

Contents of Volume 2

<i>Preface</i>	v
<i>Contributors to Volume 2</i>	vii
CHAPTER 1 Absorption Spectrophotometry	1
M. PERNAROWSKI	
1.1 Electromagnetic Radiation	3
1.2 Absorption of Radiant Energy	5
1.3 Quantitative Spectrophotometry	13
1.4 Deviations from Beer's Law	21
1.5 Analysis of Mixtures	25
1.6 Colorimetry	32
1.7 Special Methods	39
1.8 Spectrophotometers and Colorimeters	45
Questions	55
References	56
CHAPTER 2 Infrared Spectroscopy	59
RONALD T. COUTTS	
2.1 Introduction	59
2.2 Absorption Spectroscopy	62
2.3 Pharmaceutical Applications of Infrared Spectroscopy	108
References	125
CHAPTER 3 Raman Spectroscopy	127
E. A. ROBINSON and D. S. LAVERY	
3.1 Introduction	127
3.2 Theory	128
3.3 Experimental	144
3.4 Applications	160
Questions	163
References	164

CHAPTER 4 Fluorometry	167
DAVID E. GUTTMAN	
4.1 Introduction	167
4.2 Theory	168
4.3 Fluorescence and Chemical Structure	169
4.4 Instrumentation for Fluorometry	173
4.5 Factors Influencing Intensity of Fluorescence	175
4.6 Comparisons of Fluorometry with Spectrophotometry	188
4.7 Application of Fluorometry to Pharmaceutical Analysis	190
4.8 Practical Section	197
Problems	200
References	201
CHAPTER 5 Atomic Absorption Spectroscopy	203
J. W. ROBINSON	
5.1 Introduction	204
5.2 Advantages of Atomic Absorption Spectroscopy	204
5.3 Disadvantages of Atomic Absorption Spectroscopy	205
5.4 Equipment	207
5.5 Monochromator	210
5.6 Detectors	210
5.7 Optical Slit System	210
5.8 Modulation	211
5.9 Analytical Variables	213
5.10 Burner Design	214
5.11 Sample Flow Rate	214
5.12 Type of Flame	214
5.13 Solvent	215
5.14 Wavelength Choice	215
5.15 Quantitative Method	216
5.16 Conclusions	218
Experiments	218
Questions	218
References	219
CHAPTER 6 Mass Spectrometry	221
A. CHISHOLM	
6.1 Introduction	222
6.2 Instrumentation	226
6.3 Interpretation of Spectra	228
6.4 Mass Spectroscopy in Pharmacy	235
Problems	240
Questions	241
References	241

CHAPTER 7 Nuclear Magnetic Resonance Spectroscopy	243
MATHIAS P. MEPTES	
7.1 Introduction	243
7.2 Chemical Shift	250
References	275
CHAPTER 8 Turbidimetry; Nephelometry; Colloidimetry	277
FRED T. SEMENICK	
8.1 Preface	279
8.2 Introduction	279
8.3 Practical Theory on Light-Scattering	286
8.4 Correlation of Theory for Fine- and Coarse-Particle Dispersions	302
8.5 Nephelometry, cf. Turbidimetry: For Practical Analysis of Dispersions	303
8.6 Special Dispersion Analyses Involving Light-Scattering Methods	309
8.7 Commercial Instruments	316
8.8 Experimental Procedure	317
Questions	319
Appendix: Topics Index to References and Extended Bibliography	320
References	325
Extended Bibliography	326
CHAPTER 9 Optical Crystallography	337
JOHN A. BILES	
9.1 Introduction	337
9.2 Petrographic Microscope	339
9.3 Crystals	341
9.4 Crystallization	344
9.5 Polarization Colors—Anisotropy	344
9.6 Determination of Refractive Index	346
9.7 Indicatrix	350
9.8 Dispersion	364
9.9 Molecular Orientations in the Solid State	365
Experimental Procedures	366
Questions	368
References	369
CHAPTER 10 X-Ray Analysis	371
JOHN W. SHELL	
10.1 Preliminary Remarks	371
10.2 X-Ray Safety	372
10.3 Production and Properties of X-Rays	373
10.4 X-Ray Diffraction	374
10.5 X-Ray Emission (Fluorescence)	397
10.6 X-Ray Absorption	400
10.7 Low-Angle X-Ray Analysis	402
Questions	405
References	406

