rate to 2.4 percent, the lowest of the top five U.S. technology companies by market capitalization, according to regulatory filings in six countries.

General Electric (GE) is generally viewed as the most skilled at reducing its tax burden. GE uses a maze of shelters, tax credits, and subsidiaries to pay far less than the stated tax rate. In a recent year, it reported worldwide profits of \$14.2 billion, and said \$5.1 billion of the total came from its operations in the United States. Its American tax bill? Zero. In fact, GE claimed a tax benefit of \$3.2 billion. GE’s giant tax department is viewed by some as the world’s best tax law

firm. Indeed, the company’s slogan, “Imagination at Work,” fits this department well. The team includes former officials not just from the Treasury, but also from the IRS and virtually all the tax-writing committees in Congress. The strategies employed by Apple, Google, and GE, as well as changes in tax laws that encouraged some businesses and professionals to file as individuals, have pushed down the corporate share of the nation’s tax receipts from 30 percent of all federal revenue in the mid-1950s to 6.6 percent in 2009.

One IRS provision designed to curb excessive tax avoidance is the **alternative minimum tax (AMT)**. Companies compute their potential tax liability under the AMT, adjusting for various preference items that reduce their tax bills under the regular tax code. (Examples of such preference items are accelerated depreciation methods and the installment method for revenue recognition.) Companies must pay the higher of the two tax obligations computed under the AMT and the regular tax code. But, as indicated by the cases above, some profitable companies avoid high tax bills, even in the presence of the AMT. Indeed, a recent study by the Government Accounting Office found that roughly two-thirds of U.S. and foreign corporations paid no federal income taxes from 1998–2005. Many citizens and public-interest groups cite corporate avoidance of income taxes as a reason for more tax reform.

Income Statement

Companies should allocate income tax expense (or benefit) to continuing operations, discontinued operations, extraordinary items, and prior period adjustments. This approach is referred to as intraperiod tax allocation.

In addition, companies should disclose the significant components of income tax expense attributable to continuing operations:

1. Current tax expense or benefit.
2. Deferred tax expense or benefit, exclusive of other components listed below.
3. Investment tax credits.
4. Government grants (if recognized as a reduction of income tax expense).
5. The benefits of operating loss carryforwards (resulting in a reduction of income tax expense).
6. Tax expense that results from allocating tax benefits either directly to paid-in capital or to reduce goodwill or other noncurrent intangible assets of an acquired entity.
7. Adjustments of a deferred tax liability or asset for enacted changes in tax laws or rates or a change in the tax status of a company.
8. Adjustments of the beginning-of-the-year balance of a valuation allowance because of a change in circumstances that causes a change in judgment about the realizability of the related deferred tax asset in future years.

In the notes, companies must also reconcile (using percentages or dollar amounts) income tax expense attributable to continuing operations with the amount that results from applying domestic federal statutory tax rates to pretax income from continuing significant reconciling items. Illustration 19-41 (page 1142) presents an example from the 2011 annual report of **PepsiCo, Inc.**

These income tax disclosures are required for several reasons:

1. **Assessing quality of earnings.** Many investors seeking to assess the quality of a company's earnings are interested in the reconciliation of pretax financial income to taxable income. Analysts carefully examine earnings that are enhanced by a favorable tax effect, particularly if the tax effect is nonrecurring. For example, the tax disclosure in Illustration 19-41 indicates that PepsiCo's effective tax rate increased from 23 percent in 2010 to 26.8 percent in 2011 (due to acquisitions of PBG and PAS and "other"). This decrease in the effective tax rate increased income for 2011.
2. **Making better predictions of future cash flows.** Examination of the deferred portion of income tax expense provides information as to whether taxes payable are likely to be higher or lower in the future. In PepsiCo's case, analysts expect future taxable amounts and higher tax payments, primarily from lower depreciation and amortization in the future. PepsiCo expects future deductible amounts and lower tax payments due to deductions for carryforwards, employee benefits, and state taxes. These deferred tax items indicate that actual tax payments for PepsiCo will be higher than the tax expense reported on the income statement in the future.⁷

⁷An article by R. P. Weber and J. E. Wheeler, "Using Income Tax Disclosures to Explore Significant Economic Transactions," *Accounting Horizons* (September 1992), discusses how analysts use deferred tax disclosures to assess the quality of earnings and to predict future cash flows.

Carryforwards and allowances

Operating loss carryforwards totaling \$10.0 billion at year-end 2011 are being carried forward in a number of foreign and state jurisdictions where we are permitted to use tax operating losses from prior periods to reduce future taxable income. These operating losses will expire as follows: \$0.1 billion in 2012, \$8.2 billion between 2013 and 2031 and \$1.7 billion may be carried forward indefinitely. We establish valuation allowances for our deferred tax assets if, based on the available evidence, it is more likely than not that some portion or all of the deferred tax assets will not be realized.

3. Predicting future cash flows for operating loss carryforwards. Companies should disclose the amounts and expiration dates of any operating loss carryforwards for tax purposes. From this disclosure, analysts determine the amount of income that the company may recognize in the future on which it will pay no income tax. For example, the PepsiCo disclosure in Illustration 19-41 indicates that PepsiCo has \$10.0 billion in net operating loss carryforwards that it can use to reduce future taxes. However, the valuation allowance indicates that \$1.264 billion of deferred tax assets may not be realized in the future.

Loss carryforwards can be valuable to a potential acquirer. For example, as mentioned earlier, **Yahoo!** has a substantial net operating loss carryforward. A potential acquirer would find Yahoo! more valuable as a result of these carryforwards. That is, the acquirer may be able to use these carryforwards to shield future income. However the acquiring company has to be careful because the structure of the deal may lead to a situation where the deductions will be severely limited.

Much the same issue arises in companies emerging from bankruptcy. In many cases, these companies have large NOLs but the value of the losses may be limited. This is because any gains related to the cancellation of liabilities in bankruptcy must be offset against the NOLs. For example, when **Kmart Holding Corp.** emerged from bankruptcy in early 2004, it disclosed NOL carryforwards approximating \$3.8 billion. At the same time, Kmart disclosed cancellation of debt gains that reduced the value of the NOL carryforward. These reductions soured the merger between Kmart and **Sears Roebuck** because the cancellation of the indebtedness gains reduced the value of the Kmart carryforwards to the merged company by \$3.74 billion.⁸

Evolving Issue

UNCERTAIN TAX POSITIONS

Whenever there is a contingency, companies determine if the contingency is **probable** and can be reasonably estimated. If both of these criteria are met, the company records the contingency in the financial statements. These guidelines also apply to uncertain tax positions. **Uncertain tax positions** are tax positions for which the tax authorities may disallow a deduction in whole or in part. Uncertain tax positions often arise when a company takes an aggressive approach in its tax planning. Examples are instances in which the tax law is unclear or the company may believe that the risk of audit is low. Uncertain tax positions give rise to tax benefits either by reducing income tax expense or related payables or by increasing an income tax refund receivable or deferred tax asset.

Unfortunately, companies have not applied these provisions consistently in accounting and reporting of uncertain tax positions. Some companies have not recognized a tax benefit unless it is probable that the benefit will be realized and can be reasonably estimated. Other companies have

used a lower threshold, such as that found in the existing authoritative literature. As we have learned, the lower threshold—described as “**more likely than not**”—means that the company believes it has at least a 51 percent chance that the uncertain tax position will pass muster with the taxing authorities. Thus, there has been diversity in practice concerning the accounting and reporting of uncertain tax positions.

As a result, the FASB has issued rules for companies to follow to determine whether it is “more likely than not” that tax positions will be sustained upon audit. [3] If the probability is more than 50 percent, companies may reduce their liability or increase their assets. If the probability is less than 50 percent, companies may not record the tax benefit. In determining “more likely than not,” companies must assume that they will be audited by the tax authorities. If the recognition threshold is passed, companies must then estimate the amount to record as an adjustment to their tax assets and

⁸P. McConnell, J. Pegg, C. Senyak, and D. Mott, “The ABCs of NOLs,” *Accounting Issues*, Bear Stearns Equity Research (June 2005). In addition, some U.S. banks hope to cash in tax credits by acquiring weaker banks with operating losses and housing credits, arising from the credit crisis. See D. Palletta, “Goldman Looks to Buy Fannie Tax Credits,” *Wall Street Journal* (November 2, 2009). The IRS frowns on acquisitions done solely to obtain operating loss carryforwards. If it determines that the merger is solely tax-motivated, the IRS disallows the deductions. But because it is very difficult to determine whether a merger is or is not tax-motivated, the “purchase of operating loss carryforwards” continues.

liabilities. (This estimation process is complex and is beyond the scope of this textbook.)

Companies will experience varying financial statement effects upon adoption of these rules. Those with a history of conservative tax strategies may have their tax liabilities decrease

or their tax assets increase. For example, **PepsiCo** recorded a \$7 million increase to retained earnings upon adoption of the guidelines. Others that followed more aggressive tax planning may have to increase their liabilities or reduce their assets, with a resulting negative effect on net income.

REVIEW OF THE ASSET-LIABILITY METHOD

LEARNING OBJECTIVE 10

Indicate the basic principles of the asset-liability method.

The FASB believes that the **asset-liability method** (sometimes referred to as the **liability approach**) is the most consistent method for accounting for income taxes. One objective of this approach is to recognize the amount of taxes payable or refundable for the current year. A second objective is to recognize **deferred tax liabilities and assets** for the **future tax consequences** of events that have been recognized in the financial statements or tax returns.

To implement the objectives, companies apply some basic principles in accounting for income taxes at the date of the financial statements, as listed in Illustration 19-42. [4]

ILLUSTRATION 19-42

Basic Principles of the Asset-Liability Method

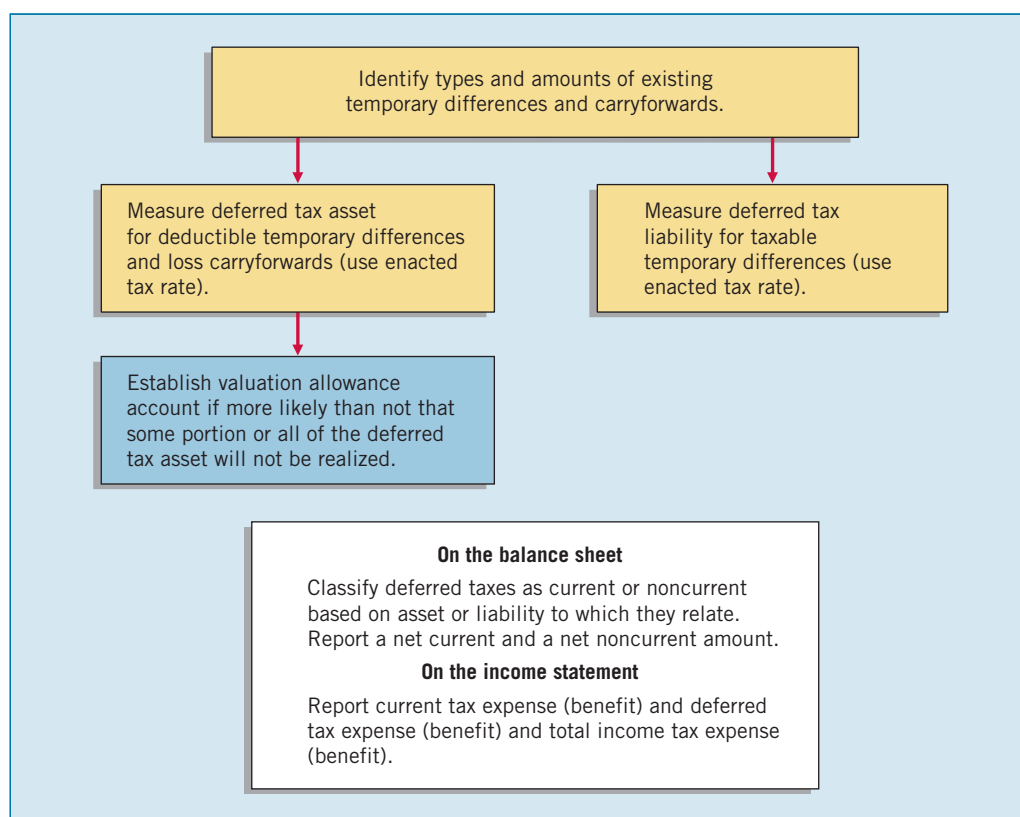

Illustration 19-43 diagrams the procedures for implementing the asset-liability method.

Discussion of Conceptual Approaches to Interperiod Tax Allocation

As an aid to understanding deferred income taxes, we provide the following glossary.

KEY DEFERRED INCOME TAX TERMS

CARRYBACKS. Deductions or credits that cannot be utilized on the tax return during a year and that may be carried back to reduce taxable income or taxes paid in a prior year. An **operating loss carryback** is an excess of tax deductions over gross income in a year. A **tax credit carryback** is the amount by which tax credits available for utilization exceed statutory limitations.

CARRYFORWARDS. Deductions or credits that cannot be utilized on the tax return during a year and that may be carried forward to reduce taxable income or taxes payable in a future year. An **operating loss carryforward** is an excess of tax deductions over gross income in a year. A **tax credit carryforward** is the amount by which tax credits available for utilization exceed statutory limitations.

CURRENT TAX EXPENSE (BENEFIT). The amount of income taxes paid or payable (or refundable) for a year as determined by applying the provisions of the enacted tax law to the taxable income or excess of deductions over revenues for that year.

DEDUCTIBLE TEMPORARY DIFFERENCE. Temporary differences that result in deductible amounts in future years when recovering or settling the related asset or liability, respectively.

DEFERRED TAX ASSET. The deferred tax consequences attributable to deductible temporary differences and carryforwards.

DEFERRED TAX CONSEQUENCES. The future effects on income taxes as measured by the enacted tax rate and provisions of the enacted tax law resulting from temporary differences and carryforwards at the end of the current year.

DEFERRED TAX EXPENSE (BENEFIT). The change during the year in a company's deferred tax liabilities and assets.

DEFERRED TAX LIABILITY. The deferred tax consequences attributable to taxable temporary differences.

INCOME TAXES. Domestic and foreign federal (national), state, and local (including franchise) taxes based on income.

INCOME TAXES CURRENTLY PAYABLE (REFUNDABLE). Refer to current tax expense (benefit).

INCOME TAX EXPENSE (BENEFIT). The sum of current tax expense (benefit) and deferred tax expense (benefit).

TAXABLE INCOME. The excess of taxable revenues over tax-deductible expenses and exemptions for the year as defined by the governmental taxing authority.

TAXABLE TEMPORARY DIFFERENCE. Temporary differences that result in taxable amounts in future years when recovering or settling the related asset or liability, respectively.

TAX-PLANNING STRATEGY. An action that meets certain criteria and that a company implements to realize a tax benefit for an operating loss or tax credit carryforward before it expires. Companies consider tax-planning strategies when assessing the need for and amount of a valuation allowance for deferred tax assets.

TEMPORARY DIFFERENCE. A difference between the tax basis of an asset or liability and its reported amount in the financial statements that will result in taxable or deductible amounts in future years when recovering or settling the reported amount of the asset or liability, respectively.

VALUATION ALLOWANCE. The portion of a deferred tax asset for which it is more likely than not that a company will not realize a tax benefit.

International Perspective

IFRS on income taxes is based on the same principles as GAAP—comprehensive recognition of deferred tax assets and liabilities.

You will want to read the

IFRS INSIGHTS
on pages 1175–1181

for discussion of IFRS related to income taxes.

SUMMARY OF LEARNING OBJECTIVES

- 1 Identify differences between pretax financial income and taxable income.** Companies compute pretax financial income (or income for book purposes) in accordance with generally accepted accounting principles. They compute taxable income (or income for tax purposes) in accordance with prescribed tax regulations. Because tax regulations and GAAP differ in many ways, so frequently do pretax financial income and taxable income. Differences may exist, for example, in the timing of revenue recognition and the timing of expense recognition.
- 2 Describe a temporary difference that results in future taxable amounts.** Revenue recognized for book purposes in the period earned but deferred and reported as revenue for tax purposes when collected results in future taxable amounts. The future taxable amounts will occur in the periods the company recovers the receivable and reports the collections as revenue for tax purposes. This results in a deferred tax liability.
- 3 Describe a temporary difference that results in future deductible amounts.** An accrued warranty expense that a company pays for and deducts for tax purposes, in a period later than the period in which it incurs and recognizes it for book purposes, results in future deductible amounts. The future deductible amounts will occur in the periods during which the company settles the related liability for book purposes. This results in a deferred tax asset.
- 4 Explain the purpose of a deferred tax asset valuation allowance.** A deferred tax asset should be reduced by a valuation allowance if, based on all available evidence, it is more likely than not (a level of likelihood that is at least slightly more than 50 percent) that it will not realize some portion or all of the deferred tax asset. The company should carefully consider all available evidence, both positive and negative, to determine whether, based on the weight of available evidence, it needs a valuation allowance.
- 5 Describe the presentation of income tax expense in the income statement.** Significant components of income tax expense should be disclosed in the income statement or in the notes to the financial statements. The most commonly encountered components are the current expense (or benefit) and the deferred expense (or benefit).
- 6 Describe various temporary and permanent differences.** Examples of temporary differences are (1) revenues or gains that are taxable after recognition in financial income; (2) expenses or losses that are deductible after recognition in financial income; (3) revenues or gains that are taxable before recognition in financial income; and (4) expenses or losses that are deductible before recognition in financial income. Examples of permanent differences are (1) items recognized for financial reporting purposes but not for tax purposes, and (2) items recognized for tax purposes but not for financial reporting purposes.
- 7 Explain the effect of various tax rates and tax rate changes on deferred income taxes.** Companies may use tax rates other than the current rate only after enactment of the future tax rates. When a change in the tax rate is enacted, a company should immediately recognize its effect on the deferred income tax accounts. The company reports the effects as an adjustment to income tax expense in the period of the change.
- 8 Apply accounting procedures for a loss carryback and a loss carryforward.** A company may carry a net operating loss back two years and receive refunds for income taxes paid in those years. The loss is applied to the earlier year first and then to the second year. Any loss remaining after the two-year carryback may be carried forward up to 20 years to offset future taxable income. A company may forgo the loss carryback and use the loss carryforward, offsetting future taxable income for up to 20 years.

9 Describe the presentation of deferred income taxes in financial statements. Companies report deferred tax accounts on the balance sheet as assets and liabilities. These deferred tax accounts are classified as a net current and a net noncurrent amount. Companies classify an individual deferred tax liability or asset as current or noncurrent based on the classification of the related asset or liability for financial reporting. A deferred tax liability or asset that is not related to an asset or liability for financial reporting, including a deferred tax asset related to a loss carryforward, is classified according to the expected reversal date of the temporary difference.

10 Indicate the basic principles of the asset-liability method. Companies apply the following basic principles in accounting for income taxes at the date of the financial statements. (1) Recognize a current tax liability or asset for the estimated taxes payable or refundable on the tax return for the current year. (2) Recognize a deferred tax liability or asset for the estimated future tax effects attributable to temporary differences and carryforwards using the enacted tax rate. (3) Base the measurement of current and deferred tax liabilities and assets on provisions of the enacted tax law. (4) Reduce the measurement of deferred tax assets, if necessary, by the amount of any tax benefits that, based on available evidence, companies do not expect to realize.

APPENDIX 19A

COMPREHENSIVE EXAMPLE OF INTERPERIOD TAX ALLOCATION

This appendix presents a comprehensive illustration of a deferred income tax problem with several temporary and permanent differences. The example follows one company through two complete years (2013 and 2014). **Study it carefully.** It should help you understand the concepts and procedures presented in the chapter.

11 LEARNING OBJECTIVE
Understand and apply the concepts and procedures of interperiod tax allocation.

FIRST YEAR—2013

Allman Company, which began operations at the beginning of 2013, produces various products on a contract basis. Each contract generates a gross profit of \$80,000. Some of Allman's contracts provide for the customer to pay on an installment basis. Under these contracts, Allman collects one-fifth of the contract revenue in each of the following four years. For financial reporting purposes, the company recognizes gross profit in the year of completion (accrual basis); for tax purposes, Allman recognizes gross profit in the year cash is collected (installment basis).

Presented below is information related to Allman's operations for 2013.

- In 2013, the company completed seven contracts that allow for the customer to pay on an installment basis. Allman recognized the related gross profit of \$560,000 for financial reporting purposes. It reported only \$112,000 of gross profit on installment sales on the 2013 tax return. The company expects future collections on the related installment receivables to result in taxable amounts of \$112,000 in each of the next four years.
- At the beginning of 2013, Allman Company purchased depreciable assets with a cost of \$540,000. For financial reporting purposes, Allman depreciates these assets using the straight-line method over a six-year service life. For tax purposes, the assets fall in the five-year recovery class, and Allman uses the MACRS system. The depreciation schedules for both financial reporting and tax purposes are shown on page 1148.

Year	Depreciation for Financial Reporting Purposes	Depreciation for Tax Purposes	Difference
2013	\$ 90,000	\$108,000	\$(18,000)
2014	90,000	172,800	(82,800)
2015	90,000	103,680	(13,680)
2016	90,000	62,208	27,792
2017	90,000	62,208	27,792
2018	90,000	31,104	58,896
	<u>\$540,000</u>	<u>\$540,000</u>	<u>\$ -0-</u>

3. The company warrants its product for two years from the date of completion of a contract. During 2013, the product warranty liability accrued for financial reporting purposes was \$200,000, and the amount paid for the satisfaction of warranty liability was \$44,000. Allman expects to settle the remaining \$156,000 by expenditures of \$56,000 in 2014 and \$100,000 in 2015.
4. In 2013, nontaxable municipal bond interest revenue was \$28,000.
5. During 2013, nondeductible fines and penalties of \$26,000 were paid.
6. Pretax financial income for 2013 amounts to \$412,000.
7. Tax rates enacted before the end of 2013 were:

2013	50%
2014 and later years	40%

8. The accounting period is the calendar year.
9. The company is expected to have taxable income in all future years.

Taxable Income and Income Taxes Payable—2013

The first step is to determine Allman Company's income taxes payable for 2013 by calculating its taxable income. Illustration 19A-1 shows this computation.

ILLUSTRATION 19A-1 Computation of Taxable Income, 2013

Pretax financial income for 2013	\$412,000
Permanent differences:	
Nontaxable revenue—municipal bond interest	(28,000)
Nondeductible expenses—fines and penalties	26,000
Temporary differences:	
Excess gross profit per books (\$560,000 – \$112,000)	(448,000)
Excess depreciation per tax (\$108,000 – \$90,000)	(18,000)
Excess warranty expense per books (\$200,000 – \$44,000)	156,000
Taxable income for 2013	<u>\$100,000</u>

Allman computes income taxes payable on taxable income for \$100,000 as follows.

ILLUSTRATION 19A-2 Computation of Income Taxes Payable, End of 2013

Taxable income for 2013	\$100,000
Tax rate	50%
Income taxes payable (current tax expense) for 2013	<u>\$ 50,000</u>

Computing Deferred Income Taxes—End of 2013

The schedule in Illustration 19A-3 summarizes the temporary differences and the resulting future taxable and deductible amounts.

	Future Years					Total
	2014	2015	2016	2017	2018	
Future taxable (deductible) amounts:						
Installment sales	\$112,000	\$112,000	\$112,000	\$112,000		\$448,000
Depreciation	(82,800)	(13,680)	27,792	27,792	\$58,896	18,000
Warranty costs	(56,000)	(100,000)				(156,000)

ILLUSTRATION 19A-3
Schedule of Future Taxable and Deductible Amounts, End of 2013

Allman computes the amounts of deferred income taxes to be reported at the end of 2013 as shown in Illustration 19A-4.

Temporary Difference	Future Taxable (Deductible) Amounts	Tax Rate	Deferred Tax	
			(Asset)	Liability
Installment sales	\$448,000	40%		\$179,200
Depreciation	18,000	40%		7,200
Warranty costs	(156,000)	40%	\$(62,400)	
Totals	\$310,000		\$(62,400)	\$186,400*

*Because only a single tax rate is involved in all relevant years, these totals can be reconciled:
\$310,000 × 40% = \$(62,400) + \$186,400.

ILLUSTRATION 19A-4
Computation of Deferred Income Taxes, End of 2013

A temporary difference is caused by the use of the accrual basis for financial reporting purposes and the installment method for tax purposes. This temporary difference will result in future taxable amounts and hence a deferred tax liability. Because of the installment contracts completed in 2013, a temporary difference of \$448,000 originates that will reverse in equal amounts over the next four years. The company expects to have taxable income in all future years, and there is only one enacted tax rate applicable to all future years. Allman uses that rate (40 percent) to compute the entire deferred tax liability resulting from this temporary difference.

