## Preface

---

This book is based on the fundamental concepts associated with typical 8-, 16-, and 32-bit microprocessors and microcomputers. These concepts are related in detail to the Intel 8085/8086/80386/80486/80960 and Motorola 68000/68020/68030/88100. A brief coverage of Intel Pentium, Motorola 68040, Motorola/IBM/Apple PowerPC, and DEC's Alpha is also included.

With the growing popularity of both Intel and Motorola 32-bit microprocessors, it is now necessary to cover these processors at the undergraduate and graduate levels. Therefore, a thorough coverage of these processors is provided.

A detailed treatment of Intel 80386 and Motorola 68020/68030 along with more examples and system design concepts is included. Programming and system design concepts associated with other popular 32-bit microprocessors such as Intel 80486/80960 and Motorola 68040 are also covered in this book. Finally, an overview of Intel Pentium microprocessor is provided. Since the fundamental concept of 8-bit microprocessors, along with the Intel 8085, has proved its worth many times over in the intervening years, the 8085 has been retained in this edition.

This book is divided into ten chapters. Chapter 1 contains the basics of microprocessors, as in the first edition. New topics such as floating-point arithmetic, Program Array Logic (PAL) used for address decoding for 32-bit microprocessors, flash memories and an overview of various 32-bit microprocessors is also included.

Chapter 2 covers details of the 8085 microprocessor.

Chapters 3 through 8 provide detailed descriptions of the architectures, addressing modes, instruction sets, I/O and system design concepts of Intel's 8086, 80386, 80486, and 80960 and Motorola's 68000, 68020, 68030, 68040, and 88100 microprocessors. An overview of Intel 80186, 80286, Pentium and PowerPC microprocessors are also included.

Chapter 9 contains fundamentals of peripheral interfacing.

Chapter 10 includes system design concepts along with the applications of design principles covered in the preceding chapters. Three system design examples using the 8085, 8086, and 68000 are included in detail.

The appendices include materials on the HP 64000 microcomputer development systems, data sheets on various microprocessors and support chips, and a glossary.

The audience of this book can be college students or practicing microprocessor system designers in the industry. It can be used as an undergraduate or graduate text in electrical engineering, computer engineering or computer science. Practitioners of microprocessor system design in the industry will find greater detail and comparison considerations than are found in manufacturers' manuals. The book assumes a familiarity with digital logic and topics such as Boolean Algebra and K-maps.

The author wishes to express his sincere appreciation to his student Frank Lee for making constructive suggestions and typing the manuscript. The author is also grateful to Dr. W.C. Miller of University of Windsor, Canada, and others for their support throughout the writing effort.

Mohamed Rafiqzaman  
Pomona, California

## The Author

---

Mohamed Rafiquzzaman obtained his Ph.D. in Electrical Engineering in Canada in 1974. He worked for Esso/Exxon and Bell Northern Research for approximately 5 years. Dr. Rafiquzzaman is presently a professor of electrical and computer engineering at California State Polytechnic University, Pomona. He was Chair of the department there from 1984 to 1985. Dr. Rafiquzzaman is also an adjunct professor of electrical engineering systems at the University of Southern California, Los Angeles. He consulted for ARCO, Rockwell, Los Angeles County, and Parsons Corporation in the areas of computer applications. He has published six books on computers, which have been translated into Russian, Chinese and Spanish, and has published numerous papers on computers.

Dr. Rafiquzzaman is the founder of Rafi Systems, Inc. a manufacturer of biomedical devices and computer systems consulting firm in California. In 1984, he managed the Olympic Swimming, Diving and Synchronized Swimming teams. He has also managed Swiss timing, scorekeeping, and computer systems.

From 1984 to 1989, he was the instructor for Motorola in Southern California teaching short courses on 68000, 68020, and 68030 for local industries.

Dr. Rafiquzzaman was an advisor to the President of Bangladesh on computers from 1988 to 1990. He is currently involved in research activities in both hardware and software aspects of typical 16- and 32-bit microprocessor-based applications. These activities include image processing, robotics control, and OCR (Optical Character Recognition).