CHAPTER 11 Refractometry	407
ROBERT A. LOCOCK	
11.1 Introduction	407
11.2 Origin of Refractive Index	409
11.3 Refractive Index and Temperature	411
11.4 Refractive Index and Dielectric Constant	412
11.5 Molar Refraction	413
11.6 Measurement of Refractive Index	416
11.7 Applications of Refractive Index Measurements	422
Experiments	423
Questions	423
Problems	423
Bibliography	424
CHAPTER 12 Polarimetry	425
ROBERT A. LOCOCK	
12.1 Introduction	425
12.2 Origin of Optical Rotation	426
12.3 Molecular Requirements for Optical Rotatory Power	435
12.4 Instrumentation	438
12.5 Applications	443
Experiments	446
Questions	447
Problems	448
Bibliography	449
CHAPTER 13 Potentiometric Titrations	451
J. GEORGE JEFFREY	
13.1 Introduction	452
13.2 Electrochemical Cells and Half-Cells	454
13.3 Electrodes	464
13.4 Measurement of Potential	474
13.5 Applications of Potentiometric Titrations	498
13.6 Analytical Procedures	504
Questions	508
Bibliography	509
CHAPTER 14 Current Flow Methods	511
STUART ERIKSEN	
14.1 Conduction of Current	512
14.2 Some Basic Electrical Concepts and Definitions	513
14.3 Properties of Solutions as They Affect Electrical Resistance Measurement	519
14.4 Analytical Aspects of Solution Resistance	524
14.5 Experimental Methods	526
References	541

CHAPTER 15	Coulometric Methods and Chronopotentiometry	543
	PETER KABASAKALIAN	
15.1	Introduction	544
15.2	Controlled-Potential Coulometry	548
15.3	Constant Current Coulometry	555
15.4	Chronopotentiometry	560
15.5	Experimental Procedures	566
	Questions	569
	Problems	570
	References	571
CHAPTER 16	Polarography	575
	FRED W. TEARE	
16.1	Introduction	576
16.2	Theoretical Considerations	577
16.3	Basic Instrumentation, Apparatus, and Principles	598
16.4	General Polarographic Analysis	605
16.5	Laboratory Experiments	613
	Problems	626
	Selected Reading List	627
	References	628
CHAPTER 17	Amperometric Titrations	629
	FRED W. TEARE	
17.1	Introduction	629
17.2	Amperometric Titrations with One Polarized Electrode	631
17.3	Amperometric Titrations Using Two Polarized Electrodes	645
	Questions	652
	Reading List for Amperometric Titrations	653
	References	654
CHAPTER 18	Gas Chromatography	655
	CARMAN A. BLISS	
18.1	Introduction	656
18.2	Fundamentals of Gas Chromatography	657
18.3	Theoretical Considerations of Gas Chromatography	661
18.4	Column Technology	672
18.5	Detectors	677
18.6	Analytical Determination by Gas Chromatography	679
18.7	Experiments	684
	Questions	687
	References	687
	General References	688

CHAPTER 19 Radiochemical Techniques	689
A. NOUJAIM	
19.1 Introduction	689
19.2 Basic Nuclear Properties	690
19.3 Measurement of Radioactivity	700
19.4 Analytical Application of Radioactivity	715
19.5 Laboratory Experiments	730
General References	733
References	733
<i>Answers to Problems and Questions</i>	735
<i>Author Index</i>	737
<i>Subject Index</i>	755