The temporary difference caused by different depreciation policies for books and for tax purposes originates over three years and then reverses over three years. This difference will cause deductible amounts in 2014 and 2015 and taxable amounts in 2016, 2017, and 2018. These amounts sum to a net future taxable amount of \$18,000 (which is the cumulative temporary difference at the end of 2013). Because the company expects to have taxable income in all future years and because there is only one tax rate enacted for all of the relevant future years, Allman applies that rate to the net future taxable amount to determine the related net deferred tax liability.

The third temporary difference is caused by different methods of accounting for warranties. This difference will result in deductible amounts in each of the two future years it takes to reverse. Because the company expects to report a positive income on all future tax returns and because there is only one tax rate enacted for each of the relevant future years, Allman uses that 40 percent rate to calculate the resulting deferred tax asset.

Deferred Tax Expense (Benefit) and the Journal Entry to Record Income Taxes—2013

To determine the deferred tax expense (benefit), we need to compare the beginning and ending balances of the deferred income tax accounts. Illustration 19A-5 (on page 1150) shows that computation.

ILLUSTRATION 19A-5
Computation of Deferred Tax Expense (Benefit), 2013

Deferred tax asset at the end of 2013	\$ 62,400
Deferred tax asset at the beginning of 2013	—0—
Deferred tax expense (benefit)	<u>\$ (62,400)</u>
Deferred tax liability at the end of 2013	\$186,400
Deferred tax liability at the beginning of 2013	—0—
Deferred tax expense (benefit)	<u>\$186,400</u>

The \$62,400 increase in the deferred tax asset causes a deferred tax benefit to be reported in the income statement. The \$186,400 increase in the deferred tax liability during 2013 results in a deferred tax expense. These two amounts **net** to a deferred tax expense of \$124,000 for 2013.

ILLUSTRATION 19A-6
Computation of Net Deferred Tax Expense, 2013

Deferred tax expense (benefit)	\$ (62,400)
Deferred tax expense (benefit)	186,400
Net deferred tax expense for 2013	<u>\$124,000</u>

Allman then computes the total income tax expense as follows.

ILLUSTRATION 19A-7
Computation of Total Income Tax Expense, 2013

Current tax expense for 2013	\$ 50,000
Deferred tax expense for 2013	124,000
Income tax expense (total) for 2013	<u>\$174,000</u>

Allman records income taxes payable, deferred income taxes, and income tax expense as follows.

Income Tax Expense	174,000	
Deferred Tax Asset	62,400	
Income Taxes Payable		50,000
Deferred Tax Liability		186,400

Financial Statement Presentation—2013

Companies should classify deferred tax assets and liabilities as current and noncurrent on the balance sheet based on the classifications of related assets and liabilities. Multiple categories of deferred taxes are classified into a net current amount and a net noncurrent amount. Illustration 19A-8 shows the classification of Allman’s deferred tax accounts at the end of 2013.

ILLUSTRATION 19A-8
Classification of Deferred Tax Accounts, End of 2013

Temporary Difference	Resulting Deferred Tax		Related Balance Sheet Account	Classification
	(Asset)	Liability		
Installment sales		\$179,200	Installment Receivable	Current
Depreciation		7,200	Plant Assets	Noncurrent
Warranty costs	\$(62,400)		Warranty Obligation	Current
Totals	<u>\$(62,400)</u>	<u>\$186,400</u>		

For the first temporary difference, there is a related asset on the balance sheet, installment accounts receivable. Allman classifies that asset as current because it has a trade practice of selling to customers on an installment basis. Allman therefore classifies the resulting deferred tax liability as a current liability.

Certain assets on the balance sheet are related to the depreciation difference—the property, plant, and equipment being depreciated. Allman would classify the plant assets as noncurrent. Therefore, it also classifies the resulting deferred tax liability as noncurrent. Since the company’s operating cycle is at least four years in length, Allman classifies the entire \$156,000 warranty obligation as a current liability. Thus, it also classifies the related deferred tax asset of \$62,400 as current.⁹

The balance sheet at the end of 2013 reports the following amounts.

<u>Current liabilities</u>	
Income taxes payable	\$ 50,000
Deferred tax liability (\$179,200 – \$62,400)	116,800
<u>Long-term liabilities</u>	
Deferred tax liability	\$ 7,200

ILLUSTRATION 19A-9
Balance Sheet
Presentation of Deferred
Taxes, 2013

Allman’s income statement for 2013 reports the following.

Income before income taxes		\$412,000
Income tax expense		
Current	\$ 50,000	
Deferred	124,000	174,000
Net income		<u>\$238,000</u>

ILLUSTRATION 19A-10
Income Statement
Presentation of Income
Tax Expense, 2013

SECOND YEAR—2014

1. During 2014, Allman collected \$112,000 from customers for the receivables arising from contracts completed in 2013. The company expects recovery of the remaining receivables to result in taxable amounts of \$112,000 in each of the following three years.
2. In 2014, the company completed four new contracts that allow for the customer to pay on an installment basis. These installment sales created new installment receivables. Future collections of these receivables will result in reporting gross profit of \$64,000 for tax purposes in each of the next four years.
3. During 2014, Allman continued to depreciate the assets acquired in 2013 according to the depreciation schedules appearing on page 1148. Thus, depreciation amounted to \$90,000 for financial reporting purposes and \$172,800 for tax purposes.
4. An analysis at the end of 2014, of the product warranty liability account, showed the following details.

Balance of liability at beginning of 2014	\$156,000
Expense for 2014 income statement purposes	180,000
Amount paid for contracts completed in 2013	(56,000)
Amount paid for contracts completed in 2014	(50,000)
Balance of liability at end of 2014	<u>\$230,000</u>

⁹If Allman’s operating cycle were less than one year in length, the company would expect to settle \$56,000 of the warranty obligation within one year of the December 31, 2013, balance sheet and would use current assets to do so. Thus, \$56,000 of the warranty obligation would be a current liability and the remaining \$100,000 warranty obligation would be a long-term (noncurrent) liability. This would mean that Allman would classify \$22,400 ($\$56,000 \times 40\%$) of the related deferred tax asset as a current asset, and \$40,000 ($\$100,000 \times 40\%$) of the deferred tax asset as a noncurrent asset. *In doing homework problems, unless it is evident otherwise, assume a company’s operating cycle is not longer than one year.*

The balance of the liability is expected to require expenditures in the future as follows.

\$100,000 in 2015 due to 2013 contracts
\$ 50,000 in 2015 due to 2014 contracts
\$ 80,000 in 2016 due to 2014 contracts
<u>\$230,000</u>

5. During 2014, nontaxable municipal bond interest revenue was \$24,000.
6. Allman accrued a loss of \$172,000 for financial reporting purposes because of pending litigation. This amount is not tax-deductible until the period the loss is realized, which the company estimates to be 2022.
7. Pretax financial income for 2014 amounts to \$504,800.
8. The enacted tax rates still in effect are:

2013	50%
2014 and later years	40%

Taxable Income and Income Taxes Payable—2014

Allman computes taxable income for 2014 as follows.

ILLUSTRATION 19A-11
Computation of Taxable
Income, 2014

Pretax financial income for 2014	\$504,800
Permanent difference:	
Nontaxable revenue—municipal bond interest	(24,000)
Reversing temporary differences:	
Collection on 2013 installment sales	112,000
Payments on warranties from 2013 contracts	(56,000)
Originating temporary differences:	
Excess gross profit per books—2014 contracts	(256,000)
Excess depreciation per tax	(82,800)
Excess warranty expense per books—2014 contracts	130,000
Loss accrual per books	172,000
Taxable income for 2014	<u>\$500,000</u>

Income taxes payable for 2014 are as follows.

ILLUSTRATION 19A-12
Computation of Income
Taxes Payable, End of
2014

Taxable income for 2014	\$500,000
Tax rate	40%
Income taxes payable (current tax expense) for 2014	<u>\$200,000</u>

ILLUSTRATION 19A-13
Schedule of Future
Taxable and Deductible
Amounts, End of 2014

Computing Deferred Income Taxes—End of 2014

The schedule in Illustration 19A-13 summarizes the temporary differences existing at the end of 2014 and the resulting future taxable and deductible amounts.

	Future Years					Total
	2015	2016	2017	2018	2022	
Future taxable (deductible) amounts:						
Installment sales—2013	\$112,000	\$112,000	\$112,000			\$336,000
Installment sales—2014	64,000	64,000	64,000	\$64,000		256,000
Depreciation	(13,680)	27,792	27,792	58,896		100,800
Warranty costs	(150,000)	(80,000)				(230,000)
Loss accrual					\$(172,000)	(172,000)

Allman computes the amounts of deferred income taxes to be reported at the end of 2014 as follows.

Temporary Difference	Future Taxable (Deductible) Amounts	Tax Rate	Deferred Tax	
			(Asset)	Liability
Installment sales	\$592,000*	40%		\$236,800
Depreciation	100,800	40%		40,320
Warranty costs	(230,000)	40%	\$ (92,000)	
Loss accrual	(172,000)	40%	(68,800)	
Totals	\$290,800		\$(160,800)	\$277,120**

*Cumulative temporary difference = \$336,000 + \$256,000
 **Because of a flat tax rate, these totals can be reconciled: \$290,800 × 40% = \$(160,800) + \$277,120

ILLUSTRATION 19A-14
 Computation of Deferred Income Taxes, End of 2014

Deferred Tax Expense (Benefit) and the Journal Entry to Record Income Taxes—2014

To determine the deferred tax expense (benefit), Allman must compare the beginning and ending balances of the deferred income tax accounts, as shown in Illustration 19A-15.

Deferred tax asset at the end of 2014	\$160,800
Deferred tax asset at the beginning of 2014	62,400
Deferred tax expense (benefit)	<u>\$ (98,400)</u>
Deferred tax liability at the end of 2014	\$277,120
Deferred tax liability at the beginning of 2014	186,400
Deferred tax expense (benefit)	<u>\$ 90,720</u>

ILLUSTRATION 19A-15
 Computation of Deferred Tax Expense (Benefit), 2014

The deferred tax expense (benefit) and the total income tax expense for 2014 are, therefore, as follows.

Deferred tax expense (benefit)	\$ (98,400)
Deferred tax expense (benefit)	<u>90,720</u>
Deferred tax benefit for 2014	(7,680)
Current tax expense for 2014	200,000
Income tax expense (total) for 2014	<u>\$192,320</u>

ILLUSTRATION 19A-16
 Computation of Total Income Tax Expense, 2014

The deferred tax expense of \$90,720 and the deferred tax benefit of \$98,400 net to a deferred tax benefit of \$7,680 for 2014.

Allman records income taxes for 2014 with the following journal entry.

Income Tax Expense	192,320	
Deferred Tax Asset	98,400	
Income Taxes Payable		200,000
Deferred Tax Liability		90,720

Financial Statement Presentation—2014

Illustration 19A-17 (on page 1154) shows the classification of Allman’s deferred tax accounts at the end of 2014.

ILLUSTRATION 19A-17

Classification of Deferred Tax Accounts, End of 2014

Temporary Difference	Resulting Deferred Tax		Related Balance Sheet Account	Classification
	(Asset)	Liability		
Installment sales		\$236,800	Installment Receivables	Current
Depreciation		40,320	Plant Assets	Noncurrent
Warranty costs	\$ (92,000)		Warranty Obligation	Current
Loss accrual	(68,800)		Litigation Obligation	Noncurrent
Totals	<u>\$(160,800)</u>	<u>\$277,120</u>		

The new temporary difference introduced in 2014 (due to the litigation loss accrual) results in a litigation obligation that is classified as a long-term liability. Thus, the related deferred tax asset is noncurrent.

Allman's balance sheet at the end of 2014 reports the following amounts.

ILLUSTRATION 19A-18

Balance Sheet Presentation of Deferred Taxes, End of 2014

<u>Other assets (noncurrent)</u>		
Deferred tax asset (\$68,800 – \$40,320)		\$ 28,480
<u>Current liabilities</u>		
Income taxes payable		\$200,000
Deferred tax liability (\$236,800 – \$92,000)		144,800

The income statement for 2014 reports the following.

ILLUSTRATION 19A-19

Income Statement Presentation of Income Tax Expense, 2014

Income before income taxes		\$504,800
Income tax expense		
Current	\$200,000	
Deferred	<u>(7,680)</u>	<u>192,320</u>
Net income		<u>\$312,480</u>

SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 19A

11 Understand and apply the concepts and procedures of interperiod tax allocation. Accounting for deferred taxes involves the following steps. (1) Calculate taxable income and income taxes payable for the year. (2) Compute deferred income taxes at the end of the year. (3) Determine deferred tax expense (benefit) and make the journal entry to record income taxes. (4) Classify deferred tax assets and liabilities as current or noncurrent in the financial statements.

DEMONSTRATION PROBLEM

Johnny Bravo Company began operations in 2014 and has provided the following information.

1. Pretax financial income for 2014 is \$100,000.
2. The tax rate enacted for 2014 and future years is 40%.
3. Differences between the 2014 income statement and tax return are listed below.
 - (a) Warranty expense accrued for financial reporting purposes amounts to \$5,000. Warranty deductions per the tax return amount to \$2,000.

- (b) Gross profit on construction contracts using the percentage-of-completion method for books amounts to \$92,000. Gross profit on construction contracts for tax purposes amounts to \$62,000.
 - (c) Depreciation of property, plant, and equipment for financial reporting purposes amounts to \$60,000. Depreciation of these assets amounts to \$80,000 for the tax return.
 - (d) A \$3,500 fine paid for violation of pollution laws was deducted in computing pretax financial income.
 - (e) Interest revenue earned on an investment in tax-exempt municipal bonds amounts to \$1,400.
- Assume (a) is short-term in nature; assume (b) and (c) are long-term in nature.
4. Taxable income is expected for the next few years.

Instructions

- (a) Compute taxable income for 2014.
- (b) Compute the deferred taxes at December 31, 2014, that relate to the temporary differences described above.
- (c) Prepare the journal entry to record income tax expense, deferred taxes, and income taxes payable for 2014.
- (d) Draft the income tax expense section of the income statement, beginning with "Income before income taxes."
- (e) Assume that in 2015 Johnny Bravo reported a pretax operating loss of \$100,000. There were no other temporary or permanent differences in tax and book income for 2015. Prepare the journal entry to record income tax expense for 2015. Johnny Bravo expects to return to profitability in 2016.

Solution

(a)

Pretax financial income		\$100,000
Permanent differences		
Fine for pollution		3,500
Tax-exempt interest		(1,400)
Originating temporary differences		
Excess warranty expense per books (\$5,000 – \$2,000)		3,000
Excess construction profits per books (\$92,000 – \$62,000)		(30,000)
Excess depreciation per tax (\$80,000 – \$60,000)		(20,000)
Taxable income		\$ 55,100

(b)

Temporary Difference	Future Taxable (Deductible) Amounts	Tax Rate	Deferred Tax	
			(Asset)	Liability
Warranty costs	\$ (3,000)	40%	\$(1,200)	
Construction contracts	30,000	40%		\$12,000
Depreciation	20,000	40%		8,000
Totals	\$47,000		\$(1,200)	\$20,000*

(c)

Income Tax Expense		40,840
Deferred Tax Asset		1,200
Deferred Tax Liability		20,000
Income Taxes Payable		22,040
Taxable income for 2014 [from part (a)]		\$55,100
Tax rate		40%
Income taxes payable for 2014		\$22,040
Deferred tax liability at the end of 2014 [from part (b)]		\$20,000
Deferred tax liability at the beginning of 2014		–0–
Deferred tax expense for 2014		\$20,000
Deferred tax asset at the end of 2014 [from part (b)]		\$ 1,200
Deferred tax asset at the beginning of 2014		–0–
Deferred tax benefit for 2014		\$ (1,200)

(d)			
	Income before income taxes		\$100,000
	Income tax expense		
	Current	\$22,040	
	Deferred	18,800	40,840
	Net income		<u>\$ 59,160</u>
(e)			
	Income Tax Refund Receivable*	22,040	
	Deferred Tax Asset**	17,960	
	Benefit from Operating Loss Carryback		22,040
	Benefit from Operating Loss Carryforward		17,960
2015 Loss	\$100,000		
*Carryback	<u>(55,100)</u> × 40% = \$22,040 refund		
**Carryforward	\$ 44,900 × 40% = \$17,960 deferred tax asset		

No valuation allowance is needed since Johnny Bravo is expected to return to profitability in 2016. This is positive evidence that the deferred tax asset will be realized.

Exercises

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

CE19-1 Access the glossary ("Master Glossary") to answer the following.

- (a) What is a deferred tax asset?
- (b) What is taxable income?
- (c) What is the definition of valuation allowance?
- (d) What is a deferred tax liability?

CE19-2 What are the two basic requirements applied to the measurement of current and deferred income taxes at the date of the financial statements?

CE19-3 A company wishes to conduct business in a foreign country that attracts businesses by granting "holidays" from income taxes for a certain period of time. Would the company have to disclose this "holiday" to the SEC? If so, what information must be disclosed?

CE19-4 When is a company allowed to initially recognize the financial statement effects of a tax position?

An additional Codification case can be found in the Using Your Judgment section, on page 1174.

Be sure to check the book's companion website for a Review and Analysis Exercise, with solution.

QUESTIONS

1. Explain the difference between pretax financial income and taxable income.
2. What are the two objectives of accounting for income taxes?
3. Interest on municipal bonds is referred to as a permanent difference when determining the proper amount to report for deferred taxes. Explain the meaning of permanent differences, and give two other examples.
4. Explain the meaning of a temporary difference as it relates to deferred tax computations, and give three examples.
5. Differentiate between an originating temporary difference and a reversing difference.
6. The book basis of depreciable assets for Erwin Co. is \$900,000, and the tax basis is \$700,000 at the end of 2015. The enacted tax rate is 34% for all periods. Determine the amount of deferred taxes to be reported on the balance sheet at the end of 2015.
7. Roth Inc. has a deferred tax liability of \$68,000 at the beginning of 2015. At the end of 2015, it reports accounts receivable on the books at \$90,000 and the tax basis at zero (its only temporary difference). If the enacted tax rate is 34% for all periods, and income taxes payable for the period is \$230,000, determine the amount of total income tax expense to report for 2015.
8. What is the difference between a future taxable amount and a future deductible amount? When is it appropriate to record a valuation account for a deferred tax asset?
9. Pretax financial income for Lake Inc. is \$300,000, and its taxable income is \$100,000 for 2015. Its only temporary difference at the end of the period relates to a \$70,000 difference due to excess depreciation for tax purposes. If the tax rate is 40% for all periods, compute the amount of income tax expense to report in 2015. No deferred income taxes existed at the beginning of the year.
10. How are deferred tax assets and deferred tax liabilities reported on the balance sheet?
11. Describe the procedures involved in segregating various deferred tax amounts into current and noncurrent categories.
12. How is it determined whether deferred tax amounts are considered to be “related” to specific asset or liability amounts?
13. At the end of the year, Falabella Co. has pretax financial income of \$550,000. Included in the \$550,000 is \$70,000 interest income on municipal bonds, \$25,000 fine for dumping hazardous waste, and depreciation of \$60,000. Depreciation for tax purposes is \$45,000. Compute income taxes payable, assuming the tax rate is 30% for all periods.
14. Addison Co. has one temporary difference at the beginning of 2014 of \$500,000. The deferred tax liability established for this amount is \$150,000, based on a tax rate of 30%. The temporary difference will provide the following taxable amounts: \$100,000 in 2015, \$200,000 in 2016, and \$200,000 in 2017. If a new tax rate for 2017 of 20% is enacted into law at the end of 2014, what is the journal entry necessary in 2014 (if any) to adjust deferred taxes?
15. What are some of the reasons that the components of income tax expense should be disclosed and a reconciliation between the effective tax rate and the statutory tax rate be provided?
16. Differentiate between “loss carryback” and “loss carryforward.” Which can be accounted for with the greater certainty when it arises? Why?
17. What are the possible treatments for tax purposes of a net operating loss? What are the circumstances that determine the option to be applied? What is the proper treatment of a net operating loss for financial reporting purposes?
18. What controversy relates to the accounting for net operating loss carryforwards?
19. What is an uncertain tax position, and what are the general guidelines for accounting for uncertain tax positions?

BRIEF EXERCISES

- 1 2** **BE19-1** In 2014, Amirante Corporation had pretax financial income of \$168,000 and taxable income of \$120,000. The difference is due to the use of different depreciation methods for tax and accounting purposes. The effective tax rate is 40%. Compute the amount to be reported as income taxes payable at December 31, 2014.
- 1 2** **BE19-2** Oxford Corporation began operations in 2014 and reported pretax financial income of \$225,000 for the year. Oxford’s tax depreciation exceeded its book depreciation by \$40,000. Oxford’s tax rate for 2014 and years thereafter is 30%. In its December 31, 2014, balance sheet, what amount of deferred tax liability should be reported?

- 9** **BE19-3** Using the information from BE19-2, assume this is the only difference between Oxford's pretax financial income and taxable income. Prepare the journal entry to record the income tax expense, deferred income taxes, and income taxes payable, and show how the deferred tax liability will be classified on the December 31, 2014, balance sheet.
- 2** **5** **BE19-4** At December 31, 2014, Appaloosa Corporation had a deferred tax liability of \$25,000. At December 31, 2015, the deferred tax liability is \$42,000. The corporation's 2015 current tax expense is \$48,000. What amount should Appaloosa report as total 2015 income tax expense?
- 1** **3** **BE19-5** At December 31, 2014, Suffolk Corporation had an estimated warranty liability of \$105,000 for accounting purposes and \$0 for tax purposes. (The warranty costs are not deductible until paid.) The effective tax rate is 40%. Compute the amount Suffolk should report as a deferred tax asset at December 31, 2014.
- 3** **5** **BE19-6** At December 31, 2014, Percheron Inc. had a deferred tax asset of \$30,000. At December 31, 2015, the deferred tax asset is \$59,000. The corporation's 2015 current tax expense is \$61,000. What amount should Percheron report as total 2015 income tax expense?
- 4** **BE19-7** At December 31, 2014, Hillyard Corporation has a deferred tax asset of \$200,000. After a careful review of all available evidence, it is determined that it is more likely than not that \$60,000 of this deferred tax asset will not be realized. Prepare the necessary journal entry.
- 5** **BE19-8** Mitchell Corporation had income before income taxes of \$195,000 in 2014. Mitchell's current income tax expense is \$48,000, and deferred income tax expense is \$30,000. Prepare Mitchell's 2014 income statement, beginning with Income before income taxes.
- 2** **3** **BE19-9** Shetland Inc. had pretax financial income of \$154,000 in 2014. Included in the computation of that amount is insurance expense of \$4,000 which is not deductible for tax purposes. In addition, depreciation for tax purposes exceeds accounting depreciation by \$10,000. Prepare Shetland's journal entry to record 2014 taxes, assuming a tax rate of 45%.
- 2** **BE19-10** Clydesdale Corporation has a cumulative temporary difference related to depreciation of \$580,000 at December 31, 2014. This difference will reverse as follows: 2015, \$42,000; 2016, \$244,000; and 2017, \$294,000. Enacted tax rates are 34% for 2015 and 2016, and 40% for 2017. Compute the amount Clydesdale should report as a deferred tax liability at December 31, 2014.
- 7** **BE19-11** At December 31, 2014, Fell Corporation had a deferred tax liability of \$680,000, resulting from future taxable amounts of \$2,000,000 and an enacted tax rate of 34%. In May 2015, a new income tax act is signed into law that raises the tax rate to 40% for 2015 and future years. Prepare the journal entry for Fell to adjust the deferred tax liability.
- 8** **BE19-12** Conlin Corporation had the following tax information.

Year	Taxable Income	Tax Rate	Taxes Paid
2012	\$300,000	35%	\$105,000
2013	\$325,000	30%	\$ 97,500
2014	\$400,000	30%	\$120,000

In 2015, Conlin suffered a net operating loss of \$480,000, which it elected to carry back. The 2015 enacted tax rate is 29%. Prepare Conlin's entry to record the effect of the loss carryback.

- 8** **BE19-13** Rode Inc. incurred a net operating loss of \$500,000 in 2014. Combined income for 2012 and 2013 was \$350,000. The tax rate for all years is 40%. Rode elects the carryback option. Prepare the journal entries to record the benefits of the loss carryback and the loss carryforward. Rode expects to return to profitability in 2015.
- 4** **8** **BE19-14** Use the information for Rode Inc. given in BE19-13. Assume that it is more likely than not that the entire net operating loss carryforward will not be realized in future years. Prepare all the journal entries necessary at the end of 2014.
- 9** **BE19-15** Youngman Corporation has temporary differences at December 31, 2014, that result in the following deferred taxes.

Deferred tax liability—current	\$38,000
Deferred tax asset—current	\$62,000
Deferred tax liability—noncurrent	\$96,000
Deferred tax asset—noncurrent	\$27,000

Indicate how these balances would be presented in Youngman's December 31, 2014, balance sheet.