*To my parents,  
my wife Kusum, son Tito,  
and brother Elan*

*In memory of my brother, Dr. M. Kaisaruzzaman*

# Table of Contents

---

Chapter 1	Introduction to Microprocessors and Microcomputer-Based Applications	
1.1	Evolution of the Microprocessor .....	2
1.2	Microprocessor Data Types .....	3
1.2.1	Unsigned and Signed Binary Integers .....	3
1.2.2	BCD (Binary Coded Decimal) Numbers .....	3
1.2.3	ASCII .....	4
1.2.4	Floating-Point Numbers .....	4
1.3	Microcomputer Hardware .....	6
1.3.1	The System Bus .....	6
1.3.2	The Microprocessor .....	7
1.3.3	Memory Organization .....	10
1.3.3.a	Introduction .....	10
1.3.3.b	Main Memory Array Design .....	13
1.3.3.c	Memory Management Concepts .....	17
1.3.3.d	Cache Memory Organization .....	22
1.3.4	Input/Output (I/O) .....	24
1.3.4.a	Programmed I/O .....	25
1.3.4.b	Standard I/O Versus Memory-Mapped I/O .....	26
1.3.4.c	Unconditional and Conditional Programmed I/O .....	27
1.3.4.d	Typical Microcomputer Output Circuit .....	27
1.3.4.e	Interrupt Driven I/O .....	29
1.3.4.f	Direct Memory Access (DMA) .....	31
1.3.4.g	Summary of Microcomputer I/O Methods .....	32
1.3.4.h	Coprocessors .....	32
1.4	Microcomputer System Software and Programming Concepts .....	34
1.4.1	System Software .....	34
1.4.2	Programming Concepts .....	35
1.4.2.a	Assembly Language Programming .....	35
1.4.2.b	High-Level Language Programming .....	35
1.4.2.c	Which Programming Language to Choose? .....	36
1.5	Typical Microcomputer Addressing Modes and Instructions .....	36
1.5.1	Introduction .....	36
1.5.2	Addressing Modes .....	36
1.5.3	Instruction Types .....	37
1.6	Basic Features of Microcomputer Development Systems .....	38
1.7	System Development Flowchart .....	44
1.7.1	Software Development .....	44
1.7.2	Hardware Development .....	46
1.8	Typical Microprocessors .....	46
1.9	Typical Practical Applications .....	47
1.9.1	Personal Workstations .....	47
1.9.2	Fault-Tolerant Systems .....	47
1.9.3	Real-Time Controllers .....	49
1.9.4	Robotics .....	49
1.9.5	Embedded Control .....	49
	Questions and Problems .....	50

<b>Chapter 2</b>	<b>Intel 8085</b>	
2.1	Introduction .....	53
2.2	Register Architecture .....	53
2.3	Memory Addressing .....	55
2.4	8085 Addressing Modes .....	56
2.5	8085 Instruction Set .....	57
2.6	Timing Methods .....	75
2.7	8085 Pins and Signals .....	77
2.8	8085 Instruction Timing and Execution .....	81
	2.8.1 Basic System Timing .....	82
	2.8.2 8085 Memory READ ( $\overline{IO/\overline{M}} = 0, \overline{RD} = 0$ ) and I/O READ ( $\overline{IO/\overline{M}} = 1, \overline{RD} = 0$ ) .....	82
	2.8.3 8085 Memory WRITE ( $\overline{IO/\overline{M}} = 0, \overline{WR} = 0$ ) and I/O WRITE ( $\overline{IO/\overline{M}} = 1, \overline{WR} = 0$ ) .....	84
2.9	8085 Input/Output (I/O) .....	84
	2.9.1 8085 Programmed I/O .....	84
	2.9.1.a 8355/8755 I/O Ports .....	86
	2.9.1.b 8155/8156 I/O Ports .....	88
	2.9.2 8085 Interrupt System .....	93
	2.9.3 8085 DMA .....	97
	2.9.4 8085 SID and SOD Lines .....	98
2.10	8085-Based System Design .....	103
	Questions and Problems .....	105