EXERCISES

- 2 5** **E19-1 (One Temporary Difference, Future Taxable Amounts, One Rate, No Beginning Deferred Taxes)** South Carolina Corporation has one temporary difference at the end of 2014 that will reverse and cause taxable amounts of \$55,000 in 2015, \$60,000 in 2016, and \$65,000 in 2017. South Carolina's pretax financial income for 2014 is \$300,000, and the tax rate is 30% for all years. There are no deferred taxes at the beginning of 2014.

Instructions

- (a) Compute taxable income and income taxes payable for 2014.
- (b) Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2014.
- (c) Prepare the income tax expense section of the income statement for 2014, beginning with the line "Income before income taxes."

- 2** **E19-2 (Two Differences, No Beginning Deferred Taxes, Tracked through 2 Years)** The following information is available for Wenger Corporation for 2013 (its first year of operations).

1. Excess of tax depreciation over book depreciation, \$40,000. This \$40,000 difference will reverse equally over the years 2014–2017.
2. Deferral, for book purposes, of \$20,000 of rent received in advance. The rent will be recognized in 2014.
3. Pretax financial income, \$300,000.
4. Tax rate for all years, 40%.

Instructions

- (a) Compute taxable income for 2013.
- (b) Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2013.
- (c) Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2014, assuming taxable income of \$325,000.

- 2 5** **E19-3 (One Temporary Difference, Future Taxable Amounts, One Rate, Beginning Deferred Taxes)** Bandung Corporation began 2014 with a \$92,000 balance in the Deferred Tax Liability account. At the end of 2014, the related cumulative temporary difference amounts to \$350,000, and it will reverse evenly over the next 2 years. Pretax accounting income for 2014 is \$525,000, the tax rate for all years is 40%, and taxable income for 2014 is \$405,000.

Instructions

- (a) Compute income taxes payable for 2014.
- (b) Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2014.
- (c) Prepare the income tax expense section of the income statement for 2014 beginning with the line "Income before income taxes."

- 2 3** **E19-4 (Three Differences, Compute Taxable Income, Entry for Taxes)** Zurich Company reports pretax financial income of \$70,000 for 2014. The following items cause taxable income to be different than pretax financial income.

5 6

1. Depreciation on the tax return is greater than depreciation on the income statement by \$16,000.
2. Rent collected on the tax return is greater than rent recognized on the income statement by \$22,000.
3. Fines for pollution appear as an expense of \$11,000 on the income statement.

Zurich's tax rate is 30% for all years, and the company expects to report taxable income in all future years. There are no deferred taxes at the beginning of 2014.

Instructions

- (a) Compute taxable income and income taxes payable for 2014.
- (b) Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2014.
- (c) Prepare the income tax expense section of the income statement for 2014, beginning with the line "Income before income taxes."
- (d) Compute the effective income tax rate for 2014.

- 2 3** E19-5 (Two Temporary Differences, One Rate, Beginning Deferred Taxes) The following facts relate to Krung Thep Corporation.

5

1. Deferred tax liability, January 1, 2014, \$40,000.
2. Deferred tax asset, January 1, 2014, \$0.
3. Taxable income for 2014, \$95,000.
4. Pretax financial income for 2014, \$200,000.
5. Cumulative temporary difference at December 31, 2014, giving rise to future taxable amounts, \$240,000.
6. Cumulative temporary difference at December 31, 2014, giving rise to future deductible amounts, \$35,000.
7. Tax rate for all years, 40%.
8. The company is expected to operate profitably in the future.

Instructions

- (a) Compute income taxes payable for 2014.
 - (b) Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2014.
 - (c) Prepare the income tax expense section of the income statement for 2014, beginning with the line "Income before income taxes."
- 6** E19-6 (Identify Temporary or Permanent Differences) Listed below are items that are commonly accounted for differently for financial reporting purposes than they are for tax purposes.

Instructions

For each item below, indicate whether it involves:

- (1) A temporary difference that will result in future deductible amounts and, therefore, will usually give rise to a deferred income tax asset.
- (2) A temporary difference that will result in future taxable amounts and, therefore, will usually give rise to a deferred income tax liability.
- (3) A permanent difference.

Use the appropriate number to indicate your answer for each.

- (a) _____ The MACRS depreciation system is used for tax purposes, and the straight-line depreciation method is used for financial reporting purposes for some plant assets.
- (b) _____ A landlord collects some rents in advance. Rents received are taxable in the period when they are received.
- (c) _____ Expenses are incurred in obtaining tax-exempt income.
- (d) _____ Costs of guarantees and warranties are estimated and accrued for financial reporting purposes.
- (e) _____ Installment sales of investments are accounted for by the accrual method for financial reporting purposes and the installment method for tax purposes.
- (f) _____ For some assets, straight-line depreciation is used for both financial reporting purposes and tax purposes but the assets' lives are shorter for tax purposes.
- (g) _____ Interest is received on an investment in tax-exempt municipal obligations.
- (h) _____ Proceeds are received from a life insurance company because of the death of a key officer. (The company carries a policy on key officers.)
- (i) _____ The tax return reports a deduction for 80% of the dividends received from U.S. corporations. The cost method is used in accounting for the related investments for financial reporting purposes.
- (j) _____ Estimated losses on pending lawsuits and claims are accrued for books. These losses are tax deductible in the period(s) when the related liabilities are settled.
- (k) _____ Expenses on stock options are accrued for financial reporting purposes.

- 2 3** E19-7 (Terminology, Relationships, Computations, Entries)

4 6

Instructions

Complete the following statements by filling in the blanks.

- (a) In a period in which a taxable temporary difference reverses, the reversal will cause taxable income to be _____ (less than, greater than) pretax financial income.
- (b) If a \$76,000 balance in Deferred Tax Asset was computed by use of a 40% rate, the underlying cumulative temporary difference amounts to \$_____.
- (c) Deferred taxes _____ (are, are not) recorded to account for permanent differences.
- (d) If a taxable temporary difference originates in 2014, it will cause taxable income for 2014 to be _____ (less than, greater than) pretax financial income for 2014.
- (e) If total tax expense is \$50,000 and deferred tax expense is \$65,000, then the current portion of the expense computation is referred to as current tax _____ (expense, benefit) of \$_____.

- (f) If a corporation's tax return shows taxable income of \$100,000 for Year 2 and a tax rate of 40%, how much will appear on the December 31, Year 2, balance sheet for "Income taxes payable" if the company has made estimated tax payments of \$36,500 for Year 2? \$_____.
- (g) An increase in the Deferred Tax Liability account on the balance sheet is recorded by a _____ (debit, credit) to the Income Tax Expense account.
- (h) An income statement that reports current tax expense of \$82,000 and deferred tax benefit of \$23,000 will report total income tax expense of \$_____.
- (i) A valuation account is needed whenever it is judged to be _____ that a portion of a deferred tax asset _____ (will be, will not be) realized.
- (j) If the tax return shows total taxes due for the period of \$75,000 but the income statement shows total income tax expense of \$55,000, the difference of \$20,000 is referred to as deferred tax _____ (expense, benefit).

- 2 3** E19-8 (Two Temporary Differences, One Rate, 3 Years) Button Company has the following two temporary differences between its income tax expense and income taxes payable.

	2014	2015	2016
Pretax financial income	\$840,000	\$910,000	\$945,000
Excess depreciation expense on tax return	(30,000)	(40,000)	(10,000)
Excess warranty expense in financial income	20,000	10,000	8,000
Taxable income	<u>\$830,000</u>	<u>\$880,000</u>	<u>\$943,000</u>

The income tax rate for all years is 40%.

Instructions

- (a) Assuming there were no temporary differences prior to 2014, prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2014, 2015, and 2016.
- (b) Indicate how deferred taxes will be reported on the 2016 balance sheet. Button's product warranty is for 12 months.
- (c) Prepare the income tax expense section of the income statement for 2016, beginning with the line "Pretax financial income."

- 8** E19-9 (Carryback and Carryforward of NOL, No Valuation Account, No Temporary Differences) The pretax financial income (or loss) figures for Jenny Spangler Company are as follows.

2009	\$160,000
2010	250,000
2011	80,000
2012	(160,000)
2013	(380,000)
2014	120,000
2015	100,000

Pretax financial income (or loss) and taxable income (loss) were the same for all years involved. Assume a 45% tax rate for 2009 and 2010 and a 40% tax rate for the remaining years.

Instructions

Prepare the journal entries for the years 2011 to 2015 to record income tax expense and the effects of the net operating loss carrybacks and carryforwards assuming Jenny Spangler Company uses the carryback provision. All income and losses relate to normal operations. (In recording the benefits of a loss carryforward, assume that no valuation account is deemed necessary.)

- 8** E19-10 (Two NOLs, No Temporary Differences, No Valuation Account, Entries and Income Statement) Felicia Rashad Corporation has pretax financial income (or loss) equal to taxable income (or loss) from 2006 through 2014 as follows.

	Income (Loss)	Tax Rate
2006	\$ 29,000	30%
2007	40,000	30%
2008	17,000	35%
2009	48,000	50%
2010	(150,000)	40%
2011	90,000	40%
2012	30,000	40%
2013	105,000	40%
2014	(60,000)	45%

Pretax financial income (loss) and taxable income (loss) were the same for all years since Rashad has been in business. Assume the carryback provision is employed for net operating losses. In recording the benefits of a loss carryforward, assume that it is more likely than not that the related benefits will be realized.

Instructions

- What entry(ies) for income taxes should be recorded for 2010?
- Indicate what the income tax expense portion of the income statement for 2010 should look like. Assume all income (loss) relates to continuing operations.
- What entry for income taxes should be recorded in 2011?
- How should the income tax expense section of the income statement for 2011 appear?
- What entry for income taxes should be recorded in 2014?
- How should the income tax expense section of the income statement for 2014 appear?

- 2 3** **E19-11 (Three Differences, Classify Deferred Taxes)** At December 31, 2013, Belmont Company had a net deferred tax liability of \$375,000. An explanation of the items that compose this balance is as follows.

9

Temporary Differences	Resulting Balances in Deferred Taxes
1. Excess of tax depreciation over book depreciation	\$200,000
2. Accrual, for book purposes, of estimated loss contingency from pending lawsuit that is expected to be settled in 2014. The loss will be deducted on the tax return when paid.	(50,000)
3. Accrual method used for book purposes and installment method used for tax purposes for an isolated installment sale of an investment.	<u>225,000</u>
	<u>\$375,000</u>

In analyzing the temporary differences, you find that \$30,000 of the depreciation temporary difference will reverse in 2014, and \$120,000 of the temporary difference due to the installment sale will reverse in 2014. The tax rate for all years is 40%.

Instructions

Indicate the manner in which deferred taxes should be presented on Belmont Company's December 31, 2013, balance sheet.

- 2 3** **E19-12 (Two Temporary Differences, One Rate, Beginning Deferred Taxes, Compute Pretax Financial Income)** The following facts relate to Duncan Corporation.

5

- Deferred tax liability, January 1, 2014, \$60,000.
- Deferred tax asset, January 1, 2014, \$20,000.
- Taxable income for 2014, \$105,000.
- Cumulative temporary difference at December 31, 2014, giving rise to future taxable amounts, \$230,000.
- Cumulative temporary difference at December 31, 2014, giving rise to future deductible amounts, \$95,000.
- Tax rate for all years, 40%. No permanent differences exist.
- The company is expected to operate profitably in the future.

Instructions

- Compute the amount of pretax financial income for 2014.
- Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2014.
- Prepare the income tax expense section of the income statement for 2014, beginning with the line "Income before income taxes."
- Compute the effective tax rate for 2014.

- 2 7** **E19-13 (One Difference, Multiple Rates, Effect of Beginning Balance versus No Beginning Deferred Taxes)** At the end of 2013, Lucretia McEvil Company has \$180,000 of cumulative temporary differences that will result in reporting future taxable amounts as shown on the next page.

2014	\$ 60,000
2015	50,000
2016	40,000
2017	<u>30,000</u>
	<u>\$180,000</u>

Tax rates enacted as of the beginning of 2012 are:

2012 and 2013	40%
2014 and 2015	30%
2016 and later	25%

McEvil's taxable income for 2013 is \$320,000. Taxable income is expected in all future years.

Instructions

- Prepare the journal entry for McEvil to record income taxes payable, deferred income taxes, and income tax expense for 2013, assuming that there were no deferred taxes at the end of 2012.
- Prepare the journal entry for McEvil to record income taxes payable, deferred income taxes, and income tax expense for 2013, assuming that there was a balance of \$22,000 in a Deferred Tax Liability account at the end of 2012.

- 3 4 E19-14 (Deferred Tax Asset with and without Valuation Account)** Jennifer Capriati Corp. has a deferred tax asset account with a balance of \$150,000 at the end of 2013 due to a single cumulative temporary difference of \$375,000. At the end of 2014, this same temporary difference has increased to a cumulative amount of \$450,000. Taxable income for 2014 is \$820,000. The tax rate is 40% for all years. No valuation account related to the deferred tax asset is in existence at the end of 2013.

Instructions

- Record income tax expense, deferred income taxes, and income taxes payable for 2014, assuming that it is more likely than not that the deferred tax asset will be realized.
- Assuming that it is more likely than not that \$30,000 of the deferred tax asset will not be realized, prepare the journal entry at the end of 2014 to record the valuation account.

- 3 4 E19-15 (Deferred Tax Asset with Previous Valuation Account)** Assume the same information as E19-14, except that at the end of 2013, Jennifer Capriati Corp. had a valuation account related to its deferred tax asset of \$45,000.

Instructions

- Record income tax expense, deferred income taxes, and income taxes payable for 2014, assuming that it is more likely than not that the deferred tax asset will be realized in full.
- Record income tax expense, deferred income taxes, and income taxes payable for 2014, assuming that it is more likely than not that none of the deferred tax asset will be realized.

- 2 5 E19-16 (Deferred Tax Liability, Change in Tax Rate, Prepare Section of Income Statement)** Novotna Inc.'s only temporary difference at the beginning and end of 2013 is caused by a \$3 million deferred gain for tax purposes for an installment sale of a plant asset, and the related receivable (only one-half of which is classified as a current asset) is due in equal installments in 2014 and 2015. The related deferred tax liability at the beginning of the year is \$1,200,000. In the third quarter of 2013, a new tax rate of 34% is enacted into law and is scheduled to become effective for 2015. Taxable income for 2013 is \$5,000,000, and taxable income is expected in all future years.

Instructions

- Determine the amount reported as a deferred tax liability at the end of 2013. Indicate proper classification(s).
- Prepare the journal entry (if any) necessary to adjust the deferred tax liability when the new tax rate is enacted into law.
- Draft the income tax expense portion of the income statement for 2013. Begin with the line "Income before income taxes." Assume no permanent differences exist.

- 2 3 7 E19-17 (Two Temporary Differences, Tracked through 3 Years, Multiple Rates)** Taxable income and pretax financial income would be identical for Huber Co. except for its treatments of gross profit on installment sales and estimated costs of warranties. The income computations shown on page 1164 have been prepared.

Taxable income	2013	2014	2015
Excess of revenues over expenses (excluding two temporary differences)	\$160,000	\$210,000	\$90,000
Installment gross profit collected	8,000	8,000	8,000
Expenditures for warranties	(5,000)	(5,000)	(5,000)
Taxable income	\$163,000	\$213,000	\$93,000

Pretax financial income	2013	2014	2015
Excess of revenues over expenses (excluding two temporary differences)	\$160,000	\$210,000	\$90,000
Installment gross profit earned	24,000	–0–	–0–
Estimated cost of warranties	(15,000)	–0–	–0–
Income before taxes	\$169,000	\$210,000	\$90,000

The tax rates in effect are 2013, 40%; 2014 and 2015, 45%. All tax rates were enacted into law on January 1, 2013. No deferred income taxes existed at the beginning of 2013. Taxable income is expected in all future years.

Instructions

Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2013, 2014, and 2015.

- 2 3** **E19-18 (Three Differences, Multiple Rates, Future Taxable Income)** During 2014, Kate Holmes Co.’s first year of operations, the company reports pretax financial income at \$250,000. Holmes’s enacted tax rate is 45% for 2014 and 40% for all later years. Holmes expects to have taxable income in each of the next 5 years. The effects on future tax returns of temporary differences existing at December 31, 2014, are summarized as follows.

	Future Years					Total
	2015	2016	2017	2018	2019	
Future taxable (deductible) amounts:						
Installment sales	\$32,000	\$32,000	\$32,000			\$ 96,000
Depreciation	6,000	6,000	6,000	\$6,000	\$6,000	30,000
Unearned rent	(50,000)	(50,000)				(100,000)

Instructions

- (a) Complete the schedule below to compute deferred taxes at December 31, 2014.
- (b) Compute taxable income for 2014.
- (c) Prepare the journal entry to record income taxes payable, deferred taxes, and income tax expense for 2014.

Temporary Difference	Future Taxable (Deductible) Amounts	Tax Rate	December 31, 2014	
			Deferred Tax (Asset)	Liability
Installment sales	\$ 96,000			
Depreciation	30,000			
Unearned rent	(100,000)			
Totals	\$			

- 2 3** **E19-19 (Two Differences, One Rate, Beginning Deferred Balance, Compute Pretax Financial Income)** Andy McDowell Co. establishes a \$100 million liability at the end of 2014 for the estimated site-cleanup costs at two of its manufacturing facilities. All related closing costs will be paid and deducted on the tax return in 2015. Also, at the end of 2014, the company has \$50 million of temporary differences due to excess depreciation for tax purposes, \$7 million of which will reverse in 2015.

The enacted tax rate for all years is 40%, and the company pays taxes of \$64 million on \$160 million of taxable income in 2014. McDowell expects to have taxable income in 2015.

Instructions

- (a) Determine the deferred taxes to be reported at the end of 2015.
- (b) Indicate how the deferred taxes computed in (a) are to be reported on the balance sheet.

- (c) Assuming that the only deferred tax account at the beginning of 2014 was a deferred tax liability of \$10,000,000, draft the income tax expense portion of the income statement for 2014, beginning with the line "Income before income taxes." (*Hint:* You must first compute (1) the amount of temporary difference underlying the beginning \$10,000,000 deferred tax liability, then (2) the amount of temporary differences originating or reversing during the year, and then (3) the amount of pretax financial income.)

- 2 3** **E19-20 (Two Differences, No Beginning Deferred Taxes, Multiple Rates)** Teri Hatcher Inc., in its first year of operations, has the following differences between the book basis and tax basis of its assets and liabilities at the end of 2013.

	<u>Book Basis</u>	<u>Tax Basis</u>
Equipment (net)	\$400,000	\$340,000
Estimated warranty liability	\$200,000	\$ -0-

It is estimated that the warranty liability will be settled in 2014. The difference in equipment (net) will result in taxable amounts of \$20,000 in 2014, \$30,000 in 2015, and \$10,000 in 2016. The company has taxable income of \$520,000 in 2013. As of the beginning of 2013, the enacted tax rate is 34% for 2013–2015, and 30% for 2016. Hatcher expects to report taxable income through 2016.

Instructions

- (a) Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2013.
 (b) Indicate how deferred income taxes will be reported on the balance sheet at the end of 2013.

- 2 3** **E19-21 (Two Temporary Differences, Multiple Rates, Future Taxable Income)** Nadal Inc. has two temporary differences at the end of 2013. The first difference stems from installment sales, and the second one results from the accrual of a loss contingency. Nadal's accounting department has developed a schedule of future taxable and deductible amounts related to these temporary differences as follows.

	<u>2014</u>	<u>2015</u>	<u>2016</u>	<u>2017</u>
Taxable amounts	\$40,000	\$50,000	\$60,000	\$80,000
Deductible amounts		(15,000)	(19,000)	
	<u>\$40,000</u>	<u>\$35,000</u>	<u>\$41,000</u>	<u>\$80,000</u>

As of the beginning of 2013, the enacted tax rate is 34% for 2013 and 2014, and 38% for 2015–2018. At the beginning of 2013, the company had no deferred income taxes on its balance sheet. Taxable income for 2013 is \$500,000. Taxable income is expected in all future years.

Instructions

- (a) Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2013.
 (b) Indicate how deferred income taxes would be classified on the balance sheet at the end of 2013.

- 2 3** **E19-22 (Two Differences, One Rate, First Year)** The differences between the book basis and tax basis of the assets and liabilities of Castle Corporation at the end of 2013 are presented below.

	<u>Book Basis</u>	<u>Tax Basis</u>
Accounts receivable	\$50,000	\$-0-
Litigation liability	30,000	-0-

It is estimated that the litigation liability will be settled in 2014. The difference in accounts receivable will result in taxable amounts of \$30,000 in 2014 and \$20,000 in 2015. The company has taxable income of \$350,000 in 2013 and is expected to have taxable income in each of the following 2 years. Its enacted tax rate is 34% for all years. This is the company's first year of operations. The operating cycle of the business is 2 years.

Instructions

- (a) Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2013.
 (b) Indicate how deferred income taxes will be reported on the balance sheet at the end of 2013.

- 4** **7** **E19-23 (NOL Carryback and Carryforward, Valuation Account versus No Valuation Account)** Spamela Hamderson Inc. reports the following pretax income (loss) for both financial reporting purposes and tax purposes. (Assume the carryback provision is used for a net operating loss.)

Year	Pretax Income (Loss)	Tax Rate
2012	\$120,000	34%
2013	90,000	34%
2014	(280,000)	38%
2015	220,000	38%

The tax rates listed were all enacted by the beginning of 2012.

Instructions

- Prepare the journal entries for the years 2012–2015 to record income tax expense (benefit) and income taxes payable (refundable) and the tax effects of the loss carryback and carryforward, assuming that at the end of 2014 the benefits of the loss carryforward are judged more likely than not to be realized in the future.
 - Using the assumption in (a), prepare the income tax section of the 2014 income statement beginning with the line “Operating loss before income taxes.”
 - Prepare the journal entries for 2014 and 2015, assuming that based on the weight of available evidence, it is more likely than not that one-fourth of the benefits of the loss carryforward will not be realized.
 - Using the assumption in (c), prepare the income tax section of the 2014 income statement beginning with the line “Operating loss before income taxes.”
- 4** **7** **E19-24 (NOL Carryback and Carryforward, Valuation Account Needed)** Beilman Inc. reports the following pretax income (loss) for both book and tax purposes. (Assume the carryback provision is used where possible for a net operating loss.)

Year	Pretax Income (Loss)	Tax Rate
2012	\$120,000	40%
2013	90,000	40%
2014	(280,000)	45%
2015	120,000	45%

The tax rates listed were all enacted by the beginning of 2012.

Instructions

- Prepare the journal entries for years 2012–2015 to record income tax expense (benefit) and income taxes payable (refundable), and the tax effects of the loss carryback and loss carryforward, assuming that based on the weight of available evidence, it is more likely than not that one-half of the benefits of the loss carryforward will not be realized.
 - Prepare the income tax section of the 2014 income statement beginning with the line “Operating loss before income taxes.”
 - Prepare the income tax section of the 2015 income statement beginning with the line “Income before income taxes.”
- 4** **7** **E19-25 (NOL Carryback and Carryforward, Valuation Account Needed)** Meyer reported the following pretax financial income (loss) for the years 2012–2016.

2012	\$240,000
2013	350,000
2014	120,000
2015	(570,000)
2016	180,000

Pretax financial income (loss) and taxable income (loss) were the same for all years involved. The enacted tax rate was 34% for 2012 and 2013, and 40% for 2014–2016. Assume the carryback provision is used first for net operating losses.

Instructions

- (a) Prepare the journal entries for the years 2014–2016 to record income tax expense, income taxes payable (refundable), and the tax effects of the loss carryback and loss carryforward, assuming that based on the weight of available evidence, it is more likely than not that one-fifth of the benefits of the loss carryforward will not be realized.
- (b) Prepare the income tax section of the 2015 income statement beginning with the line “Income (loss) before income taxes.”

EXERCISES SET B

See the book’s companion website, at www.wiley.com/college/kieso, for an additional set of exercises.

PROBLEMS

- 2 3 5** P19-1 (Three Differences, No Beginning Deferred Taxes, Multiple Rates) The following information is available for Remmers Corporation for 2014.

1. Depreciation reported on the tax return exceeded depreciation reported on the income statement by \$120,000. This difference will reverse in equal amounts of \$30,000 over the years 2015–2018.
2. Interest received on municipal bonds was \$10,000.
3. Rent collected in advance on January 1, 2014, totaled \$60,000 for a 3-year period. Of this amount, \$40,000 was reported as unearned at December 31, 2014, for book purposes.
4. The tax rates are 40% for 2014 and 35% for 2015 and subsequent years.
5. Income taxes of \$320,000 are due per the tax return for 2014.
6. No deferred taxes existed at the beginning of 2014.