<b>Chapter 3</b>	<b>Intel 8086</b>	
3.1	Introduction .....	111
3.2	8086 Architecture .....	113
3.3	8086 Addressing Modes .....	117
	3.3.1 Addressing Modes for Accessing Immediate and Register Data (Register and Immediate Modes) .....	117
	3.3.1.a Register Addressing Mode .....	117
	3.3.1.b Immediate Addressing Mode .....	117
	3.3.2 Addressing Modes for Accessing Data in Memory (Memory Modes) .....	117
	3.3.2.a Direct Addressing Mode .....	118
	3.3.2.b Register Indirect Addressing Mode .....	118
	3.3.2.c Based Addressing Mode .....	118
	3.3.2.d Indexed Addressing Mode .....	120
	3.3.2.e Based Indexed Addressing Mode .....	121
	3.3.2.f String Addressing Mode .....	121
	3.3.3 Addressing Modes for Accessing I/O Ports (I/O Modes) .....	122
	3.3.4 Relative Addressing Mode .....	123
	3.3.5 Implied Addressing Mode .....	123
3.4	8086 Instruction Set .....	123
3.5	8086 Assembler-Dependent Instructions .....	140
3.6	ASM-86 Assembler Directives .....	140
	3.6.1 SEGMENT and ENDS Directives .....	141
	3.6.2 Assume Directive .....	141
	3.6.3 DUP Directive .....	142

3.7	System Design Using the 8086 .....	155
3.7.1	Pins and Signals .....	155
3.7.2	8086 Basic System Concepts .....	160
3.7.2.a	8086 Bus Cycle .....	160
3.7.2.b	8086 Address and Data Bus Concepts .....	161
3.7.3	Interfacing with Memories .....	163
3.7.3.a	ROM and EPROM .....	163
3.7.3.b	Static RAMs .....	164
3.7.3.c	Dynamic RAMs .....	164
3.7.4	8086 Programmed I/O .....	164
3.8	8086-Based Microcomputer .....	165
3.9	8086 Interrupt System .....	173
3.9.1	Predefined Interrupts (0 to 4) .....	174
3.9.2	User-Defined Software Interrupts .....	175
3.9.3	User-Defined Hardware (Maskable Interrupts, Type Codes $32_{10}$ — $255_{10}$ ) .....	175
3.10	8086 DMA .....	181
	Questions and Problems .....	181
<b>Chapter 4 Intel 80186/80286/80386</b>		
4.1	Intel 80186 and 80286 .....	187
4.1.1	Intel 80186 .....	187
4.1.2	Intel 80286 .....	192
4.1.2.a	80286 Memory Management .....	195
4.1.2.b	Protection .....	198
4.1.2.c	80286 Exceptions .....	204
4.2	Intel 80386 .....	204
4.2.1	Basic 80386 Programming Model .....	206
4.2.1.a	Memory Organization and Segmentation .....	208
4.2.1.b	Data Types .....	208
4.2.1.c	80386 Registers .....	208
4.2.1.d	80386 Addressing Modes .....	211
4.2.2	80386 Instruction Set .....	213
4.2.2.a	Arithmetic Instructions .....	221
4.2.2.b	Bit Manipulation Instructions .....	221
4.2.2.c	Byte-Set-On Condition Instructions .....	223
4.2.2.d	Conditional Jumps and Loops .....	223
4.2.2.e	Data Transfer .....	224
4.2.2.f	Flag Control .....	225
4.2.2.g	Logical .....	225
4.2.2.h	String .....	226
4.2.2.i	Table Look-Up Translation Instruction .....	227
4.2.2.j	High-Level Language Instructions .....	227
4.2.3	Memory Organization .....	234
4.2.4	I/O Space .....	235
4.2.5	80386 Interrupts .....	235
4.2.6	80386 Reset and Initialization .....	237
4.2.7	Testability .....	238
4.2.8	Debugging .....	238
4.2.9	80386 Pins and Signals .....	238
4.2.10	80386 Bus Transfer Technique .....	244