Instructions

- (a) Compute taxable income for 2014.
 - (b) Compute pretax financial income for 2014.
 - (c) Prepare the journal entries to record income tax expense, deferred income taxes, and income taxes payable for 2014 and 2015. Assume taxable income was \$980,000 in 2015.
 - (d) Prepare the income tax expense section of the income statement for 2014, beginning with “Income before income taxes.”
- 3 5 6** P19-2 (One Temporary Difference, Tracked for 4 Years, One Permanent Difference, Change in Rate) The pretax financial income of Truttman Company differs from its taxable income throughout each of 4 years as follows.

Year	Pretax Financial Income	Taxable Income	Tax Rate
2014	\$290,000	\$180,000	35%
2015	320,000	225,000	40%
2016	350,000	260,000	40%
2017	420,000	560,000	40%

Pretax financial income for each year includes a nondeductible expense of \$30,000 (never deductible for tax purposes). The remainder of the difference between pretax financial income and taxable income in each period is due to one depreciation temporary difference. No deferred income taxes existed at the beginning of 2014.

Instructions

- (a) Prepare journal entries to record income taxes in all 4 years. Assume that the change in the tax rate to 40% was not enacted until the beginning of 2015.
- (b) Prepare the income statement for 2015, beginning with Income before income taxes.

2 5 **P19-3 (Second Year of Depreciation Difference, Two Differences, Single Rate, Extraordinary Item)** The following information has been obtained for the Gocker Corporation.

6 9

1. Prior to 2014, taxable income and pretax financial income were identical.
2. Pretax financial income is \$1,700,000 in 2014 and \$1,400,000 in 2015.
3. On January 1, 2014, equipment costing \$1,200,000 is purchased. It is to be depreciated on a straight-line basis over 5 years for tax purposes and over 8 years for financial reporting purposes. (*Hint:* Use the half-year convention for tax purposes, as discussed in Appendix 11A.)
4. Interest of \$60,000 was earned on tax-exempt municipal obligations in 2015.
5. Included in 2015 pretax financial income is an extraordinary gain of \$200,000, which is fully taxable.
6. The tax rate is 35% for all periods.
7. Taxable income is expected in all future years.

Instructions

- (a) Compute taxable income and income taxes payable for 2015.
- (b) Prepare the journal entry to record 2015 income tax expense, income taxes payable, and deferred taxes.
- (c) Prepare the bottom portion of Gocker's 2015 income statement, beginning with "Income before income taxes and extraordinary item."
- (d) Indicate how deferred income taxes should be presented on the December 31, 2015, balance sheet.

2 3 **P19-4 (Permanent and Temporary Differences, One Rate)** The accounting records of Shinault Inc. show the following data for 2014 (its first year of operations).

5

1. Life insurance expense on officers was \$9,000.
2. Equipment was acquired in early January for \$300,000. Straight-line depreciation over a 5-year life is used, with no salvage value. For tax purposes, Shinault used a 30% rate to calculate depreciation.
3. Interest revenue on State of New York bonds totaled \$4,000.
4. Product warranties were estimated to be \$50,000 in 2014. Actual repair and labor costs related to the warranties in 2014 were \$10,000. The remainder is estimated to be paid evenly in 2015 and 2016.
5. Gross profit on an accrual basis was \$100,000. For tax purposes, \$75,000 was recorded on the installment-sales method.
6. Fines incurred for pollution violations were \$4,200.
7. Pretax financial income was \$750,000. The tax rate is 30%.

Instructions

- (a) Prepare a schedule starting with pretax financial income in 2014 and ending with taxable income in 2014.
- (b) Prepare the journal entry for 2014 to record income taxes payable, income tax expense, and deferred income taxes.

5 7 **P19-5 (NOL without Valuation Account)** Jennings Inc. reported the following pretax income (loss) and related tax rates during the years 2010–2016.

8 9

	Pretax Income (loss)	Tax Rate
2010	\$ 40,000	30%
2011	25,000	30%
2012	50,000	30%
2013	80,000	40%
2014	(180,000)	45%
2015	70,000	40%
2016	100,000	35%

Pretax financial income (loss) and taxable income (loss) were the same for all years since Jennings began business. The tax rates from 2013–2016 were enacted in 2013.

Instructions

- (a) Prepare the journal entries for the years 2014–2016 to record income taxes payable (refundable), income tax expense (benefit), and the tax effects of the loss carryback and carryforward. Assume that Jennings elects the carryback provision where possible and expects to realize the benefits of any loss carryforward in the year that immediately follows the loss year.
- (b) Indicate the effect the 2014 entry(ies) has on the December 31, 2014, balance sheet.
- (c) Prepare the portion of the income statement, starting with "Operating loss before income taxes," for 2014.
- (d) Prepare the portion of the income statement, starting with "Income before income taxes," for 2015.

- 2 3** **P19-6 (Two Differences, Two Rates, Future Income Expected)** Presented below are two independent situations related to future taxable and deductible amounts resulting from temporary differences existing at December 31, 2014.

9

1. Mooney Co. has developed the following schedule of future taxable and deductible amounts.

	<u>2015</u>	<u>2016</u>	<u>2017</u>	<u>2018</u>	<u>2019</u>
Taxable amounts	\$300	\$300	\$300	\$ 300	\$300
Deductible amount	—	—	—	(1,600)	—

2. Roesch Co. has the following schedule of future taxable and deductible amounts.

	<u>2015</u>	<u>2016</u>	<u>2017</u>	<u>2018</u>
Taxable amounts	\$300	\$300	\$ 300	\$300
Deductible amount	—	—	(2,300)	—

Both Mooney Co. and Roesch Co. have taxable income of \$4,000 in 2014 and expect to have taxable income in all future years. The tax rates enacted as of the beginning of 2014 are 30% for 2014–2017 and 35% for years thereafter. All of the underlying temporary differences relate to noncurrent assets and liabilities.

Instructions

For each of these two situations, compute the net amount of deferred income taxes to be reported at the end of 2014, and indicate how it should be classified on the balance sheet.

- 2 5** **P19-7 (One Temporary Difference, Tracked 3 Years, Change in Rates, Income Statement Presentation)** Crosley Corp. sold an investment on an installment basis. The total gain of \$60,000 was reported for financial reporting purposes in the period of sale. The company qualifies to use the installment-sales method for tax purposes. The installment period is 3 years; one-third of the sale price is collected in the period of sale. The tax rate was 40% in 2014, and 35% in 2015 and 2016. The 35% tax rate was not enacted in law until 2015. The accounting and tax data for the 3 years is shown below.

	<u>Financial Accounting</u>	<u>Tax Return</u>
<u>2014 (40% tax rate)</u>		
Income before temporary difference	\$ 70,000	\$70,000
Temporary difference	60,000	20,000
Income	<u>\$130,000</u>	<u>\$90,000</u>
<u>2015 (35% tax rate)</u>		
Income before temporary difference	\$ 70,000	\$70,000
Temporary difference	—0—	20,000
Income	<u>\$ 70,000</u>	<u>\$90,000</u>
<u>2016 (35% tax rate)</u>		
Income before temporary difference	\$ 70,000	\$70,000
Temporary difference	—0—	20,000
Income	<u>\$ 70,000</u>	<u>\$90,000</u>

Instructions

- Prepare the journal entries to record the income tax expense, deferred income taxes, and the income taxes payable at the end of each year. No deferred income taxes existed at the beginning of 2014.
- Explain how the deferred taxes will appear on the balance sheet at the end of each year. (Assume Installment Accounts Receivable is classified as a current asset.)
- Draft the income tax expense section of the income statement for each year, beginning with "Income before income taxes."

- 2 3** **P19-8 (Two Differences, 2 Years, Compute Taxable Income and Pretax Financial Income)** The information shown below and on page 1170 was disclosed during the audit of Elbert Inc.

5 9

- 1.

<u>Year</u>	<u>Amount Due per Tax Return</u>
2014	\$130,000
2015	104,000

2. On January 1, 2014, equipment costing \$600,000 is purchased. For financial reporting purposes, the company uses straight-line depreciation over a 5-year life. For tax purposes, the company uses the elective straight-line method over a 5-year life. (*Hint:* For tax purposes, the half-year convention as discussed in Appendix 11A must be used.)
3. In January 2015, \$225,000 is collected in advance rental of a building for a 3-year period. The entire \$225,000 is reported as taxable income in 2015, but \$150,000 of the \$225,000 is reported as unearned revenue in 2015 for financial reporting purposes. The remaining amount of unearned revenue is to be recognized equally in 2016 and 2017.
4. The tax rate is 40% in 2014 and all subsequent periods. (*Hint:* To find taxable income in 2014 and 2015, the related income taxes payable amounts will have to be “grossed up.”)
5. No temporary differences existed at the end of 2013. Elbert expects to report taxable income in each of the next 5 years.

Instructions

- (a) Determine the amount to report for deferred income taxes at the end of 2014, and indicate how it should be classified on the balance sheet.
- (b) Prepare the journal entry to record income taxes for 2014.
- (c) Draft the income tax section of the income statement for 2014, beginning with “Income before income taxes.” (*Hint:* You must compute taxable income and then combine that with changes in cumulative temporary differences to arrive at pretax financial income.)
- (d) Determine the deferred income taxes at the end of 2015, and indicate how they should be classified on the balance sheet.
- (e) Prepare the journal entry to record income taxes for 2015.
- (f) Draft the income tax section of the income statement for 2015, beginning with “Income before income taxes.”

2 **3** P19-9 (Five Differences, Compute Taxable Income and Deferred Taxes, Draft Income Statement)

5 **6** Wise Company began operations at the beginning of 2015. The following information pertains to this company.

9

1. Pretax financial income for 2015 is \$100,000.
2. The tax rate enacted for 2015 and future years is 40%.
3. Differences between the 2015 income statement and tax return are listed below:
 - (a) Warranty expense accrued for financial reporting purposes amounts to \$7,000. Warranty deductions per the tax return amount to \$2,000.
 - (b) Gross profit on construction contracts using the percentage-of-completion method per books amounts to \$92,000. Gross profit on construction contracts for tax purposes amounts to \$67,000.
 - (c) Depreciation of property, plant, and equipment for financial reporting purposes amounts to \$60,000. Depreciation of these assets amounts to \$80,000 for the tax return.
 - (d) A \$3,500 fine paid for violation of pollution laws was deducted in computing pretax financial income.
 - (e) Interest revenue recognized on an investment in tax-exempt municipal bonds amounts to \$1,500.
4. Taxable income is expected for the next few years. (Assume (a) is short-term in nature; assume (b) and (c) are long-term in nature.)

Instructions

- (a) Compute taxable income for 2015.
- (b) Compute the deferred taxes at December 31, 2015, that relate to the temporary differences described above. Clearly label them as deferred tax asset or liability.
- (c) Prepare the journal entry to record income tax expense, deferred taxes, and income taxes payable for 2015.
- (d) Draft the income tax expense section of the income statement, beginning with “Income before income taxes.”

PROBLEMS SET B

See the book’s companion website, at www.wiley.com/college/kieso, for an additional set of problems.

CONCEPTS FOR ANALYSIS

 **CA19-1 (Objectives and Principles for Accounting for Income Taxes)** The amount of income taxes due to the government for a period of time is rarely the amount reported on the income statement for that period as income tax expense.

Instructions

- (a) Explain the objectives of accounting for income taxes in general-purpose financial statements.
- (b) Explain the basic principles that are applied in accounting for income taxes at the date of the financial statements to meet the objectives discussed in (a).
- (c) List the steps in the annual computation of deferred tax liabilities and assets.

 **CA19-2 (Basic Accounting for Temporary Differences)** Dexter Company appropriately uses the asset-liability method to record deferred income taxes. Dexter reports depreciation expense for certain machinery purchased this year using the modified accelerated cost recovery system (MACRS) for income tax purposes and the straight-line basis for financial reporting purposes. The tax deduction is the larger amount this year.

Dexter received rent revenues in advance this year. These revenues are included in this year's taxable income. However, for financial reporting purposes, these revenues are reported as unearned revenues, a current liability.

Instructions

- (a) What are the principles of the asset-liability approach?
- (b) How would Dexter account for the temporary differences?
- (c) How should Dexter classify the deferred tax consequences of the temporary differences on its balance sheet?

CA19-3 (Identify Temporary Differences and Classification Criteria) The asset-liability approach for recording deferred income taxes is an integral part of generally accepted accounting principles.

Instructions

- (a) Indicate whether each of the following independent situations should be treated as a temporary difference or as a permanent difference, and explain why.
 - (1) Estimated warranty costs (covering a 3-year warranty) are expensed for financial reporting purposes at the time of sale but deducted for income tax purposes when paid.
 - (2) Depreciation for book and income tax purposes differs because of different bases of carrying the related property, which was acquired in a trade-in. The different bases are a result of different rules used for book and tax purposes to compute the basis of property acquired in a trade-in.
 - (3) A company properly uses the equity method to account for its 30% investment in another company. The investee pays dividends that are about 10% of its annual earnings.
 - (4) A company reports a gain on an involuntary conversion of a nonmonetary asset to a monetary asset. The company elects to replace the property within the statutory period using the total proceeds so the gain is not reported on the current year's tax return.
- (b) Discuss the nature of the deferred income tax accounts and possible classifications in a company's balance sheet. Indicate the manner in which these accounts are to be reported.

CA19-4 (Accounting and Classification of Deferred Income Taxes)

Part A: This year, Gumowski Company has each of the following items in its income statement.

1. Gross profits on installment sales.
2. Revenues on long-term construction contracts.
3. Estimated costs of product warranty contracts.
4. Premiums on officers' life insurance policies with Gumowski as beneficiary.

Instructions

- (a) Under what conditions would deferred income taxes need to be reported in the financial statements?
- (b) Specify when deferred income taxes would need to be recognized for each of the items above, and indicate the rationale for such recognition.

Part B: Gumowski Company's president has heard that deferred income taxes can be classified in different ways in the balance sheet.

Instructions

Identify the conditions under which deferred income taxes would be classified as a noncurrent item in the balance sheet. What justification exists for such classification?

(AICPA adapted)

CA19-5 (Explain Computation of Deferred Tax Liability for Multiple Tax Rates) At December 31, 2014, Higley Corporation has one temporary difference which will reverse and cause taxable amounts in 2015. In 2014, a new tax act set taxes equal to 45% for 2014, 40% for 2015, and 34% for 2016 and years thereafter.

Instructions

Explain what circumstances would call for Higley to compute its deferred tax liability at the end of 2014 by multiplying the cumulative temporary difference by:

- 45%.
- 40%.
- 34%.

CA19-6 (Explain Future Taxable and Deductible Amounts, How Carryback and Carryforward Affects Deferred Taxes) Maria Rodriguez and Lynette Kingston are discussing accounting for income taxes. They are currently studying a schedule of taxable and deductible amounts that will arise in the future as a result of existing temporary differences. The schedule is as follows.

	Future Years				
	2014	2015	2016	2017	2018
Taxable income	<u>\$850,000</u>				
Taxable amounts		\$375,000	\$375,000	\$375,000	\$375,000
Deductible amounts				(2,400,000)	
Enacted tax rate	50%	45%	40%	35%	30%

Instructions

- Explain the concept of future taxable amounts and future deductible amounts as illustrated in the schedule.
- How do the carryback and carryforward provisions affect the reporting of deferred tax assets and deferred tax liabilities?

CA19-7 (Deferred Taxes, Income Effects) Stephanie Delaney, CPA, is the newly hired director of corporate taxation for Acme Incorporated, which is a publicly traded corporation. Ms. Delaney's first job with Acme was the review of the company's accounting practices on deferred income taxes. In doing her review, she noted differences between tax and book depreciation methods that permitted Acme to realize a sizable deferred tax liability on its balance sheet. As a result, Acme paid very little in income taxes at that time.

Delaney also discovered that Acme has an explicit policy of selling off plant assets before they reversed in the deferred tax liability account. This policy, coupled with the rapid expansion of its plant asset base, allowed Acme to "defer" all income taxes payable for several years, even though it always has reported positive earnings and an increasing EPS. Delaney checked with the legal department and found the policy to be legal, but she's uncomfortable with the ethics of it.

Instructions

Answer the following questions.

- Why would Acme have an explicit policy of selling plant assets before the temporary differences reversed in the deferred tax liability account?
- What are the ethical implications of Acme's "deferral" of income taxes?
- Who could be harmed by Acme's ability to "defer" income taxes payable for several years, despite positive earnings?
- In a situation such as this, what are Ms. Delaney's professional responsibilities as a CPA?

USING YOUR JUDGMENT

FINANCIAL REPORTING

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of P&G are presented in Appendix 5B. The company's complete annual report, including the notes to the financial statements, can be accessed at the book's companion website, www.wiley.com/college/kieso.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- (a) What amounts relative to income taxes does P&G report in its:
 - (1) 2011 income statement?
 - (2) June 30, 2011, balance sheet?
 - (3) 2011 statement of cash flows?
- (b) P&G's income taxes in 2009, 2010, and 2011 were computed at what effective tax rates? (See the notes to the financial statements.)
- (c) How much of P&G's 2011 total income taxes was current tax expense, and how much was deferred tax expense?
- (d) What did P&G report as the significant components (the details) of its June 30, 2011, deferred tax assets and liabilities?

Comparative Analysis Case**The Coca-Cola Company and PepsiCo, Inc.****Instructions**

Go to the book's companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- (a) What are the amounts of Coca-Cola's and PepsiCo's provision for income taxes for the year 2011? Of each company's 2011 provision for income taxes, what portion is current expense and what portion is deferred expense?
- (b) What amount of cash was paid in 2011 for income taxes by Coca-Cola and by PepsiCo?
- (c) What was the U.S. federal statutory tax rate in 2011? What was the effective tax rate in 2011 for Coca-Cola and PepsiCo? Why might their effective tax rates differ?
- (d) For year-end 2011, what amounts were reported by Coca-Cola and PepsiCo as (1) gross deferred tax assets and (2) gross deferred tax liabilities?
- (e) Do either Coca-Cola or PepsiCo disclose any net operating loss carrybacks and/or carryforwards at year-end 2011? What are the amounts, and when do the carryforwards expire?

Financial Statement Analysis Case**Homestake Mining Company**

Homestake Mining Company is a 120-year-old international gold mining company with substantial gold mining operations and exploration in the United States, Canada, and Australia. At year-end, Homestake reported the following items related to income taxes (thousands of dollars).

Total current taxes	\$ 26,349
Total deferred taxes	(39,436)
Total income and mining taxes (the provision for taxes per its income statement)	<u>(13,087)</u>
Deferred tax liabilities	\$303,050
Deferred tax assets, net of valuation allowance of \$207,175	<u>95,275</u>
Net deferred tax liability	<u>\$207,775</u>

Note 6: The classification of deferred tax assets and liabilities is based on the related asset or liability creating the deferred tax. Deferred taxes not related to a specific asset or liability are classified based on the estimated period of reversal.

Tax loss carryforwards (U.S., Canada, Australia, and Chile)	\$71,151
Tax credit carryforwards	\$12,007

Instructions

- (a) What is the significance of Homestake's disclosure of "Current taxes" of \$26,349 and "Deferred taxes" of \$(39,436)?
- (b) Explain the concept behind Homestake's disclosure of gross deferred tax liabilities (future taxable amounts) and gross deferred tax assets (future deductible amounts).
- (c) Homestake reported tax loss carryforwards of \$71,151 and tax credit carryforwards of \$12,007. How do the carryback and carryforward provisions affect the reporting of deferred tax assets and deferred tax liabilities?

Accounting, Analysis, and Principles

DeJohn Company, which began operations at the beginning of 2012, produces various products on a contract basis. Each contract generates a gross profit of \$80,000. Some of DeJohn's contracts provide for the customer to pay on an installment basis. Under these contracts, DeJohn collects one-fifth of the contract revenue in each of the following four years. For financial reporting purposes, the company recognizes gross profit in the year of completion (accrual basis). For tax purposes, DeJohn recognizes gross profit in the year cash is collected (installment basis).

Presented below is information related to DeJohn's operations for 2014:

1. In 2014, the company completed seven contracts that allow for the customer to pay on an installment basis. DeJohn recognized the related gross profit of \$560,000 for financial reporting purposes. It reported only \$112,000 of gross profit on installment sales on the 2014 tax return. The company expects future collections on the related installment receivables to result in taxable amounts of \$112,000 in each of the next four years.
2. In 2014, nontaxable municipal bond interest revenue was \$28,000.
3. During 2014, nondeductible fines and penalties of \$26,000 were paid.
4. Pretax financial income for 2014 amounts to \$500,000.
5. Tax rates (enacted before the end of 2014) are 50% for 2014 and 40% for 2015 and later.
6. The accounting period is the calendar year.
7. The company is expected to have taxable income in all future years.
8. The company has no deferred tax assets or liabilities at the end of 2013.

Accounting

Prepare the journal entry to record income taxes for 2014.

Analysis

Classify deferred income taxes on the balance sheet at December 31, 2014, and indicate, starting with Income before income taxes, how income taxes are reported on the income statement. What is DeJohn's effective tax rate?

Principles

Explain how the conceptual framework is used as a basis for determining the proper accounting for deferred income taxes.

BRIDGE TO THE PROFESSION

Professional Research: FASB Codification

Kleckner Company started operations in 2010. Although it has grown steadily, the company reported accumulated operating losses of \$450,000 in its first four years in business. In the most recent year (2014), Kleckner appears to have turned the corner and reported modest taxable income of \$30,000. In addition to a deferred tax asset related to its net operating loss, Kleckner has recorded a deferred tax asset related to product warranties and a deferred tax liability related to accelerated depreciation.

Given its past operating results, Kleckner has established a full valuation allowance for its deferred tax assets. However, given its improved performance, Kleckner management wonders whether the company can now reduce or eliminate the valuation allowance. They would like you to conduct some research on the accounting for its valuation allowance.

Instructions

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

- (a) Briefly explain to Kleckner management the importance of future taxable income as it relates to the valuation allowance for deferred tax assets.
- (b) What are the sources of income that may be relied upon to remove the need for a valuation allowance?
- (c) What are tax-planning strategies? From the information provided, does it appear that Kleckner could employ a tax-planning strategy to support reducing its valuation allowance?

Additional Professional Resources

See the book's companion website, at www.wiley.com/college/kieso, for professional simulations as well as other study resources.

The accounting for income taxes in IFRS is covered in *IAS 12* (“Income Taxes”), which is based on an asset-liability approach to measurement of deferred taxes.

12 LEARNING OBJECTIVE

Compare the accounting for income taxes under GAAP and IFRS.

RELEVANT FACTS

Following are the key similarities and differences between GAAP and IFRS related to accounting for taxes.

Similarities

- Similar to GAAP, IFRS uses the asset and liability approach for recording deferred taxes.

Differences

- The classification of deferred taxes under IFRS is always non-current. As indicated in the chapter, GAAP classifies deferred taxes based on the classification of the asset or liability to which it relates.
- Under IFRS, an affirmative judgment approach is used, by which a deferred tax asset is recognized up to the amount that is probable to be realized. GAAP uses an impairment approach. In this approach, the deferred tax asset is recognized in full. It is then reduced by a valuation account if it is more likely than not that all or a portion of the deferred tax asset will not be realized.
- IFRS uses the enacted tax rate or substantially enacted tax rate. (“Substantially enacted” means virtually certain.) For GAAP, the enacted tax rate must be used.
- The tax effects related to certain items are reported in equity under IFRS. That is not the case under GAAP, which charges or credits the tax effects to income.
- GAAP requires companies to assess the likelihood of uncertain tax positions being sustainable upon audit. Potential liabilities must be accrued and disclosed if the position is “more likely than not” to be disallowed. Under IFRS, all potential liabilities must be recognized. With respect to measurement, IFRS uses an expected-value approach to measure the tax liability, which differs from GAAP.

ABOUT THE NUMBERS

Deferred Tax Asset (Non-Recognition)

Under IFRS, companies recognize a deferred tax asset for all deductible temporary differences. However, based on available evidence, a company should reduce a deferred tax asset if it is probable that it **will not realize** some portion or all of the deferred tax asset. “**Probable**” means a level of likelihood of at least slightly more than 50 percent.

Assume that Jensen Co. has a deductible temporary difference of \$1,000,000 at the end of its first year of operations. Its tax rate is 40 percent, which means it records a deferred tax asset of \$400,000 ($\$1,000,000 \times 40\%$). Assuming \$900,000 of income taxes payable, Jensen records income tax expense, the deferred tax asset, and income taxes payable as follows.

Income Tax Expense	500,000	
Deferred Tax Asset	400,000	
Income Taxes Payable		900,000

After careful review of all available evidence, Jensen determines that it is probable that it will not realize \$100,000 of this deferred tax asset. Jensen records this reduction in asset value as follows.

Income Tax Expense	100,000	
Deferred Tax Asset		100,000

This journal entry increases income tax expense in the current period because Jensen does not expect to realize a favorable tax benefit for a portion of the deductible temporary difference. Jensen **simultaneously recognizes a reduction in the carrying amount of the deferred tax asset**. Jensen then reports a deferred tax asset of \$300,000 in its statement of financial position.