4.2.11	80386 Read and Write Cycles .....	244
4.2.12	80386 Modes .....	246
	4.2.12.a 80386 Real Mode .....	246
	4.2.12.b Protected Mode .....	247
	4.2.12.c Virtual 8086 Mode .....	251
4.3	80386 System Design .....	251
4.3.1	80386 Memory Interface .....	253
4.3.2	80386 I/O .....	257
4.4	Coprocessor Interface .....	264
4.4.1	Coprocessor Hardware Concepts .....	264
4.4.2	Coprocessor Registers .....	267
4.4.3	80387 Instructions .....	269
	Questions and Problems .....	272
<b>Chapter 5</b>	<b>Motorola MC68000</b>	
5.1	Introduction .....	277
5.2	68000 Programming Model .....	278
5.3	68000 Addressing Structure .....	280
5.4	68000 Addressing Modes .....	281
	5.4.1 Register Direct Addressing .....	282
	5.4.2 Address Register Indirect Addressing .....	282
	5.4.3 Absolute Addressing .....	283
	5.4.4 Program Counter Relative Addressing .....	284
	5.4.5 Immediate Data Addressing Mode .....	284
	5.4.6 Implied Addressing .....	284
5.5	68000 Instruction Set .....	285
	5.5.1 Data Movement Instructions .....	291
	5.5.1.a MOVE Instructions .....	291
	5.5.1.b EXG and SWAP Instructions .....	292
	5.5.1.c LEA and PEA Instructions .....	293
	5.5.1.d LINK and UNLK Instructions .....	293
	5.5.2 Arithmetic Instructions .....	294
	5.5.2.a Addition and Subtraction Instructions .....	294
	5.5.2.b Multiplication and Division Instructions .....	294
	5.5.2.c Compare, Clear, and Negate Instructions .....	296
	5.5.2.d Extended Arithmetic Instructions .....	296
	5.5.2.e Test Instructions .....	297
	5.5.2.f Test and Set Instruction .....	297
	5.5.3 Logical Instructions .....	298
	5.5.4 Shift and Rotate Instructions .....	298
	5.5.5 Bit Manipulation Instructions .....	300
	5.5.6 Binary-Coded Decimal Instructions .....	301
	5.5.7 Program Control Instructions .....	301
	5.5.8 System Control Instructions .....	305
5.6	68000 Stacks .....	307
5.7	68000 Pins and Signals .....	314
	5.7.1 Synchronous and Asynchronous Control Lines .....	315
	5.7.2 System Control Lines .....	318
	5.7.3 Interrupt Control Lines .....	323
	5.7.4 DMA Control Lines .....	323
	5.7.5 Status Lines .....	323