Jensen evaluates the deferred tax asset account at the end of each accounting period. If, at the end of the next period, it expects to realize \$350,000 of this deferred tax asset, Jensen makes the following entry to adjust this account.

Deferred Tax Asset (\$350,000 – \$300,000)	50,000	
Income Tax Expense		50,000

Jensen should consider all available evidence, both positive and negative, to determine whether, based on the weight of available evidence, it needs to adjust the deferred tax asset. For example, if Jensen has been experiencing a series of loss years, it reasonably assumes that these losses will continue. Therefore, Jensen will lose the benefit of the future deductible amounts.

Generally, sufficient taxable income arises from temporary taxable differences that will reverse in the future or from a tax-planning strategy that will generate taxable income in the future. Illustration IFRS19-1 shows how **Ahold** describes its reporting of deferred assets.

ILLUSTRATION IFRS19-1

Deferred Tax Asset
Disclosure

Ahold

Note 11. Significant judgment is required in determining whether deferred tax assets are realizable. Ahold determines this on the basis of expected taxable profits arising from recognized deferred tax liabilities and on the basis of budgets, cash flow forecasts, and impairment models. Where utilization is not considered probable, deferred taxes are not recognized.

Carryforward (Non-Recognition)

To illustrate non-recognition of a loss carryforward, assume that Groh Inc. has tax benefits of \$110,000 associated with a NOL carryback and a potential deferred tax asset of \$80,000 associated with an operating loss carryforward of \$200,000, assuming a future tax rate of 40% ($\$200,000 \times 40\%$). However, if it is probable that Groh will *not* realize the entire NOL carryforward in future years, it does not recognize this deferred tax asset. To illustrate, Groh makes the following journal entry in 2014 to record only the tax refund receivable.

To recognize benefit of loss carryback		
Income Tax Refund Receivable	110,000	
Benefit Due to Loss Carryback (Income Tax Expense)		110,000

Illustration IFRS19-2 shows Groh's 2014 income statement presentation.

GROH INC.	
INCOME STATEMENT (PARTIAL) FOR 2014	
Operating loss before income taxes	\$(500,000)
Income tax benefit	
Benefit due to loss carryback	<u>110,000</u>
Net loss	<u><u>\$(390,000)</u></u>

ILLUSTRATION IFRS19-2

Recognition of Benefit of Loss Carryback Only

In 2015, assuming that Groh has taxable income of \$250,000 (before considering the carryforward), subject to a tax rate of 40 percent, it realizes the deferred tax asset. Groh records the following entries.

To recognize deferred tax asset and loss carryforward		
Deferred Tax Asset	80,000	
Benefit Due to Loss Carryforward (Income Tax Expense)		80,000
To record current and deferred income taxes		
Income Tax Expense	100,000	
Deferred Tax Asset		80,000
Income Taxes Payable		20,000

Groh reports the \$80,000 Benefit Due to the Loss Carryforward on the 2015 income statement. The company did not recognize it in 2014 because it was probable that it would not be realized. Assuming that Groh derives the income for 2015 from continuing operations, it prepares the income statement as shown in Illustration IFRS19-3.

GROH INC.	
INCOME STATEMENT (PARTIAL) FOR 2015	
Income before income taxes	\$250,000
Income tax expense	
Current	\$ 20,000
Deferred	80,000
Benefit due to loss carryforward	<u>(80,000)</u>
Net income	<u><u>\$230,000</u></u>

ILLUSTRATION IFRS19-3

Recognition of Benefit of Loss Carryforward When Realized

Another method is to report only one line for total income tax expense of \$20,000 on the face of the income statement and disclose the components of income tax expense in the notes to the financial statements.

Statement of Financial Position Classification

Companies classify taxes receivable or payable as current assets or current liabilities. Although current tax assets and liabilities are separately recognized and measured, they are often offset in the statement of financial position. The offset occurs because companies normally have a legally enforceable right to offset a current tax asset (Taxes Receivable) against a current tax liability (Taxes Payable) when they relate to income taxes levied by the same taxation authority. Deferred tax assets and deferred tax liabilities are also separately recognized and measured but may be offset in the statement of financial position. Companies are permitted to offset deferred tax assets and deferred tax liabilities if, and only if (1) the company has a legally enforceable right to offset current tax assets against current tax liabilities, and (2) the deferred tax assets and the deferred tax liabilities relate to income taxes levied by the same tax authority and for the same company.

The net deferred tax asset or net deferred tax liability is reported in the non-current section of the statement of financial position. Deferred tax amounts should not be discounted. The IASB apparently considers discounting to be an unnecessary complication even if the effects are material. To illustrate, assume that K. Scott Company has four deferred tax items at December 31, 2014, as shown in Illustration IFRS19-4.

ILLUSTRATION IFRS19-4

Classification of Temporary Differences

Temporary Difference	Resulting Deferred Tax	
	(Asset)	Liability
1. Rent collected in advance: recognized when earned for accounting purposes and when received for tax purposes.	\$(42,000)	
2. Use of straight-line depreciation for accounting purposes and accelerated depreciation for tax purposes.		\$214,000
3. Recognition of profits on installment sales during period of sale for accounting purposes and during period of collection for tax purposes.		45,000
4. Warranty liabilities: recognized for accounting purposes at time of sale; for tax purposes at time paid.	(12,000)	
Totals	<u>\$(54,000)</u>	<u>\$259,000</u>

As indicated, K. Scott has a total deferred tax asset of \$54,000 and a total deferred tax liability of \$259,000. Assuming these two items can be offset, K. Scott reports a deferred tax liability of \$205,000 ($\$259,000 - \$54,000$) in the non-current liability section of its statement of financial position.

ON THE HORIZON

The IASB and the FASB have been working to address some of the differences in the accounting for income taxes. Some of the issues under discussion are the term “probable” under IFRS for recognition of a deferred tax asset, which might be interpreted to mean “more likely than not.” If the term is changed, the reporting for impairments of deferred tax assets will be essentially the same between GAAP and IFRS. In addition, the IASB is considering adoption of the classification approach used in GAAP for deferred assets and liabilities. Also, GAAP will likely continue to use the enacted tax rate in computing deferred taxes, except in situations where the taxing jurisdiction is not involved. In that case, companies should use IFRS, which is based on enacted rates or substantially enacted tax rates. Finally, the issue of allocation of deferred income taxes to equity for certain transactions under IFRS must be addressed in order to converge with GAAP, which allocates the effects to income. At the time of this printing, deliberations on the income tax project have been suspended indefinitely.

IFRS SELF-TEST QUESTIONS

- Which of the following is **false**?
 - Under GAAP, deferred taxes are reported based on the classification of the asset or liability to which it relates.
 - Under IFRS, some potential liabilities are not recognized.
 - Under GAAP, the enacted tax rate is used to measure deferred tax assets and liabilities.
 - Under IFRS, all deferred tax assets and liabilities are classified as non-current.
- Which of the following statements is **correct** with regard to IFRS and GAAP?
 - Under GAAP, all potential liabilities related to uncertain tax positions must be recognized.
 - The tax effects related to certain items are reported in equity under GAAP; under IFRS, the tax effects are charged or credited to income.

- (c) IFRS uses an affirmative judgment approach for deferred tax assets, whereas GAAP uses an impairment approach for deferred tax assets.
- (d) IFRS classifies deferred taxes based on the classification of the asset or liability to which it relates.
3. Under IFRS:
- (a) “probable” is defined as a level of likelihood of at least slightly more than 60%.
- (b) a company should reduce a deferred tax asset when it is likely that some or all of it will not be realized by using a valuation allowance.
- (c) a company considers only positive evidence when determining whether to recognize a deferred tax asset.
- (d) deferred tax assets must be evaluated at the end of each accounting period.
4. Stephens Company has a deductible temporary difference of \$2,000,000 at the end of its first year of operations. Its tax rate is 40 percent. Stephens has \$1,800,000 of income taxes payable. After a careful review of all available evidence, Stephens determines that it is probable that it will not realize \$200,000 of this deferred tax asset. On Stephens Company’s statement of financial position at the end of its first year of operations, what is the amount of deferred tax asset?
- (a) \$2,000,000. (c) \$800,000.
- (b) \$1,800,000. (d) \$600,000.
5. Lincoln Company has the following four deferred tax items at December 31, 2014. The deferred tax assets and the deferred tax liabilities relate to income taxes levied by the same tax authority.

<u>Temporary Difference</u>	<u>Deferred Tax Asset</u>	<u>Deferred Tax Liability</u>
Rent collected in advance: recognized when earned for accounting purposes and when received for tax purposes.	\$652,000	
Use of straight-line depreciation for accounting purposes and accelerated depreciation for tax purposes.		\$330,000
Recognition of profits on installment sales during period of sale for accounting purposes and during period of collection for tax purposes.		64,000
Warranty liabilities: recognized for accounting purposes at time of sale; for tax purposes at time paid.	37,000	

On Lincoln’s December 31, 2014, statement of financial position, it will report:

- (a) \$394,000 non-current deferred tax liability and \$689,000 non-current deferred tax asset.
- (b) \$330,000 non-current liability and \$625,000 current deferred tax asset.
- (c) \$295,000 non-current deferred tax asset.
- (d) \$295,000 current tax receivable.

IFRS CONCEPTS AND APPLICATION

IFRS19-1 Where can authoritative IFRS related to the accounting for taxes be found?

IFRS19-2 Briefly describe some of the similarities and differences between GAAP and IFRS with respect to income tax accounting.

IFRS19-3 Describe the current convergence efforts of the FASB and IASB in the area of accounting for taxes.

IFRS19-4 How are deferred tax assets and deferred tax liabilities reported on the statement of financial position under IFRS?

IFRS19-5 Describe the procedure(s) involved in classifying deferred tax amounts on the statement of financial position under IFRS.

IFRS19-6 At December 31, 2014, Hillyard Corporation has a deferred tax asset of \$200,000. After a careful review of all available evidence, it is determined that it is probable that \$60,000 of this deferred tax asset will not be realized. Prepare the necessary journal entry.

IFRS19-7 Rode Inc. incurred a net operating loss of \$500,000 in 2014. Combined income for 2012 and 2013 was \$350,000. The tax rate for all years is 40%. Rode elects the carryback option. Prepare the journal entries to record the benefits of the loss carryback and the loss carryforward.

IFRS19-8 Use the information for Rode Inc. given in IFRS19-7. Assume that it is probable that the entire net operating loss carryforward will not be realized in future years. Prepare the journal entry(ies) necessary at the end of 2014.

IFRS19-9 Youngman Corporation has temporary differences at December 31, 2014, that result in the following deferred taxes.

Deferred tax asset	\$24,000
Deferred tax liability	\$69,000

Indicate how these balances would be presented in Youngman's December 31, 2014, statement of financial position.

IFRS19-10 At December 31, 2014, Cascade Company had a net deferred tax liability of \$450,000. An explanation of the items that compose this balance is as follows.

Temporary Differences in Deferred Taxes	Resulting Balances
1. Excess of tax depreciation over book depreciation.	\$200,000
2. Accrual, for book purposes, of estimated loss contingency from pending lawsuit that is expected to be settled in 2015. The loss will be deducted on the tax return when paid.	\$ (50,000)
3. Accrual method used for book purposes and installment method used for tax purposes for an isolated installment sale of an investment.	\$300,000

In analyzing the temporary differences, you find that \$30,000 of the depreciation temporary difference will reverse in 2015, and \$120,000 of the temporary difference due to the installment sale will reverse in 2015. The tax rate for all years is 40%.

Instructions

Indicate the manner in which deferred taxes should be presented on Cascade Company's December 31, 2014, statement of financial position.

IFRS19-11 Callaway Corp. has a deferred tax asset account with a balance of \$150,000 at the end of 2014 due to a single cumulative temporary difference of \$375,000. At the end of 2015, this same temporary difference has increased to a cumulative amount of \$500,000. Taxable income for 2015 is \$850,000. The tax rate is 40% for all years.

Instructions

- Record income tax expense, deferred income taxes, and income taxes payable for 2015, assuming that it is probable that the deferred tax asset will be realized.
- Assuming that it is probable that \$30,000 of the deferred tax asset will not be realized, prepare the journal entry at the end of 2015 to recognize this probability.

Professional Research

IFRS19-12 Kleckner Company started operations in 2010. Although it has grown steadily, the company reported accumulated operating losses of \$450,000 in its first four years in business. In the most recent year (2014), Kleckner appears to have turned the corner and reported modest taxable income of \$30,000. In addition to a deferred tax asset related to its net operating loss, Kleckner has recorded a deferred tax asset related to product warranties and a deferred tax liability related to accelerated depreciation. Given its past operating results, Kleckner has determined that it is not probable that it will realize any of the deferred tax assets. However, given its improved performance, Kleckner management wonders whether there are any accounting consequences for its deferred tax assets. They would like you to conduct some research on the accounting for recognition of its deferred tax asset.

Instructions

Access the IFRS authoritative literature at the IASB website (<http://eifrs.iasb.org/>). (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can

use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) Briefly explain to Kleckner management the importance of future taxable income as it relates to the recognition of deferred tax assets.
- (b) What are the sources of income that may be relied upon in assessing realization of a deferred tax asset?
- (c) What are tax-planning strategies? From the information provided, does it appear that Kleckner could employ a tax-planning strategy in evaluating its deferred tax asset?

International Financial Reporting Problem Marks and Spencer plc

IFRS19-13 The financial statements of **Marks and Spencer plc (M&S)** are available at the book's companion website or can be accessed at http://annualreport.marksandspencer.com/_assets/downloads/Marks-and-Spencer-Annual-report-and-financial-statements-2012.pdf.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) What amounts relative to income taxes does M&S report in its:
 - (1) 2012 income statement?
 - (2) 31 March 2012 statement of financial position?
 - (3) 2012 statement of cash flows?
- (b) M&S's provision for income taxes in 2011 and 2012 was computed at what effective tax rates? (See the notes to the financial statements.)
- (c) How much of M&S's 2012 total provision for income taxes was current tax expense, and how much was deferred tax expense?
- (d) What did M&S report as the significant components (the details) of its 31 March 2012 deferred tax assets and liabilities?

ANSWERS TO IFRS SELF-TEST QUESTIONS

1. b 2. c 3. d 4. d 5. c

Remember to check the book's companion website to find additional resources for this chapter.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Distinguish between accounting for the employer's pension plan and accounting for the pension fund.
- 2 Identify types of pension plans and their characteristics.
- 3 Explain alternative measures for valuing the pension obligation.
- 4 List the components of pension expense.
- 5 Use a worksheet for employer's pension plan entries.
- 6 Describe the amortization of prior service costs.
- 7 Explain the accounting for unexpected gains and losses.
- 8 Explain the corridor approach to amortizing gains and losses.
- 9 Describe the requirements for reporting pension plans in financial statements.

Where Have All the Pensions Gone?

Many companies have benefit plans that promise income and other benefits to retired employees in exchange for services during their working years. However, a shift is on from traditional defined benefit plans, in which employers bear the risk of meeting the benefit promises, to plans in which employees bear more of the risk. In some cases, employers are dropping retirement plans altogether. Here are some of the reasons for the shift.

- **Competition.** Newer and foreign competitors do not have the same retiree costs that older U.S. companies do. **Southwest Airlines** does not offer a traditional pension plan, but **United** has a pension deficit exceeding \$100,000 per employee.
- **Cost.** Retirees are living longer, and the costs of retirement are higher. Combined with annual retiree healthcare costs, retirement benefits are costing the S&P 500 companies over \$25 billion a year and are rising at double-digit rates.
- **Insurance.** Pensions are backed by premiums paid to the **Pension Benefit Guarantee Corporation (PBGC)**. When a company fails, the PBGC takes over the plan. But due to a number of significant company failures, the PBGC is running a deficit, and healthy companies are subsidizing the weak.
- **Accounting.** To bring U.S. standards in line with international rules, accounting rule-makers are considering rules that will require companies to "mark their pensions to market" (value them at market rates). Such a move would increase the reported volatility of the retirement plan and of company financial statements. When Great Britain made this shift, 25 percent of British companies closed their plans to new entrants.

As a result of such factors, it is understandable that experts can think of no major company that has instituted a traditional pension plan in the past decade. What does this mean for you as you evaluate job offers and benefit packages? To start, you should begin building *your own* retirement nest egg,

rather than relying on your employer to provide postretirement income and healthcare benefits. Recently, a sample of Americans was asked the following question: When you retire, do you think you will have enough money to live comfortably, or not?

The graph on the previous page shows a substantial change in responses from nonretired adults from 2002 to 2011.

In 2002, adults were nearly twice as likely to say they would have enough money to live comfortably (59%) as to say they would not (32%). Those views changed as time passed. By 2011, a majority said they would not have enough money to live comfortably in retirement.

General economic conditions affect how Americans look at retirement. Americans were more positive about the overall economy—and retirement—prior to the recent recession than they are now. The continuing political discussion about the fragility of the country’s Social Security and Medicare programs may also reduce nonretired Americans’ comfort with projections of their monetary resources in their retirement. In addition, many are beginning to realize that retirement at the age of 65 may no longer be possible given the possible extension of social benefits to later ages.

This means that retirement accounts, including individual retirement accounts and defined contribution pensions such as 401(k) plans, will need to become a bigger piece of the pie to fill the gap left by smaller government and employer-sponsored benefits. So get started now with a personal savings strategy to ensure an adequate nest egg at your retirement.

 - Using a pension worksheet

PREVIEW OF CHAPTER

20

As our opening story indicates, the cost of retirement benefits is steep. For example, **British Airways’** pension and healthcare costs for retirees in a recent year totaled \$195 million, or approximately \$6 per passenger carried. Many other companies are also facing substantial pension and other postretirement expenses and obligations. In this chapter, we discuss the accounting issues related to these benefit plans. The content and organization of the chapter are as follows.

NATURE OF PENSION PLANS

LEARNING OBJECTIVE 1

Distinguish between accounting for the employer's pension plan and accounting for the pension fund.

A **pension plan** is an arrangement whereby an employer provides benefits (payments) to retired employees for services they provided in their working years. Pension accounting may be divided and separately treated as **accounting for the employer** and **accounting for the pension fund**. The *company* or *employer* is the organization sponsoring the pension plan. It incurs the cost and makes contributions to the pension fund. The *fund* or *plan* is the entity that receives the contributions from the employer, administers the pension assets, and makes the benefit payments to the retired employees (pension recipients). Illustration 20-1 shows the three entities involved in a pension plan and indicates the flow of cash among them.

ILLUSTRATION 20-1

Flow of Cash among Pension Plan Participants

A pension plan is **funded** when the employer makes payments to a funding agency.¹ That agency accumulates the assets of the pension fund and makes payments to the recipients as the benefits come due.

Some pension plans are **contributory**. In these, the employees bear part of the cost of the stated benefits or voluntarily make payments to increase their benefits. Other plans are **noncontributory**. In these plans, the employer bears the entire cost. Companies generally design their pension plans so as to take advantage of federal income tax benefits. Plans that offer tax benefits are called **qualified pension plans**. They permit **deductibility of the employer's contributions to the pension fund and tax-free status of earnings from pension fund assets**.

The pension fund should be a separate legal and accounting entity. The pension fund, as a separate entity, maintains a set of books and prepares financial statements. Maintaining records and preparing financial statements for the fund, an activity known as "accounting for employee benefit plans," is not the subject of this chapter.² Instead, this chapter explains the pension accounting and reporting problems **of the employer** as the sponsor of a pension plan.

The need to properly administer and account for pension funds becomes apparent when you understand the size of these funds. Listed in Illustration 20-2 are the pension fund assets and pension expenses of six major companies.

ILLUSTRATION 20-2

Pension Funds and Pension Expense

Company (\$ in millions)	Size of Pension Fund	2011 Pension Expense (Income)	Pension Expense as % of Pretax Income
General Motors	\$108,980	\$(490)	-8.19%
Hewlett-Packard	10,662	280	3.12%
Deere & Company	9,552	91	2.15%
Merck	12,481	543	7.40%
The Coca-Cola Company	6,171	249	2.18%
Molson Coors Brewing	3,139	19	2.45%

¹When used as a verb, **fund** means to pay to a funding agency (as to fund future pension benefits or to fund pension cost). Used as a noun, it refers to assets accumulated in the hands of a funding agency (trustee) for the purpose of meeting pension benefits when they become due.

²The FASB issued a separate standard covering the accounting and reporting for employee benefit plans. [1]

See the FASB Codification section (page 1229).

As Illustration 20-2 indicates, pension expense is a substantial percentage of total pretax income for many companies.³ The two most common types of pension plans are **defined contribution plans** and **defined benefit plans**, and we look at each of them in the following sections.

Defined Contribution Plan

In a **defined contribution plan**, the employer agrees to contribute to a pension trust a certain sum each period, based on a formula. This formula may consider such factors as age, length of employee service, employer's profits, and compensation level. **The plan defines only the employer's contribution.** It makes no promise regarding the ultimate benefits paid out to the employees. A common form of this plan is a **401(k) plan**.

The size of the pension benefits that the employee finally collects under the plan depends on several factors: the amounts originally contributed to the pension trust, the income accumulated in the trust, and the treatment of forfeitures of funds caused by early terminations of other employees. A company usually turns over to an **independent third-party trustee** the amounts originally contributed. The trustee, acting on behalf of the beneficiaries (the participating employees), assumes ownership of the pension assets and is accountable for their investment and distribution. The trust is separate and distinct from the employer.

The accounting for a defined contribution plan is straightforward. The employee gets the benefit of gain (or the risk of loss) from the assets contributed to the pension plan. The employer simply contributes each year based on the formula established in the plan. As a result, the employer's annual cost (pension expense) is simply the amount that it is obligated to contribute to the pension trust. The employer reports a liability on its balance sheet only if it does not make the contribution in full. The employer reports an asset only if it contributes more than the required amount.

In addition to pension expense, the employer must disclose the following for a defined contribution plan: a plan description, including employee groups covered; the basis for determining contributions; and the nature and effect of significant matters affecting comparability from period to period. [2]

Defined Benefit Plan

A **defined benefit plan** outlines the benefits that employees will receive when they retire. These benefits typically are a function of an employee's years of service and of the compensation level in the years approaching retirement.

To meet the defined benefit commitments that will arise at retirement, a company must determine what the contribution should be today (a time value of money computation). Companies may use many different contribution approaches. However, the funding method should provide enough money at retirement to meet the benefits defined by the plan.

The **employees** are the beneficiaries of a defined **contribution** trust, but the **employer** is the beneficiary of a defined **benefit** trust. Under a defined benefit plan, the trust's primary purpose is to safeguard and invest assets so that there will be enough to pay the employer's obligation to the employees. **In form**, the trust is a separate entity. **In substance**, the trust assets and liabilities belong to the employer. That is, **as long as**

2 LEARNING OBJECTIVE

Identify types of pension plans and their characteristics.

³Retirement assets in the 13 major global markets increased 4 percent to a record \$27.5 trillion in 2011. The United States accounts for 59 percent of total pension assets, followed by Japan at 12 percent and the United Kingdom at 9 percent. Defined contribution assets for the seven largest markets—United States, United Kingdom, Japan, Netherlands, Canada, Australia, and Switzerland—now make up 43 percent of global retirement assets, up from 41 percent in 2005 and 38 percent in 2001. The United States, Australia, and Switzerland are the only countries with more defined contribution assets than defined benefit ones. See K. Olsen, "Global Pension Market Hits \$27.5T," <http://www.pionline.com/article/20120206/PRINTSUB/302069986#> (February 6, 2012).

International Perspective

Outside the United States, private pension plans are less common because many other nations rely on government-sponsored pension plans. Consequently, accounting for defined benefit pension plans is typically a less important issue elsewhere in the world.

the plan continues, the employer is responsible for the payment of the defined benefits (without regard to what happens in the trust). The employer must make up any shortfall in the accumulated assets held by the trust. On the other hand, the employer can recapture any excess accumulated in the trust, either through reduced future funding or through a reversion of funds.

Because a defined benefit plan specifies benefits in terms of uncertain future variables, a company must establish an appropriate funding pattern to ensure the availability of funds at retirement in order to provide the benefits promised. This funding level depends on a number of factors such as turnover, mortality, length of employee service, compensation levels, and interest earnings.

Employers are at risk with defined benefit plans because they must contribute enough to meet the cost of benefits that the plan defines. The expense recognized each period is not necessarily equal to the cash contribution. Similarly, the liability is controversial because its measurement and recognition relate to unknown future variables. Thus, the accounting issues related to this type of plan are complex. Our discussion in the following sections deals primarily with defined benefit plans.⁴

What do the numbers mean?

WHICH PLAN IS RIGHT FOR YOU?

Defined contribution plans have become much more popular with employers than defined benefit plans, as indicated in the chart below. One reason is that they are cheaper. Defined

contribution plans often cost no more than 3 percent of payroll, whereas defined benefit plans can cost 5 to 6 percent of payroll.

Source: Form 5500 filings with U.S. Department of Labor, November 2012, "Private Pension Plan Bulletin."

The total amount of assets held by pension plans increased 14 percent to \$6.3 trillion in 2010. Defined benefit

plan assets increased 12 percent to \$2.4 trillion, while defined contribution plans increased 16 percent to \$3.8 trillion.

⁴A recent federal law requires employees to explicitly opt out of an employer-sponsored defined contribution plan. This should help employees build their own nest eggs (as suggested in the opening story) and will contribute to further growth in defined contribution plans. However, note the following three warnings: (1) low-income workers will still not be able to stash enough away, (2) it leaves each participant alone to manage risk, and (3) companies establish a minimum contribution, which too many participants choose to use, instead of a larger contribution.

The Role of Actuaries in Pension Accounting

The problems associated with pension plans involve complicated mathematical considerations. Therefore, companies engage **actuaries** to ensure that a pension plan is appropriate for the employee group covered.⁵ Actuaries are individuals trained through a long and rigorous certification program to assign probabilities to future events and their financial effects. The insurance industry employs actuaries to assess risks and to advise on the setting of premiums and other aspects of insurance policies. Employers rely heavily on actuaries for assistance in developing, implementing, and funding pension funds.

Actuaries make predictions (called *actuarial assumptions*) of mortality rates, employee turnover, interest and earnings rates, early retirement frequency, future salaries, and any other factors necessary to operate a pension plan. They also compute the various pension measures that affect the financial statements, such as the pension obligation, the annual cost of servicing the plan, and the cost of amendments to the plan. In summary, accounting for defined benefit pension plans relies heavily upon information and measurements provided by actuaries.

ACCOUNTING FOR PENSIONS

In accounting for a company's pension plan, two questions arise. (1) What is the pension obligation that a company should report in the financial statements? (2) What is the pension expense for the period? Attempting to answer the first question has produced much controversy.

3 LEARNING OBJECTIVE

Explain alternative measures for valuing the pension obligation.

Alternative Measures of the Liability

Most agree that an employer's **pension obligation** is the deferred compensation obligation it has to its employees for their service under the terms of the pension plan. Measuring that obligation is not so simple, though, because there are alternative ways of measuring it.⁶

One measure of the pension obligation is to base it only on the benefits vested to the employees. **Vested benefits** are those that the employee is entitled to receive even if he or she renders no additional services to the company. Most pension plans require a certain minimum number of years of service to the employer before an employee achieves vested benefits status. Companies compute the **vested benefit obligation** using only vested benefits, at current salary levels.

Another way to measure the obligation uses both vested and nonvested years of service. On this basis, the company computes the deferred compensation amount on all years of employees' service—**both vested and nonvested**—using current salary levels. This measurement of the pension obligation is called the **accumulated benefit obligation**.

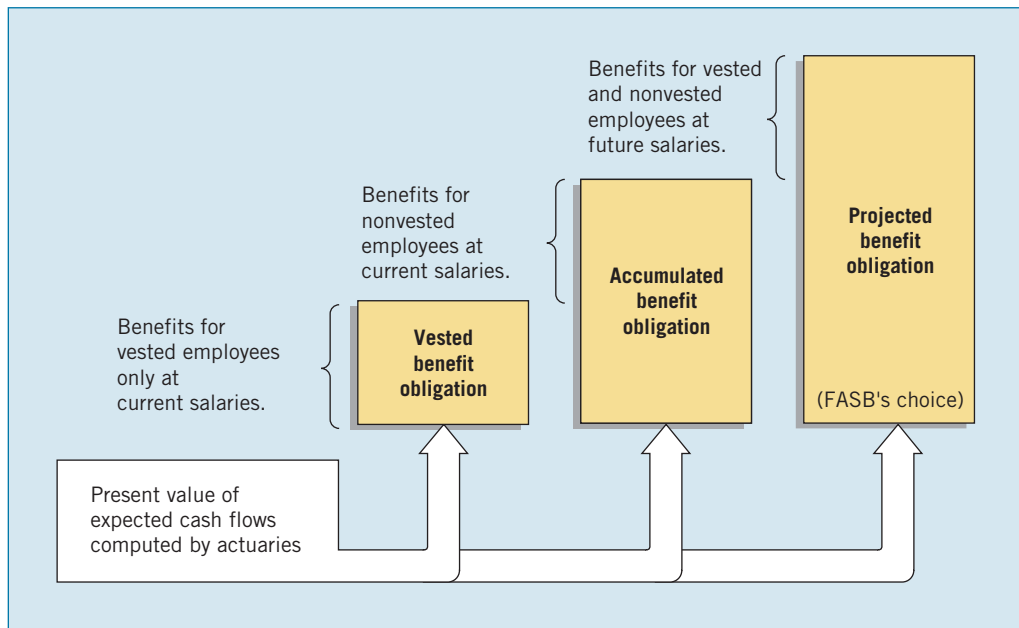

⁵An actuary's primary purpose is to ensure that the company has established an appropriate funding pattern to meet its pension obligations. This computation involves developing a set of assumptions and continued monitoring of these assumptions to ensure their realism. That the general public has little understanding of what an actuary does is illustrated by the following excerpt from the *Wall Street Journal*: "A polling organization once asked the general public what an actuary was, and received among its more coherent responses the opinion that it was a place where you put dead actors."

⁶One measure of the pension obligation is to determine the amount that the **Pension Benefit Guaranty Corporation** would require the employer to pay if it defaulted. (This amount is limited to 30 percent of the employer's net worth.) The accounting profession rejected this approach for financial reporting because it is too hypothetical and ignores the going concern concept.

A third measure bases the deferred compensation amount on both vested and nonvested service **using future salaries**. This measurement of the pension obligation is called the **projected benefit obligation**. Because future salaries are expected to be higher than current salaries, this approach results in the largest measurement of the pension obligation.

The choice between these measures is critical. The choice affects the amount of a company's pension liability and the annual pension expense reported. The diagram in Illustration 20-3 presents the differences in these three measurements.

ILLUSTRATION 20-3
Different Measures of the
Pension Obligation

Which of these alternative measures of the pension liability does the profession favor? **The profession adopted the projected benefit obligation—the present value of vested and nonvested benefits accrued to date, based on employees' future salary levels.**⁷ Those in favor of the projected benefit obligation contend that a promise by an employer to pay benefits based on a percentage of the employees' future salaries is far greater than a promise to pay a percentage of their current salary, and such a difference should be reflected in the pension liability and pension expense.

Moreover, companies discount to present value the estimated future benefits to be paid. Minor changes in the interest rate used to discount pension benefits can dramatically affect the measurement of the employer's obligation. For example, a 1 percent decrease in the discount rate can increase pension liabilities 15 percent. Accounting rules require that at each measurement date, a company must determine the appropriate discount rate used to measure the pension liability, based on current interest rates.

⁷When we use the term "present value of benefits" throughout this chapter, we really mean the *actuarial* present value of benefits. **Actuarial present value** is the amount payable adjusted to reflect the time value of money *and* the probability of payment (by means of decrements for events such as death, disability, withdrawals, or retirement) between the present date and the expected date of payment. For simplicity, though, we use the term "present value" instead of "actuarial present value" in our discussion.

Recognition of the Net Funded Status of the Pension Plan

Companies must recognize on their balance sheet the full overfunded or underfunded status of their defined benefit pension plan.⁸ [3] The **overfunded** or **underfunded status** is measured as the difference between the fair value of the plan assets and the projected benefit obligation.

To illustrate, assume that Coker Company has a projected benefit obligation of \$300,000, and the fair value of its plan assets is \$210,000. In this case, Coker Company's pension plan is underfunded, and therefore it reports a pension liability of \$90,000 ($\$300,000 - \$210,000$) on its balance sheet. If instead the fair value of Coker's plan assets were \$430,000, it would report a pension asset of \$130,000 ($\$430,000 - \$300,000$).

In 2007, by slowing the growth of pension liabilities and increasing contributions to pension funds, the S&P 500 companies reported aggregate overfunding (assets exceeded liabilities) of \$47.2 billion. However, by 2011, these same pension plans were underfunded by \$358.4 billion.⁹

Components of Pension Expense

There is broad agreement that companies should account for pension cost on the **accrual basis**.¹⁰ The profession recognizes that **accounting for pension plans requires measurement of the cost and its identification with the appropriate time periods**. The determination of pension cost, however, is extremely complicated because it is a function of the following components.

- 1. Service cost.** Service cost is the expense caused by the increase in pension benefits payable (the **projected benefit obligation**) to employees because of their services rendered during the current year. Actuaries compute **service cost** as the present value of the new benefits earned by employees during the year.
- 2. Interest on the liability.** Because a pension is a deferred compensation arrangement, there is a time value of money factor. As a result, companies record the pension liability on a discounted basis. **Interest expense accrues each year on the projected benefit obligation just as it does on any discounted debt.** The actuary helps to select the interest rate, referred to as the **settlement rate**.
- 3. Actual return on plan assets.** The return earned by the accumulated pension fund assets in a particular year is relevant in measuring the net cost to the employer of sponsoring an employee pension plan. Therefore, **a company should adjust annual pension expense for interest and dividends that accumulate within the fund, as well as increases and decreases in the fair value of the fund assets.**
- 4. Amortization of prior service cost.** Pension plan amendments (including initiation of a pension plan) often include provisions to increase benefits (or in rare situations, to decrease benefits) for employee service provided in prior years. A company grants plan amendments with the expectation that it will realize economic benefits in future periods. Thus, **it allocates the cost (prior service cost) of providing these**

4 LEARNING OBJECTIVE

List the components of pension expense.

Underlying Concepts

The expense recognition principle and the definition of a liability justify accounting for pension cost on the accrual basis. This requires recording an expense when employees earn the future benefits, and recognizing an existing obligation to pay pensions later based on current services received.

⁸Recognize that GAAP applies to pensions as well as other postretirement benefit plans (OPEBs). Appendix 20A addresses the accounting for OPEBs.

⁹J. Ciesielski, "State of the Pension Promise: The S&P 500 in 2011," *The Analyst's Accounting Observer* (May 29, 2012).

¹⁰At one time, companies applied the **cash basis** of accounting to pension plans by recognizing the amount paid in a particular accounting period as the pension expense for the period. The problem was that the amount paid or funded in a fiscal period depended on financial management and was too often discretionary. For example, funding could depend on the availability of cash, the level of earnings, or other factors unrelated to the requirements of the plan. Application of the cash basis made it possible to manipulate the amount of pension expense appearing in the income statement simply by varying the cash paid to the pension fund.

retroactive benefits to pension expense in the future, specifically to the remaining service-years of the affected employees.

5. **Gain or loss.** Volatility in pension expense can result from sudden and large changes in the fair value of plan assets and by changes in the projected benefit obligation (which changes when actuaries modify assumptions or when actual experience differs from expected experience). Two items comprise this gain or loss: (1) the difference between the actual return and the expected return on plan assets, and (2) amortization of the net gain or loss from previous periods. We will discuss this complex computation later in the chapter.

Illustration 20-4 shows the **components of pension expense** and their effect on total pension expense (increase or decrease).

ILLUSTRATION 20-4
Components of Annual
Pension Expense

Service Cost

The **service cost** is the **actuarial present value of benefits attributed by the pension benefit formula to employee service during the period**. That is, the actuary predicts the additional benefits that an employer must pay under the plan's benefit formula as a result of the employees' current year's service, and then discounts the cost of those future benefits back to their present value.

The Board concluded that **companies must consider future compensation levels in measuring the present obligation and periodic pension expense if the plan benefit formula incorporates them**. In other words, the present obligation resulting from a promise to pay a benefit of 1 percent of an employee's **final pay** differs from the promise to pay 1 percent of **current pay**. To overlook this fact is to ignore an important aspect of pension expense. Thus, the FASB adopts the **benefits/years-of-service actuarial method, which determines pension expense based on future salary levels**.

Some object to this determination, arguing that a company should have more freedom to select an expense recognition pattern. Others believe that incorporating future salary increases into current pension expense is accounting for events that have not yet happened. They argue that if a company terminates the plan today, it pays only liabilities for accumulated benefits. **Nevertheless, the FASB indicates that the projected benefit obligation provides a more realistic measure of the employer's obligation under the**

plan on a going concern basis and, therefore, companies should use it as the basis for determining service cost.

Interest on the Liability

The second component of pension expense is **interest on the liability**, or **interest expense**. Because a company defers paying the liability until maturity, the company records it on a discounted basis. The liability then accrues interest over the life of the employee. **The interest component is the interest for the period on the projected benefit obligation outstanding during the period.** The FASB did not address the question of how often to compound the interest cost. To simplify our illustrations and problem materials, we use a simple interest computation, applying it to the beginning-of-the-year balance of the projected benefit liability.

How do companies determine the interest rate to apply to the pension liability? The Board states that the assumed discount rate should **reflect the rates at which companies can effectively settle pension benefits**. In determining these **settlement rates**, companies should look to rates of return on high-quality fixed-income investments currently available, whose cash flows match the timing and amount of the expected benefit payments. The objective of selecting the assumed discount rates is to measure a single amount that, if invested in a portfolio of high-quality debt instruments, would provide the necessary future cash flows to pay the pension benefits when due.

Actual Return on Plan Assets

Pension plan assets are usually investments in stocks, bonds, other securities, and real estate that a company holds to earn a reasonable return, generally at minimum risk. Employer contributions and actual returns on pension plan assets increase pension plan assets. Benefits paid to retired employees decrease them. As we indicated, the actual return earned on these assets increases the fund balance and correspondingly reduces the employer's net cost of providing employees' pension benefits. That is, the higher the actual return on the pension plan assets, the less the employer has to contribute eventually and, therefore, the less pension expense that it needs to report.

The actual return on the plan assets is the increase in pension funds from interest, dividends, and realized and unrealized changes in the fair value of the plan assets. Companies compute the actual return by adjusting the change in the plan assets for the effects of contributions during the year and benefits paid out during the year. The equation in Illustration 20-5, or a variation thereof, can be used to compute the actual return.

$$\text{Actual Return} = \left(\begin{array}{r} \text{Plan} \\ \text{Assets} \\ \text{Ending} \\ \text{Balance} \end{array} - \begin{array}{r} \text{Plan} \\ \text{Assets} \\ \text{Beginning} \\ \text{Balance} \end{array} \right) - (\text{Contributions} - \text{Benefits Paid})$$

ILLUSTRATION 20-5
Equation for Computing
Actual Return

Stated another way, the actual return on plan assets is the difference between the **fair value of the plan assets** at the beginning of the period and at the end of the period, adjusted for contributions and benefit payments. Illustration 20-6 uses the equation above to compute the actual return, using some assumed amounts.

Fair value of plan assets at end of period		\$5,000,000
Deduct: Fair value of plan assets at beginning of period		4,200,000
Increase in fair value of plan assets		800,000
Deduct: Contributions to plan during period	\$500,000	
Less benefits paid during period	300,000	200,000
Actual return on plan assets		\$ 600,000

ILLUSTRATION 20-6
Computation of Actual
Return on Plan Assets

If the actual return on the plan assets is positive (a gain) during the period, a company subtracts it when computing pension expense. If the actual return is negative (a loss) during the period, the company adds it when computing pension expense.¹¹

USING A PENSION WORKSHEET

LEARNING OBJECTIVE 5

Use a worksheet for employer's pension plan entries.

We will now illustrate the basic computation of pension expense using the first three components: (1) service cost, (2) interest on the liability, and (3) actual return on plan assets. We discuss the other pension expense components (amortization of prior service cost, and gains and losses) in later sections.

Companies often use a worksheet to record pension-related information. As its name suggests, the worksheet is a working tool. A worksheet is **not** a permanent accounting record. It is neither a journal nor part of the general ledger. The worksheet is merely a device to make it easier to prepare entries and the financial statements.¹² Illustration 20-7 shows the format of the **pension worksheet**.

ILLUSTRATION 20-7
Basic Format of Pension Worksheet

Pension Worksheet.xls

3		Annual Pension Expense	Cash	Pension Asset/Liability	Projected Benefit Obligation	Plan Assets
4	Items					
5						
6						
7						
8						
9						

The “General Journal Entries” columns of the worksheet (near the left side) determine the entries to record in the formal general ledger accounts. The “Memo Record” columns (on the right side) maintain balances in the projected benefit obligation and the plan assets. The difference between the projected benefit obligation and the fair value of the plan assets is the **pension asset/liability**, which is shown in the balance sheet. If the projected benefit obligation is greater than the plan assets, a pension liability occurs. If the projected benefit obligation is less than the plan assets, a pension asset occurs.

On the first line of the worksheet, a company records the beginning balances (if any). It then records subsequent transactions and events related to the pension plan using debits and credits, using both sets of columns as if they were one. For each transaction or event, the debits must equal the credits. **The ending balance in the Pension Asset/Liability column should equal the net balance in the memo record.**

2014 Entries and Worksheet

To illustrate the use of a worksheet and how it helps in accounting for a pension plan, assume that on January 1, 2014, Zarle Company provides the following information related to its pension plan for the year 2014.

¹¹At this point, we use the actual rate of return. Later, for purposes of computing pension expense, we use the expected rate of return.

¹²The use of a pension entry worksheet is recommended and illustrated by Paul B. W. Miller, “The New Pension Accounting (Part 2),” *Journal of Accountancy* (February 1987), pp. 86–94.

Plan assets, January 1, 2014, are \$100,000.

Projected benefit obligation, January 1, 2014, is \$100,000.

Annual service cost is \$9,000.

Settlement rate is 10 percent.

Actual return on plan assets is \$10,000.

Funding contributions are \$8,000.

Benefits paid to retirees during the year are \$7,000.

Using this data, the worksheet in Illustration 20-8 presents the beginning balances and all of the pension entries recorded by Zarle in 2014. Zarle records the beginning balances for the projected benefit obligation and the pension plan assets on the first line of the worksheet in the memo record. Because the projected benefit obligation and the plan assets are the same at January 1, 2014, the Pension Asset/Liability account has a zero balance at January 1, 2014.

16						
17	*\$9,000 – \$8,000 = \$1,000					
18	**\$112,000 – \$111,000 = \$1,000					

ILLUSTRATION 20-8
Pension
Worksheet—2014

Entry (a) in Illustration 20-8 records the service cost component, which increases pension expense by \$9,000 and increases the liability (projected benefit obligation) by \$9,000. Entry (b) accrues the interest expense component, which increases both the liability and the pension expense by \$10,000 (the beginning projected benefit obligation multiplied by the settlement rate of 10 percent). Entry (c) records the actual return on the plan assets, which increases the plan assets and decreases the pension expense. Entry (d) records Zarle's contribution (funding) of assets to the pension fund, thereby decreasing cash by \$8,000 and increasing plan assets by \$8,000. Entry (e) records the benefit payments made to retirees, which results in equal \$7,000 decreases to the plan assets and the projected benefit obligation.

Zarle makes the "formal journal entry" on December 31, which records the pension expense in 2014, as follows.

2014	
Pension Expense	9,000
Cash	8,000
Pension Asset/Liability	1,000

The credit to Pension Asset/Liability for \$1,000 represents the difference between the 2014 pension expense of \$9,000 and the amount funded of \$8,000. Pension Asset/Liability (credit) is a liability because Zarle underfunds the plan by \$1,000. The Pension Asset/Liability account balance of \$1,000 also equals the net of the balances in the memo accounts. Illustration 20-9 shows that the projected benefit obligation exceeds the plan assets by \$1,000, which reconciles to the pension liability reported in the balance sheet.

ILLUSTRATION 20-9
Pension Reconciliation
Schedule—December 31,
2014

Projected benefit obligation (Credit)	\$(112,000)
Plan assets at fair value (Debit)	111,000
Pension asset/liability (Credit)	\$ (1,000)

If the net of the memo record balances is a credit, the reconciling amount in the pension asset/liability column will be a credit equal in amount. If the net of the memo record balances is a debit, the pension asset/liability amount will be a debit equal in amount. The worksheet is designed to produce this reconciling feature, which is useful later in the preparation of the financial statements and required note disclosure related to pensions.

In this illustration (for 2014), the debit to Pension Expense exceeds the credit to Cash, resulting in a credit to Pension Asset/Liability—the recognition of a liability. If the credit to Cash exceeded the debit to Pension Expense, Zarle would debit Pension Asset/Liability—the recognition of an asset.

Amortization of Prior Service Cost (PSC)

LEARNING OBJECTIVE 6
Describe the amortization of prior service costs.

When either initiating (adopting) or amending a defined benefit plan, a company often provides benefits to employees for years of service before the date of initiation or amendment. As a result of this prior service cost, the projected benefit obligation is increased to recognize this additional liability. In many cases, the increase in the projected benefit obligation is substantial.

Should a company report an expense for these **prior service costs (PSC)** at the time it initiates or amends a plan? The FASB says no. The Board's rationale is that the employer would not provide credit for past years of service unless it expects to receive benefits in the future. As a result, a company should not recognize the **retroactive benefits** as pension expense in the year of amendment. Instead, **the employer initially records the prior service cost as an adjustment to other comprehensive income. The employer then recognizes the prior service cost as a component of pension expense over the remaining service lives of the employees who are expected to benefit from the change in the plan.**

The cost of the retroactive benefits (including any benefits provided to existing retirees) is the increase in the projected benefit obligation at the date of the amendment. An actuary computes the amount of the prior service cost. Amortization of the prior service cost is also an accounting function performed with the assistance of an actuary.

The Board prefers a **years-of-service method** that is similar to a units-of-production computation. First, the company computes the total number of service-years to be worked by all of the participating employees. Second, it divides the prior service cost by the total number of service-years, to obtain a cost per service-year (the unit cost). Third, the company multiplies the number of service-years consumed each year by the cost per service-year, to obtain the annual amortization charge.

To illustrate the amortization of the prior service cost under the years-of-service method, assume that Zarle Company's defined benefit pension plan covers 170 employees. In its negotiations with the employees, Zarle Company amends its pension plan on January 1, 2015, and grants \$80,000 of prior service costs to its employees. The employees are grouped according to expected years of retirement, as shown on the next page.

Group	Number of Employees	Expected Retirement on Dec. 31
A	40	2015
B	20	2016
C	40	2017
D	50	2018
E	20	2019
	<u>170</u>	

Illustration 20-10 shows computation of the service-years per year and the total service-years.

Year	Service-Years					Total
	A	B	C	D	E	
2015	40	20	40	50	20	170
2016		20	40	50	20	130
2017			40	50	20	110
2018				50	20	70
2019					20	20
	<u>40</u>	<u>40</u>	<u>120</u>	<u>200</u>	<u>100</u>	<u>500</u>

ILLUSTRATION 20-10
Computation of Service-Years

Computed on the basis of a prior service cost of \$80,000 and a total of 500 service-years for all years, the cost per service-year is \$160 ($\$80,000 \div 500$). The annual amount of amortization based on a \$160 cost per service-year is computed as follows.

Year	Total Service-Years	×	Cost per Service-Year	=	Annual Amortization
2015	170		\$160		\$27,200
2016	130		160		20,800
2017	110		160		17,600
2018	70		160		11,200
2019	20		160		3,200
	<u>500</u>				<u>\$80,000</u>

ILLUSTRATION 20-11
Computation of Annual Prior Service Cost Amortization

An alternative method of computing amortization of **prior service cost is permitted**. **Employers may use straight-line amortization over the average remaining service life of the employees.** In this case, with 500 service-years and 170 employees, the average would be 2.94 years ($500 \div 170$). The annual expense would be \$27,211 ($\$80,000 \div 2.94$). Using this method, Zarle Company would charge cost to expense in 2015, 2016, and 2017 as follows.

Year	Expense
2015	\$27,211
2016	27,211
2017	25,578*
	<u>\$80,000</u>
*.94 × \$27,211	

2015 Entries and Worksheet

Continuing the Zarle Company illustration into 2015, we note that the company amends the pension plan on January 1, 2015, to grant employees prior service benefits with a present value of \$80,000. Zarle uses the annual amortization amounts, as computed in

the previous section using the years-of-service approach (\$27,200 for 2015). The following additional facts apply to the pension plan for the year 2015.

Annual service cost is \$9,500.

Settlement rate is 10 percent.

Actual return on plan assets is \$11,100.

Annual funding contributions are \$20,000.

Benefits paid to retirees during the year are \$8,000.

Amortization of prior service cost (PSC) using the years-of-service method is \$27,200.

Accumulated other comprehensive income (hereafter referred to as accumulated OCI) on December 31, 2014, is zero.

Illustration 20-12 presents a worksheet of all the pension entries and information recorded by Zarle in 2015. We now add an additional column to the worksheet to record the prior service cost adjustment to other comprehensive income. In addition, as shown in rows 19, 21, and 22, the other comprehensive income amount related to prior service cost is added to accumulated other comprehensive income (“Accumulated OCI”) to arrive at a debit balance of \$52,800 at December 31, 2015.