5.8	68000 System Diagram .....	324
5.9	Timing Diagrams .....	324
5.10	68000 Memory Interface .....	326
5.11	68000 Programmed I/O .....	329
	5.11.1 68000-68230 Interface .....	329
	5.11.2 Motorola 68000-6821 Interface .....	333
5.12	68000/2716/6116/6821-Based Microcomputer .....	335
5.13	68000 Interrupt I/O .....	341
	5.13.1 External Interrupts .....	341
	5.13.2 Internal Interrupts .....	343
	5.13.3 68000 Exception Map .....	343
	5.13.4 68000 Interrupt Address Vector .....	344
	5.13.5 An Example of Autovector and Nonautovector Interrupts .....	344
5.14	68000 DMA .....	344
5.15	68000 Exception Handling .....	345
5.16	Multiprocessing with the 68000 Using the TAS Instruction and AS (Address Strobe) Signal .....	347
	Questions and Problems .....	351
<b>Chapter 6 Motorola MC68020</b>		
6.1	Introduction .....	359
6.2	Programming Model .....	362
6.3	Data Types, Organization, and CPU Space Cycle .....	362
6.4	MC68020 Addressing Modes .....	364
	6.4.1 Address Register Indirect (ARI) with Index and 8-Bit Displacement .....	364
	6.4.2 ARI with Index (Base Displacement, bd: Value 0 or 16 Bits or 32 Bits) .....	368
	6.4.3 Memory Indirect .....	368
	6.4.4 Memory Indirect with PC .....	369
	6.4.4.a PC Indirect with Index (8-Bit Displacement) .....	369
	6.4.4.b PC Indirect with Index (Base Displacement) .....	369
	6.4.4.c PC Indirect (Postindexed) .....	370
	6.4.4.d PC Indirect (Preindexed) .....	370
6.5	68020 Instructions .....	372
	6.5.1 New Privileged Move Instruction .....	373
	6.5.2 Return and Delocate Instruction .....	375
	6.5.3 CHK/CHK2 and CMP/CMP2 Instructions .....	375
	6.5.4 Trap On Condition Instructions .....	379
	6.5.5 Bit Field Instructions .....	380
	6.5.6 Pack and Unpack Instructions .....	383
	6.5.7 Multiplication and Division Instructions .....	385
	6.5.8 MC68000 Enhanced Instructions .....	388
6.6	68020 Advanced Instructions .....	390
	6.6.1 Breakpoint Instruction .....	390
	6.6.2 Call Module/Return from Module Instructions .....	394
	6.6.3 CAS Instructions .....	395
	6.6.4 Coprocessor Instructions .....	400
6.7	MC68020 Cache/Pipelined Architecture and Operation .....	402
6.8	MC68020 Virtual Memory .....	405
6.9	MC68020 Coprocessor Interface .....	406

6.9.1	MC68881 Floating-Point Coprocessor .....	408
6.9.1.a	68881 Data Movement Instructions .....	412
6.9.1.b	Monadic .....	413
6.9.1.c	Dyadic Instructions .....	414
6.9.1.d	BRANCH, Set, or Trap-On Condition .....	415
6.9.1.e	Miscellaneous Instructions .....	416
6.9.2	MC68851 MMU .....	420
6.10	MC68020 Pins and Signals .....	422
6.11	MC68020 Timing Diagrams .....	436
6.12	Exception Processing .....	441
6.13	MC68020 System Design .....	446
	Questions and Problems .....	453
<b>Chapter 7 Motorola MC68030/MC68040, Intel 80486 and Pentium Microprocessors</b>		
7.1	Motorola MC68030 .....	461
7.1.1	MC68030 Block Diagram .....	461
7.1.2	MC68030 Programming Model .....	462
7.1.3	MC68030 Data Types, Addressing Modes, and Instructions .....	463
7.1.3.a	PMOVE Rn, (EA) or (EA), Rn .....	464
7.1.3.b	PTEST .....	464
7.1.3.c	PLOAD .....	465
7.1.3.d	PFLUSH .....	466
7.1.4	MC68030 Cache .....	466
7.1.5	68030 Pins and Signals .....	470
7.1.6	MC68030 Read and Write Timing Diagrams .....	471
7.1.7	MC68030 On-Chip Memory Management Unit .....	476
7.1.7.a	MMU Basics .....	476
7.1.7.b	68030 On-chip MMU .....	480
7.2	MC68040 .....	491
7.2.1	Introduction .....	491
7.2.2	Register Architecture/Addressing Modes .....	491
7.2.3	Instruction Set/Data Types .....	493
7.2.4	68040 Processor Block Diagram .....	498
7.2.5	68040 Memory Management .....	499
7.2.6	Discussion and Conclusion .....	501
7.3	Intel 80486 Microprocessor .....	501
7.3.1	Intel 80486/80386 Comparison .....	501
7.3.2	Special Features of the 80486 .....	503
7.3.3	80486 New Instructions Beyond Those of the 80386 .....	504
7.4	Intel Pentium Microprocessor .....	505
7.4.1	Pentium Processor Block Diagram .....	507
7.4.2	Pentium Registers .....	508
7.4.3	Pentium Addressing Modes and Instructions .....	508
7.4.4	Pentium Vs. 80486 Basic Differences in Registers, Paging, Stack Operations, and Exceptions .....	509
7.4.4.a	Registers of the Pentium Processor vs. Those of the 80486 .....	509
7.4.4.b	Paging .....	509
7.4.4.c	Stack Operations .....	509
7.4.4.d	Exceptions .....	510
7.4.5	Input/Output .....	510