ILLUSTRATION 20-12

Pension Worksheet—2015

The first line of the worksheet shows the beginning balances of the Pension Asset/Liability account and the memo accounts. Entry (f) records Zarle’s granting of prior service cost, by adding \$80,000 to the projected benefit obligation and decreasing other comprehensive income—prior service cost by the same amount. Entries (g), (h), (i), (k), and (l) are similar to the corresponding entries in 2014. To compute the interest cost on the projected benefit obligation for entry (h), we use the beginning projected benefit

balance of \$192,000, which has been adjusted for the prior service cost amendment on January 1, 2015. Entry (j) records the 2015 amortization of prior service cost by debiting Pension Expense for \$27,200 and crediting **Other Comprehensive Income (PSC)** for the same amount.

Zarle makes the following journal entry on December 31 to formally record the 2015 pension expense (the sum of the annual pension expense column), and related pension information.

2015	
Pension Expense	44,800
Other Comprehensive Income (PSC)	52,800
Cash	20,000
Pension Asset/Liability	77,600

Because the debits to Pension Expense and to Other Comprehensive Income (PSC) exceed the funding, Zarle credits the Pension Asset/Liability account for the \$77,600 difference. That account is a liability. In 2015, as in 2014, the balance of the Pension Asset/Liability account (\$78,600) is equal to the net of the balances in the memo accounts, as shown in Illustration 20-13.

Projected benefit obligation (Credit)	\$(212,700)
Plan assets at fair value (Debit)	134,100
Pension asset/liability (Credit)	\$ (78,600)

ILLUSTRATION 20-13
Pension Reconciliation
Schedule—December 31,
2015

The reconciliation is the formula that makes the worksheet work. It relates the components of pension accounting, recorded and unrecorded, to one another.

Gain or Loss

Of great concern to companies that have pension plans are the uncontrollable and unexpected swings in pension expense that can result from (1) sudden and large changes in the fair value of plan assets, and (2) changes in actuarial assumptions that affect the amount of the projected benefit obligation. If these gains or losses impact fully the financial statements in the period of realization or incurrence, substantial fluctuations in pension expense result.

Therefore, the FASB decided to reduce the volatility associated with pension expense by using **smoothing techniques** that dampen and in some cases fully eliminate the fluctuations.

Smoothing Unexpected Gains and Losses on Plan Assets

One component of pension expense, actual return on plan assets, reduces pension expense (assuming the actual return is positive). A large change in the actual return can substantially affect pension expense for a year. Assume a company has a 40 percent return in the stock market for the year. Should this substantial, and perhaps one-time, event affect current pension expense?

Actuaries ignore current fluctuations when they develop a funding pattern to pay expected benefits in the future. They develop an **expected rate of return** and multiply it by an asset value weighted over a reasonable period of time to arrive at an **expected return on plan assets**. They then use this return to determine a company's funding pattern.

The FASB adopted the actuary's approach to dampen wide swings that might occur in the actual return. That is, a company includes the **expected return** on the plan assets as a component of pension expense, not the actual return in a given year. To achieve this

7 LEARNING OBJECTIVE
Explain the accounting for unexpected gains and losses.

goal, the company multiplies the expected rate of return by the market-related value of the plan assets. The **market-related asset value** of the plan assets is either the fair value of plan assets or a calculated value that recognizes changes in fair value in a systematic and rational manner. [4]¹³

The difference between the expected return and the actual return is referred to as the **unexpected gain or loss**; the FASB uses the term **asset gains and losses**. **Asset gains** occur when actual return exceeds expected return; **asset losses** occur when actual return is less than expected return.

What happens to unexpected gains or losses in the accounting for pensions? Companies record asset gains and asset losses in an account, **Other Comprehensive Income (G/L)**, combining them with gains and losses accumulated in prior years. This treatment is similar to prior service cost. The Board believes this treatment is consistent with the practice of including in other comprehensive income certain changes in value that have not been recognized in net income (for example, unrealized gains and losses on available-for-sale securities). [5] In addition, the accounting is simple, transparent, and symmetrical.

To illustrate the computation of an unexpected gain or loss and its related accounting, assume that in 2016, Zarle Company has an actual return on plan assets of \$12,000 when the expected return is \$13,410 (the expected rate of return of 10% on plan assets times the beginning-of-the-year plan assets). The unexpected asset loss of \$1,410 ($\$12,000 - \$13,410$) is debited to Other Comprehensive Income (G/L) and credited to Pension Expense.

What do the numbers mean?

PENSION COSTS UPS AND DOWNS

For some companies, pension plans generated real profits in 2011. The plans not only paid for themselves but also increased earnings. This happens when the expected return on pension assets exceed the company's annual costs. At **Mead-Westvaco**, pension income amounted to approximately 27 percent of operating profit. It tallied 11 percent of operating profit at **CenturyTel** and 9.5 percent at **Sun Trust Banks**. The issue is important because in these cases management is not driving the operating income—pension income is. And as a result, income can change quickly.

Unfortunately, when the stock market stops booming, pension expense substantially increases for many companies. The reason: Expected return on a smaller asset base no longer offsets pension service costs and interest on the projected benefit obligation. As a result, many companies find it difficult to meet their earnings targets, and at a time when meeting such targets is crucial to maintaining the stock price.

Smoothing Unexpected Gains and Losses on the Pension Liability

In estimating the projected benefit obligation (the liability), actuaries make assumptions about such items as mortality rate, retirement rate, turnover rate, disability rate, and salary amounts. Any change in these actuarial assumptions affects the amount of the projected benefit obligation. Seldom does actual experience coincide exactly with actuarial predictions. These unexpected gains or losses from changes in the projected benefit obligation are called **liability gains and losses**.

¹³Companies may use different ways of determining the calculated market-related value for different classes of assets. For example, an employer might use fair value for bonds and a five-year moving-average for equities. But companies should consistently apply the manner of determining market-related value from year to year for each asset class. Throughout our Zarle illustrations, we assume that market-related values based on a calculated value and the fair value of plan assets are equal. *For homework purposes, use the fair value of plan assets as the measure for the market-related value.*

Companies report liability gains (resulting from unexpected decreases in the liability balance) and liability losses (resulting from unexpected increases) in Other Comprehensive Income (G/L). Companies combine the liability gains and losses in the same Other Comprehensive Income (G/L) account used for asset gains and losses. They accumulate the asset and liability gains and losses from year to year that are not amortized in Accumulated Other Comprehensive Income. This amount is reported on the balance sheet in the stockholders' equity section.

Corridor Amortization

The asset gains and losses and the liability gains and losses can offset each other. As a result, the Accumulated OCI account related to gains and losses may not grow very large. But, it is possible that no offsetting will occur and that the balance in the Accumulated OCI account related to gains and losses will continue to grow.

To limit the growth of the Accumulated OCI account, the FASB invented the **corridor approach** for amortizing the account's accumulated balance when it gets too large. How large is too large? The FASB set a limit of 10 percent of the larger of the beginning balances of the projected benefit obligation or the market-related value of the plan assets. **Above that size, the Accumulated OCI account related to gains and losses is considered too large and must be amortized.**

To illustrate the corridor approach, data for Callaway Co.'s projected benefit obligation and plan assets over a period of six years are shown in Illustration 20-14.

Beginning-of-the-Year Balances	Projected Benefit Obligation	Market-Related Asset Value	Corridor* +/- 10%
2013	\$1,000,000	\$ 900,000	\$100,000
2014	1,200,000	1,100,000	120,000
2015	1,300,000	1,700,000	170,000
2016	1,500,000	2,250,000	225,000
2017	1,700,000	1,750,000	175,000
2018	1,800,000	1,700,000	180,000

*The corridor becomes 10% of the larger (in red type) of the projected benefit obligation or the market-related plan asset value.

ILLUSTRATION 20-14

Computation of the Corridor

How the corridor works becomes apparent when we portray the data graphically, as in Illustration 20-15.

ILLUSTRATION 20-15

Graphic Illustration of the Corridor

8 LEARNING OBJECTIVE

Explain the corridor approach to amortizing gains and losses.

If the balance in the Accumulated OCI account related to gains and losses stays within the upper and lower limits of the corridor, no amortization is required. In that case, Callaway carries forward unchanged the accumulated OCI related to gains and losses.

If amortization is required, the minimum amortization is the excess divided by the average remaining service period of active employees who are expected to receive benefits under the plan. Callaway may use any systematic method of amortization of gains and losses in lieu of the minimum, provided it is greater than the minimum. It must use the method consistently for both gains and losses, and must disclose the amortization method used.

Example of Gains/Losses

In applying the corridor, companies should include amortization of the net gain or loss as a component of pension expense only if, at the **beginning of the year**, the net gain or loss in Accumulated OCI exceeded the corridor. That is, if no net gain or loss exists in Accumulated OCI at the beginning of the period, the company cannot recognize pension expense gains or losses in that period.

To illustrate the amortization of net gains and losses, assume the following information for Soft-White, Inc.

	2014	2015	2016
	(beginning of the year)		
Projected benefit obligation	\$2,100,000	\$2,600,000	\$2,900,000
Market-related asset value	2,600,000	2,800,000	2,700,000

Soft-White recorded in Other Comprehensive Income actuarial losses of \$400,000 in 2014 and \$300,000 in 2015.

If the average remaining service life of all active employees is 5.5 years, the schedule to amortize the net gain or loss is as shown in Illustration 20-16.

ILLUSTRATION 20-16 Corridor Test and Gain/Loss Amortization Schedule

Year	Projected Benefit Obligation ^a	Plan Assets ^a	Corridor ^b	Accumulated OCI (G/L) ^a	Minimum Amortization of Loss (For Current Year)
2014	\$2,100,000	\$2,600,000	\$260,000	\$ -0-	\$ -0-
2015	2,600,000	2,800,000	280,000	400,000	21,818 ^c
2016	2,900,000	2,700,000	290,000	678,182 ^d	70,579 ^d

^aAll as of the beginning of the period.
^b10% of the greater of projected benefit obligation or plan assets' market-related value.
^c\$400,000 - \$280,000 = \$120,000; \$120,000 ÷ 5.5 = \$21,818.
^d\$400,000 - \$21,818 + \$300,000 = \$678,182; \$678,182 - \$290,000 = \$388,182; \$388,182 ÷ 5.5 = \$70,579.

As Illustration 20-16 indicates, the loss recognized in 2015 increased pension expense by \$21,818. This amount is small in comparison with the total loss of \$400,000. It indicates that the corridor approach dampens the effects (reduces volatility) of these gains and losses on pension expense.

The rationale for the corridor is that gains and losses result from refinements in estimates as well as real changes in economic value. Over time, some of these gains and losses will offset one another. It therefore seems reasonable that Soft-White should not fully recognize gains and losses as a component of pension expense in the period in which they arise.

However, Soft-White should immediately recognize in net income certain gains and losses—if they arise from a single occurrence not directly related to the operation of the pension plan and not in the ordinary course of the employer’s business. For example, a gain or loss that is directly related to a plant closing, a disposal of a business component, or a similar event that greatly affects the size of the employee work force should be recognized as a part of the gain or loss associated with that event.

For example, at one time, **Bethlehem Steel** reported a quarterly loss of \$477 million. A great deal of this loss was attributable to future estimated benefits payable to workers who were permanently laid off. In this situation, the loss should be treated as an adjustment to the gain or loss on the plant closing and should not affect pension cost for the current or future periods.

Summary of Calculations for Asset Gain or Loss

The difference between the actual return on plan assets and the expected return on plan assets is the **unexpected asset gain or loss** component. This component defers the difference between the actual return and expected return on plan assets in computing current-year pension expense. Thus, after considering this component, **it is really the expected return on plan assets (not the actual return) that determines current pension expense.**

Companies determine the amortized net gain or loss by amortizing the Accumulated OCI amount related to net gain or loss at the beginning of the year subject to the corridor limitation. In other words, **if the accumulated gain or loss is greater than the corridor, these net gains and losses are subject to amortization.** Soft-White computed this minimum amortization by dividing the net gains or losses subject to amortization by the average remaining service period. When the current-year unexpected gain or loss is combined with the amortized net gain or loss, we determine the current-year gain or loss. Illustration 20-17 summarizes these gain and loss computations.

ILLUSTRATION 20-17

Graphic Summary of
Gain or Loss
Computation

In essence, these gains and losses are subject to *triple* smoothing. That is, companies first smooth the asset gain or loss by using the expected return. Second, they do not amortize the accumulated gain or loss at the beginning of the year unless it is greater than the corridor. Finally, they spread the excess over the remaining service life of existing employees.

Evolving Issue

BYE BYE CORRIDOR

Many companies have significant actuarial losses in their pension plans, which are presently deferred through use of the corridor approach. However, companies do have a choice—they may select any method of accounting for these deferred losses as long as it is systematic, rational, and consistently applied, and meets a minimum for recognition in the income statement.

Some companies are now shifting away from the corridor approach and recognizing actuarial losses immediately. For example, **AT&T**, **Verizon Communications**, and **Honeywell International** have recently changed accounting principles from smoothing these losses to recognizing them in the year incurred.

Companies argue this approach provides more transparency for these losses that will directly affect pension expense in the current period (and this accounting is also more similar to IFRS). However, there is a silver lining for these companies—they can charge many of these deferred losses to past years. For example, the table at the top of the right-hand column indicates deferred losses as of 2009 for three major companies.

	Deferred Losses as of 2009 (in billions)	Losses as % of Pension Assets
AT&T	\$23.04	49%
Verizon	\$12.20	43
Honeywell	\$7.57	55

When AT&T changed to immediate recognition in 2010, it restated its previous years. In 2008, for example, AT&T increased its pension cost by \$24.9 billion, which led to a net loss in 2008 of \$2.6 billion instead of a profit of \$12.9 billion. As a result, in 2010 it recognized a much smaller pension cost of \$3 billion. Skeptics suggest that AT&T made this change to charge these losses to prior periods. In other words, does anyone in 2011 care that the profit in 2008 was changed to a loss? In addition, once these losses are charged to prior periods, they no longer affect current and future earnings.

Although earnings in the future will probably be more volatile due to fluctuations in pension expense, more companies are willing to move in the direction of immediate expensing to eliminate large deferred losses which would be a drag on future income.

Source: Michael Rapoport, "Rewriting Pension History," *Wall Street Journal* (March 9, 2011).

2016 Entries and Worksheet

Continuing the Zarle Company illustration, the following facts apply to the pension plan for 2016.

Annual service cost is \$13,000.

Settlement rate is 10 percent; expected earnings rate is 10 percent.

Actual return on plan assets is \$12,000.

Amortization of prior service cost (PSC) is \$20,800.

Annual funding contributions are \$24,000.

Benefits paid to retirees during the year are \$10,500.

Changes in actuarial assumptions resulted in an end-of-year projected benefit obligation of \$265,000.

The worksheet in Illustration 20-18 presents all of Zarle's 2016 pension entries and related information. The first line of the worksheet records the beginning balances that relate to the pension plan. In this case, Zarle's beginning balances are the ending balances from its 2015 pension worksheet in Illustration 20-12 (page 1196).

Entries (m), (n), (o), (q), (r), and (s) are similar to the corresponding entries in 2014 or 2015.

Entries (o) and (p) are related. We explained the recording of the actual return in entry (o) in both 2014 and 2015; it is recorded similarly in 2016. In both 2014 and 2015, Zarle assumed that the actual return on plan assets was equal to the expected return on plan assets. In 2016, the expected return of \$13,410 (the expected rate of return of

ILLUSTRATION 20-18
Pension Worksheet—2016

10 percent times the beginning-of-the-year plan assets' balance of \$134,100) is higher than the actual return of \$12,000. To smooth pension expense, Zarle defers the unexpected loss of \$1,410 (\$13,410 – \$12,000) by debiting the Other Comprehensive Income (G/L) account and crediting Pension Expense. **As a result of this adjustment, the expected return on the plan assets is the amount actually used to compute pension expense.**

Entry (t) records the change in the projected benefit obligation resulting from the change in the actuarial assumptions. As indicated, the actuary has now computed the ending balance to be \$265,000. Given the PBO balance at December 31, 2015, and the related transactions during 2016, the PBO balance to date is computed as shown in Illustration 20-19.

December 31, 2015, PBO balance	\$212,700
Service cost [entry (m)]	13,000
Interest cost [entry (n)]	21,270
Benefits paid [entry (s)]	(10,500)
December 31, 2016, PBO balance (before liability increases)	<u>\$236,470</u>

ILLUSTRATION 20-19
Projected Benefit
Obligation Balance
(Unadjusted)

The difference between the ending balance of \$265,000 and the balance of \$236,470 before the liability increase is \$28,530 (\$265,000 – \$236,470). This \$28,530 increase in the employer's liability is an unexpected loss. The journal entry on December 31, 2016, to record the pension information is as follows.

Pension Expense	41,660	
Other Comprehensive Income (G/L)	29,940	
Cash		24,000
Other Comprehensive Income (PSC)		20,800
Pension Asset/Liability		26,800

As the 2016 worksheet indicates, the \$105,400 balance in the Pension Asset/Liability account at December 31, 2016, is equal to the net of the balances in the memo accounts. Illustration 20-20 shows this computation.

ILLUSTRATION 20-20

Pension Reconciliation Schedule—December 31, 2016

Projected benefit obligation (Credit)	\$ (265,000)
Plan assets at fair value (Debit)	159,600
Pension asset/liability	\$ (105,400)

What do the numbers mean? ROLLER COASTER

The chart below shows what has happened to the financial health of pension plans over the last few years. It is a real roller coaster.

At the turn of the century, when the stock market was strong, pension plans were overfunded. However, the bubble burst, and by 2002 companies in the S&P 500 saw their pension plans funded at just 85 percent of reported liabilities. Then, plans bounced back, and by 2007 pension plans were overfunded again. However, due to recent downturns,

plans are now underfunded again and the future is highly uncertain.

A number of factors cause a fund to change from being overfunded to underfunded. First, low interest rates decimate returns on pension plan assets. Second, using low interest rates to discount the projected benefit payments leads to a higher pension liability. Finally, more individuals are retiring, which leads to a depletion of the pension plan assets.

REPORTING PENSION PLANS IN FINANCIAL STATEMENTS

LEARNING OBJECTIVE 9

Describe the requirements for reporting pension plans in financial statements.

As you might suspect, a phenomenon as significant and complex as pensions involves extensive reporting and disclosure requirements. We will cover these requirements in two categories: (1) those within the financial statements, and (2) those within the notes to the financial statements.

Within the Financial Statements

Recognition of the Net Funded Status of the Pension Plan

Companies must recognize on their balance sheet the overfunded (pension asset) or underfunded (pension liability) status of their defined benefit pension plan. The overfunded or underfunded status is measured as the difference between the fair value of the plan assets and the projected benefit obligation.

Classification of Pension Asset or Pension Liability

No portion of a pension asset is reported as a current asset. The excess of the fair value of the plan assets over the benefit obligation is classified as a noncurrent asset. The rationale for noncurrent classification is that the pension plan assets are restricted. That is, these assets are used to fund the projected benefit obligation, and therefore noncurrent classification is appropriate.

The current portion of a net pension liability represents the amount of benefit payments to be paid in the next 12 months (or operating cycle, if longer), if that amount cannot be funded from existing plan assets. Otherwise, the pension liability is classified as a noncurrent liability.¹⁴

Aggregation of Pension Plans

Some companies have two or more pension plans. In such instances, a question arises as to whether these multiple plans should be combined and shown as one amount on the balance sheet. The Board takes the position that **all overfunded plans should be combined** and shown as a pension asset on the balance sheet. Similarly, if the company has two or more underfunded plans, the **underfunded plans are combined and shown as one amount** on the balance sheet.

The FASB rejected the alternative of combining *all* plans and representing the net amount as a single net asset or net liability. The rationale: A company does not have the ability to offset excess assets of one plan against underfunded obligations of another plan. Furthermore, netting all plans is inappropriate because offsetting assets and liabilities is not permitted under GAAP unless a right of offset exists.

To illustrate, assume that Cresci Company has three pension plans as shown in Illustration 20-21.

	Pension Assets (at Fair Value)	Projected Benefit Obligation	Pension Asset/Liability
Plan A	\$400,000	\$300,000	\$100,000 Asset
Plan B	600,000	720,000	120,000 Liability
Plan C	550,000	700,000	150,000 Liability

ILLUSTRATION 20-21
Multiple Pension Plans'
Funded Status

In this case, Cresci reports a pension plan asset of \$100,000 and a pension plan liability of \$270,000 (\$120,000 + \$150,000).

Actuarial Gains and Losses/Prior Service Cost

Actuarial gains and losses not recognized as part of pension expense are recognized as increases and decreases in other comprehensive income. The same type of accounting is also used for prior service cost. The Board requires that the prior service cost arising in the year of the amendment (which increases the projected benefit obligation) be recognized

¹⁴Recently, the FASB required more extensive disclosures related to pension plan assets. At a minimum, companies must disclose the amount of assets allocated to equities, government and corporate bonds, mortgage-backed securities, derivatives, and real estate. Also, information on concentrations of risk must be explained. Finally, fair value disclosures would be required, including classification of amounts into levels of the fair value hierarchy. [6]

by an offsetting debit to other comprehensive income. By recognizing both actuarial gains and losses and prior service cost as part of other comprehensive income, the Board believes that the usefulness of financial statements is enhanced.

To illustrate the presentation of other comprehensive income and related accumulated OCI, assume that Obey Company provides the following information for the year 2014. None of the Accumulated OCI on January 1, 2014, should be amortized in 2014.

Net income for 2014	\$100,000
Actuarial liability loss for 2014	60,000
Prior service cost adjustment to provide additional benefits in December 2014	15,000
Accumulated OCI, January 1, 2014	40,000

Both the actuarial liability loss and the prior service adjustment decrease the funded status of the plan on the balance sheet. This results because the projected benefit obligation increases. However, neither the actuarial liability loss nor the prior service cost adjustment affects pension expense in 2014. In subsequent periods, these items will impact pension expense through amortization.

For Obey Company, the computation of “Other comprehensive loss” for 2014 is as follows.

ILLUSTRATION 20-22
Computation of Other Comprehensive Income

Actuarial liability loss	\$60,000
Prior service cost benefit adjustment	<u>15,000</u>
Other comprehensive loss	<u>\$75,000</u>

The computation of “Comprehensive income” for 2014 is as follows.

ILLUSTRATION 20-23
Computation of Comprehensive Income

Net income	\$100,000
Other comprehensive loss	<u>75,000</u>
Comprehensive income	<u>\$ 25,000</u>

The components of other comprehensive income must be reported in one of two ways: (1) in a second income statement, or (2) in a combined statement of comprehensive income. Regardless of the format used, net income must be added to other comprehensive income to arrive at comprehensive income. *For homework purposes, use the second income statement approach unless stated otherwise.* Earnings per share information related to comprehensive income is not required.

To illustrate the second income statement approach, assume that Obey Company has reported a traditional income statement. The comprehensive income statement is shown in Illustration 20-24.

ILLUSTRATION 20-24
Comprehensive Income Reporting

OBHEY COMPANY		
COMPREHENSIVE INCOME STATEMENT		
FOR THE YEAR ENDED DECEMBER 31, 2014		
Net income		\$100,000
Other comprehensive loss		
Actuarial liability loss	\$60,000	
Prior service cost	<u>15,000</u>	<u>75,000</u>
Comprehensive income		<u>\$ 25,000</u>

The computation of “Accumulated other comprehensive income” as reported in stockholders’ equity at December 31, 2014, is as follows.

Accumulated other comprehensive income, January 1, 2014	\$40,000
Other comprehensive loss	<u>75,000</u>
Accumulated other comprehensive loss, December 31, 2014	<u><u>\$35,000</u></u>

ILLUSTRATION 20-25
Computation of Accumulated Other Comprehensive Income

Regardless of the display format for the income statement, the accumulated other comprehensive loss is reported in the stockholders’ equity section of the balance sheet of Obey Company as shown in Illustration 20-26. (Illustration 20-26 uses assumed data for the common stock and retained earnings information.)

OBEY COMPANY BALANCE SHEET AS OF DECEMBER 31, 2014 (STOCKHOLDERS’ EQUITY SECTION)	
Stockholders’ equity	
Common stock	\$100,000
Retained earnings	60,000
Accumulated other comprehensive loss	<u>35,000</u>
Total stockholders’ equity	<u><u>\$125,000</u></u>

ILLUSTRATION 20-26
Reporting of Accumulated OCI

By providing information on the components of comprehensive income as well as total accumulated other comprehensive income, the company communicates all changes in net assets.

In this illustration, it is assumed that the accumulated other comprehensive income at January 1, 2014, is not adjusted for the amortization of any prior service cost or actuarial gains and losses that would change pension expense. As discussed in the earlier examples, these items will be amortized into pension expense in future periods.