	7.4.6	Applications with the Pentium .....	510
		Questions and Problems .....	511
<b>Chapter 8</b>		<b>RISC Microprocessors: Intel 80960, Motorola MC88100 and PowerPC</b>	
8.1		Basics of RISC .....	515
8.2		Intel 80960 .....	516
	8.2.1	Introduction .....	516
	8.2.2	Key Performance Features .....	516
		8.2.2.a Load and Store Model .....	516
		8.2.2.b Large Internal Register Sets .....	516
		8.2.2.c On-Chip Code and Data Checking .....	516
		8.2.2.d Overlapped Instruction Execution .....	517
		8.2.2.e Single Clock Instructions .....	517
		8.2.2.f Interrupt Model .....	517
		8.2.2.g Procedure Call Mechanism .....	517
		8.2.2.h Instruction Set and Addressing .....	517
		8.2.2.i Floating Point Unit (Available with 80960SB only) .....	517
	8.2.3	80960SA/SB Registers .....	517
		8.2.3.a Register Scoreboarding .....	519
		8.2.3.b Instruction Pointer .....	519
		8.2.3.c Process Control Register .....	519
		8.2.3.d Arithmetic Control .....	519
	8.2.4	Data Types and Addresses .....	520
		8.2.4.a Data Types .....	520
		8.2.4.b Literals .....	520
		8.2.4.c Register Addressing .....	520
		8.2.4.d Memory Addressing Modes .....	520
	8.2.5	809690SA/SB Instruction Set .....	521
		8.2.5.a Data Movement .....	522
		8.2.5.b Conversion (Available with 80960SB only) .....	524
		8.2.5.c Arithmetic and Logic Operations .....	525
		8.2.5.d Comparison and Control .....	531
	8.2.6	80960SA/SB Pins and Signals .....	539
		8.2.6.a Basic Bus States .....	540
		8.2.6.b Signals Groups .....	540
	8.2.7	Basic READ and WRITE .....	542
	8.2.8	80960SA/SB-Based Microcomputer .....	543
8.3		Motorola MC88100 RISC Microprocessor .....	544
	8.3.1	88100/88200 Interface .....	545
	8.3.2	88100 Registers .....	546
	8.3.3	88100 Data Types, Addressing Modes, and Instructions .....	551
	8.3.4	88100 Pins and Signals .....	565
	8.3.5	88100 Exception Processing .....	566
8.4		IBM/Motorola/Apple PowerPC 601 .....	567
	8.4.1	PowerPC 601 Block Diagram .....	568
		8.4.1.a RTC (Real Time Clock) .....	568
		8.4.1.b Instruction Unit .....	570
		8.4.1.c Execution Unit .....	570
		8.4.1.d Memory Management Unit (MMU) .....	570
		8.4.1.e Cache Unit .....	571

	8.4.1.f	Memory Unit .....	571
	8.4.1.g	System Interface .....	572
8.4.2		Byte and Bit Ordering .....	572
8.4.3		PowerPC Registers and Programming Model .....	572
	8.4.3.a	User-Level Registers .....	572
	8.4.3.b	Supervisor-Level Registers .....	574
8.4.4		PowerPC 601 Memory Addressing: Effective Address (EA) Calculation .....	<b>575</b>
	8.4.4.a	Register Indirect with Immediate Index Mode .....	576
	8.4.4.b	Register Indirect with Index Mode .....	576
8.4.5		PowerPC 601 Typical Instructions .....	577
	8.4.5.a	Integer Instructions .....	577
	8.4.5.b	Floating-Point Instructions .....	578
	8.4.5.c	Load/Store Instructions .....	579
	8.4.5.d	Flow Control Instructions .....	579
	8.4.5.e	Processor Control Instructions .....	579
8.4.6		PowerPC 601 Exception Model .....	579
8.4.7		601 System Interface .....	580
	8.4.7.a	Memory Accesses .....	580
	8.4.7.b	I/O Controller Interface Operations .....	580
	8.4.7.c	601 Signals .....	580
8.4.8		PowerPC 601 Vs. Alpha 21064 .....	581
8.5		64-Bit RISC Microprocessors .....	582
		Questions and Problems .....	583
<b>Chapter 9 Peripheral Interfacing</b>			
9.1		Keyboard Interface .....	587
	9.1.1	Basics of Keyboard and Display Interface to a Microprocessor .....	587
	9.1.2	8086 Keyboard Interface .....	590
		9.1.2.a Hardware .....	590
		9.1.2.b Software .....	590
9.2		DMA Controllers .....	594
9.3		Printer Interface .....	599
	9.3.1	LRC7040 Printer Interface Using Direct Microcomputer Control .....	601
	9.3.2	LRC7040 Printer Interface to a Microcomputer Using the 8295 Printer Controller Chip .....	601
		9.3.2.a 8295 Parallel Interface .....	602
		9.3.2.b 8295 Serial Mode .....	604
9.4		CRT (Cathode Ray Tube) Controller and Graphics Controller Chips .....	605
	9.4.1	CRT Fundamentals .....	605
	9.4.2	Intel 8275 CRT Controller .....	607
	9.4.3	Intel 82786 Graphics Controller .....	608
9.5		Coprocessors .....	610
	9.5.1	Intel 8087 .....	610
	9.5.2	Intel 80287 .....	611
	9.5.3	Intel 80387 .....	611
		Questions and Problems .....	612

<b>Chapter 10</b>	<b>Design Problems</b>	
10.1	Design Problem No. 1 .....	615
	10.1.1 Problem Statement .....	615
	10.1.2 Objective .....	615
	10.1.3 Operation .....	615
	10.1.4 Hardware .....	615
	10.1.5 Software .....	617
10.2	Design Problem No. 2 .....	621
	10.2.1 Display Scroller Using the Intel 8086 .....	621
	10.2.1.a Introduction and Problem Statement .....	621
	10.2.1.b Hardware Description .....	622
	10.2.1.c Software Development .....	626
10.3	Design Problem No. 3 .....	628
	10.3.1 Problem Statement .....	628
	10.3.2 Solution No. 1 .....	628
	10.3.2.a Hardware .....	628
	10.3.2.b Microcomputer Development System .....	630
	10.3.2.c Software .....	632
	10.3.3 Solution No. 2 .....	637
	10.3.3.a Hardware .....	637
	10.3.3.b Software .....	637
	Questions and Problems .....	648
<b>Appendix A:</b>	<b>The Hewlett-Packard (HP) 64000 .....</b>	<b>653</b>
<b>Appendix B:</b>	<b>Motorola MC68000 and Support Chips — Data Sheets .....</b>	<b>683</b>
<b>Appendix C:</b>	<b>Intel 8085, 8086, and Support Chips — Data Sheets .....</b>	<b>695</b>
<b>Appendix D:</b>	<b>MC68000 Instruction Execution Times .....</b>	<b>713</b>
<b>Appendix E:</b>	<b>8086 Instruction Set Reference Data .....</b>	<b>723</b>
<b>Appendix F:</b>	<b>Glossary/ASCII Codes .....</b>	<b>741</b>
<b>Bibliography</b> .....		<b>753</b>
<b>Credits</b> .....		<b>757</b>
<b>Index</b> .....		<b>759</b>