Within the Notes to the Financial Statements

Pension plans are frequently important to understanding a company’s financial position, results of operations, and cash flows. Therefore, a company discloses the following information, either in the body of the financial statements or in the notes. [7]

- 1.** A schedule showing all the major components of pension expense.
Rationale: Information provided about the components of pension expense helps users better understand how a company determines pension expense. It also is useful in forecasting a company’s net income.
- 2.** A **reconciliation** showing how the projected benefit obligation and the fair value of the plan assets changed from the beginning to the end of the period.
Rationale: Disclosing the projected benefit obligation, the fair value of the plan assets, and changes in them should help users understand the economics underlying the obligations and resources of these plans. Explaining the changes in the projected benefit obligation and fair value of plan assets in the form of a reconciliation provides a more complete disclosure and makes the financial statements more understandable.

International Perspective 

The IASB and FASB are studying whether the various components of pension expense, such as interest cost and investment earnings on plan assets, should be presented separately in the income statement along with other interest expense and investment earnings.

3. A disclosure of the rates used in measuring the benefit amounts (discount rate, expected return on plan assets, rate of compensation).

Rationale: Disclosure of these rates permits users to determine the reasonableness of the assumptions applied in measuring the pension liability and pension expense.

4. A table indicating the allocation of pension plan assets by category (equity securities, debt securities, real estate, and other assets), and showing the percentage of the fair value to total plan assets. In addition, a company must include a narrative description of investment policies and strategies, including the target allocation percentages (if used by the company).

Rationale: Such information helps financial statement users evaluate the pension plan's exposure to market risk and possible cash flow demands on the company. It also will help users better assess the reasonableness of the company's expected rate of return assumption.

5. The **expected benefit payments** to be paid to current plan participants for each of the next five fiscal years and in the aggregate for the five fiscal years thereafter. Also required is disclosure of a company's best **estimate of expected contributions** to be paid to the plan during the next year.

Rationale: These disclosures provide information related to the cash outflows of the company. With this information, financial statement users can better understand the potential cash outflows related to the pension plan. They can better assess the liquidity and solvency of the company, which helps in assessing the company's overall financial flexibility.

6. The nature and amount of changes in plan assets and benefit obligations recognized in net income and in other comprehensive income of each period.

Rationale: This disclosure provides information on pension elements affecting the projected benefit obligation and plan assets and on whether those amounts have been recognized in income or deferred to future periods.

7. The accumulated amount of changes in plan assets and benefit obligations that have been recognized in other comprehensive income and that will be recycled into net income in future periods.

Rationale: This information indicates the pension-related balances recognized in stockholders' equity, which will affect future income.

8. The amount of estimated net actuarial gains and losses and prior service costs and credits that will be amortized from accumulated other comprehensive income into net income over the next fiscal year.

Rationale: This information helps users predict the impact of deferred pension expense items on next year's income.

In summary, the disclosure requirements are extensive, and purposely so. One factor that has been a challenge for useful pension reporting has been the lack of consistent terminology. Furthermore, a substantial amount of offsetting is inherent in the measurement of pension expense and the pension liability. These disclosure requirements are designed to address these concerns and take some of the mystery out of pension reporting.

Underlying Concepts

Does it make a difference to users of financial statements whether companies recognize pension information in the financial statements or disclose it only in the notes? The FASB was unsure, so in accord with the full disclosure principle, it decided to provide extensive pension plan disclosures.

Example of Pension Note Disclosure

In the following sections, we provide examples and explain the key pension disclosure elements.

Components of Pension Expense

The FASB requires disclosure of the individual pension expense components (derived from the information in the pension expense worksheet column): (1) service cost,

(2) interest cost, (3) expected return on assets, (4) other gains or losses component, and (5) prior service cost component. The purpose of such disclosure is to clarify to more sophisticated readers how companies determine pension expense. Providing information on the components should also be useful in predicting future pension expense.

Illustration 20-27 presents an example of this part of the disclosure. It uses the information from the Zarle illustration, specifically the expense component information from the worksheets in Illustrations 20-8 (page 1193), 20-12 (page 1196), and 20-18 (page 1203).

ZARLE COMPANY			
	2014	2015	2016
Components of Pension Expense			
Service cost	\$ 9,000	\$ 9,500	\$13,000
Interest cost	10,000	19,200	21,270
Expected return on plan assets	(10,000)	(11,100)	(13,410)*
Amortization of prior service cost	—	27,200	20,800
Pension expense	<u>\$ 9,000</u>	<u>\$44,800</u>	<u>\$41,660</u>

*Note that the expected return must be disclosed, not the actual return. In 2016, the expected return is \$13,410, which is the actual gain (\$12,000) adjusted by the unrecognized loss (\$1,410).

ILLUSTRATION 20-27

Summary of Expense Components—2014, 2015, 2016

Funded Status of Plan

Having a reconciliation of the changes in the assets and liabilities from the beginning of the year to the end of the year, statement readers can better understand the underlying economics of the plan. In essence, this disclosure contains the information in the pension worksheet for the projected benefit obligation and plan asset columns. Using the information for Zarle, the schedule in Illustration 20-28 provides an example of the reconciliation.

Underlying Concepts

This represents another compromise between relevance and faithful representation. Disclosure attempts to balance these objectives.

ZARLE COMPANY PENSION DISCLOSURE			
	2014	2015	2016
Change in benefit obligation			
Benefit obligation at beginning of year	\$100,000	\$112,000	\$ 212,700

Interest cost	10,000	19,200	21,270
Amendments (Prior service cost)	—	80,000	—
Actuarial loss	—	—	28,530
Benefits paid	(7,000)	(8,000)	(10,500)
Benefit obligation at end of year	112,000	212,700	265,000
Change in plan assets			
Fair value of plan assets at beginning of year	100,000	111,000	134,100
Actual return on plan assets	10,000	11,100	12,000
Contributions	8,000	20,000	24,000
Benefits paid	(7,000)	(8,000)	(10,500)
Fair value of plan assets at end of year	111,000	134,100	159,600
Funded status (Pension asset/liability)	\$ (1,000)	\$ (78,600)	\$ (105,400)

ILLUSTRATION 20-28

Pension Disclosure for Zarle Company—2014, 2015, 2016

The 2014 column reveals that Zarle underfunds the projected benefit obligation by \$1,000. The 2015 column reveals that Zarle reports the underfunded liability of \$78,600 in the balance sheet. Finally, the 2016 column indicates that Zarle recognizes the underfunded liability of \$105,400 in the balance sheet.

2017 Entries and Worksheet—A Comprehensive Example

Incorporating the corridor computation and the required disclosures, we continue the Zarle Company pension plan accounting based on the following facts for 2017.

Service cost is \$16,000.

Settlement rate is 10 percent; expected rate of return is 10 percent.

Actual return on plan assets is \$22,000.

Amortization of prior service cost is \$17,600.

Annual funding contributions are \$27,000.

Benefits paid to retirees during the year are \$18,000.

Average service life of all covered employees is 20 years.

Zarle prepares a worksheet to facilitate accumulation and recording of the components of pension expense and maintenance of amounts related to the pension plan. Illustration 20-29 shows that worksheet, which uses the basic data presented above. Beginning-of-the-year 2017 account balances are the December 31, 2016, balances from Zarle's revised 2016 pension worksheet in Illustration 20-18 (on page 1203).

ILLUSTRATION 20-29

Comprehensive Pension Worksheet—2017

Worksheet Explanations and Entries

Entries (aa) through (gg) are similar to the corresponding entries previously explained in the prior years' worksheets, with the exception of entry (dd). In 2016, the expected

return on plan assets exceeded the actual return, producing an unexpected loss. In 2017, the actual return of \$22,000 exceeds the expected return of \$15,960 ($\$159,600 \times 10\%$), resulting in an unexpected gain of \$6,040, entry (dd). By netting the gain of \$6,040 against the actual return of \$22,000, pension expense is affected only by the expected return of \$15,960.

A new entry (hh) in Zarle's worksheet results from application of the corridor test on the accumulated balance of net gain or loss in accumulated other comprehensive income. Zarle Company begins 2017 with a balance in the net loss account of \$29,940. The company applies the corridor criterion in 2017 to determine whether the balance is excessive and should be amortized. In 2017, the corridor is 10 percent of the larger of the beginning-of-the-year projected benefit obligation of \$265,000 or the plan asset's \$159,600 market-related asset value (assumed to be fair value). The corridor for 2017 is \$26,500 ($\$265,000 \times 10\%$). Because the balance in Accumulated OCI is a net loss of \$29,940, the excess (outside the corridor) is \$3,440 ($\$29,940 - \$26,500$). Zarle amortizes the \$3,440 excess over the average remaining service life of all employees. Given an average remaining service life of 20 years, the amortization in 2017 is \$172 ($\$3,440 \div 20$). In the 2017 pension worksheet, Zarle debits Pension Expense for \$172 and credits that amount to Other Comprehensive Income (G/L). Illustration 20-30 shows the computation of the \$172 amortization charge.

2017 Corridor Test	
Net (gain) or loss at beginning of year in accumulated OCI	\$29,940
10% of larger of PBO or market-related asset value of plan assets	(26,500)
Amortizable amount	<u>\$ 3,440</u>
Average service life of all employees	20 years
2017 amortization ($\$3,440 \div 20$ years)	<u>\$172</u>

ILLUSTRATION 20-30

Computation of 2017 Amortization Charge (Corridor Test)

Zarle formally records pension expense for 2017 as follows.

2017	
Pension Expense	44,312
Pension Asset/Liability	6,500
Cash	27,000
Other Comprehensive Income (G/L)	6,212
Other Comprehensive Income (PSC)	17,600

Note Disclosure

Illustration 20-31 (page 1212) shows the note disclosure of Zarle's pension plan for 2017. Note that this example assumes that the pension liability is noncurrent and that the 2018 adjustment for amortization of the net gain or loss and amortization of prior service cost are the same as 2017.

Special Issues

The Pension Reform Act of 1974

A classic example of the unfortunate consequences of an underfunded pension plan is the 1963 shutdown of the **Studebaker Automobile** operations in South Bend, Indiana, in which 4,500 workers lost 85 percent of their vested benefits. As a result of such situations, the Employee Retirement Income Security Act of 1974—**ERISA**—was passed. The legislation affects virtually every private retirement plan in the United States. It attempts

The weighted-average expected long-term rate of return on the plan's assets was 10 percent.</p>																						

to safeguard employees' pension rights by mandating many pension plan requirements, including minimum funding, participation, and vesting.

These requirements can influence the employers' cash flows significantly. Under this legislation, annual funding is no longer discretionary. An employer now must fund the plan in accordance with an actuarial funding method that over time will be sufficient to

pay for all pension obligations. If companies do not fund their plans in a reasonable manner, they may be subject to fines and/or loss of tax deductions.¹⁵

The law requires plan administrators to publish a comprehensive description and summary of their plans, along with detailed annual reports that include many supplementary schedules and statements.

Another important provision of the act is the creation of the **Pension Benefit Guaranty Corporation (PBGC)**. The PBGC's purpose is to administer **terminated plans** and to impose liens on an employer's assets for certain unfunded pension liabilities. If a company terminates its pension plan, the PBGC can effectively impose a lien against the employer's assets for the excess of the present value of guaranteed vested benefits over the pension fund assets. This lien generally has had the status of a tax lien; it takes priority over most other creditorship claims. This section of the act gives the PBGC the power to force an involuntary termination of a pension plan whenever the risks related to nonpayment of the pension obligation seem too great. Because ERISA restricts to 30 percent of net worth the lien that the PBGC can impose, the PBGC must monitor all plans to ensure that net worth is sufficient to meet the pension benefit obligations.

A large number of terminated plans have caused the PBGC to pay out substantial benefits. Currently the PBGC receives its funding from employers, who contribute a certain dollar amount for each employee covered under the plan.¹⁶

Underlying Concepts

Many plans are underfunded but still quite viable. For example, at one time **Loews Corp.** had a \$159 million shortfall, but also had earnings of \$594 million and a good net worth. Thus, the going concern assumption permits us to ignore pension underfundings in some cases because in the long run they are not significant.

What do the numbers mean?

WHO GUARANTEES THE GUARANTOR?

The **Pension Benefit Guaranty Corporation (PBGC)** in its 2012 annual report indicates that its primary mission is to encourage the continuation and maintenance of voluntary private pension plans. It's an obligation which the PBGC takes seriously. However, the trends are ominous:

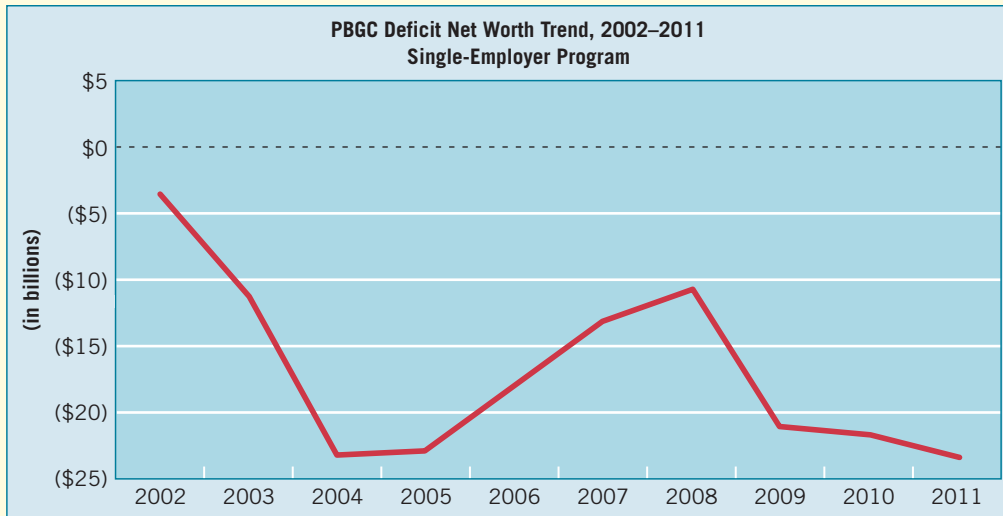

- Americans today are spending more years in retirement. They're healthier and more active, which is great news. Unfortunately, pensions haven't kept up.
- Many businesses, for competitive and other reasons, continue to reduce their support for retirement plans. Some have switched from a defined benefit plan to a defined contribution plan which costs less and comes with fewer obligations. Others offer lump-sum cash payments to employees or retirees to settle the employer's obligations.

- Left on their own, many people save less, as well as invest and plan less well. They also pay higher fees and they get lower returns.
- Many people defer retirement but still don't have enough money for retirement—and they're worried. One poll cited by the Senate Health, Education, Labor, and Pensions Committee says that 92 percent of people think there's a retirement crisis. They're right to be concerned.

Add to these concerns that obligations in pension plans today greatly exceed pension assets. Finally, the PBGC has a problem as well—a large deficit in its accounts. The chart on page 1214 indicates that downward spiral in the net worth of the PBGC over the last 10 years.

¹⁵In 2006, Congress passed the Pension Protection Act. This law has many provisions. One important aspect of the act is that it forced many companies to expedite their contributions to their pension plans. One group estimates that companies in the S&P 500 would have had to contribute \$47 billion to their pension plans if the new rules were fully phased in for 2006. That amount is about 57 percent more than the \$30 billion that companies were expecting to contribute to their plans that year. Subsequently, Congress continues to provide pension funding relief. For example, in the "Moving Ahead for Progress in the 21st Century" Act (enacted July 6, 2012), companies can use a higher discount rate based on high-grade bond yields averaged over 25 years, which helps reduce the pension liability and required contributions.

¹⁶**Pan American Airlines** is a good illustration of how difficult it is to assess when to terminate. When Pan Am filed for bankruptcy in 1991, it had a pension liability of \$900 million. From 1983 to 1991, the IRS gave it six waivers so it did not have to make contributions. When Pan Am terminated the plan, there was little net worth left upon which to impose a lien. An additional accounting problem relates to the manner of disclosing the possible termination of a plan. For example, should Pan Am have disclosed a contingent liability for its struggling plan? At present this issue is unresolved, and considerable judgment is needed to analyze a company with these contingent liabilities.

In February 2012, **American Airlines** announced that it is ending its defined benefit plans, which would result in the PBGC having to increase its deficit even more to an estimated \$35 billion. The result is a growing deficit problem which is likely to continue. Who has the risk? You guessed it, the American taxpayer.

Pension Terminations

A congressman at one time noted, "Employers are simply treating their employee pension plans like company piggy banks, to be raided at will." What this congressman was referring to is the practice of paying off the projected benefit obligation and pocketing any excess. ERISA prevents companies from recapturing excess assets unless they pay participants what is owed to them and then terminate the plan. As a result, companies were buying *annuities* to pay off the pension claimants and then used the excess funds for other corporate purposes.¹⁷

For example, at one time, pension plan terminations netted \$363 million for **Occidental Petroleum Corp.**, \$95 million for **Stroh's Brewery Co.**, \$58 million for **Kellogg Co.**, and \$29 million for **Western Airlines**. Recently, many large companies have terminated their pension plans and captured billions in surplus assets. The U.S. Treasury also benefits: Federal legislation requires companies to pay an excise tax of anywhere from 20 percent to 50 percent on the gains. All of this is quite legal.¹⁸

¹⁷A question exists as to whose money it is. Some argue that the excess funds belong to the employees, not the employer. In addition, given that the funds have been reverting to the employer, critics charge that cost-of-living increases and the possibility of other increased benefits are reduced because companies will be reluctant to use those remaining funds to pay for such increases.

¹⁸Another way that companies have reduced their pension obligations is through adoption of **cash-balance plans**. These are *hybrid* plans combining features of defined benefit and defined contribution plans. Although these plans permit employees to transfer their pension benefits when they change employers (like a defined contribution plan), they are controversial because the change to a cash-balance plan often reduces benefits to older workers.

The accounting for cash-balance plans is similar to that for defined benefit plans, because employers bear the investment risk in cash-balance plans. When an employer adopts a cash-balance plan, the measurement of the future benefit obligation to employees generally is lower, compared to a traditional defined benefit plan. See A. T. Arcady and F. Mellors, "Cash-Balance Conversions," *Journal of Accountancy* (February 2000), pp. 22–28.

The accounting issue that arises from these terminations is whether a company should recognize a gain when pension plan assets revert back to the company (often called **asset reversion** transactions). The issue is complex. In some cases, a company starts a new defined benefit plan after it eliminates the old one. Thus, some contend that there has been no change in substance but merely a change in form. However, the FASB disagrees. It requires recognition in earnings of a gain or loss when the employer settles a pension obligation either by lump-sum cash payments to participants or by purchasing nonparticipating annuity contracts. [8]¹⁹

Concluding Observations

Hardly a day goes by without the financial press analyzing in depth some issue related to pension plans in the United States. This is not surprising, since pension funds exceed over \$22 trillion in assets globally. As you have seen, the accounting issues related to pension plans are complex. Recent changes to GAAP have clarified many of these issues and should help users understand the financial implications of a company's pension plans on its financial position, results of operations, and cash flows.

You will want to read the

IFRS INSIGHTS
on pages 1250–1266

for discussion of IFRS related to pension accounting.

SUMMARY OF LEARNING OBJECTIVES

- 1 Distinguish between accounting for the employer's pension plan and accounting for the pension fund.** The company or employer is the organization sponsoring the pension plan. It incurs the cost and makes contributions to the pension fund. The fund or plan is the entity that receives the contributions from the employer, administers the pension assets, and makes the benefit payments to the pension recipients (retired employees). The fund should be a separate legal and accounting entity; it maintains a set of books and prepares financial statements.
- 2 Identify types of pension plans and their characteristics.** The two most common types of pension arrangements are as follows. (1) *Defined contribution plans*: The employer agrees to contribute to a pension trust a certain sum each period based on a formula. This formula may consider such factors as age, length of employee service, employer's profits, and compensation level. Only the employer's contribution is defined; no promise is made regarding the ultimate benefits paid out to the employees. (2) *Defined benefit plans*: These plans define the benefits that the employee will receive at the time of retirement. The formula typically provides for the benefits to be a function of the employee's years of service and the compensation level when he or she nears retirement.
- 3 Explain alternative measures for valuing the pension obligation.** One measure bases the pension obligation only on the benefits vested to the employees. Vested benefits are those that the employee is entitled to receive even if he or she renders no additional services under the plan. Companies compute the *vested benefit pension obligation* using current salary levels; this obligation includes only vested benefits. Another measure of the obligation, called the *accumulated benefit obligation*, computes the deferred compensation amount based on all years of service performed by employees

¹⁹Some companies have established *pension poison pills* as an anti-takeover measure. These plans require asset reversions from termination of a plan to benefit employees and retirees rather than the acquiring company. For a discussion of pension poison pills, see Eugene E. Comiskey and Charles W. Mulford, "Interpreting Pension Disclosures: A Guide for Lending Officers," *Commercial Lending Review* (Winter 1993–94), Vol. 9, No. 1.

KEY TERMS

accumulated benefit obligation, 1187
 actual return on plan assets, 1191
 actuarial present value, 1188(*n*)
 actuaries, 1187
 asset gains and losses, 1198
 cash-balance plans, 1214(*n*)
 components of pension expense, 1190
 contributory pension plan, 1184
 corridor approach, 1199
 defined benefit plan, 1185
 defined contribution plan, 1185
 ERISA, 1211
 expected rate of return, 1197
 expected return on plan assets, 1197
 fair value of plan assets, 1191
 funded pension plan, 1184
 funded status (overfunded or underfunded), 1189
 interest on the liability (interest expense), 1191

liability gains and losses, 1198
 market-related asset value, 1198
 noncontributory pension plan, 1184
 Other Comprehensive Income (G/L), 1198
 Other Comprehensive Income (PSC), 1197
 pension asset/liability, 1192
 pension plan, 1184
 pension worksheet, 1192
 prior service cost (PSC), 1194
 projected benefit obligation, 1188
 qualified pension plan, 1184
 reconciliation, 1207
 retroactive benefits, 1194
 service cost, 1190
 settlement rate, 1191
 unexpected gain or loss, 1198
 vested benefit obligation, 1187
 vested benefits, 1187
 years-of-service method, 1194

under the plan—both vested and nonvested—using current salary levels. A third measure, called the *projected benefit obligation*, bases the computation of the deferred compensation amount on both vested and nonvested service using future salaries.

4 List the components of pension expense. Pension expense is a function of the following components: (1) service cost, (2) interest on the liability, (3) return on plan assets, (4) amortization of prior service cost, and (5) gain or loss.

5 Use a worksheet for employer's pension plan entries. Companies may use a worksheet unique to pension accounting. This worksheet records both the formal entries and the memo entries to keep track of all the employer's relevant pension plan items and components.

6 Describe the amortization of prior service costs. An actuary computes the amount of the prior service cost, and the company then records it as an adjustment to the projected benefit obligation and other comprehensive income. It then amortizes it, generally using a "years-of-service" amortization method, similar to a units-of-production computation. First, the company computes total estimated number of service-years to be worked by all of the participating employees. Second, it divides the accumulated prior service cost by the total number of service-years, to obtain a cost per service-year (the unit cost). Third, the company multiplies the number of service-years consumed each year times the cost per service-year, to obtain the annual amortization charge.

7 Explain the accounting for unexpected gains and losses. In estimating the projected benefit obligation (the liability), actuaries make assumptions about such items as mortality rate, retirement rate, turnover rate, disability rate, and salary amounts. Any change in these actuarial assumptions affects the amount of the projected benefit obligation. These unexpected gains or losses from changes in the projected benefit obligation are liability gains and losses. Liability gains result from unexpected decreases in the liability balance; liability losses result from unexpected increases. Companies also incur asset gains or losses. Both types of actuarial gains and losses are recorded in other comprehensive income and adjust either the projected benefit obligation or the plan assets.

8 Explain the corridor approach to amortizing gains and losses. The FASB set a limit for the size of an accumulated net gain or loss balance. That arbitrarily selected limit (called a *corridor*) is 10 percent of the larger of the beginning balances of the projected benefit obligation or the market-related value of the plan assets. Beyond that limit, an accumulated net gain or loss balance is considered too large and must be amortized. If the balance of the accumulated net gain or loss account stays within the upper and lower limits of the corridor, no amortization is required.

9 Describe the requirements for reporting pension plans in financial statements. Currently, companies must disclose the following pension plan information in their financial statements. (1) The components of pension expense for the period. (2) A schedule showing changes in the benefit obligation and plan assets during the year. (3) The amount of prior service cost and net gains and losses in accumulated OCI, including the estimated prior service cost and gains and losses that will affect net income in the next year. (4) The weighted-average assumed discount rate, the rate of compensation increase used to measure the projected benefit obligation, and the weighted-average expected long-term rate of return on plan assets. (5) A table showing the allocation of pension plan assets by category and the percentage of the fair value to total plan assets. (6) The expected benefit payments for current plan participants for each of the next five fiscal years and for the following five years in aggregate, along with an estimate of expected contributions to the plan during the next year.

APPENDIX 20A
